"In recent weeks, according to more than half a dozen current and former officials who have had direct interaction with him, McMaster has bristled at White House aides close to Trump whom he perceives as undercutting his authority. He seethes over every national security leak and lashes out over negative news stories he thinks are spread by his enemies. And McMaster, whose temper is legendary, frequently blows his top in high-level meetings. 'He can be very intense,' a McMaster confidant who speaks with him regularly and is a major supporter, told POLITICO Thursday. 'Some find that difficult.'" http://politi.co/2wqV1wN

ANOTHER PLOT TWIST -- "Flynn details tie to data firm, transition pay," by AP's Chad Day and Stephen Braun: "President Donald Trump's former national security adviser, Michael Flynn, is revealing a brief advisory role with a firm related to a controversial data analysis company that aided the Trump campaign, The Associated Press has learned. The disclosure of Flynn's link to Cambridge Analytica will come in an amended public financial filing in which the retired U.S. Army lieutenant general also discloses income that includes payments from the Trump transition team ... The amended disclosure shows that just before the end of the campaign, Flynn entered into a consulting agreement with SCL Group, a Virginia-based company related to Cambridge Analytica, the data mining and analysis firm that worked with Trump's campaign." http://bit.ly/2htghj9

TRUMP INC. -- "Secret Service vacates Trump Tower command post in lease

dispute with president's company," by WaPo's Carol Leonnig, David Fahrenthold and Jonathan O'Connell: "The Secret Service has vacated its command post inside Trump Tower in Manhattan following a dispute between the government and President Trump's company over the terms of a lease for the space ... Previously, the Secret Service had stationed its command post - which houses supervisors and backup agents on standby in case of an emergency - in a Trump Tower unit one floor below the president's apartment. But in early July, the post was relocated to a trailer on the sidewalk, more than 50 floors below, a distance that some security experts worry could hamper the agency that protects the president's home and family. The command post appears unlikely to move anytime soon back inside Trump Tower, where the president and his family have rarely gone since moving to the White House. On Thursday, a spokeswoman for the Trump Organization said the government should seek space in another location." http://wapo.st/2ht2PM7

AT MAIN JUSTICE -- "Justice Dept., Under Siege From Trump, Plows Ahead With His Agenda," by NYT's Rebecca Ruiz: "[E]ven as the Justice Department has been under siege by Mr. Trump, [Jeff] Sessions and [Rod] Rosenstein have sought to tune out the noise as they remake the department into the one that is most powerfully carrying out the president's agenda. 'We value the independence of the Justice Department,' Mr. Rosenstein said in an interview this week. ... Mr. Sessions is carrying out the president's conservative agenda with head-turning speed, roiling critics on the left and leaving some career staff members within the department disoriented by the sea change. 'Sessions as attorney general has been everything conservatives could have dreamed of and liberals could have feared,' said Erwin Chemerinsky, dean of the law school at the University of California, Berkeley.

"In the last six months, the attorney general has rolled back Obama-era policies on gay rights, voting rights, and criminal justice and police reform while advancing his own fight against drugs, gangs and violent crime. ... Mr. Sessions has mandated that prosecutors be as tough as possible in charging and sentencing all crimes, including drug offenses that carry stiff mandatory minimum prison sentences. He has expanded the ability of the police to seize people's assets, irrespective of whether they may have been convicted of a crime or even charged. And as he presses a hard-line immigration agenda, he has dispatched additional federal prosecutors to border districts to prosecute immigration cases and has ordered cities and states to fall in line with federal immigration authorities or else face cuts in federal funding." http://nyti.ms/2v2TGi5

--INTERESTING NUGGET: "Among the paintings that Mr. Rosenstein selected to decorate his conference room at the Justice Department is a portrait of Edward H. Levi, appointed attorney general by President Gerald R. Ford in 1975 after the department's credibility had been eroded by President Richard M. Nixon, whose firing of the Watergate special prosecutor, Archibald Cox, led to the resignations of Attorney General Elliot Richardson and Deputy Attorney General William Ruckelshaus in what became known as the Saturday Night Massacre in October 1973. 'That right there,' Mr. Rosenstein said, motioning to the portrait of Mr. Levi. 'That's the post-Watergate A.G.'"

-- "U.S. Attorney Subpoenas Kushner Cos. Over Investment-For-Visa Program," by WSJ's Erica Orden, Aruna Viswanatha and Byron Tau: "Kushner Cos., the New York property development business owned by the family of White House senior adviser Jared Kushner, has been subpoenaed by New York federal prosecutors regarding its use of an investment-for-immigration program ... The subpoena concerns at least one Jersey City, N.J., development financed in part by a federal visa program known as EB-5: twin, 66-floor commercial-and-residential towers called One Journal Square ... The subpoena, received by the company in May, was a document request that included a demand for emails." http://on.wsj.com/2wqQCKr

1600 PENNSYLVANIA -- "Life in the West Wing: Bug zappers and helicopter fumes," by Tara Palmeri: "Bug zappers buzz in the West Wing while flies zip around. The yellow carpet is worn, and it can sometimes be difficult to work in parts of the White House because it fills with fumes when Marine One lands or takes off on the lawn of America's most famous home. Some White House aides claim to have seen rodents, and say they're used to having maintenance professionals moving around their work space to do work on the air conditioning system, which hasn't been overhauled in more than 20 years.

"Fixing it is top of the agenda for a building-wide renovation blitz scheduled for the next two weeks, while President Donald Trump heads to his golf club in Bedminster, N.J. Along with installing a high-volume air-conditioning system, the work may include replacing worn carpets and addressing other issues ... The main situation room was recently closed for two weeks so that the iconic main table could be refurbished, according to a former official." http://politi.co/2uqjj8Y

SPICER'S POST-WHITE HOUSE LIFE -- "Sean Spicer signs with top TV lawyer after meetings with networks," by Page Six's Emily Smith and Marisa Schultz: "Former White House press secretary Sean Spicer today signed with renowned attorney Bob Barnett, who represents a host of top politicians and TV news personalities, as he negotiates a big TV deal. Sources say Spicer signed with Barnett and Michael O'Connor of Williams & Connolly Thursday after taking meetings with all the major TV and news networks including NBC, CBS and Fox News last week. The former press secretary had also been courted by all the top Hollywood talent agencies, but sources said he chose Barnett, who is based with Williams & Connolly in Washington D.C. because of his track record with politicians and TV correspondents." http://pge.sx/2vvvVzN

--TMZ: "Sources close to Spicer tell us the former White House Press Secretary was flattered by the opportunity, but because he believes he'll have an 'overwhelming number of commitments in the Fall,' he declined the offer. As for whether Spicey had the skills to truly compete on 'DWTS' -- our source said, 'He's not a good dancer.'" http://bit.ly/2v4rMk1

UPDATE via Morning Media's Hadas Gold: **"SCARAMUCCI CANCELED HIS BIG ONLINE ANNOUNCEMENT TODAY,** where he was supposed to address the American people. Former Fox News co-president Bill Shine was reportedly helping Scaramucci

with the event, which was to be broadcast live on various platforms, but Scaramucci tweeted yesterday "No Press Event Tomorrow: Focusing on Family, My Work in The Private Sector. #MovingForward Stay Tuned!"

HOT VIDEO -- @TheDailyShow: "We can all agree the White House's 'theme weeks' have been a rousing success..." *2-min. video* http://bit.ly/2vnGdlK (h/t Matt Negrin)

TRUMP'S FRIDAY -- THE PRESIDENT is heading to FEMA for a hurricane briefing and having lunch with VP Mike Pence. He'll talk to French President Emmanuel Macron before departing for Bedminster.

Playbook Reads

PHOTO DU JOUR -- Sen. Ted Cruz (R-Texas) walks away from the U.S. Capitol after the last vote before the summer break, August 3, 2017 in Washington, DC. The U.S. Senate is scheduled to return from summer break on September 5. | Mark Wilson/Getty | Mark Wilson/Getty

ALI WATKINS -- "Hunt for Trump dossier author inflames Russia probe: An overseas trip to contact a former British spy exposes friction among House, Senate investigators and special counsel Robert Mueller": Two Republican House Intelligence Committee staffers traveled to London earlier this summer to track down the former British intelligence operative who compiled a controversial dossier on President Donald Trump and Russia, according to three people familiar with the matter. ...

"The House staffers left their contact information at two addresses associated with Steele, a former agent for Britain's MI6 foreign intelligence service. One of those locations was Steele's lawyer's office, where the former spy was meeting with his counsel when the House investigators showed up." http://politi.co/2wcVm7j

TOP-ED -- JOE SCARBOROUGH in WaPo, "Ivanka and Jared, move back to New York": "For almost a decade, Mika Brzezinski and I had the pleasure of occasionally crossing paths with Ivanka, Don Jr. and Eric Trump. I explained that in those encounters, the president's children were unfailingly deferential and polite. Long before their father's election, the Trump children enjoyed a stellar reputation among most Manhattan influencers for being hard-working and well raised. They possessed few of the flaws too easily recognizable in other wealthy and well-connected kids. Often, conversations that centered on the boorish behavior of Trump himself would end with someone citing his children as a mitigating factor against whatever severe judgments were being handed down. I once told Trump that a good way to judge most people is by the children they raised, and that by that measure, he seemed to be an unqualified success.

"The Donald's response was uncharacteristically humble. 'Anything good you see in my children is the result of them having a great mother,' he quietly said, with no cameras rolling to catch this fleeting glimpse of humility. ... Americans have seen enough headlines over the past six months to better understand why nepotism does not work in the White House. Though my words may suggest otherwise, I genuinely like Jared and Ivanka. I also love Joey, Andrew, Katherine and Jack Scarborough. But I wouldn't let them run my morning show any more than Trump should let his children run roughshod over White House operations." http://wapo.st/2vo5A7c

FIRST IN PLAYBOOK -- From California Playbooker Carla Marinucci: "Former California Gov. Arnold Schwarzenegger, flexing his muscles in efforts to counter President Trump's withdrawal from the Paris climate accord, will unveil an ambitious new national effort Friday aimed at providing lawmakers with a comprehensive toolbox to pass substantive climate change legislation at the state and local level. The new initiative to tweak Trump on climate change is being touted as a first on the internet -- a 'digital environmental legislative handbook' which organizers say will provide political leaders and lawmakers around the nation with a comprehensive curated list of legal and legislative research, voting records, and bill language and data to help them prepare bills on a wide range of environmental action, including air quality, renewable energy, health and climate change." http://politi.co/2feqHll

WEST COAST WATCH -- "Hollywood picks Gavin Newsom over Antonio Villaraigosa in California's race for governor," by L.A. Times' Seema Mehta and Maloy Moore: http://lat.ms/2vyVLDl

****** **A message from Morgan Stanley:** Has alternative energy gone mainstream? Several decades ago, renewable energy seemed futuristic. Now, it has emerged as a practical way to power our cities. Morgan Stanley explored the economics driving the industry, the obstacles it faces, and what it means for investors in renewable energy technology. Read more from Morgan Stanley. ******

THE PLAYBOOK INTERVIEW: New Orleans Mayor Mitch Landrieu

Mitch Landrieu, the mayor of New Orleans and president of the United States Conference of Mayors, is trying to sell the importance of mayors in the legislative process. Landrieu, who is wrapping up his last year as mayor of New Orleans, is following in the footsteps of his father, Moon Landrieu, who was himself a New Orleans mayor and president of the conference. The Democrat remains mum about his future plans, but he has been mentioned as a dark horse candidate for higher office once his term expires. "I really don't [have future plans]. I haven't had time to think about it that much ... and I intend to finish really, really strong, to make sure I keep my eyes focused on the streets in the city of New Orleans and to make sure the people have my full attention and full commitment. When that's over, I'm going to take a nap."

The highlights ...

ON WORKING WITH TRUMP: "This administration is particularly confused about what they want to talk about at any particular time. They have a very hard time staying on message and as a consequence it is hard to respond to. We don't have a set position, we're always ready to work. Whenever they want to find an issue that we have common ground on, and even ones that we disagree on, we're always ready to be engaged. We don't have an ideological bent. We don't have the freedom to do that. We have to work with any president at any time to try to find an answer that works."

ON HOW MAYORS CAN WORK WITH CONGRESS: "Don't wait to bring us in until the last minute when everything looks like it's gone to hell in the handbasket. Talk to us early and we might be able, based on our practical experience, to help you design a better mousetrap on whatever it is you might be talking about. ... We're the ones who build all the projects on time, on task and under budget. We do it much better than the federal government does. But they've got to show up to do that role."

HIS ADVICE FOR WASHINGTON: "Stop being so ideologically bent. Be problem-solvers. Be thoughtful, be practical and be bipartisan. Talk to each other and find common-sense solutions to real problems. We do it every day in our cities. If you want to learn how to balance a budget, come see us. If you want to learn how to choose between bad and worse or good and better, come see us, because we see it every day." ***Full interview*** http://politi.co/2feNePz

-- "Mayors to Washington (and Trump): You need to listen to us," by Zach Montellaro http://politi.co/2fegBBH

MEDIAWATCH - per Hadas Gold's Morning Media: "'CBS This Morning" pulled a Kellyanne Conway interview after the senior counselor to the president showed up late on Wednesday, two sources tell me. The interview was teased on CBS in the early morning on Wednesday but it never aired after Conway showed up late to the stand-up spot on the north lawn of the White House. Morning shows run on tight timelines, but entirely ditching an interview with a senior counselor to the president struck me as pretty unusual. CBS News declined to comment and Conway did not respond to a request for comment."

--JULIA EDWARDS AINSLEY is joining NBC's national security investigative team in Washington. She most recently has covered the Justice Department beat at Reuters.

--"MEET THE PRESS" promotions: Sarah Blackwill has been promoted to senior producer, Natalie Cucchiara to senior coordinating producer and Sally Bronston to producer.

TV TONIGHT - On PBS's "Washington Week" with Bob Costa: Dan Balz, Susan Davis, Carol Lee, Franco Ordoñez

Playbookers

SPOTTED: Bill Clinton and Virginia Gov. Terry McAuliffe last night at Matsuhisa in Aspen ... Sarah Huckabee Sanders last night at Le Diplomate where she had steak frites and house Chardonnay.

ENGAGED -- Mike Luce of the Dover Group popped the question to **Melissa Salmanowitz** of the Gates Foundation Thursday night. While their friends cheered from a secret lookout across the street, Mike proposed under an umbrella outside of Maple in Columbia Heights, where the couple first met. The ring is a family heirloom, previously belonging to Melissa's grandmother and mother. ***Pic*** http://bit.ly/2vohcXL

TRANSITIONS -- Chester Spellman has been named director of AmeriCorps for the Corporation for National and Community Service. He most recently was CEO of Volunteer Florida. ... **Nicole Hager** is joining the Senate Finance Committee as deputy press secretary and is also starting law school at GWU. Yesterday was her last day as deputy press secretary for Sen. Jim Inhofe (R-Okla.). ... **Michaela Sims** is launching a new lobbying firm, Sims Strategies, and is registering for five mostly health and tax-related clients. She most recently was co-founder and partner at Chamber Hill Strategies and has also worked as counsel and LD for former Sens. Bob Kerrey and Ben Nelson. Her firm has also hired **Ted Prettyman** as a director.

OUT AND ABOUT - JOSH GREEN's book party -- pool report: "Bloomberg hosted a party for Bloomberg Businessweek senior national correspondent Joshua Green at the Newseum last night to toast his instant #1 New York Times non-fiction bestseller 'Devil's Bargain: Steve Bannon, Donald Trump, and the Storming of the Presidency'. Bloomberg Washington bureau chief Wes Kosova and Bloomberg Businessweek editor Megan Murphy co-hosted Beltway guests during a flash thunderstorm which was on prime display on the Newseum's panoramic top floor. As remarks ended, a rainbow was visible over the Capitol. Guests nibbled on haute grilled cheese sandwiches and drank spicy margarita 'Devil's Delights,'" which was made up of silver tequila, serrano peppers, lime juice, simple syrup, St. Germain, and soda water. ***$16.20 on Amazon*** http://amzn.to/2v4DwTK ... ***Pic of Josh Green and Charlie Spiering*** http://politi.co/2v2Kf27

SPOTTED: Jerry Seib, Carl Cannon, Betsy Fischer Martin, Patrick Steel, Tammy Haddad, Julie Pace, Adam Goldman and Allison Hoffman, Ryan Williams, Garance Franke Ruta, Elaina Plott, Hilary Rosen, Linda Douglass and John Phillips, Jeremy and Robyn Bash, Margaret Talev, Al Hunt, Zach Mider, AB Stoddard, Shannon Pettypiece, Toluse Olorunnipa, Josh Dawsey, Robert Draper and Kirsten Powers, Sam Feist, Garance Franke-Ruta, Adam Goldman and Allison Hoffman, Kathy O'Hearn, John and Barbara Cochran, Katie Rogers, James Hohmann, David Jackson, Lisa Lerer, Annie Linskey, Ty Trippet, Augusta Mellon, Abby Phillip, Marty Schenker, Jack Shafer, Sabrina Siddiqui, Cindy Smith, Robin Sproul, Keith Urbahn, Dave Weigel, Gail Ross, Matt Apuzzo, Rosie Gray, Tim Noah, Jen Epstein, Gail Ross, Michael Schaffer (whose birthday is today), David Jackson, Tom Forrest, Annie Findlay, Julie Bykowicz.

SUNDAY SO FAR -- CBS' "Face the Nation": Sen. Tom Cotton (R-Ark.) ... Ohio Gov. John Kasich and Colorado Gov. John Hickenlooper. Political panel: Jamelle Bouie, Jennifer Jacobs, Susan Page, and Reihan Salam

-- ABC's "This Week": Stephanie Cutter, Megan Murphy, Ramesh Ponnuru, and Matt Schlapp

--"Fox News Sunday": Panel: Jason Riley, Rachael Bade, Rich Lowry, Charles Lane

-- CNN's "State of the Union": Rep. Adam Schiff (D-Calif.) ... New Jersey Gov. Chris Christie. Panel: Nina Turner, former Sen. Rick Santorum (R-Pa.), Amanda Carpenter, Rep. Ro Khanna (D-Calif.)

-- CNN's "Inside Politics," guest hosted by Dana Bash: Perry Bacon, Karoun Demirjian, Julie Davis, Michael Shear

-- CNN's "Fareed Zakaria GPS": Al Gore ... Julia Ioffe ... Gideon Rose ... Dan Senor

BIRTHWEEK (was yesterday): Joe McCarthy, who celebrated last night with wife Marina and brother Jim at Fenway ... Brian Morgenstern, senior adviser at Treasury and Rubio alum (hat tip: Natalie Boyse)

BIRTHDAY OF THE DAY: Bret Baier, Fox News' chief political anchor and anchor of "Special Report". **How he's celebrating:** "I am actually playing in a golf tournament out of town, and then coming home and having a little dinner with my wife and two sons - 10 and 7. I am a big fan of homemade cards and one cupcake with a candle - low key. (47 is not that thrilling.)" Read his Playbook Plus Q&A: http://politi.co/2uad2mC

BIRTHDAYS: Barack Obama is 56 ... Sheldon Adelson is 84 ... Politico's Seung Min Kim, Randi Braun and Ashley Ryan ... former Attorney General Alberto Gonzales is 62 ... Iowa Gov. Kim Reynolds is 58 ... screenwriter Allison Abner ... The Hill's Bob Cusack ... Richard Carlbom, principal at United Strategies, is 36 ... Fritz Fitzpatrick ... Andrei Cherny is 42 ... Caren Auchman, SVP at FleishmanHillard (h/t Allison Preiss) ... Alex Mallin, ABC News White House producer (h/ts Jonathan Karl and Arlette Saenz) ... Rep. Keith Ellison (D-Minn.) is 54 ... Rep. Hakeem Jeffries (D-NY) is 47 ... Rep. Tom Rice (R-SC) is 6-0 ... Andrea Hechavarria ... Daniel Moss, Bloomberg News' executive editor on global economics ... WaPo's Joby Warrick is 57 ... Washingtonian editor Michael Schaffer is 44 (h/t Dan Swartz) ... Pete Brodnitz ... David Myles FitzSimmons ... Allison Rhodes Morgan ... AP's Sinan Salaheddin is 42 ... Susan Whitson, Bush administration alum, former press secretary to First Lady Laura Bush, and former DOJ and FBI spox, celebrating with her seven year-old son on a cruise down the Blue Danube through Austria (h/t Keir Whitson) ...

... Brett Loper, SVP of gov't affairs at American Express ... Nick Wing, senior viral editor at HuffPost, is 3-0 ... Kate Michelman ... John Edgell, comms director for Rep.

Marcy Kaptur (h/ts Jon Haber) ... former U.S. treasurer Rosario Marin ... WashPost deputy Outlook editor Mike Madden, a City Paper alum, is 41 ... Wendy Ruderman ... Wendy Cohen ... CNN Politics' Greg Krieg, alum of Mic and ABC ... former Ohio Gov. Ted Strickland is 76 ... Daniel Son ... Reagan Anderson, VP of Capital Group is 4-0. She is celebrating with her husband somewhere on a beach ... The U.S. Coast Guard is 227 ... Joel Bailey ... Jonathan Green ... Sam Carmody ... former Rep. Rob Andrews (D-NJ) is 6-0 ... Kaci Sturgeon ... Derek Dash ... Hayley Prim, principal at Hilltop Public Solutions ... Valerie McCabe ... Steve Rudin ... Emil Hill ... Chad Kolton ... Martha Love ... Steve Kean ... Lina Brunton ... Paige Shipman ... Anna Bennett (h/ts Teresa Vilmain)

****** **A message from Morgan Stanley** : Alternative energy, solar power investment and utilities are taking what was on the fringes of science as recently as 30 years ago and turning it into the new normal. Biosphere 2, a massive science facility tucked away in the desert foothills of the Santa Catalina Mountains, was built for controversial space exploration experiments. Now, it functions as a reputable research facility, studying the potential for farming beneath solar panels-a technique that's already applicable for future colonies on Mars. Morgan Stanley's podcast discusses where the renewable energy industry has been, its transformations over the past few decades, and what this means for investors in renewable energy technology, as well as everyday consumers. Read more from Morgan Stanley. ******

Environment & Safety Resource Center Update

July 31, 2017 - Number 31

Analysis : Air Pollution Control Guide | Chemicals Management Guide | Safety Guide | Water Pollution Control Guide

Federal Statutes, Regulations and Agency Documents : Federal Chemical Controls Updates | Federal Environment Updates | Federal Register Final Rules | Federal Register Notices | Federal Register Proposed Rules

States—Environment : Arizona | California | Colorado | Illinois | Indiana | Mississippi | Ohio | Oregon | Texas

Analysis

Air Pollution Control Guide

Federal

Protection of the Ozone Layer (Significant New Alternatives Policy). Updated to reflect a determination of acceptability by the Environmental Protection Agency under the agency's Significant New Alternatives Policy (SNAP) program. The EPA uses the SNAP program to identify substitutes for Class I and II substances after the agency determines that alternative substances reduce the overall risk to humans or the environment. The EPA may also restrict the use of substitutes depending upon the risks involved. This particular determination presents the EPA's most recent decision to list as acceptable several substitutes in the refrigeration and light commercial air conditioning sector, as well as the cleaning solvents sector. The determination took effect July 21.

State

Tennessee (Municipal Solid Waste Landfills). Updated to reflect a final rulemaking by the Tennessee Department of Environment and Conservation concerning construction and operating permits for municipal solid waste (MSW) landfills. The rule exempts from such permitting requirements all MSW landfills with a design capacity of less than 2.5 million megagrams by mass or 2.5 million cubic meters by volume. The rule took effect July 27.

Chemicals Management Guide

Federal

Prioritization and Risk Evaluation (Risk Evaluation Process and Deadlines). Updated to discuss the Guidance to Assist Interested Persons in Developing and Submitting Draft Risk Evaluations Under the Toxic Substances Control Act, which the Environmental Protection Agency released

June 22 in accordance with provisions of the 2016 amendments to the TSCA requiring the EPA to issue such guidance and to take draft risk evaluations voluntarily submitted by external parties into consideration in its own risk evaluation process. The guidance covers science standards, data quality considerations, and steps to follow in developing draft risk evaluations. Through this guidance, the EPA aims to ensure that draft risk evaluations achieve the same quality level as risk evaluations developed by the agency itself.

State

Minnesota (Consumer Protection). Updated to provide an analysis of Minnesota's Toxic Free Kids Act (TFKA), which requires the Minnesota Department of Health (MDH), in consultation with the Minnesota Pollution Control Agency, to create and maintain a chemicals of high concern list and a priority chemicals list. The MDH must review and revise the chemicals of high concern list at least every three years. A "chemical of high concern" designation is based on credible scientific evidence demonstrating that the chemical may cause cancer, genetic damage, or other specified harms. The most recent chemicals of high concern list was published September 7, 2016. The MDH may designate a chemical of high concern as a priority chemical if it has been identified as a high-production volume chemical by the EPA and it meets certain criteria. The priority chemicals list must be updated whenever the MDH designates a new priority chemical. Current priority chemicals include bisphenol A, cadmium, and lead. Exemptions to the TFKA requirements include chemicals in used children's products, medical devices, and priority chemicals used in agricultural production.

Safety Guide

State

New Jersey (Hazard Communication Standard (HCS)). Updated to reflect New Jersey's adoption of hazard communication standards from federal OSHA and to reflect state requirements for employee information and training. The rule became effective June 5.

Ohio (Injury and Illness Reporting and Recordkeeping (OSHA 300 Log)). Updated to remove outdated requirements and to clarify requirements for the maintenance of records.

Water Pollution Control Guide

Federal

Primary Drinking Water Regulation General Provisions (General Monitoring and Analysis Provisions). Updated to reflect the addition by the Environmental Protection Agency, effective July 27, 2017, of 17 additional approved alternative testing methods for use in measuring the levels of contaminants in drinking water and determining compliance with national primary drinking water regulations (82 Fed. Reg. 34,861, July 27, 2017).

State

Illinois (State Revolving Funds). Updated to reflect revisions by the Illinois Environmental Protection Agency of regulations related to the state's wastewater and drinking water revolving fund loan programs. The revisions authorize reduced fixed-rate loans for communities with service populations less than 25,000 that demonstrate financial need, and communities with service populations less than 10,000 that demonstrate specified hardship conditions. The revisions also authorize 30-year loan terms for disadvantaged communities. In addition, the

agency has provided for the restructuring of existing loan obligations.

Indiana (Water Classifications). Updated to reflect the replacement by the Indiana Department of Environmental Management (IDEM) of the exceptional use waters designation with a designation for outstanding state resource waters.

Indiana (Types of Permits). Updated to reflect the transfer of authority to administer the National Pollutant Discharge Elimination System general permitting program from the federal Environmental Protection Agency to IDEM.

Indiana (Stormwater Permits for Construction Activities). Updated to reflect requirements for construction activities disturbing a total of one or more acres of land, or construction activities that disturb less than one acre of land, but that are part of a larger development plan, to be authorized under a stormwater NPDES permit.

Indiana (

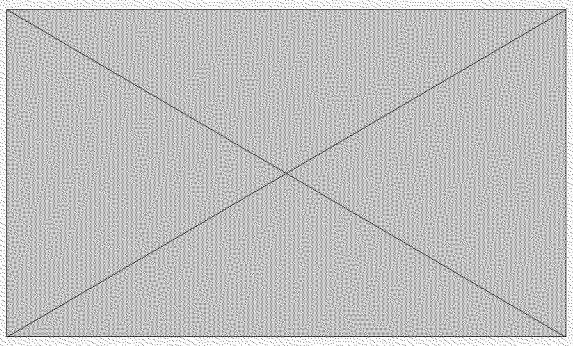
Subject: AEI Today: Bipartisanship wins a round at the White House

Economists of all political views breathed a sigh of relief and raised a glass in celebration last week.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



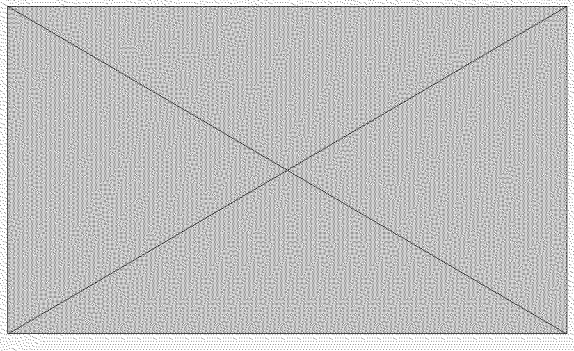
AEI

Bipartisanship wins a round at the White House

Michael R. Strain | Bloomberg View

Economists of all political views breathed a sigh of relief and raised a glass in celebration when Kevin Hassett was confirmed last week as chairman of the Council of Economic Advisers. Hassett, until recently an AEI scholar, is widely respected — as evidenced by a June letter of support for his nomination signed by 44 leading economists from both the left and right. This

degree of bipartisanship is all too rare in Washington.

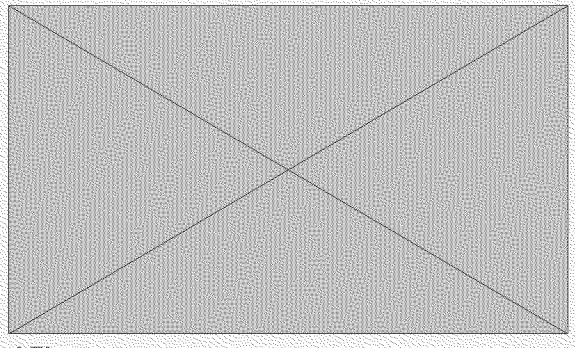


Reuters

Republicans can pick up the ball on health care with Medicaid

Ryan Streeter | The Hill

Two decades ago, America launched a new approach to welfare. Passed by a Republican Congress and signed by President Bill Clinton, welfare reform began in 1997 as a way to shift our antipoverty strategy away from giving low-income people cash and toward helping them find employment. This new vision came largely as a result of state-level experimentation. Unlike the 1990s, state policy is regrettably having no impact on Capitol Hill today.



Twenty20

The next frontier in the War on Poverty

Robert Doar | AEIdeas

James Sullivan, author of a recent report on US consumption poverty, offers this thought: "Relying on the official poverty rate, many have concluded that we have lost the 'War on Poverty,' but improved measures of poverty show that we have actually made tremendous progress." This claim is true to a large extent. But we still can't declare victory so long as we believe that the goal of such programs is to help people escape poverty through earnings.

AEI

Vestager: Competition is key to a fair society

Jeffrey Eisenach | AEI event video

There is some broad global agreement on the basic principles of competition policy: Firms with market power should not engage in conduct that mainly harms competition, for instance. Yesterday, European Commissioner for Competition Margrethe Vestager visited AEI to discuss the European Union's perspective. "Competition in the market is as fundamental to a fair society as competition of ideas is to a free one," says Vestager.

Summaries

AIR
California SIP/Antelope Valley AQMD
AIR

Proposed rule of the EPA approves and conditionally approves revisions to the Antelope Valley Air Quality Management District portion of the California SIP regarding reasonably available control technology (RACT) requirements for the 1997 8-hour ozone and the 2008 8-hour ozone NAAQS in the Antelope Valley nonattainment area. The rule withdraws and replaces a proposed rule (81 FR 90754; 12/15/2016) to partially approve and partially disapprove the 2006 and 2015 SIPs in which the agency determined that the district's rules did not implement RACT for all applicable sources. The district subsequently addressed the deficiencies identified by the EPA. The rule also approves the district's negative declarations into the SIP for the ozone standards. Comments are due Aug. 28, 2017. Contact: Nancy Levin; EPA Region 9; 415-942-3848; levin.nancy@epa.gov. Citations: 40 CFR 52

AIR
Clean Air Scientific Advisory Committee Meeting
AIR

Notice of the EPA Science Advisory Board Staff Office announces a meeting of the Clean Air Scientific Advisory Committee (CASAC) and the CASAC Secondary NAAQS Review Panel for Oxides of Nitrogen and Sulfur. The agenda includes discussion of the EPA's integrated science assessment for nitrogen oxides, sulfur oxides, and particulate matter-ecological criteria (first external review draft–February 2017). The meeting is scheduled for Aug. 31, 2017, via teleconference. Comments are due Aug. 24, 2017. Contact: Thomas Armitage; EPA, Science Advisory Board Staff Office; 202-564-2155; armitage.thomas@epa.gov

Regulatory Update

AIR
Georgia SIP/Miscellaneous Revisions
AIR

Direct final rule of the EPA approves revisions to the Georgia SIP to clarify applicability requirements for certain volatile organic compound emission standards. The revisions also remove obsolete provisions regarding kraft pulp mill total reduced sulfur compliance schedules, conical burners for wood waste burning, cupola furnaces for metallurgical melting, and monitoring and reporting requirements for particular sources. In addition, the revisions correct a numbering error and remove various tables. The rule is effective Sept. 26, 2017, unless adverse comments are received by Aug. 28, 2017. Contact: Richard Wong; EPA Region 4, Air Planning and Implementation Branch; 404-562-8726; wong.richard@epa.gov. Citations: 40 CFR 52.570

GENERAL ENVIRONMENT AND SAFETY
Atlantic Coast Pipeline and Supply Header Projects
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces availability of the final environmental impact statement for the Atlantic Coast Pipeline and the Supply Header Project proposed by Atlantic Coast Pipeline LLC and Dominion Transmission Inc., respectively, both of Richmond, Va. The projects consist of a total of 642 miles of natural gas transmission pipeline, three new natural gas-fired compressor stations, and associated facilities and modification of four existing compressor stations in North Carolina, Pennsylvania, Virginia, and West Virginia. The projects would provide approximately 1.44 billion cubic feet per day of natural gas to electric generation, distribution, and end-use markets in Virginia and North Carolina. The final EIS, which was prepared in cooperation with the EPA, the U.S. Army Corps of Engineers, the U.S. Forest Service, and state relevant agencies concludes that the project would result in some adverse and significant environmental impacts that would be reduced to less than significant levels through the proposed mitigation measures. GENERAL ENVIRONMENT AND SAFETY
Classification of Hysteroscopic Insufflator with Cutter-Coagulator
GENERAL ENVIRONMENT AND SAFETY

Final rule of the FDA codifies a final order to classify the closed loop hysteroscopic insufflator with cutter-coagulator into class II (special controls). The device is indicated for use to perform diagnostic and surgical procedures and contains a closed loop recirculating fluid management system for the controlled delivery of filtered distension fluid. The device also contains a bipolar radiofrequency device used in conjunction with a hysteroscope for resection and coagulation of intrauterine tissues. The classification was applicable March 28, 2014. The order is effective July 28, 2017. Contact: Veronica Price; FDA, Center for Devices and Radiological Health; 301-796-6538. GENERAL ENVIRONMENT AND SAFETY

Classification of Oral Removable Palatal Space Occupying Device
GENERAL ENVIRONMENT AND SAFETY

Final rule of the FDA codifies a final order to classify the oral removable palatal space occupying device for weight management and/or weight loss into class II (special controls). The prescription device is worn during meals to limit bite size, thereby reducing the amount of food that is consumed. The device may contain recording sensors for monitoring patient use. The classification does not include devices that are intended to treat any dental diseases or conditions. The classification was applicable Sept. 26, 2016. The order is effective July 28, 2017. Contact: Mark Antonino; FDA, Center for Devices and Radiological Health; 240-402-9980; mark.antonino@fda.hhs.gov. Citations: 21 CFR 876.5981

Difficult to Compound List Nominations
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the establishment of a docket to accept nominations of drug products or drug product categories for inclusion on the list of drugs that present demonstrable difficulties in compounding under Sections 503A and 503B of the Federal Food, Drug, and Cosmetic Act. The docket is intended for nominations not previously submitted under a Dec. 4, 2013, request (78 FR 72840); resubmission of previous nominations with additional supporting information; and comments. The FDA requests that nominations include the name of the product or category and the reason for inclusion on the list, taking into account risks and benefits to patients. The FDA also seeks responses to six questions related to agency criteria presented to the Pharmacy Compounding Advisory Committee for evaluating whether drug products or categories of products are difficult to compound. Comments and nominations for the list may be submitted at any time. Contact: Pawanprit Singh; FDA, Center for Drug Evaluation and Research; 240-402-8866

Genetically Engineered Canola/Determination of Status
GENERAL ENVIRONMENT AND SAFETY

Notice of the Animal and Plant Health Inspection Service announces the determination to extend the nonregulated status of the InVigor® MS8 canola to the canola event MS11 in response to a request from Bayer CropScience LP, of Research Triangle Park, N.C. MS11 has been genetically engineered for male sterility and resistance to the herbicide glufosinate-ammonium using the same mechanism of action as MS8 canola. Bayer stated that the MS11 canola is unlikely to pose a plant pest risk due to its similarity to MS8 canola, the antecedent organism. The determination is effective July 28, 2017. Contact: Cindy Eck; APHIS, Biotechnology Regulatory Services; 301-851-3954; cynthia.a.eck@aphis.usda.gov. Citations: 7 CFR 340

GENERAL ENVIRONMENT AND SAFETY
Software Precertification Pilot Program
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA, Center for Devices and Radiological Health, announces the issuance of the Digital Health Innovation Action Plan concerning the regulation of digital health technologies that are medical devices, and the launch of the Software Precertification Pilot Program to evaluate the agency's approach toward software products. The agency intends to develop a precertification program to replace the need for premarket submissions in certain instances. The pilot program, which is a part of the action plan, will assess companies that perform high-quality software design and testing and allow for input from participants regarding the development of the precertification program. The agency intends to accept requests for voluntary participation in the pilot program beginning Aug. 1, 2017, and the program will begin on Sept. 1, 2017. Comments are requested, but a due date is not specified. Contact: Bakul Patel; FDA, Center for Devices and Radiological Health; 301-796-5528; bakul.patel@fda.hhs.gov

Tennessee Valley Authority NEPA Implementing Procedures
GENERAL ENVIRONMENT AND SAFETY

Notice of the Tennessee Valley Authority announces an extension of the comment period for a June 8, 2017, proposed rule (82 FR 26620) that would update and codify the agency's procedures for implementing the National Environmental Policy Act (NEPA). The rule would update organizational references and reflect modern notification and communication methods. The rule also would revise the list of categorical exclusions to include common actions demonstrated to have little effect on the human environment and to remove categorical exclusions for actions that TVA rarely or no longer uses. In addition, the rule would incorporate federal flood risk management standards and the process for soliciting and considering stakeholder input required by Executive Order 13690 (81 FR 91150; 12/16/2016). Comments now are due Sept. 6, 2017. Contact: Matthew Higdon; TVA; 865-632-8051; mshigdon@tva.gov. Citations: 18 CFR 1318.10 through 1318.605, Appendix A

HAZARDOUS MATERIALS TRANSPORTATION
Carriage of Bulk Solids Requiring Special Handling
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the U.S. Coast Guard announces the submission of a continuing information collection request to the OMB regarding carriage of bulk solids requiring special handling. The collection addresses a special permit used by the USCG to determine the manner of safe carriage for unlisted materials. The collection also addresses information in dangerous cargo manifests and shipping papers that allows vessel crews and emergency personnel to properly and safely respond to accidents involving hazardous substances. Comments are due Aug. 28, 2017. Contact: Anthony Smith; USCG, Office of Information Management; 202-475-3532. Citations: 46 CFR 148

82 FR 35235 (07/28/2017)

Regulatory Update

PESTICIDES

Pesticide Tolerance Exemption/Pseudomonas Chlororaphis Strain AFS009
PESTICIDES

Final rule of the EPA establishes an exemption from the requirement of a tolerance for residues of pseudomonas chlororaphis strain AFS009 in or on all food commodities when used in accordance with label directions and good agricultural practices. The rule eliminates the need to establish a maximum permissible level for the residues when used in accordance with approved conditions. The rule is issued in response to a petition filed by AFS009 Plant Protections Inc., of Durham, N.C. The rule is effective July 28, 2017. Objections and hearing requests are due Sept. 26, 2017. Contact: Robert McNally; EPA, Office of Pesticide Programs; 703-305-7090; BPPDFRNotices@epa.gov. Citations: 40 CFR 180.1341

82 FR 35120 (07/28/2017)

Regulatory Update

PESTICIDES
Pesticide Tolerances/Fenamidone
PESTICIDES

Final rule of the EPA establishes tolerances for residues of the pesticide fenamidone in or on basil, dried leaves at 200 ppm; basil, fresh leaves at 30 ppm; celtuce at 60 ppm; cottonseed subgroup 20C at 0.02 ppm; fennel, Florence, fresh leaves and stalk at 60 ppm; kohlrabi at 5.0 ppm; leaf petiole vegetable subgroup 22B at 60 ppm; leafy vegetable group 4-16 at 60 ppm; and the vegetable, Brassica, head and stem, group 5-16 at 5.0 ppm. The tolerances generally are established as petitioned for by Interregional Research Project Number 4, of Princeton, N.J. The petitioner sought separate tolerances on the subgroups 4-16A and 4-15B, but the EPA established a single tolerance for the whole group. The rule removes several existing crop group tolerances because those groups are covered under the new tolerances. In addition, the name of the existing entry for cilantro is changed to cilantro, fresh leaves. The rule is effective July 28, 2017. Objections and hearing requests are due Sept. 26, 2017. Contact: Michael Goodis; EPA, Office of Pesticide Programs; 703-305-7090; RDFRNotices@epa.gov. Citations: 40 CFR 180.579

Pesticide Tolerances/Topramezone
PESTICIDES

Final rule of the EPA establishes tolerances for residues of the herbicide topramezone in or on sugarcane, cane at 0.01 parts per million. The rule is issued in response to a petition filed by BASF Corp., of Research Triangle Park, N.C. The rule is effective July 28, 2017. Objections and hearing requests are due Sept. 26, 2017. WATER

Aquatic Life Ambient Water Quality Criteria for Aluminum

WATER

Notice of the EPA announces the availability of draft updated aquatic life ambient water quality criteria for aluminum in freshwater. The draft, which updates 1988 criteria, permits users to develop criteria based on site-specific water chemistry and uses a multiple linear regression model to normalize data to develop criteria based on site pH, dissolved organic carbon, and hardness. The criteria would increase the one-day total freshwater acute limit to 1,400 micrograms/liter and increase the four-day total freshwater chronic limit to 390 µg/L for water with specified pH, hardness, and dissolved organic carbon levels. Comments are requested on the science and technical approach used in the derivation of the draft criteria. Comments are due Sept. 26, 2017. Contact: Diana Eignor; EPA, Office of Water; 202-566-1143; eignor.diana@epa.gov

WATER

U.S. Coast Guard/Navigation and Navigable Waters

WATER

Final rule of the U.S. Coast Guard makes technical revisions to regulations associated with navigation and navigable waters. The revisions align the regulations with International Regulations for Preventing Collisions at Sea and clarify location and boundaries of Activities Europe Marine Inspection Zone. In addition, the revisions reflect the transfers of functions from the Secretary of War to the Secretary of Transportation to the Secretary of Homeland Security and address inland navigation standards and deepwater ports. The rule also deletes obsolete references, updates cross references, and makes editorial corrections. The rule is effective July 28, 2017. Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Federal Ruling Could Block Coal, Oil and Gas Projects Across U.S.

Posted August 16, 2017, 03:37 P.M. ET

By Stephen Lee

Environmentalists say a recent district court decision stopping the expansion of a Montana coal mine provides a blueprint for them to block other coal, oil, and gas projects across the country.

"The decision has national significance, and it can and will be applied in other cases that we are bringing to challenge the federal government's analysis of coal development, oil and gas development, and other fossil fuel projects," Laura King, staff attorney at the Western Environmental Law Center, told Bloomberg BNA.

Especially vulnerable could be two Bureau of Land Management decisions. A 2015 decision made more than 80 billion tons of coal and nearly 10 million acres of land available for federal oil and gas leasing in Wyoming's Power River Basin. Another decision approved 147,000 acres for oil and gas leasing in Colorado, King said.

The U.S. District Court for the District of Montana found Aug. 14 that the Office of Surface Mining Reclamation and Enforcement (OSMRE) didn't consider the social cost of Signal Peak Energy's proposed expansion of Bull Mountain Mine in Montana (Mont. Envtl. Info. Ctr. v. U.S. Office of Surface Mining, 2017 BL 283856, D. Mont., No. CV 15-106-M-DWM, 8/14/17).

The court ruled OSMRE violated the National Environmental Policy Act by focusing on the benefits of the mine plan while minimizing the environmental and social impacts of trains transporting coal to ports in Canada and on the Great Lakes, as well as the air pollution emissions of coal combustion.

Strategy's Potential

Hayden Baker, an attorney with Sullivan & Worcester LLP, told Bloomberg BNA that the decision "really shows how courts—and, by extension, non-governmental organizations and states—can continue to use the other mechanisms at their disposal to slow down infrastructure in mining."

But Baker also cautioned that one impediment to environmentalists using the strategy again is that each case is different and highly contingent on specific sets of facts.

"What's more important is that they scored a win here and will therefore push their strategy further," he said. "Any case will be dependent on how good a job the agency or proponent did in justifying their National Environmental Policy Act Review. So yes, while opponents will push forward with this strategy, it's hard to gauge the precedential value this has because it's always so fact-specific."

Signal Peak Responds

Mike Dawson, a spokesman for Signal Peak Energy, told Bloomberg BNA that the company will be "evaluating all of our options" in the coming weeks and months. For now, the mine remains open, and no workers have been laid off, Dawson said.

"Depending on a number of factors, this court decision could affect some operations in the future," Dawson said.

Luke Popovich, a spokesman for the National Mining Association, told Bloomberg BNA that, "aside from the absence of any legal obligation to consider these wider costs, there is no actionable, reliable value in doing so."

China Coal Capacity Cuts Parallel Nudge Toward Gas Production

Posted August 16, 2017, 11:10 A.M. ET

By Michael Standaert

China is more than halfway to its goal of cutting 800 million metric tons of coal production capacity by the end of 2020, signaling to investors the government isn't projecting coal production to grow much more.

The National Energy Administration announced Aug. 14 that it cut 111 million metric tons in the first six months of 2017, following a cut of 290 million metric tons in 2016.

While most of the cuts have targeted operations with lower quality coal, and "zombie firms" that operated with minimal actual production, the efforts could mean reducing coal consumption and air pollution in the long term, and have beneficial climate impacts as funding moves toward utilizing coal-bed methane and shale gas.

"[The cuts] may not have visible [short-term] impact to reduce air pollution in urban centers, where coal consumption rather than production is the main culprit," Ranping Song, climate policy associate at the World Resources Institute in Washington, told Bloomberg BNA Aug. 16.

"However, closing mines send signals that the government does not project coal production to grow significantly and [that] the energy transition is already underway," Song said. "It encourages workers and investors to move on from coal."

The NEA aims to cap the coal-fired power supply at 1.1 billion kilowatts by the end of 2020, and seeks to cut or slow some 150 million kilowatts of planned coal-fired capacity to meet those goals, according to an Aug. 2 notice.

NEA officials said in late July that total coal consumption increased by about 1 percent in the first half of 2017 over the same period in 2016, but that coal power as a proportion of the energy mix dropped 0.6 percent in that period, reflecting increased use of natural gas and renewable energy.

Transforming the Coal Industry

Nudging the coal industry toward coal-bed methane and shale gas in areas within the Sichuan basin of central and southwest China goes hand-in-hand with efforts to reduce coal production capacity and cap coal-fire power.

In Guizhou province in the southwestern part of the country, the provincial government will provide 1 billion yuan per year ($787 million) in subsidies for coal companies to reduce production capacity and adopt more coal-bed methane and other upgrades.

Shanxi province is also in the process of auctioning coal-bed methane mining rights as part of a pilot program which is expected to start this year, state-run media reported Aug. 14.

China's Ministry of Land and Resources announced on Aug. 15 that in 2016, shale gas production reached 7.88 billion cubic meters while coal-bed methane reached 4.5 billion cubic meters.

The U.S. Energy Information Administration projects that around 40 percent of China's natural gas production will come from shale gas by 2040, making it second only to the US in shale-gas production.

Potential Climate Benefits

Capturing coal-bed methane before it leaks into the atmosphere from old coal mines could significantly reduce some of China's greenhouse gas emissions, according to Song.

Leaking methane from coal mining in China was estimated at around 300 megatons of carbon dioxide equivalent, or about 18 percent of annual non-carbon emissions, according to 2010 data.

"Capturing coal-bed methane, especially from coal mining activities, would have significant climate benefits," Song said adding that research suggests that if China meets 13th Five-Year Plan (2016-2020) targets for coal-bed methane exploitation, coal mining-related methane emissions could drop to about 173 megatons of carbon dioxide equivalent by the end of 2020.

"These are efforts to modernize the energy industry as well as move to less polluting fuels," Song said.

Still, there is insufficient data at the moment to determine the amount of leakage occurring during coal-bed methane and shale gas production operations in China, Song cautioned.

Climate Bonds Pioneered by Goldman Lure Storm-Plagued Cities

Posted August 16, 2017, 10:20 A.M. ET

By Christopher Flavelle

As climate change pushes U.S. cities to build protections against stronger storms and more frequent floods, the Rockefeller Foundation is helping cities with a novel kind of financing, one that transfers some of the risk of innovative projects from cities to investors.

The foundation, established with John D. Rockefeller's oil wealth, announced today it will pay

$342,000 to underwrite the costs for two municipalities in issuing environmental impact bonds, pioneered by The Goldman Sachs Group Inc. and Washington, D.C. More than a dozen cities have expressed interest in the bonds, which link an investor bonus or penalty to how well the underlying project works.

"You take the risk off the project not working" for city officials, said Saadia Madsbjerg, who leads the Rockefeller Foundation's work on financial innovation. "There are many, many municipalities that have the exact same problem that D.C. has."

The goal is to give local governments room to experiment with ways of protecting their residents against the impacts of climate change by providing a sort of insurance policy against failure of the micro-grids, flood walls or other untested projects. For investors, there's a upside, too: If the project works better than expected, they get a bonus payment.

U.S. Offshore Lease Sale Draws $121 Million in High Bids

Posted August 16, 2017, 02:29 P.M. ET

By Catherine Traywick (Bloomberg)

A U.S. auction of offshore oil and gas leases in the Gulf of Mexico drew $121 million in high bids from 27 companies Aug. 16. The top bidders were Royal Dutch Shell Plc, Chevron Corp., Exxon Mobil Corp., Total S.A., and Anadarko Petroleum Corp. The sale drew 99 bids on 90 tracts. The last Gulf of Mexico lease sale, in March, drew $275 million in high bids on 163 tracts.

Oil companies have reduced their capital spending over the last two years amid a prolonged market slump, a factor alluded to by Randall Luthi, president of the National Ocean Industries Association, in a statement issued after the sale.

"While the results of today's Gulf of Mexico oil and gas lease sale reflect market realities, they also demonstrate the offshore oil and gas industry's commitment to the U.S. Gulf of Mexico, even with extended low commodity prices and lingering regulatory dysfunction," Luthi said.

The sale was the first of 10 scheduled under Bureau of Ocean Energy Management's current five-year leasing program, which runs from mid-2017 to mid-2022.

Trump Push for Natural Gas Exports Opposed by Manufacturers

Posted August 16, 2017, 11:22 A.M. ET

By Ari Natter

President Donald Trump's effort to boost U.S. energy is facing push back from manufacturers who say exporting more natural gas may undercut his "America First" jobs focus.

The Industrial Energy Consumers of America asked the administration Aug. 16 for a moratorium on U.S. approvals for liquefied natural gas projects. The trade association, which represents U.S.

manufacturers that depend on cheap energy to fuel their factories, sent a letter to Energy Secretary Rick Perry Aug. 16.

It's "inconsistent with President Trump's fair trade and America-first policy," Paul N. Cicio, the group's president, said in a phone interview. "It's a stunningly breathtaking amount of natural gas that could be exported."

The dispute between oil and gas companies and manufacturers is but one among business groups over Trump's agenda. Oil companies oppose Trump's idea to require that pipelines be made in the U.S.; agriculture producers oppose some of his trade policies; and refiners have pushed the White House to drop consideration of sanctions on Venezuelan oil imports.

In its letter, the energy consumers group says that exports could drain as much as two-thirds of U.S. natural gas resources by 2050. The group doesn't disclose its members, but its 2015 tax filing says it represented The Dow Chemical Co., Corning Inc. and other factory owners. The chief executives of both companies, Andrew Liveris for Dow and Wendell Weeks for Corning, are members of the president's manufacturing council.

Neither Dow nor Corning responded to requests for comment.

More Approvals

"We remain alarmed at the volume of LNG exports that have been approved for periods of 20-30 years," the group says in its letter. "Of greatest concern, is that the administration has said publicly that it will approve more applications to export" to countries that don't have a free-trade agreement with the U.S.

The dispute shows how Trump's formulation of American energy dominance could have a downside for other U.S. companies, said Kevin Book, managing director of Washington-based ClearView Energy Partners LLC.

"The question isn't about the next five years, it's about the next 20 years," Book said in an interview. "For anyone who is making an industrial investment in the U.S. these days is thinking very much in that time frame."

U.S. natural gas futures have risen since the first cargo of liquefied shale gas left Louisiana's shores last year—and more of the fuel is slated to set sail this year as Cheniere Energy Inc. starts up another LNG plant at its Sabine Pass terminal.

Meanwhile, the natural gas industry rejects the idea the U.S. doesn't have enough natural gas supplies to do it all.

"It advances our national security interests by providing allies access to diverse sources of energy, improves the global environment and contributes to correcting the U.S. trade deficit," said Charlie Riedl, executive director for the Center for LNG, which represents companies such as Golden Pass LNG, a Texas export terminal being developed by a joint venture of Qatar Petroleum, ExxonMobil Corp. and ConocoPhillips. "The U.S. has a limited window to take advantage of new demand."

The number of countries seeking to import U.S. liquefied natural gas has increased to 39 from 10 in 2000, according to the Washington-based trade group. ©2017 Bloomberg L.P. All rights reserved. Used with permission

Scana Needs`Willing Partner' to Resume Nuclear Construction

Posted August 16, 2017, 12:43 P.M. ET

By Jim Polson, Robert Lavelle, and Mark Chediak

Scana Corp. executives said the company would need to sign new contracts to revive construction on a South Carolina nuclear power plant—and that federal tax credits would be "an important factor."

The executives were commenting on the company's withdrawal of a petition to abandon work at the V.C. Summer nuclear station in an Aug. 16 conference call.

Scana halted construction last month on the nuclear power plant after its price tag ballooned to more than $20 billion. It withdrew its petition to officially abandon the project on Aug. 15, giving state officials more time to review the plan.

On the conference call, Scana CEO Kevin Marsh said the company would need to find a "willing partner" before the project could be resumed. Restarting work would take about a year, including signing new agreements with a new partner, a construction contractor and with Westinghouse for nuclear services and support, and there would also be the issue of qualifying for tax credits.

Nuclear abandonment remains the right decision, the executives said. Scana still expects to seek abandonment costs from customers but hasn't set a deadline to revive abandonment cost request.

Mishap Triggers Taiwan Blackout as Power Policies Questioned

Posted August 16, 2017, 9:54 A.M. ET

By Bloomberg News

A blackout caused by a blunder at Taiwan's biggest gas-fired plant is the latest challenge to an electricity grid recently pushed to its limit and to President Tsai Ing-wen's efforts to reshape the island's power mix.

A combination of unusually hot weather, infrastructure damage from typhoons, and Tsai's drive to abandon nuclear power left Taiwan barely able to supply sufficient electricity to residential and business users in the past week. That balance gave way late Aug. 15 when the Tatan power plant, which accounts for almost 9 percent of the island's generation capacity, stopped after workers accidentally shut off its natural gas supply.

Tsai publicly apologized for the power outage that hit more than 6 million households and disrupted some semiconductor production. Electricity was restored by 10 p.m., but not before Lee Chih-kung, Tsai's economy minister, offered his resignation. Both the operator and supplier of the plant, Taiwan Power Co. and CPC Corp., are state-run.

"The outages hurt President Tsai's creditability," Jeffrey Bor, economics professor at Chinese Culture University in Taipei, said by phone. "The impact on the economy is comprehensive. It's like

sending a signal to companies to escape fast, because of the risks of electricity supply disruption."

Shift to Gas, Renewables

While the Aug. 15 outage was caused by human error, the blackouts heightened scrutiny of Tsai's policies, including a pledge to rid Taiwan of nuclear and cut its use of coal. The island, which plays a critical role in the world's electronics supply chain, will rely instead under her plan on natural gas, renewables, and distributed generation, which entails multiple, smaller power sources that decrease reliance on single plants and can offer greater grid stability.

The disruption occurred when engineers replacing power supply equipment for a control system at Tatan's metering station didn't switch the system from automated to manual before starting the work, according to CPC Corp., which provides the plant natural gas. That resulted in two valves being automatically closed, one for about six minutes, shutting off gas supplies.

There had been multiple warnings about Taiwan's electricity reliability before the blackouts. A week earlier, state-run utility Taiwan Power Co. issued a red alert as the operating reserve margin, the amount of maximum capacity available above peak demand on a particular day, fell to the second-lowest on record. Business associations, including the Chinese National Federation of Industries, had called for slowing the pace of closing nuclear plants.

Tsai's apology, posted on Facebook late Aug. 15, included a reiteration of her determination to push forward phasing out nuclear in favor of renewable energy.

"The government is promoting distributed green energy to avoid the situation where an incident at a single power station can affect the power supply for the whole country," Tsai wrote. "We will not change course. Today's incident only makes us more determined."

New Plants Delayed

New capacity not being delivered on schedule is compounding Taiwan's energy woes, according to Kerry Anne Shanks, a Singapore-based analyst at Wood Mackenzie Ltd.

"Commissioning of the new gas-fired units has been delayed again and again," Shanks said by email Aug. 16. "There are now appeals for a review of the nuclear phase-out policy. The government remains committed to a nuclear-free Taiwan by 2025, but this stance will depend on whether the power system can survive the summer."

Taiwan has mothballed one of its four nuclear power stations, and three of the remaining six remaining reactors are shut down. Wu Tsai-yi, president at Taiwan Research Institute, said the restart of two of the shut reactors has been stalled by lawmakers. Nuclear made up 12 percent of Taiwan's power mix last year, down from 17 percent in 2013, according to its Bureau of Energy.

Legislation passed in January set a goal of getting rid of nuclear power by 2025, as well as lowering the share of coal to 30 percent, and raising natural gas to 50 percent, with the remainder coming from renewables, according to Bloomberg New Energy Finance.

Taiwan's three shut reactors—both units at Jinshan and the No. 2 unit at Kuosheng—have combined capacity of almost 2.26 gigawatts, according to the Atomic Energy Council. The Tatan plant accidentally shut Aug. 15 can produce 4.38 gigawatts, according to Taiwan Power Co., known as Taipower. The country's total generation capacity is 49.9 gigawatts, according to Bureau of Energy, Ministry of Economic Affairs.

Semiconductors

The impact so far on Taiwan's technology industry has been limited. Advanced Semiconductor Engineering Inc. said production lines are operating again at two plants hit by the blackout and the company is evaluating any losses. ChipMOS Technologies Inc. said production has been restored, while Taiwan Semiconductor Manufacturing Co. said there was no impact on output, with all lines operating as normal.

Advanced Semiconductor and TSMC are both suppliers to Apple Inc. The main assembler of iPhones, Hon Hai Precision Industry Co., locates most of the production for the U.S. company in mainland China.

The power cut Aug. 15 hit Taiwan's Hsinchu Science Park, the "heart" of its semiconductor industry, said Annabelle Hsu, a senior research manager in Taiwan at International Data Corp.

"Factories there are running 24 hours a day, so sudden power cut without warning could cause a big damage," Hsu said.

Tesla Skipping Green Bond Label Keeps Fledgling Market Limited

Posted August 16, 2017, 8:15 A.M. ET

By Emily Chasan

Investors are hungrier than ever for green bonds, yet companies known for their sustainable prowess—including Tesla Inc.—are choosing to sit out, raising questions about just how valuable the green bond label is.

U.S. non-financial companies have been among the slowest to embrace green bonds—debt that's designated to only finance eligible green projects—issuing just $4.3 billion last year, a tiny fraction of an overall U.S. corporate bond market that sold $1.6 trillion. U.S. companies are expected to issue $5.2 billion in green bonds this year, meaning a green label for Tesla's offering last week would have grown U.S. corporate issuance in 2017 by more than a third, according to Bloomberg New Energy Finance data.

Tesla, whose declared mission is to accelerate the world's transition to sustainable energy, didn't need the label as much as the nascent green bond market needed Tesla. Green bonds are a way for big companies to highlight their sustainable credentials, and also to help little-known renewable energy companies get the attention of institutional investors with like-minded interests. Tesla doesn't fit in either of those buckets.

"Even if a company does know what a green bond is, and understands that they could issue one, they may not see any outright benefits in doing so, versus the costs and commitments associated with issuing a green bond," Daniel Shurey, a green bonds analyst at BNEF, said in an email.

Companies that issue green bonds say they help attract a more diverse and long-term oriented

group of investors than they would otherwise. They're betting the label can improve liquidity, lead to more committed bondholders or at least raise their profile among green investors. Global assets linked to sustainable and responsible investing strategies hit $23 trillion at the end of 2015, according to the Global Sustainable Investment Alliance.

SolarCity Corp. was one of the most frequent issuers of green bonds before Tesla bought it in 2016. The company used the offerings as a way to raise low-cost money directly from environmentally friendly investors.

Palo Alto, Calif.-based Tesla didn't comment on why it chose not to designate the recent offering as green. But with the company led by Chief Executive Officer Elon Musk already a household name in zero-emission automobiles, it may not have needed to spend the extra money and time to snag the certification.

Costs, Commitments

Interest was high for Tesla's debt sale regardless, with the B3/B- rated deal aimed at supporting production of its mass-market Model 3 electric car increased to $1.8 billion from the original $1.5 billion. The 5.3 percent coupon was a record low for a bond of its rating and maturity, according to data compiled by Bloomberg.

Costs to certify an offering as green can vary significantly. Sean Kidney, chief executive and co-founder of the Climate Bonds Initiative, estimates annual certification costs at between $18,000 and $41,000. Tesla choosing not to label its bond green was a "missed opportunity" for a fledgling sector hungry for another marquee name, he said.

"At the very minimum issuing green bonds for Tesla is a way to highlight its obvious green credentials to an investment community that is thirsty for green bonds," said Kidney, whose London-based nonprofit aims to grow the environmentally friendly bond market.

Though corporate green bonds continue to lag, issuers globally are expected to sell a record $131 billion green bonds this year, up from from just $5 billion in 2012, BNEF data show. The pickup has been led by development banks, municipalities and sovereign issuers who've jumped into the market to meet global climate change goals.

Green Demand

Investors with more than $11 trillion in assets have signed onto the Paris Green Bonds Statement, aimed at boosting issuance in the market. Ethical investors, ranging from millennials to public pensions, increasingly seek out the bonds as a way to offset broader climate risks in their portfolios. Many green offerings are several times oversubscribed and underwriters report rapidly filling order books for green bonds.

"There just aren't enough green bonds to go around," BNEF's Shurey said.

Corporate green bonds have taken hold more quickly at European companies, as issuers there face more pressure from central banks and institutional investors to help lower carbon emissions. In the U.S., companies have been more hesitant amid concerns about backing up their green credentials legally or being accused of "greenwashing," or trumping up their commitments to clean energy.

A handful of other automakers including the finance arms of Hyundai Motor Co. and Toyota Motor Corp. have issued green bonds to fund consumer purchases or development of electric vehicles. In

those cases, green investors may have needed the label to see that the proceeds were going to projects they supported.

"There is a tacit acceptance by green bond funds that their investible universe is, at least at present, limited," Alastair Sewell, a senior director at Fitch Ratings' fund and asset manager rating group in London, said in an email. "In the case of Tesla, were a green bond fund to consider Tesla sufficiently 'green' in and of itself, then it might consider the issue despite it not being a labeled green bond."

Subject: EPA adds 26 more states to E15 waiver

By Eric Wolff

08/31/2017 02:39 PM EDT

EPA is adding 26 states to a Clean Air Act waiver that allows the sale of 15 percent ethanol gasoline blends, effectively ending the summer restriction on sales of the fuel because of Hurricane Harvey.

The agency provided the waiver to 12 states and the District of Columbia on Wednesday.

AAA shows the national gas price average up 10 cents a gallon from a week ago, before Harvey hit.

The list of states with E15 waivers now includes about two-thirds of the country, but excludes the western states.

The Department of Energy is also trying to ease pressure on gas prices — the agency said it would release 1 million gallons of crude from the Strategic Petroleum Reserve to a Phillips 66 refinery to help ease supply constraints. Harvey has caused the closure of 20 percent of the nation's refining capacity.

Democratic leaders Chuck Schumer and Nancy Pelosi said they will not attend a meeting at the White House Tuesday after President Donald Trump slammed them in a tweet.

"Given that the President doesn't see a deal between Democrats and the White House, we believe the best path forward is to continue negotiating with our Republican counterparts in Congress instead," the Senate and House minority leaders said in a statement.

Subject: POLITICO's Morning Score: Representatives enter races for governor — Battle kicks off for Delaney's seat — New candidates in Minnesota and Tennessee

By Maggie Severns | 08/07/2017 10:00 AM EDT

With Zach Montellaro

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

GREENER PASTURES - Reps make bids for governor: POLITICO's Heather Caygle and Kevin Robillard report that half of the 18 retiring House members are leaving Capitol Hill next year to run for governor, but their chances of winning those races may be slim. "The last time this many sitting representatives ran for governor, in 2006, twice as many lost as won. Lawmakers are motivated partly by the quest for more power - being one in a village of 435, especially in the Democratic minority, only gets you so far. They are also seeking the chance to assist or resist the Trump administration, depending on their party, in implementing new policy throughout the states," report Caygle and Robillard. "For Democrats in particular, the choice between another term in the House minority or the chance to lead their home states can be an easy one. 'It's a good partnership to have folks who have federal experience, have relationships here but can be the governor of their states so they don't execute some of these federal changes in a way that harms their citizens,' said Rep. Michelle Lujan Grisham (D-N.M.), who announced in December that she would run for governor in 2018. 'And you would be in charge of redistricting.'"

"On the GOP side, members have watched Republican governors make political gains and pass major policy initiatives throughout the Obama administration, and they want in on the action. ... Rep. Diane Black, a four-term Republican from a safe GOP seat in Tennessee, became the latest lawmaker to launch her gubernatorial campaign last week. The current House Budget chairwoman joins eight other lawmakers, as well as a handful of others who are considering runs." Full story here.

THE HOUSE SCRAMBLE - Expensive battle kicks off for Delaney's seat: Elena Schneider has the story: "Rep. John Delaney 's quest for the presidency set off a scramble for perhaps the only competitive House district in Maryland. And the price tag for the Democratic-leaning seat jumped significantly last week, after wine retailer David Trone, who sunk $13 million of his own money on his 2016 primary bid for a neighboring district, entered the race," Schneider reports. "Republicans are eyeing the seat, too. The district comfortably backed former President Barack Obama and Hillary Clinton, but in 2014, Republican Gov. Larry Hogan won it handily. Amie Hoeber, who lost against Delaney in 2016, is considering another run, and former state Del. Matt Mossburg already announced his bid."

"Democrats, however, are bullish about their chances to hold on to the seat. 'This is a district - with the fundraising base and the media market - where a real Democratic leadership star could emerge,' said former DCCC deputy executive director Jesse Ferguson." Full story here.

Days until the 2017 election: 92.

Days until the 2018 election: 456.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com

HEALTH CARE BLOWBACK - House Majority PAC launches billboards: House Majority PAC is launching a series of billboards across the country hitting Republicans on health care. The first billboard will go up today in GOP Rep. Fred Upton's Michigan district. The billboard focuses on a so-called "age tax" in the GOP health plan that allows insurers to charge higher premiums for people over 50, and directs viewers to a website with information.

CHASING AMY - State Rep. Jim Newberger announces Minn. Senate run: Minnesota Republican Jim Newberger announced on social media over the weekend he plans to challenge Democratic Sen. Amy Klobuchar in 2018. "For over a decade, millions of Minnesotans have had no voice in the U.S. Senate. Sen. Amy Klobuchar has rejected them," Newberger wrote. He pledged to repeal Obamacare and fight for a simpler tax code, among other things, in the post.

- And a new gov candidate in Tennessee: Craig Fitzhugh, the Democratic leader in the Tennessee House of Representatives, plans to run for governor in 2018. Fitzhugh's entry means there will be a contested race for governor next year. Full story.

DAILY ROLL TIDE - Poll finds tight race in Alabama: A poll released by a GOP blog on Friday found a tight race between the GOP candidates for the Alabama Senate seat currently held by Sen. Luther Strange, the Montgomery Advertiser reports. Alabama Chief Justice Roy Moore led Strange 31 percent to 29 percent in the poll, and Rep. Mo Brooks garnered 19 percent of the vote. The poll had a margin of error of plus or minus 5 percentage points.

- Two dispatches from D.C. journalists: Brooks was working the campaign trail over the weekend and defending himself against the slew of Senate Leadership Fund ads targeting him. Here's his defense, as told to voters in Gadsden, Ala., via CNN's Juana Summers: "'Previously he was just attacking me, trying to push me down to get into a runoff with Roy Moore,' Brooks told the group. 'And now that he's attacking both me and Roy Moore, that suggests that our polling data is more like his, it shows that there is a chance that he won't make the runoff and that scares the willies out of (Senate Majority Leader) Mitch McConnell and all the special interest groups who are investing in Luther Strange in this race.'"

More from Bridget Bowman at Roll Call: "The key challenge facing Brooks is how to spread his campaign message - which he boiled down to 'ethics, proven conservative, and I'm the candidate that supports Donald Trump's agenda' - while also counteracting the negative ads. In the home stretch of the primary, Brooks has launched a 'Drain the Swamp' bus tour around the Yellowhammer State, borrowing a phrase from Trump's own campaign. On Thursday, he stopped in four towns in northern Alabama."

- Brooks picks up FreedomWorks endorsement: FreedomWorks PAC president Adam Brandon said over the weekend that "it is becoming clearer every day that we need members of Congress who will not only vote the right way but actually fight for free-market, limited government principles," and the conservative group is thus supporting Brooks in the race, The Hill reported.

WEEKEND BUZZ - Republicans run shadow presidential campaigns: Republican party stars including Vice President Mike Pence are scheduling events as if they're preparing for 2020 primary season, write Jonathan Martin and Alexander Burns write at The New York Times. The White House is, predictably, not pleased: "Asked about those Republicans who seem to be eyeing 2020, a White House spokeswoman, Lindsay Walters, fired a warning shot: 'The president is as strong as he's ever been in Iowa, and every potentially ambitious Republican knows that.' But in interviews with more than 75 Republicans at every level of the party, elected officials, donors and strategists expressed widespread uncertainty about whether Mr. Trump would be on the ballot in 2020 and little doubt that others in the party are engaged in barely veiled contingency planning." Full story.

- Pence swiftly issued a statement denouncing the story: "Today's article in the New York Times is disgraceful and offensive to me, my family, and our entire team," Pence said. "The allegations in this article are categorically false and represent just the latest attempt by the media to divide this Administration." POLITICO's David Cohen has more here.

FLIP FLOP FLAP - Manchin avoids Justice fallout: West Virginia Gov. Jim Justice's decision to flip from Democrat to Republican may complicate Democratic Sen. Joe Manchin 's path to reelection in the Senate, but Manchin appears to be soldiering on as usual, POLITICO's Gabriel Debenedetti and Robillard report. Republicans immediately began attacking Manchin, but "Manchin's name barely surfaced on West Virginia's political talk radio programming on Friday. And neither Manchin, the Democratic infrastructure backing him, nor any of his Republican challengers immediately changed their strategies in the aftermath of Justice's surprise move," write Robillard and Debenedetti. Full story.

SHAKEUP - Three RNC staffers head for the exits: Three aides at the Republican National Committee are departing in the coming weeks, POLITICO's Alex Isenstadt reports. Deputy chief data officer Liam O'Rourke, director of political data support Ashley Burns and director of business intelligence Patrick Stewart are all planning to exit at an awkward time for the committee as it gears up for the 2018 elections. Full story.

CODA - QUOTE OF THE DAY: "I'm doing what I think my voters expect of me." - GOP Sen. Jeff Flake, while explaining to NBC's "Meet the Press" on Sunday that he has no plans to quit the

Republican party.

Subject: Morning Energy: FERC quorum a-coming? — Pruitt reverses course on ozone delay — No place like Gold King in August

By Annie Snider | 08/03/2017 05:41 AM EDT

With help from Eric Wolff, Alex Guillén, Darius Dixon and Esther Whieldon.

FERC QUORUM SO CLOSE YOU CAN ALMOST TASTE IT: Late Wednesday, the White House officially sent the nominations for FERC nominees Rich Glick and Kevin McIntyre to the Senate, raising the prospect that the agency's six-month stretch without a quorum will finally get resolved, Darius Dixon reports.

FERC has been unable to make major decisions on everything from interstate natural gas pipelines to liquefied natural gas export terminals to anti-market manipulation cases since early February. With the paperwork delivered, particularly for Democratic nominee Glick, the industry's Eye of Sauron-like attention is trained entirely on the Senate. GOP nominees Neil Chatterjee and Rob Powelson received approval from the Senate Energy and Natural Resources Committee in June, but their confirmations were stalled by Democrats amid battles over Obamacare and the tradition of molding bipartisan nomination packages for the agency.
The calculation happening now is determining whether Glick's nomination — rather than his actually confirmation — is enough for Democrats to accept Chatterjee and Powelson being confirmed before the Senate skips town for recess. "They're trying to structure a package that gets both sides interested enough to get everybody behind it," Sen. John Thune, the GOP No. 3, told ME. "I know that the FERC absences are on everybody's radar screen." Other senators said they expect a plan for FERC action to materials today.

Nominations across the federal government have been piling up for potential 11th-hour action ahead of the Senate's plans to depart for its abbreviated August break, no later than next week. The White House also officially delivered nominations Wednesday for John Henderson to lead the Air Force's energy, environment and installations program and Ryan Nelson to be Interior Department Solicitor.

In the meantime, Senate Majority Leader Mitch McConnell teed up a noon vote today on Dan Brouillette's nomination to be Deputy Secretary of Energy.

Optimistic Yucca foe: Nevada Sen. Dean Heller, who held up the nomination to protest Brouillette's support for a nuclear waste repository in his home state, lifted that hold after making progress on Yucca Mountain, his office told ME, declining to elaborate.

PRUITT REVERSES COURSE ON OZONE IMPLEMENTATION DELAY: EPA Administrator Scott Pruitt has dropped his plan to delay a key step in implementing the 2015 ozone standard — deciding which areas hit the air quality target. Pruitt had originally said he didn't think EPA had the necessary data to decide on the designations by the Oct. 1 deadline, a move that drew lawsuits from environmental groups and blue states. But a pre-publication

Federal Register notice Pruitt signed Wednesday says that "the information gaps that formed the basis of the extension may not be as expansive as we previously believed."

The notice hints, however, that there may yet be regional delays made on a case-by-case basis. "The Administrator may still determine that an extension of time to complete designations is necessary, but is not making such a determination at this time," it states. Here's Alex Guillén with more.

YOU MADE IT TO THURSDAY! I'm your fill-in host, Annie Snider, and I know it's not surprising, but I am still impressed with y'all's knowledge of nuclear history. Dan Meyer of the Duberstein group was the first across the finish line with yesterday's trivia, correctly answering that the August 2, 1939 letter written by Leo Szilard and signed by Albert Einstein warned President Franklin D. Roosevelt that Germany could develop an atomic bomb and urged the U.S. to begin its own nuclear program — which eventually became the Manhattan project. Dan has today's question: Name the official currently in the line of presidential succession who is ineligible to be president. Send your guesses — and your tips, energy gossip and comments to asnider@politico.com or follow us on Twitter @AnnElizabeth18, @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

THE GLASS IS NOW 40 PERCENT FULL: EPA put out an annual report Wednesday touting decreased emissions amid a growing economy over the last quarter-century — old news to those following the issue. But as Mother Jones reporter Rebecca Leber pointed out Wednesday on Twitter, the 40 percent non-attainment rate for ozone EPA Administrator Scott Pruitt has used in the past to attack the Obama administration's environmental record is now an EPA win. "Despite this success, there is more work to be done," Pruitt said in a statement. He vowed to work with states to improve air quality. Environmentalists also noted a changed tune. EPA's report credits the pollution reductions to "implementation of the Clean Air Act and technological advancements." As the NRDC's John Walke pointed out, many innovations came about because of demand created by regulations. "It's not like electric utility sector was clamoring for scrubbers prior to any Clean Air Act rules warranted using them," he wrote.

ANNIVERSARY GETAWAY: Pruitt is scheduled to tour the Gold King Mine with Colorado Gov. John Hickenlooper (D) and Sen. Cory Gardner (R-Colo.) on Friday, just ahead of the 2-year anniversary of the 2015 spill of 3 million gallons of wastewater by an EPA crew, the Denver Post reports. The disaster has become a favorite example for congressional Republicans of EPA ineptitude.

Gina McCarthy, who was EPA administrator at the time of the spill, visited command centers and people affected by the toxic wastewater that eventually reached the Colorado River, but did not visit the actual mine. EPA said at the time that the area was too remote and difficult to access, and that they did not want to interfere with emergency operations underway.

Road-trippin': Already on the road, Pruitt swung through Indiana Wednesday, where he spoke Wednesday with Gov. Eric Holcomb (R) and farm interests about the Waters of the U.S. rule, which EPA is in the midst of withdrawing and rewriting, and also visited Liberty Mine. Next week he'll be back on the topic of the water rule while in North Dakota, the Bismarck Tribune

reports.

INTERIOR NO. 2 CALLS OUT EMPLOYEES WHO "PARROT" SPECIAL INTERESTS: After being sworn in as Deputy Interior Secretary on Tuesday, David Bernhardt sent a missive to department employees calling out "a few people" who he said "parrot comments of special interests rather than carry out their governmental duties." Bernhardt, who was opposed by most Senate Democrats, in part over potential conflict of interests concerns related to his former job as a lobbyist and lawyer for various industries, warned employees in the email obtained by POLITICO that such people "often avoid grounding their views in the actual facts or the law." Esther Whieldon's got the rundown here.

FALSE ALARM? Some climate change information disappeared from the Department of Agriculture's website late last week before reappearing late yesterday, according to a report from the Environmental Data & Governance Initiative. The missing pages from USDA's "Climate Hubs," which provide tools to help farmers and land managers adapt to climate change, "were the result of the site being migrated to a new server," an agency spokeswoman said.

Agriculture Secretary Sony Perdue and the nominee to be his chief scientist, Sam Clovis, have both questioned human-caused climate change. But Perdue has said he's committed to "digging ever deeper" into research about agricultural production in a changing climate.

NOTHIN' TO SEE HERE: Southern Co. CEO Tom Fanning spent Wednesday morning trying to squash speculation that the Vogtle nuclear project is facing a similar fate to the two-reactor project slated for shutdown in South Carolina. On a call with analysts, Fanning argued "there are a host of differences" between the two projects, with project backers on track to decide by the end of this month how to proceed. Here's Darius Dixon with more.

SPECIAL COUNSEL INVESTIGATING OBAMA-ERA WHISTLEBLOWER FIRING: The U.S. Office of Special Counsel has launched a whistleblower investigation into the Obama administration's firing of an Interior Department employee who raised concerns over the agency's plan to approve Shell's Arctic offshore drilling lease, Esther Whieldon reports. The U.S. Merit Systems Protection Board this week granted the counsel's request to require the agency to reinstate Jeffrey Missal as the regional environmental officer with the agency's Bureau of Safety and Environmental Enforcement in Anchorage, Alaska while the office of special counsel investigates.

A MONIZ FOR THE AGES: Former Energy Secretary Ernest Moniz returned to old stomping grounds at the Energy Department Wednesday as a guest of honor for the unveiling of his official portrait to an auditorium of current and former agency employees. NNSA Administrator Frank Klotz presided, and Moniz's successor, Rick Perry, gave speech. Both Moniz and Perry got plenty of laughs out of the attendees, which included ex-Energy Secretary Bill Richardson, former DOE deputies Elizabeth Sherwood-Randall and Dan Poneman, and Obama Health and Human Services chief Sylvia Burwell, who is now president of American University.

Moniz quipped that he was honored so many people gathered for his "official designation as a historical artifact" before engaging in an extended explanation of everything in Chris Saper's

painting, which included "The Future of Natural Gas" report he led while at MIT, a DOE Quadrennial Technology Review, the Obama administration's Quadrennial Energy Review — an effort he pushed for well before he was secretary — and the Iran nuclear agreement he helped negotiate. DOE's Flickr account has dozens of photos.

GREENS, DEM STATES URGE COURT AGAINST HEARING METHANE APPEAL: The coalition of Democratic states and environmental groups that challenged EPA Administrator Scott Pruitt's 90-day stay of the methane rule for new oil and gas wells yesterday urged the D.C. Circuit Court of Appeals not to hear an appeal. The full court on Monday reinstated the rule while it considers requests from industry groups and Republican states for an appeal heard by all 11 judges. The stay's opponents argued yesterday that the case "does not come close to satisfying the demanding standards for granting *en banc* rehearing." EPA has remained silent on the matter so far, but may weigh in by this afternoon's final brief deadline, along with the stay's industry and state supporters. The court could decide whether to hear the appeal as soon as Friday.

EPA PANEL ON PRUITT CO2 REMARK: OPINIONS DON'T VIOLATE INTEGRITY POLICY: After a letter circulated in conservative news outlets Tuesday clearing Pruitt from scientific integrity allegations for his controversial remark that carbon dioxide is not the primary driver of climate change, the agency released a four-page report Wednesday compiled by five senior career staffers. The panel found Pruitt's comment did not violate the agency's scientific integrity policy because it was not a "significant departure from accepted practices of the relevant scientific or scholarly community." However, the report did not discuss how the remark diverged from scientists' consensus, and concluded "expressing an opinion" does not violate the integrity policy.

ZINKE TAKES ANOTHER MONUMENT OFF CHOPPING BLOCK: Interior Secretary Ryan Zinke on Tuesday announced he will recommend Trump leave intact the Upper Missouri River Breaks National Monument in central Montana. "The monument is one of the only free-flowing areas of the Missouri that remains as Lewis and Clark saw it more than 200 years ago," Zinke said in a statement. Zinke has until Aug. 24 to send his recommendations on the remaining monuments on his list.

BIODIESEL'S DC TEAM MOTORS AWAY: The National Biodiesel Board, which is based in Missouri, is losing two of its three Washington staffers. Anne Steckel, the head of the D.C. office, and Sandra Franco, the head of regulatory affairs and general counsel, are both leaving the group, NBB spokesperson Rosemarie Calabro Tully told ME. Chief Operating Officer Doug Whitehead will come to D.C. to run the office. The move comes at an awkward time, as lobbying is ramping up to get a biodiesel producers tax credit into any future tax overhaul bill, the group's members want EPA to increase the biodiesel requirements in the Renewable Fuel Standard, and they're looking to the Commerce Department to slap sanctions on Argentina and Indonesia.

MAINE LEGISLATURE SUSTAINS VETO ON SOLAR BILL: The Maine Legislature on Wednesday did not override Gov. Paul LePage's veto of L.D. 1504, a measure that would have had utility regulators formulate new recommendations on the future of net metering in 2019. The Legislature passed the measure in June with a veto-proof majority but on Tuesday the House fell short of the votes needed to override the veto.

REPORT SAYS STATES ILL-EQUIPPED TO TAKE ON ESA: A report out Tuesday by University of California Irvine School of Law suggests that most states are legally and financially ill-equipped to take over protecting and recovering threatened and endangered species. It notes that state expenditures on conservation of federally listed species make up only about 5 percent of total national spending on ESA, and found that compared with the requirements of the Endangered Species Act, some state laws fall short.

MOVER, SHAKER: Monica Trauzzi, managing editor and anchor of E&E News' video operation, is heading to the Nuclear Energy Institute in September as senior director of external communications.

Joan Card, a Western water expert who served as senior policy advisor in EPA's Region 8 office until January, has joined the natural resources consulting firm Culp & Kelly, LLP.

Stories from POLITICO Pro

White House delivers long-awaited FERC nominations to Senate Back

By Darius Dixon | 08/02/2017 06:44 PM EDT

The White House announced tonight that it has officially sent the Senate paperwork for FERC nominees Rich Glick and Kevin McIntyre, President Donald Trump's pick for the agency

chairman.

FERC has been without a leadership quorum since early February, leaving it unable to decide on major interstate natural gas pipelines, liquefied natural gas export terminals, anti-market manipulation cases or contested electric rate plans.

Trump's plans to nominate Glick and McIntyre were announced June 28 and July 13, respectively.

Glick has been nominated to fill a Democratic seat on the commission, and the arrival of his paperwork increases the chance that Senate Democrats get behind smooth confirmation votes for two other pending FERC nominees.

GOP picks Neil Chatterjee and Rob Powelson were approved by the Senate Energy and Natural Resources Committee in June, but they have been stalled since as Democrats used procedural tactics to slow-walk confirmations for most Trump nominees amid GOP efforts to repeal Obamacare. Now, lawmakers have been negotiating a slate of uncontroversial nominees to confirm before recess.

WHAT'S NEXT: With Glick and McIntyre's nomination paperwork in the Senate, it's possible Chatterjee and Powelson get approved on the Senate floor with a voice vote or by unanimous consent, however the timing is unclear and negotiations over nominees is still delicate.

Pruitt drops delay of ozone rule implementation Back

By Alex Guillén | 08/02/2017 07:55 PM EDT

EPA Administrator Scott Pruitt has dropped his one-year delay of an upcoming implementation step for the 2015 ozone standard, EPA announced today.

The withdrawal comes after lawsuits from environmental groups and Democratic states sued over the delay in deciding which areas meet the standard and which do not. EPA had been due to file its first defense of Pruitt's delay in court on Thursday.

Pruitt originally said he did not believe EPA had the necessary data to decide on the designations by the Oct. 1 deadline. But a pre-publication Federal Register notice signed by Pruitt on Wednesday says that "the information gaps that formed the basis of the extension may not be as expansive as we previously believed."

Some areas may be ready for designation in the coming months, and the notice hints that regional delays may be necessary on a case-by-case basis. "The Administrator may still

determine that an extension of time to complete designations is necessary, but is not making such a determination at this time," says the notice in withdrawing the nationwide delay.

"We believe in dialogue with, and being responsive to, our state partners. Today's action reinforces our commitment to working with the states through the complex designation process," Pruitt said in a statement.

Pruitt also said he intends to avoid any settlement agreements with "activist groups," a practice he has long opposed and said he ended at EPA. "We do not believe in regulation through litigation, and we take deadlines seriously. We also take the statute and the authority it gives us seriously," Pruitt said.

WHAT'S NEXT: EPA has until Oct. 1 to determine which areas of the U.S. meet the standard and which will have to submit plans to lower pollution, a years-long process.

Interior No. 2 tells employees to follow the law, not 'parrot' special interests Back

By Esther Whieldon | 08/02/2017 03:44 PM EDT

Interior Deputy Secretary David Bernhardt, a former lobbyist, believes a few bad apples within the department have "forgotten their oath" and "choose to parrot comments of special interests rather than carry out their governmental duties to move the country forward," he told employees in an introductory email sent after he was sworn in Tuesday.

"By doing so, they often avoid grounding their views in the actual facts or the law. Such conduct is arbitrary. It is lazy. We must always refrain from taking such a path," Bernhardt wrote in the email, a copy of which was obtained by POLITICO today.

Before being confirmed as Interior Secretary Ryan Zinke's second-in-command, Bernhardt spent years as a lobbyist for clients including Westlands Water District. Bernhardt pledged during his confirmation process to recuse himself from matters involving past clients for two years.

In the email, Bernhardt promised to respect employees at the Interior Department, where he served a previous stint under President George W. Bush. But he stressed that they were bound by laws set by Congress and obligated to exercise discretion in implementing those laws to accord with the administration's views.

The agency's authority has limits, he wrote, and instead of trying to "stretch the law like a fraying rubber band to fit a particular policy vision," the agency should ask Congress for help.

Bernhardt told the Senate Energy and Natural Resource Committee in May that the president's

views, not the recommendations of climate scientists, would guide the department's policies where possible.

Southern CEO: Comparing Vogtle to Summer is 'apples and oranges' Back

By Darius Dixon | 08/02/2017 04:38 PM EDT

Southern Co. chief Tom Fanning sought to tamp down speculation today that the Vogtle nuclear project was in similarly dire straits as a two-reactor project facing shutdown in South Carolina, while also praising several Trump administration officials.

On Monday, SCANA and co-owner Santee Cooper announced plans to walk away from their V.C. Summer nuclear project in South Carolina.

But Fanning said "there are a host of differences" between the two project and the Vogtle backers were on track to decide by the end of this month how to proceed.

"It really is apples and oranges," he added, pointing to different regulatory processes, commercial terms and the cost of capital needed.

Southern and its partners, Oglethorpe Power Co., Municipal Electric Authority of Georgia and the City of Dalton have been analyzing their options for finishing all or part of the project.

The Energy Department authorized $8.3 billion in loan guarantees to the project under the Obama administration, but Fanning said the new administration has been "fantastic" in dealing with Toshiba after its Westinghouse unit, the reactor designer and Vogtle contractor, filed for bankruptcy this spring.

Fanning praised several members of the Trump administration — Energy Secretary Rick Perry, Commerce Secretary Wilbur Ross and Vice President Mike Pence, in particular — for helping secure commitments from Toshiba. Since Westinghouse's bankruptcy, Vogtle's owners have been trying to finalize payments from Toshiba, access to intellectual property and the scope of Westinghouse's responsibilities to the project.

WHAT'S NEXT: The Vogtle project owners expect to file their recommendation on the future of the reactors with state regulators later this month.

Special counsel investigating Interior employee whistleblower case Back

By Esther Whieldon | 08/02/2017 07:26 PM EDT

The U.S. Office of Special Counsel today revealed it has launched a whistle-blower investigation over the Obama administration's firing of an Interior Department employee who raised concerns about plans to approve Shell's offshore drilling lease in the Arctic.

The U.S. Merit Systems Protection Board granted the counsel's request to make Interior reinstate Jeffrey Missal as the regional environmental officer with the agency's Bureau of Safety and Environmental Enforcement in Anchorage, Alaska, for 45 days while the office of special counsel negotiates with the agency over what "corrective action" the agency should take.

Missal claimed his January 2016 firing came in retaliation for raising concerns with Interior's inspector general about two years prior that the agency was planning on affirming a lease sale in the Chukchi Sea regardless of the findings of the environmental impact statement for the lease.

The report does not list the company who had the lease. But according to documents on the Bureau of Ocean Energy Management's website, Shell Gulf of Mexico Inc. had won the bid for the lease in the Chukchi Sea, and BSEE affirmed the lease in April 2015.

The agency fired Missal accusing him of conducting outside business during work hours, among other things.

WHAT'S NEXT: Missal will be able to return to his job at Interior at least until Sept. 15 while the counsel's office continues to negotiate with the department.

Scientific integrity panel clears Pruitt over CO2 comments Back

By Alex Guillén | 08/01/2017 06:44 PM EDT

A panel of EPA employees says Administrator Scott Pruitt's controversial March comments on television that carbon dioxide is not the primary driver of climate change did not violate the agency's scientific integrity policy.

"Expressing an opinion about science is not a violation of the EPA Scientific Integrity Policy," the panel wrote.

The panel's two-paragraph finding was included in a letter from Thomas Sinks, director of EPA's Office of the Science Advisor, addressed to the Sierra Club, which formally complained about

Pruitt's comment but said it had not received a copy of the response.

EPA earlier today sent out a press release touting an article on the letter in the conservative Washington Free Beacon.

The agency's scientific integrity policy "specifically encourages employees to express their opinion should the employee disagree with scientific data, scientific interpretations, or scientific conclusions," the panel wrote, noting that Pruitt "did not suppress or alter Agency scientific findings."

The special panel was formed by EPA's Scientific Integrity Committee, which is made up of high-ranking EPA officials. It did not comment on the accuracy of his statement, which departs from the scientific consensus that carbon dioxide is the primary driver of global warming.

Elena Saxonhouse, a senior attorney with Sierra Club, said in a statement that the group had "been told by EPA staff that the proper process is for the party that filed the complaint to be informed first, not the media." She added: "Pruitt's 'opinions' can have especially weighty consequences for the many scientists working below him, yet the letter treats him like any other employee."

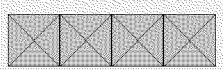
EPA Head Addresses Energy Issues

Anna Wolfe
October 13, 2017
http://www.clarionledger.com/story/news/local/2017/10/13/epa-water-energy-mississippi/757533001/

U.S. Environmental Protection Agency Administrator Scott Pruitt visited Mississippi Thursday to discuss proposed changes to the Waters of the United States rule, just days after announcing the repeal of the Clean Power Plan.

The water rule sought to control pollution under the Clean Water Act of 1972 and had extended the federal government's authority over small waterways. Republicans and industry groups argue that it required costly and unnecessary permitting. The rule was also the subject of litigation.

Pruitt said he's meeting with government agencies and stakeholders across the country to get input on how to best craft the new definition of U.S. waters. The definition implemented in 2015, Pruitt argues, "has created substantial confusion."



"The whole focus that they said at the time was 'we're doing this to ensure certainty.' If that was their certainty, they failed miserably. Because truly, land use positions, jurisdictional determination, about where federal jurisdiction begins and ends, has never been more confusing."

Gov. Phil Bryant was among many governors who initiated a challenge to the Waters of the United States rule.

"Regulatory uncertainty has been the greatest impediment to economic growth over the last several years, and it's not just in the energy and environmental space. It's in finance. It's in health care. It's across a full spectrum of agency actions in Washington D.C.," Pruitt told The Clarion-Ledger. "But this WOTUS rule is one that I believe of the greatest example of uncertainty that was created because people literally quit using their land or they were concerned about using the land because of the potential for fines and penalties."

America's imminent production boom

James Pethokoukis | The Week

Some researchers think the widespread and innovative use of big data, artificial intelligence, and robotics in areas such as health care, education, and the service sector could eventually boost productivity growth high enough to achieve overall 3 percent growth. This tech wave may be unstoppable as long as government doesn't do something profoundly dumb, such as banning or taxing new technologies.

Reuters

The military options for North Korea

John R. Bolton | The Wall Street Journal

Nuclear proliferators happily exploit America's weakness and its short attention span. They exploit negotiations to gain the most precious asset: time to resolve the complex scientific and

technological hurdles to making deliverable nuclear weapons.

Twenty20

Scientific facts should supercede ideology

Benjamin Zycher | Washington Examiner

The leftist environmentalist groups' plea — more government subsidies for more expensive energy, less for cheaper energy — is highly problematic. It is yet another example of ideology masquerading as analysis, premised on energy and climate assumptions vastly at odds with the evidence.

Twenty20

Ignoring the lessons of effective presidents

Michael Barone | Washington Examiner

Donald Trump too often confides in the world things that great presidents such as Roosevelt, Eisenhower, and Reagan would have told no one else. We know his mood at 6:23 a.m., his reactions to hosts and guests on Fox & Friends, and how miffed he is with the attorney general.

Subject: BREAKING NEWS: Trump campaign aide Clovis withdraws from consideration for USDA job

Former Trump campaign aide Sam Clovis has withdrawn from consideration to be the Department of Agriculture's chief scientist, according to a letter Clovis sent on Wednesday to President Donald Trump.

Clovis has come under criticism recently for his lack of science credentials and for his role supervising George Papadopoulos, a Trump campaign foreign policy adviser who struck a plea deal on charges he lied to FBI investigators about his communications with Russia-linked contacts.

"The political climate inside Washington has made it impossible for me to receive balanced and fair consideration for this position," Clovis wrote. "The relentless assaults on you and your team seem to be a blood sport that only increases in intensity each day."

Subject: Morning Media: The conservative commentator shuffle -- Sean Spicer is sorry -- Happy anniversary, 'Morning Joe'

By Alex Weprin | 09/19/2017 05:40 AM EDT

THE CONSERVATIVE COMMENTATOR SHUFFLE: Laura Ingraham will take over the 10 p.m. hour on Fox News starting this Monday with her new show "The Ingraham Angle." Sean Hannity will move an hour earlier to 9 p.m., and "The Five" will go back to its old time slot at 5 p.m. The move will see yet another Fox News primetime lineup take shape, with Tucker Carlson leading into Hannity leading into Ingraham. One year ago, Fox News had a dominant primetime lineup, with Bill O'Reilly leading into Megyn Kelly leading into Hannity. Kelly has since decamped for NBC (her new morning show starts Monday too!), while O'Reilly was booted after new sexual harassment allegations surfaced.

-Notes from the press release: Fox clearly wants to send the message that they expect this lineup to last. "We are delighted to unveil this new primetime schedule for both our current and future generation of loyal FNC fans," said president of programming Suzanne Scott in a statement. As for what Ingraham's angle will be? "Ingraham will challenge the decision makers to focus on everyday, hard-working Americans who serve as the backbone of the nation," per the announcement.

-Ingraham was not the only major conservative voice in the news Monday. On ABC's daytime talk show "The View," conservative co-host Jedediah Bila unexpectedly announced her departure from the program. The New York Post's Page Six said that the show's interview with Hillary Clinton last week may have played a role.

-Who will replace Bila? Well, CNN's Oliver Darcy and Dylan Byers report that Meghan McCain, who left Fox News last week, is in advanced talks to join.

-Oh, and about Bill O'Reilly: He is in the middle of the book tour for his latest, "Killing England." he appeared on Hannity's radio show yesterday (despite the fact that the two do not have the friendliest of histories) and will be on NBC's "Today" show this morning.

Good morning and welcome to Morning Media. I always want to improve Morning Media and make it more useful to you, so please send me tips, ideas and feedback! I'm on Twitter **@alexweprin** and on email at **alexweprin@gmail.com**. Morning Media is produced with help from **Cristiano Lima (clima@politico.com / @ludacristiano)**. **Archives**. **Subscribe.**

FOX NEWS HIT WITH ANOTHER LAWSUIT: Former frequent guest Scottie Nell Hughes claims in the suit that she was raped by Fox Business anchor Charles Payne. Per The New York Times' Emily Steel : "According to the suit, Ms. Hughes was 'shocked and ashamed' and did not immediately report the episode. She said that over the next two years she was forced to engage in a sexual relationship with Mr. Payne. In exchange, she said, she received career opportunities, including increased appearances on Fox News and Fox Business and the promise that Mr. Payne

would help her land a contributor contract, a job that can pay several hundred thousand dollars a year."

-Payne, who was suspended in July while the channel investigated sexual harassment complaints against him, returned to the air this month after the investigation was completed.

-"The latest publicity stunt of a lawsuit filed by Doug Wigdor has absolutely no merit and is downright shameful," a Fox News spokesperson told Deadline, in part. "My client Charles Payne vehemently denies any wrongdoing and will defend himself vigorously against this baseless complaint," said Jonathan Halpern of Foley & Lardner LLP, in part.

SEAN SPICER IS SORRY: No, really. The former White House press secretary told The New York Times "Of course I do, absolutely," when asked whether he regrets what happened behind the press briefing podium on day one of the Trump administration, where he asserted that the inauguration crowd was the largest ever (an appearance he poked fun at during Sunday's Emmy Awards). Spicer said that his appearance "was an attempt to poke a little fun at myself and add a little bit of levity to the event." It certainly drew its fair share of criticism.

-Not unlike his January appearance behind the podium, Sunday's Spicer declaration also fell short of truthiness. The Emmys were not, in fact, the most-watched ever. In fact, they were nearly tied for the least-watched Emmys ever with 11.4 million people watching, on average. Last year's averaged 11.3 million. Did the heavy political nature of the broadcast take a toll? Maybe, but I'd wager so did "Sunday Night Football" on NBC, and an NFL game on Fox that spilled into primetime.

MUST WATCH: Fran Lebowitz talks about Donald Trump in this Vanity Fair video.

SPOTTED: At Old Town Bar in Manhattan last night, former POLITICO executives Josh Benson, Katherine Lehr and Tom McGeveran held a launch party for their new media company, appropriately named Old Town Media. We spied BuzzFeed News editor-in-chief Ben Smith, Hiltzik Strategies founder Matthew Hiltzik, Rubenstein Communications president Steve Rubenstein, Vanity Fair's Joe Pompeo and Matt Lynch, Recode's Johana Bhuiyan, The Hollywood Reporter's Jeremy Barr, Gizmodo Media Group's John Cook and Splinter's David Uberti, among others. Old Town Media's projects include Galley, an app for news media professionals, and Civil, a decentralized blockchain-based journalism platform.

HAPPY ANNIVERSARY "MORNING JOE." Yes, the official launch date for the show is a bit debatable (remember it started as a temporary program in the wake of Don Imus' suspension from MSNBC), but today is the day that MSNBC is choosing to commemorate one decade of the political chat show. There will be a live studio audience, and New Jersey Gov. Chris Christie, New York City Mayor Bill de Blasio and Mike Bloomberg are all scheduled to appear. TVNewser has an interview with Joe Scarborough and Mika Brzezinski here.

INSIDE ESPN: Sports Business Journal's John Ourand tackles the ESPN controversy from a different angle: talking to staffers at the channel about how it feels to be in the spotlight for politics, rather than sports. "The mood in Bristol, Conn., last week was a strange mixture of

embarrassment and frustration following a series of public missteps that culminated with the spokeswoman for the United States president calling for one of ESPN's highest-profile anchors to be fired."

-Speaking of ESPN, a carriage dispute with cable provider Altice could see the channel, as well as ABC and others, dropped. The current deal ends Sept. 30, and the two sides are still negotiating.

REVOLVING DOOR:

-A big hire at BuzzFeed News: Thomas Frank, a Pulitzer Prize finalist who resigned from CNN earlier this year in the wake of a since-retracted story about Anthony Scaramucci, will join BuzzFeed News as a reporter covering national security and counterintelligence. Joe Pompeo spoke to Frank about the move.

-Also at BuzzFeed News: Mike Giglio will move from Istanbul to Washington, D.C., as senior national security correspondent, while Adolfo Flores will become national security correspondent for immigration.

-Massimo Calabresi is now Time magazine's Washington bureau chief. Alex Altman will also become national editor.

-Former Twitter COO Adam Bain is joining Cheddar as a senior adviser.

-The Root has named Danielle Belton editor-in-chief. Belton had been the site's managing editor since May, 2016. Genetta Adams has been named managing editor, while Yesha Callahan has been named deputy managing editor.

EXTRAS:

-Pentagon reporters are becoming increasingly frustrated with a lack of access to Secretary Mattis, and his department's relationship to the press.

-A new project, Report For America, aims to place 1,000 journalists in local newsrooms across the country over the next five years.

-Shonda Rhimes is partnering with Hearst to launch a digital publishing platform, Shondaland.com.

-???The TV tabloid wars are heating up, with The Daily Mail and Page Six taking on TMZ.

-New York Times reporter Glenn Thrush said yesterday he was going to delete his Twitter account.

-Vox Media is hopping on the programmatic advertising bandwagon.

-BuzzFeed head of U.S. News Shani Hilton addresses BuzzFeed News' new morning news show, and why it isn't really a "pivot to video.'

Subject: Corn state senators to meet with Pruitt Oct. 17

By Eric Wolff

10/03/2017 11:18 AM EDT

Sen. Chuck Grassley (R-Iowa) and at least two corn state Republican senators will meet with EPA Administrator Scott Pruitt to discuss the Renewable Fuel Standard on Oct. 17, a spokeswoman for Sen. Chuck Grassley said.

Sens. Joni Ernst (R-Iowa) and Deb Fischer (R-Neb.) will also attend the meeting in Grassley's office, their spokespeople told POLITICO.

President Donald Trump asked Pruitt to meet with Grassley after a Friday call between the president and the Iowa senator. Grassley has been public with his frustration over Pruitt's proposal last week to cut biodiesel requirements under the Renewable Fuel Standard.

PHOTOS: Pruitt Continues State Action Tour in Iowa

Des Moines, Iowa (August 8, 2017) U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt continued his state action tour in Iowa on Tuesday, visiting his eighth state in four weeks.

"Iowa is home to a robust agriculture industry that EPA should not be obstructing with unnecessary and costly regulations that do little to promote environmental stewardship," **said EPA Administrator Scott Pruitt**. "By beginning the process to redefine WOTUS, EPA is providing regulatory certainty for farmers, ranchers, and landowners while respecting the traditional oversight role of states to help keep water clean."

Administrator Pruitt began his visit at the state capitol where he met with Iowa Governor Kim Reynolds, U.S. Senator Joni Ernst, Iowa Lt. Governor Adam Gregg, Iowa Secretary of Agriculture Bill Northey and other state officials to discuss how EPA's recent decision to begin the process of redefining 'Waters of the United States' (WOTUS) will help empower traditional state governing powers and keep water clean for Iowans. Following his meeting at the state capitol, Administrator Pruitt held a roundtable hosted by the Iowa Farm Bureau where he met with state agribusiness leaders to discuss how EPA is providing regulatory certainty with the Agency's recent WOTUS decision. U.S. Senator Chuck Grassley also joined Administrator Pruitt and state officials at the roundtable.

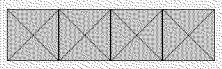
"The 2015 Waters of the United States rule was a significant and severe case of government overreach by the Obama administration," **said Iowa Governor Kim Reynolds**. "I want to thank Administrator Pruitt for traveling to Iowa to hear directly from farmers, once again showing his commitment to partnering with states."

"The federal government works for the people of Iowa and the rest of the United States," **said U.S. Sen. Chuck Grassley**. "Administrator Pruitt is right to come to Iowa and hear firsthand how the WOTUS rule and other regulations affect the farmers on the ground who are good stewards of the land while feeding the world."

"Today we heard more input from Iowans about the harmful impact the Obama administration's WOTUS rule would have on our state," **said U.S. Senator Joni Ernst**. "Here in Iowa, 97 percent of our land could see extensive overregulation by the EPA through this misguided rule, unnecessarily hamstringing our farmers, businesses, and manufacturers. I am pleased that Administrator Pruitt and the Trump administration are taking this feedback seriously and are working to eliminate the burdensome WOTUS rule."

"With the potential to regulate 97% of Iowa and hamper the ability of farmers to implement conservation efforts, we applaud EPA Administrator Pruitt for taking the steps to repeal the misguided Waters of the U.S. rule," **said Craig Hill, President of the Iowa Farm Bureau Federation**. "Farm Bureau looks forward to working with the EPA to draft a new rule that provides clarity and predictability to farmers and upholds the intent of the Clean Water Act."

EPA Administrator Pruitt (left) discusses WOTUS and other Agency priorities with U.S. Senator Joni Ernst (second from left), Iowa Governor Kim Reynolds (second from right), and Iowa Lt. Governor Adam Gregg (right).



Iowa Lt. Adam Gregg (left), Iowa Governor Kim Reynolds (second from left), EPA Administrator Scott Pruitt (middle), U.S. Senator Joni Ernst (second from right), and Iowa Secretary of Agriculture Bill Northey (right).

EPA Administrator Scott Pruitt addresses roundtable at the Iowa Farm Bureau

U.S. Senator Joni Ernst (left), Iowa Governor Kim Reynolds (second from left), EPA Administrator Scott Pruitt (middle), U.S. Senator Chuck Grassley (second from right), and Iowa Farm Bureau President Craig Hill (right) hold roundtable on WOTUS .

EPA Administrator Scott Pruitt elaborates on EPA's decision to begin the process redefining WOTUS.

Federal Ruling Could Block Coal, Oil and Gas Projects Across U.S.

Posted August 16, 2017, 03:37 P.M. ET

By Stephen Lee

Environmentalists say a recent district court decision stopping the expansion of a Montana coal mine provides a blueprint for them to block other coal, oil, and gas projects across the country.

"The decision has national significance, and it can and will be applied in other cases that we are bringing to challenge the federal government's analysis of coal development, oil and gas development, and other fossil fuel projects," Laura King, staff attorney at the Western Environmental Law Center, told Bloomberg BNA.

Especially vulnerable could be two Bureau of Land Management decisions. A 2015 decision made more than 80 billion tons of coal and nearly 10 million acres of land available for federal oil and gas leasing in Wyoming's Power River Basin. Another decision approved 147,000 acres for oil and gas leasing in Colorado, King said.

The U.S. District Court for the District of Montana found Aug. 14 that the Office of Surface Mining Reclamation and Enforcement (OSMRE) didn't consider the social cost of Signal Peak Energy's proposed expansion of Bull Mountain Mine in Montana (Mont. Envtl. Info. Ctr. v. U.S. Office of Surface Mining, 2017 BL 283856, D. Mont., No. CV 15-106-M-DWM, 8/14/17).

The court ruled OSMRE violated the National Environmental Policy Act by focusing on the benefits of the mine plan while minimizing the environmental and social impacts of trains transporting coal to ports in Canada and on the Great Lakes, as well as the air pollution emissions of coal combustion.

Strategy's Potential

Hayden Baker, an attorney with Sullivan & Worcester LLP, told Bloomberg BNA that the decision "really shows how courts—and, by extension, non-governmental organizations and states—can continue to use the other mechanisms at their disposal to slow down infrastructure in mining."

But Baker also cautioned that one impediment to environmentalists using the strategy again is that each case is different and highly contingent on specific sets of facts.

"What's more important is that they scored a win here and will therefore push their strategy further," he said. "Any case will be dependent on how good a job the agency or proponent did in justifying their National Environmental Policy Act Review. So yes, while opponents will push forward with this strategy, it's hard to gauge the precedential value this has because it's always so fact-specific."

Signal Peak Responds

Mike Dawson, a spokesman for Signal Peak Energy, told Bloomberg BNA that the company will be "evaluating all of our options" in the coming weeks and months. For now, the mine remains open, and no workers have been laid off, Dawson said.

"Depending on a number of factors, this court decision could affect some operations in the future," Dawson said.

Luke Popovich, a spokesman for the National Mining Association, told Bloomberg BNA that, "aside from the absence of any legal obligation to consider these wider costs, there is no actionable, reliable value in doing so."

Minamata Now in Force; Brings New Focus on Mercury Alternatives

Posted August 16, 2017, 02:20 P.M. ET

By Bryce Baschuk

The entry into force of the Minamata Convention on Mercury Aug. 16 will spur companies worldwide to restrict their use of mercury and pursue alternatives to mercury added products.

The convention seeks to protect human health and curb environmental contamination by obligating its parties to broadly limit the use and export of mercury and restrict mercury emissions into the air, soil, and water.

The legally binding treaty—named after Japan's Minamata Bay where industrial pollution led to widespread mercury poisoning in the 1950s—requires its signatories to phase out many common mercury-added products by 2020 and mercury-bearing processes by 2025. The U.S. and the European Union are among the 74 participants of the Minamata Convention, which also includes China, the world's largest producer of mercury.

"The treaty is designed to foster a simultaneous reduction in global mercury demand and supply," said Michael Bender, director of the Vermont-based Mercury Policy Project.

Inorganic mercury can become the more toxic methylmercury when discharged to lakes and other water bodies. Methylmercury is a neurotoxin that can affect IQ and cardiovascular health at sufficient concentrations.

Mercury Phase Out

Some companies have already begun the process of phasing out mercury products. Furniture

retailer Ikea announced in 2015 that it would sell only LED lightbulbs that do not contain mercury, unlike traditional fluorescent light bulbs.

"Mercury-added products represent one-third of total mercury demand and consumption," Bender told Bloomberg BNA. "So, by phasing out mercury-added products by 2020, this rather rapidly reduces global mercury demand."

Mercury is added to a variety of products, including batteries, watches, cameras, clocks, dental amalgam, automobile headlights, neon signs, laboratory chemicals, preservatives, fixatives, buffers, dyes, barometers, and thermostats.

Abbott Laboratories, Dell Inc., Energizer Battery Manufacturing Inc., and Ford Motor Co. are among the manufacturers with products that can contain mercury, according to the Interstate Mercury Education & Reduction Clearinghouse..

In addition, mercury cell chlor alkali factories make chlorine and caustic soda. Increasingly, chlorine producers are moving away from mercury cell to membrane technology, which has much less impact on the environment, according to Euro Chlor, an association of producers.

Gold Production

The Minamata Convention prohibits new primary mining of mercury, and bans mined mercury traded for certain uses—such as for artisanal and small-scale gold mining—the largest emissions source worldwide, Bender told Bloomberg BNA via email.

Members of the convention are obliged to promote mercury-free gold processing methods and end the practice of burning the mercury-gold amalgam in residential areas.

The treaty also obligates countries to promote heath care services for people who are exposed to mercury and protect vulnerable populations, including children and women of child-bearing age.

International Export Bans

The convention seeks to reduce the transboundary movement of mercury and promote more national mercury export bans such as those adopted by the U.S. and the EU.

Minamata Convention participants will gather for their first conference of the parties in Geneva from Sept. 24–29 to mark the convention's entry into force and discuss compliance.

China Coal Capacity Cuts Parallel Nudge Toward Gas Production

Posted August 16, 2017, 11:10 A.M. ET

By Michael Standaert

China is more than halfway to its goal of cutting 800 million metric tons of coal production capacity by the end of 2020, signaling to investors the government isn't projecting coal production to grow much more.

The National Energy Administration announced Aug. 14 that it cut 111 million metric tons in the first six months of 2017, following a cut of 290 million metric tons in 2016.

While most of the cuts have targeted operations with lower quality coal, and "zombie firms" that operated with minimal actual production, the efforts could mean reducing coal consumption and air pollution in the long term, and have beneficial climate impacts as funding moves toward utilizing coal-bed methane and shale gas.

"[The cuts] may not have visible [short-term] impact to reduce air pollution in urban centers, where coal consumption rather than production is the main culprit," Ranping Song, climate policy associate at the World Resources Institute in Washington, told Bloomberg BNA Aug. 16.

"However, closing mines send signals that the government does not project coal production to grow significantly and [that] the energy transition is already underway," Song said. "It encourages workers and investors to move on from coal."

The NEA aims to cap the coal-fired power supply at 1.1 billion kilowatts by the end of 2020, and seeks to cut or slow some 150 million kilowatts of planned coal-fired capacity to meet those goals, according to an Aug. 2 notice.

NEA officials said in late July that total coal consumption increased by about 1 percent in the first half of 2017 over the same period in 2016, but that coal power as a proportion of the energy mix dropped 0.6 percent in that period, reflecting increased use of natural gas and renewable energy.

Transforming the Coal Industry

Nudging the coal industry toward coal-bed methane and shale gas in areas within the Sichuan basin of central and southwest China goes hand-in-hand with efforts to reduce coal production capacity and cap coal-fire power.

In Guizhou province in the southwestern part of the country, the provincial government will provide 1 billion yuan per year ($787 million) in subsidies for coal companies to reduce production capacity and adopt more coal-bed methane and other upgrades.

Shanxi province is also in the process of auctioning coal-bed methane mining rights as part of a pilot program which is expected to start this year, state-run media reported Aug. 14.

China's Ministry of Land and Resources announced on Aug. 15 that in 2016, shale gas production reached 7.88 billion cubic meters while coal-bed methane reached 4.5 billion cubic meters.

The U.S. Energy Information Administration projects that around 40 percent of China's natural gas production will come from shale gas by 2040, making it second only to the US in shale-gas production.

Potential Climate Benefits

Capturing coal-bed methane before it leaks into the atmosphere from old coal mines could significantly reduce some of China's greenhouse gas emissions, according to Song.

Leaking methane from coal mining in China was estimated at around 300 megatons of carbon dioxide equivalent, or about 18 percent of annual non-carbon emissions, according to 2010 data.

"Capturing coal-bed methane, especially from coal mining activities, would have significant climate

benefits," Song said adding that research suggests that if China meets 13th Five-Year Plan (2016-2020) targets for coal-bed methane exploitation, coal mining-related methane emissions could drop to about 173 megatons of carbon dioxide equivalent by the end of 2020.

"These are efforts to modernize the energy industry as well as move to less polluting fuels," Song said.

Still, there is insufficient data at the moment to determine the amount of leakage occurring during coal-bed methane and shale gas production operations in China, Song cautioned.

U.S. Offshore Lease Sale Draws $121 Million in High Bids

Posted August 16, 2017, 02:29 P.M. ET

By Catherine Traywick (Bloomberg)

A U.S. auction of offshore oil and gas leases in the Gulf of Mexico drew $121 million in high bids from 27 companies Aug. 16. The top bidders were Royal Dutch Shell Plc, Chevron Corp., Exxon Mobil Corp., Total S.A., and Anadarko Petroleum Corp. The sale drew 99 bids on 90 tracts. The last Gulf of Mexico lease sale, in March, drew $275 million in high bids on 163 tracts.

Oil companies have reduced their capital spending over the last two years amid a prolonged market slump, a factor alluded to by Randall Luthi, president of the National Ocean Industries Association, in a statement issued after the sale.

"While the results of today's Gulf of Mexico oil and gas lease sale reflect market realities, they also demonstrate the offshore oil and gas industry's commitment to the U.S. Gulf of Mexico, even with extended low commodity prices and lingering regulatory dysfunction," Luthi said.

The sale was the first of 10 scheduled under Bureau of Ocean Energy Management's current five-year leasing program, which runs from mid-2017 to mid-2022.

—With assistance from Alan Kovski (Bloomberg BNA)

Climate Bonds Pioneered by Goldman Lure Storm-Plagued Cities

Posted August 16, 2017, 7:45 A.M. ET

By Christopher Flavelle

As climate change pushes U.S. cities to build protections against stronger storms and more frequent floods, the Rockefeller Foundation is helping cities with a novel kind of financing, one that transfers some of the risk of innovative projects from cities to investors.

The foundation, established with John D. Rockefeller's oil wealth, is set to announce Aug. 16 it will pay $342,000 to underwrite the costs for two municipalities in issuing environmental impact bonds, pioneered by The Goldman Sachs Group Inc. and Washington, D.C. More than a dozen cities have expressed interest in the bonds, which link an investor bonus or penalty to how well the underlying project works.

"You take the risk off the project not working" for city officials, said Saadia Madsbjerg, who leads the

Rockefeller Foundation's work on financial innovation. "There are many, many municipalities that have the exact same problem that D.C. has."

The goal is to give local governments room to experiment with ways of protecting their residents against the impacts of climate change by providing a sort of insurance policy against failure of the micro-grids, flood walls or other untested projects. For investors, there's a upside, too: If the project works better than expected, they get a bonus payment.

So-called green bonds, which are similar in purpose, grew to $95 billion in 2016, twice as much as the previous year, according to Bloomberg New Energy Finance. Many are issued by companies—Apple Inc. sold $1.5 billion last year to help its operations run 100 percent on renewable energy—but governments are also getting into the act.

Environmental impact bonds were first used in the U.S. last September. As part of the deal made last year, Goldman Sachs has $3 million riding on how well tree planting, rain gardens and porous asphalt keep stormwater from swamping Washington's aging sewers.

Green Bonds for Stormwater Plans

DC Water, Washington's water utility, issued a $25 million bond to help build "green infrastructure" for stormwater management. The utility had been ordered by federal regulators to cut the raw sewage flowing into the Potomac River after storms.

Climate change results in more and wetter storms hitting the mid-Atlantic region, and massive rains can overwhelm the city's water treatment plant.

The bond that DC Water issued is similar to regular municipal debt, with one difference: If the project reduces stormwater runoff by more than 41 percent during its first 12 months of operation, DC Water promises to give investors a one-time bonus of $3 million on top of the bond's 3.43 percent interest rate.

But if the project reduces runoff by less than 19 percent, investors instead have to pay DC Water $3 million—what it calls a "risk share" payment. That would reduce the effective interest rate on the bond from 3.43 percent to 0.5 percent.

That structure was attractive because it means DC Water will have money to design a new project if the green approach doesn't work, said George Hawkins, the utility's chief executive. "You never really know until you build" it, if it will work, he said.

Goldman Sachs bought $23 million of those bonds. The Calvert Foundation, a Maryland-based nonprofit, bought the other $2 million.

Margaret Anadu, who heads Goldman's Urban Investment Group, said the bond is a chance to "really put your money where your mouth is"—funding a climate-resilience project that will deliver better returns for Goldman the better it performs.

Not everyone is so optimistic that tying payments to outcomes will produce better results. Daniel Edmiston, who teaches sociology and social policy at the University of Leeds, published a paper earlier this year looking at the effectiveness of those social impact bonds, which got their start in the U.K. and were the inspiration for environmental impact bonds.

Whether a program triggers a bonus payment could have just as much to do with the quality of the lawyers who drew up the contract as it does with its actual performance, Edmiston said.

"Very intelligent, well qualified private sector consultants in the U.K. have managed to dictate the terms of contracts," Edmiston said. "These public authorities that are commissioning them, they have no idea what they're doing or how to go about it."

Others say there's no time to wait for the results of earlier projects. Eric Letsinger is founder and chief executive of Qualified Ventures, the company that helped structure DC Water's bond and is being paid by the Rockefeller Foundation to choose the next cities to sell similar bonds. He said his goal is continuing to improve the way environmental impact bonds are designed, so that more cities are willing to issue them.

"I don't think we have a capital problem," Letsinger said. "What we have is an adoption challenge."

Trump Push for Natural Gas Exports Opposed by Manufacturers

Posted August 16, 2017, 11:22 A.M. ET

By Ari Natter

President Donald Trump's effort to boost U.S. energy is facing push back from manufacturers who say exporting more natural gas may undercut his "America First" jobs focus.

The Industrial Energy Consumers of America asked the administration Aug. 16 for a moratorium on U.S. approvals for liquefied natural gas projects. The trade association, which represents U.S. manufacturers that depend on cheap energy to fuel their factories, sent a letter to Energy Secretary Rick Perry Aug. 16.

It's "inconsistent with President Trump's fair trade and America-first policy," Paul N. Cicio, the group's president, said in a phone interview. "It's a stunningly breathtaking amount of natural gas that could be exported."

The dispute between oil and gas companies and manufacturers is but one among business groups over Trump's agenda. Oil companies oppose Trump's idea to require that pipelines be made in the U.S.; agriculture producers oppose some of his trade policies; and refiners have pushed the White House to drop consideration of sanctions on Venezuelan oil imports.

In its letter, the energy consumers group says that exports could drain as much as two-thirds of U.S. natural gas resources by 2050. The group doesn't disclose its members, but its 2015 tax filing says it represented The Dow Chemical Co., Corning Inc. and other factory owners. The chief executives of both companies, Andrew Liveris for Dow and Wendell Weeks for Corning, are members of the president's manufacturing council.

Neither Dow nor Corning responded to requests for comment.

More Approvals

"We remain alarmed at the volume of LNG exports that have been approved for periods of 20-30

years," the group says in its letter. "Of greatest concern, is that the administration has said publicly that it will approve more applications to export" to countries that don't have a free-trade agreement with the U.S.

The dispute shows how Trump's formulation of American energy dominance could have a downside for other U.S. companies, said Kevin Book, managing director of Washington-based ClearView Energy Partners LLC.

"The question isn't about the next five years, it's about the next 20 years," Book said in an interview. "For anyone who is making an industrial investment in the U.S. these days is thinking very much in that time frame."

U.S. natural gas futures have risen since the first cargo of liquefied shale gas left Louisiana's shores last year—and more of the fuel is slated to set sail this year as Cheniere Energy Inc. starts up another LNG plant at its Sabine Pass terminal.

Meanwhile, the natural gas industry rejects the idea the U.S. doesn't have enough natural gas supplies to do it all.

"It advances our national security interests by providing allies access to diverse sources of energy, improves the global environment and contributes to correcting the U.S. trade deficit," said Charlie Riedl, executive director for the Center for LNG, which represents companies such as Golden Pass LNG, a Texas export terminal being developed by a joint venture of Qatar Petroleum, ExxonMobil Corp. and ConocoPhillips. "The U.S. has a limited window to take advantage of new demand."

The number of countries seeking to import U.S. liquefied natural gas has increased to 39 from 10 in 2000, according to the Washington-based trade group. ©2017 Bloomberg L.P. All rights reserved. Used with permission

Scana Needs`Willing Partner' to Resume Nuclear Construction

Posted August 16, 2017, 12:43 P.M. ET

By Jim Polson, Robert Lavelle, and Mark Chediak

Scana Corp. executives said the company would need to sign new contracts to revive construction on a South Carolina nuclear power plant—and that federal tax credits would be "an important factor."

The executives were commenting on the company's withdrawal of a petition to abandon work at the V.C. Summer nuclear station in an Aug. 16 conference call.

Scana halted construction last month on the nuclear power plant after its price tag ballooned to more than $20 billion. It withdrew its petition to officially abandon the project on Aug. 15, giving state officials more time to review the plan.

On the conference call, Scana CEO Kevin Marsh said the company would need to find a "willing partner" before the project could be resumed. Restarting work would take about a year, including signing new agreements with a new partner, a construction contractor and with Westinghouse for nuclear services and support, and there would also be the issue of qualifying for tax credits.

Nuclear abandonment remains the right decision, the executives said. Scana still expects to seek abandonment costs from customers but hasn't set a deadline to revive abandonment cost request.

Mishap Triggers Taiwan Blackout as Power Policies Questioned

Posted August 16, 2017, 9:54 A.M. ET

By Bloomberg News

A blackout caused by a blunder at Taiwan's biggest gas-fired plant is the latest challenge to an electricity grid recently pushed to its limit and to President Tsai Ing-wen's efforts to reshape the island's power mix.

A combination of unusually hot weather, infrastructure damage from typhoons, and Tsai's drive to abandon nuclear power left Taiwan barely able to supply sufficient electricity to residential and business users in the past week. That balance gave way late Aug. 15 when the Tatan power plant, which accounts for almost 9 percent of the island's generation capacity, stopped after workers accidentally shut off its natural gas supply.

Tsai publicly apologized for the power outage that hit more than 6 million households and disrupted some semiconductor production. Electricity was restored by 10 p.m., but not before Lee Chih-kung, Tsai's economy minister, offered his resignation. Both the operator and supplier of the plant, Taiwan Power Co. and CPC Corp., are state-run.

"The outages hurt President Tsai's creditability," Jeffrey Bor, economics professor at Chinese Culture University in Taipei, said by phone. "The impact on the economy is comprehensive. It's like sending a signal to companies to escape fast, because of the risks of electricity supply disruption."

Shift to Gas, Renewables

While the Aug. 15 outage was caused by human error, the blackouts heightened scrutiny of Tsai's policies, including a pledge to rid Taiwan of nuclear and cut its use of coal. The island, which plays a critical role in the world's electronics supply chain, will rely instead under her plan on natural gas, renewables, and distributed generation, which entails multiple, smaller power sources that decrease reliance on single plants and can offer greater grid stability.

The disruption occurred when engineers replacing power supply equipment for a control system at Tatan's metering station didn't switch the system from automated to manual before starting the work, according to CPC Corp., which provides the plant natural gas. That resulted in two valves being automatically closed, one for about six minutes, shutting off gas supplies.

There had been multiple warnings about Taiwan's electricity reliability before the blackouts. A week earlier, state-run utility Taiwan Power Co. issued a red alert as the operating reserve margin, the amount of maximum capacity available above peak demand on a particular day, fell to the second-lowest on record. Business associations, including the Chinese National Federation of Industries, had called for slowing the pace of closing nuclear plants.

Tsai's apology, posted on Facebook late Aug. 15, included a reiteration of her determination to push forward phasing out nuclear in favor of renewable energy.

"The government is promoting distributed green energy to avoid the situation where an incident at a single power station can affect the power supply for the whole country," Tsai wrote. "We will not change course. Today's incident only makes us more determined."

New Plants Delayed

New capacity not being delivered on schedule is compounding Taiwan's energy woes, according to Kerry Anne Shanks, a Singapore-based analyst at Wood Mackenzie Ltd.

"Commissioning of the new gas-fired units has been delayed again and again," Shanks said by email Aug. 16. "There are now appeals for a review of the nuclear phase-out policy. The government remains committed to a nuclear-free Taiwan by 2025, but this stance will depend on whether the power system can survive the summer."

Taiwan has mothballed one of its four nuclear power stations, and three of the remaining six remaining reactors are shut down. Wu Tsai-yi, president at Taiwan Research Institute, said the restart of two of the shut reactors has been stalled by lawmakers. Nuclear made up 12 percent of Taiwan's power mix last year, down from 17 percent in 2013, according to its Bureau of Energy.

Legislation passed in January set a goal of getting rid of nuclear power by 2025, as well as lowering the share of coal to 30 percent, and raising natural gas to 50 percent, with the remainder coming from renewables, according to Bloomberg New Energy Finance.

Taiwan's three shut reactors—both units at Jinshan and the No. 2 unit at Kuosheng—have combined capacity of almost 2.26 gigawatts, according to the Atomic Energy Council. The Tatan plant accidentally shut Aug. 15 can produce 4.38 gigawatts, according to Taiwan Power Co., known as Taipower. The country's total generation capacity is 49.9 gigawatts, according to Bureau of Energy, Ministry of Economic Affairs.

Semiconductors

The impact so far on Taiwan's technology industry has been limited. Advanced Semiconductor Engineering Inc. said production lines are operating again at two plants hit by the blackout and the company is evaluating any losses. ChipMOS Technologies Inc. said production has been restored, while Taiwan Semiconductor Manufacturing Co. said there was no impact on output, with all lines operating as normal.

Advanced Semiconductor and TSMC are both suppliers to Apple Inc. The main assembler of iPhones, Hon Hai Precision Industry Co., locates most of the production for the U.S. company in mainland China.

The power cut Aug. 15 hit Taiwan's Hsinchu Science Park, the "heart" of its semiconductor industry, said Annabelle Hsu, a senior research manager in Taiwan at International Data Corp.

"Factories there are running 24 hours a day, so sudden power cut without warning could cause a big damage," Hsu said.

EU Automakers May Be Required to Produce Electric Vehicles

Posted August 16, 2017, 9:26 A.M. ET

By Brian Parkin

Making electric cars may become a regulatory requirement rather than a strategic choice for vehicle makers in the European Union as the bloc seeks to underpin a shift away from polluting combustion engines.

The EC is considering bringing forward targets this autumn for the number of electric cars automakers and importers should sell in the bloc, bolstering climate targets and pollution limits, Germany's Deputy Environment Minister Jochen Flasbarth told reporters in Berlin Aug. 16.

Pollution from vehicles has risen in Germany even as emissions from industry and utilities have fallen, adding to pressure on the government to tighten up rules applying to carmakers. An EU move would add to ambitions the U.K., Germany and France have set out to limit the number of cars using gasoline in the coming decades.

"I'm convinced a quota is coming even though the commission has diplomatically denied it," said Flasbarth. "In terms of meeting the EU's climate goals we're in the realm of legal obligation here."

Any EU quota might be lower than Germany's target to expand emissions-free car sales by 25 percent by 2025, he said.

Chancellor Angela Merkel is struggling to grapple with a diesel scandal and rising carbon dioxide emitted by the transport sector and may find it hard to help the EC push stricter regulations on the entire 28-nation bloc. She's already had to back off a goal of having 1 million electric cars on the road by 2020.

The minister's comments are an indication that Merkel may be prepared to water down her administration's support for the car industry's slant toward diesel engine technology where Germany is a leader.

France and the U.K. have already moved to set 2040 deadline as a deadline to phase out new gasoline and diesel cars. Merkel said in Germany's Super Illu magazine that's the "right approach."

"I can't right now name a precise year" for a ban, she is cited as saying in the interview due to be published Aug. 17.

All-electric and hybrid cars made up less than 1 percent of the 46 million passenger cars on German roads at the end of January.

The chancellor of Europe's biggest polluter is also struggling to explain how it will cope with an increase in greenhouse gas emissions, led primarily by vehicle pollution. Carbon dioxide from vehicle exhausts accounted for about 18 percent of output last year.

Merkel, who is campaigning for a fourth term in federal elections on Sept. 24, said in a July 17 ARD television interview she would double down action to meet national climate goals after the vote. Germans identify climate protection as their biggest concern, ahead of terrorism and unemployment,

according to a survey conducted by Emnid this month.

Subject: Bishop to seek to one final term

By Esther Whieldon

08/29/2017 05:26 PM EDT

House Natural Resource Chairman Rob Bishop's 2018 reelection campaign will be his last, a committee spokeswoman said today.

Bishop first made the announcement that he would leave after 2020 at a Friday town hall in Utah, which was first reported by the Associated Press.

The eight-term Utah Republican is well known for sporting three-piece suits and has chaired the committee since 2015, championing efforts to hand more public lands over to states.

The Senate defeated the "skinny" Obamacare repeal plan, dealing a substantial blow to the Republican effort to repeal the Affordable Care Act.

Sens. John McCain, Lisa Murkowski and Susan Collins voted with Democrats to defeat the measure.

Republicans had hoped to use the minimalist repeal plan to advance the overall effort to a conference with the House.

Subject: POLITICO's Morning Energy: FERC may have an August pulse — Asian carp plan set to jump — No changes for Grand Canyon-Parashant

By Darius Dixon | 08/07/2017 10:00 AM EDT

With help from Esther Whieldon, Annie Snider, Alex Guillén and Eric Wolff

AUGUST WATCH: Free of Congress, wilting from the heat and anxious for some vacation time before the kids are back in school, most of Washington's policy apparatus is likely to shut down now for the rest of August. But this summer may be different for FERC since the Senate approved two nominees last week. After losing its quorum for the first time in its history early this year, the pressure is on for the agency to shrink the backlog that built up over the past six months. Remember, it's not just natural gas pipelines. There are also mergers, rehearings, and electric and natural gas rate cases, not to mention enforcement probes and potential settlements. Digging out from under that backlog - while dealing with the day-to-day workload - will take several months to get FERC caught up.

Neil Chatterjee and Rob Powelson were confirmed to FERC last Thursday, but it's not clear when they'll take the oath. When former FERC Chairman Norman Bay was confirmed by the Senate as a commissioner three years ago, he wasn't sworn in for 20 days. Of course, the circumstances are a bit more urgent now and a lot of people who depend on FERC may get more than a bit impatient if Chatterjee and Powelson head out for summer vacation. Just remember: They weren't the ones who brought FERC's work to a standstill or slowed the confirmation process. FERC commissioners don't normally hold a monthly meeting in August, but that's just tradition, not a rule. They also aren't limited to holding only one meeting a month, and there's plenty they can approve without having a public session. All in all, this may be a different sort of August for FERC.

BROUILLETTE IN THE BUILDING? One of the Senate's last votes before jetting out of town last week was to confirm Deputy Energy Secretary Dan Brouillette, a move that was welcomed by the Energy Department and those groups and companies who work with the agency. One of the most frequent complaints inside and outside the agency for months has been about the lack of confirmed nominees (Brouillette is just the second at DOE) to help take the bureaucratic busy work off of Perry's plate. Although it's August, we may see more activity out of the agency as Brouillette settles in. His swearing-in date hasn't been publicly released yet.

HAPPY MONDAY! I'm Darius Dixon, returning to the morning slot and attempting to fill Anthony's big ME shoes. Hayley Moller at Glover Park Group was the first by a mile to call out the myth/rumor of President William Howard Taft getting stuck in a bathtub. He apparently weighed about 354 pounds around the time of his inauguration in 1909. Annie dove into atomic history trivia last week and your new host can't resist jumping in the deep end. What Manhattan Project physicist later founded a science museum? Name the museum and its location. Send your answers to moi - along with your tips, energy gossip and commentary - at ddixon@politico.com, or follow us on Twitter @dariusss, @aadragna, @bjlefebvre, @Morning_Energy, and

@POLITICOPro. And tell me if that was too easy!

CARP PLAN A-COMING: The Army Corps of Engineers is poised to dodge a major controversy when it releases a long-awaited draft plan for blocking invasive Asian carp from reaching Lake Michigan. A notice posted in the Federal Register Friday indicates the plan, due out today, will recommend using noise, electric barriers, water jets and other measures to deter carp from migrating further upstream, where recreational and environmental interests fear they would devastate the ecosystem and pose a safety threat to boaters. That's a much less controversial approach than others under consideration, like shutting down barge traffic on the waterway. The draft plan was originally due out at the end of February, but the Trump administration put it on hold amid worries from shippers. That delay drew an outcry from Great Lakes lawmakers, and multiple appropriations riders were aimed at speeding its release.

One fish, two fish, every fish! If you're reading about Asian carp then you probably know how frustrating they are to deal with. But for the uninitiated, who may not know how crazy this fish is, watch this.

NEVERMIND! NO EPA RFS ANNOUNCEMENT AFTER ALL: EPA has changed course, and will not announce its intent to leave the Renewable Fuel Standard as-is, multiple sources tell ME. Instead, it will wait until the official documents are ready for the Federal Register, most likely in a few weeks. The sources say nothing has changed with the agency's policy decision, which is backed by the president: It will still leave refiners on the hook for the cost of complying with the program. But while it had been planning to announce the decision last week or today, it has now decided that industry and the public were sufficiently notified by POLITICO and other media reports last week. No public statement will be issued until all the t's are crossed and i's are dotted.

MC ZINKE WON'T TOUCH THIS: Interior Secretary Ryan Zinke announced on Friday that Arizona's Grand Canyon-Parashant national monument is "no longer under review" and that he's recommending that it be left alone amid a White House-directed study. The monument, which spans more than a million acres, was designated by President Bill Clinton in 2000. "The land has some of the most pristine and undeformed geological formations in North America, which show the scientific history of our earth while containing thousands of years of human relics and fossils," Zinke said. He has now officially removed five monuments from the original list. Seventeen remain under the microscope.

GREENS SCORE KEY WIN IN COAL ASH SUIT: A federal judge ruled for the first time Friday that a coal-fired power plant would have to remove the material from a leaky coal ash pond, rather than simply cap it and leave it in place - a pricey proposition. The lawsuit, brought by the Southern Environmental Law Center and a local Tennessee group, challenged the Tennessee Valley Authority's management of coal ash at its Gallatin Fossil Plant, although the conditions there are similar to those at plants across the south. "While the burden of closure by removal may be great, it is the only adequate resolution to an untenable situation that has gone on for far too long," Chief District Judge Waverly Crenshaw, Jr. of the Middle District of Tennessee wrote in his order.

DOCS SHOW ENERGY CONNECTIONS AMONG EPA APPOINTEES: Key Trump administration appointees at EPA previously provided legal representation or held investments in some of the companies the agency regulates, according to newly released financial disclosures. Erik Baptist, EPA's senior deputy general counsel who arrived from the American Petroleum Institute in June, recently sold off investments of less than $1,000 apiece in Exxon Mobil and ConocoPhillips. Another top appointee in the general counsel's office, David Fotouhi , still holds a number of energy-related investments, according to his disclosure. They include Phillips 66, Dow Chemical, Halliburton, Clorox, Solar Capital Ltd. and Energy Select Sector SPDF, an index with oil and gas holdings. Fotouhi, previously an attorney at Gibson Dunn & Crutcher, had a client list there that included Tesoro, General Electric and oil company Maxus Energy.

Meanwhile, Patrick Traylor, the deputy assistant administrator in the Office of Enforcement and Compliance Assurance, previously represented a number of energy interests at Hogan Lovells, including Southern California Edison, the American Petroleum Institute, Transocean, Koch Minerals, NRG Energy, Venture Global LNG, Delfin LNG, Denbury Resources, AES Corp., Vopak, Flint Hills Resources, The C. Reiss Coal Company, BHP Billiton and Bloom Energy, as well as Daimler Truck North American and U.S. Steel. And Byron Brown , EPA's deputy chief of staff, disclosed that his wife owns between $265,000 and $550,000 in stock in Hess, where she is a senior lobbyist.

Meanwhile, a new Interior nom is Mr. Clean: Trump's pick for Interior Department assistant secretary on land and minerals management, Joe Balash, has an ethics agreement and financial disclosure form that are as boring as they come, listing his pension fund and less than a handful of index funds. Balash, who works for Sen. Dan Sullivan , is a former Alaska Department of National Resources commissioner and ex-staffer for Sarah Palin when she was governor. Balash has advocated for opening up the National Petroleum Reserve in Alaska for additional leases - a goal he shares with Zinke.

BOEM WRAPS UP WORK ON STALLED CAPE WIND: The Interior's Bureau of Ocean Energy Management on Friday issued its final supplemental environmental impact statement for the stalled 468-megawatt Cape Wind project after a court in July 2016 held the agency should have used better data to determine the conditions of the seafloor for the project before it issued a lease for the project. The final EIS says that the additional data it gathered does not change its prior finding that drilling foundations for the project in the seabed would only temporarily disturb sedimentation and the overall impacts to water quality would be minor. Cape Wind is on ice after it missed a financing deadline, prompting National Grid and NStar (now Eversource) to cancel contracts to buy power from the project.

SCANA CHIEF 'SORRY' FOR SHUTTING NUCLEAR PROJECT: The CEO of SCANA made a public apology to its customers for its plans to walk away from its V.C. Summer nuclear project last week. "I want to express that I am deeply disappointed and sorry that we were unable to complete the new nuclear units. You put your trust in us to build these units in order to bring additional clean, reliable energy to our state," CEO Kevin Marsh wrote in an op-ed. "I understand your frustration and share in your disappointment."

MOVERS, SHAKERS: Susanna Murley has taken over as the head of communications for the

Energy Department's SunShot Initiative. Murley replaces Jamie Nolan who left last week. Murley's previous jobs include at the Solar Energy Industries Association and the Chesapeake Climate Action Network.

Subject: Morning Energy: FERC back to work — Trump and Justice, a coal country bromance — Interior IG to probe Zinke's Obamacare call

By Annie Snider | 08/04/2017 05:41 AM EDT

With help from Alex Guillén, Esther Whieldon, Eric Wolff and Emily Holden.

FERC IS BAAAAACK: Just before slipping out for August recess Thursday night, the Senate confirmed Republican FERC nominees Neil Chatterjee and Rob Powelson, effectively restoring a quorum at the agency after nearly six fallow months, during which billions of dollars in shovel-ready energy infrastructure projects have stalled.

Even as President Donald Trump has touted plans for a major infrastructure overhaul and cleared hurdles for high-profile pipeline projects like the Keystone XL, his biggest and most tangible impact on infrastructure so far may well be the $13 billion in projects, expected to generate more than 23,000 construction jobs, that went on hold during the bureaucratic morass that was partly of his making, Eric Wolff and Darius Dixon report this morning. For many of these projects, the loss of the quorum in February, shortly after Trump demoted FERC's former chairman, may have cost them a year of work, thanks to the limited construction season in much of the country.

No small matter: "I would not begin to minimize even the passage of another month," former FERC Commissioner Colette Honorable told Eric and Darius, "because there are high stakes in the matters that come before FERC each and every day — vast amounts of capital at issue, vast amounts of consumer cost or savings at stake."

Once Chatterjee and Powelson are sworn in — expected to happen in the next few days — the agency can begin working through the backlog. That's a win for project backers but a setback for anti-pipeline advocates, who accuse FERC of ignoring the climate and environmental implications of its decisions. Lena Moffitt of the Sierra Club blasted the confirmations Thursday night, arguing that the two soon-to-be commissioners are too aligned with the fossil fuel industry. "As the gas industry is threatening a massive expansion of fracked gas projects, it is more important than ever that our FERC Commissioners put the health and safety of the public and our climate first, not rubber stamp any project the industry puts in front of them," she said in a statement.

It's not just infrastructure: We previously laid out a lot of the policy work also piling up for FERC — and that was three months ago!

More hands coming: The Senate Energy and Natural Resources Committee has scheduled a September hearing for Trump's next two FERC nominees: Glick, a Democrat, and Kevin McIntyre, Trump's pick for the agency's chairmanship.

FINALLY FRIDAY! I'm your fill-in host, Annie Snider, and it's my last day with you. Susan Lafferty with Eversheds Sutherland US was first through the door answering that Transportation

Secretary Elaine Chao is constitutionally ineligible for the presidency, because she is originally from Taiwan. Here's Susan's question for today, inspired by a book she's reading with her kids: Which president is rumored to have been stuck in his bath on his Inauguration Day, and in what year did that inauguration take place? Send your guesses to Darius Dixon, who takes the ME reins for Monday — along with your tips, energy gossip and comments at ddixon@politico.com, or follow us on Twitter @Dariusss, @aadragna, @Morning_Energy, and @POLITICOPro.

BASKING IN THE APPALACHIAN LOVE: After a rough couple of weeks for Trump in which Republicans failed to achieve their years-long bid to repeal Obamacare, a new communications director imploded and Russia allegations continued to dominate the news, the president turned to a friendly crowd Thursday night in Huntington, W.Va., where his favorite energy talking points drew roaring applause. After waving a supporter's "Trump digs coal" sign on his way to the podium, Trump touted his withdrawal from the Trans-Pacific Partnership and "the job-killing Paris climate accords" and took credit for an upswing in coal exports, which have seen a bump compared with 2016 but remain far below shipments in previous years.

West Virginia Gov. Jim Justice, a former coal businessman and the richest person in the state, also got a turn at the mic to announce that he will leave the Democratic Party to become a Republican. "I can't help you anymore as a Democrat governor," he told the crowd before lavishing praise on Trump's children and declaring, "Have we not heard enough about the Russians?" Justice said he's been in the Oval Office twice in two weeks to present ideas on coal and manufacturing.

MANCHIN OUT ON A LIMB: The announcement meant further political isolation for Sen. Joe Manchin, the sole Democrat in West Virginia's congressional delegation, as he faces reelection in 2018. The Senate Leadership Fund, a deep-pocketed GOP super PAC, launched a digital campaign Thursday attacking the Democrat. Manchin has refused to change parties and resisted entreaties to join Trump's Cabinet, a move that could have given Republicans one additional vote in the Senate (coincidentally, that's how many extra votes they needed on Obamacare last week). In a statement Thursday ahead of Trump's West Virginia rally, Manchin welcomed the president and said he is "particularly excited" to work with him on tax reform. "Our job is to fix things, not fight," Manchin said.

WIND AT GREENS' BACKS — BUT FOR HOW LONG? Environmentalists hope that EPA Administrator Scott Pruitt's deregulatory agenda is beginning to crumble after he hit two roadblocks this week, Alex Guillén reports: First a federal court reinstated an Obama-era methane regulation, and then Pruitt backed off on his attempts to delay implementation of a sweeping ozone rule. "This week's been a reality check for Pruitt and Trump that when they ignore the law, they're going to lose, and I think that may be starting to sink in," said Mary Anne Hitt, director of the Sierra Club's Beyond Coal campaign.

But Pruitt supporters aren't hanging their heads yet. For one thing, this week's losses were relatively minor, with the biggest battles over the most contentious Obama-era rules yet to come.

Moreover, argued Christi Tezak of ClearView Energy Partners, Pruitt has multiple paths to victory. "You can certainly win by vaporizing a rule, no doubt. You can win by putting in place a different rule that makes it harder to do a stricter rule later. You can win through delays, even if courts reverse you later," she told Alex.

INTERIOR IG LAUNCHES PROBE OF ZINKE-MURKOWSKI CALL: The Interior Department's inspector general has begun a preliminary investigation into Secretary Ryan Zinke's call to Sen. Lisa Murkowski in which he conveyed the administration's dissatisfaction with her vote against a motion to proceed on the GOP health care bill. IG Mary Kendall told Reps. Raúl Grijalva and Frank Pallone in a letter Thursday that she is looking into "potential legal and ethical violations" by Zinke during the July 26 call. But the Alaska Republican has said she didn't take the call as a threat, and Zinke posted a photo Thursday on Twitter of the pair sharing a beer. "My friends know me well," he wrote. Esther Whieldon has all the details.

SCHWARZENEGGER FLEXING CLIMATE MUSCLES AGAINST TRUMP: Former California Gov. Arnold Schwarzenegger today will announce an ambitious national effort aimed at countering Trump's withdrawal from the Paris climate accord by providing state and local lawmakers with a toolbox for passing substantive climate change legislation, POLITICO California's Carla Marinucci reports.

The project, dubbed a "digital environmental legislative handbook," offers a curated list of legal and legislative research, voting records, bill language and data to help lawmakers prepare bills on everything from air quality to renewable energy to climate change. "With his decision on the Paris agreement, it is even more so important to make this information available — because it shows the kinds of wonderful things states can do — without waiting for the federal government," Schwarzenegger told Carla. He's set to unveil the toolbox before the National Caucus of Environmental Legislators.

GREEN GROUPS PRESS COURT ON CPP RULING: Environmental groups are asking the D.C. Circuit Court of Appeals not to hold off on ruling on the Obama administration's Clean Power Plan, arguing that the White House's Unified Agenda indicates that it could be at least 12 months before the Trump administration will propose its repeal of the contentious rule. The classification of the CPP repeal as a "long-term" action "demonstrates that even the preliminary step of a *proposed* rule may be delayed for at least another year," the green groups wrote in a court filing Thursday, arguing that the court should not hold off on a fully-briefed case "for a period far longer than the Supreme Court presumed when it issued its stay pending this Court's disposition of the merits." Here's Alex with more.

ANOTHER SAGE GROUSE REBELLION? The team of Interior politicals and career staff assigned to review the agency's land-use conservation plans for sage grouse in Western states could send Zinke their recommendations as soon as today. The Obama administration's plans, which sparked ire across the West, aimed to avoid an Endangered Species Act listing by boosting protections on broad swaths of federal land. The new recommendations, due to Zinke by Sunday, could include ideas for easing the path for fossil fuel development on federal land in the bird's range.

EPA REMAINS QUIET IN METHANE APPEAL: EPA is staying mum in the ongoing legal battle over Pruitt's 90-day stay of the methane rule for new oil and gas wells. The agency did not file any brief taking a position on requests from industry groups and states that support the stay seeking a rehearing before the full D.C. Circuit Court of Appeals, and a spokesman had no comment on the record. The stay's supporters made one last argument Thursday for an *en banc* review, saying the court didn't have the jurisdiction to hear the case in the first place. It's not clear when the D.C. Circuit will decide whether to hear the appeal, but time is of the essence: Pruitt's stay would have expired in 27 days anyway.

EPA, DOT READY TO TAKE COMMENT ON MPG REVIEW: EPA and the Department of Transportation could move to reopen comments on a review of the 2022-2025 mileage standards as soon as today, a source tells ME. As part of setting vehicle emission requirements for both 2017-2021 and 2022-2025, EPA agreed to review the second set of standards for appropriateness. The review was completed over a year early under former Administrator Gina McCarthy, and she affirmed the mileage standard of 54.5 miles per gallon. Under pressure from the auto industry, Pruitt and Chao revoked that affirmation in March, and now the agency will announce that it will take the next step in the review by reopening the docket for further input.

GAO SEES ROOM FOR IMPROVING PHMSA'S SAFETY CALCULATIONS: The Government Accountability Office recommended Thursday that the Pipeline and Hazardous Materials Safety Administration take steps to ensure that the formula it uses to identify which pipelines pose the greatest safety risk is effective. PHMSA uses the formula to set its priorities each year and decide how often it checks on parts of the nation's 2.7-million-mile pipeline network. GAO said the agency needs to document its reasoning behind each component of its formula and create a process to periodically review its effectiveness.

SPRING'S COMING SOONER IN THE HIGH NORTH: Snow is melting earlier in the spring and coming later in the fall on the North Slope of Alaska, according to a study by NOAA and the Cooperative Institute for Research in Environmental Sciences published in the *Bulletin of the American Meteorological Society*. Between 1975 and 2016, the researchers found the snow-free season was growing by about one week per decade, with major ecosystem implications. Native birds have been laying eggs earlier, and rivers have broken through the ice to flow earlier in the season, the researchers found.

ENVIROS PLAN BORDER WALL RALLY: Dozens of environmental and social justice groups are planning a two-day rally and walk in southern Texas on Aug. 12-13 aimed at highlighting the potential social and environmental impacts that Trump's plan to expand the border wall could have on nearby towns and wildlife. The rally, which will include speakers such as Sierra Club President Loren Blackford, will also take aim at Trump's anti-immigration policies. The move is part of a new strategy by environmental groups to combine forces with social justice groups on this issue.

Stories from POLITICO Pro

New FERC picks face a mountain of difficult business Back

By Darius Dixon | 05/09/2017 07:09 PM EDT

President Donald Trump's new picks for FERC should have little trouble winning Senate confirmation, and once they do they will face a mountain of decisions about the future of power markets, the agency's relationship with the states, and its approach to enforcement.

Trump's long-awaited announcement that he would fill two vacancies on the five-seat commission couldn't have come soon enough for Sen. Lisa Murkowski, who is angling for quick confirmation hearings before her Senate Energy and Natural Resources Committee.

"The FERC has been without a quorum since early February and they need the ability to get to work," Murkowski told reporters Tuesday.

Trump nominated Neil Chatterjee, a senior energy adviser to Senate Majority Leader Mitch McConnell , and Robert Powelson, a Pennsylvania regulator with strong relationships in Congress, to the commission, but he has yet to tap a permanent FERC chairman. That position has been expected to go to Kevin McIntyre, a Jones Day lawyer who also is an expert in the Federal Power Act, FERC's core statute. In more than two decades with Jones Day, McIntyre has had a slew of energy industry clients, including South Carolina Electric & Gas Co. and SCANA Corp., making his financial disclosures and ethics paperwork more complicated than those who have been in government for several years.

The agency has been experiencing a traffic jam of energy infrastructure projects needing the leadership's blessing.

"We are already building up quite a backlog," acting FERC Chairwoman Cheryl LaFleur said recently, noting that there'd been a steep drop-off in the number of orders issued since former Chairman Norman Bay's resignation in February dropped it to two members, preventing a quorum needed to conduct a lot of its most critical business.

Many of those orders, dealing with issues such as interstate natural gas pipeline projects and contested electricity rate plans, still require followup decisions to be made when more leaders are brought on. To help ease the agency's pileup, staff have been lining up draft orders for new

commissioners to review as soon as they're sworn in.

Perhaps the biggest issue looming over the agency is how it plans to address a growing number of state-level policies tailored to specific energy sources — such as nuclear incentive programs recently approved in New York and Illinois — that are complicating the markets under FERC's jurisdiction.

The Electric Power Supply Association, which represents independent generators, filed complaints in January calling on FERC to ensure electricity prices in upcoming spring auctions in the New York and the mid-Atlantic area PJM Interconnection markets were not artificially lowered by state programs that subsidize struggling nuclear plants. But until at least one new member is confirmed, FERC's hands are tied.

Meanwhile, Ohio, Connecticut, New Jersey and Pennsylvania have all started to mull their options for helping power plants in their states just as state regulators and a broad swath of the energy industry has increasingly looked to FERC for policy guidance.

Presidents and Congress typically aim to achieve geographic balance at FERC, and Powelson would be the only representative of a PJM state if he is confirmed.

In addition to being the largest power market overseen by FERC, PJM may test how the agency irons out differences — or butts head with —with states crafting lifelines for power plants. And Powelson has called for market operators to take a more forceful role in addressing issues such as aiding nuclear power through carbon pricing rather than leaving states to take bites out of the markets.

"I think it creates a bastardized market construct and at the end of the day, this issue is best resolved with the RTO — in our case PJM — putting that value on carbon and dealing with it," Powelson said in an interview with POLITICO last fall. "Sheepishly, RTOs are putting their heads down in the sand and not saying a word."

Carbon pricing got a lot of airtime at FERC's recent technical conference as perhaps the most market-friendly way to support nuclear power. Still, it was also clear that states within the same electricity market, like New England, couldn't agree on moving ahead with carbon pricing.

Another part of the policy deluge the new commissioners will feel pressure to act on is the agency's closely watched price formation initiative, which focuses on developing new market rules that boost how power plants are paid in an increasingly complex grid. That initiative, which was launched following the 2013-14 polar vortex that caused electricity prices in the Northeast to skyrocket, has been eyed particularly by companies with around-the-clock baseload power plants, like the nuclear industry.

The FERC vacancies also exacerbated uncertainty surrounding the commission's work to protect energy markets against alleged manipulation. Once a new commissioner is confirmed — and a permanent chairman in place — leaders will have to decide how to respond to recent court losses over how they run enforcement cases. While FERC lawyers handle the particulars of each case,

the commission leadership will have to debate any overarching change to its enforcement strategy, particularly if judges are going to force them to practically build the cases from scratch again.

FERC Commissioner Colette Honorable also recently announced that she will leave the agency later this year. Her departure provides another opening for Trump to fill but because FERC's board can't have more than three members of the same political party, tradition indicates that Democrats will pick who fills the seat.

West Virginia Democratic governor switches to GOP Back

By Matthew Nussbaum, Gabriel Debenedetti, Kevin Robillard and Daniel Strauss | 08/03/2017 04:40 PM EDT

West Virginia Gov. Jim Justice announced a party switch Thursday evening in a surprise appearance with President Donald Trump in Huntington, West Virginia.

"Today, I will tell you, with lots of prayers and lots of thinking, I can't help you anymore being a Democrat governor," Justice said. "So tomorrow, I will be changing my registration to Republican."

Justice's flip is further confirmation of his state's sharp rightward turn, and reflects Trump's widespread popularity in a state the president won by a landslide in 2016.

Trump, who has promised to restore lost coal industry jobs, has lavished attention on West Virginia since taking office.

Justice, who seldom worked with other Democrats, recently spent a well-publicized day hunting with Donald Trump Jr. — a familiar political optic in a largely rural state with a strong hunting tradition. But his move still blindsided his old party, which is now left with control of just 15 governor mansions.

Rumors that Justice was going to make the switch circulated throughout the day, but West Virginia Democrats and multiple national Democrats who have worked for Justice in the past said he gave them no notice on the party switch.

"We are sitting here in our office, everyone of us that is capable of standing on two feet, looking at each other, saying, 'Oh my goodness, did anybody see this coming?" said Steve Roberts, president of the West Virginia Chamber of Commerce. "I am surprised. However, when I worked with Gov. Justice during the last session of the Legislature, I could plainly see that he is a pragmatist who is trying to get things done and is not driven by ideological or party loyalty.

And he has a close connection to the Trump family and it is my hope that this will further solidify a national attention in favor of policies that will help economic development, job creation and education in West Virginia."

Former Democratic Rep. Nick Rahall described the governor as a close friend who put West Virginia first.

"Jim is a West Virginian true and blue and does what is best for West Virginia," Rahall said. "That's his No. 1 goal. His every move as governor has been in that direction. I have not discussed this situation with him to know what moved him to switch parties, but suffice it to say that much of West Virginia's been voting late this way. But most of the state is registered Democrats, so I'm sure he read the political winds."

Privately, the mood among many West Virginia Democrats was less understanding. Despite West Virginia's embrace of Republicans on the federal level, Democrats had held the state's governorship since 2001.

"Obviously, we're pissed. I mean let's face it, we put a lot of effort in the 2015 election to elect this man as governor," a top West Virginia Democratic operative said. "And we had two more progressive individuals in that primary but we knew that if Jim Justice went out of that primary he could win. So I mean, a lot people are pissed. There's a lot of hurt feelings. People are feeling betrayed right now."

The Democratic Governors Association had worked closely with Justice on his gubernatorial run, and combined with labor unions to spend about $1 million helping defeat GOP state Senate President Bill Cole. Justice, a populist-minded billionaire like Trump, funded much of his run out of his own fortune, made in the agriculture, coal, timber and tourism industries. Despite his status as the richest man in the state, he still lived in the house he grew up in and coached high school basketball.

Justice will not be a stranger in his new party. He's friends with Senate Majority Leader Mitch McConnell, and donated to McConnell's super PAC in 2014. He also donated to the Republican Governors Association just a few years before the RGA spent millions of dollars trying to defeat him in 2016, attacking him for failing to pay taxes and fines related to his businesses.

The governor's move stands to make the coming months more complicated for Sen. Joe Manchin, who now stands as the state's most prominent Democrat ahead of a tough reelection challenge in 2018. Manchin — a moderate Democrat who is often criticized by his own party's left wing — was already a top GOP target, with Rep. Evan Jenkins and Attorney General Patrick Morrissey challenging him.

"I certainly have wondered what the impact is likely to be on Manchin," said Roberts. "There had been some speculation that Manchin was going to change parties from earlier on. If Manchin is taken by surprise, my guess is that he just has a lot to think about."

Manchin's office declined to comment on Justice's switch in party affiliation but said that the

senator would continue to "be a proud West Virginia Democrat."

In a sign of the charged politics surrounding Trump, Manchin — who has maintained good relations with the White House — issued a long statement welcoming Trump to the state Thursday.

"The president is coming to West Virginia, and I'm excited he is," Manchin said. "I know some Democrats, especially those in Washington, D.C., would not want the president to visit their state. As Americans, we should always be honored to have a president visit our state — whoever he or she is, regardless of political party. All Americans should hope for the president to succeed, because if he does, the country succeeds — and West Virginia does as well."

When Trump touched down in the state Thursday, he was set to visit the place that explains his surprise 2016 victory as well as the challenges of turning his campaign promises into tangible results.

Commentators were often left scratching their heads at Trump's dark campaign rhetoric and description of a nation in decline, crushed by job loss, drugs and rising crime. In much of the country, particularly the urban centers Trump so often derided, the rhetoric simply did not match with reality.

But West Virginia was an exception. Trump's promises to renew American greatness, to "bring back jobs" and restore an idealized version of the American worker struck a chord in a long-suffering state. Trump won 68 percent of the vote there against Hillary Clinton, carrying every one of the state's 55 counties. In the state's coal-producing counties, he regularly racked up more than 70 [percent] and 80 percent of the vote.

"The demographic profile sort of fits your hypothetical Trump voter — we're older, we're lower income, lower levels of education, not very ethnically diverse," said Sean O'Leary, a senior policy analyst at the West Virginia Center on Budget and Policy. "If you were to take a stereotypical Trump voter it would look a lot like a stereotypical West Virginian."

For many in the state, Trump's dystopian rhetoric felt like a long-awaited acknowledgment. The state's population peaked around 1950 and, after some rebounding growth over the past two decades, has begun to shrink again since 2010. It has one of the country's lowest median household incomes at $42,824, well below the national average of $56,516. The life expectancy is more than three years below the national average, and in 2015 the rate of opioid overdose deaths was 3.6 times as high in West Virginia as nationwide. The state also had the highest rate of drug overdose deaths overall.

The economic scene is almost as bleak: The state's labor force participation is just 53.1 percent, meaning almost half of the state's adults are neither working or looking for jobs.

For an electorate that the Chamber's Roberts described as "rural populist," Trump's campaign pledge not to cut Medicare, Medicaid or Social Security carried special resonance. In supporting Republican health care plans since his inauguration, though, Trump has reneged on the promise

to protect Medicaid.

But that has done little to dent his popularity in West Virginia, where much of his appeal is wrapped in his promise to restore the state's coal industry. The industry, deeply entwined with the state's culture even as it wanes in economic importance, has seen a stark decline in recent years.

Coal mining jobs declined by half from 2011 to 2016, with the Commerce Department tallying just 11,343 coal miners in the state by the end of 2016 — down from more than 23,000 in 2011. Total mining and logging jobs, though, have increased by about 2,400 over the last year, with 1,200 of those jobs coming just between May and June — a sign that Trump's policies are working, supporters say.

"We love our coal miners. Great people," Trump said at an executive order signing in March. "Over the past two years, I've spent time with the miners all over America. They told me about the struggles they've endured. I actually, in one case, I went to a group of miners in West Virginia — you remember, Shelley — and I said, how about this: Why don't we get together, we'll go to another place, and you'll get another job; you won't mine anymore. Do you like that idea? They said, 'No, we don't like that idea — we love to mine, that's what we want to do.' I said, if that's what you want to do, that's what you're going to do. And I was very impressed. They love the job. That's what their job is. I fully understand that."

At a rally in the state during the campaign, Trump famously put on a coal miner's helmet and mimed as though he was shoveling while the crowd roared.

"We have a tradition of mining and producing coal that people here are really proud of," Roberts said, noting that Trump's pro-mining rhetoric — particularly after the Obama administration sought to curtail coal production due to environmental concerns — was a breath of fresh air.

"Plain-spokenness is not considered offensive here, the fact that he just sort of calls it like he sees it," Roberts said. "There probably is a very real feeling that the nation hasn't done much to help our state during at least the eight years of the Obama administration and now we have a president that says, 'I like coal, I support the military, I love the Boy Scouts.'"

"The president is proud to have the support of the men and women in places like West Virginia who had been left behind by the policies of the previous administration," White House spokesperson Lindsay Walters said in a statement to POLITICO. "He's working for them each and every day, unleashing American businesses and protecting their communities. Just look at the results he's already gotten. 42,000 mining and logging jobs have been added since January, and a new coal mine has opened its doors. The much-needed resources of the federal government are refocused towards combating the epidemic of drug and opioid addiction. He's getting better trade deals with our partners around the world. And this is only the beginning."

Senate Leadership Fund launches digital campaign vs. Manchin Back

By Kevin Robillard | 08/03/2017 02:44 PM EDT

Senate Leadership Fund, the deep-pocketed GOP super PAC, is launching a digital campaign attacking Democratic Sen. Joe Manchin ahead of President Donald Trump's visit to West Virginia tonight.

The campaign will direct voters to a website labeling Manchin "The Joe You Don't Know," which notes Manchin voted against repealing Obamacare and has voted against 60 percent of Trump's judicial nominees. It's the first of what will be a slew of attacks aimed at pitting the former governor and second-term senator against Trump, who is ultra-popular in the state.

"The launch of this digital campaign is the first step in Senate Leadership Fund's commitment to ending the career of Joe Manchin," SLF spokesman Chris Pack said.

Manchin is the last Democrat remaining in West Virginia's congressional delegation, and Republicans have made him a top target in 2018. Pack said the West Virginia campaign is the first of multiple digital campaigns the group will launch around the country.

Early hurdles slow Pruitt's deregulation push — but maybe not for long Back

By Alex Guillén | 08/03/2017 05:35 PM EDT

EPA Administrator Scott Pruitt is starting to hit roadblocks in his efforts to undo the agency's Obama-era regulations — a trend that has environmentalists crowing but may prove to be symbolic and short-lived.

Green groups were happy to take the wins this week after a federal court reinstated an Obama-era methane regulation and Pruitt backed off on his attempts to delay implementation of a sweeping ozone rule. Both rules are among dozens targeted by President Donald Trump's push to relieve regulatory burdens on businesses.

"This week's been a reality check for Pruitt and Trump that when they ignore the law, they're going to lose, and I think that may be starting to sink in," said Mary Anne Hitt, director of the Sierra Club's Beyond Coal campaign.

"I think these cases show the plain language of federal statutes will not be Administrator Pruitt's Achilles' heel, they'll be his Achilles' torso," said John Walke, the NRDC's clean air director.

Not everyone believes Pruitt's and Trump's deregulatory agenda is in danger, however.

Christi Tezak, managing director at ClearView Energy Partners, said these early snags represent "more of an evolution versus a faltering" for Pruitt's attempt to revoke, rewrite and delay as many Obama administration regulations as possible.

"They're pushing the envelope, just as the administration before them did, just 180 degrees in the other direction," Tezak said. "Winning in this administration is a broad term that can change. You can certainly win by vaporizing a rule, no doubt. You can win by putting in place a different rule that makes it harder to do a stricter rule later. You can win through delays, even if courts reverse you later."

Indeed, Trump's agencies have already scored a lot of early success in undermining Obama administration regulations, including the major water and climate rules that Pruitt has put on the chopping block.

EPA downplayed its setbacks on the methane regulation, which Pruitt had halted early this year following requests from the oil and gas industry to reconsider the rule.

"EPA is moving full speed ahead to enact common sense regulations, as evidence by the number of significant regulatory actions taken to implement President Trump's executive orders to protect the environment, save manufacturing jobs and reduce America's dependency on foreign energy sources," agency spokeswoman Liz Bowman said in an email.

A federal court said in July that Pruitt had unlawfully halted the methane rule. On Monday the court reinstated the rule, saying it was unreasonable to let an unlawful stay remain in place any longer.

Then on Wednesday, Pruitt made a hard U-turn on a one-year delay in implementing an Obama ozone standard — a postponement that had drawn lawsuits from environmentalists and Democratic attorneys general. EPA said in a notice that, on second thought, the national delay was not supported by the data it had.

Pruitt's ozone retreat came a day before EPA was going to have to defend itself in court.

These are "initial victories," Hitt acknowledged, but she hopes they prove an omen.

Pruitt "may be very creative in how he tries to unravel [regulations], but at the end of the day he has an obligation to protect public health, and if he unravels the standards that protect public health, he is going to be breaking the law," she said.

Walke rejected the idea that even temporary delays that are later overturned could count as victories for Pruitt.

"A cynical agency head willing to break the law can get away with a lot, that is sure. But that's

not winning. That's recklessness," Walke said. "They pay a price in adverse court rulings, public scorn and negative publicity."

Still, these are relatively minor losses for Pruitt in the grand scheme of the Trump agenda.

EPA will have a new freeze placed on the methane rule within weeks, and this one may be less vulnerable to court challenge because Pruitt took public comment first.

The agency also hinted that Pruitt could still delay ozone implementation decisions on a case-by-case basis. That could mean issuing decisions for regions that are indisputably above or below the limit while giving more time for others, particularly in the intermountain West, where background ozone levels have emerged as a difficult issue.

"There's probably plenty of stuff you can put out the door, and then you fight over what really matters," Tezak said.

Meanwhile, the underlying ozone standard remains under review by Pruitt's team. That prompted Democratic states to step up in court this week to defend the 2015 rule, since EPA no longer will.

For now, environmental groups are pressing forward in the handful of cases where they can.

Green groups teamed up with a union last month trying to reverse Pruitt's two-year stay of a rule meant to prevent explosions at chemical plants. Environmentalists are also trying to reinstate the compliance deadlines for a rule on toxic discharges from power plants, which Pruitt stayed until litigation over the rule concludes.

Still to come are many of the biggest battles, as Pruitt eventually moves to revise or rescind major Obama-era rules that were tied up in court when Trump took power. Cases frozen while Pruitt works to undo the underlying rules include the Clean Power Plan, the carbon rule for future power plants, the ozone standard itself and the Waters of the U.S. rule.

Pruitt's work to rewrite or revoke those regulations could take a year or more, with intense litigation sure to follow.

D.C. Circuit orders EPA to resume enforcing methane rule Back

By Alex Guillén | 07/31/2017 06:39 PM EDT

The full D.C. Circuit Court of Appeals today ordered EPA to resume enforcing its methane rule for new oil and gas wells, a potentially temporary but important loss for EPA Administrator

Scott Pruitt's deregulatory agenda.

A three-judge panel ruled on July 3 that Pruitt improperly imposed a 90-day stay of the rule amid a reconsideration of key leak detection and repair requirements.

The court agreed to keep the stay in place for two weeks to give EPA time to decide on an appeal, a timeline that expired last week. The agency has not asked for an appeal, but industry groups and states critical of rule have. The court ordered responses to those appeal petitions be turned in by Wednesday afternoon, with any further reply due Thursday, indicating the court will move quickly on the appeal.

The order was issued by a 9-2 vote. Judges Janice Rogers Brown, who will retire from the court effective Aug. 31, and Brett Kavanaugh voted against reinstating the rule immediately.

EPA is taking comment through Aug. 9 on a proposed two-year stay of the rule through 2019 and could have it in place by September. That longer-term stay may not face the same legal issues as the 90-day one since EPA will incorporate public comment.

WHAT'S NEXT: The court could decide as early as this week whether to hear an en banc appeal. Pruitt's 90-day stay would expire on Aug. 31 anyway, putting a ticking clock on the court proceedings before the matter becomes moot.

Pruitt drops delay of ozone rule implementation Back

By Alex Guillén | 08/02/2017 07:55 PM EDT

EPA Administrator Scott Pruitt has dropped his one-year delay of an upcoming implementation step for the 2015 ozone standard, EPA announced today.

The withdrawal comes after lawsuits from environmental groups and Democratic states sued over the delay in deciding which areas meet the standard and which do not. EPA had been due to file its first defense of Pruitt's delay in court on Thursday.

Pruitt originally said he did not believe EPA had the necessary data to decide on the designations by the Oct. 1 deadline. But a pre-publication Federal Register notice signed by Pruitt on Wednesday says that "the information gaps that formed the basis of the extension may not be as expansive as we previously believed."

Some areas may be ready for designation in the coming months, and the notice hints that regional delays may be necessary on a case-by-case basis. "The Administrator may still determine that an extension of time to complete designations is necessary, but is not making such

a determination at this time," says the notice in withdrawing the nationwide delay.

"We believe in dialogue with, and being responsive to, our state partners. Today's action reinforces our commitment to working with the states through the complex designation process," Pruitt said in a statement.

Pruitt also said he intends to avoid any settlement agreements with "activist groups," a practice he has long opposed and said he ended at EPA. "We do not believe in regulation through litigation, and we take deadlines seriously. We also take the statute and the authority it gives us seriously," Pruitt said.

WHAT'S NEXT: EPA has until Oct. 1 to determine which areas of the U.S. meet the standard and which will have to submit plans to lower pollution, a years-long process.

Interior IG probing Zinke call to Murkowski over health care vote Back

By Esther Whieldon | 08/03/2017 04:18 PM EDT

The Interior Department's inspector general's office told lawmakers today that it has launched a preliminary investigation into Secretary Ryan Zinke's effort to get Sen. Lisa Murkowski to back Obamacare repeal last week.

In a letter to Reps. Raúl Grijalva and Frank Pallone, Deputy Inspector General Mary Kendall said she is looking into "potential legal and ethical violations" by Zinke. The secretary called Murkowski July 26 to convey the administration's dissatisfaction with her vote against a motion to proceed on the GOP health care bill.

Murkowski today said that pressure from the administration was one of several reasons she delayed a markup that had been scheduled for July 27 to consider several nominees. The panel voted today to advance the nominees.

"But we also were dealing with the very proximate timing of issues coming out of the White House related to health care that really had nothing to do with energy and yet some had made it tied to energy," Murkowski told POLITICO today. "But ... even if that had not happened, we still were looking at whether or not the timing was right to move forward with the markup."

Murkowski said that she did not take Zinke's call as a threat and that his department has not done anything to stop or slow down the issues she cares about since then.

Zinke posted a photo on Twitter today of him and Murkowski sharing a beer. "My friends know me well," he wrote.

Murkowski characterized their relationship as "very strong, professional, friendly, cordial and respectful."

WHAT'S NEXT: Murkowski said she is hopeful the Interior and Energy department nominees that cleared her committee today will be confirmed by the full Senate before adjourning for recess, which is expected later tonight. They were not part of a large batch of nominations confirmed earlier this afternoon, but negotiations continue.

Schwarzenegger unveils initiative to tweak Trump on climate Back

By Carla Marinucci | 08/04/2017 05:20 AM EDT

Former California Gov. Arnold Schwarzenegger, flexing his muscles in an effort to counter President Donald Trump's withdrawal from the Paris climate accord, will unveil an ambitious new national effort Friday aimed at providing lawmakers with a comprehensive set of tools to pass substantive climate change legislation at the state and local level.

The new initiative to tweak Trump on climate change is being touted as a first — a "digital environmental legislative handbook" which organizers say will provide political leaders around the nation with a comprehensive curated list of legal and legislative research, voting records, and bill language and data to help them prepare bills on a wide range of environmental action, including air quality, renewable energy, health and climate change.

The effort developed by the USC Schwarzenegger Institute and the National Caucus of Environmental Legislators will be unveiled Friday by the former California governor before more than 130 legislators at the NCEL's Boston conference.

"There's no reason why we shouldn't have a digital legislative handbook — and make it available to people who wanted to create environmental action now — because of the situation with Trump," Schwarzenegger told POLITICO in an interview Thursday. "With his decision on the Paris agreement, it is even more so important to make this information available because it shows the kinds of wonderful things states can do without waiting for the federal government."

"The message to legislators with the project is now 'you have the power to do it yourselves,'" he said. "The reality is each state now goes to work and passes great legislation that helps them...make great decisions."

Bonnie Reiss, global director of the Schwarzenegger Institute, and a longtime senior adviser to the former governor who helped developed the new digital website, told POLITICO that "even as governor, when he passed our landmark AB32, Arnold has always been a big believer in the

power of local and sub-national action on climate change."

"And now, with Trump both denying climate change and, frankly, reversing so much action on environmental protection across the board, Arnold is really doubling down on the need for action," she said.

The unveiling of Schwarzenegger's new effort comes just days after both he and California Gov. Jerry Brown appeared to seize the mantle as de facto national leaders on climate change — standing side by side at a triumphant ceremony to sign California's latest cap-and-trade bill. The Republican and the Democrat said the moment illustrated how California offers the nation an example of bipartisan cooperation on climate that benefits all Americans.

But in the first six months since Trump's inauguration, the former California governor and Hollywood star has been especially driven to spur international action on climate change to counter both a White House and an Environmental Protection Agency intent on rolling back some of the same environmental regulations and protections for which both he and Brown fought.

Schwarzenegger in Paris recently issued a direct challenge to Trump's position on climate change when he stood alongside French President Emmanuel Macron and vowed to "make our planet great again" on climate change issues. In a video message that has received nearly 2 million views, Schwarzenegger vowed: "One man cannot destroy our progress. One man can't stop our clean energy revolution. And one man can't go back in time."

Now, making good on a promise that states will move forward with environmental legislation — with or without the help of Trump — Schwarzenegger says the new resource site debuting today provides legislators with a range of categories in the area of environmental protection. The site provides comprehensive listings of examples of bills that have passed around the country, compete with data like fiscal impact and past votes, as well as full legal language. Lawmakers can also research new legislation including air quality, renewable energy, human health and climate change.

"It's interactive and it's about states helping states," said Reiss. "We've given legislators an opportunity to submit legislation in their states that may be duplicable in other states, and the research is done for them already."

The one-stop-shop is important "especially with Trump — what's happening in the Congress and the EPA and our parks," said Reiss. "Our focus is making sure we really reach out and create a meaningful resource that is huge for U.S. legislators," with the hope to eventually expand the effort internationally, she said.

Fran Pavley, the environmental icon and former California legislator who authored the landmark AB32 — the nation's first bill to take a long-term and comprehensive approach to the goals of cutting greenhouse gas emissions — said that the former governor, as a Hollywood star known to millions worldwide, is in a unique position to bring international spotlight to the issue.

"I'm thrilled that he's in this space," she told POLITICO. "Arnold consistently commands attention on a global stage like few people can...so it's critically important."

She told POLITICO that Schwarzenegger's determination to expand consciousness of a watershed moment in environmental protection has produced an entirely bipartisan new platform that will enable more legislation in the environmental arena.

"We've proven since the passage of AB32, eleven years ago when we started the multi-sector approach, that our economy has grown and we've reduced greenhouse gas emissions in California," said Pavley, who closely advised Schwarzenegger and Reiss on how to maximize the site's usefulness for legislators. "You don't have to make a choice between a healthy economy and a healthy environment."

In the wake of Trump's Paris decision, Pavley said,"everyone realizes it's really going to be up to the sub-nationals to do even more — cities, states and provinces working collaboratively together." The move to provide legislators with tools they need "is a natural progression," she said, "given that the federal government level is not moving forward and states need to share information."

Schwarzenegger, who in 2010 founded the non-profit global environmental effort called the R-20 Regions of Climate Action to advance the climate change message, said his goal looking forward is for the new digital legislative handbook to expand its scope and to assist lawmakers worldwide.

"California is not the only state that has done great things....the key thing is to show leadership," Schwarzenegger said. "There's a lot of great laws..there's great information out there and brilliant minds. We want to share it with the rest of the world."

Green groups ask court to issue Clean Power Plan ruling Back

By Alex Guillén | 08/03/2017 02:49 PM EDT

Environmental groups today asked the D.C. Circuit Court of Appeals to issue its ruling on the Obama administration's Clean Power Plan because it remains unclear when the Trump administration will propose its repeal of that rule.

The groups cite the White House's Unified Agenda, which was released last month. The document provided no deadline for proposing or finalizing the CPP repeal, which it classified as a "long-term action," those for which the agency does not expect to act for at least 12 months.

That classification "demonstrates that even the preliminary step of a *proposed* rule may be

delayed for at least another year," the green groups wrote.

"These facts further underscore that this Court should not continue to postpone a decision in this fully briefed case, which was argued en banc on September 27, 2016, for a period far longer than the Supreme Court presumed when it issued its stay pending this Court's disposition of the merits," the groups wrote. "The Court should decide the case on the merits, or terminate it by remanding the case to EPA."

WHAT'S NEXT: If the court decides to consider the request, it likely will ask EPA and the CPP's challengers to weigh in first.

Green groups to huddle on plan to challenge Trump's border wall Back

By Esther Whieldon | 02/08/2017 02:37 PM EDT

Environmentalists plan to meet this month to craft a strategy to try to stop President Donald Trump's plan to erect a border wall that they fear could wreak havoc on sensitive ecological areas and species.

The Feb. 23 meeting in Tucson, Ariz., among national and local environmental and human rights groups is part of green groups' broader goal to counter the Trump administration and Republican-led Congress' efforts to eliminate environmental laws and rules.

"The new administration is a game changer in terms of how we do our work," said Dan Millis, program coordinator for the Sierra Club's Borderlands Program, which is co-sponsoring the meeting along with Wildlands Network and the Center for Biological Diversity. "We have pivoted to a position of resistance on pretty much all of Trump's policies because they would be catastrophic for the environment."

The 1,954-mile U.S.-Mexico border includes designated wilderness areas and terrain with mountains so rugged that border guards can only patrol them on horseback. Green groups contend installing a high wall in ecologically sensitive spots along the border will not only drive up patrol traffic but also cut off important breeding and hunting grounds for wide-roaming species such as ocelots and jaguars.

The wall and fencing that are already along more than 650 miles of the border "have been a disaster for the environment," Millis said. "They have not stopped anybody from crossing the border except for the wildlife and the natural flow of water. ... Obviously, the problem would get much worse if Trump were to go through with his plans to build a larger and more solid wall."

Environmentalists hope to rally the progressive voter base that backed Sen. Bernie Sanders' (I-

Vt.) and the "Keep it in the Ground" movement, while drawing in civil rights, immigration, social justice and tribal groups that care about border issues.

"I think we have an opportunity to mobilize that energy in a way that maybe didn't necessarily exist back in 2005 or 2006 or some of the other times when the wall and border construction was being discussed," said Katie Davis, Western director for the Wildlands Network. Like the "Keep it in the Ground" movement, a stop-the-wall message could become a rallying cry that people use to pressure their lawmakers, she said.

The green groups are likely to push back against legislation like the bill House Natural Resources Chairman Rob Bishop (R-Utah) told POLITICO he would re-introduce that would expand the Homeland Security secretary's existing authority to waive environmental and other laws to build a wall.

Bishop wants to allow the DHS secretary to waive the laws in a zone extending 100 miles from the border, which would also give patrol officials more leeway to traverse the more than 40 percent of the Southwest border that is controlled by the Interior Department and the Agriculture Department's Forest Service. DHS secretaries have used the waiver authority five times in the past to build border fencing and walls, and the courts have upheld the constitutionality of those actions.

Environmentalists are also searching for new allies among right-leaning groups that are reluctant to fund a wall.

"There's a whole list of Republican deficit hawks who look at that price tag of $15 billion, which is probably significantly low-balled in fact ... and they say, 'There's no way I'm going to vote for that,'" said Randy Serraglio, Southwest conservation advocate at the Center for Biological Diversity.

And Davis envisions alliances like those that solar advocates in the Southeast struck with tea party members to push for more customer access to rooftop solar.

"It really doesn't matter why you are opposed to a wall, we don't want to see a wall and if people are also of the same mind I could see there being some potential opportunities to, if not work together, at least be on the same page," said Davis.

If all else fails, some environmentalists are prepared to resort to more extreme measures. "In the end, there will be civil disobedience if necessary. If it comes down to it, we will put our bodies in front of the bulldozers if necessary," said Serraglio.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 1, 2017

Latest News

Utilities Fight Opposition To ELG Stay By Attacking EPA Benefits Estimate

Utilities are fighting environmentalists' opposition to EPA's stay of the Obama-era Clean Water Act (CWA) effluent limitation guideline (ELG) for power plants, rejecting the environmentalists' claims that the agency's estimated benefits for the rule justify keeping it in place and countering that the benefits data is flawed and should be disregarded.

Divided D.C. Circuit Issues Mandate To EPA For Reinstating Methane NSPS

A majority of the full U.S. Court of Appeals for the District of Columbia Circuit has granted a request from some states and environmentalists to issue its mandate vacating the agency's 90-day pause of key requirements in its methane rule for new oil and gas sources, putting the rule back into effect -- though two judges opposed the decision.

In Symbolic Move, California To Submit Final CPP Compliance Plan To EPA

California has approved its state compliance plan for EPA's Clean Power Plan (CPP) greenhouse gas rule for existing power plants, a largely symbolic step though officials say it nonetheless shows other states that cutting power sector GHGs is achievable under the stayed rule that the Trump administration is expected to soon propose to repeal.

EPA Budget Justification Provides Ambiguous Language On Superfund

Environmental advocates are criticizing EPA's plans to make significant budget cuts to the agency's Superfund program in fiscal year 2018 while at the same time saying the agency's budget justification document is ambiguous as to the effect of the reductions and uses "double talk" to explain how it plans to offset some of the cuts.

Environmentalists Seek Quick D.C. Circuit Mandate In Methane NSPS Suit

Environmentalists are urging an appellate court to quickly require EPA implementation of its ruling vacating the agency's 90-day pause of key requirements

in its methane standards for new oil and gas sources, arguing recent requests from industry and states for the court to reconsider the ruling are "transparent attempts to seek further delay."

District Court Case Poses Test Of Limits On Suits Over EPA CWA Permits

A federal district court in California is weighing whether to allow wastewater agencies' suit over test methods mandated in Clean Water Act (CWA) discharge permits to proceed despite EPA's claim that the case is time-barred and filed in the wrong court, posing a test of when and where dischargers can challenge EPA-mandated permit terms.

Subject: Playbook Power Briefing, presented by JPMorgan Chase & Co.: HOUSE FREEDOM CAUCUS planning to support the Senate budget -- CUMMINGS says W.H. employees used private email -- DUSTY BAKER not returning as Nats manager

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by JPMorgan Chase & Co.

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Happy Friday afternoon. THE HOUSE FREEDOM CAUCUS will hold a conference call at 2 p.m. today to discuss the Senate's budget, and whether the House should swallow it. The Senate -- in consultation with House Republican leaders -- made a number of changes to the budget to try to get the House to pass it. The other option is a formal negotiation between the House and Senate. If the house just passes the senate's bill, that could shave a week or two off the tax reform process. The Freedom Caucus's support will be necessary.

REP. MARK MEADOWS (R-N.C.) told Jake this morning that they would support it: "Only if we get a commitment to move the actual tax reform bill much quicker than originally planned. HFC will be holding a conference call later today discuss this option, in anticipation of a vote that could be scheduled for as soon as Wednesday of next week. There is a strong motivation to pass the Senate version if it actually allows us to pass tax reform by Thanksgiving."

NYT'S MIKE GRYNBAUM emails us an alert he got: "Delta will co-locate its LaGuardia operations in Terminals C and D by relocating its Delta Shuttle to Chicago and Washington, D.C. from Terminal A (Marine Air Terminal) to Terminal C."

-- THIS MEANS the American Airlines shuttle between New York and D.C. will operate from terminal B. JetBlue is taking over the Marine Air Terminal.

REMEMBER THOSE EMAILS? -- "Cummings: Trump aides admitted to lawyers they used private email," by Kyle Cheney: "A top House Democrat says White House lawyers acknowledged this week that "several" Trump administration officials used their private email accounts for government business in violation of federal record-keeping law.

"But Rep. Elijah Cummings, the top Democrat on the House Oversight Committee, said the lawyers repeatedly refused to name the officials and now he's asking Chairman Trey Gowdy (R-S.C.) to issue subpoenas for the information. In a letter to Gowdy

delivered on Friday, Cummings described a Wednesday briefing on the email matter from three members of the White House counsel's office: deputy counsel Stefan Passantino, deputy counsel Uttam Dhillon and associate counsel Daniel Epstein.

"The lawyers 'stated that several White House employees came forward and 'confessed' that they failed to forward official records from their personal email accounts to their governmental email accounts within 20 days, as the Presidential Records Act requires,' Cummings wrote. 'However, the White House officials refused to identify these employees.' Asked specifically whether President Donald Trump's senior aide and son-in-law Jared Kushner was among the violators, the attorneys told committee staff, 'You should talk to Mr. Kushner's counsel about that,' Cummings added." http://politi.co/2zpdVFU

ON COMEY -- "Grassley won't force Sessions to answer Trump-Comey questions," by Elana Schor: "Senate Judiciary Committee Chairman Chuck Grassley (R-Iowa) does not plan to force Attorney General Jeff Sessions to answer questions about his private conversations with President Donald Trump concerning the firing of FBI Director James Comey, a spokesman said Friday. Sessions sidestepped repeated questions about the Comey firing and the federal probe of Russia's election meddling during testimony before the Judiciary panel earlier this week, dismissing a bid by the committee's nine Democrats to force him to formally invoke executive privilege in declining to answer questions.

"While Democratic frustration simmers over Sessions' ability to evade questions about his private conversations with the president without claiming executive privilege, Grassley appears to have concluded that the matter isn't worth pressing because the Trump administration would likely prevail. 'No president is likely to invoke executive privilege until forced to do so,' Grassley spokesman George Hartmann said by email. 'In this case, it's premature and probably not a legitimate use of committee time and resources to force the issue.'" http://politi.co/2yC1IAj

THE FEUD CONTINUES -- "Wilson accuses John Kelly of lying: 'How dare he'," by Louis Nelson and Marc Caputo: "Rep. Frederica Wilson on Friday accused White House chief of staff John Kelly of lying about her during his emotional remarks in defense of the president's language during a condolence call to the widow of a soldier killed in action. ... 'You know, I feel sorry for Gen. Kelly. He has my sympathy for the loss of his son. But he can't just go on TV and lie on me. I was not even in Congress in 2009 when the money for the building was secured. So that's a lie. How dare he?' Wilson said Friday morning on CNN's 'New Day.' 'He didn't tell the truth, and he needs to stop telling lies on me.'" http://politi.co/2zDeUmU

****** **A message from JPMorgan Chase & Co.: What's the Word** It's been more than

30 years since we reformed our tax code, putting good jobs and higher wages at risk. In fact, 90% of CEOs believe that inaction by lawmakers could slow hiring and wage growth. Learn more about what tax reform could mean for American workers: http://politi.co/2xE3I1i ******

SOMETHING TO WATCH -- "Proposed 'Honest Ads Act' Seeks More Disclosure About Online Political Ads," by WSJ's Byron Tau: "Driven by concerns about Russian online activity during the 2016 election, two senior Senate Democrats introduced new campaign finance legislation on Thursday that would force greater disclosure about the political advertising that runs online. In a press conference Thursday, Sens. Amy Klobuchar of Minnesota and Mark Warner of Virginia unveiled the Honest Ads Act, a bill that mandates large digital platforms keep a public repository of paid political advertising that appears on their sites. ...

"The proposed law would apply to sites with an average of 50 million or more viewers or users -- a standard that wouldn't only include tech giants like Facebook and Google but also online services like Twitter , Pinterest, LinkedIn, Snapchat and others. ... The proposed public repository would contain a copy of the advertisement. More important, the law would require the firms to disclose whom the ad was targeted at -- allowing the public a glimpse at how campaigns target messages at difference audiences online. And the bill would require companies to disclose the number of views generated by the ad, the date and time that it ran, the amount spent, as well as the contact information of the purchaser." http://on.wsj.com/2zDjuBL

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 6:31 a.m.: "Just out report: 'United Kingdom crime rises 13% annually amid spread of Radical Islamic terror.' Not good, we must keep America safe!"

-- FACT-CHECK -- CNN's James Masters and Richard Allen Greene: "But although Trump was correct in asserting that there had been a 13% rise in 'victim-based crime' in the UK in the year ending June 2017 compared to the year before, there was no evidence that the rise was linked to 'Radical Islamic terror.' The Office for National Statistics -- which compiled the report, 'Crime in England and Wales: year ending June 2017' -- told CNN it did not draw any link between the rise in 'victim-based crime' and 'Radical Islamic terror.'" http://cnn.it/2zDDqEp

NEVER SAY NEVER -- "Bob Iger for President? Disney's Political Cat-and-Mouse Game," by The Hollywood Reporter's Jeremy Barr: "Officially, Walt Disney Co. CEO Bob Iger is not running for president. At least not yet. The 2020 election may feel eons away, but the Des Moines International Airport will soon start crowding with candidate wannabes, and while Iger has plenty of time to make up his mind, the clock is ticking and the whispers will only grow louder. While Iger, 66, hasn't explicitly said he's interested, he also hasn't ruled himself out, which sets him apart from Sens. Al Franken and Chris Murphy, who recently have taken themselves out of the hypothetical running.

"Those who know and work with Iger in Hollywood say he is seriously considering a

presidential bid, which would be perfectly timed with his plans to step down as Disney CEO in 2019. One fellow media titan tells THR that Iger would be a great candidate if he decides to run but stops short of saying he is encouraging him to do so." http://bit.ly/2zoMr3a

VALLEY TALK -- "How People Inside Facebook Are Reacting To The Company's Election Crisis," by BuzzFeed's Charlie Warzel: "To truly understand how Facebook is responding to its role in the election and the ensuing morass, numerous sources inside and close to the company pointed to its unemotional engineering-driven culture, which they argue is largely guided by a quantitative approach to problems. It's one that views nearly all content as agnostic, and everything else as a math problem. As that viewpoint has run headfirst into the wall of political reality, complete with congressional inquiries and multiple public mea culpas from its boy king CEO, a crisis of perception now brews.

"Inside Facebook, many in the company's rank and file are frustrated. They view the events of the last month and those that preceded it as part of an unjust narrative that's spiraled out of control, unchecked. Five sources familiar with the thinking inside the company told BuzzFeed News that many employees feel Facebook is being used as a scapegoat for the myriad complex factors that led to 2016's unexpected election result. What the public sees as Facebook's failure to recognize the extent to which it could be manipulated for untoward ends, employees view as a flawed hindsight justification for circumstances that mostly fell well beyond their control. And as the drumbeat of damning reports continues, the frustration and fundamental disconnect between Facebook's stewards and those wary of its growing influence grow larger still." http://bzfd.it/2zphqwd

SPORTS BLINK -- DUSTY BAKER will not be returning as The Nationals' manager next year, the team announced.

TV TONIGHT -- Bob Costa's guests on PBS' "Washington Week" tonight, talking about health care, the budget and the fallout from Niger: NYT's Yamiche Alcindor, CNN's Jeff Zeleny, The Atlantic's Molly Ball and WSJ's Nancy Youssef

2020 PREVIEW -- TOM STEYER, the billionaire Democratic donor, unveiled an ad from a new group he is backing called "Need to Impeach," which is calling on Americans to push for the president's impeachment. Steyer, whose name has been floated for president along with California governor or senator, appears in the ad. The group says there will be an eight-figure national TV buy and a seven-figure digital ad buy behind the initiative. ***The ad*** http://bit.ly/2zBIYPT

MEDIAWATCH -- "FAKER! Man admits he lied to Fox News about Navy SEAL service," by Navy Times' Geoff Ziezulewicz: "Navy veteran John Garofalo appeared on a Fox News segment this month, showing off a massive presidential seal he carved for President Trump while receiving praise for his service in Vietnam as a SEAL. The piece was broadcast nationally and featured cascading shots of all Garofalo's medals. Online, it went viral, racking up 1.5 million Facebook views on Fox's Facebook page. ... But

when Navy Times contacted Garofalo Thursday, Garofalo admitted he had lied and never served in Vietnam, never received a Purple Heart and was never a SEAL." http://bit.ly/2zDAUy7

****** **A message from JPMorgan Chase & Co.: What's in it for me?** America's tax

system is outdated and complex, and it's putting American jobs and wages at risk. But that doesn't mean there isn't cause for optimism - according to a Business Roundtable CEO survey, tax reform would prompt more than 75% of business leaders to increase investment and expand hiring. And it's not just important in the boardroom. As JPMorgan Chase Chairman and CEO Jamie Dimon said, "Under our current system, workers bear up to 75% of the corporate tax burden through lower wages. I believe that tax reform should go further than that to boost wages. It should also be used to do more for lower- and middle-income workers by expanding programs such as the earned income tax credit, which already lifts more than 7.3 million workers out of poverty." Learn more about what tax reform can mean to the American economy and the American worker: http://politi.co/2z6j0D8 ******

Subject: Morning Energy, presented by the Nuclear Energy Institute: Climate talk looms throughout U.N. meetings — Senate Energy panel moves nominees today — Steyer hits Trump over climate

By Anthony Adragna | 09/19/2017 05:39 AM EDT

With help from Ben Lefebvre

CLIMATE TALK PROMINENT IN U.N. MEETINGS: Look for talk of climate change and the Paris climate agreement to continue to pop up throughout the United Nations General Assembly today, but any fog around the White House's position appears to be clearing. President Donald Trump reiterated his view that the landmark international accord was unfair to the U.S. during a Monday meeting with French President Emmanuel Macron, according to a White House official. "The President talked through that he believes it's just simply unfair — that he thought other countries, particularly China, received a better deal than the United States negotiated," State Department policy planning director Brian Hook said. "He does not believe that the Paris Agreement is a framework to achieve those goals around clean energy, protecting the environment, and promoting economic growth."

Chicago to host climate conference: Chicago Mayor Rahm Emanuel announced Monday his city would host a two-day conference to discuss how cities around the world are addressing climate change and implementing the Paris agreement. And former U.N. climate chief Christiana Figueres said in a statement the Dec. 4-5 event would "provide an opportunity for mayors to continue acting on the political will demonstrated in Paris, showing that local action is being taken to fulfill commitments." Participants will include Paris' Anne Hidalgo, Montreal's Denis Coderre, Austin's Steve Adler and Atlanta's Kasim Reed, among others.

MOVE ALONG, MOVE ALONG: It should be a quick and easy process for five FERC, DOE and Interior nominees to get through the Senate Energy and Natural Resources Committee this morning. On the agenda are votes on the selections of Kevin McIntyre for chairman of FERC, Richard Glick for FERC commissioner, David Jonas for DOE general counsel, and Ryan Nelson and Joseph Balash for solicitor and assistant secretary for land and minerals management at DOI, respectively. The vote is set for 9:30 a.m. in Dirksen 366. Watch here.

FIGHT AGAINST DOURSON HEATS UP: Outside groups are ramping up what's expected to be an intense push against the nomination of Michael Dourson to head up EPA's chemicals office (and the lead role in implementing the revamped Toxic Substances Control Act). Clean Air Moms Action is out with an ad hitting him for being a "toxicologist-for-hire for corporate clients" who minimized the dangers of second-hand smoke and dangerous chemicals. The Environmental Defense Fund and Environmental Working Group are holding their own press call today to draw attention to Dourson's past work.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and LCV's Gene Karpinski was first up to identify former EPA chief Doug Costle as the unsuccessful Senate candidate in Vermont. For today: Which Supreme Court justice once hosted the prime-time Emmys? Send

your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

Register here.

MURKOWSKI ENERGY BILL BACK ON ICE? Congressional GOP lawmakers consider the bill S. 1460 (115) Sen. Lisa Murkowski introduced in June "too moderate" and don't expect it to move until next spring at the earliest, energy lobbyist and GOP sources tell ME. Republicans want to see language paring back DOE's role in approving LNG export projects in any energy bill package, sources said. One item lobbyists and Senate and House aides said would help jumpstart its chances would be adding language similar to the bills Republicans Ted Cruz and Bill Cassidy also introduced in June that would require DOE automatically approve LNG export applications to any country that isn't on a U.S. sanctions list.

But even with that included, the legislation could languish as the energy industry focuses its attention on the White House, said one GOP staffer familiar with the bill's negotiations. "I think something will happen this Congress, but there's no appetite to get anything done anytime soon. Spring sounds about right," the aide said.

** **A message from the Nuclear Energy Institute**: Nuclear is doing more than ever before. It's powering the grid, boosting the economy by billions, creating jobs, propelling space travel and even helping doctors. It's moving us forward in ways we never thought possible. Explore all nuclear energy is doing at discovernuclear.com. **

MORE CLIMATE LUMINARY CHATTER TODAY (AND LEO ALERT!): John Kerry's climate change summit is back for another packed day of action at Yale. First up at 10:30 a.m.: A session on what non-federal entities are doing to tackle the problem, featuring Govs. Jerry Brown and Jay Inslee, World Bank President Jim Yong Kim and Paris Mayor Anne Hidalgo. After that comes a panel at 2:30 p.m. on "potential new avenues for bipartisanship" with former Secretary of State James Baker and recorded video remarks from Sens. Lindsey Graham and John McCain .

Bringing it home: Kerry closes his summit at 5:00 p.m. along with remarks from actor/activist Leonardo DiCaprio. Watch all the events online here.

EXPECT MORE OF THESE! The Sierra Club filed a lawsuit Monday in the U.S. District Court for the District of Columbia seeking to compel EPA to release a host of records about the

activities of Administrator Scott Pruitt, including his schedule, list of meetings and records of communications with outside parties, your ME hosts report. The legal actions comes after the group filed Freedom of Information Act requests in June and the agency has not yet produced responsive records nor provided any indication of when it might be able to.

BISHOP SEEKS INVESTIGATION ON MONUMENT REPORT LEAK: As Democrats and outside groups condemned the leak of Zinke's recommendations on national monument (and threatened immediate legal action), House Natural Resources Chairman Rob Bishop said its release warranted investigation. "The fact this was leaked is troubling and merits an immediate and thorough investigation," Bishop said. "The President should have the time to evaluate the Secretary's review and develop actions without the encumbrance of incomplete information being leaked to the press."

CLINTON TO FEDERAL WORKERS: DON'T QUIT: Hillary Clinton urged federal employees to remain in their posts if possible, arguing their experience is needed more now than ever, POLITICO's Gabriel Debenedetti reports . "I don't want us to lose the decades — really, if you added it all up, the thousands of years — of experience in the EPA, in the State Department, in the Labor Department, in a lot of the places being targeted by the administration," Clinton said at an event at the Warner Theatre in Washington. "At some point they're going to need you, and the country is going to need you. And I hope you're still there."

VIRGIN ISLANDS NOT READY FOR HURRICANE: Utility restoration efforts are now on pause with Hurricane Maria bearing down, but the U.S. Virgin Islands lack adequate basic supplies like drinking water and electric generators, POLITICO's Sarah Ferris reports, citing internal FEMA briefing documents.

EXAMINING VEGETATION MANAGEMENT: The Senate Energy committee will hear testimony regarding "the vegetation management requirements for electricity assets located on federal lands." Witnesses include representatives from the Forest Service, BLM, the Wilderness Society, Arizona Public Service and a Montana electric cooperative. "I fully recognize that the fires burning in Montana today were all lightning sparked. But, for me, these fires serve as a vivid reminder and warning of what could occur as a result of long delays in permit approvals and inconsistent application of policies by federal land managers," Mark Hayden, Missoula Electric Cooperative general manager, will say.

STEYER HITS TRUMP OVER CLIMATE: Billionaire environmentalist Tom Steyer is criticizing Trump over his failure to act on climate in a full-page ad appearing today in *The New York Post,* one of the president's preferred papers. "The most dangerous part of a hurricane isn't the wind or the surge," the ad says. "It's a President who fails to act on climate change."

MAIL QUESTION! INTERIOR ORDER QUESTIONED: House Natural Resources Ranking Member Raul Grijalva sent a letter Monday seeking additional information on an Interior order setting page and time limits on National Environmental Policy Act reviews. Grijalva argues the agency failed to provide adequate evidence that NEPA analyses are indeed overly complex or that they have caused infrastructure project delays.

LEAKED EPA MEMO MANDATES ANTI-LEAK TRAINING: All federal agency employees this week will undergo a one-hour training course for employees on preventing leaks, according to a EPA memorandum slipped under the door to ME. "As federal government employees and federal contractors, we have a responsibility to properly protect this information from unauthorized disclosure," Donna J. Vizian, acting assistant administrator for EPA's Office of Administration and Resources Management, wrote. The agency didn't respond to request for comment.

RUFFALO SENDING CLIMATE PLEA: Actor Mark Ruffalo is emailing the Progressive Change Campaign Committee's 1 million members today, urging them to donate to Hurricane Irma relief and fight back against Pruitt. "As we help hurricane victims, we need to stay true to our progressive values," he'll say. "This means acknowledging climate change and remembering that marginalized communities who are least equipped to escape are hardest hit in crises like this."

SCIENTIST PAC ROLLS OUT ENDORSEMENTS: 314 Action, which backs scientific professionals seeking public office, announced endorsements of four House hopefuls Monday: Mai-Khanh Tran against Rep. Ed Royce; Joseph Kopser against House Science Chairman Lamar Smith; RD Huffstetler against Rep. Tom Garrett; and Kathie Allen, who's seeking to replace former Rep. Jason Chaffetz. The group also endorsed Ralph Northam's run for Virginia governor.

REPORT: ASSESSING RISKS TO RATEPAYERS: Oil Change International is out today with a report in partnership with Public Citizen and the Sierra Club arguing FERC offers little meaningful analysis of market need for new gas pipelines. "FERC fails ratepayers when it takes at face value pipeline company estimates of future gas demand while the momentum behind clean energy's disruption of fossil fuel markets is accelerating," Lorne Stockman, senior research analyst at Oil Change International, said in a statement.

REPORT: 15 PLACES LIKELY FOR ENERGY DEVELOPMENT: The Wilderness Society is out with a report today examining 15 places on public lands seen as likely targets for drilling, mining and other energy development by the Trump administration. "Some places are simply too wild to drill," Jamie Williams, president of The Wilderness Society, said in a statement. "The federal government must resist pressure from energy companies and other special interests to open up our last remaining wild places for development."

ZINKE'S 'HAVING A BALL': Interior Secretary Ryan Zinke invoked his well-known love of Teddy Roosevelt and said he was "having a ball" running his agency in a Monday interview with the Washington Examiner. "No one loves public land more," Zinke said. "Roosevelt, who've I've admired since I was a Boy Scout, had it right. He carved the path of putting under federal protection millions of acres and and beginning our experience of our public lands, unique to the U.S." The secretary added that Trump "has got a lot of Roosevelt in him, in that he's a man of action."

MOVER, SHAKER: Todd Snitchler has joined the American Petroleum Institute as group director for the association's market development department. He previously chaired both the

Public Utilities Commission and the Power Siting Board of Ohio.

SPOTTED: At the Capitol last night, STARZ screened "Age of Consequences," a new documentary examining how climate change is affecting U.S. national security and global stability. Sen. Sheldon Whitehouse delivered opening comments before the screening, which was followed by a panel discussion featuring David Titley, founding director of the U.S. Navy's Task Force on Climate Change and the film's executive producer Sophie Robinson. The documentary premiered on STARZ Monday.

Stories from POLITICO Pro

Sierra Club sues EPA over unfulfilled public records requests Back

By Anthony Adragna | 09/18/2017 05:42 PM EDT

The Sierra Club filed a lawsuit today in federal district court seeking to compel EPA to release a host of records about the activities of Administrator Scott Pruitt, including his schedule, list of meetings and records of communications with outside parties.

"EPA has chosen to engage in a pattern of unlawfully rebuffing, or vaguely and indefinitely delaying response to, FOIA requests from a variety of public-interest requesters, including Sierra Club," the group wrote in its lawsuit, filed in the U.S. District Court for the District of Columbia.

The green group originally filed its Freedom of Information Request in June and the agency has not yet produced responsive records nor provided any indication of when it might be able to.

In addition to Pruitt's communications, Sierra Club filed similar requests for several senior EPA officials. They included external communications and calendars of Chief of Staff Ryan Jackson and Associate Administrator Samantha Dravis; records from Pruitt's scheduler and communications between Senior Policy Advisor Mandy Gunasekara and specific members of the National Mining Association.

An EPA spokesperson said the agency would not comment on pending litigation.

Clinton urges government workers not to quit their posts Back

By Gabriel Debenedetti | 09/18/2017 08:56 PM EDT

Hillary Clinton on Monday urged federal employees who disagree with the Trump administration to stay in their jobs if they can, condemning what she called the "disregard, even

contempt, among many in this administration about what federal workers know and what they've done, and the advice they can give."

The 2016 Democratic presidential nominee, speaking at Warner Theatre in Washington in the first speaking event of the national tour for her new book, urged government workers to "stick it out, stick it out, because the tide has to turn."

Scores of federal workers held over from the Obama administration have left the government since President Donald Trump took over, but Clinton pointed to the ongoing North Korea crisis as an example of why their expertise is needed in Washington.

"I don't want us to lose the decades — really, if you added it all up, the thousands of years — of experience in the EPA, in the State Department, in the Labor Department, in a lot of the places being targeted by the administration," Clinton said. "At some point they're going to need you, and the country is going to need you. And I hope you're still there."

"If [Democrats] can take back one or both houses of Congress in 2018, you will have people you can talk to again," she added toward the end of the hourlong event, in which she largely stuck to the themes of her book, "What Happened," which rehashes the 2016 campaign and other portions of Clinton's life.

The event was formatted as a question-and-answer session hosted by former Clinton speechwriter Lissa Muscatine, owner of the Politics and Prose Bookstore, which sponsored the event.

Environmentalists Raise Concerns Over EPA's TSCA Scoping Documents

Several environmental groups are questioning multiple aspects of EPA's efforts to launch its new risk evaluation program for existing chemicals under the Toxic Substances Control Act (TSCA), and in a new letter are pressing EPA officials for reassurances that its first 10 risk evaluations will comply with the law's intent.

House Panel Approves Bipartisan Overhaul Of Drinking Water Protection

The House Energy & Commerce Committee has approved bipartisan legislation to reauthorize the Safe Drinking Water Act (SDWA), with increased authorization levels for infrastructure funding, expanded monitoring of emerging contaminants and targeted attention on replacing lead pipes, drawing praise from Democrats who initially criticized the bill.

GOP Backing For California Cap-And-Trade Expansion Key To Durability

Republican support for the landmark extension of California's greenhouse gas cap-and-trade program -- which was key to extending the program by a two-thirds vote of the state legislature -- is the latest evidence that bipartisan support is critical for the long-term durability of climate mitigation policies, according to one top analyst.

GOP's Push To Narrow EPA Deference Faces Unclear High Court Outcome

The Supreme Court's upcoming term could reshape judicial principles on deference to EPA and other agencies about their interpretations of law and regulatory text, given the GOP push to narrow or scrap precedents on the subject, observers say, but the fact that deference now benefits the Trump administration could blunt that effort.

EPA Clarifies Waste Manifest Requirements For Off-Shore Oil Rig Wastes

EPA's waste office has updated its interpretation of Resource Conservation & Recovery Act (RCRA) regulations for certain hazardous wastes generated from off-shore oil platforms, saying the agency is now making it clear that RCRA hazardous waste generator manifest requirements apply to such waste -- a reversal from its

previous position.

Subject: POLITICO's Morning Score: Collins agonizes over governor run — American Bridge goes after Trump on women's health — LCV launches digital ad buy opposing Gillespie

By Maggie Severns | 10/03/2017 10:00 AM EDT

With Zach Montellaro and Daniel Strauss

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

SUDDENLY SUSAN - "Collins agonizes over decision to ditch the Senate," by POLITICO's Burgess Everett: Sen. Susan Collins (R-Maine) "is torn over with whether to leave her prominent perch as one of the Senate's few true moderate legislators, according to her colleagues. If Collins had made up her mind by now, said Sen. Angus King (I-Maine), 'she already would have announced it.' ... She initially planned to make up her mind by the end of September, but pushed back her deadline to mid-October as she wrestled with the GOP's last Obamacare repeal effort.

"Republicans are fretting Collins will join retiring Sen. Bob Corker (R-Tenn.) and create a wave of pragmatic GOP senators fleeing the chamber. Though Collins holds sway as one of the chamber's few swing votes, she also faces the frustration of watching her party constantly doing the opposite of what she'd like. ... In the latest Obamacare repeal effort, even after party leaders had written her off as an automatic 'no,' she came under unyielding pressure from the White House." **Full story.**

FIRST IN SCORE - American Bridge launches women's health campaign: American Bridge is using its opposition research machine, candidate trackers and other resources to home in on President Donald Trump and his nominees' approaches to women's health, the liberal opposition research group announced today. Bridge is rolling out a "Protect Women's Health Care" website and a digital ad campaign on Facebook to kick off the new initiative. American Bridge has also started filing public records requests in order to dig up information on Trump nominees' past approaches to women's issues.

Emily Aden, who is directing the project, said in a statement that "this initiative is designed to shut out the noise and hone in on all of the the big and small ways the Trump administration is rolling back decades of progress for women."

FIRST IN SCORE - "LCV launches digital buy vs. Gillespie," by POLITICO's Kevin Robillard: "The League of Conservation Voters' Virginia arm is spending $200,000 on digital advertisements attacking Virginia Republican gubernatorial candidate Ed Gillespie. The group has now spent $2 million on the contest between Gillespie and Democratic Lt. Gov. Ralph Northam. Polls show Northam with a small but steady lead. The ads attack Gillespie over his

work for polluters during his long and lucrative career as a lobbyist.

"'Ed Gillespie has a long history working for corporate polluters who want to poison our air and water to boost their own profits,' said Michael Town, the executive director of Virginia LCV PAC. ... LCV worked with Priorities USA Action to design the ads, which will appear on social media platforms like Facebook, as YouTube pre-roll and on Pandora radio and local news websites." **Full story.**

Q3 CAMPAIGN FINANCE WATCH -

- VA-07: Democrat Dan Ward's campaign announced raising $263,000 in the third quarter for his challenge against GOP Rep. Dave Brat.

- WA-08: Democratic pediatrician Kim Schrier announced raising more than $270,000 in the third quarter. She is running for retiring GOP Rep. Dave Reichert's seat.

- WI-01: Democrat Randy Bryce has raised over $1.5 million in the third quarter in his bid to defeat Speaker Paul Ryan, POLITICO Playbook first reported.

Days until the 2017 election: 35.

Days until the 2018 election: 399.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

DAILY WAR EAGLE - Alabama Gov. Kay Ivey scheduled a special election for Alabama state Sen. Quinton Ross' seat on Dec. 12, the same day as the the special election for U.S. Senate. Ross announced Monday he had decided to take a job as the next president of Alabama State University. Ivey's decision could benefit Alabama Democratic Senate nominee Doug Jones. The Montgomery Advertiser's Brian Lyman tweeted that Ivey's move "will help Doug Jones in an area he needs to win big to have a shot at" winning the special election.

HOUSE CANDIDATE WATCH - Minnesota state Sen. Carla Nelson running for MN-01, per the Post-Bulletin's Heather J. Carlson: "Nelson made her announcement during a 10 a.m. press conference at Textile Care Services in Rochester ... set[ting] up a showdown with Blue Earth Republican Jim Hagedorn for the party's support. Hagedorn is making his third straight bid for the seat after narrowly losing to 1st District DFL Rep. Tim Walz last year. The open 1st District seat is expected to be one of the most watched races in the country. Walz announced in the spring he would not seek re-election to the seat and would instead run for governor." **Full story.**

- Obama alumni candidate watch: Former Assistant Secretary of State for Human Rights Tom Malinowski launched a campaign in NJ-07, joining the Democratic primary against GOP Rep. Leonard Lance. Among his early endorsers: former Secretary of State John Kerry. The Washington Post's Josh Rogin notes that Malinowski is part of a trend of former Obama-era natsec officials running for Congress.

BENEDICT RAUNER? - "Republicans rage at Rauner," by POLITICO's Natasha Korecki: "Until recently, the biggest question looming over Illinois politics has been whether Republican Bruce Rauner, the most vulnerable incumbent governor in the country, can win reelection next year. Now the question is whether Rauner can make it through a Republican primary. After the first-term governor signed a highly controversial bill last week expanding taxpayer-funded abortion in the state - becoming the first governor in decades to on his own authorize Medicaid payments for the procedure - Rauner's political universe began collapsing on itself.

"He found himself uninvited to GOP events, including a pro-life event that for weeks had boasted him as a headline guest. One-time GOP allies began searching for funding - and candidates - to challenge him. Chicago's Cardinal Blasé Cupich declared that Rauner had betrayed him. The Chicago Sun-Times summed up the reaction on the right with this screaming tabloid cover page: 'Benedict Rauner.'" **Full story.**

STAFFING UP - Tallahassee Mayor Andrew Gillum's gubernatorial campaign has added Akilah Ensley as finance director. Gillum campaign communications director Geoff Burgan said in a statement: "Our campaign is thrilled to add Akilah R. Ensley, a nationally-recognized leader in Democratic politics and non-profit causes, as our new Finance Director. She brings a wealth of knowledge to the Gillum campaign, including numerous statewide campaigns in the Southeast. With the Democratic primary under a year away, her addition comes at a critical time, and we're thrilled that she'll be leading the charge as we run a strong people-powered campaign to take back Florida."

FACEBOOK STATUS UPDATE - Facebook says 10 million people saw ads, POLITICO's Nancy Scola reports: "Facebook today said 10 million people saw ads placed by Russia's Internet Research Agency that the company shared with congressional investigators today. The cache, targeted at 2016 U.S. presidential election voters, includes paid spots 'focused on divisive social and political messages across the ideological spectrum' on topics like LGBT issues and immigration, the company said.

"That information came in a blog post from Elliot Schrage, Facebook's vice president of policy and communications. According to Schrage, many of the ads cost little. 'For 50% of the ads, less than $3 was spent; for 99% of the ads, less than $1,000 was spent,' Schrage wrote. And because Facebook's ad system only presents ads to users when they cross a minimum standard of relevance, about a quarter of the ads were never seen, he added. Moreover, only about half of the advertisements in question ran before election day." **Full story.**

- Facebook sent 3,000 ads to Congress, Scola reports: "Facebook today submitted the batch of 3,000 Russia-linked ads from the 2016 election to three congressional committees along with

data on 'targeting, payment and impressions' associated with the ads, according to a source familiar with the material." **Full Story.**

- Even more Facebook news: Facebook said Monday "it is making changes to better understand how one-off advertisements factor into advertisers' broader strategic goals." **Full story.**

QUOTE OF THE DAY: "I made some very specific prayers during that time." - House Majority Whip Steve Scalise, recounting the experience of being shot to POLITICO.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BULLETIN -- WAPO'S JOBY WARRICK, ELLEN NAKASHIMA and **ANNA FIFIELD: "North Korea now making missile-ready nuclear weapons, U.S. analysts say"**: "North Korea has successfully produced a miniaturized nuclear warhead that can fit inside its missiles, crossing a key threshold on the path to becoming a full-fledged nuclear power, U.S. intelligence officials have concluded in a confidential assessment.

"The new analysis completed last month by the Defense Intelligence Agency comes on the heels of another intelligence assessment that sharply raises the official estimate for the total number of bombs in the communist country's atomic arsenal. The U.S. calculated last month that up to 60 nuclear weapons are now controlled by North Korean leader Kim Jong Un. Some independent experts believe the number of bombs is much smaller." http://wapo.st/2vjepwJ

Happy Tuesday afternoon. SPOTTED this morning on the 7:15 a.m. flight from DCA to Los Angeles: Paul Manafort. He was in the first seat of first class on the American Airlines flight.

TWEETS FROM BEDMINSTER -- @realDonaldTrump at 7:11 a.m.: "I will be holding a major briefing on the Opioid crisis, a major problem for our country, today at 3:00 P.M. in Bedminster, N.J." ... **at 7:17 a.m.:** "After many years of failure,countries are coming together to finally address the dangers posed by North Korea. We must be tough & decisive!" ***The president also retweeted Fox and Friends three times.***

-- TRUMP retweeted this Fox News tweet: **@foxandfriends:** "U.S. spy satellites detect North Korea moving anti-ship cruise missiles to patrol boat" ... **NIKKI HALEY** would not comment on this story after the Trump tweet, saying "I can't talk about anything that's classified. And if that's in the newspaper then that's a shame." ***The Fox News story from Lucas Tomlinson*** http://fxn.ws/2fqi8Vf

ONE BIG TAKEAWAY from the Trump/Sen. Richard Blumenthal tiff: **THE ATLANTIC'S**

DAVID A. GRAHAM (@GrahamDavidA): "Two dudes who didn't fight in Vietnam are getting their chance to have their own endless, pointless, unwinnable war".

WAR REPORT -- "Trump White House weighs unprecedented plan to privatize much of the war in Afghanistan," by USA Today's Jim Michaels: "The White House is actively considering a bold plan to turn over a big chunk of the U.S. war in Afghanistan to private contractors in an effort to turn the tide in a stalemated war, according to the former head of a security firm pushing the project. Under the proposal, 5,500 private contractors, primarily former Special Operations troops, would advise Afghan combat forces. The plan also includes a 90-plane private air force that would provide air support in the nearly 16-year-old war against Taliban insurgents, Erik Prince, founder of the Blackwater security firm, told USA TODAY.

"The unprecedented proposal comes as the U.S.-backed Afghan military faces a stalemate in the war and growing frustration by President Trump about the lack of progress in the war. The U.S. military has 8,400 U.S. troops there to train and guide local forces. They do not have a direct combat role, and presumably would be replaced gradually by the contractors. The plan remains under serious consideration within the White House despite misgivings by Trump's national security adviser, H.R. McMaster, an Army three-star general, and Defense Secretary Jim Mattis. Other White House officials, such as chief strategist Stephen Bannon, appear open to using private contractors.

"'At what point do you say a conventional military approach in Afghanistan is not working,' said Prince, a former Navy SEAL. 'Maybe we say that at 16 years.' Blackwater, founded 1997, worked extensively in the wars in Iraq and Afghanistan. Prince sold the company in 2010. The White House did not respond to requests for comment." https://usat.ly/2fp2kCc

FIRST IN PLAYBOOK -- WHAT THE DSCC WANTS YOU TO SEE -- The DSCC has released a memo for what to watch for in Senate races over the August recess. What to watch: The "GOP primaries will get nastier", "health care remains top of mind for voters" and "the heat" on Sens. Dean Heller (R-Nev.) and Jeff Flake (R-Ariz.). ***The full memo*** http://politi.co/2hFWZHh

-- "Heller gets GOP primary challenger in Nevada," by Kevin Robillard: "Danny Tarkanian, the son of a legendary Nevada college basketball coach who has run for office several times, announced Tuesday morning that he will challenge Sen. Dean Heller in Nevada's Republican primary next year. Tarkanian announced his bid on 'Fox & Friends,' where he criticized Heller as a 'Never-Trumper' and said that his stance on the president helped Hillary Clinton carry the state." http://politi.co/2hGBENZ

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb

costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

ONE WEEK UNTIL ALABAMA'S SPECIAL ELECTION -- "Low turnout expected in Alabama primary to replace Sessions," AP/Montgomery, Ala.: "Alabama Secretary of State John Merrill said he is projecting that 20 percent to 25 percent of voters will go to the polls on Aug. 15. Merrill said a typical primary brings turnout of 30-32 percent. The closely watched race features crowded fields and heated matchups, particularly on the Republican side. However, the late summer special election comes at a time that state voters aren't accustomed to going to the polls, Merrill said. The Senate election is the only race on the ballot on Aug. 15, meaning there will be no other elections to help drive voters to the poll." http://bit.ly/2hEQzYS

THE NEW FACE OF THE ADMINISTRATION -- "Now Starring in the West Wing: Sarah Huckabee Sanders," by NYT's Michael Grynbaum: "Absurd as it was, the Pickle affair offered a low-stakes microcosm of the deep distrust that has developed between the Trump administration and the journalists whose work the president derides as 'fake news.' And it underscored the why-would-you-want-this nature of Ms. Sanders's new job: defending a president who is at war with the news media and an administration that has repeatedly been denounced for playing loose with facts. Now Ms. Sanders, who inherited her position when her celebrity predecessor Sean Spicer quit, is stepping into the glare, trying to manage coverage of a tumultuous White House while mollifying a boss who believes he is his own best spokesman. ...

"She is the first mother to serve as press secretary, and among the youngest to occupy the role. At the lectern, she is folksy, but nimble: She recently deflected questions about 'chaos' in the White House by inviting reporters to visit the three preschoolers in her living room. There were laughs, even as Ms. Sanders clearly sidestepped the subject. She is also unafraid to call out reporters and news coverage that she deems unfair. Asked in the interview if the establishment media is biased against Mr. Trump, she replied, 'Absolutely.'" http://nyti.ms/2hGxohx

COMING ATTRACTIONS -- "Trump White House quietly courts Democrats for tax overhaul," by Rachael Bade and Elana Schor: "'We'd prefer bipartisan support for the tax plan,' Marc Short, White House director of legislative affairs, said in an interview. 'We still think we can earn the support of [Democrats] on the tax package.' Short acknowledged, however, that Hill Republicans 'will choose the path that they want.'" http://politi.co/2viRLVa

-- TAX WRITERS on the Hill have said privately and publicly they do not expect Democratic support.

THE ATLANTIC'S NEW COVER STORY -- KURT ANDERSON'S latest -- **"How America Lost Its Mind":** "Each of us is on a spectrum somewhere between the poles of rational and irrational. We all have hunches we can't prove and superstitions that make no sense. Some of my best friends are very religious, and others believe in dubious conspiracy theories. What's problematic is going overboard-letting the

subjective entirely override the objective; thinking and acting as if opinions and feelings are just as true as facts. The American experiment, the original embodiment of the great Enlightenment idea of intellectual freedom, whereby every individual is welcome to believe anything she wishes, has metastasized out of control.

"From the start, our ultra-individualism was attached to epic dreams, sometimes epic fantasies-every American one of God's chosen people building a custom-made utopia, all of us free to reinvent ourselves by imagination and will. In America nowadays, those more exciting parts of the Enlightenment idea have swamped the sober, rational, empirical parts. Little by little for centuries, then more and more and faster and faster during the past half century, we Americans have given ourselves over to all kinds of magical thinking, anything-goes relativism, and belief in fanciful explanation-small and large fantasies that console or thrill or terrify us. And most of us haven't realized how far-reaching our strange new normal has become." http://theatln.tc/2hGm051 ... ***The cover*** http://bit.ly/2vJTJ2W

TOP EDS -- JEH JOHNSON in WSJ: **"Have a Heart, Mr. President, and Defend These Immigrants in Court":** "Deciding the future of DACA presents a chance for the president to show a 'great heart.' Public office and the manner in which we enforce the law permits us to do that once in a while. DACA recipients came here as kids, and they've been here for years. As Mr. Trump himself has observed, they are almost all outstanding young men and women who grew up and went to school here, work hard, follow the law, and hope to share in the American dream. They are American in fact though not in law." http://on.wsj.com/2fpBgT4

-- REP. DARRELL ISSA (R-CALIF.) in Variety: **"It's Time to Bring Pre-1972 Copyrights Out of the Dark Ages":** "When a musician records a song today, federal law grants a copyright in the 'sound recording' itself -- the captured version of the performance, separate and apart from the notes and lyrics. But thanks to an inexplicable gap in federal copyright law, the recordings by musical greats like John Coltrane, Aretha Franklin, Frank Sinatra and others before February 15, 1972 aren't given the same copyright protections as their modern peers. In recent years, disputes have arisen as to what these rights should consist of -- creating significant uncertainty for artists, record labels, and music distributors alike. Under the current system, there is no way for a recording artist to be guaranteed payment in all 50 states. Instead, they are captive to a patchwork of inconsistent and ultimately unworkable state laws - denying them millions in royalties for their older songs." http://bit.ly/2fp7EVT

SURVEYING SENIOR STAFF -- ONE BIG TAKEAWAY from The Congressional Management Foundation's interviews with senior Hill staffers: only 6 percent say they are very satisfied with the amount of time members have to deliberate legislation. ***Full report*** http://politi.co/2hGYNzK

FIRST IN PLAYBOOK -- MEDIAWATCH: Vera Bergengruen, previously a security correspondent for McClatchy, is joining Buzzfeed News as a Pentagon correspondent. She will start Aug. 28. ***National security editor Mark Seibel's memo to staff***

http://politi.co/2fpX4hx

-- "Political News Outlet Young Turks Raises $20 Million After Viewership Gains," by WSJ's Lukas Alpert http://on.wsj.com/2hGuRE1

FELLOW WATCH -- Harvard's Shorenstein Center on Media, Politics and Public Policy announced its fall 2017 fellows class. The group includes **Donna Brazile, Tyler Bridges, Claes H. de Vreese, Kathleen Hall Jamieson, Tom Wheeler** and **Wael Ghonim.** http://bit.ly/2hGpS6g

SPOTTED on the porch of Bombay Club this afternoon: Mike Allen, Sarah Huckabee Sanders and Jon Karl at one table. Jim VandeHei was inside.

TRANSITIONS -- Chris Armstrong and Jen Kuskowski have both been promoted in Sen. Orrin Hatch's (R-Utah) office. Armstrong will serve as the Senate Finance Committee's chief oversight counsel and Kuskowski will be health policy director.

WELCOME TO THE WORLD -- Ken Spain, partner at CGCN Group and a Koch Industries alum, and **Emily Spain,** legislative director for Sen. Carper, post on Facebook: "Elizabeth Maria 'Emma' Spain was born at 1:42 a.m. on August 8th, weighing in at 6 lbs 14.5 oz. She's excited to share her grandmother, Fatima Spain's birthday. Emily coasted through labor to the point Emma's arrival surprised the doctor and nurses. Jack can't wait to meet his baby sister." ***Pic*** http://politi.co/2ulKKp4

-- Ginny Badanes, Microsoft's Republican campaign tech lead, and **David Badanes,** global cybersecurity adviser for the AES Corporation, email friends and family: "We are elated to share the news that Baby Boy Badanes #3 has arrived! Henry Stone Badanes was born on [Thursday] at 7:24 p.m., weighing a healthy 8 lbs, 15 ounces and measuring 21.5 inches long. Dad is thrilled to round out his golfing foursome; Mom looks forward to a nap and a bourbon. For the moment, big brothers Miller and TJ are both excited to share August birthdays with their little brother -- less excited however to share their toys." ***Pics*** http://politi.co/2ulBVrg ... http://bit.ly/2fpMAyl

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Subject: POLITICO's Morning Transportation: Infrastructure grant proposals lean rural — FRA, FMCSA drop plans to propose sleep apnea screening mandate — Welcome to the reporting airlines club

By Brianna Gurciullo and Stephanie Beasley | 08/07/2017 10:00 AM EDT

With help from Tanya Snyder

INFRASTRUCTURE GRANT PROPOSALS LEAN RURAL: DOT is looking to award $78.9 million in fiscal 2017 grants to 10 transportation infrastructure projects, most of which are in rural areas of the country. Transportation Secretary Elaine Chao notified House Transportation Chairman Bill Shuster (R-Pa.) last week that DOT is proposing the grants for highway, rail, port and bridge projects. MT readers may remember that DOT is overhauling the FASTLANE grant program and re-titling it INFRA. But these grants for "small projects" (those expected to cost less than $100 million), for which applications had already been sent in, were decided using FASTLANE standards. Large projects seeking fiscal 2017 funding have until Nov. 2 to apply again, under INFRA criteria.

NY, NJ SENATORS TIE UP DOT NOMS OVER GATEWAY: New Jersey's and New York's senators prevented Derek Kan, Ronald Batory and Adam Sullivan from being included in their chamber's wave of confirmations last week because they question whether the Trump administration will help fund the Gateway program's Hudson tunnel project, The Wall Street Journal reports . The Democratic senators have shelved the nominations of Kan (to be under secretary of Transportation for policy), Batory (to be FRA administrator) and Sullivan (to be assistant secretary for governmental affairs) at least until lawmakers return in September.

Confirmation deprivation: The department told WSJ that it finds it "counterproductive to deprive DOT of highly qualified, noncontroversial nominees, who are needed to accomplish the department's work on behalf of the American people, for reasons having nothing whatever to do with their merits."

HAPPY MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Welcome to the lazy, hazy, crazy days of recess. Hit us up with tips, feedback and lyrics: sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"Don't hafta tell a girl and fella about a drive-in / Or some romantic moon it seems / Right from the moment that those lovers start arrivin' / You'll see more kissin' in the cars than on the screen."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

TWEETS DU JOUR: How quickly is President Donald Trump nominating senior DOT officials during his first year in the White House compared to past presidents? Jeff Davis over at the Eno Center for Transportation broke it down. DHS Acting Secretary Elaine Duke and FEMA

Administrator Brock Long got in some face time with the president and vice president when they hosted a briefing on government efforts to prep for the looming Atlantic hurricane season.

STAY WOKE: FRA and FMCSA announced Friday that they're dropping plans to put forward screening and treatment mandates for commercial drivers and rail workers diagnosed with obstructive sleep apnea. As our Lauren Gardner and Tanya Snyder report, the administration claims that "current safety programs and FRA's rulemaking addressing fatigue risk management are the appropriate avenues" to deal with obstructive sleep apnea - though that rulemaking has languished for years. The move comes despite a slew of recent accidents, some deadly, in which untreated sleep apnea was found to be a causal factor, including a fatal 2000 tractor-trailer crash in Tennessee and a 2013 Metro-North derailment in the Bronx, N.Y.

Tweetmentary: "Focus - this is really important - the Trump admin killing common sense safety regulations like these mean more accidents, more deaths," former FRA Administrator Sarah Feinberg tweeted.

WELCOME TO THE CLUB: Six new airlines will be subject to reporting requirements starting next year because of a passenger-protection rule that lowers the threshold for reporting. Allegiant Airlines, PSA Airlines, Republic Airlines, Endeavor Air, Mesa Airlines, and Envoy Air - none of which currently report on-time performance and denied boarding data to the Bureau of Transportation Statistics - will have to start next year, Tanya reports for Pros.

See you in 2019: The rule also lowered the threshold for reporting mishandled baggage data, though airlines get an extra year before it kicks in because some carriers have "encountered challenges" in "reprogramming computer systems, developing procedures to account for gate-checked bags, and training personnel," a BTS spokesman said.

RAIL VS. TRUCKING WAR OF WORDS: After the head of the Association of American Railroads argued that big trucks aren't paying "their fair share for the infrastructure they use," the American Trucking Associations fired back last week, saying they also think "highway users should pay for their use of the system, but it is utterly false to suggest trucks are responsible for all highway maintenance costs." The trucking industry "is most certainly paying its fair share for maintenance," ATA President and CEO Chris Spear wrote in a column for HuffPost. Spear then knocked weight-distance taxes and mentioned the potential problems with a VMT tax, all while advocating for a federal gas tax hike.

Them's fightin' words: "Rather than creating division in the debate, railroads should be exploring ways to lower costs and stimulate competition in their own industry," Spear writes. "In essence, they maintain an oligopoly that is void of competition, but unlike public utilities which are regulated, the railroads are free to dictate prices and hold captive shippers hostage to them."

SO HAPPY TOGETHER: Toyota and Mazda announced Friday that they would jointly build a $1.6 billion manufacturing plant in the United States. The plant is expected to produce 300,000 cars per year and create 4,000 jobs, according to the companies, which have yet to disclose where they are planning to break ground. The facility is slated to open in 2021 and could also be a testing ground for the development of electric cars and safety technologies like vehicle-to-

vehicle and vehicle-to-infrastructure communication.

The opposite of 'sad': The Toyota/Mazda deal won high praise from Trump, who campaigned on promises to bring once-plentiful jobs in the auto industry back to the United States, POLITICO's Madeline Conway writes. "A great investment in American manufacturing!" he tweeted on Friday in response to the news. But Pro Trade's Doug Palmer writes that the companies' decision probably isn't just an attempt to curry favor with Trump, who has threatened to re-open NAFTA negotiations to tighten automotive trade rules and raise import taxes. Other policy factors "such as rising U.S. fuel economy standards and generous local incentives" more likely played a larger role in making up the Japanese automakers' minds to open the U.S. plant.

SIGNED, SEALED, DELIVERED: A resolution to create the D.C. area's Metro Safety Commission is awaiting action by Trump after lawmakers enacted it late last week. "The official congressional seal of approval is one of the last hurdles in the drawn-out legislative process that started more than two years ago to codify a new organization that would help prevent safety crises on Metro like the January 2015 L'Enfant Plaza smoke disaster," The Washington Post's Martine Powers reports. Martine (a former MT scribe) also notes that it's uncertain when FTA will stop holding back funding from D.C., Maryland and Virginia over their lateness in forming the commission.

THE SCANDAL THAT NEVER ENDS: An ex-Volkswagen official pleaded guilty Friday to crimes linked to the automaker's diesel emissions scandal. Oliver Schmidt, previously VW's U.S. Environment and Engineering Office general manager, pleaded guilty to "conspiracy to defraud the U.S., to commit wire fraud and to violate the Clean Air Act," as well as breaching that law. He owned up to hiding from the California Air Resources Board that diesel VW cars were equipped with so-called defeat devices that rigged emissions checks, the Justice Department said in a release. Schmidt, a German resident, will be sentenced in December.

PAW PATROL: TSA is at risk of being a few paws short for its bomb-sniffing units, according to a New York Times report that describes how DHS agencies and DOD are being forced to compete with each other to bid for a limited number of dogs - mostly sourced from breeders in Eastern Europe. "With terrorists increasingly attacking so-called soft targets, the demand for detection dogs that can sweep large areas for explosives has soared. So have prices, which can exceed $25,000 for a single dog," per the article. TSA currently has about 1,000 dogs but needs 350 new dogs every year to replace those that age out of the workforce.

Help! Earlier this year, the president issued a fiscal 2018 budget request that would slash funding for some of TSA's canine units. The House, however, recently passed a DHS reauthorization bill (H.R. 2825 (115)) that would block those changes.

AMTRAK PUTS RIDERS ON THE ROPES: In news that is sure to make a lot of New Yorkers groan, Amtrak announced Friday that service disruptions could continue at Penn Station through the fall and beyond. During a press call with reporters, Amtrak officials said they expect more repairs will be needed even after the organization completes its initial "infrastructure renewal" project on Sept. 4, NJ.com reports. "We will ask our partners at NJ Transit, the MTA and the LIRR for some extended (service) outages, after we've planned for them and determined

the need," said Chief Engineer Gery Williams.

LOBBYING UPDATE: FedEx hired Mehlman Castagnetti Rosen & Thomas to lobby on fiscal 2018 transportation appropriations, "issues related to supply chain management" and "general transportation issues." And Melissa Edwards, a former legislative assistant to Sen. Thad Cochran (R-Miss.), registered to lobby for the Truckload Carriers Association on surface transportation issues.

SHIFTING GEARS: Friday was Lauren Huston's last day as the Senate Commerce Committee's press secretary and digital director. She will be studying full time at Catholic's law school. Brianna Manzelli is taking Huston's place.

ICYMI: C-SPAN aired on Friday night an interview with Transportation Secretary Elaine Chao.

THE AUTOBAHN:

- "As NAFTA talks approach, Mexican officials meet with business leaders in border states." Arizona Daily Star.

- "Hosting the 2028 Olympics could fix Los Angeles." Wired.

- "Boeing Dreamliner crew draws enormous outline of their plane in the sky." NPR.

- "Toyota and Mazda join forces on electric vehicles. Is this the end of the road for gas cars?" The Washington Post.

- "Embattled NJ transit suspends compliance chief 6 months into job." Bloomberg.

- "Spotted: driverless vehicle cruising the streets of Clarendon." ARLnow.com.

- "Unbuckled in the back seat? You'll become a human missile in a crash." USA Today.

- "Infrastructure borrowing drops as U.S. states await Trump plan details." Reuters.

- "NYC mayor pushes for tax on the 1 percent to fund subway fix." The Associated Press.

THE COUNTDOWN: DOT appropriations run out in 54 days. The FAA reauthorization expires in 54 days. Highway and transit policy is up for renewal in 1,150 days.

October 13, 2017

Today on Climate Beat . . .

. . . we started at EPA, where the agency is poised to start the clock for public comments on its proposed rule to repeal the Clean Power Plan.

Speaking of the Clean Power Plan repeal, don't miss our weekly wrap-up of some our top stories, which this week focuses on the repeal plan and the threatened litigation over it.

In other litigation news, we reported on states' and environmentalists' briefs urging a federal appellate court to reject calls from trailer manufacturers to stay EPA's greenhouse gas rule for heavy-duty vehicles.

And, is always, our daily news roundup.

Subject: Morning Media: Maria Elena Salinas to leave Univision -- Right wing media goes after McMaster -- Scaramucci cancels his big announcement

By Hadas Gold | 08/04/2017 05:28 AM EDT

With Alex Weprin

MARIA ELENA SALINAS IS LEAVING UNIVISION AFTER MORE THAN THREE DECADES as an anchor at the Spanish-language network. The longtime "Noticiero Univision" anchor announced on Thursday that she will leave at the end of the year. It's a big change for the network and will also mean that Jorge Ramos will get a new co-anchor as the network fends off competitor Telemundo. Salinas, an Emmy, Peabody, and Edward R. Murrow award-winning journalist, said in a statement she is beginning "a new stage in my career, and look forward to new projects to reach new and diverse audiences on multiple platforms." Some sources have suggested that the U.S.-born Salinas plans to break through on English-language platforms -- she recently wrapped up her first season as host of "The Real Story with Maria Elena Salinas" on Investigation Discovery.

"I haven't been pushed out, I haven't quit, I'm not retiring. And I'm not leaving to another place to do the same as I do here," she said on air last night.

RIGHT WING MEDIA HAS DECLARED WAR ON GEN. H.R. MCMASTER, the president's National Security Adviser, who replaced Gen. Michael Flynn. the siege against McMaster comes in response to his shakeup of the National Security Council, which has included removing three officials who were reportedly members of the more nationalist-minded faction of Trump's administration. A report on Thursday also said that McMaster allowed former National Security Advisor Susan Rice to keep her security clearance, angering many who say Rice was inappropriately "unmasking" members of Trump's team and other Americans during the campaign. Personalities like Sean Hannity, Mike Cernovich and outlets like Breitbart have suggested McMaster needs to go. On Twitter today, many right-wing personalities were encouraging their followers to call the White House switchboard and to call for McMaster's firing. Mediaite has a round up here.

-- For now, McMaster is safe, my colleagues reported yesterday. White House Chief of Staff John "Kelly told McMaster this week that he wanted him to remain as national security adviser, said two senior White House aides, and has encouraged him to make any staffing changes he deems necessary." But then again, this is Trump's White House where roles can come and go, as Anthony Scaramucci can attest.

Good morning, happy Friday, and welcome to Morning Media! I always want to hear from you -- **hgold@politico.com** / **@Hadas_Gold**. **Morning Media** is edited by **Alex Weprin** (**@alexweprin** / **alexweprin@gmail.com**) and produced with writing/reporting help from **Cristiano Lima**. (**clima@politico.com** / **@ludacristiano**). **Archives**. **Subscribe.**

"CBS THIS MORNING" PULLED A KELLYANNE CONWAY INTERVIEW after the senior counselor to the president showed up late on Wednesday, two sources tell me. The interview was teased on CBS in the early morning on Wednesday but it never aired after Conway showed up late to the stand-up spot on the north lawn of the White House. Morning shows run on tight timelines, but entirely ditching an interview with a senior counselor to the president struck me as pretty unusual. CBS News declined to comment and Conway did not respond to a request for comment.

SCARAMUCCI CANCELED HIS BIG ONLINE ANNOUNCEMENT TODAY, where he was supposed to address the American people. Former Fox News co-president Bill Shine was reportedly helping Scaramucci with the event, which was to be broadcast live on various platforms, but Scaramucci tweeted yesterday "No Press Event Tomorrow: Focusing on Family, My Work in The Private Sector. #MovingForward Stay Tuned!"

-- Meanwhile on Thursday, The New Yorker released audio excerpts of Scaramuccis' infamous conversation with Ryan Lizza. After initially saying last week that they would not release the audio The New Yorker included clips of the conversation as part of its weekly podcast "The New Yorker Radio Hour" hosted by editor-in-chief David Remnick. Listen to it here.

THE WASHINGTON POST GETS A HOLD OF TRUMP'S CONVERSATIONS WITH LEADERS OF MEXICO, AUSTRALIA: Leaked transcripts are making a lot of news this week! On Thursday The Washington Post published transcripts of Trump's phone calls with Mexican President Enrique Peña Nieto and Australian Prime Minister Malcolm Turnbull. There was tons of news in them, including Trump admitting to Peña Nieto that the border wall that has been such a mainstay of Trump's campaign "is the least important thing that we are talking about, but politically this might be the most important talk about" and that his phone call with Turnbull really was as tense as was reported at the time.

-- Out of this transcript came the renewed focus, especially in right-wing media, on leaks. While outlets like Fox and Breitbart covered the transcripts they focused on the fact that it was a leak -- that someone from the "deep state" sent the transcript of the private phone calls to reporters.

-- Some, like David Frum in the Atlantic, argued that the leaks are "unprecedented, shocking, and dangerous" and that as the president's opponents "violate norms to undermine him, they do lasting damage to American security." The Sunlight Foundation argued that "whistleblowing is essential to democratic accountability," and that "the American public is better off knowing what @realdonaldtrump has said to these world leaders" and that it's Trump's conduct that has lead people to leak. "President Trump's conduct in office threatens democratic stability. Dissent is an essential check to power."

-- Sen. Mark Warner, a Democrat, wants the leaks to be investigated, telling The Daily Beast "A president of the United States, a governor would tell us they've got to be able to have confidential conversations ... And I think it was disgraceful that those [came out]."

IS SEAN SPICER VIOLATING ETHICS RULES BY TALKING FUTURE JOBS? Former White House Press Secretary Sean Spicer is still technically employed at the White House and will be through August. Last week Spicer made the rounds with the television networks, while agents are fighting over who gets to represent him. However, my colleague Tara Palmeri reports that under federal law, senior government officials must file notice when opening employment negotiations and pledge to recuse themselves from anything that would affect the financial interests of their prospective employers. The government's former ethics director Walter Shaub (who has criticized the Trump administration's ethics program since his departure last month) told Palmeri "If [the networks] broach the topic of him coming to work for them, then he's seeking employment and the recusal under the standards of conduct kicks in." More from Palmeri here.

-- Here's one gig Spicer won't be doing: ABC's "Dancing With the Stars." According to TMZ Spicer "was flattered by the opportunity, but because he believes he'll have an 'overwhelming number of commitments in the Fall, he declined the offer." The New York Post also reports that Spicer has signed with Washington mega-lawyers Bob Barnett and Michael O'Connor to represent him for all post White House TV deals, business consultancies and speaking appearances.

FACEBOOK IS ROLLING OUT MORE TOOLS TO HELP FIGHT FAKE NEWS including a new effort to display related articles to limit the damage of false news without censoring posts, the Wall Street Journal reports. "Starting Thursday, when Facebook's U.S. users come across popular links-including made-up news articles-in their feeds, they may also see a cluster of other articles on the same topic. The 'related articles' feature, which will roll out widely in the U.S. after months of testing, is part of the Facebook news feed team's effort to limit the damage of false news without taking down those posts." Related: Here are some key takeaways from Facebook's Journalism Project hackathons, via Nieman Lab.

THE STATUE OF LIBERTY QUESTION, by Alex Weprin: CNN White House correspondent Jim Acosta's tough questioning of White House aid Stephen Miller on Wednesday made news, both for Acosta's line of questioning (he invoked Emma Lazarus' 1883 poem The New Colossus, which appears on a plaque by the Statue of Liberty), and for Miller's response. Buzzfeed's Steven Perlberg notes , however, that just two years ago CNN suspended a reporter for citing the poem in response to House lawmakers attempting to limit the number of Syrian refugees permitted into the U.S. "Times are very different" from 2015, said a CNN TV executive. "Acosta posed a question (albeit a loaded one) rather than making an affirmative statement."

REVOLVING DOOR:

-- NBC has announced a new investigative unit focused on national security and politics. The team will comprise of **Carol Lee**, who recently joined from The Wall Street Journal, **Mike Memoli**, who recently joined from the L.A. Times, **Vivian Salama** who joins from the Associated Press, **Keri Geiger** who joins from Bloomberg News and **Julia Ainsley** joins from Reuters. Current NBCers joining the team include **Courtney Kube and Ken Dilanian**. The team will be led by **Rich Greenberg and Dafna Linzer.**

-- NBC's "Meet the Press" has promoted **Sarah Blackwill** to senior producer, **Natalie Cucchiara** (a GWU classmate of mine!) to senior coordinating producer and **Sally Bronston** to producer.

-- The newest ABC News contributor: former Major League Baseball player **Alex Rodriguez.** Rodriguez is also set to host a new show on CNBC, and turned to CNN's Jessica Yellin for advice in breaking into TV. More from The Hollywood Reporter.

-- **J. David Ake, Kathleen Hennessey and Elizabeth Kennedy** are moving into deputy bureau chief roles at the Associated Press.

-- **Karen Miller Pensiero** has been appointed managing editor of the Wall Street Journal. She is currently editor for newsroom standards.

-- The Atlantic is making a few moves across the Atlantic**: Rachel Donadio,** recently the European culture correspondent for The New York Times, will be The Atlantic's culture and politics writer based in Paris; **Yasmeen Serhan** joins the newly established London bureau as a reporter; and in Washington **Krishnadev Calamur,** currently The Atlantic's news editor, will begin this fall as a global diplomacy correspondent covering U.S.-Europe relations, the State Department, and foreign policy. Already in place is The Atlantic's staff writer Sophie Gilbert, who returned to her native London this summer and continues her coverage of culture and entertainment. James Fallows, previously announced as The Atlantic's first European Editor, arrives to lead the London bureau later this month.

-- The Wall Street Journal's **Eli Stokols** is now an MSNBC contributor.

SOUNDBITE: "I was here when you got fired the last time and I'll be here when you get fired this time. ... I've been doing well. What were you doing last year? Nothing but selling cellphones." [April Ryan]

Driving the Day

Good Tuesday morning and welcome to August. **HERE'S AN IMPORTANT STORY** that developed yesterday late in the day when we were in the Capitol: **"Republicans ignore Trump's Obamacare taunts,"** by Burgess Everett and Jen Haberkorn: "Senate Republicans have no plans to revive their party-line attempts to repeal Obamacare this summer, despite President Donald Trump's increasing frustration over the chamber's failed attempts last week to gut the law.

"'Until somebody shows us a way to get that elusive 50th vote, I think it's over,' said Sen. John Thune of South Dakota, the third-ranking Republican. 'Maybe lightning will strike and something will come together but I'm not holding my breath.' ... Privately, Republican aides said there is essentially no chance McConnell will take another shot at repealing Obamacare soon. On Monday, there was discussion among Senate staffers of a 'hard pivot to tax reform,' one Senate aide said. ...

"'Do I think we should stay on health care until we get it done? I think it's time to move on to something else. Come back to health care when we've had more time to get beyond the moment we're in and see if we can't put some wins on the board,' said Sen. Roy Blunt of Missouri, a member of GOP leadership. 'Tax reform, infrastructure are the kinds of things we ought to be looking at.'" http://politi.co/2vcYzpJ

-- IN OTHER WORDS, members of the Senate don't really care what the president says they ought to do. Period.

NYT'S CARL HULSE: "Lesson for Trump: Hardball Against Senators Is a Game He Can Lose" http://nyti.ms/2uQR2f0

A QUICK REMINDER -- When the White House tells us -- as they did yesterday -- that tax reform is going to be done by September or October, remember that neither chamber has passed a budget resolution. Tax reform is very hard without reconciliation instructions (just ask Rich Rubin and Phil Mattingly!). And, if you've watched the squirming on, well, everything on the Hill, you wouldn't be surprised to hear that passing a budget isn't easy. This seems to be a bit lost on the White House. Oh, and by the way, in September and October, Congress also has to fund the government and lift the debt ceiling. This won't be quick and painless.

-- PLAYBOOK SCOOPLET: SPEAKER PAUL RYAN is wholeheartedly embracing the flood of outside group support for tax reform. From the speaker: "It is time to unleash the full potential of the American economy by creating a tax code that actually works for the middle class. A simpler, fairer tax system that puts working families first will strengthen our economy and generate more jobs. I am encouraged to see the Middle Class Growth Initiative, and American Action Network, working to give their voice to this critical issue, and I'm pleased for such allies and supportive efforts."

FIRST IN PLAYBOOK -- WHAT HOUSE DEMOCRATS WANT 2018 TO LOOK LIKE -- MARK PUTNAM, the top-flight Democratic ad maker, has cut a spot for Ret. Lt. Col. Amy McGrath, who is running against Rep. Andy Barr in a solid Republican district in Kentucky. The spot tells the story of McGrath's career -- she was the first female Marine to fly in an F-18 in combat and flew in 89 missions bombing al Qaeda and the Taliban. The ad has some familiar themes: Barr -- who she says is Mitch McConnell's hand-picked congressman -- wants to take health care away from people, according to McGrath. But the spot also highlights another theme in 2018: House Democrats are especially interested in veterans jumping in the race. The imagery in this ad shows how they might employ military ties in the midterm.

"This is my new mission: to take on a Congress full of career politicians who treat the people of Kentucky like they're disposable. Some are telling me a Democrat can't win that battle in Kentucky. That we can't take back our country for my kids and yours. We'll see about that." The ad ends showing her Marine dress uniform with all her medals, decorations and her personal sword, with the text "Amy McGrath: Democrat for Congress" on the screen. ***The two-minute spot*** http://bit.ly/2vohv5j

BUT, BUT, BUT -- "Democrats snub new party message," by Gabe Debenedetti, Elana Schor, and Heather Caygle: "Chuck Schumer, Nancy Pelosi, and Democratic leaders on Capitol Hill will spend the next 15 months talking up the new 'Better Deal' economic message they unveiled last week. What's not clear is if anyone else will follow. The national party remains far from consensus on a unified message -- Democrats can't even agree on whether the party needs one. ... [N]ot every incumbent wants to be associated with the party's message. And many of the party's influential constituent groups and moneyed organizations are busy pursuing their own messaging and branding initiatives, and remain in the early stages of their own investigations into what went wrong in November. Some - including the Democratic National Committee

and individual state party committees - are busy preparing their own, independent lines of messaging." http://politi.co/2uTGyKi

BREAKING LATE MONDAY -- "Trump dictated son's misleading statement on meeting with Russian lawyer," by WaPo's Ashley Parker, Carol Leonnig, Phil Rucker and Tom Hamburger: "On the sidelines of the Group of 20 summit in Germany last month, President Trump's advisers discussed how to respond to a new revelation that Trump's oldest son had met with a Russian lawyer during the 2016 campaign - a disclosure the advisers knew carried political and potentially legal peril. The strategy, the advisers agreed, should be for Donald Trump Jr. to release a statement to get ahead of the story. They wanted to be truthful, so their account couldn't be repudiated later if the full details emerged.

"But within hours, at the president's direction, the plan changed. Flying home from Germany on July 8 aboard Air Force One, Trump personally dictated a statement in which Trump Jr. said that he and the Russian lawyer had 'primarily discussed a program about the adoption of Russian children' when they met in June 2016, according to multiple people with knowledge of the deliberations. The statement, issued to the New York Times as it prepared an article, emphasized that the subject of the meeting was 'not a campaign issue at the time.'" http://wapo.st/2vnN67f

JOHN KELLY'S DAY ONE -- "Kelly flexes muscle his first day on the job at White House," by AP's Vivian Salama and Jill Colvin: "Raised voices could be heard through the thick door to the Oval Office as John Kelly - then secretary of Homeland Security - offered some tough talk to President Donald Trump. Kelly, a whip-cracking retired general who was sworn in as White House chief of staff on Monday, had demanded to speak to the president alone after Trump complained loudly that the U.S. was admitting travelers from countries such as Afghanistan, Iran and Haiti.

"Kelly first tried to explain to Trump that the admissions were standard - some people had legitimate reasons to visit the country - but the president insisted that it was making him look bad, according to an administration official familiar with the exchange about a month ago. Kelly then demanded that other advisers leave the room so he could speak to the president frankly. Trump refused at first, but agreed when Kelly insisted. It was an early indication that Kelly, a decorated retired Marine general who served three tours in Iraq, is not afraid to stand up to his commander-in-chief." http://bit.ly/2uTrrRl

... FOR THE RECORD -- "Kelly called Comey to express anger over firing, sources say," by CNN's Shimon Prokupecz and Pamela Brown: "New White House chief of staff John Kelly was so upset with how President Donald Trump handled the firing of FBI Director James Comey that Kelly called Comey afterward and said he was considering resigning, according to two sources familiar with a conversation between Kelly and Comey. Both sources cautioned that it was unclear how serious Kelly, then the secretary of homeland security, was about resigning himself. 'John was angry and hurt by what he saw and the way (Comey) was treated,' one of the sources said." http://cnn.it/2tTnfj1

****** **A message from Morgan Stanley:** Driving Inclusive Growth: See where 20 countries stand in terms of opportunities for investing in technology that enhances inclusive economic growth. Learn more. ******

UNDERSTANDING KELLY ...

-- "Kelly's military approach to the media: The new chief of staff respects the press but will defer to his superior, Donald Trump," by Hadas Gold: "Should Kelly be presented with a situation in which Trump wishes to ban an outlet from the White House, Kelly would likely carry out the president's directive, [longtime press aide David] Lapan said. 'I think he would push back against banning a reporter from the briefing room, but he also recognizes that ultimately the president is the decision-maker and there is a time to have internal discussions and disagreements,' Lapan said. 'But at the end of the day ... Gen. Kelly is the one to carry out those orders and directions, but he certainly will have a say.'" http://politi.co/2vi8sC9

-- THE NEW BOSS -- "Kelly seizes control of the chaotic West Wing," by Andrew Restuccia, Josh Dawsey, Tara Palmeri and Darren Samuelsohn: "John Kelly and Reince Priebus had a joint -- and brief -- meeting with senior staff on Kelly's first day in charge to talk about the changes afoot in the West Wing. By Monday afternoon, Kelly was meeting with staff again, this time without Priebus. Kelly assembled senior aides in his office and laid down his rules of the road: More accountability on how jobs are done. More limitations on access to the Oval Office. More structure. Better briefings and information for the president. A White House staff where everyone reports to Kelly. ... To both Scaramucci's ouster and the new ground rules there was no public dissent ... Internally, people saw Scaramucci's firing as a good thing, several West Wing aides said. ...

"White House officials said Kelly is planning to lock down the Oval Office, restricting the number of aides and outside visitors who can wander in. One aide said Trump's daughter Ivanka Trump and son-in-law Jared Kushner have agreed to follow Kelly's rules when it comes to visiting the Oval and sharing information with the president. 'They are going to actually report to him,' the aide said." http://politi.co/2tZ8LSK

WSJ EDITORIAL BOARD -- "Kelly Sends a Message: The new White House chief of staff gives the Mooch the boot": "The big questions about new White House chief of staff John Kelly are whether he can impose discipline on a chaotic staff, and whether President Trump will listen to him. After one day on the job, Mr. Kelly appears to be 2-0." http://on.wsj.com/2uf2tK2

THE PRESSURE IS ON -- Yes, John Kelly made a dramatic mark on his first day as chief of staff firing controversial communications director Anthony Scaramucci. He also laid down the law to White House staffers, publicly saying that there would be a new chain of command -- and he was at the top. The question remains whether Kelly can

force order in an inherently chaotic environment. It also remains to be seen whether Kelly can actually stop top aides like Dan Scavino, Steve Bannon and others from going directly to Trump, not to mention Ivanka and Jared when they disagree with their new boss.

BIG QUESTIONS ...

-- WHO WILL BE THE NEXT COMMS DIRECTOR? Trump's White House has struggled to fill the communications director position since the beginning of this administration. Mike Dubke didn't last. Clearly, Scaramucci wasn't a good fit. It's unclear who Kelly will look to fill the critical role of trying to set the message for the administration. Several Republican sources floated **BLAIN RETHMEIER** as a potential replacement. Rethmeier, a veteran Republican communicator who has worked at trade associations and more recently at firms like Ditto PR and Edelman, has a relationship with Kelly. He was part of the sherpa team that helped get Kelly confirmed as DHS secretary. **JASON MILLER** is another communications vet who is perennially brought up to fill the top comms slot. Miller, who served as communications director of Trump's campaign, currently is a CNN contributor and works at Teneo Strategy. Neither Rethmeier nor Miller responded to a request for comment.

-- WHO WILL BE THE NEXT DHS SECRETARY? Republican sources said that the White House's focus is on getting the West Wing in order before turning to fill Kelly's slot at DHS. It's unclear whether Trump will want to continue with a military official in the position, or turn to a more political operator. Either way, multiple sources said Trump's operation wants someone who can be easily confirmed. House Homeland Security Chairman Mike McCaul (R-Texas) is on the shortlist for Kelly replacements. He's got the experience and political chops. Others in the mix include: ICE acting director Thomas Homan and Kansas Secretary of State Kris Kobach, though Kobach would likely have a hard time getting confirmed.

-- NOT ON THE SHORT LIST: "'America's toughest sheriff' found guilty of criminal contempt," by Ted Hesson: "A federal judge in Arizona found former Maricopa County Sheriff Joe Arpaio guilty of criminal contempt on Monday for violating an order in a racial-profiling case. U.S. District Court Judge Susan Bolton said the evidence in the case showed a 'flagrant disregard' for a 2011 court order that required the sheriff to stop detaining people unless they were suspected of a crime. The 85-year-old Arpaio, who lost a reelection bid last year, earned a reputation during his tenure for his tough stance against illegal immigration and headline-grabbing approach to criminal justice, dressing inmates in pink underwear and operating an open-air 'tent city' jail in the scorching Arizona heat." http://politi.co/2tY307Y

NOT THE ONION - JAKE TAPPER on CNN.com, "White House officials tricked by email prankster": "A self-described 'email prankster' in the UK fooled a number of White House officials into thinking he was other officials, including an episode where he convinced the White House official tasked with cyber security that he was Jared Kushner and received that official's private email address unsolicited. 'Tom, we are

arranging a bit of a soirée towards the end of August,' the fake Jared Kushner on an Outlook account wrote to the official White House email account of Homeland Security Adviser Tom Bossert. 'It would be great if you could make it, I promise food of at least comparible (sic) quality to that which we ate in Iraq. Should be a great evening.' Bossert wrote back: 'Thanks, Jared. With a promise like that, I can't refuse. Also, if you ever need it, my personal email is' (redacted). ...

"Masquerading as Priebus, the prankster emailed Scaramucci's official account using a mail.com account on Saturday, the day after Priebus' resignation was announced. ... The very real Scaramucci responded: 'You know what you did. We all do. Even today. But rest assured we were prepared. A Man would apologize.' Fake Priebus wrote back: 'I can't believe you are questioning my ethics! The so called "Mooch", who can't even manage his first week in the White House without leaving upset in his wake. I have nothing to apologize for.' Actual Scaramucci responded: 'Read Shakespeare. Particularly Othello. You are right there. My family is fine by the way and will thrive. I know what you did. No more replies from me.'

"In another exchange, Scaramucci was hoodwinked by the same prankster pretending to be Ambassador to Russia-designate Jon Huntsman Jr. ... After a few ... nice messages of support from faux Huntsman, Scaramucci wrote, 'Are you in Moscow now? If not please visit.'" http://cnn.it/2vcYYZh

WILD STORY -- "Capitol Police Responded to Wrong Site in Scalise Shooting," by Bloomberg's Billy House: "The U.S. Capitol Police department opened an internal investigation into why its elite tactical team was initially directed to respond to the wrong location when a gunman opened fire last month at a GOP congressional baseball practice, according to two people familiar with the matter. Instead of responding directly to the Virginia field where House Majority Whip Steve Scalise and several others were shot, members of the Capitol Police Containment and Emergency Response Team were signaled instead to go to House Minority Leader Nancy Pelosi's house in the Georgetown neighborhood of Washington, several miles away." https://bloom.bg/2uSnJqZ

RETIREMENT WATCH -- TENNESSEE REPUBLICAN JIMMY DUNCAN is retiring at the end of this Congress. The seat has been represented by a Duncan since 1965: he has been in Congress since 1988, and his father represented the same district before that. The move wasn't wholly unexpected and Republican sources predict several more lawmakers to join Duncan and Rep. Ileana Ros-Lehtinen (R-Fla.) in not seeking reelection.

NEW POLITICO/MORNING CONSULT POLL -- "Majority of voters believe White House is in chaos," by Steven Shepard: "While President Donald Trump claimed early Monday in a tweet that there was no 'chaos' in his White House, voters disagree: 60 percent say the administration is running somewhat or very chaotically, compared to only 33 percent who say it is running well. That's according to a new POLITICO/Morning Consult poll conducted last Thursday through Saturday. The survey was conducted

entirely prior to Monday's ouster of Anthony Scaramucci from his position as White House communications director, and was already in the field when Reince Priebus left the chief of staff position.

"In general, voters have a low opinion of how Trump's White House is operating. Fewer voters, 29 percent, say Trump's staff serves him well than the 39 percent who say his staff doesn't serve him well. Republican voters have a much more positive impression of how Trump's White House is operating: 63 percent say it is running well, though more than a third, 34 percent, say it is running chaotically. By comparison, very few Democrats (12 percent) or independents (25 percent) say Trump's White House is running well -- with 80 percent of Democrats and 65 percent of independents saying it is beset by chaos." http://politi.co/2uP9NzO

NEW ISAAC DOVERE PODCAST -- ISAAC DOVERE spoke to **DEVAL PATRICK** in his Bain Capital office in the John Hancock tower in Boston. "Barack Obama is nudging him to run. His inner circle is actively encouraging it. Dovere chatted with him about Donald Trump's governing by fear and a dishonest pitch to economic nostalgia, while encouraging a rise in casual racism and ditching any real commitment to civil rights. 'I'm trying to think about how to be helpful, because I care about the country, and I'm a patriot first. It's way, way too soon to be making plans for 2020,' he said. 'So I'll just leave it at that.'

"But he's clearly upset with what Trump is doing, on both policy and approach. 'The president, I believe, is at risk of diminishing the voice of the presidency because he pops off so often, and so, kind of, carelessly. I think there is a risk both domestically, and internationally for that matter, that we'll begin to tune him out,' he said. David Axelrod has had several conversations with Patrick about running, and eagerly rattles off the early primary map logic. Valerie Jarrett says that a President Patrick is what 'my heart desires.' Obama himself-who is personally close to Patrick, and counts him among the very small group of people whom he thinks has actual political talent-has privately encouraged him to think about it, among others." http://politi.co/2tZdmVj ... ***Listen to the full podcast*** http://apple.co/2e2dLvm

THE JUICE ...

-- FIRST LOOK: Stevie Wonder, Green Day, The Killers, The Lumineers, and The Chainsmokers will perform at the 2017 Global Citizen Festival Sept. 23 in New York. Pharrell Williams, Big Sean, Andra Day and Alessia Cara will also perform.

-- GAVIN NEWSOM has $16 million in the bank for his race for governor of California. John Chiang has $8.9 million. Former Los Angeles Mayor Antonio Villaraigosa has nearly $4.5 million.

-- MOOCH EMAILS BILL COHAN - "The Mooch is Dead! Long Live the Mooch!" -- Vanity Fair: "'Will make it better this week,' Anthony Scaramucci e-mailed me at 2:33 a.m. on Sunday morning. Alas, he would not get the chance. ... He was out of control

and knew it. His wild interview with Ryan Lizza of The New Yorker probably sealed his fate. He wrote in an e-mail on Saturday morning at 2:24 a.m. that it was 'a mistake' to talk to Lizza. 'I lost my temper,' he said." http://bit.ly/2tZeTKP

Playbook Reads

PHOTO DU JOUR: President Donald Trump presents the Medal of Honor to former Army Specialist James McCloughan of South Haven, Michigan, during an East Room ceremony at the White House on July 31. McCloughan was awarded with the medal for his heroic acts as a combat medic during the Vietnam War. | Win McNamee/Getty Images

FIRST PERSON -- SEN. JEFF FLAKE (R-Ariz.) in POLITICO Magazine, "My Party Is in Denial About Donald Trump: We created him, and now we're rationalizing him. When will it stop?" in an excerpt of his new book "Conscience of a Conservative": "I've been sympathetic to [an] impulse to denial, as one doesn't ever want to believe that the government of the United States has been made dysfunctional at the highest levels, especially by the actions of one's own party. ... [A]s I layered in my defense mechanisms, I even found myself saying things like, 'If I took the time to respond to every presidential tweet, there would be little time for anything else.'

"Given the volume and velocity of tweets from both the Trump campaign and then the White House, this was certainly true. But it was also a monumental dodge. It would be like Noah saying, 'If I spent all my time obsessing about the coming flood, there would be little time for anything else.' At a certain point, if one is being honest, the flood becomes the thing that is most worthy of attention. At a certain point, it might be time to build an ark." http://politi.co/2uSnrAp ... ***$20.79 on Amazon*** http://amzn.to/2uQ6eJy

MOOCH TICK TOCK -- "Scaramucci's short, wild ride through Trump's White House," by Josh Dawsey, Annie Karni and Tara Palmeri: "The retired Marine general was amazed Scaramucci hadn't been disciplined for his profane rants about other West Wing aides published in The New Yorker and couldn't imagine him staying in the West Wing, several White House officials said. Scaramucci was spotted at the swearing-in ceremony, looking grim-but at that point still unaware of what was coming, said people familiar with how the day unfolded. Scaramucci arrived at work Monday, Kelly's first day, with a plan to announce changes in the communications team ... Instead, Kelly told him he needed to go, meeting with Scaramucci in his West Wing office without President Donald Trump present. 'No way could he work with Kelly,' one White House official said. 'His antics over the past week were crazy by any standard.' ...

"In meetings, Scaramucci repeatedly reminded aides that he wasn't 'one of them,' one White House official said. He often talked about his close personal relationship with the president and the autonomy and leeway he had to make decisions, this official said.

In the few meetings he held with communications staffers, he mostly just talked about his desire to cut off embarrassing 'leaks' of anonymous quotes from inside the West Wing - and to fire anyone who had been talking to the press, according to one person familiar with the meetings. He would cut off former RNC staffers, telling them, 'I know you've been serving two masters in this place' - meaning the president and Priebus, whom Scaramucci believed had been undermining the administration. 'I really believe he was on track to fire everybody,' said the person familiar with the meetings. 'Sarah would try and keep the meeting on track, and he would interrupt to talk about leaks and firing everybody.'" http://politi.co/2vde29k

OOPS -- "Anthony Scaramucci erroneously listed as dead in the new Harvard Law alumni directory," by WaPo's Emily Heil: "Pity poor Anthony Scaramucci: reportedly getting divorced, sacked from his job after a mere 10 days - and now there's an erroneous report that he's dead. The blink-and-you-missed-him former White House communications director is listed as deceased in the new Harvard Law School alumni directory, which arrived in alums' mailboxes the very week that 'The Mooch' became the most talked-about guy in politics. An asterisk by the 1989 graduate's name indicates that he was reported dead since the last directory, which was published in 2011. It's unclear whether he was the victim of a prank - or just a typo." http://wapo.st/2ufnLXT

FROM THE PRESIDENT'S SENIOR ADVISER -- "Kushner to Interns: Trump Team Too Disorganized to Collude With Russia," by Foreign Policy's Jenna McLaughlin: "Donald Trump's election team could not have colluded with Russia because they were barely talking to each other, according to Jared Kushner, the president's son-in-law and top White House advisor. 'They thought we colluded, but we couldn't even collude with our local offices,' Kushner told congressional interns during a private talk at the Capitol Visitor Center in Washington on Monday afternoon. ... Before the lecture, the intern director warned those present not to leak the contents of the speech, which was given off the record. ... 'I'm a lot more comfortable talking to you guys today 'cause there isn't any press,' Kushner said." http://atfp.co/2tYRVU4

PIC DU JOUR -- @HotlineJosh: "Just passed Seb Gorka on the Hill. His license plate is 'ART WAR'". http://bit.ly/2tTblWl

WHAT THE PENTAGON IS READING -- "Pentagon Offers Plan to Arm Ukraine," by WSJ's Julian E. Barnes in London, Laurence Norman in Brussels and Felicia Schwartz in Washington: "The U.S. Pentagon and State Department have devised plans to supply Ukraine with antitank missiles and other weaponry and are seeking White House approval, U.S. officials said, as Kiev battles Russia-backed separatists and ties between Moscow and Washington fray. ... The official said President Donald Trump hasn't been briefed on the plan and his position isn't known. Some U.S. and Ukrainian officials said they expect it could be months before the White House makes a final determination." http://on.wsj.com/2uPLzVS

MONEY WATCH -- "Super PACs already racing toward 2018 - and 2020 -- Conservatives have edge over liberals as both camps raise millions," by Center for

Public Integrity's Ashley Balcerzak and Dave Levinthal: http://bit.ly/2vi7KEQ

COMING ATTRACTIONS -- "Watchdog wants investigation into Wasserman Schultz over IT staffer," by Heather Caygle: "A right-leaning ethics group is pushing for a congressional probe into Rep. Debbie Wasserman Schultz because she continued to employ an IT staffer for months after he became the focus of a criminal investigation. The Foundation for Accountability and Civic Trust ... a conservative accountability group, is requesting the Office of Congressional Ethics launch an investigation into what the nonprofit says is Wasserman Schultz's 'apparent breach' of House rules for continuing to employ Imran Awan, even after he was blocked from accessing the House IT system earlier this year." http://politi.co/2f1YRt5

****** **A message from Morgan Stanley:** Growing disparities in income and more are among today's greatest socio-economic challenges. Private sector capital can help create prosperous communities and reduce inequality globally. Morgan Stanley, with The Economic Intelligence Unit, created a tool to rank 20 countries in terms of finance, healthcare, education and gender disparities. Read more. ******

ARE YOU INVITED? -- CHRISTIAN BROADCASTING NETWORK'S JENNIFER WISHON: "Bible Studies at the White House: Who's Inside This Spiritual Awakening?": "A spiritual awakening is underway at the White House. Some of the most powerful people in America have been gathering weekly to learn more about God's Word, and this Trump Cabinet Bible study is making history. They've been called the most evangelical Cabinet in history - men and women who don't mince words when it comes to where they stand on God and the Bible. ... Health Secretary Tom Price, Energy Secretary Rick Perry, Education Secretary Betsy DeVos, Agriculture Secretary [Sonny] Perdue, and CIA Director Mike Pompeo are just a few of the regulars. ... America's top cop, Attorney General Jeff Sessions, also attends the study." http://bit.ly/2uPYt6o

WHAT TO EXPECT IN MOSCOW -- "After Russia's Retaliation, Embassy Workers Brace for a 'Shock to the System,'" by NYT's Neil MacFarquhar: "The last time the Kremlin forced a sweeping reduction of local staff at the American Embassy in Moscow, a young diplomat named Steven Pifer found himself working four days a week on arms control, as usual. But on the fifth day, he navigated the capital in a big truck to move furniture or haul mammoth grocery loads. The entire staff of the embassy, except the ambassador, was assigned one day each week to grunt work called All Purpose Duty ... when they shed their dark suits and polished loafers to mow the lawns, fix the plumbing, cook in the cafeteria and even clean the toilets. ... [M]any current and former diplomats expect a similar effort in the wake of President Vladimir V. Putin's announcement on Sunday that the United States diplomatic mission in Russia must shed 755 employees by Sept. 1." http://nyti.ms/2tZ6YgD

-- REUTERS/MOSCOW: "U.S. embassy in Moscow says locked out of diplomatic property": "The U.S. embassy in Moscow accused Russian authorities on Monday of barring diplomatic staff from a property on the outskirts of Moscow, after having earlier

agreed to grant access until midday on Tuesday for them to retrieve belongings. A Russian foreign ministry official, quoted by state news agency RIA, said the U.S. embassy had sent in its trucks without first obtaining permits which, the official said, are required by law because the property is in a conservation area. The property, in a picturesque spot on a bend in the Moskva river northwest of the capital, is leased by the U.S. embassy for its staff to use for recreation." http://reut.rs/2tZ1thU

WHAT YOUSEF IS SAYING BEHIND THE SCENES -- "Persian Gulf Rivals Competed to Host Taliban, Leaked Emails Show," by NYT's David D. Kirkpatrick: "In their long-running rivalry, the United Arab Emirates has often accused its neighbor Qatar of abetting Islamist militants, citing as one prime example the 2013 opening of a Taliban embassy in the Qatari capital, Doha. Now it turns out that the Emiratis tried to get the Taliban to open an embassy in their own country instead. The Emirati ambassador to Washington, Yousef al-Otaiba, even received 'an angry phone call' from the foreign minister at the time complaining that the Taliban had ended up in Qatar and not the U.A.E., according to leaked emails from the ambassador's account." http://nyti.ms/2ueRS1P

BUSINESS BURST - "While Other U.S. Companies Flee China, Starbucks Marches In," by NYT's Andrew Ross Sorkin: "Consider this mind-boggling statistic that I culled from the company's statement last week about its Chinese ambitions: Starbucks is opening more than 500 stores a year there -- which amounts to more than one new store a day. Starbucks is creating some 10,000 jobs in China annually. In Shanghai alone, there are already 600 stores. To put that in perspective, New York City has about half as many stores as Shanghai." http://nyti.ms/2uSI1R1

MEDIAWATCH -- "Corey Lewandowski Has Been Fired From The One America News Network," by The Daily Beast's Lachlan Markay and Asawin Suebsaeng: "Three sources with knowledge of the situation tell The Daily Beast that the former Trump campaign manager and current informal adviser to the president has been let go from One America News Network, a pro-Trump cable channel pitching itself as an aspiring Fox News. Lewandowski angered OANN leadership with his frequent appearances on Fox and other competitors, which one former OANN employee described as 'a big no-no' with the channel's leadership." http://thebea.st/2vdlSiX

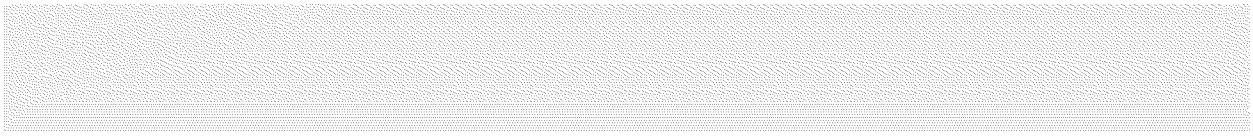
Justin Worland
Time Magazine
October 20, 2017
http://time.com/4990060/scott-pruitt-interview-epa-schedule-meetings/

The head of the Environmental Protection Agency defended his meetings with energy companies, chemical manufacturers, automakers and other industry groups, arguing that they were "stakeholders" not "polluters."



In an exclusive interview with TIME on Oct. 18, former Oklahoma attorney general Scott Pruitt argued that the recent criticism of his schedule, which showed he met with environmental groups less than 1% of the time, was inaccurate.

"I don't spend any time with polluters. I prosecute polluters," says Pruitt. "What I'm spending time with are stakeholders who care about outcomes. I think it's a wrong premise. It's Washington D.C.-think to look at folks across the country—from states to citizens to farmers and ranchers, industry in general—and say they are evil or wrong and we're not going to partner with them."

Subject: Clinton urges government workers not to quit their posts

By Gabriel Debenedetti

09/18/2017 10:04 PM EDT

Hillary Clinton today urged federal employees who disagree with the Trump administration to stay in their jobs if they can, condemning what she called the "disregard, even contempt, among many in this administration about what federal workers know and what they've done, and the advice they can give."

The 2016 Democratic presidential nominee, speaking at Warner Theatre in Washington in the first speaking event of the national tour for her new book, urged government workers to "stick it out, stick it out, because the tide has to turn."

Scores of federal workers held over from the Obama administration have left the government since President Donald Trump took over, but Clinton pointed to the ongoing North Korea crisis as an example of why their expertise is needed in Washington.

"I don't want us to lose the decades — really, if you added it all up, the thousands of years — of experience in the EPA, in the State Department, in the Labor Department, in a lot of the places being targeted by the administration," Clinton said. "At some point they're going to need you, and the country is going to need you. And I hope you're still there."

"If [Democrats] can take back one or both houses of Congress in 2018, you will have people you can talk to again," she added toward the end of the hourlong event, in which she largely stuck to the themes of her book, "What Happened," which rehashes the 2016 campaign and other portions of Clinton's life.

The event was formatted as a question-and-answer session hosted by former Clinton speechwriter Lissa Muscatine, owner of the Politics and Prose Bookstore, which sponsored the event.

Driving the Day

Good Friday morning. WELL, THAT'S THAT...FOR NOW. Sens. John McCain (R-Ariz.), Lisa Murkowski (R-Alaska) and Susan Collins (R-Maine) voted "no" early Friday morning on a "skinny" Obamacare repeal bill -- an effort Republicans, including Speaker Paul Ryan, framed as the way to begin a negotiation between the House and Senate on a large health care package. McCain and Murkowski have been targets of Trump's scorn in the last year or so.

THERE WAS PLENTY OF LATE-NIGHT DRAMA. GREAT TIDBITS from Seung Min Kim, Burgess Everett and Jen Haberkorn: "The president made a last-ditch effort, calling [McCain] on the GOP's Obamacare repeal measure, as the bill's fate hung in the balance, according to two sources familiar with the conversation. After Pence had spent about 20 minutes working McCain, the senator went off the floor to speak with Trump by phone, those sources said. ... 'I thought it was the right vote,' McCain told reporters as he left the Capitol. 'I do my job as a senator.' ...

"But his mind wouldn't change. McCain walked over to a gaggle of Senate Democrats and told them that he would be voting no on the Obamacare repeal measure. His mind had already sped ahead to what was next: the National Defense Authorization Act, a top priority for the Armed Services Committee chairman. 'Let's get this over with,' McCain told the cluster of Democrats, according to senators. 'I really want to do NDAA.'" http://politi.co/2h8bFih

-- Before the final vote was called, McCain walked to the Democratic side of the aisle and spoke to a happy Senate Minority Leader Chuck Schumer (D-N.Y.) and embraced Sen. Dianne Feinstein (D-Calif.). Pence, who was standing by to cast a tiebreaking vote,

was not presiding over the Senate during the final tally -- an ominous sign. ***John Bresnahan, Burgess Everett, Jen Haberkorn and Seung Min Kim with many more details*** http://politi.co/2v58VYk ... **WATCH:** Schumer's fist pump. http://bit.ly/2h8dqfi ... **WATCH**: McCain walks up to the desk, puts his thumb down and votes no. http://bit.ly/2uHOpdX

SEN. CHRIS MURPHY (D-CONN.) (@ChrisMurphyCT): "I ran into John McCain as we walked underground to the Senate for the final vote. Someday I'll get to tell my grandkids what he said to me."

-- HOW IT PLAYED IN PHOENIX -- LEAD IN THE MAINBAR OF THE ARIZONA REPUBLIC: "Capping his dramatic return to Capitol Hill while fighting brain cancer, Sen. John McCain cast the deciding vote to sink his fellow Republicans' so-called 'skinny repeal' of the Affordable Care Act." http://bit.ly/2vOZfPn

-- WHAT MCCAIN SAID: "We must now return to the correct way of legislating and send the bill back to committee, hold hearings, receive input from both sides of aisle, heed the recommendations of nation's governors, and produce a bill that finally delivers affordable health care for the American people. We must do the hard work our citizens expect of us and deserve."

--Drudge banner, "THE END -- MCCAIN KILLS REPEAL" ... **HuffPost banner,** "SHOCK VOTE: REPEAL DEAD -- 3 GOP CROSS AISLE" ... **N.Y. Post cover,** "SURVIVOR WHITE HOUSE" http://bit.ly/2tP12GI

REACTION FROM PRESIDENT TRUMP -- at 2:25 a.m.: "3 Republicans and 48 Democrats let the American people down. As I said from the beginning, let ObamaCare implode, then deal. Watch!"

A FEW TAKEAWAYS: Health care is a very tricky topic, and there's very little agreement among Republicans on the key issues like Medicaid and coverage. Legislating takes time and effort. Artificial deadlines don't help. The president needs allies, not skeptics and enemies on Capitol Hill. Shifting responses on Russia, constant chatter about the outcome of the 2016 election and berating your attorney general and members of Congress haven't been helpful for the president, broadly speaking. The president has to learn to be nice to members of Congress. That's all part of the game. It's not always fun. But that's the way to win. Not many people are interested in fighting for the president and taking tough votes for him at this point. Right now, Trump has just one major Capitol Hill win: a new Supreme Court justice.

WHERE DO THINGS GO FROM NOW? It is not completely clear. Talk to Hill Republicans and the big problem is this: House Republicans do not believe Senate Republicans can pass anything substantial -- period. And the idea that a bi-cameral negotiation -- called a "conference committee" -- would have somehow produced a compromise was also a bit of a fantasy.

WILL REPUBLICANS GIVE UP ON HEALTH CARE? No, almost definitely not. Repealing and replacing Obamacare is still the party's central tenet -- and has been for nearly a decade. But it will have to start anew, now. And it will continue to eat up much of the party's time and energy on Capitol Hill. Obamacare was on life support many times in 2009-2010. Democrats eventually got it through. **THE LIKELIHOOD?** A package of fixes from Republicans. Dismantling or fixing -- depending on your political orientation -- piece by piece. There will definitely be a push to starve the law of funding.

HOUSE REPUBLICANS have a 9 a.m. closed party meeting this morning. There's no reason why they'll stay for the weekend, but some might want to. **TOP REPUBLICANS** believe it's incumbent on the Senate to come up with something it can pass.

****** **A message from BP: We produced and refined 1.3 million barrels per day of oil and natural gas last year - enough energy to light the entire country.** *Flip through our Economic Impact Report to learn more.* ******

WELL, WELCOME TO AUGUST. Washington hasn't accomplished anything on health care, infrastructure, government spending, the debt ceiling or taxes. As we've been telling you, health care will stretch into the fall, and could damage the chance for tax reform. We're about two months away from a government shutdown, and not that far out from defaulting on the nation's debt.

THE WORST SCENARIO FOR HOUSE REPUBLICANS -- A bipartisan deal on health care emerges from the Senate. It would deeply divide the House, which is more conservative and factional than the Senate.

FIRST IN PLAYBOOK: House Republican leaders raised $515,000 this week at a fundraiser for House Majority Leader Steve Scalise's leadership fund.

WHAT EVERYONE IS TALKING ABOUT -- RYAN LIZZA on NewYorker.com, **"Anthony Scaramucci Called Me to Unload About White House Leakers, Reince Priebus, and Steve Bannon":** "'What I'm going to do is, I will eliminate everyone in the comms team and we'll start over,' he said. ... 'They'll all be fired by me,' he said. 'I fired one guy the other day. I have three to four people I'll fire tomorrow. I'll get to the person who leaked that to you. Reince Priebus-if you want to leak something-he'll be asked to resign very shortly.' The issue, he said, was that he believed Priebus had been worried about the dinner [with Sean Hannity and Bill Shine] because he hadn't been invited. 'Reince is a f***ing paranoid schizophrenic, a paranoiac,' Scaramucci said. He channelled Priebus as he spoke: "'Oh, Bill Shine is coming in. Let me leak the f***ing thing and see if I can c***-block these people the way I c***-blocked Scaramucci for six months.'" (Priebus did not respond to a request for comment.)"

"Scaramucci also told me that, unlike other senior officials, he had no interest in media attention. 'I'm not Steve Bannon, I'm not trying to suck my own c**k,' he said ... 'I'm not trying to build my own brand off the f***ing strength of the President. I'm here to serve the country.' (Bannon declined to comment.) He reiterated that Priebus would

resign soon, and he noted that he told Trump that he expected Priebus to launch a campaign against him. 'He didn't get the hint that I was reporting directly to the President,' he said. 'And I said to the President here are the four or five things that he will do to me.' His list of allegations included leaking the Hannity dinner and the details from his financial-disclosure form. ...

"I got the sense that Scaramucci's campaign against leakers flows from his intense loyalty to Trump. Unlike other Trump advisers, I've never heard him say a bad word about the President. 'What I want to do is I want to f***ing kill all the leakers and I want to get the President's agenda on track so we can succeed for the American people,' he told me. He cryptically suggested that he had more information about White House aides. 'O.K., the Mooch showed up a week ago,' he said. 'This is going to get cleaned up very shortly, O.K.? Because I nailed these guys. I've got digital fingerprints on everything they've done through the F.B.I. and the f***ing Department of Justice.' ... Scaramucci said he had to get going. 'Yeah, let me go, though, because I've gotta start tweeting some s*** to make this guy crazy.'" http://bit.ly/2h75I58z

-- @Scaramucci: "I sometimes use colorful language. I will refrain in this arena but not give up the passionate fight for @realDonaldTrump's agenda. #MAGA ... I made a mistake in trusting in a reporter. It won't happen again."

-- BUT ... PER RYAN LIZZA's piece: "Scaramucci, who initiated the call, did not ask for the conversation to be off the record or on background."

****** **A message from BP: We operate an oil and gas pipeline network across America that spans nearly 4,000 miles - farther than New York to San Francisco.** *Watch this short video for more on our U.S. footprint.* ******

JOSH DAWSEY - "Scaramucci declares war on Priebus, Bannon": "One person who talked with Scaramucci said he talks openly about getting rid of Priebus, the former Republican National Committee chairman whose job has appeared to be in jeopardy for months. 'He's got to go,' this person said, summarizing Scaramucci's comments about Priebus. ... One White House official described the incident as a bump in the road for Scaramucci - and said that there was no expectation that he would be fired or punished for the interview. Nor any expectation that Trump will be inflamed by it. 'He didn't say anything negative about Trump,' this person said. ...

"One person who spoke with Priebus over the weekend said he'd wanted to make it to one year in the White House, but has settled for staying 'at least through health care.' One reason Priebus and his allies opposed Scaramucci coming on board was that they knew 'he wouldn't just be a comms person going on TV,' one West Wing official said. Priebus has begun calling allies and asking for advice on whether he should stay in the job and how he should handle the situation, according to people familiar with the talks. One such call went to Speaker Paul Ryan earlier this week, who advised Priebus to stay and that the president needed him. ... Priebus has continued to hold daily meetings in his office, but people no longer feel like they have to attend, one senior White House

official said." http://politi.co/2tOKwqz

REINCE WATCH -- INTERESTING NUGGET from NYT's Peter Baker and Maggie Haberman: "Mr. Trump has openly told people that he has lost faith in Mr. Priebus. He has said he wants 'a general' as chief of staff, and has focused on John F. Kelly, the retired four-star Marine now serving as homeland security secretary. Many of his advisers, however, consider that a bad idea." http://nyti.ms/2u3RwLc

-- "Reince Priebus's Days Are Numbered, Trump Allies Say," by BuzzFeed's Adrian Carrasquillo: "The White House used to sternly push back on reports that Chief of Staff Reince Priebus was losing the president's favor and would soon be fired. ... Those days appear to be over. ... Privately, Kellyanne Conway, counselor to the president, has told people that Priebus is 'gone' and that he is trying to figure out his next steps, a source with knowledge said. Her message is that White House staffers who came from the [RNC], which Priebus ran before being named chief of staff, are out, and that the administration is 'going back to Trump loyalists.'" http://bzfd.it/2h8h4G1

REMEMBER WHEN the Trump administration said tax reform was easy, and would happen by the end of the year?

THE SKINNY TAX PLAN -- "Tax reform: Is that all there is?," by Nancy Cook and Aaron Lorenzo: "The White House, Treasury and congressional leaders issued a six-paragraph statement Thursday that tried to show off their commitment to pursuing tax reform without delving into any policy specifics. The only problem? Tax overhauls live and die on details -- and their absence, after months of weekly meetings aimed at achieving consensus, showed that the GOP's dream of achieving tax reform may be years from completion.

"Missing from the 'Big 6' leaders' statement were details such as what rates Republicans think major corporations, the wealthiest individuals and the middle class should pay. Also unresolved were the status of the estate tax and the fate of prized tax breaks, such as the ability to deduct business interest and state and local taxes. It was even briefer and less detailed than the one-page tax proposal that the Treasury Department and White House released in April, which drew widespread criticism at the time for being too short." http://politi.co/2u4lJd7

-- "Business Roundtable launching multi-million dollar push backing tax reform," by Nancy Cook: "The Business Roundtable is embarking on a multi-million-dollar national TV and radio campaign, beginning in early August, to give tax reform extra momentum over the congressional recess. Done in cooperation with White House, Treasury, and House and Senate leadership, this is BRT's effort to cast a potential tax overhaul as a once-in-a-generation opportunity." http://politi.co/2eT9f6g

FOR YOUR RADAR -- "Congress sends Russia sanctions to Trump's desk, daring a veto," by Elana Schor: "The Senate on Thursday delivered Donald Trump the first big bipartisan rebuke of his presidency, giving final approval to a package of sanctions on Russia, Iran, and North Korea that constrains his bid to defrost relations with Moscow. The Senate voted 98-2 to approve the sanctions bill that cleared the House earlier this week. ... The only no votes on the bill were Kentucky Republican Rand Paul and Vermont independent Bernie Sanders." http://politi.co/2tIGxrb

-- WAPO'S MICHAEL BIRNBAUM: "The bill ... gives Trump the power to impose sanctions on [a] pipeline under development between Russia and Germany, a project that many policymakers in Europe and the United States say will harm Ukraine by enabling Russian gas to completely bypass it. The pipeline ... may also increase European dependence on Russian gas imports. Days ahead of the vote, language was added to the bill saying that the president should coordinate with U.S. allies before moving on this front, in what backers view as an attempt to calm European concerns." http://wapo.st/2vOFyYb

-- NYT QUOTE OF THE DAY -- VLADIMIR PUTIN talking about the sanctions and the Russia investigations: "It is impossible to put up forever with this boorishness toward our country." http://nyti.ms/2tParyh

-- BULLETIN at 5:35 a.m. -- "MOSCOW (AP) - Russia's Foreign Ministry orders number of U.S. diplomats cut, seizes recreational retreat in response to U.S. sanctions."

FUN READ -- "Spicer on the loose," by Annie Karni: "Sean Spicer doesn't need the bushes anymore. Press secretary Sarah Huckabee Sanders had just wrapped up her daily briefing when her gleeful predecessor came bounding up the White House driveway Thursday afternoon. He had been in meetings off campus, he said, and hadn't been able to catch his old show on television. A departing press secretary with what appears to be at least a mild case of senioritis, smiling Spicer also didn't have much to say about the latest, drama-filled episode of 'As The White House Turns.'" http://politi.co/2tIzcbo

THE JUICE ...

-- JOSH GREEN SMILES: BLUMHOUSE TV has optioned "Devil's Bargain" as a Showtime miniseries. The book will be No. 1 on the New York Times bestseller list Aug. 6. Blumhouse is the same shop that developed Gabe Sherman's Roger Ailes biography into a Showtime series.

-- HILLARY CLINTON: Six hours after releasing the title and cover of her book yesterday, Hillary Clinton's "What Happened" was number one on Amazon. They are still six weeks from release. http://amzn.to/2v4U1Bp

DOJ WATCH -- "Justice Department briefing at White House fuels ethics worries," by Josh Gerstein: "A briefing a top Justice Department official and top Homeland Security official delivered at the White House Thursday on anti-gang efforts is drawing renewed warnings of blurred ethical lines between the White House and law enforcement. Principal Associate Deputy Attorney General Rob Hur and Immigration and Customs Enforcement acting director Thomas Homan spoke and took questions from the press briefing room podium in a previously-unannounced addition to the not-so-regular White House briefing.

"Hur and Homan were flanked by some compelling visuals: TV monitors showing images of tattoos belonging to MS-13 gang members, including enough of the face of one alleged gang participant to identify him. The scene troubled several former Justice Department officials, including Hur's predecessor in the Obama administration, Matthew Axelrod. He said the move was particularly unwise at a time when Justice's independence seems to be under challenge by President Donald Trump's extraordinary and sustained public criticism of Attorney General Jeff Sessions." http://politi.co/2v4WmvS

-- **"Sessions calls Trump criticism over Russia recusal 'kind of hurtful' in 'Tucker Carlson Tonight' interview"** http://fxn.ws/2tOMyGR

NSC DEPARTURE LOUNGE - "McMaster ousts senior official on National Security Council," by WaPo's Karen DeYoung and Greg Jaffe: "The National Security Council's top official for the Middle East has been removed from his job following internal complaints about his management style, according to senior Trump administration officials. The departure Thursday of retired Army colonel Derek Harvey, an influential voice on Iran, Syria and counterterrorism policy, came at the initiative of national security adviser H.R. McMaster, who has repeatedly clashed with him. ... Michael Bell, NSC director for Persian Gulf affairs, has been named to take Harvey's place temporarily until a permanent replacement is determined ... Harvey also drew the ire of Secretary of State Rex Tillerson, Defense Secretary Jim Mattis and Pentagon officials,

who thought that he was trying to set policy rather than coordinate among the different departments and agencies." http://wapo.st/2eTu4yp ... ***Derek's statement on his firing*** http://bit.ly/2ulwR1m

THE OPPOSITION -- ATTN. NANCY PELOSI -- REP. SETH MOULTON (D-Mass.) to CBS' Major Garrett and Steve Chaggaris for today's episode of "The Takeout": **GARRETT:** "You'd like to see the leadership changed before the 2018 elections?" **MOULTON:** "I think we're going to have a much better chance of winning if it does. And that's the bottom line." http://cbsn.ws/2uDWemE

WHAT MARCO IS UP TO -- "Marco Rubio stakes out role in Congress as human rights champion," by USA Today's Ledyard King: "Rubio's office maintains a spreadsheet of hundreds of political prisoners or human rights victims from more than 30 countries. ... The senator himself adds to the list when he comes across news accounts of particularly moving examples. He directs his office to advocate for some of them using back-channel communications with the State Department. More prominent dissidents might be strategically featured in hearings or floor speeches, often timed to coincide with a prominent anniversary, or the president's trip to a country with a documented pattern of human rights abuses. On occasion, he's had the opportunity to make his case directly to Trump and other world leaders." https://usat.ly/2v3aTsk

TRUMP INC. -- "Trump Organization employees must agree to keep info about Trump family secret," by CBS News' Julianna Goldman and Laura Strickler: "CBS News has obtained a new confidentiality agreement rolled out after the election. The Trump Organization is requiring employees at all levels to sign it, or else they will lose their jobs. Employees must agree to keep secret any information they learn about anyone in the 'Trump family' and extended family, including their 'present, former and future spouses, children, parents, in-laws.' 'I have reviewed confidentiality agreements in international, family-run hospitality organizations and ... I have never seen a loyalty code to a family like this,' said Debra Soltis, who has specialized in employment law for more than 25 years." http://cbsn.ws/2v4XIH2

FUTURE OF NEWS - "Facebook wants to help news publishers sell subscriptions, but says it doesn't want a cut of the revenue," by Recode's Peter Kafka: "Facebook [is talking] to publishers about a subscription tool it wants to launch later this year ... Industry sources say that instead of operating a subscription service itself, Facebook plans on creating a paywall it would implement after non-subscribers view 10 articles a month from a particular publisher. When users hit the 10-article limit, Facebook plans on sending users to that publisher's site to sign up for a subscription." http://bit.ly/2v5449h

MEDIAWATCH -- "Pulitzer Prize-Winner James Risen Leaving The New York Times," by HuffPost's Michael Calderone: "Pulitzer Prize-winning reporter James Risen is leaving The New York Times after nearly two decades, a distinguished run that included standout reporting on the Sept. 11 terrorist attacks, the Bush administration's bogus case for invading Iraq, and rampant government surveillance. Risen, a press-freedom advocate, successfully battled two Washington administrations trying to compel

him to reveal a confidential source." http://bit.ly/2v30ltk

-- "Kasie Hunt in talks for MSNBC show," by Hadas Gold: "MSNBC correspondent Kasie Hunt is likely to get her own show on Sunday evenings, two sources with knowledge of the situation tell POLITICO. The deal is not done yet and the show does not have its own name, but the two sources say it's more or less a done deal. One source suggested it would be a two-hour show on Sundays." http://politi.co/2uIdyFj

-- Cassie McNamara is leaving Media DC to be a booking producer at MSNBC for "Hardball" starting on Monday.

Subject: POLITICO's Morning Energy, presented by Chevron: FERC sets quick timeframe to consider Perry's request — Trump heads to Puerto Rico today — Heavyweights weigh in on solar tariffs today

By Anthony Adragna | 10/03/2017 10:00 AM EDT

With help from Eric Wolff, Lauren Gardner and Alex Guillén

FERC AIMS FOR QUICK WORK: FERC is asking for initial comments on DOE's proposed rule that would benefit nuclear and coal-fired power plants to be submitted in just three weeks - a timeline that suggests the independent commission is eager to move quickly on the Trump administration's proposal that is already generating push-back from a diverse group of major industry players. In a notice out late Monday, FERC set an Oct. 23 comment deadline and said reply comments would be due by Nov. 7.

Energy super-group says slow down: Representatives of oil, natural gas, wind, solar and other sectors urged FERC in a Monday letter to pump the brakes on Energy Secretary Rick Perry's request for a quick turnaround on the new rules, Pro's Darius Dixon reports . "This is one of the most significant proposed rules in decades related to the energy industry and, if finalized, would unquestionably have significant ramifications for wholesale markets under the Commission's jurisdiction," wrote the 11 groups, including the American Petroleum Institute, Solar Energy Industries Association and Electric Power Supply Association. They called Secretary Rick Perry's proposed timeline "unreasonable on its face."

Murkowski seems lukewarm: Senate Energy Chairman Lisa Murkowski also seemed lukewarm to Perry's push, saying in a statement she respects "Secretary Perry for taking an action that he believes is necessary" and "will be following the proceedings closely" at FERC.

DOE's proposal should be a hot topic on the Hill today. The House Science Committee takes a look at grid resilience at a hearing at 10 a.m. in Rayburn 2318. Then this afternoon a House Energy and Commerce subcommittee will hear a wide variety perspectives on reliability in a changing electric sector, including representatives of the coal and nuclear industries as well as several of the groups who signed that letter, at 2 p.m. in Rayburn 2123.

TRUMP HEADS TO PUERTO RICO TODAY: President Donald Trump heads to the devastated island of Puerto Rico today even as information released Monday by the federal government hints at the lengthy recovery road ahead. Puerto Rican Gov. Ricardo Rosselló said at a news conference that just one in 10 of the island's nearly 3.5 million people are likely to have power within two weeks, and only a quarter of the island should have the lights on by next month. It's a similarly dire situation for drinking water: 47 percent of residents have potable drinking water right now, though Rosselló said that number should climb to around 60 percent by the end of the week.

The president summed up his view of the situation Monday. "It's been amazing what's been done in a very short period of time on Puerto Rico. There's never been a piece of land that we've

known that was so devastated," Trump said in Oval Office remarks. "The bridges are down, the telecommunications was nonexistent, and it's in very, very bad shape. The electrical grid, as you know, was totally destroyed. But we've gotten tremendous amounts of food and water, and lots of other things - supplies - generally speaking, on the island." The White House said San Juan Mayor Carmen Yulín Cruz, who drew Trump's wrath over the weekend, has been invited to events with him today.

Disaster relief request coming: Meanwhile, the Trump administration is expected to by the end of this week request between $10 billion to $15 billion to respond to the disaster, Playbook reports.

The Center for American Progress today is out with a policy roadmap for lawmakers as they consider the next round of assistance for Puerto Rico and other areas impacted by hurricanes. They urge Congress to enact policies to improve resiliency, update flood risk information and prioritize underserved communities, among other ideas, rather than just throwing money at the problem.

PERMANENT JONES ACT REPRIVE? Senate Majority Leader Mitch McConnell on Monday fast-tracked potential consideration of legislation S. 1894 (115) that would permanently exempt Puerto Rico from the Jones Act, which bans foreign-flagged ships from traveling between U.S. ports. After sustained pressure, Trump granted a 10-day Jones Act waiver for Puerto Rico last week.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and the American Chemistry Council's Jon Corley was first to ID former Rep. Cynthia McKinney as the 2008 Green Party nominee. For today: What "Love Boat" actor went on to serve four terms in Congress for Iowa? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro .

ITC TO GET AN EARFUL ON REMEDY FOR THAT SOLAR BURN: The U.S. International Trade Commission will hear arguments this morning about how to best level the playing field for U.S. solar manufacturers, and it looks like it's going to be quite a show, with hours' worth of speakers lined up. The commission found last week that U.S. solar manufacturing had been harmed by cheap solar imports, over the objections of the rest of the solar industry.

In this corner, for the installers: The Solar Energy Industries Association, along with solar producer SunPower, told the ITC in its brief that a tariff will result in the loss of 62,800 jobs in 2018 and 80,000 jobs in later years. Sen. Martin Heinrich will bat for the no-tariffs team, along with a laundry list of SEIA witnesses. They will also be backed by representatives from the embassies of China, Korea, Brazil, and Mexico.

And in this corner, for the petitioners: In their public briefs, Suniva and SolarWorld Americas offered the commission two choices: A tariff plus a price floor for solar cells, or a tariff plus a quota. Sen. Ron Wyden and Rep. Suzanne Bonamici , both of Oregon, will speak in support of their home-state SolarWorld, which wants tariffs and a price floor. "I urge the Commission to

recommend a remedy robust enough to repair the serious injury already experienced by the U.S. solar manufacturing sector and to ensure its long-term growth and competitiveness," Wyden will say according to an excerpt of his statement obtained by ME. "In practical terms, that means identifying a remedy that helps to revive a domestic manufacturing sector central to our leadership in energy innovation yet long under siege."

And First Solar shall be first: SEIA also locates a winner if tariffs are imposed, Arizona-based thin film manufacturer First Solar, which does much of its manufacturing in Malaysia. "Thin-film solar directly competes with CSPV solar in the marketplace. Consequently, global trade restrictions on [crystalline silicon photovoltaic] would raise rivals' costs and drive customers toward First Solar's products, strengthening First Solar's already strong hand."

MORE CONCERNS RAISED OVER RFS POTENTIAL CHANGES: Nearly all major biofuel trades and the corn growers are out with a letter this morning to Trump urging him to abandon "drastic, unprecedented changes" to change the Renewable Fuel Standard that they said would benefit a select few petroleum refiners. "The proposed changes are inconsistent with the law and threaten the growth and prosperity of the U.S. biofuels industry," wrote signatories of the letter, including National Corn Growers Association, Renewable Fuels Association and Growth Energy. "EPA's changes are also inconsistent with Administrator Pruitt's assurances to uphold the law and your long-standing support of ethanol and the RFS." EPA released a notice last week suggesting it might reduce the already set 2018 biomass-based biodiesel requirement and shrink the mandate in 2019.

Grassley confirms Trump conversation: Iowa Sen. Chuck Grassley told reporters he discussed his concern over potential changes to the RFS during a Friday phone conversation with Trump. "They're trying to respond to big oil and not take into consideration the needs of alternative energy, biofuels," he said. "Cutting back on the mandate isn't a way you're going to encourage capital and capital is what we need now to get pumps to pump E15 instead of E10."

Seems relevant: The White House previously granted EPA deputy general counsel Erik Baptist, a senior counsel to the American Petroleum Institute for more than six years, an ethics waiver to work on RFS issues given his "expertise in this program and its policy and implementation." Copy of that waiver here.

NO OZONE DESIGNATIONS AS DEADLINE PASSES: EPA appears to have missed the Oct. 1 deadline to say which parts of the U.S. meet the 2015 ozone standard and which don't, a key step toward implementing the regulation. The agency is remaining mum; a spokesperson told ME Monday that there is "no further information" on when the designations will be released. The matter has been controversial for months, ever since Administrator Scott Pruitt said he would delay the designations by a year - a delay he later reversed following lawsuits from Democratic attorneys general and environmental groups. (The 2015 standard itself is also under review, with no specific timeline attached.) It may be a while before green groups can take Pruitt to court. The Clean Air Act requires them to provide EPA with 60 days' notice before filing a lawsuit over a missed deadline, meaning any suit couldn't be filed until December at the earliest.

Also adding uncertainty to the process is a pending proposed rule at OMB that appears to set

new thresholds for how EPA classifies ozone areas. That rule arrived at OMB on Sept. 21. EPA had previously proposed classification details last November that the agency characterized as only minor changes to the implementation rules for the 2008 ozone standard. An EPA spokesperson declined to comment on a rule under review at OMB.

** **A message from Chevron**: When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://politi.co/2fVfOTm **

WHAT ABOUT LOLA? Two House Democrats want Interior's inspector general to expand its newly announced investigation into Secretary Ryan Zinke's non-commercial travel to also include his wife, Lola, in light of her involvement with a GOP Senate campaign in Montana, Pro's Esther Whieldon reports. "Because the secretary's spouse is leading a Senate campaign in Montana, tax-payer funded travel for Mrs. Zinke, especially to or from Montana, deserves heightened scrutiny," Raul Grijalva and Donald McEachin wrote in a letter Monday.

HEARING ROUNDUP! SEEMS LIKE A PATTERN HERE: The Senate Energy and Natural Resources Committee axed a vote slated for this morning on the nominations of Steven Winberg to be assistant Energy secretary for fossil energy and Bruce Walker to be assistant Energy secretary for electricity, delivery and energy reliability. No reason was given.

RALLY AGAINST DOURSON: Ahead of Wednesday's hearing on four EPA nominations, Sens. Tom Udall and Richard Blumenthal are holding a press conference with advocates today at 2:30 p.m. to protest Michael Dourson's nomination to run the agency's chemicals office. Udall, you'll remember, was a key architect of the revamped national chemicals law last year.

LIFELINE FOR NAVAJO GENERATING? Peabody Energy said Monday it had found "a number of highly qualified potential investors" interested in taking an ownership stake in the Navajo Generating Station that would allow it to continue operating beyond 2019. It did not provide further details. The plant's current owners said back in February they planned to close the facility after 2019, several decades before expected. But Zinke said in late June that "one of Interior's top priorities" has been finding a way to keep it operating.

MAINE ATTRACTION: Democrat Lucas St. Clair, who led a successful push to create the Katahdin Woods and Waters National Monument, announced Monday he'll challenge incumbent Rep. Bruce Poliquin, the Bangor Daily News reports. St. Clair is the 39-year-old son of Burt's Bees entrepreneur Roxanne Quimby and resigned his post as president of the Friends of Katahdin Woods and Waters to run for office.

NOT IN SLO'S BACKYARD: Energy company Phillips 66 will drop its lawsuit challenging a California county's denial of a proposal that would have let the refiner bring millions of gallons of oil per week by train to its facility in Santa Maria, environmentalists who opposed it said Monday. The county's decision to reject the project came after the Surface Transportation Board last year declined to prevent another California city from denying Valero Energy's bid to expand crude-by-rail operations. The San Luis Obispo Tribune reports that the parties reached a settlement, which must be approved by a court.

PAUSE BUTTON HIT: Amid the worst mass shooting in modern U.S. history, a broad sportsmen's package with controversial gun silencer provisions is no longer expected to get a House vote in the near future, POLITICO's John Bresnahan and Heather Caygle report. Democrats said the Las Vegas massacre was just one more reason to shelve the bill. "There's a lot we need to do in the wake of this mass shooting. We don't need to make it easier to get hold of items that could make mass casualty events even more deadly," Grijalva said in a statement.

TAKE A GLANCE! STUDY: U.S. PAYS BIG FOSSIL FUEL SUBSIDIES: Oil Change International is out with a report today finding the U.S. provides more than $20 billion toward oil, gas and coal production annually. Those include $14.7 billion in annual federal subsidies and $5.8 billion in yearly state-level incentives.

REPORT: GETTING EASIER TO HIT CLEAN POWER PLAN GOALS: The Institute for Policy Integrity at NYU's School of Law is out with a report today arguing the emissions reduction targets of the Obama administration's Clean Power Plan are more achievable due to changes in the electric sector. If the agency were to redo its regulatory impact analysis with recent developments, the report argues compliance costs would be even lower than originally thought.

MOVER, SHAKER: Peter Tomasi has joined Foley & Lardner LLP's environmental practice as of counsel in its Milwaukee office. He was previously a partner at Quarles & Brady LLP.

Subject: POLITICO's Morning Transportation: TSA releases Thanksgiving travel stats — Will Washington really take up infrastructure after taxes? — Strong outlook for airports

By Tanya Snyder | 11/28/2017 10:00 AM EDT

With help from Brianna Gurciullo and Adrienne Hurst

FIRST IN MT: Last week was one of the busiest Thanksgiving travel weeks in TSA's 16-year history. TSA will release data today that show, between Nov. 17 and Nov. 26, the agency screened 21.6 million passengers and crew at airport checkpoints nationwide. More than 2.6 million passengers and crew members passed through TSA screening Sunday, the busiest day of the holiday week and the fifth busiest day since the agency was established.

PreCheck yourself before you PreWreck yourself: TSA said in a statement that nationwide, 98 percent of all passengers waited less than 20 minutes in a checkpoint line and 99 percent of passengers in a PreCheck lane waited less than 10 minutes.

HANDS OFF: A new survey of more than 1,000 flight passengers by Stratos Jet Charters breaks down how different racial, religious and political groups feel about everyone's favorite aspect of air travel: TSA pat-downs. According to the report, nearly three-quarters of Republicans said they believe racial profiling by the TSA is acceptable; Jewish respondents were the likeliest to feel angry about being randomly selected in the security line; and African-Americans were the least likely to be surprised when they were chosen for additional screening.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Tanya is your pilot. Send tips, feedback and song lyrics to tsnyder@politico.com or @TSnyderDC.

"And as you packed up your load / There was one last look / And then the U-Haul broke free / Now the ditches are flooded over the backroads / And damn this stretch of 99 that takes so many lives / One of them was mine." (h/t Chris Rall, Transportation For America)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) about lonely highways and south-bound trains?

WE'RE UP NEXT, RIGHT? Administration officials have been saying that work on an infrastructure package will have to wait until after the tax fight. But recently, President Donald Trump has indicated that welfare reform could come next, or that he could make another go at health care. Put simply, no one knows what's happening and when, report Eliana Johnson, Andrew Restuccia and Ben White. "White House policy initiatives are typically planned months in advance, with congruent strategies for communications and a view toward working them through Congress," they write. "But there is little agreement between White House officials and Republican leaders on the Hill about what should follow tax reform."

What's the problem? The president himself isn't as policy-oriented as his predecessors, and his staff is light on policymaking muscle. Aside from costing the president legislative victories, this disorganization "may also make it harder for the White House to retain staff or to attract replacements as administration officials begin to leave next year," report Eliana, Andrew and Ben.

All of them: "Senior White House officials did not dispute characterizations of the general confusion surrounding the sequencing of these legislative initiatives, and said the administration is likely to push welfare reform as well as infrastructure and a health care bill" over the next year, though the order will be determined by Congress, they write.

POSITIVE MOOD FOR AIRPORTS: Moody's said Monday that it predicts "strong growth" in the U.S. airport sector in 2018 thanks to continued economic expansion. In their 2018 outlook report, Moody's said it expects GDP to expand by 2.3 percent in 2018 and enplanements to expand by 3.7 percent. Even with Uber and Lyft cutting into airport parking revenue, Moody's expects that "enplanements for most airports will far surpass budgeted levels in 2017 and moderately surpass them in 2018, resulting in higher revenue than forecasted."

Big or small: Moody's expects airport growth to be concentrated at small and non-hub airports in 2018, with discount carriers expanding in those markets. It predicts slower growth at large airports next year "due to constrained growth at connecting hubs for carriers like American and Delta." But Fitch Ratings says large hubs are "again driving traffic for U.S. airports." Looking at fiscal 2016 data, Fitch said, "Median enplanements grew again [year over year], rising by over 5 percent to 4.71 million for fiscal 2016 compared to 4.16 million in fiscal 2015. Large hubs and international gateways again drove most of the growth [year over year]." The strongest growth was reported at Dallas Love, Orlando, Memphis, Boise and Broward airports.

GILLAN GOING, GONE: Advocates for Highway and Auto Safety President Jackie Gillan will step down in January, to be replaced at the helm by the organization's top lobbyist, Cathy Chase. Gillan has led Advocates since 1990, helping to bring about "numerous federal and state laws advancing motor vehicle and motor carrier safety standards," according to a statement by the organization. Chase has worked at Advocates since 1996.

2 CENTS FOR PENCE: U.S. automakers had a "candid discussion" with Vice President Mike Pence on Monday about proposed changes to NAFTA auto trade rules, the president of the American Automotive Policy Council told Pro Trade's Doug Palmer. "It was a productive and candid discussion ... about the importance of NAFTA to our industry as well as our concerns with some of the reported proposals," Matt Blunt wrote in an email to POLITICO. Also present at the session: U.S. Trade Representative Robert Lighthizer and National Economic Council Director Gary Cohn.

Don't forget your roots: With Pence's past in Indiana, one of the heaviest auto-producing states, industry leaders might've had their fingers crossed for more sympathy from the VP. As Doug reported last month, one trade association-commissioned study estimated the Trump administration's proposed changes could cost up to 24,000 U.S. jobs in the auto sector by making cars pricier to produce.

GROWING UP: Older drivers represent a growing proportion of licensed drivers, according to new data the FHWA published Monday. Of a record-high 222 million licensed drivers in the U.S. in 2016, 42 million, or almost 1 in 5, were 65 years or older. "This age group is growing faster than any other, and is far outpacing their teenage counterparts," the agency said in a statement. Drivers between 75-79 years old experienced the largest year-over-year increase with that cohort growing by 5 percent over the previous year, with drivers 85 and older in second place.

PROVE IT: In a study released Monday, Forbes Insights found global infrastructure executives and government officials are cynical when it comes to whether the Trump administration's proposed $1 trillion infrastructure initiative will be able to address the nation's infrastructure shortfalls - 49 percent of respondents said it won't. The survey also found strong support for streamlining regulations and bringing in the private sector.

TITLE AND REGISTRATION: Scott Weaver of Wiley Rein LLP is lobbying for in-flight entertainment company Panasonic Avionics on FAA reauthorization legislation. Weaver formerly worked for Airports Council International-North America.

MT MAILBAG: The Beyond the Runway Coalition sent a letter to Capitol Hill Monday, signed by 51 member organizations, expressing its support for provisions in the Senate Transportation-HUD appropriations bill (S. 1655 (115)) that would lift the cap on the Passenger Facility Charge for originating flights (while maintaining the cap for the subsequent legs of a connecting flight) and increase funding for the Airport Improvement Program.

THE AUTOBAHN:

- "Chuck Schumer says no to gas tax hike, complicating Trump's infrastructure push." The Daily Beast.

- "The GOP tax bills are infrastructure bills too. Here's why." Governing.

- Derailed train leaks 'hazardous molten sulfur' in central Florida. Orlando Sentinel.

- Bali airport closed Monday after ash from the Mount Agung volcano reached airspace. The Associated Press.

- "Senate tax bill targets some foreign airlines." The Wall Street Journal.

- "Waymo's fleet reaches 4 million self-driven miles." Medium.

- "Senate Commerce, Finance committees seek answers on Uber data breach." Senate Commerce Committee.

- "Autonomous cars will cut U.S. sedan sales in half." The Detroit Bureau.

- "Dallas-Fort Worth airport gets federal money for runway work." The Associated Press.

- "Report: Hyundai taking it slow with self-driving cars." Motortrend.

THE COUNTDOWN: DOT appropriations run out in 11 days. The FAA reauthorization expires in 124 days. Highway and transit policy is up for renewal in 1,038 days.

Subject: Morning Media: Kelly's military approach to the media -- Scaramucci out -- Has Drudge soured on Trump?

By Hadas Gold | 08/01/2017 05:43 AM EDT

With Alex Weprin

THE ANTHONY SCARAMUCCI SHOW IS OVER after just ten days. It was a brief, stunning ride, with his ultimate ouster the result "of the very changes he promised to bring to the West Wing," as my colleagues wrote . Would this have happened without The New Yorker's Ryan Lizza publishing his now-infamous conversation with Scaramucci? Maybe - maybe not. Theories abound as to why Scaramucci was so worked up about the attendees of a dinner being leaked, but Scaramucci had said he was adamant about getting all the leakers out of the White House. If it wasn't going to be Lizza, at some point it likely would've been someone else. Consider that Scaramucci had already been caught on a hot mic between Sunday show appearances explaining his strategy.

Of note: The great leak hunter's departure was *leaked* out early, reported first by The New York Times and ABC News.

-- For those wondering, I asked ABC's "Dancing With the Stars" if they plan on adding Scaramucci to its cast in order to create what could be an epic Scaramucci vs. Sean Spicer dance-off. Spicer has thus far declined to comment on whether he'd join the show. ABC's response: "We do not comment on casting or casting rumors, but please stay tuned for a full announcement closer to our premiere date - September 18."

JOHN KELLY IS NOW IN CHARGE, SO WHAT DOES THAT MEAN FOR THE MEDIA? Yesterday I took a deep dive into the retired four star general and former Secretary of Homeland Security and his relationship with the fourth estate. In conversations with his former colleagues and reporters who have covered him, here's what I found:

-- Kelly deeply appreciates the role of press and the media's importance to a free democracy. But he sees it as a two-way street. He'll offer transparency and respect, but expects it in return.

-- He learned media relations from Secretaries of Defense Robert Gates and Leon Panetta, who were both known to have good relationships with their press corps.

-- Kelly oversaw the detention facility at Guantanamo Bay as head of the U.S. Southern Command from 2012 to 2016, and he was proud of the work he did there. He offered journalists access and information, but sometimes felt burned by the coverage.

-- He cares about leaks, but of a classified nature, which he's called close to "treason" before. But Kelly understands that leaks of non-classified information, like about personnel are just the nature of Washington.

-- But at his heart, Kelly is a military man. That means that while he respects the press, he reveres the chain of command, at the top of which is President Donald Trump. So if it were to come down to a situation where the president, for example, wanted to bar a reporter from the White House (not out of the realm of possibility considering he regularly blacklisted entire outlets from his campaign events), Kelly would strenuously object. But if he was unsuccessful in convincing the president otherwise, he'd carry out his commands.

HAS DRUDGE SOURED ON TRUMP? Matt Drudge doesn't tweet often from his personal account and when he does, people pay attention (because he also deletes his tweets in short order). So it was notable on Monday morning when Drudge tweeted "Life is a circle..." above a screenshot of a 1990 New York Daily News cover proclaiming "Trump in a Slump: Worried banks are pressing him on $2 billion in debt."

Some would argue that it's clear Drudge is losing faith in Trump. CNN's Oliver Darcy wrote last week that Drudge is firing "warning shots" at the White House, and that "Drudge has appeared irked by Trump and his White House, frustrated with the president's inability to carry out the ambitious agenda."

Others though, like my colleague Michael Kruse, are arguing that Drudge is pointing out that Trump has gone through slumps before, but always survives.

SINCLAIR TAKING LOCAL HEAT, by Alex Weprin: Sinclair Broadcasting is facing local criticism as it continues its bid to acquire the local TV stations owned by Tribune Media. In Maine, the state's largest newspaper the Press Herald wrote about Sinclair's "must-run" segments, which feature conservative commentary from people like former Trump advisor Boris Epshteyn. "Portland's WGME, a CBS affiliate, and its sister station WPFO, a Fox affiliate, are required to air them," the Press Herald's Colin Woodard wrote. "They are the only stations in Maine that are forced to run editorial commentary by their corporate parent."

In Cleveland, the Plain Dealer covers Sinclair's proposed acquisition of the city's Fox affiliate WJW, which is currently owned by Tribune. "Will Sinclair push a political agenda in Cleveland and those other stations? No doubt about it, but so what? If all Sinclair did was broadcast Boris Epshteyn round the clock, there still would be all of these other outlets where you can get the news," Fordham University professor Paul Levinson told The Plain Dealer.

SPEAKING OF SINCLAIR: TRUMP'S TEAM THOUGHT OF GIVING DETAILS OF DON TRUMP JR.'S MEETING WITH THE RUSSIAN LAWYER TO CIRCA, the online news organization owned by the company, according to The Washington Post . Circa, since its

acquisition by Sinclair in 2015, has become a favorite news outlet on the right, with Fox News' Sean Hannity regularly featuring its scoops on his program. The New York Times was hot on the trail of Don Jr.'s meeting with a Russian lawyer claiming to have dirt on Hillary Clinton (they ultimately broke the story) but the outside legal team "suggested that the details be given to Circa, an online news organization that the Kasowitz team thought would be friendly to Trump. Circa had inquired in previous days about the meeting, according to people familiar with the discussions."

WHOA - EMAIL PRANKSTER TRICKS ADMINISTRATION OFFICIALS, including Anthony Scaramucci, Tom Bossert, Jon Huntsman, and Eric Trump via CNN: "A self-described "email prankster" in the UK fooled a number of White House officials into thinking he was other officials, including an episode where he convinced the White House official tasked with cyber security that he was Jared Kushner and received that official's private email address unsolicited."

REVOLVING DOOR:

-- Corey Lewandowski has been fired from OANN for appearing too much on other cable channels. [Daily Beast]

-- Craig Swagler has been named general manager and Linda Coombs will be director of operations for CBS News Radio as Constance Lloyd, general manager of CBS News Radio since 2000, retires.

-- CNN reporter Kate Bennett will be a preliminary judge for Miss America

SOUNDBITES: "A great day at the White House!" [President Donald Trump]

TIL: John Popper, the singer for the band Blues Traveler has been doxxing a guy on Twitter, posting images and information about his home. [Daily Beast]

EXTRAS:

-- Discovery's deal to acquire HGTV owner Scripps Networks was made official Monday morning. [CNNMoney]

-- NowThisNews and Chase bank are teaming up to make #content, and Chase has a "newsroom." [Business Insider]

-- CNN and Anderson Cooper lead the pack in Twitter followers. [Poynter]

-- Barnes & Noble will now carry Milo Yiannopoulos' book. [New York Post]

-- Sean Hannity is partnering with actor Kevin Sorbo to produce a faith-based film that will be directed by and star the "Hercules" actor. [Variety]

-- Memo to Jared Kushner, never trust the interns, they will leak. [Foreign Policy]

-- Reddit raised $200 million in funding and is now valued at $1.8 billion. [Recode]

Subject: Morning Media: Scaramucci's tirade -- Healthcare's dramatic nightlong coverage -- N.Y. Times is failing up

By Hadas Gold | 07/28/2017 06:25 AM EDT

With Alex Weprin

SPLITSCREEN FRONT PAGE: This morning is one of those whiplash days between two major stories. The White House Communications Director's stunning interview, which in normal years would likely get him fired, and the Obamacare repeal's stunning failure during middle of the night votes.

IF YOU HAVEN'T ALREADY READ ANTHONY SCARAMUCCI'S NEW YORKER INTERVIEW, STOP RIGHT NOW AND READ IT. I unwittingly played a small part in making this story happen, since late Wednesday evening I contacted Scaramucci asking about President Trump's dinner with Sean Hannity, Bill Shine, and Scaramucci. Scaramucci asked "Can you tell me who told you that?" as though he was trying to get me to reveal my sources (which I would never do) but I simply notified him that the information had already been out there, pointing him to Ryan Lizza's tweets. Soon Scaramucci was calling Lizza and the rest is insane history.

-- The key takeaway from the conversation: Scaramucci thought leaking about a dinner was of paramount importance, to the point that he invoked Lizza's patriotism to try to get him to identify his source (he refused). "I ask these guys not to leak anything and they can't help themselves," he said. "You're an American citizen, this is a major catastrophe for the American country. So I'm asking you as an American patriot to give me a sense of who leaked it."

-- Breitbart did not take kindly to Scaramucci's outburst, perhaps because of the incredibly offensive things he said about Stephen Bannon. Their front page is covered with stories about this. "Move over President Donald Trump. You are yesterday's news. It seems like this is now The Anthony Scaramucci Show. And Trump better get used to it," the blistering Breitbart lead piece read , calling Scaramucci "drunk with power" who wasn't qualified to be communications director. Among the many noticeable lines: "His comments about Bannon also sound like someone falsely hating in another person what he secretly may hate about himself."

DEAR ANTHONY SCARAMUCCI, LET US DEFINE "LEAK" FOR YOU: Leak: /l??k/ *verb* a: to become known despite efforts at concealment confidential information leaked out. b: to be the source of an information leak (Thank you Merriam-Webster).

-- What is not a leak? A public disclosure form available to anyone who requests it, as my colleague Lorraine Woellert did on Tuesday, obtaining and publishing Scaramucci's financial disclosure form which he was required to file when he joined the government last month. The information is publicly available to anyone who asks.

--- Another thing that's not a leak, you yourself telling reporters that someone is going to be fired. On Tuesday Scaramucci told my colleague Tara Palmeri that Assistant Press Secretary Michael Short was going to be let go. But then he told other reporters that "the fact that you guys know about it before [Short] does really upsets me as a human being and as a Roman Catholic."

-- What is a leak then? Well it could be what Scaramucci did with Lizza. Lizza said Scaramucci did not request the conversation be off-the-record or on-background but it's clear that he thought it was at least somewhat private because he tweeted last night "I made a mistake in trusting a reporter. It won't happen again." Some people have suggested that Scaramucci, being new to Washington and politics, wasn't aware of the norms. But even if he *did* think he was talking privately, he initiated a phone call with someone he knew to be a reporter during which he was talking about internal feuds, trashing his colleagues, his own conversations with the president and that Priebus would be forced to resign soon. *That is leaking.*

Good morning and welcome to Morning Media! I always want to hear from you -- **hgold@politico.com** / **@Hadas_Gold**. **Morning Media** is edited by **Alex Weprin** (**@alexweprin** / **aweprin@politico.com**) and produced with writing/reporting help from **Cristiano Lima**. COVER: Check out The New York Post's take on the current situation in White House land, dubbing it "Survivor" with a tag line "Trump hates sessions. Scaramucci hates Priebus. Who will survive the administration that's become the biggest reality show on television?"

DESPITE SCARAMUCCI'S DRAMA, THE MOST IMPORTANT STORY LAST NIGHT WAS HEALTH CARE: Reporters were camped out at the Capitol through the morning as Senators held middle of the night votes, which ultimately failed to do a "skinny" repeal of Obamacare thanks to three Republicans who voted no, the most stunning of which was Sen. John McCain. Late night votes like these in the Capitol are fascinating, including for the moments on the Senate floor where reporters analyze every little body language move (and sometimes drop their notebooks on a Senator's head by accident). We also got a lesson in the importance of regional reporters, when the Alaska Dispatch reported yesterday that the Trump administration, via Interior Secretary Ryan Zinke had threatened both Alaska senators by saying their state would be punished for their health care votes. Ultimately, Sen. Lisa Murkowski was one of the three Republican 'no' votes.

A TURKISH REPORTER ADMITTED TO NOT ACCURATELY QUOTING JARED KUSHNER, the president's son-in-law and advisor on all things. The story published on Thursday caused quite a stir, because in it Kushner supposedly said Turkish President Recep Erdogan "is making Turkey great again like [the] U.S. We watch his efforts with appreciation." But the Daily Caller spoke with the reporter who wrote the article, who said the conversation lasted one to two minutes and in it, the reporter admitted "He did not say that. I asked him, 'Do you think, Erdogan is making Turkey great again, like Trump' and he only said, 'Yeah, I think so.'"

-- This is a good time to remind everyone that Turkey is now the biggest jailer of journalists in the world right now. Seventeen journalists and news executives are on trial this

week facing charges of helping terrorists for among other things, "reporting and writing columns, quoting social media posts, and in some cases being in contact with members of the groups."

TWITTER FAILS TO GROW USERS via Bloomberg: "Twitter failed to attract more monthly users in the second quarter, spooking investors looking for evidence that the company is on a sustainable long-term growth path. The shares tumbled the most in nine months, even as quarterly revenue topped analysts' projections ... A long-term turnaround depends on Twitter expanding its audience."

"FOX & FRIENDS" TROLLS NY TIMES BY PAYING FOR FULL PAGE AD IN THE NY TIMES: Fox News took out a full page ad in Thursday's New York Times quoting Times' TV critic James Poniewozik's review of "Fox & Friends" last week. Poniewozik called it "the most powerful show in America," for having the largest influence on President Trump by acting like a "two-way mirror" (and like a children's show). Those full page ads don't come cheap, so in a way, Fox and The New York Times are in a mutually beneficial relationship. "They decided to move up market and support our journalism with that money," Times CEO Mark Thompson said on the company's earnings call Thursday. "We're pleased to have them."

RELATED: THE 'FAILING' NEW YORK TIMES IS FAILING UP: Revenue is up 9 percent and subscriptions growing 69 percent faster than same quarter last year, the newspaper announced. The stock, as Bloomberg's Joe Weisenthal noted, is now at its highest level since May, 2008.

SOUNDBITES: "We can't repeat what Scaramucci said about Steve Bannon, which if true, would make Bannon a gymnast." [Brian Williams]

"Members of the band Journey were just spotted in the White House briefing room. That is all." [Margaret Brennan]

SPOTTED: Sean Spicer at the Monkey Bar in New York City (co-owned by Trump nemesis and Vanity Fair editor Graydon Carter) on Wednesday evening, after he spent the day making the rounds meeting with the television networks. A tipster says he was in a booth in the bar area having dinner with an unidentified woman.

-- Sinclair's Boris Epshteyn standing outside the tower which houses POLITICO World HQ (and Boris' offices with Sinclair) speaking in Russian to an older gentleman (mid-late 50's) for several minutes. After the conversation concluded, the two exchanged a deep hug and a kiss on each cheek before the older gentleman hopped into a cab.

STEVE BANNON MAY BE VIOLATING FEDERAL LAW BY HAVING PRIVATE SPOKESPEOPLE, the Center for Public Integrity reports. Bannon has for months now had his own PR rep (Alexandra Preate) who collaborates with other White House officials on public messaging and responses to press inquiries though she is not employed by the government. "Trump's chief strategist is potentially violating the Antideficiency Act, which provides that federal employees 'may not accept voluntary services for [the] government or employ personal services exceeding that authorized by law.'" Read more here.

KASIE HUNT LIKELY GETTING HER OWN MSNBC SHOW -- The network's tireless chronicler of Capitol Hill is set to get her own Sunday evening show from 6pm to 8pm I reported yesterday. The show has no name and the deal isn't set in stone yet but it's likely to happen soon. Congrats Kasie (a POLITICO alumna!)

REVOLVING DOOR:

-- This is a big one. Pulitzer Prize winning journalist James Risen is taking a New York Times buyout. Risen has worked for the paper for more than two decades and has not only broken tons of news but also battled two administrations who have tried to compel him to reveal his sources. More from HuffPost here.

-- And legendary New York Times book reviewer and Pulitzer Prize winner Michiko Kakutani is stepping down from her post at the paper, our friend Joe Pompeo reports. [The Hive]

-- **Daily Caller Editor-in-Chief Vince Coglianese is joining NewsTalk WMAL**'s "Mornings On The Mall" morning show as a co-host. He'll step down as editor and become Editorial Director at the Daily Caller. **Geoffrey Ingersoll** will take the helm as editor-in-chief and **Rachel Stoltzfoos** will become managing editor. [WMAL]

-- **Greta Van Susteren**, the former Fox News anchor who departed MSNBC after a brief hosting stint, is joining the USC Annenberg Center on Communication Leadership & Policy as a senior fellow. [Newswise]

-- **Former DNC communications vet April Mellody is joining the Thrillist parent-company** Group Nine Media as head of corporate communications. [The Hollywood Reporter]

-- **The AP has tapped Alex Sanz as their new deputy director for newsgathering** in the Southern U.S. [AP]

-- Cassie McNamara is leaving Media DC to be a booking producer at MSNBC for Hardball starting on Monday.

TIL: A drawing of the New York City skyline by President Donald Trump's is being auctioned. Bidding starts at $9,000 [NBC News]

EXTRAS:

-- Jeff Bezos, owner of the Washington Post (and Amazon) was briefly the world's richest man yesterday. [Bloomberg]

-- Stephen Colbert is producing an animated comedy show for Showtime, chronicling the misadventures of an a cartoon Donald Trump. [Variety]

-- Facebook wants to help news publishers sell subscriptions, but says it doesn't want a cut of the revenue. [Recode]

-- National Press Photographers Association writers a letter requesting the Capitol Hill Sergeant at Arms and Capitol Police review why telling blocking reporters on Capitol Hill and asking them to delete photos is not legal. [NPPA]

-- Sarah Palin's legal team want the internal communications of 20 New York Times reporters as part of her defamation lawsuit. [CNN]

-- Sarah Sanders is the first current mom to serve as White House Press Secretary. [CNN]

-- Jennifer Aniston and Reese Witherspoon are set to star in a series about TV morning shows. [THR]

-- Joshua Green's book about Stephen Bannon "The Devil's Bargain" has been optioned for a television series by Blumhouse, the same group that has rights to Gabriel Sherman's book on Roger Ailes. [Deadline]

Subject: POLITICO's Morning Transportation: The race to amend the Senate's self-driving car bill — DHS on alert after shooting — Independent truckers fighting ELD rule to the end

By Brianna Gurciullo | 10/03/2017 10:00 AM EDT

With help from Tanya Snyder, Lauren Gardner and Stephanie Beasley

TRUCK-IT LIST: Amendments are stacking up ahead of the Senate Commerce Committee's self-driving car bill markup Wednesday. Among the 65 first-round amendments submitted was one filed Monday by Sen. Jim Inhofe (R-Okla.) on one of the most contentious issues: whether to include trucks. Commercial motor vehicles were ultimately left out of the bill (S. 1885 (115)) that was introduced last week, but Inhofe wants them in. Still, on Monday he said he knows there's "a very strong union opposition to it, because they think it'll be automated to the point that it'll get rid of all the jobs. And, if that's automation, that's automation." Advocates say truck drivers will still have a major role to play for decades to come.

Also in the wings: Sen. Richard Blumenthal (D-Conn.) said he is considering offering several safety-related amendments. "For one thing, I am deeply concerned about the preemption of state laws, like Connecticut's, that provide greater assurance for safety," he said. He added that he's in favor of keeping trucks out of the bill. Meanwhile, Sen. Brian Schatz (D-Hawaii) said he's submitted amendments dealing with data collection from driverless vehicles - biometric data, energy efficiency data, etc. - "and then some language around metropolitan planning organizations utilizing open data, like Google Maps and Waze, for traffic engineering."

Nothing to see here: Sen. Gary Peters (D-Mich.), who co-wrote the bill with Commerce Chairman John Thune , had told Tanya last week that he didn't expect many amendments because "it's always been our intent to try to deal with everybody before the markup." Asked Monday evening if he was surprised by the number of amendments filed, he clarified: "We said we thought there was a lot of consensus on the bill, that doesn't mean [that on] every little piece of it you have 100 percent consensus." The committee will publish all amendments online Wednesday morning before the markup.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send along tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"Baby, you can drive my car / Yes, I'm gonna be a star / Baby, you can drive my car / And maybe I'll love you."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

DHS ON ALERT AFTER SHOOTING: Following the shooting Sunday in Las Vegas that left at least 59 people dead and hundreds wounded, DHS as of Monday morning had "no information

to indicate a specific credible threat involving other public venues in the country," spokesman David Lapan said via Twitter. The department "is closely monitoring & working with our federal, state and local partners," Lapan said in a separate tweet.

Flights affected: McCarran International Airport in Las Vegas stopped takeoffs and landings early Monday. Some service later returned, and the airport was running normally in a few hours. Overall, the shooting forced almost two dozen flights to divert elsewhere. The airport told ABC News that at one point a "perimeter fence near the concert venue was breached by people fleeing the scene of the incident." Monday afternoon, TSA spokesman Mike England told MT that the agency had made no changes to security at the airport.

HELP! I NEED SOMEBODY: Independent truck drivers are trying to grab the Trump administration's attention as a December deadline to use electronic logging devices looms, your MT host reports for Pros. "They've done a good job with pulling back some really harmful regulations on the trucking industry," Collin Long, the senior director of legislative affairs for the Owner-Operator Independent Drivers Association, said about the administration. "But on this one, they just haven't really latched on yet."

Full-court press: At the same time, OOIDA has rallied trade groups from the agriculture world to advocate for a bill (H.R. 3282 (115)) that would extend the deadline to 2019. But the American Trucking Associations, which has clashed with OOIDA over the mandate, sees little to no chance of anything changing. "This is sort of the last gasp of people wanting to not comply," said Bill Sullivan, ATA's executive vice president of advocacy.

FOR YOUR RADAR: Safety advocacy groups will brief reporters today on their push for revisions to the Senate's self-driving car legislation. The organizations claim the bill contains "provisions benefiting the auto industry [that] keep consumers in the dark about the limitations and performance" of self-driving vehicles. They argue that it "would unleash mass deployment of [autonomous vehicles] without essential consumer safety protections, adequate oversight and industry accountability." Blumenthal and Ed Markey (D-Mass.), both members of the Commerce Committee, will be on the call.

WHO BUDGETED IT BETTER? House Budget Committee Dems "unveiled a multitrillion-dollar fiscal wish list [Monday] to counter their Republican peers' budget resolution," our friends at Pro Budget & Appropriations Brief report. The Dem budget includes a so-called deficit-neutral reserve fund for "job creation through infrastructure and other investments and incentives." The Congressional Progressive Caucus also released a budget plan that "makes a down payment of $1.9 trillion to help close the nation's infrastructure deficit" and establishes a "public-private infrastructure bank." Lawmakers offered the proposal as an amendment to the Republican House budget.

NOT IN SLO'S BACKYARD: Energy company Phillips 66 will drop its lawsuit challenging a California county's denial of a proposal that would have let the refiner bring millions of gallons of oil per week by train to its facility in Santa Maria, environmentalists who opposed it said Monday. The county's decision to reject the project came after the Surface Transportation Board last year declined to prevent another California city from denying Valero Energy's bid to expand

crude-by-rail operations. The San Luis Obispo Tribune reports that the parties reached a settlement, which must be approved by a court.

ON-TIME ARRIVAL: The California High-Speed Rail Authority said Monday that it had spent over $2.55 billion in federal funding before a Sept. 30 deadline set by a 2009 law. The authority said the money went toward "advanced planning, design and environmental outreach," and that it "helped to create thousands of new jobs."

MT MAILBAG: Arizona's Republican senators wrote to the U.S. International Trade Commission late last week, saying that as the agency considers Boeing's case against Bombardier, it should "avoid levying unnecessary or politically motivated penalties that could have negative impacts on aerospace employees, U.S. air carriers and airline consumers." As Pro Trade's Adam Behsudi reports , Bombardier's biggest plane service center is in Tucson, Ariz. "The Commerce Department last week slapped a preliminary countervailing duty of nearly 220 percent on imports of Bombardier's new C-Series aircraft," Adam writes. "But duties won't take effect permanently unless the ITC makes a final determination that imports of the jets would cause harm to U.S. workers."

OFF YOU GO: The White House sent to the Senate on Monday the nomination of Diana Furchtgott-Roth to be assistant secretary for research and technology at DOT. Furchtgott-Roth is a senior fellow at the Manhattan Institute for Policy Research and the director of it Economics21 project. She was the Department of Labor's chief economist when Elaine Chao was Labor secretary.

SHIFTING GEARS: Terry Van Doren will be responsible for transportation, energy and agriculture issues at the office of Senate Majority Leader Mitch McConnell, per Huddle. ... Meanwhile, Uber's manager for Northern Europe is stepping down, our POLITICO colleagues across the Atlantic report . Jo Bertram was in charge of Uber's services in London, where the company is appealing a local agency's decision to effectively ban its ride-hailing operations.

SLICE OF PI: Tyler Roberts has left the office of Sen. Dan Sullivan (R-Alaska), where he served as a legislative assistant, to be a vice president at Venn Strategies and lobby for the Rail Security Alliance, among other clients, our friends at POLITICO Influence report.

SWIMMING IN THE DEEP END OF THE TRANSPO GENE POOL: Christine Brennan, press secretary for Delaware Sen. Tom Carper, the top Democrat on the Senate Environment and Public Works Committee, emails MT: "Rebecca Higgins, a professional staff member on EPW who handles transportation and infrastructure issues, and her husband Trevor Higgins, a legislative aide for Senator [Dianne] Feinstein who also handles transportation issues, welcomed their third child, a baby girl - Annabelle Dover Higgins - on Friday morning."

THE AUTOBAHN:

- "Brexit helps push U.K. airline Monarch into bankruptcy." POLITICO Europe.

- "Ohio River closed to shipping after lock failure: industry group." Reuters.

- "Putting the S in Tesla." Bloomberg Gadfly.

- "U.S. auto makers step up plans for electric vehicles." The Wall Street Journal.

- "Uber's internal investigation into allegedly stolen trade secrets was just made public." BuzzFeed News.

- "Interior watchdog opens investigation into Zinke's travel." POLITICO.

- "First passenger jet configured for cargo unveiled in Alaska." The Associated Press.

- "Rio Tinto steams ahead with first driverless ore train." The Wall Street Journal.

- "Takata says $1.6 billion KSS deal to be signed in within two weeks." Reuters.

THE COUNTDOWN: DOT appropriations run out in 67 days. The FAA reauthorization expires in 180 days. Highway and transit policy is up for renewal in 1,094 days.

Subject: POLITICO's Morning Score: Moore buried under TV ad barrage — Gutierrez won't seek reelection, sources say — Tax reform ads fly

By Maggie Severns | 11/28/2017 10:00 AM EDT

With Zach Montellaro, Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

MOORE PROBLEMS - "Moore buried under TV ad barrage," by POLITICO's Scott Bland and Daniel Strauss: "Doug Jones and Roy Moore both released new television ads on Monday. But many Alabama voters will see only one of them. That's because of the massive disparity in TV ad spending between the two candidates in the Alabama special election to a Senate seat, where Jones, the Democratic candidate, is outspending Moore roughly 7-to-1. ... Fueled by millions of online dollars pouring in to defeat Moore, Jones' campaign has flooded the airwaves with over $5.6 million of TV ads overall in the general election campaign. Moore has answered with about $800,000 in ad spending, according to Advertising Analytics."

"Jones' campaign built a big financial advantage even before women came forward accusing Moore of sexual misconduct in early November. ... A new campaign finance report from ActBlue, the widely used Democratic digital fundraising platform, shows Jones raised nearly $2.9 million online in October alone. But the firestorm that ensued after numerous allegations surfaced against Moore galvanized even more financial support for Jones, giving him the resources to relentlessly pound Moore on-air as a child predator." **Full story here.**

- Pro-Moore super PAC backed by Uihlein: A pop-up super PAC that has spent six figures supporting Moore in recent months received the majority of its funds from Wisconsin-based conservative megadonor Richard Uihlein, according to a new FEC filing. The PAC, called Proven Conservative PAC, has spent $147,649 since being formed in August and received $100,000 from Uihlein. One of Uihlein's donations came on Nov. 22, more than a week after the first allegations of sexual misconduct against Moore surfaced, according to the new disclosure.

RETIREMENT ALERT - Gutierrez won't seek reelection, via POLITICO Illinois' Natasha Korecki: "Rep. Luis Gutierrez (D-Ill.) a leading national voice on immigration reform, will not seek reelection and is expected to announce his decision [this] morning, three Democratic sources with knowledge of the decision told POLITICO. Gutierrez is expected to announce he's withdrawing his nominating petitions [today]."

"The sources say that former Chicago mayoral candidate Jesus 'Chuy' Garcia will begin circulating petitions for Gutierrez's post. Gutierrez's spokesman, Douglas Rivlin, said he couldn't comment." **Full story here.**

AIR WAR - Tax reform ads fly ahead of votes this week: A slew of liberal and conservative groups are out with television ads pressuring senators ahead of this week's Senate votes on tax reform. The DSCC is airing an ad featuring families receiving notices saying their tax bill is going up. "How much will the Republican tax scam cost you?" the ad's narrator asks after the spot notes the elimination of the state and local tax, student loan and medical deductions. **Watch it here.**

- The Chamber of Commerce airs holiday-themed spots in three states: The U.S. Chamber of Commerce is up with holiday-themed radio ads pressuring three GOP senators to support the bill: Maine Sen. Susan Collins, Montana Sen. Steve Daines and Wisconsin Sen. Ron Johnson. "What's the best gift [the senator] can give this holiday season?" the narrator of the 60-second spots asks. "The gift of tax relief." **Listen to the ads here, here and here.**

- Business for Responsible Tax Reform pressures Corker: Business for Responsible Tax Reform is up with a 30-second ad targeting Tennessee Sen. Bob Corker that notes the tax reform bill increases the deficit. **Watch the ad here.**

- Not One Penny targets Trump: Not One Penny, a coalition of Democratic groups, is out with a television ad set to air during "Fox and Friends." The ad notes President Donald Trump's frequent Twitter messages and challenges him to tweet about tax breaks for golf course owners. **Watch the spot here.**

- AAN adds $2.5 million in TV, digital ads on tax reform: American Action Network is out with a $2.5 million TV and digital ad effort, thanking GOP House members in 29 House districts who voted for the Republican tax bill. The ad will air in largely battleground seats. **Check out the full list of districts here. Watch the ad here.**

- National Immigration Forum launches DACA ad: The National Immigration Forum is spending five figures to run digital ads in five states and D.C. criticizing Republicans on DACA. The ads focus on a young, undocumented immigrant named Bernardo Castro. **More here.**

Days until the 2018 election: 343

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

Playbook Interview with Marco Rubio - Join POLITICO Playbook Co-authors Anna Palmer and Jake Sherman for a Playbook Interview with Sen. Marco Rubio (R-Fla.) on end-of-year Senate priorities, policy, politics and the news of the day. ***Nov. 29 - Doors open 8:00 a.m. - The Liaison Capitol Hill. RSVP: here.***

LONG-SHOT BID - "Former Kelly aide to mount last-minute Alabama Senate bid against Moore," by POLITICO's Cristiano Lima: "A former top aide to White House chief of staff John Kelly intends to launch a last-minute write-in campaign in the race for Alabama's open Senate seat. Retired Marine Col. Lee Busby, 60, of Tuscaloosa, Ala., said Monday he plans to challenge Democratic candidate Doug Jones and embattled Republican Roy Moore for the state's open seat. He also launched a bare-bones website counting down to the Dec. 12 special election." **Full story here.**

MOORE ON THOSE ADS - Moore denies allegations in new TV ad: "A new ad announced by Alabama Republican Roy Moore's campaign says the accusations that he pursued multiple women when they were teenagers and he was in his 30s are 'false allegations,'" Strauss reports. **Full story here. And read about Jones' latest ad here.**

- Pro-Jones super PAC dropped $1 million over last weekend: "Highway 31, the super PAC supporting Democrat Doug Jones in the Alabama Senate race, has disclosed spending another $1.1 million on ads boosting the candidate and hitting Republican Roy Moore," reports Strauss. **Full story here.**

NEW ON THE AIRWAVES - Pittenger talks 'War on Christmas' in TV ad: North Carolina Rep. Robert Pittenger is out with a new TV and digital ad, which started airing over Thanksgiving weekend, about Christmas. "Christmas - a time we honor the birth of Jesus Christ, yet some choose political correctness, attacking our faith and values, refusing to say 'Merry Christmas,'" the ad's narrator says. "Let's join together to honor the birth of Jesus Christ and Christmas traditions." Pittenger, directly addressing the camera, concludes: "I've dedicated my life to sharing God's love through Jesus Christ. Let's end political correctness and put the true meaning of Christ back into Christmas." Pittenger is up against a well-funded primary and general election opponent, both of whom outraised him last quarter. Mark Harris, a pastor who nearly beat him in a primary in 2016, is challenging him again. **Watch the ad here.**

- American Chemistry Council's new spot backs Barrasso: The American Chemistry Council's new ad praises Sen. John Barrasso as "Wyoming's conservative force." **Watch it here.**

SOMETHING TO WATCH - "Puerto Ricans could transform Florida politics, and parties are taking notice," by NBC News' Carmen Sesin: "So far, over 189,000 Puerto Ricans have migrated to the state after the hurricane left unimaginable destruction throughout the island. Planes arriving from Puerto Rico remain full and some estimate as many as half a million people will eventually make their way to Florida. Although some, particularly the older generations, will eventually return to the island, experts believe most will remain here. Central Florida is their preferred destination, but areas like South Florida and Tampa are also seeing an influx of Puerto Ricans." **Full story.**

GETTING THE NOD - Club for Growth PAC backs Fulcher in ID-01 primary: "The Club for Growth PAC is endorsing former state Sen. Russ Fulcher in the crowded Republican primary to replace Idaho Rep. Raúl Labrador, who's running for governor. ... Fulcher initially launched a gubernatorial bid but dropped out in June and endorsed Labrador. Fulcher, who also ran for governor in 2014, led the pack of GOP candidates in fundraising last quarter, bringing in more

than $100,000." **Full story.**

2018 WATCH - "Virginia Republicans anticipating state Del. Nick Freitas to announce run for U.S. Senate," by the Richmond Times-Dispatch's Patrick Wilson: "Virginia Republicans are anticipating that a state lawmaker will join the GOP primary race for a chance to challenge U.S. Sen. Tim Kaine, D-Va., next year, according to GOP insiders. The new contender would be Del. Nicholas J. Freitas, R-Culpeper, an Iraq combat veteran first elected to the General Assembly in 2015 and easily reelected this year. Freitas would join Corey Stewart, chairman of the Prince William Board of County Supervisors, in seeking the GOP nomination." **Full story.**

QUOTE OF THE DAY: "This so-called off-the-record conversation was the essence of a scheme to deceive and embarrass us," Washington Post Executive Editor Marty Baron said, explaining why the newspaper published an off-the-record exchange with a woman who appears to have tried to scam the paper with a false Roy Moore allegation while acting on behalf of the conservative group Project Veritas.

Subject: Pruitt drops delay of ozone rule implementation

By Alex Guillén

08/02/2017 07:55 PM EDT

EPA Administrator Scott Pruitt has dropped his one-year delay of an upcoming implementation step for the 2015 ozone standard, EPA announced today.

The withdrawal comes after lawsuits from environmental groups and Democratic states sued over the delay in deciding which areas meet the standard and which do not. EPA had been due to file its first defense of Pruitt's delay in court on Thursday.

Pruitt originally said he did not believe EPA had the necessary data to decide on the designations by the Oct. 1 deadline. But a pre-publication Federal Register notice signed by Pruitt on Wednesday says that "the information gaps that formed the basis of the extension may not be as expansive as we previously believed."

Some areas may be ready for designation in the coming months, and the notice hints that regional delays may be necessary on a case-by-case basis. "The Administrator may still determine that an extension of time to complete designations is necessary, but is not making such a determination at this time," says the notice in withdrawing the nationwide delay.

"We believe in dialogue with, and being responsive to, our state partners. Today's action reinforces our commitment to working with the states through the complex designation process," Pruitt said in a statement.

Pruitt also said he intends to avoid any settlement agreements with "activist groups," a practice he has long opposed and said he ended at EPA. "We do not believe in regulation through litigation, and we take deadlines seriously. We also take the statute and the authority it gives us seriously," Pruitt said.

WHAT'S NEXT: EPA has until Oct. 1 to determine which areas of the U.S. meet the standard and which will have to submit plans to lower pollution, a years-long process.

Subject: Morning Energy: EPA to get earful on corn ethanol — Court orders EPA to reinstate methane rule immediately — Trump finding tough balance on coal, nuclear — Mnuchin won't rule out blocking Venezuelan oil imports

By Alex Guillén | 08/01/2017 05:40 AM EDT

With help from Eric Wolff, Doug Palmer, Annie Snider and Esther Whieldon

RFS HEARING WILL BE POPPING LIKE CORN: EPA is throwing its annual Renewable Fuel Standard bash today, an all-day hearing for the agency to get feedback on its proposed rule that will set the amount of biofuel that must be blended into the nation's fuel supply. The agency kept the ethanol mandate at the legal maximum of 15 billion gallons, but it dramatically cut the amount of advanced biofuels, and it will surely get an earful on that.

A-listers of biofuels: EPA will hear from Iowa Gov. Kim Reynolds and Nebraska Gov. Pete Ricketts, Chris Bliley of Growth Energy, Bob Dinneen of the Renewable Fuels Association, Frank Macchiarola of the American Petroleum Institute, and Donnell Rehagen of the National Biodiesel Board. Reynolds, whose state leads the nation in ethanol production, will tell EPA she's glad they're on track for an on-time rule (they're actually a bit behind schedule). But "I urge the EPA to raise the advanced biofuel, biodiesel and cellulosic volumes. The RFS is a bold policy, and Iowans and the industry as a whole have always risen to the challenge," she plans to add.

If you go: L'affaire du RFS will be at the Hyatt Regency Washington, 400 New Jersey Avenue NW. It will start at 9 a.m. and end when everyone who wants to has had their say.

COURT REVIVES EPA METHANE RULE, AGAIN: The full D.C. Circuit Court of Appeals on Monday ordered EPA to resume enforcing its methane rule for new oil and gas wells, a potentially temporary but important loss for EPA Administrator Scott Pruitt's deregulatory agenda. A three judge panel reversed Pruitt's stay, but gave EPA time to appeal. The agency hasn't done so, but industry groups have. The court's order was issued by a 9-2 vote. Judges Janice Rogers Brown, who will retire from the court effective Aug. 31, and Brett Kavanaugh voted against reinstating the rule immediately. More here.

For those keeping track at home: EPA's methane rule has been on, off, on again, off again, and now back on again. Plus, it's likely to be off again within a couple months, once Pruitt's proposed two-year hold is finalized — and then possibly back on following a new judicial review.

TRUMP STRUGGLES TO BOOST BOTH COAL, NUCLEAR: President Donald Trump has promised to revive the nuclear industry and put more coal miners back to work, but he is already finding it difficult to do both at the same time. Dueling announcements on Monday illustrated how difficult it will be for the Trump administration to square its support for nuclear power — whose main attribute is its ability to deliver reliable, carbon-free electricity — with its position that reducing carbon emissions are no longer a priority for the federal government. A

pair of South Carolina utilities said Monday that they would be pulling the plug on two unfinished new nuclear reactors; Santee Cooper, one of the companies, pointed out that "the current political landscape has reduced the urgency for emissions-free base load generation" among the reasons for the decision. That announcement came just a few hours after Trump Cabinet members trumpeted newly announced exports from a Pennsylvania coal mine to Ukraine, a deal the administration said it helped to negotiate. Darius Dixon explains it all.

HAPPY TUESDAY AND WELCOME TO AUGUST. I'm your special guest host Alex Guillén. The NRDC's Joan Matthews was first to correctly name all five former presidents who were the same height as Trump (6 feet, 2 inches): George Washington, Chester A. Arthur, Franklin D. Roosevelt, George H.W. Bush and Bill Clinton. For today: How many presidents were born in August, and how many have died in August? Sadly, my time as guest ME host was even shorter than Anthony Scaramucci's time as White House communications director, so please welcome your guest host for the rest of the week, Annie Snider. Send your tips, energy gossip and comments to asnider@politico.com. Or follow us on Twitter @AnnElizabeth18, @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

MNUCHIN WON'T RULE OUT BLOCKING VENEZUELAN OIL IMPORTS: After taking the dramatic step Monday of slapping sanctions on Venezuelan President Nicolás Maduro, the Trump administration kept open the possibility of also shutting down oil trade with the South American country to punish Maduro's government. The U.S. "will continue to monitor the situation and consider additional sanctions," Treasury Secretary Steven Mnuchin said told reporters at a White House briefing Monday, one day after what U.S. officials called a sham election to give the Venezuelan government sweeping new powers.

The United States imports about 700,000 to 800,000 barrels per day of Venezuelan heavy crude oil to refineries in Texas, Louisiana and Mississippi. It also exports about 30,000 barrels per day of oil to Venezuela for blending with the heavier product. Mnuchin deflected questions on whether the Trump administration could impose an embargo on oil imports from Venezuela or shut down U.S. oil exports to the country. "This president is not going to advertise what he's going to do in the future. So, all options are on the table and we will consider everything," Mnuchin said.

BERNHARDT STARTS AT INTERIOR TODAY: Today is former lobbyist David Bernhardt's first day as Interior Deputy Secretary. Bernhardt had worked at Interior in several roles, including solicitor, during the George W. Bush administration and was a lobbyist for Westlands Water District.

TRUMP PICKS HEALTH COMPANY LAWYER FOR KEY INTERIOR POST: President Donald Trump plans to nominate Ryan Nelson to be the Interior Department's solicitor, its top lawyer and third in command. Nelson since 2009 has been general counsel for Idaho-based Melaleuca, an online "wellness shopping club." Nelson previous was the deputy assistant attorney general for the Environment and Natural Resources Division and a lawyer at the Office of Management and Budget. Melaleuca CEO Frank VanderSloot is a noted GOP donor who at first clashed with Trump on the campaign trail (even garnering a scornful tweet when he initially backed Marco Rubio) before backing Trump after he secured the GOP nomination. Donald

Trump Jr., who has shown influence over and interest in Interior nominees, then visited the company last September.

Trump will also nominate John Henderson to be assistant secretary of the Air Force for installations, environment and energy, the White House said. Henderson previously commanded the Army Corps of Engineers' Omaha district, where he oversaw work related to the Dakota Access pipeline — and recommended its approval under the Obama administration.

API: BORDER TAX, SHMORDER TAX, AS LONG AS WE PROMOTE GROWTH: API CEO Jack Gerard told ME Monday he was pleased Republicans in Congress and the White House had agreed to drop a border adjustment tax from plans to rewrite the tax code. He instead wants tax writers to give oil and gas companies the means to recoup their investments quicker with tools like accelerated depreciation. "We're encouraged they listen to the public and the consumers, leaving behind the border adjustment tax," he said. Gerard believes a pro-growth tax policy would replace the lost income from the proposed BAT. "The best tax policy is a job creation policy. If you want to grow taxes, you want people who are in a position to pay taxes." Gerard was touting a report sponsored by API that showed the oil and gas industry supported millions of jobs and added billions of dollars to the economy.

KOCH BACKS PRO-MORRISEY SUPER PAC IN WEST VIRGINIA: Koch Industries has been a major early contributor to a super PAC supporting West Virginia Attorney General Patrick Morrisey's campaign to challenge Sen. Joe Manchin. The group, 35th PAC, which was formed to boost Morrisey against his key Republican opponent, Rep. Evan Jenkins , reported to the FEC Monday that $10,000 of the $20,500 it raised as of the end of June came from Koch Industries. Koch is a contributor to the Republican Attorneys General Association, where Morrisey is currently chairman, and Morrisey is one of the most frequent challengers of Obama-era environmental regulations. Morrisey's actual campaign was only formed a couple of weeks ago and hasn't filed any FEC reports yet. Jenkins' campaign, meanwhile, has about $1.2 million thanks to his previously existing House campaign chest and more than $680,000 in donations this year.

CONTENTIOUS ASIAN CARP STUDY COMING NEXT WEEK: The Army Corps of Engineers has alerted lawmakers it will release a draft plan for halting the spread of dangerous Asian carp into the Great Lakes on Aug. 7. The study was originally due out Feb. 28, but was put on hold by the Trump administration amid concerns from the barge industry that it could hamper navigation between Lake Michigan and the Mississippi River. Both Republican and Democratic lawmakers have been pushing for the study's swift release, through methods including policy riders inserted in pending appropriations measures.

THE POSTMAN ALWAYS RINGS THRICE: Letters from ME's mailbag.

FERC quorum: The Electric Reliability Coordinating Council would very much like the Senate to approve the nominations of Robert Powelson and Neil Chatterjee to seats on FERC to get the commission back to a quorum. The group says $50 billion in capital is "hamstrung" in projects requiring FERC approval, with another $25 billion starting applications. "Every week's delay compounds the problem as seasonal windows for pipeline analyses close and potential for energy

price spikes increase," wrote ERCC Director Scott Segal.

'Red team' climate science review: The American Association for the Advancement of Science and 15 other science groups have asked for a meeting with EPA Administrator Scott Pruitt to talk over his forthcoming "red team" climate science review program. The existing peer review system is already "a multi-dimensional, competitive "red team/blue team" process whereby scientists and scientific teams are constantly challenging one another's findings for robustness," they write.

Monuments: The Northwest Guides and Anglers Association wants Interior Secretary Ryan Zinke to leave the Cascade-Siskiyou National Monument in Oregon and California intact.

GROUP LAUNCHES ZINKE-TARGETED ADS: The watchdog group Center for Western Priorities is launching a six-figure ad buy today pressuring Zinke against shrinking or revoking any national monuments. The spot will air in Washington starting today, with an online campaign running through the month.

Another watchdog group, the Western Values Project, will launch a website today cataloguing "the revolving door between special interest lobbyists and political appointees at the Department of the Interior." WVP's "Department of Influence" site has found 21 political appointees with backgrounds in oil, gas, coal or another resource extraction industry and three with conservation or recreational backgrounds. A dozen served in the Trump campaign.

INTERIOR SAW 79 NEW EMPLOYMENT DISCRIMINATION COMPLAINTS: The Interior Department on Monday posted its fiscal 2017 third quarter report on employee and job applicant discrimination complaints. In the last quarter, during which Interior Secretary Ryan Zinke was in office, the agency received 79 new complaints, 58 percent of which involved retaliation allegations. A former Interior senior staffer filed a whistleblower retaliation complaint earlier this month. The agency has received 260 discrimination complaints thus far this fiscal year. The numbers are largely in line with the data from the past five fiscal years.

ENVIRO ATTORNEY RUBIN DIES: Noted Washington energy attorney Jim Rubin died Friday just weeks after being diagnosed with cancer, reports Greenwire. Rubin spent almost 15 years at DOJ working on environmental trial issues and on a Clinton-era climate change task force. He spent the last decade at several D.C. law firms, most recently Dorsey & Whitney.

LOS ANGELES OLYMPICS PUT PRESSURE ON CITY POLLUTION: Los Angeles reached a deal with the IOC to host the 2028 Summer Olympics, giving the city about a decade to work on its historically high levels of smog and other pollution the world's athletes will be sucking into their lungs. The American Lung Association says Los Angeles has the worst smog pollution of any U.S. city, and despite significant strides in recent years, the area has a long way to go, ALA's Bonnie Holmes-Gen told ME. "In some parts of LA, we have over 140 bad air days every year," she said. "The good news is there are a lot of important initiatives underway. But the state of California and the South Coast air district need to step up the work to move away from polluting fossil fuels, which is the No. 1 cause of pollution in the LA region."

Smog-choked cities have hosted Olympics before — Beijing in 2008, for example. But China resorted to some serious steps to clear the skies for the games, including shutting down factories and construction projects and limiting car usage, none of which would likely go over well in La La Land. That may help temporarily, but Los Angeles' smog chronically plagues millions of residents. Coincidentally, Beijing organizers learned some of their smog reduction techniques from the 1984 Olympics in Los Angeles, when car-crazy L.A. implemented new vehicle restrictions and longtime residents were astounded to see haze clear and reveal mountain ranges.

MOVER, SHAKER: Vince Griffin is the new executive director of Indiana Advanced Energy Economy, the state branch of the national group with a similar name that promotes renewables and other advanced energy technologies. Griffin retired last year from the Indiana Chamber of Commerce, where he was vice president of energy and environmental policy.

Morning read: FERC has issued new guidelines for "reporting on culture resources investigations for natural gas projects," for compliance with laws protecting historic and preserved sites.

Stories from POLITICO Pro

D.C. Circuit orders EPA to resume enforcing methane rule Back

By Alex Guillén | 07/31/2017 06:39 PM EDT

The full D.C. Circuit Court of Appeals today ordered EPA to resume enforcing its methane rule for new oil and gas wells, a potentially temporary but important loss for EPA Administrator Scott Pruitt's deregulatory agenda.

A three-judge panel ruled on July 3 that Pruitt improperly imposed a 90-day stay of the rule amid a reconsideration of key leak detection and repair requirements.

The court agreed to keep the stay in place for two weeks to give EPA time to decide on an appeal, a timeline that expired last week. The agency has not asked for an appeal, but industry groups and states critical of rule have. The court ordered responses to those appeal petitions be turned in by Wednesday afternoon, with any further reply due Thursday, indicating the court will move quickly on the appeal.

The order was issued by a 9-2 vote. Judges Janice Rogers Brown, who will retire from the court effective Aug. 31, and Brett Kavanaugh voted against reinstating the rule immediately.

EPA is taking comment through Aug. 9 on a proposed two-year stay of the rule through 2019 and could have it in place by September. That longer-term stay may not face the same legal issues as the 90-day one since EPA will incorporate public comment.

WHAT'S NEXT: The court could decide as early as this week whether to hear an en banc appeal. Pruitt's 90-day stay would expire on Aug. 31 anyway, putting a ticking clock on the court proceedings before the matter becomes moot.

Trump's coal-boosting eats away at the case for nuclear Back

By Darius Dixon | 07/31/2017 08:30 PM EDT

President Donald Trump has promised to revive the nuclear industry and put more coal miners back to work, but he is already finding it difficult to do both at the same time.

Dueling announcements out of South Carolina and Pennsylvania illustrated how difficult it will be for the Trump administration to square its support for nuclear power — whose main attribute is its ability to deliver reliable, carbon-free electricity — with its position that reducing carbon

emissions is no longer a priority for the federal government.

Utilities in South Carolina said Monday they would stop construction on two new nuclear reactors at the V.C. Summer nuclear plant, about nine years after they launched the project. The announcement came a few hours after the Energy and Commerce departments trumpeted an agreement for a Pennsylvania-based company to sell U.S. coal to a Ukrainian utility. But analysts say there is little surprise that coal is thriving while nuclear continues to struggle, thanks to Trump's decision to abandon the Paris climate deal and unwind virtually all of the regulations former President Barack Obama put in place to bring down U.S. carbon emissions in line with that target.

In his June speech at the Energy Department outlining an "energy dominance" agenda, Trump said his administration would launch a "complete review" of U.S. nuclear policy in order to revive the industry, although it is unclear what progress has been made since then. Energy Secretary Rick Perry said a few weeks later that he had not seen any details of that work, nor a parallel review of grid reliability that may be beneficial for nuclear power. At the same DOE speech, Trump announced plans to lower barriers for overseas coal financing and pointed to Ukraine as an eager customer for U.S. coal exports.

"If the general approach to energy policy from Trump and the gang is going to be that 'we're okay with coal, we're okay with carbon,' then that's one significant reason less [for the private sector] to want to take a chance with other issues on a nuclear plant," said Kit Konolige, a senior utilities analyst with Bloomberg Intelligence.

SCANA, the majority owner of the unfinished South Carolina reactors, cited a long list of reasons for not finishing the Westinghouse-designed AP1000 units: cost concerns about the already over-budget project, "uncertainty" about a getting an extension of nuclear production tax credits from Capitol Hill, and the decision by co-owner Santee Cooper, a state-owned electric utility, to walk away from the project. Of course, cheap natural gas, construction delays, weak electricity demand and the bankruptcy of primary contractor Westinghouse didn't help, but the companies indicted that the change in attitude coming from the White House was a factor as well.

"Today, the business climate has changed considerably," Santee Cooper said in its own announcement that its board of directors sought to stop the project, referencing Obama's emphasis on climate change, the lingering effects of the most recent recession, and energy efficiency programs. "Natural gas prices plummeted after fracking began, and the current political landscape has reduced the urgency for emissions-free base load generation."

Investors rewarded the decision. SCANA's stock closed 5 percent higher than it opened Monday after it announced its plans to abandon the Summer project.

The South Carolina closures send a worrying signal for the fate of the two Westinghouse reactors under construction as part of the Vogtle nuclear expansion, a project similar to Summer being run by Southern Co., Oglethorpe Power Corp. and the Municipal Electric Authority of Georgia.

"I think Southern's gonna go the same way that SCANA is going," Konolige said. "I think, basically, the reasons are pretty much the same: The uncertainty of where policy wants you to put your money and of how long it's going to take to get this thing done — which is going to be a long time — and then they're going to look at the fact that SCANA's stock went up [Monday]."

But Georgia regulators are trying to tamp down any effort to compare the two situations.

"The dissimilarities of these projects should be recognized before making any suppositions on whether construction will continue at Plant Vogtle based on decisions made in South Carolina," Georgia Public Service Commission Chairman Stan Wise said in a statement.

Rich Powell, executive director for ClearPath, a conservative group concerned about climate change, said nuclear becomes increasingly competitive the bigger the emissions cut regulators and legislators aim for, but he argued that Obama's Clean Power Plan was weak for nuclear.

"There's been no indication so far that our policymakers are optimizing for getting our grid to zero emissions," he said. "That's where nuclear gets really valuable. Nuclear's expensive if you're trying to reduce emissions by 30 percent or 40 percent."

He added: "There hasn't been a clear line of support for zero-emissions baseload."

An Energy Department spokeswoman disputed the notion that the administration is not doing enough to help the nuclear industry.

"Secretary Perry shares President Trump's belief that an 'all of the above' energy strategy is what will help America become Energy Dominant," DOE spokesperson Shaylyn Hynes said in an email. "As we look to the future, nuclear power with its zero emissions and around the clock reliability should be a larger part of our nation's energy portfolio."

Treasury sanctions Venezuela's president Back

By Zachary Warmbrodt | 07/31/2017 03:44 PM EDT

The U.S. Treasury Department is targeting Venezuelan President Nicolás Maduro with sanctions, accusing him of widespread human rights abuses.

Treasury announced the sanctions following the election on Sunday of an assembly to rewrite the Latin American country's constitution.

In a statement, Treasury Secretary Steven Mnuchin called the vote "illegitimate" and said it

confirmed that Maduro was "a dictator who disregards the will of the Venezuelan people."

Maduro joins Zimbabwe President Robert Mugabe, Syrian President Bashar Assad and North Korean supreme leader Kim Jong Un as a head of state personally sanctioned by the U.S.

"By sanctioning Maduro, the United States makes clear our opposition to the policies of his regime and our support for the people of Venezuela who seek to return their country to a full and prosperous democracy," Mnuchin said.

Treasury said in a release that all of Maduro's assets subject to U.S. jurisdiction were frozen and that U.S. persons were prohibited from dealing with him.

Mnuchin warned that anyone who participates in the assembly that was the subject of Sunday's election "could be exposed to future U.S. sanctions."

He declined to comment on any further steps the U.S. government might take.

The move comes on the heels of President Donald Trump's reluctant agreement to sign a legislative package overwhelmingly passed by the Senate last week, consisting of sanctions on Russia, Iran and North Korea, constraining his bid to defrost relations with Moscow.

Victoria Guida contributed to this report.

Trump's Interior pick lifts outdoors groups Back

By Esther Whieldon and Annie Snider | 12/15/2016 05:00 AM EDT

President-elect Donald Trump's selection of freshman Montana Rep. Ryan Zinke as Interior secretary is a sign that hunting and fishing groups may still wield clout in a Trump administration loaded with oil and gas executives — and in a Republican Party split between its Theodore Roosevelt and shrink-the-government wings.

Influencing Trump's choice for the post was the top priority for sportsmen's groups, which had two main criteria for any candidate: The new Interior secretary had to be a hunter or angler, and someone committed to keeping public lands public.

They said Zinke, a Republican and former Navy SEAL commander, fit the bill on both counts — in contrast with Rep. Cathy McMorris Rodgers (R-Wash.), who has co-sponsored legislation that would have forced the sale of millions of acres of federal land.

McMorris Rodgers appeared to be the front-runner for the post last week. But the outdoors

groups voiced their qualms about her to Donald Trump Jr., an avid hunter and member of the group Backcountry Hunters and Anglers, when he asked for their opinions, sources close to the discussions say.

While the groups can't claim all the credit for McMorris Rodgers' fall from grace, they said Zinke's nomination — officially announced Thursday — gives them reason to hope the new president will hear their voice. Other potential candidates that sportsmen groups had supported included Wyoming Gov. Matt Mead and Nevada Gov. Brian Sandoval.

"There was some negative reaction to some of the names that were put forward and those comments were shared all the way to the very, very top," said Collin O'Mara, CEO of the National Wildlife Federation. He added: "We're not going to win on every issue, but I think we'll have the ability to make our case. And at this point, that's all we can ask for."

Conservationists also hope Zinke will serve as a counterbalance to other Trump Cabinet picks, including Exxon Mobil CEO Rex Tillerson as secretary of state and Oklahoma Attorney General Scott Pruitt as head of the EPA, whose selections have raised fears that the decks are being stacked in favor of the oil and gas industry.

"This looks to me like a cabinet that's shaping up to be filled with special interests ... especially from the fossil fuel energy kind of side," said Peter Aengst, senior director of the Northern Rockies region for The Wilderness Society. "The hope here is that Zinke will be an important check on some really concerning other Cabinet picks."

Aengst said he also drew some hope from the fact that Zinke has opposed efforts by other Republicans in Congress, including House Natural Resources Chairman Rob Bishop, to transfer vast stretches of federal land to the states. "What would give me much more hope is if I could point to specific examples where he's also gone up against fossil fuel special interests," Aengst said.

Zinke's selection could also help Democrats keep the Senate seat held by Jon Tester — whose supporters include Backcountry Hunters and Anglers leader Land Tawney — by keeping Zinke from challenging him in 2018. But Tawney told POLITICO this week that his support for Tester played no role in his group's decision to praise Zinke as a contender for Interior.

Zinke accepted Trump's nomination Thursday while invoking the name of the conservation movement's favorite Republican president.

"As inscribed in the stone archway of Yellowstone National Park in Gardiner, Mont., I shall faithfully uphold Teddy Roosevelt's belief that our treasured public lands are 'for the benefit and enjoyment of the people,'" Zinke said in a statement released by Trump's transition. "I will work tirelessly to ensure our public lands are managed and preserved in a way that benefits everyone for generations to come."

Those words offered a contrast with years of conservative attacks on pieces of Roosevelt's legacy, including efforts by Republicans to loosen the power that Interior holds over Western

states as the owner of one-third of all U.S. land. The Heritage Foundation has urged Trump's administration to hand states the responsibility for all leasing and permitting of federal lands within their borders, while Texas Sen. Ted Cruz made similar promises during this year's Republican presidential primaries.

But Trump disagreed with that anti-Washington fervor during the campaign, telling Field & Stream magazine that he would not support proposals to divest federal lands to the states.

"I don't like the idea because I want to keep the lands great, and you don't know what the state is going to do," the New York billionaire said in January. "I mean, are they going to sell if they get into a little bit of trouble? And I don't think it's something that should be sold. We have to be great stewards of this land. This is magnificent land."

Conservationists, who want to ensure that people have access to public land for fishing, hunting and recreation, see Zinke as someone who shares their values and isn't afraid to stand his ground.

Besides bucking Bishop's efforts to transfer federal lands to the states, Zinke resigned as a delegate to last summer's Republican National Convention because the party's platform included language calling for the sale of public lands. Zinke was also the lone Republican on Bishop's committee to join with Democrats last year in trying to permanently authorize the Land and Water Conservation Fund, a 51-year-old pot of federal money that Bishop opposes renewing without major changes.

"He's definitely one who's not afraid — just look at his military background," said Steve Moyer of the group Trout Unlimited.

Hunting and fishing groups have raised concerns with some aspects of Zinke's record, however, and other environmental organizations are hardly sold on him. Defenders of Wildlife President CEO Jamie Rappaport called him "unsuitable for the job" because of votes he cast against Endangered Species Act protections for individual species and his support for fossil fuel development.

"Other than supporting the Land and Water Conservation Fund, we struggle to find something positive," Rappaport said in an interview.

Moreover, Zinke is firmly anti-regulation, voting the Republican line in opposition to the Environmental Protection Agency's Waters of the U.S. rule — an Obama administration effort that Trout Unlimited and the National Wildlife Federation strongly backed — as well the EPA's climate regulations for power plants. The League of Conservation Voters gave him a lifetime score of 3 percent on environmental issues.

Zinke has also backed legislation to rip up the Obama administration's plans for protecting the greater sage grouse, an imperiled bird that dwells on prime oil and gas land in the West. And he has criticized Interior's overhaul of the royalty and valuation process for fossil fuels on federal lands and co-sponsored a bill that would sunset the agency's moratorium on new coal leases in 2019.

Endangered Species Act issues are likely to be front and center in Congress next year, especially as Bishop angles for major changes to the bedrock law. That makes some of the groups that most frequently litigate on endangered issues nervous.

Zinke has "voted for legislation to remove grizzly bears from the endangered species list, wolves, lynx, he's fought protection for the sage grouse and at every turn and he wanted to exempt big water developers ... in California from the Endangered Species Act," said Kierán Suckling, executive director of the Center for Biological Diversity, a green group that frequently sues Interior over its species protections.

But sportsmen's groups hope that with Zinke at the table, the conversation will be more constructive than it would otherwise be with a Republican-controlled Congress and White House.

"He's not somebody saying we should eliminate the act or not care about the species," said the wildlife federation's O'Mara. He said he hopes Zinke can shift the conversation away from controversies about adding species to the endangered list, and focus instead more on how to manage them better.

Zinke could help cut through some of the politics around the 1973 law, said David Allen, CEO of the Rocky Mountain Elk Foundation.

"The Endangered Species Act has been hijacked and has gone way beyond what it was ever intended [to do] when it was introduced during [President Richard] Nixon's time," Allen said, arguing that he hopes Zinke can make the act a "conservation tool and less of a political tool."

Donald Trump Jr. taps hunting pal for Interior liaison Back

By Esther Whieldon | 03/17/2017 05:01 AM EDT

Donald Trump Jr. is still exerting influence at the Interior Department and has tapped a hunting buddy to serve as a go-between for the agency, sportmen's groups and his father's White House.

President Donald Trump's eldest son is an avid hunter and played a key role in picking Interior Secretary Ryan Zinke, who is also a hunter and fisherman. And now Donald Trump Jr. has asked Jason Hairston, a former San Francisco 49ers linebacker and founder of hunting gear company Kuiu, to serve as a liaison among himself, Zinke, sportsmen's groups and the White House on conservation and public lands issues, Hairston said on Thursday.

"I'm absolutely going to take the position," Hairston told POLITICO, but the job won't come

with a salary, and he plans on staying in California where he lives and manages his business.

But an official with the Interior Department said there had "been no discussion of creating of a new role like this" and White House deputy press secretary Stephanie Grisham said in an email there were no new personnel announcements.

Hairston said Donald Trump Jr. had hoped to play the liaison role between Interior and the White House himself, but his decision to stick with running his father's business empire with his brother, Eric Trump, put a kink in that plan.

"It's really a role he was hoping to fill, but he can't because of conflict of interest," Hairston said.

Hairston and Donald Trump Jr. have been hunting buddies for at least two years — and Donald Trump Jr. tweeted out his congratulations last year after Hairston's company was featured in a Bloomberg news article. The two have tracked game together in mountain ranges in the West and Canada, and Hairston helped to organize meetings between sportsman groups and Donald Trump during his campaign, including a February 2016 gathering in Las Vegas, Hairston said.

The president "knows that it's not just a sport, that it really is something that's more meaningful to hunters and how important wildlife and conservation are because of everything Don and Eric have experienced and shared with him," Hairston said. "So he's not just pacifying his kids over this. He understands it and gets it."

Outdoor recreation groups have recently stepped up their fight against efforts by some Western Republican lawmakers to force the Interior Department to transfer more of the vast amounts of public lands it controls in the West to states — a move the groups say would cut them off from prime hunting and fishing ground. And having Hairston as their advocate would give them a direct line to the White House.

While he said his position hasn't been given a formal starting day, Hairston said he has "already started with the work on it," including "meeting with different organizations to determine what challenges and issues we're facing and really just what we should be working on — what's important."

Hairston has met with Zinke twice: once before Zinke was confirmed as secretary and again on March 7 when Hairston traveled to Washington and talked with the heads of conservation and hunting organizations. Those included the National Rifle Association, Theodore Roosevelt Conservation Partnership, National Shooting Sports Foundation and Safari Club International.

Interior official files whistleblower complaint over job reassignment Back

By Esther Whieldon and Ben Lefebvre | 07/19/2017 07:06 PM EDT

A former senior Interior Department official has filed a whistleblower complaint after the agency transferred him from a leadership position focused on climate change to a desk job collecting royalties from oil and gas companies.

In a complaint and disclosure filing with the Office of Special Counsel and in a Washington Post op-ed, former Interior Office of Policy Analysis Director Joel Clement claimed he was reassigned to a position at the Office of Natural Resources Revenue to stop him from publicly discussing climate change impacts on native Alaskan coastal communities.

Clement was among dozens of senior executive staff reassigned to other jobs in June.

Clement told POLITICO no Interior political staffers ever raised concerns about his activities prior to his reassignment. "It was kind of obvious to reassign the climate adaptation experts to the accounting office where they collect fossil fuel royalty checks. That was pretty flagrant, I would say, in terms of sending the message. So that message was received loud and clear that they wanted me to quit."

Clement said he'd like his old job back, and he hoped other staff would also complain.

Interior spokeswoman Heather Swift said the personnel moves were "conducted to better serve the taxpayer and the Department's operations."

Clement may have difficulty proving his case because agencies have wide discretion to reassign staff, according to Jeff Ruch, executive director of Public Employees for Environmental Responsibility. "It sounds like he's being retaliated against because of his job, not because of any disclosure he made," Ruch said. "He's suffering due to the nature of his job, and maybe because he did it too well."

Annie Snider contributed to this report.

The core misdirection of the Democratic 'Better Deal' agenda

James Pethokoukis | The Week

Democrats this week proposed their "Better Deal" 2018 midterms agenda — a program that suggests pro-business Clintonites are in full retreat. The party now seems to take seriously the idea that unadulterated corporate power is hurting American workers. But it's difficult to take the left's anti-monopoly agenda seriously if they go after Big Beer but not Big Tech. To understand why, you just have to follow the money.

Reuters

Why is the White House empowering al Qaeda in Syria?

Marc A. Thiessen | The Washington Post

Imagine the president's national security team walked into the Oval Office and proposed the following US policy in Syria: Let's create an al Qaeda haven in southern Syria by working with Russia to establish a cease-fire area where the terrorist network behind 9/11 is free to operate without fear of US attack. Sound like a good plan? Because that is a description of precisely what the Trump administration is doing in Syria today.

Twenty20

A new scapegoat for colleges? Right-wing pathologies

Frederick M. Hess and Grant Addison | National Review

Nearly two-thirds of conservative Republicans say colleges and universities have a negative effect on the country, while 43 percent of moderate and liberal Republicans agree. These results have prompted predictable headshaking on the part of university officials. The most revealing response came from Terry Hartle of the American Council on Education. Who does he blame for the growing distrust? Hint: It's not the academy.

Twenty20

Kindergarten test scores aren't the goal of early development

Katharine B. Stevens | US News & World Report

Another pre-K study recently showed that kindergartners who attended preschool

programs focusing on academic skills score higher on assessments than peers who didn't attend pre-K. Well, so what? There's no evidence that kindergartners' scores on tests of basic academic skills correlate with success. In fact, a handful of little-noted studies indicate that nonacademic skills may be much more important.

Subject: BREAKING NEWS: Senate Republicans introduce Obamacare bill that repeals individual mandate

Senate Republicans introduced a bill to repeal parts of Obamacare in an attempt to find 50 votes to get legislation through the chamber and to a conference with the House.

The bill would repeal the employer mandate for eight years and repeal the individual mandate. It would also repeal the medical device tax for three years and defund Planned Parenthood for one year, among other provisions.

Subject: POLITICO's Morning Energy: Clean Power Plan fever takes hold today in West Virginia — Keystone pipeline restarts today after spill — McCaskill has more questions on Whitefish

By Anthony Adragna | 11/28/2017 10:00 AM EDT

With help from Emily Holden

HEARING TIME! Some of the Clean Power Plan's biggest critics will urge EPA to replace the regulation at hearings beginning today in West Virginia - a message that conflicts with political pressures Administrator Scott Pruitt faces from conservative interests who want him to deny man-made climate change. The National Rural Electric Cooperative Association, U.S. Chamber of Commerce and representatives of major utilities that all opposed the rule will nonetheless call for EPA to write a new one that will stand up to lawsuits and provide planning certainty.

What they're thinking: The Electric Reliability Coordinating Council, which represents heavyweight utilities such as Southern, Duke and Ameren, says EPA should write flexible standards aimed at improving coal plant efficiency. NRECA, which speaks for many coal-reliant, consumer-owned co-ops, wants EPA to draft a rule and defend it through lengthy legal battles before the end of this administration. "The swing of the pendulum back and forth doesn't make it any easier to keep power costs affordable and power reliable," said Kirk Johnson, NRECA's senior vice president of government relations. "We've urged EPA to advance the ball on replacing the Clean Power Plan. We do think it's worth moving expeditiously to craft a replacement regulation." The U.S. Chamber of Commerce, which has repeatedly attacked the Clean Power Plan as job-killing, will argue for "durable and achievable standards," according to prepared remarks.

But that's not the only take: The influential companies lobbying for a new rule could run up against climate change-denying groups like the Heartland Institute and coal CEO Bob Murray, who want Pruitt to fight a science-based endangerment finding requiring climate regulations and would see a new rule as tacit acceptance that the finding is unbeatable. EPA will have to address the issue in its advanced notice of proposed rulemaking, which is expected to raise questions about whether EPA should work on a replacement rule at all. And coal miners will appear today to support withdrawing the rule.

Greens out in force too: The Sierra Club will host its own alternative hearing at the nearby University of Charleston. Bill Price, a regional Sierra Club staffer, said EPA is holding the sole hearing in West Virginia to try to make it look like there's support for the repeal. But he says many West Virginians welcomed the rule because of the job opportunities it could create in energy efficiency and renewable power.

Reminder: EPA will accept comment on its proposed repeal through Jan. 16.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and Glover Park Group's Hayley Moller correctly guessed that approximately 42 percent of Americans have valid

passports (There were 136,114,038 valid passports in circulation in 2017, per the State Department, and the U.S. population at the start of the year was 324,309,805, according to the Census). For today: Who was the most recent House lawmaker to posthumously win reelection? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

KEYSTONE BACK IN (REDUCED) BUSINESS: TransCanada announced Monday its Keystone pipeline would resume operations today at "reduced pressure" as it recovers from a South Dakota spill. "We are communicating plans to our customers and will continue working closely with them as we begin to return to normal operating conditions," the company said. TransCanada said plans to restart the line have been reviewed and cleared by PHMSA.

ICYMI, the company also asked the Nebraska Public Service Commission to "address questions" raised by its decision approving an alternate route for a proposed expansion of the Keystone pipeline through the state, Pro's Ben Lefebvre reports.

LATEST IN ENCRYPTED APP PROBE: Cause of Action is today filing a lawsuit in federal court seeking to compel the release of records from EPA about its efforts to scan for whether encrypted messaging apps, especially Signal, had been installed on agency equipment by employees. A prior lawsuit related to unfilled FOIA requests revealed records showing the agency was probing the use of encrypted apps by career staff following a POLITICO story detailing how a small group of employees had resorted to encrypted communications as they figured out how to respond to the Trump administration.

HOW TO KEEP THE GOVERNMENT RUNNING: Congressional leaders meet with President Donald Trump today on the thorny issue of how to keep the government open but there are just 12 days left until funding runs out, Pro Budget & Appropriations Brief reports. But Washington is no longer wondering if Congress will need to lean on another stopgap spending bill - the question is: For how long?

KEEP AN EYE HERE: Supreme Court justices seemed divided Monday on a case focusing on two rival oil companies that challenged the constitutionality of the Patent and Trademark Office's system for handling patent challenges outside the courts, POLITICO's Sarah Karlin-Smith reports. Oil States Energy Services argued that the existing agency process, known as inter partes review, is unconstitutional because patents are private property that can only be taken away through the court system.

ACCESS DENIED: The 9th Circuit Court of Appeals said Monday it won't transfer a lawsuit over one of the agency's implementation rules under the reformed Toxic Substances Control Act to another court, Pro's Alex Guillén reports. The decision means the 4th Circuit, which said it would wait to decide its path forward until the 9th Circuit had ruled, could choose to transfer its evaluation rule lawsuit to the 9th Circuit or instead to keep it.

SCIENCE PANEL LOOKS AT WOTUS: The House Science Committee subpanel hears perspectives on states' role in the future of the waters of the U.S. regulation today at 10 a.m. Arguably the most interesting witness to appear is Ken Kopocis, who served for years as the top

water official at EPA during the Obama administration but never got a vote in the Senate.

FERC, DOE BRASS SPEAK THIS MORNING: FERC Chairman Neil Chatterjee delivers remarks to the Consumer Energy Association's "Future of Electricity Forum" today at 9:20 a.m., followed by DOE Under Secretary for Energy Mark Menezes. Other notables expected to speak include Reps. Richard Hudson and Bill Flores.

TAKING STOCK: The Environmental Defense Fund has completed an analysis of the Senate's proposed EPA and Interior spending package that it deems "a quiet assault" on public health and the environment. Of particular concern are provisions in the chairman's mark that would eliminate the Integrated Risk Information System, a chemical safety program, and significant cuts to enforcement and various Clean Air Act programs. "The White House, House and Senate budget cuts all would require EPA to continue to lay off public health experts, scientists, environmental engineers as well as staff that manage grants to state and local communities," EDF notes.

MAIL CALL! TIME'S OF THE ESSENCE! A bipartisan group of 11 senators sent a letter to the Army Corps of Engineers expressing serious concerns about potential delays in completing an action-plan for keeping Asian carp from reaching the Great Lakes. "It is imperative that the [Army Corps] meet the original timeline for completing the Chief's Report by January 2019," the letter, led by Debbie Stabenow and Rob Portman , wrote. "This timeline is particularly concerning given recent findings that demonstrated new ways for Asian carp to enter the Great Lakes."

Whitefish probes continues: Sen. Claire McCaskill, ranking member on the Homeland Security Committee, sent a letter Monday seeking a briefing on what, if any, role FEMA played in reviewing a draft contract from Whitefish Energy from grid repair work in Puerto Rico. "Recently released documents appear to indicate that FEMA attorneys in the local office and at headquarters reviewed versions of the draft contract by PREPA and Whitefish," she wrote.

SOLAR CAPACITY'S BIG YEAR: Bloomberg New Energy Finance is out with new research finding 34 gigawatts of new solar-power generating capacity came online in 71 emerging market countries last year. China, at 27 gigawatts, accounted for the bulk of the new capacity, but India, Brazil, Chile, Jordan, Mexico and Pakistan all reported strong installations as well.

NRDC HITS COMSTOCK: The Natural Resources Defense Council is out with a six-figure ad on television and social media urging Rep. Barbara Comstock to oppose the finished version of congressional tax legislation. The Virginia Republican backed the House-passed version H.R. 1 (115) previously. Watch it here.

HEADS UP: The Center for Climate and Energy Solutions and The Climate Registry will today announce Bloomberg Philanthropies as the replacement sponsor for their Climate Leadership Conference to be held next February in Denver. It'll fill the void left after EPA pulled out of sponsorship earlier this year.

NOW PRESENTING: New DOE Assistant Secretary for Fossil Energy Steve Winberg makes

his first public appearance since confirmation this morning as the Global CCS Institute releases its annual report on the status of carbon capture and sequestration technologies. Watch here.

TAKE A GLANCE! The Competitive Enterprise Institute is out with a paper today backing Pruitt's pledge red team - blue team climate science debate. Read here.

BIG PENALTY IN STORE: Fines stemming from the emissions cheating scandal may cost Fiat Chrysler up to ???9.6 billion in France, POLITICO Europe's Sara Stefanini reports, citing documents posted by Le Monde.

LIGHTER CLICK: Beatles legend Paul McCartney tweeted his support for climate action and NRDC on Monday. "Climate change is a real issue and no effort is too small when it comes to protecting and preserving our planet," he wrote.

MOVER, SHAKER: Melisa Klem has left her position as executive director of the Society of Environmental Journalists. The organization will immediately launch a search for a replacement.

$900 Million New York Natural Gas Plant at Critical Juncture

Posted August 10, 2017, 02:39 P.M. ET

By Gerald B. Silverman

Competitive Power Ventures Inc. is at a critical juncture in its plan to operate a 680-megawatt natural gas power plant 75 miles northwest of New York City.

The $900 million plant, scheduled to begin operations in February, is counting on the construction of a pipeline by Millennium Pipeline Co. LLC to supply the natural gas for operations. The state Department of Environmental Conservation is expected to decide by the end of August whether it will grant the permits needed for the pipeline.

The project has been a flash point in the larger battle between environmentalists and companies in the Northeast that contend that more pipelines are needed to meet the region's demand for natural gas.

Pramilla Malick, chairwoman of Protect Orange County, a leading opponent of the natural gas plant, told Bloomberg BNA Aug. 10 that Competitive Power Ventures put "the cart before the horse" by building the plant before the pipeline received the necessary permits.

She said the plant could not operate without the pipeline and should be "mothballed."

80 Percent Complete

But Chapin Fay, a spokesman for the company, said the plant will open in 2018, with or without the state's approval of the pipeline. He said the plant is about 80 percent complete.

"There is little to stop us from opening in February, when we can run on diesel," he told Bloomberg BNA in an Aug. 10 email. "The only real issue is the pipeline permit, which we believe we will get from [the Federal Energy Regulatory Commission], if not from DEC. It would mean we operate on diesel until we get approved and built."

The natural gas plant, which is backed by a coalition of business and labor groups, will generate $1 billion in economic activity over 10 years, including lower energy costs and new jobs, according to the company.

A number of environmental groups oppose the plant and the pipeline because of its impact on greenhouse gas emissions, including methane and carbon dioxide. Malick said the plant will have carbon dioxide emissions of 4.7 million tons per year, which would raise total carbon emissions from the state's power sector by more than 10 percent.

Protect Orange County and other groups also oppose the plant because it will rely largely on natural gas transported from states that permit high-volume hydraulic fracturing, known as fracking. New York has banned fracking.

Voting Quorum Restored at Federal Energy Regulator

Posted August 10, 2017, 12:38 P.M. ET

By Rebecca Kern

A quorum that the Federal Energy Regulatory Commission needs to vote on key infrastructure projects was restored today when Robert Powelson was sworn in as a commissioner.

Powelson joins Acting Chairman Cheryl LaFleur (D) and Commissioner Neil Chatterjee (R), who was sworn in on Aug. 8.

At least three commissioners are required for the agency to vote on key infrastructure filings and orders, including natural gas pipelines and liquefied natural gas pipelines, contested rate filings, and mergers and acquisitions. At least $14 billion worth of natural gas pipeline infrastructure is awaiting FERC approval, according to the natural gas industry.

The Senate confirmed Powelson, former president of the National Association of Regulatory Utility Commissioners and a commissioner on the Pennsylvania Utility Commission, and Neil Chatterjee, former energy staffer for Senate Majority Leader Mitch McConnell (R-Ky.), on Aug. 3.

FERC has been without a voting quorum since February, when former Chairman Norman Bay (D) left the agency.

President Donald Trump has nominated two other FERC commissioners—Kevin McIntyre, an attorney with Jones Day, and Richard Glick, Democratic general counsel for the Senate Energy and Natural Resources Committee. Their Senate confirmation hearing is Sept. 7.

Federal Scientists Say Climate Change No Hoax, Refuting Trump

Posted August 10, 2017, 01:46 P.M. ET

By Christopher Flavelle

Less than a week after President Donald Trump notified the United Nations of his intent to exit from the Paris climate accord, his government's chief science agency released a report demonstrating that global warming is real and getting worse.

The report, prepared by almost 500 scientists from around the world, shows that last year's average global temperatures were the highest ever recorded. There were more major tropical cyclones than usual, longer droughts, and less snow cover. After years of increasing, Antarctic sea ice declined,

undercutting an argument by those who dispute the science of global warming.

"The major indicators of climate change continued to reflect trends consistent with a warming planet," said the report, which was edited by Jessica Blunden and Derek S. Arndt of the National Oceanic and Atmospheric Administration.

Reports, such as the NOAA-supported one released Aug. 10 in the Bulletin of the American Meteorological Society, are "hard to dodge," according to David Schnare, who worked for a short time at the Environmental Protection Agency under Trump and wants the administration to abandon any efforts to tackle climate change. He said this and other federal reports documenting the severity of climate change could make it harder for the EPA to reverse its 2009 finding that carbon dioxide emissions pose a danger to the public.

Trump has labeled climate change a "hoax," and members of his administration have downplayed the impact that burning fossil fuels is having on the Earth and its changing weather patterns.

While Trump's administration seeks to unwind federal policies to address climate change, local governments are being forced to act. Nick Crossley, emergency management director for Ohio's Hamilton County, which includes Cincinnati, said his agency dealt with more flash flooding than usual last year.

"Some call it climate change; some call it something else," Crossley said in a phone interview. But whatever you call it, "it's putting a strain on local resources."

Crossley, who is also vice president of the International Association of Emergency Managers, said his counterparts around the country are dealing with similar problems. He said that while federal reports documenting the extent of climate change might not capture the public's attention, they can help persuade local officials to better prepare for future storms, floods, and other challenges.

Those steps can include building storm-resistant infrastructure, and helping people who live in vulnerable areas move someplace else.

One of the surest signals that local governments are taking climate change seriously is that they're looking for new ways to pay for it. In South Florida, which is struggling with both rapid sea-level rise and an increase in flooding, the city of Coral Gables is looking for ways to start saving now for higher stormwater-managements costs.

"The earlier you do stuff, the easier it is to prepare," said Abby Corbett, a lawyer who specializes in climate adaptation and is advising Coral Gables. She said that while cities in South Florida have long had to cope with flooding, climate change could cause people to leave, shrinking the city's tax base.

"It may be that we have to struggle with revenues, just as costs are increasing," Corbett said.

Local officials aren't the only ones trying to cope with the effects of climate change. The accumulation of scientific data on global warming has put pressure on the U.S. coal industry, which is already suffering because of competition from cheap natural gas prices and renewable energy. It increasingly has to deal as well with the perception that coal is ruining the planet.

"I don't think the public is in the dark" about the scientific consensus on climate change, said Luke Popovich, vice president of the National Mining Association, which represents coal companies. He

asked why the U.S. should reduce its own coal use when other countries, chiefly China and India, continue to burn it. And he said that for most people, climate change remains low on their list of worries.

"No matter how much information comes out of NOAA, it is not going to help put more pressure on the U.S. to do more," Popovich predicted. "We've got a hell of a lot of other problems to address."

Trump Is Said to Be 'Really Interested' in Payments for Coal Use

Posted August 10, 2017, 8:58 A.M. ET

By Tim Loh

West Virginia Governor Jim Justice said Donald Trump is "really interested" in his plan to prop up Appalachian mining by giving federal money to power plants that burn the region's coal.

Justice, a coal and real estate mogul elected governor last year as a Democrat, announced at a West Virginia rally alongside President Trump last week that he's becoming a Republican. Justice has recently spent a "goodly amount of time" meeting one-on-one with Trump and has liked the feedback to his pro-coal proposal. The plan calls for the Department of Homeland Security to send $15 to eastern U.S. utilities for every ton of Appalachia coal they burn.

"He's really interested. He likes the idea," Justice said in a phone interview on Aug. 9 when asked about Trump's reaction. "Naturally, he's trying to vet the whole process. It's a complicated idea."

In Justice's eyes, the coal payments will be necessary because Trump's moves to roll back regulations on the Appalachian coal industry won't be enough to preserve it. The Appalachian coal sector has been shrinking for years as companies are forced to spend more money to access harder-to-reach seams of the fossil fuel. Meanwhile, competitors in regions including the Illinois Basin and Powder River Basin of Wyoming and Montana have much thicker coal seams that are cheaper to get to.

Critics say such a proposal would be expensive and misguided. U.S. power plants burned at least 110 million short tons of Appalachian coal in 2016, according to Andrew Cosgrove, an analyst at Bloomberg Intelligence. A payment of $15 for each of those tons would cost at least $1.65 billion.

Justice said he's discussed the plan with, among others, Department of Energy Secretary Rick Perry, Vice President Mike Pence and Jared Kushner, Trump's senior adviser and son-in-law.

Asked whether Trump is considering Justice's plan to prop up the coal industry, White House spokeswoman Kelly Love said there's nothing to announce at this time.

Too Reliant

While Appalachian coal production is up this year, if there's another "downtick" it'll cause a spate of bankruptcies, mine closures, and layoffs that could be impossible to recover from, Justice said.

At the heart of his pitch, Justice argues that the country is becoming too reliant on natural gas for power and it's not enough to supplement that with coal from the Midwest and West.

Justice rejects the notion that his plan amounts to a "bailout" or "subsidy" for Appalachian coal. Rather, it's a matter of national security, he said, because terrorists could easily blow up important gas pipelines or derail freight trains shipping coal to the east, leaving large swaths of the country lacking power-plant fuel.

'Absolute Chaos'

"Can you imagine what would happen if we lost the power in the east for a month, or two months, or three months?" Justice said. "It would be like a nuclear blast went off. You would lose hundreds of thousands of people. It would be just absolute chaos beyond belief."

Justice insisted that renewables could one day be the primary source of U.S. electricity generation, but says he's not sure whether that'll come in 10, 20 or 30 years.

"This may very well be a temporary fix, a temporary security blanket," he said. "But today we don't have the renewables in place. And today, we cannot lose our eastern coal fields."

While it's legitimate to worry about the reliability of the U.S. power grid, the decline of the coal industry isn't raising much of a threat at a time of cheap and abundant gas and fast-growing wind and solar power, said Jason Bordoff, director of Columbia University's Center on Global Energy Policy.

It's "unfortunate and irresponsible" to float a policy idea like this, Bordoff said, when U.S. and global forces are causing a structural decline in the Appalachian coal sector and communities need to diversify local economies.

America's Power Plant Jobs, Ignored by Politicians, Are Dying

Posted August 10, 2017, 7:59 A.M. ET

By Naureen S. Malik and Tim Loh

A couple months ago, Donald Trump was cheering a new coal mine in Pennsylvania that will put 70 people to work—good news for a president whose pledge to revive the industry helped get him elected. But a bigger group of coal workers has already suffered sweeping job cuts, and it's bracing for more.

Coal-fired power plants employ more people than mines, and they're shutting down all over the country. Cheap natural gas, the rise of renewables backed by tax credits, and subsidies for nuclear energy will likely combine to keep the trend going—and leave more people like Lynnette Faje out of work.

Faje had spent more than a quarter century at an Illinois-based power company that's owned today by NRG Energy Inc. She had survived two buyouts and had spent her final three years at the company as a laborer on the plant floor after her office position was cut. She found out her $23.50-an-hour job was being eliminated entirely while taking minutes one day at a local union meeting.

"Pretty much everything I've worked for my whole life is pretty much gone," Faje, 51, said. She voted for Trump, and wants to go back to work at a coal plant, but sees little chance of that happening. Contractors have been hired to do her old job now and she's found work on the overnight shift at a candy factory, earning 28 percent less an hour than she did at NRG to watch Baby Ruth bars roll by on the conveyor belt.

'Going to Zero'

Coal-fired plants employed 86,035 people in the U.S. last year. That may not seem like a huge amount in a country of some 150 million workers but it's 16 percent more than the number employed at mines, according to the U.S. government. It's also a younger and more diverse workforce, with women making up more than a third of it, and ethnic minorities about a quarter.

Curiously, they haven't gotten nearly as much attention as the miners -- even though their numbers are shrinking fast. And coal comebacks like the one Trump hailed in Pennsylvania won't help them. Corsa Coal Corp.'s venture there is digging up metallurgical coal, which is used in steelmaking and often exported.

Under Trump, the Environmental Protection Agency is making efforts to save some of the coal-plant jobs by scaling back emissions regulations. But most experts expect more plants to shutter as new gas-fired units come online and costs keep plunging for solar and wind power. Some coal plants are being converted to gas, which still involves layoffs because gas generators typically employ about half as many people.

"All the power market people that I know, we all think coal is going to zero," said Alex Elsik, chief executive officer of Geosol Capital LLC, a Houston-based hedge fund. In the power market that the Chicago plants are part of, the cost of generation with coal is about 50 percent higher than with gas, he said.

If there's a sliver of hope for the industry, it may lie in a burgeoning debate among regulators and grid operators about the need to preserve fuel diversity.

Polar Vortex

The International Brotherhood of Electrical Workers has been pushing that case in Washington, according to Donnie Colston, director of its utilities department. A much-cited example is the polar vortex that froze the U.S. in early 2014. Gas prices surged to record highs in New York, and the PJM Interconnection grid—serving a fifth of the country's population, from the Midwest to the mid-Atlantic—lost 22 percent of its generation assets. Keeping some coal capacity can mitigate such risks.

Coal plants are "life-limited over time, but for the present, coal plants will continue to be needed for reliability and fuel diversity," David Gaier, a spokesman for NRG, said by email.

Still, last month saw a string of announcements that's left a growing group of coal-power workers uncertain about their future.

Faje's former employer, NRG, plans to overhaul its entire business to slash debt and costs, with about 4 percent of savings coming from plant payroll, though it didn't say how many jobs would be cut. American Electric Power Co. is closing almost all of its coal plants in Ohio and is exploring strategic alternatives for the last two. It's already cut about 670 jobs, more than a fifth of the coal-

plant workforce, since 2015.

Deep Discounts

The Texas power market is so depressed that all but two of the state's 15 coal generators are losing money, according to energy-focused investment firm Tudor Pickering Holt & Co. Houston-based Calpine Corp. may be on the verge of a buyout by a private-equity firm, a process that's kept plants alive in other states, but one that typically leads to staffing cuts. In a sign of how desperate some power companies are to get rid of their beleaguered coal units, they are being offered up at less than 10 percent of replacement cost.

Coal-plant shutdowns ripple across many other industries too, starting, of course, with the miners. Power generators accounted for 87 percent of U.S. demand for coal last year, according to analyst Wood Mackenzie Ltd. Temporary jobs in plant maintenance will be lost too. Generators need regular overhauls, and even small outages require hundreds of workers.

The big ones that take place every three to four years can involve a team of thousands. By contrast, gas-fired plants have few outages.

Faje says she's hearing a growing number of the personal stories that lie behind some of these numbers.

She recently found out that a former colleague had died after a battle with depression, and wrote a Facebook post in his memory. Others stepped forward with their own anxieties, about losing their homes, working longer hours and toiling under increasingly dangerous conditions as the industry's cost-cutting measures strain workers.

NRG's Waukegan plant north of Chicago had its own recent scare. One day in June, powdered coal ignited, triggering an explosion. No one was hurt but workers were spooked, according to an employee who asked not to be identified for fear of retaliation.

Later that month, a celebration was held at the Waukegan plant to commemorate 314 injury-free days. Bakers Square pies were spread across the lunchroom -- apple and cherry and blueberry. The staff wasn't in the mood, though, the worker said. The explosion was still on everyone's mind, and most of the pies were left untouched.

World's Biggest Coal Shipper Talks a Lot About Electric Cars

Posted August 10, 2017, 7:40 A.M. ET

By Thomas Biesheuvel

Glencore Plc might be the world's biggest exporter of coal, the dirtiest fuel, but the mining giant is increasingly excited about electric cars.

"It looks like it's going to be the big growth area, no doubt," Ivan Glasenberg, Glencore's chief executive officer, said on a call with reporters August 10. "It's an area people definitely have to get into."

Battery-powered cars and gasoline hybrids are poised to grow so fast that by 2040 they'll make up more than half of vehicles sold globally, according to estimates from Bloomberg New Energy Finance.

Electric cars contain about three times more copper than a regular vehicle, according to Glencore. Even more is needed for charging stations, with Exane BNP Paribas predicting infrastructure will add about 5 percent to demand by 2025. Lithium, cobalt, graphite and manganese used in batteries will also see additional demand.

The battery in an electric car contains about 38 kilograms of copper (84 pounds), 11 kilograms of cobalt and 11 kilograms of nickel, according to Glencore.

The outlook for greener transportation got a boost this year after the U.K., France and Norway said they would ban sales of fossil-fuel cars in coming decades. Volvo AB has also announced plans to abandon the combustion engine and Tesla Inc. will soon sell its cheaper Model 3.

Glencore, a major producer of cobalt, copper and nickel, is not the only miner lining up to take advantage of the growth. The world's biggest miner, BHP Billiton Ltd., is looking to boost nickel supply.

"From the tough period we've just been through, people don't have big plans for new greenfield operations and this bodes well for the prices in these commodities," Glasenberg said. "It's going to be hard to grow in these areas."

At the same time, Glencore is also increasing its coal bet. The company recently agreed to pay $1.1 billion plus royalties for a large stake in an Australian coal mine.

Its pursuit of coal contrasts with other major miners such as Rio Tinto Group, who have moved away from the most polluting fuel. Glencore has consistently said that coal is essential to the needs of the developing world in the long term, especially in Asia.

Still, Glasenberg sees electric vehicles and coal as a win-win situation.

"You have to power these electric vehicles from the grid," Glasenberg said. "The amount of power that you have to throw into these electric vehicles when you're charging them, we definitely need more power supply."

Peter Grauer, the chairman of Bloomberg LP, is a senior independent non-executive director at Glencore.

Subject: Morning Energy, presented by Chevron: Fallout spreads from Zinke's Alaska arm-twist — Energy and Water title clears House — Inhofe shrugs at red team-blue team climate debate

By Anthony Adragna | 07/28/2017 05:42 AM EDT

With help from Esther Whieldon, Ben Lefebvre and Eric Wolff

ALASKA-SIZED FALLOUT FROM ZINKE CALL: Swift pushback continues after Interior Secretary Ryan Zinke threatened repercussions for Alaska's energy priorities in light of Sen. Lisa Murkowski's vote against taking up Obamacare earlier this week. Two House Democratic ranking members — Energy and Commerce's Frank Pallone and Natural Resources' Raul Grijalva — sent requests for investigations into Zinke's actions to GAO and Interior's inspector general. In addition, the Western Values Project filed a FOIA request for all records related to Zinke's calls with Murkowski and Alaska Sen. Dan Sullivan, promising to sue for them if they don't get the response within statutory limits.

The White House didn't deny the phone calls occurred with Press Secretary Sarah Huckabee Sanders instead declining to "speak about conversations between Cabinet members and other individuals." But as POLITICO's Elana Schor and Ben Lefebvre report , Sullivan urged his senior senator and the Trump administration return to harmony. "From my perspective, the sooner we can get back to that kind of cooperation between the administration and the chairman of the [energy] committee, the better for Alaska and the better for the country," he told reporters. "I'm not telling Sen. Murkowski anything. I work super closely with Sen. Murkowski, but that's my statement."

Murkowski responds: In an interview with the Alaska Dispatch News' Erica Martinson (who broke the story), Murkowski confirmed she had a "difficult conversation" with President Donald Trump before the vote and spoke with Zinke, who "shared with me that the president was not pleased" afterwards. But she said she didn't feel pressured at all and didn't feel like her Interior priorities were at risk. "I certainly hope that those in the administration will continue to work with all of us — all of the Alaska delegation — on priorities that are not only important to Alaska, they're important to the country," she said.

Some Republicans said Zinke's pressure wasn't unusual: Sen. Lindsey Graham said lawmakers feel pressure from the administration all the time. "It won't matter one bit," he told reporters. "I think she's going to do what she likes. If you're in the Senate you get threatened all the time by everybody." And House Natural Resources Chairman Rob Bishop agreed: "That is not unprecedented, [he] has a right to do that," he told reporters in the Capitol. As Pro's Esther Whieldon reports, Bishop said former Interior Secretary Sally Jewell would call him "complaining about some things that we were doing."

Why this could backfire: Murkowski chairs the Senate Energy and Natural Resources Committee, which controls among other things how quickly Zinke may get personnel in place, and also holds the gavel of the Appropriations subcommittee that oversees Interior's funding.

Also, she's tough as nails and unlikely to be intimidated by anyone. She proved it early this morning, when she joined Sens. Susan Collins and John McCain to help Democrats defeat the last-ditch, slimmed-down Obamacare repeal bill, killing the effort for now.

TGIF EVERYBODY! I'm your host Anthony Adragna, and I am officially off to Scotland for my honeymoon today. See you in two weeks! In the meantime, a merry band of very talented energy Pros will fill in for me! Be nice! Theodore M. Pomeroy had the shortest tenure as House speaker (at just a day), but your end-of-the-week trivia is who was our shortest president? Send your tips, energy gossip and comments to Alex Guillén, who returns to the ME captain's chair on Monday, at aguillen@politico.com. Or follow us on Twitter @alexcguillen, @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

ENERGY AND WATER TITLE CLEARS HOUSE: It will almost certainly be substantially reshaped by the Senate — if not ignored altogether — but House lawmakers passed $789 billion mini-spending package, H.R. 3219 (115), that included energy and water infrastructure funding, Pro Budget and Appropriations Brief's Sarah Ferris reports . The $37.6 billion energy and water title includes funding for Yucca Mountain and a rider protecting the Trump administration's withdrawal of the Waters of the U.S. regulation from legal challenges, while zeroing out DOE's ARPA-E program and blocking any new loan guarantees. Senate appropriators cleared their own $38.4 billion energy spending package on July 20 with large differences compared to the House version.

The House package came together as centrist Republicans told leadership they would not back a massive 12-bill spending package sought by others in the caucus, POLITICO's Rachael Bade reports. It comes as moderate GOPers are increasingly banding together to undermine leadership as they take from the Freedom Caucus' playbook.

YOUR MOVE, MR. PRESIDENT: The Senate passed a package of sanctions on Russia, Iran, and North Korea by an overwhelming 98-2 margin Thursday, sending it to Trump's desk, POLITICO's Elana Schor reports. The White House has worked hard to avoid taking a clear position on the bill, H.R. 3364 (115) , with communications director Anthony Scaramucci telling CNN on Thursday that Trump "may sign the sanctions exactly the way they are, or he may veto the sanctions and negotiate an even tougher deal against the Russians." But Congress has shown they can easily override a veto if Trump elects that path. Remember the sanctions only kick in for energy projects in which a Russian company owns 33 percent or a controlling stake.

A former member of Congress with detailed knowledge of the legislation pointed our colleague Daniel Lippman to a provision of the legislation that the ex-member thinks hasn't gotten enough attention: "A lot of the coverage is about what the bill forces the president to do with the sanctions but what a lot of people are missing is that there is a key discretionary provision [in Section 232] that basically allows the president to avoid meddling in the energy affairs in our European and NATO allies. He can decide to allow to not to punish and not meddle in the affairs of Europe's energy policy ... [and] he actually has discretion to do absolutely nothing. It is not all mandatory language but it does have some discretionary language. And that could be a key provision."

WHERE DO WE GO FROM HERE? White House, Treasury and congressional leaders issued a statement on tax reform Thursday, acknowledging that they were giving up on plans for a border adjustment tax. But the lack of additional details in their six-paragraph statement suggests the GOP's dream of achieving tax reform may be years from completion, POLITICO's Nancy Cook and Aaron Lorenzo report. But Edison Electric Institute President Tom Kuhn applauded the statement and said his organization would work "to find tax reform solutions that will benefit all customers and encourage much-needed investment in critical energy infrastructure by helping to keep the cost of capital as low as possible."

OIL AND GAS INDUSTRY WANTS FULL COURT REVIEW OF METHANE STAY: EPA's stay of the Obama-era methane rule may be headed to the full D.C. Circuit Court of Appeals. EPA had not filed any petition as of the midnight deadline to decide whether and how to appeal the early July ruling striking down Administrator Scott Pruitt's 90-day stay of the methane rule for new oil and gas wells. The court agreed not to order EPA to immediately resume enforcing the regulation, but the judges gave EPA limited time to seek an appeal. While EPA did not file anything on Thursday, a coalition of industry groups did, requesting an *en banc* review by all 11 judges at the D.C. Circuit. It typically takes the court months even to decide whether to grant *en banc* review, long past the point at which Pruitt's 90-day stay would expire, but the court may speed things up under the circumstances. It's unclear whether the rule will take effect in the meantime, but the three-judge panel indicated it wasn't comfortable letting EPA keep it on hold indefinitely after Pruitt's action was found to be unlawful. The groups argued that the stay should remain in place in the meantime.

INHOFE NOT WILD ABOUT RED-BLUE CLIMATE DEBATE: EPA Administrator Scott Pruitt didn't discuss his plans to hold a red team-blue team public debate on the scientific consensus on climate change with him, but one of his normal allies, Sen. Jim Inhofe, thinks it isn't useful. "I don't think there's anything to be accomplished," he told ME.

HE'S GOING HOME: Energy Secretary Rick Perry will be in Waller, Texas, at 11 a.m. local time today to tour Daikin Texas Technology Park, which manufactures air conditioning equipment. He'll deliver remarks to employees and then hold a brief media availability.

Another unusual tweet: After their press shop blasted out a link to Perry's odd op-ed on Obamacare reform, DOE's official Twitter account tweeted: "In the fight between @SecretaryPerry and climate scientists — He's winning."

** **A message from Chevron**: When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://bit.ly/2vFizh5 **

ICAHN GETS BEAT IN RFS CREDITS MARKET: Carl Icahn's CVR Refining lost $19 million in the second quarter of 2017, and it laid the blame for the loss on spending $106 million on credits needed to comply with the Renewable Fuel Standard, according to its income statement released Thursday. Reuters had reported that Icahn had been holding fewer credits than needed on the expectation that RIN prices would drop, a move that worked in the first part of the year. But prices have jumped from roughly 34 cents a credit to 80 cents a credit, and CVR

took it on the chin. "As I've said many, many times before, RINs continue to be an egregious tax on independent refiners and small retailers," CVR CEO Jack Lipinski said on the earnings call. "RINs prices have been extremely volatile this year, which only proves the fact that RINs market is manipulated...EPA continues to ignore this."

FRACKING RULE'S DAY IN COURT: The Trump administration may be having a hard time convincing appeals court judges to suspend the court case brought by the state of Wyoming over the BLM fracking rule. Lawyers for the administration said in court Thursday in Denver that suspension would help Interior as it works to rescind the rule, which went into place in 2015 but got caught up in a legal battle over BLM's jurisdiction before it took effect. Judges for the U.S. Court of Appeals for the 10th Circuit hearing the argument didn't seem too impressed, however, saying they were wary of ceding court process to another branch of government.

CORTEZ MASTO TO ZINKE: HANDS OFF: Nevada Democratic Sen. Catherine Cortez Masto released a video urging Zinke not to alter the boundaries of two national monuments — Gold Butte and Basin and Range — as he prepares to tour the sites next week. "Secretary Zinke, the people of Nevada have spoken," the first-term senator said. "They don't want their national monuments rescinded."

Zinke's still in New Mexico today where he'll go on a hike with local veterans and then host meetings with the Mescalero Apache, Fort Sill Tribe, and Friends of Organ Mountains Desert Peaks. All are closed press. Then, on Saturday, he'll go for a hike and horseback ride with Democratic Sens. (and outspoken public lands advocates) Tom Udall and Martin Heinrich.

MAIL CALL! OUR ADVICE ON ADVISORY PANELS: Three senior Senate EPW Republicans — John Barrasso, Shelley Moore Capito and Mike Rounds — sent a letter to Pruitt Thursday urging him to revamp past Clean Air Scientific Advisory Committee "practices to make them compliant with the statute." They write the scientific advisory panel has never detailed adverse social, economic, or energy effects stemming from the agency's National Ambient Air Quality Standards program because it has never requested that information. "CASAC must be constituted of experts who can provide independent counsel to you in all of the above areas," the senators wrote.

SECOND TIME'S THE CHARM? The American Fuel & Petrochemical Manufacturers is still worried about sanctions possibly being placed on Venezuela's crude oil exports. The trade association sent a second letter to the White House today asking it to consider the economic impact sanctions of Venezuela's heavy crude would have on U.S. refiners. The White House said earlier this week it would sanction more individuals in President Maduro's regime, but left sanctions on the South American country's oil on the table for the future. "AFPM supports the Administration's goal of bringing stability to Venezuela, but urges you to carefully consider the impact sectoral sanctions will have on U.S. businesses and consumers," the association wrote in its latest letter.

CONSERVATIVES BACK ANTI-SCC BILL: A group of 20 conservative organizations voiced support in a letter Thursday for Transparency and Honesty in Energy Regulations Act, which would halt the use of the social cost of carbon and similar figures in federal regulatory

proceedings. "The problems [with these figures] are too large to ignore, especially since they are being used to justify regulations that make energy more expensive for American families and businesses," the letter, signed by groups including the American Energy Alliance, Competitive Enterprise Institute and Heartland Institute, states.

MORE PRESSURE AGAINST GARRETT: Four senior House Democrats — Steny Hoyer, Gwen Moore, Maxine Waters and Denny Heck — sent a letter Thursday to Senate Banking Chairman Mike Crapo asking him to join their calls against the nomination of former Rep. Scott Garrett to lead the Export-Import Bank.

MORE THAN 2K WIND MEGAWATTS INSTALLED THIS YEAR: The American Wind Energy Association in a new report said 357 megawatts in new wind projects were brought online the second quarter of this year, bringing the annual total to 2,357 megawatts. There are now 84,405 megawatts of installed wind capacity in the US and another 25,819 megawatts under construction or in advanced development. Power purchase agreements with utilities continued to dominate the scene with more than 1,697 megawatts in new contracts in the second quarter.

SPOTTED: At a Chemistry Caucus event on non-traditional careers in chemistry in the Capitol Visitor Center yesterday, according to a PI tipster: Non-traditional chemists including Rep. John Moolenaar (R-Mich.), Tracy Caldwell Dyson of NASA, Dana Sedin of New Belgium Brewing Company and Bill Provine of Delaware Innovation Space; Tom Connelly of the American Chemical Society; and Rep. Dan Lipinski (D-Ill.) (h/t POLITICO Influence).

Democrats vow investigation, lawsuit over 'political blackmail' against Murkowski Back

By Elana Schor and Ben Lefebvre | 07/27/2017 12:55 PM EDT

Democrats and their allies off the Hill pushed back hard at the Trump administration on Thursday after a report that Interior Secretary Ryan Zinke threatened projects important to Alaska in retribution for Sen. Lisa Murkowski's vote against health care legislation.

House Democrats vowed to seek an investigation into Zinke's call to Murkowski and fellow Alaska Sen. Dan Sullivan on Wednesday — a day after Murkowski voted against taking up Obamacare repeal — to warn them that the administration's support for energy projects in the state are now at risk. And a conservation group that often works with Democrats sought internal documents on Zinke's calls as well as to any others that he may have made to other GOP swing votes on health care.

The Freedom of Information Act request filed by the group, the Western Values Project, seeks records of any contact Zinke made with the Alaskan senators as well as Sens. Dean Heller (R-Nev.), Mike Lee (R-Utah), John McCain (R-Ariz.) and Susan Collins (R-Maine), according to a copy shared with POLITICO.

The group plans to sue Interior to force the release of any relevant information that it doesn't receive by the time its legal window closes, Executive Director Chris Saeger said.

Meanwhile, Democrats on the House Natural Resources Committee plan later Thursday to seek an investigation conducted by the Government Accountability Office or Interior's independent inspector general, according to a spokesman.

Murkowski confirmed to reporters Thursday that the call with Zinke took place, as well as a second call she received from President Donald Trump on Tuesday, the day she voted with Collins against taking up the GOP's Obamacare repeal bill.

She denied any suggestion that she had used her power as chairwoman of the Energy and Natural

Resources Committee, which has jurisdiction over Zinke's department, to hit back by postponing a committee meeting that would have included votes on three Interior nominees.

In addition to her energy panel gavel, Murkowski chairs the Senate Appropriations subcommittee in charge of deciding how much money Interior has to spend each year.

Zinke holds ample sway over the state of Alaska, where the federal government controls 61 percent of the land in the state. Interior is reviewing a multitude of projects tied to Alaska energy development, including a possible opening of the Arctic National Wildlife Refuge for oil and gas drilling and allowing offshore oil drilling in currently off-limits Arctic waters.

Sullivan touted that potential to develop more of the state's resources in urging that his senior senator and the Trump administration return to harmony.

"[T]hat cooperation has been very useful and very important in the last six months, reversing what the previous administration did to Alaska," Sullivan told reporters. "So, from my perspective, the sooner we can get back to that kind of cooperation between the administration and the chairman of the [energy] committee, the better for Alaska and the better for the country."

Asked if he had any advice for Murkowski, Sullivan demurred: "I'm not telling Sen. Murkowski anything. I work super closely with Sen. Murkowski, but that's my statement."

Sen. Roy Blunt (R-Mo.) offered advice of his own to the Trump administration on the matter. "I've been doing this for a long time and I've seldom seen threats to be very effective," Blunt said.

Arizona's Raul Grijalva, the House Natural Resources panel's top Democrat, said Zinke had crossed the line.

"Running a department of the federal government means you serve the American people as a protector of their rights and freedoms," Grijalva said in a statement. "It doesn't mean you serve the president as a bag man for his political vendettas. Threatening to punish your rivals as political blackmail is something we'd see from the Kremlin."

Beyond its stewardship over oil and gas resources, Interior also has the final say over whether to allow a road through Alaska's Izembek National Wildlife Refuge to take residents of an isolated village reach a nearby hospital, something Murkowski has pushed for years.

"Even if this road provides health care access to hundreds, which is very much in doubt, Secretary Zinke thinks the price to build it is a vote to deny health care access to millions," Grijalva said.

Zinke's phone call, first reported by the Alaska Dispatch News, came after Trump tweeted his displeasure with Murkowski's vote. But Murkowski is unlikely to face serious political consequences in the near term. She will not be up for reelection until 2022, and she has previously proved her political mettle in the state — winning a rare write-in victory to be

reelected in 2010 after she lost the GOP primary to a Tea Party challenger.

House Natural Resources Chairman Rob Bishop on Thursday defended Zinke's call to Murkowski.

"That is not unprecedented, [he] has a right to do that," Bishop told reporters in the Capitol. Bishop said former Interior Secretary Sally Jewell would call him "complaining about some things that we were doing."

Spokespeople for the Interior Department, Murkowski and Sullivan did not respond to requests for comment.

Alaska Oil & Gas Association President Kara Moriarty called the threats "unfortunate."

"As the secretary has said, they want to have American energy dominance, and the only way to do that is through Alaska," Moriarty told POLITICO. "When the time comes when Alaskan energy projects are in front of Congress, I hope they are considered on their merits and not used as a political chits."

Environmentalists were unsparing in their assessment.

"Ryan Zinke is revealing himself as Trump's hitman. He's now threatening to hold public lands and energy policy hostage over a health care bill. This is the U.S. government, not the Corleone family," Jennifer Rokala, executive director of the Center for Western Priorities, said in a statement.

Zinke is not the first member of Trump's Cabinet without a health care portfolio to insert himself into the debate over the Senate's effort to repeal and replace Obamacare. The Energy Department earlier this week posted, then deleted, a tweet saying it was time to "discard" the law, with a link to an op-ed on the subject from DOE Secretary Rick Perry.

Energy and Commerce ranking member Frank Pallone (D-N.J.) asked GAO Wednesday to investigate whether Perry or others at DOE violated federal laws relating to lobbying and influencing the public.

Meanwhile, some Republicans back in Alaska said Murkowski's vote was stirring up trouble for her at home, with state GOP Chairman Tuckerman Babcock saying his party is in "full revolt."

"I think among Republicans it is causing tremendous damage," Babcock said in a phone interview Thursday, citing "a grass-roots swell" of comments on Facebook pages for the party, Murkowski and Sullivan. "It's evident to me that the Republicans [in Alaska] are in full revolt over the idea that these promises aren't going to be kept."

He added that Interior's ownership of so much of Alaska raises the stakes of any clash with Zinke.

"What the secretary of Interior does will have a major impact on Alaska. He's absolutely vital to moving forward with the development of the coastal plain at ANWR, National Petroleum Reserve on the Western North Slope, building the road from King Cove, the land exchange that Congressman [Don] Young has gotten through the House of Representatives," Babcock said.

"I'm just hitting the tip of the iceberg on how important a cooperative relationship is with that department."

Bishop defends Zinke pressure on Alaska senators Back

By Esther Whieldon | 07/27/2017 04:45 PM EDT

House Natural Resources Chairman Rob Bishop today defended Interior Secretary Ryan Zinke's recent call to Sen. Lisa Murkowski (R-Alaska) in which the secretary reportedly threatened to pull his support for energy and public land issues Murkowski cares about after she voted against taking up a bill to repeal Obamacare.

"That is not unprecedented, [he] has a right to do that," Bishop told reporters in the Capitol. Bishop said former Interior Secretary Sally Jewell would call him "complaining about some things that we were doing."

Bishop said President Barack Obama in 2009 had members of his Cabinet press senators over funding for F-22s in a defense authorization bill.

"When Obama sent his cabinet to lobby the Senate for a week on F-22, you don't think there was bullying and threatening that was going on with that? ... Come on, this has happened all the time," Bishop said. "There is nothing unique about this, there is nothing new about this. ... This is tradition."

Democrats are demanding an investigation into Zinke's calls to Murkowski and fellow Alaska Sen. Dan Sullivan.

Senate Appropriations approves $38.4B energy and water spending bill Back

By Annie Snider and Darius Dixon | 07/20/2017 01:10 PM EDT

The Senate Appropriations committee sent its $38.4 billion energy and water spending package to the floor with limited amendments.

On a 30-1 vote, the committee advanced the measure, which rebukes the Trump administration by providing $330 million for the Advanced Research Projects Agency-Energy and increases funds for DOE's science office and delivering record funding for the Army Corps of Engineers after the president's budget recommended steep cuts. However, the bill slashes DOE's contentious loan program and includes no funding for the Yucca Mountain nuclear waste project.

The sole no vote came from Sen. Lindsey Graham, who pressed his fellow appropriators to reconsider their decision to nix funding for the troubled MOX nuclear project in his home state. The South Carolina Republican said he would withhold an amendment related to the project until the energy and water measure reaches the Senate floor.

The manager's package approved by the committee includes a provision from Sens. Dick Durbin (D-Ill.) and Tammy Baldwin (D-Wisc.) to require the Army Corps of Engineers to release within 30 days of passage a draft plan for keeping Asian carp from reaching the Great Lakes, which was stalled by the Trump administration amid worries from the navigation industry.

Another amendment, from Sens. Steve Daines (R-Mont.) and Jeff Merkley (D-Ore.) would lift restrictions on the use of water that was moved via federal water projects for industrial hemp cultivation.

WHAT'S NEXT: The energy and spending measure heads to the full Senate for consideration, where it is expected to be one of the first appropriations measures taken up.

Pity Paul Ryan: Moderates adopt Freedom Caucus tactics Back

By Rachael Bade | 07/27/2017 05:11 AM EDT

Moderate Republicans have watched for years as conservative hard-liners tanked legislation in the House — all while dutifully falling in line with leadership and being knocked as "squishes" by some of their colleagues.

But lately, some in the centrist Tuesday Group have started to adopt the power-in-numbers strategy of the Freedom Caucus. And the get-tough approach is yielding results.

Resistance from moderates almost torpedoed the House Obamacare replacement this spring, and resulted in billions in additional funding to help people with pre-existing conditions — a

requirement for some centrists' support. Earlier this month, they banded with Democrats to sink two controversial amendments overwhelmingly supported by their GOP colleagues, including one barring the Pentagon from spending money on gender reassignment changes for troops.

Centrist Republicans have also told Speaker Paul Ryan they will not back a budget without a broader spending deal with Democrats. And this week, they helped crush a rank-and-file effort to pass a massive GOP appropriations package full of goodies for the base but that has no chance of passing the Senate. The spending bill was extremely popular with most of their Republican colleagues, infuriating those who supported the plan.

Tougher tactics from centrists will exacerbate Ryan's already-difficult job of wrangling his fractious conference. The Wisconsin Republican and his leadership team find themselves twisted in knots trying to find 218 votes to pass almost anything of consequence. Now they'll need to take more seriously the demands of vulnerable swing-district members as well as rabble-rousers on the right.

"I think there's a lot of us who are like, 'Don't put us in a position of having to vote for something that has tremendous political risk to us and, substantively, is just done for negotiation purposes,'" said Rep. Thomas Reed, one of several centrists who told leadership he would not back the 12-bill spending package.

Lacking the votes, leadership is set to pass a slimmed-down, less controversial measure that funds the Pentagon and a few other agencies.

It's quite a change for the House GOP. Tuesday Group members are typically leadership's greatest sympathizers, always more eager than their ideologically driven colleagues to show that Republicans can govern.

Take Reed for example. By all accounts, the New York Republican has always been considered a leadership ally. He helps muscle votes as a deputy whip, and he boasts a prized panel post on the powerful Ways and Means Committee.

But when Ryan and his team came up short on votes for their GOP spending package, Reed told them to look elsewhere for help. The fourth-term centrist said he's sick of taking tough votes for the team, then reeling from the political fallout back home — only to see the conservative plan die in the Senate.

"I think there is some frustration in a sense that we came here to govern," he said. "And to go through these exercises? ... I don't see a path to the finish line, and I don't see the strategy."

The Tuesday Group hasn't gone as far as the Freedom Caucus, of course. It's not churning out official positions against legislation and certainly isn't as vocal as the conservatives, who have nearly perfected their no-holds-barred tactics.

But GOP insiders said the change is notable, albeit subtler. For instance, most Republicans were shocked and furious when moderates sank the amendment on transgender troops during the

defense authorization bill in early July. Moderates knew what was coming, whispering among themselves on the floor in a loosely laid plan to bring it down.

Before President Donald Trump on Wednesday announced a ban on transgender people serving in the military, some Republicans had been trying to persuade GOP leaders to do an end run around the moderates and tuck the amendment into the bill using a procedural loophole.

Sources say Tuesday Group leaders Elise Stefanik of New York and Charlie Dent of Pennsylvania were adamant that leaders better not go there. And centrists made it clear that if a ban on gender reassignment surgery was included, moderates wouldn't hesitate to take down the entire "minibus" measure of spending increases for the Pentagon.

Moderates also recently sunk a controversial amendment on Islam from Rep. Trent Franks of Arizona. It would have instructed the Pentagon to, essentially, make a list of good and potentially bad Muslim thought leaders. Moderates, who worried about religious profiling, put their foot down, rejecting the proposal with Democrats in a defeat that stunned opponents of the text.

"I think a lot of members have learned from observing others," said centrist Republican Carlos Curbelo of Florida, referring to the Freedom Caucus.

On the GOP spending package, Curbelo continued: "Everyone knows that at the end of the day we're going to need a bipartisan deal and a bipartisan spending package, so let's get it done and focus less on messaging."

Rep. Dave Reichert, a centrist Republican from Washington, argued that moderates like him are the so-called Majority Makers. And since Republicans' hold on the House hinges entirely on them keeping their seats, they shouldn't be subject to controversial votes that could haunt them on the ballot.

That, Reichert said, is already happening too often: "I think that there are some members who feel like a certain group of people within the conference are taking some votes that they don't necessarily need to take... certain votes that might be bills that divide our constituency that we represent in our districts."

At some level, moderates have a certain amount of leverage conservatives don't — even if they've rarely used it. Leadership relies on them to support must-pass, often-controversial legislation that the far right refuses to back, including votes to avert government shutdowns.

This fall, House Republican leaders will look to these very members to help raise the debt ceiling since a majority of the GOP Conference likely won't be on board.

"They rely on us to achieve outcomes that they can't always advocate themselves, OK? And please, use that on the record," said Dent, who's often referred to as the ringleader of the GOP's centrist flank.

Moderates say they'll be ready to support GOP leaders when they take steps toward bipartisan solutions. But until then, they can expect more resistance from the center.

"I know how to push the red button," Dent warned.

Tax reform: Is that all there is? Back

By Nancy Cook and Aaron Lorenzo | 07/27/2017 07:21 PM EDT

The White House, Treasury and congressional leaders issued a six-paragraph statement Thursday that tried to show off their commitment to pursuing tax reform without delving into any policy specifics.

The only problem? Tax overhauls live and die on details — and their absence, after months of weekly meetings aimed at achieving consensus, showed that the GOP's dream of achieving tax reform may be years from completion.

Missing from the "Big 6" leaders' statement were details such as what rates Republicans think major corporations, the wealthiest individuals and the middle class should pay. Also unresolved were the status of the estate tax and the fate of prized tax breaks, such as the ability to deduct business interest and state and local taxes.

It was even briefer and less detailed than the one-page tax proposal that the Treasury Department and White House released in April, which drew widespread criticism at the time for being too short.

The lone policy detail Thursday came in paragraph five when, after urging Congress to take the lead in writing tax legislation in the coming weeks, the group collectively killed off the so-called border adjustment tax, a pet project of House Speaker Paul Ryan and Ways and Means Chairman Kevin Brady (R-Texas).

The border tax, which would have applied to goods brought into the U.S., was one of the key ways that House tax writers had devised to pay for the lower rates that President Donald Trump covets, particularly his desire to reduce the corporate tax rate to 15 percent. Supporters had estimated that the border tax would bring in as much as $1 trillion over the coming decade that could have offset cuts elsewhere. But it prompted fierce opposition from retailers, other import-dependent industries and conservative activists.

A House leadership aide said Ryan dropped the idea willingly.

"His top priority is getting meaningful tax reform done," the aide said. "He had no interest in

holding up reform over this one policy, no matter how right he believes it to be."

Border adjustment had to go now for the good of demonstrating consensus to constituents during August, rank-and-file Ways and Means members said.

"There is not question that this provision was controversial," said Rep. Carlos Curbelo (R-Fla.), adding that "Kevin Brady is not a my-way-or-the-highway kind of guy."

But some people who had been awaiting the statement expressed deep disappointment with the results.

"This literally started as principles yesterday and morphed into mindless pablum in 24 hours," said one tax lobbyist, disappointed by the statement's brevity.

"A few vague paragraphs isn't even a 'broad strokes' proposal — it's more like finger painting," Rep. Sander Levin (D-Mich.) said in a statement.

Among other things, the death of the border tax leaves open the question of how the administration and Congress plan to offset deep tax cuts, as well as how low they intend to bring rates.

"The big pieces are simplification and helping take off relief for the middle class," White House press secretary Sarah Huckabee Sanders said during Thursday's briefing. "Those are big places we are really focused. We will continue to do that. As you saw from the statement, the border adjustment tax was taken off the table. That's another big step forward in the process."

Besides Ryan and Brady, Treasury Secretary Steven Mnuchin, Senate Majority Leader Mitch McConnell, Senate Finance Chairman Orrin Hatch (R-Utah) and National Economic Council Director Gary Cohn signed the statement.

The joint statement gave no details as to how the leaders planned to address middle-class anxiety through the tax code.

That lack of specificity underscored the difficulties of the revenue and policy battles ahead. And Republican lawmakers know it.

"That makes the conversation more difficult because we all now — 50 out of 52 of us — have to agree on some number for short-term deficits," said Sen. Tim Scott (R-S.C.), a Finance Committee member.

He and others on the panel see rate reduction as the key to unlocking more economic growth for the U.S. But the joint statement's lack of rate targets for companies and individuals indicates that the leaders acknowledge that Trump's 15 percent business tax goal would be too expensive.

It also indicates that other options for taxes on international income remain in play, such as a minimum tax favored in the Senate. The idea hasn't proven popular in the past, but Congress is

under pressure to address corporations' motivations to shelter their money overseas instead of bringing it back to the U.S.

As part of a switch to a territorial tax system, the minimum tax would affect the profits that U.S. companies book in foreign tax havens. It's likely to face opposition from the pharmaceutical and technology industries that now enjoy low effective tax rates.

To some analysts and lobbyists, the statement also seemed to sideline the idea of letting all businesses immediately write off all new investments, known as full expensing.

In the meantime, the six principals who signed the statement will play a steering role as committee staffers begin drafting legislation over the coming recess. That coordination is meant to keep the process within the broadly agreed framework so that a unified plan emerges in September — avoiding the kind of disjointed effort that's plaguing Republican efforts to upend the Affordable Care Act.

PHOTOS: Pruitt Continues State Action Tour in Colorado

DENVER (August 3, 2017) — U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt continued his state action tour in Colorado today, marking the seventh state visit in three weeks.

"There is now hope and optimism for farmers, ranchers and agribusinesses across the country. Two years ago, senior EPA officials with the previous Administration visited Frasier Ranch promising this same audience that agriculture would experience no adverse effects by the 2015 WOTUS rule," **said EPA Administrator Scott Pruitt**. "Unfortunately, that couldn't have been further from the truth. Today, I returned to the farm to ensure Coloradans regulatory certainty and return traditional oversight back to the states and prioritize keeping Colorado's water clean."

Administrator Pruitt began his visit by addressing Cloud Peak Energy in Broomfield, Colo. to discuss the Agency's agenda to enact sensible energy policy that promotes environmental stewardship while unnecessarily harming jobs. Following his address, Administrator Pruitt visited Fraiser Ranch in Woodrow, Colo. where he discussed EPA's recent decision to begin the process of redefining the definition of a "Waters of the United States" (WOTUS) rule that would seek to provide regulatory certainty for farmers, ranchers, and land owners and also empower traditional regulatory roles for state governments.

EPA Administrator Scott Pruitt discusses WOTUS with Fraiser Ranch employees in Woodrow, Colo.

EPA Administrator Scott Pruitt greets Fraiser Ranch employees in Woodrow, Colo.

Ford Sued Over Chemicals Seeping Into Michigan Groundwater

Posted August 10, 2017, 01:45 P.M. ET

By Alex Ebert

More than 130 residents of Livonia, Mich. are suing Ford Motor Co. for alleged damages caused by the release of cleaning chemicals from a company plant.

The complaint alleges that Ford's release of vinyl chloride and trichloroethylene from the Livonia Transmission Plant endangers more than 90 households, which now have chemicals in their groundwater. The residents seek damages for loss of property value and loss of the use of personal wells (Tenniswood v. Ford Motor Co., Mich. Cir. Ct., No. 17-11941, 8/9/17).

The Aug. 9 lawsuit follows a July consent decree with the Michigan Department of Environmental Quality, under which Ford is responsible for chemical cleanup and monitoring. The release occurred between the 1950s and 1980s, but Ford discovered it in 2014, according to the state's complaint.

Ford's Livonia plant, located in a Detroit suburb, employs about 1,740 people, according to the company's website.

Shawn Collins, attorney for the residents, told Bloomberg BNA the state's lawsuit was prompted by his clients. The residents sent Ford notice in April that since the state had not acted on the pollution, they would sue in 90 days under the Resource Conservation and Recovery Act. The consent decree came 88 days later.

Ford spokesperson John Cangany told Bloomberg BNA in a statement that samples have shown no health risks to residents or drinking water.

"When we discovered the issue, we promptly alerted the MDEQ and the plant's neighbors," Cangany said. "Since then, we have actively worked with the MDEQ and investigated the potential for groundwater contamination, culminating in our settlement with the State of Michigan in July that includes plans for addressing the neighborhood and continued public outreach."

Collins said no confirmed cases of illness are related to the chemical release. However, his firm is investigating an unusually high prevalence of auto-immune diseases in the neighborhood.

Clock Starts Ticking to Keep Chemicals in Commerce

Posted August 10, 2017, 01:56 P.M. ET

By Pat Rizzuto

Chemical makers and importers will have six months to notify the EPA about chemicals they've made over the last 10 years if they want to continue to enjoy access to the U.S. market.

The Environmental Protection Agency will publish its final inventory notification rule (RIN:2070-AK24) on Aug. 11, which starts a 180-day clock for companies to provide that information. The rule, required by the Toxic Substances Control Act amendments of 2016, requires that the EPA establish two lists: an active inventory of chemicals that have been in commerce since June 21, 2006, and an inventory of chemicals that used to be in commerce but currently are dormant.

Only chemicals on the active inventory can continue to be made in, imported into, or used in the U.S. once the agency establishes the list. That means companies that use chemicals to make cars, airplanes, semiconductors, cleaners, and a myriad of other products may want to make sure the chemicals they need remain on the active list.

Chemicals on the inactive inventory could possibly be made and used once again, but only after notifying the agency ahead of time.

Chemical processors—companies that mix chemicals into products such as paint, wax, and kitchen cleaners—can choose to notify the agency about chemicals they use, but they aren't required to. They have up to 420 days after the rule is published to notify the agency if a chemical they use wasn't put on the active chemicals inventory.

Voting Quorum Restored at Federal Energy Regulator

Posted August 10, 2017, 12:38 P.M. ET

By Rebecca Kern

A quorum that the Federal Energy Regulatory Commission needs to vote on key infrastructure projects was restored today when Robert Powelson was sworn in as a commissioner.

Powelson joins Acting Chairman Cheryl LaFleur (D) and Commissioner Neil Chatterjee (R), who was sworn in on Aug. 8.

At least three commissioners are required for the agency to vote on key infrastructure filings and orders, including natural gas pipelines and liquefied natural gas pipelines, contested rate filings, and mergers and acquisitions. At least $14 billion worth of natural gas pipeline infrastructure is awaiting FERC approval, according to the natural gas industry.

The Senate confirmed Powelson, former president of the National Association of Regulatory Utility Commissioners and a commissioner on the Pennsylvania Utility Commission, and Neil Chatterjee,

former energy staffer for Senate Majority Leader Mitch McConnell (R-Ky.), on Aug. 3.

FERC has been without a voting quorum since February, when former Chairman Norman Bay (D) left the agency.

President Donald Trump has nominated two other FERC commissioners—Kevin McIntyre, an attorney with Jones Day, and Richard Glick, Democratic general counsel for the Senate Energy and Natural Resources Committee. Their Senate confirmation hearing is Sept. 7.

$900 Million New York Natural Gas Plant at Critical Juncture

Posted August 10, 2017, 02:39 P.M. ET

By Gerald B. Silverman

Competitive Power Ventures Inc. is at a critical juncture in its plan to operate a 680-megawatt natural gas power plant 75 miles northwest of New York City.

The $900 million plant, scheduled to begin operations in February, is counting on the construction of a pipeline by Millennium Pipeline Co. LLC to supply the natural gas for operations. The state Department of Environmental Conservation is expected to decide by the end of August whether it will grant the permits needed for the pipeline.

The project has been a flash point in the larger battle between environmentalists and companies in the Northeast that contend that more pipelines are needed to meet the region's demand for natural gas.

Pramilla Malick, chairwoman of Protect Orange County, a leading opponent of the natural gas plant, told Bloomberg BNA Aug. 10 that Competitive Power Ventures put "the cart before the horse" by building the plant before the pipeline received the necessary permits.

She said the plant could not operate without the pipeline and should be "mothballed."

80 Percent Complete

But Chapin Fay, a spokesman for the company, said the plant will open in 2018, with or without the state's approval of the pipeline. He said the plant is about 80 percent complete.

"There is little to stop us from opening in February, when we can run on diesel," he told Bloomberg BNA in an Aug. 10 email. "The only real issue is the pipeline permit, which we believe we will get from [the Federal Energy Regulatory Commission], if not from DEC. It would mean we operate on diesel until we get approved and built."

The natural gas plant, which is backed by a coalition of business and labor groups, will generate $1 billion in economic activity over 10 years, including lower energy costs and new jobs, according to the company.

A number of environmental groups oppose the plant and the pipeline because of its impact on greenhouse gas emissions, including methane and carbon dioxide. Malick said the plant will have carbon dioxide emissions of 4.7 million tons per year, which would raise total carbon emissions from the state's power sector by more than 10 percent.

Protect Orange County and other groups also oppose the plant because it will rely largely on natural gas transported from states that permit high-volume hydraulic fracturing, known as fracking. New York has banned fracking.

Federal Scientists Say Climate Change No Hoax, Refuting Trump

Posted August 10, 2017, 01:46 P.M. ET

By Christopher Flavelle

Less than a week after President Donald Trump notified the United Nations of his intent to exit from the Paris climate accord, his government's chief science agency released a report demonstrating that global warming is real and getting worse.

The report, prepared by almost 500 scientists from around the world, shows that last year's average global temperatures were the highest ever recorded. There were more major tropical cyclones than usual, longer droughts, and less snow cover. After years of increasing, Antarctic sea ice declined, undercutting an argument by those who dispute the science of global warming.

"The major indicators of climate change continued to reflect trends consistent with a warming planet," said the report, which was edited by Jessica Blunden and Derek S. Arndt of the National Oceanic and Atmospheric Administration.

Reports, such as the NOAA-supported one released Aug. 10 in the Bulletin of the American Meteorological Society, are "hard to dodge," according to David Schnare, who worked for a short time at the Environmental Protection Agency under Trump and wants the administration to abandon any efforts to tackle climate change. He said this and other federal reports documenting the severity of climate change could make it harder for the EPA to reverse its 2009 finding that carbon dioxide emissions pose a danger to the public.

Trump has labeled climate change a "hoax," and members of his administration have downplayed the impact that burning fossil fuels is having on the Earth and its changing weather patterns.

While Trump's administration seeks to unwind federal policies to address climate change, local governments are being forced to act. Nick Crossley, emergency management director for Ohio's Hamilton County, which includes Cincinnati, said his agency dealt with more flash flooding than usual last year.

"Some call it climate change; some call it something else," Crossley said in a phone interview. But whatever you call it, "it's putting a strain on local resources."

Crossley, who is also vice president of the International Association of Emergency Managers, said his counterparts around the country are dealing with similar problems. He said that while federal reports documenting the extent of climate change might not capture the public's attention, they can help persuade local officials to better prepare for future storms, floods, and other challenges.

Those steps can include building storm-resistant infrastructure, and helping people who live in vulnerable areas move someplace else.

One of the surest signals that local governments are taking climate change seriously is that they're

looking for new ways to pay for it. In South Florida, which is struggling with both rapid sea-level rise and an increase in flooding, the city of Coral Gables is looking for ways to start saving now for higher stormwater-managements costs.

"The earlier you do stuff, the easier it is to prepare," said Abby Corbett, a lawyer who specializes in climate adaptation and is advising Coral Gables. She said that while cities in South Florida have long had to cope with flooding, climate change could cause people to leave, shrinking the city's tax base.

"It may be that we have to struggle with revenues, just as costs are increasing," Corbett said.

Local officials aren't the only ones trying to cope with the effects of climate change. The accumulation of scientific data on global warming has put pressure on the U.S. coal industry, which is already suffering because of competition from cheap natural gas prices and renewable energy. It increasingly has to deal as well with the perception that coal is ruining the planet.

"I don't think the public is in the dark" about the scientific consensus on climate change, said Luke Popovich, vice president of the National Mining Association, which represents coal companies. He asked why the U.S. should reduce its own coal use when other countries, chiefly China and India, continue to burn it. And he said that for most people, climate change remains low on their list of worries.

"No matter how much information comes out of NOAA, it is not going to help put more pressure on the U.S. to do more," Popovich predicted. "We've got a hell of a lot of other problems to address."

Trump Is Said to Be 'Really Interested' in Payments for Coal Use

Posted August 10, 2017, 8:58 A.M. ET

By Tim Loh

West Virginia Governor Jim Justice said Donald Trump is "really interested" in his plan to prop up Appalachian mining by giving federal money to power plants that burn the region's coal.

Justice, a coal and real estate mogul elected governor last year as a Democrat, announced at a West Virginia rally alongside President Trump last week that he's becoming a Republican. Justice has recently spent a "goodly amount of time" meeting one-on-one with Trump and has liked the feedback to his pro-coal proposal. The plan calls for the Department of Homeland Security to send $15 to eastern U.S. utilities for every ton of Appalachia coal they burn.

"He's really interested. He likes the idea," Justice said in a phone interview on Aug. 9 when asked about Trump's reaction. "Naturally, he's trying to vet the whole process. It's a complicated idea."

In Justice's eyes, the coal payments will be necessary because Trump's moves to roll back regulations on the Appalachian coal industry won't be enough to preserve it. The Appalachian coal sector has been shrinking for years as companies are forced to spend more money to access harder-to-reach seams of the fossil fuel. Meanwhile, competitors in regions including the Illinois Basin and Powder River Basin of Wyoming and Montana have much thicker coal seams that are cheaper to get to.

Critics say such a proposal would be expensive and misguided. U.S. power plants burned at least 110 million short tons of Appalachian coal in 2016, according to Andrew Cosgrove, an analyst at Bloomberg Intelligence. A payment of $15 for each of those tons would cost at least $1.65 billion.

Justice said he's discussed the plan with, among others, Department of Energy Secretary Rick Perry, Vice President Mike Pence and Jared Kushner, Trump's senior adviser and son-in-law.

Asked whether Trump is considering Justice's plan to prop up the coal industry, White House spokeswoman Kelly Love said there's nothing to announce at this time.

Too Reliant

While Appalachian coal production is up this year, if there's another "downtick" it'll cause a spate of bankruptcies, mine closures, and layoffs that could be impossible to recover from, Justice said.

At the heart of his pitch, Justice argues that the country is becoming too reliant on natural gas for power and it's not enough to supplement that with coal from the Midwest and West.

Justice rejects the notion that his plan amounts to a "bailout" or "subsidy" for Appalachian coal. Rather, it's a matter of national security, he said, because terrorists could easily blow up important gas pipelines or derail freight trains shipping coal to the east, leaving large swaths of the country lacking power-plant fuel.

'Absolute Chaos'

"Can you imagine what would happen if we lost the power in the east for a month, or two months, or three months?" Justice said. "It would be like a nuclear blast went off. You would lose hundreds of thousands of people. It would be just absolute chaos beyond belief.''

Justice insisted that renewables could one day be the primary source of U.S. electricity generation, but says he's not sure whether that'll come in 10, 20 or 30 years.

"This may very well be a temporary fix, a temporary security blanket," he said. "But today we don't have the renewables in place. And today, we cannot lose our eastern coal fields."

While it's legitimate to worry about the reliability of the U.S. power grid, the decline of the coal industry isn't raising much of a threat at a time of cheap and abundant gas and fast-growing wind and solar power, said Jason Bordoff, director of Columbia University's Center on Global Energy Policy.

It's "unfortunate and irresponsible" to float a policy idea like this, Bordoff said, when U.S. and global forces are causing a structural decline in the Appalachian coal sector and communities need to diversify local economies.

Disclosing Monsanto Messages Could Cost Lawyers in Lawsuit

Posted August 10, 2017, 11:41 A.M. ET

By Tiffany Stecker

Lawyers for cancer victims suing Monsanto could be booted from the case after disclosing confidential documents detailing the pesticide manufacturer's communications with regulators and scientists.

U.S. District Court Judge Vince Chhabria told the lawyers Aug. 9 that posting 75 instances of emails and text messages allegedly showing Monsanto influencing scientists and regulators on the safety of their Roundup herbicide appears "to have violated the requirement that lawyers work with opposing counsel in good faith" (In re Roundup Products Liability Litigation, N.D. Cal., No. 3:16-md-02741, 8/9/17).

The firm Baum, Hedlund, Aristei, and Goldman PC must now show by Aug. 14 why the firm should remain one of the leaders in coordinating the litigation, and why it shouldn't pay penalties. More than 1,000 people are suing the company in state and federal courts, saying Roundup exposure caused their non-Hodgkins lymphoma.

Baum Hedlund is one of the firms responsible for consolidating the cases in the U.S. District Court for the Northern District of California. Starting over with new attorneys would be a big setback for the plaintiffs.

The other plaintiffs' firms also must tell the court why they should not be replaced as a result of Baum Hedlund's actions. The court will hear arguments on the matter Aug. 24.

Baum Hedlund posted the correspondence on Aug. 1, saying that Monsanto missed a deadline to extend the protective order. The company disputes this, saying that plaintiffs did not have proper grounds to lift the confidentiality seal on the documents, and that the judge specifically denied that certain files be made public. The documents have been widely covered in media reports, and may remain online until at least Aug. 24.

"You can't unring the bell," Scott Partridge, vice president of global strategies for Monsanto, told Bloomberg BNA. "To repair the violation is impossible."

Managing partner Michael Baum said in a statement that the firm will respond to the court's order to show cause.

EPA Issues Checklist for State Coal Ash Permit Programs

Posted August 10, 2017, 11:20 A.M. ET

By Emily McCormick (Bloomberg) and Sylvia Carignan (Bloomberg BNA)

States and Indian tribes now have details on how to develop EPA-approved coal ash disposal programs.

States had long been aware that their coal ash disposal programs must be at least as protective as federal standards, but had received few additional details until the Environmental Protection Agency released guidance Aug. 10. The EPA announced in May it was developing a framework for those programs.

The guidance responds to inquiries about the provisions of Water Infrastructure Improvements of the Nation Act, enacted in December, to allow states to be chief regulators over coal ash through EPA-approved state permit programs.

To gain federal approval, states must be able to show they can determine whether coal ash storage owners and operators are complying with state requirements. States also must show they can monitor or test them for compliance, and can enter sites for inspections, sampling or to review operation records.

According to the interim guidance, the EPA generally expects states to develop permit programs before seeking federal approval, but has not set deadlines for any of those actions. The agency expects to update the guidance document as its receives feedback from states.

The 2016 Water Infrastructure Improvement for the Nation Act delegates coal ash disposal permits to states. EPA has 180 days to act on a state's application for approval and must provide an opportunity for public comment.

The EPA promised states a "swift" review of their programs in May.

World's Biggest Coal Shipper Talks a Lot About Electric Cars

Posted August 10, 2017, 7:40 A.M. ET

By Thomas Biesheuvel

Glencore Plc might be the world's biggest exporter of coal, the dirtiest fuel, but the mining giant is increasingly excited about electric cars.

"It looks like it's going to be the big growth area, no doubt," Ivan Glasenberg, Glencore's chief executive officer, said on a call with reporters August 10. "It's an area people definitely have to get into."

Battery-powered cars and gasoline hybrids are poised to grow so fast that by 2040 they'll make up more than half of vehicles sold globally, according to estimates from Bloomberg New Energy Finance.

Electric cars contain about three times more copper than a regular vehicle, according to Glencore. Even more is needed for charging stations, with Exane BNP Paribas predicting infrastructure will add about 5 percent to demand by 2025. Lithium, cobalt, graphite and manganese used in batteries will also see additional demand.

The battery in an electric car contains about 38 kilograms of copper (84 pounds), 11 kilograms of cobalt and 11 kilograms of nickel, according to Glencore.

The outlook for greener transportation got a boost this year after the U.K., France and Norway said they would ban sales of fossil-fuel cars in coming decades. Volvo AB has also announced plans to abandon the combustion engine and Tesla Inc. will soon sell its cheaper Model 3.

Glencore, a major producer of cobalt, copper and nickel, is not the only miner lining up to take advantage of the growth. The world's biggest miner, BHP Billiton Ltd., is looking to boost nickel supply.

"From the tough period we've just been through, people don't have big plans for new greenfield operations and this bodes well for the prices in these commodities," Glasenberg said. "It's going to be hard to grow in these areas."

At the same time, Glencore is also increasing its coal bet. The company recently agreed to pay $1.1 billion plus royalties for a large stake in an Australian coal mine.

Its pursuit of coal contrasts with other major miners such as Rio Tinto Group, who have moved away from the most polluting fuel. Glencore has consistently said that coal is essential to the needs of the developing world in the long term, especially in Asia.

Still, Glasenberg sees electric vehicles and coal as a win-win situation.

"You have to power these electric vehicles from the grid," Glasenberg said. "The amount of power that you have to throw into these electric vehicles when you're charging them, we definitely need more power supply."

Peter Grauer, the chairman of Bloomberg LP, is a senior independent non-executive director at Glencore.

America's Power Plant Jobs, Ignored by Politicians, Are Dying

Posted August 10, 2017, 7:59 A.M. ET

By Naureen S. Malik and Tim Loh

A couple months ago, Donald Trump was cheering a new coal mine in Pennsylvania that will put 70 people to work—good news for a president whose pledge to revive the industry helped get him elected. But a bigger group of coal workers has already suffered sweeping job cuts, and it's bracing for more.

Coal-fired power plants employ more people than mines, and they're shutting down all over the country. Cheap natural gas, the rise of renewables backed by tax credits, and subsidies for nuclear energy will likely combine to keep the trend going—and leave more people like Lynnette Faje out of work.

Faje had spent more than a quarter century at an Illinois-based power company that's owned today by NRG Energy Inc. She had survived two buyouts and had spent her final three years at the company as a laborer on the plant floor after her office position was cut. She found out her $23.50-an-hour job was being eliminated entirely while taking minutes one day at a local union meeting.

"Pretty much everything I've worked for my whole life is pretty much gone," Faje, 51, said. She voted for Trump, and wants to go back to work at a coal plant, but sees little chance of that

happening. Contractors have been hired to do her old job now and she's found work on the overnight shift at a candy factory, earning 28 percent less an hour than she did at NRG to watch Baby Ruth bars roll by on the conveyor belt.

'Going to Zero'

Coal-fired plants employed 86,035 people in the U.S. last year. That may not seem like a huge amount in a country of some 150 million workers but it's 16 percent more than the number employed at mines, according to the U.S. government. It's also a younger and more diverse workforce, with women making up more than a third of it, and ethnic minorities about a quarter.

Curiously, they haven't gotten nearly as much attention as the miners -- even though their numbers are shrinking fast. And coal comebacks like the one Trump hailed in Pennsylvania won't help them. Corsa Coal Corp.'s venture there is digging up metallurgical coal, which is used in steelmaking and often exported.

Under Trump, the Environmental Protection Agency is making efforts to save some of the coal-plant jobs by scaling back emissions regulations. But most experts expect more plants to shutter as new gas-fired units come online and costs keep plunging for solar and wind power. Some coal plants are being converted to gas, which still involves layoffs because gas generators typically employ about half as many people.

"All the power market people that I know, we all think coal is going to zero," said Alex Elsik, chief executive officer of Geosol Capital LLC, a Houston-based hedge fund. In the power market that the Chicago plants are part of, the cost of generation with coal is about 50 percent higher than with gas, he said.

If there's a sliver of hope for the industry, it may lie in a burgeoning debate among regulators and grid operators about the need to preserve fuel diversity.

Polar Vortex

The International Brotherhood of Electrical Workers has been pushing that case in Washington, according to Donnie Colston, director of its utilities department. A much-cited example is the polar vortex that froze the U.S. in early 2014. Gas prices surged to record highs in New York, and the PJM Interconnection grid—serving a fifth of the country's population, from the Midwest to the mid-Atlantic—lost 22 percent of its generation assets. Keeping some coal capacity can mitigate such risks.

Coal plants are "life-limited over time, but for the present, coal plants will continue to be needed for reliability and fuel diversity," David Gaier, a spokesman for NRG, said by email.

Still, last month saw a string of announcements that's left a growing group of coal-power workers uncertain about their future.

Faje's former employer, NRG, plans to overhaul its entire business to slash debt and costs, with about 4 percent of savings coming from plant payroll, though it didn't say how many jobs would be cut. American Electric Power Co. is closing almost all of its coal plants in Ohio and is exploring strategic alternatives for the last two. It's already cut about 670 jobs, more than a fifth of the coal-plant workforce, since 2015.

Deep Discounts

The Texas power market is so depressed that all but two of the state's 15 coal generators are losing money, according to energy-focused investment firm Tudor Pickering Holt & Co. Houston-based Calpine Corp. may be on the verge of a buyout by a private-equity firm, a process that's kept plants alive in other states, but one that typically leads to staffing cuts. In a sign of how desperate some power companies are to get rid of their beleaguered coal units, they are being offered up at less than 10 percent of replacement cost.

Coal-plant shutdowns ripple across many other industries too, starting, of course, with the miners. Power generators accounted for 87 percent of U.S. demand for coal last year, according to analyst Wood Mackenzie Ltd. Temporary jobs in plant maintenance will be lost too. Generators need regular overhauls, and even small outages require hundreds of workers.

The big ones that take place every three to four years can involve a team of thousands. By contrast, gas-fired plants have few outages.

Faje says she's hearing a growing number of the personal stories that lie behind some of these numbers.

She recently found out that a former colleague had died after a battle with depression, and wrote a Facebook post in his memory. Others stepped forward with their own anxieties, about losing their homes, working longer hours and toiling under increasingly dangerous conditions as the industry's cost-cutting measures strain workers.

NRG's Waukegan plant north of Chicago had its own recent scare. One day in June, powdered coal ignited, triggering an explosion. No one was hurt but workers were spooked, according to an employee who asked not to be identified for fear of retaliation.

Later that month, a celebration was held at the Waukegan plant to commemorate 314 injury-free days. Bakers Square pies were spread across the lunchroom -- apple and cherry and blueberry. The staff wasn't in the mood, though, the worker said. The explosion was still on everyone's mind, and most of the pies were left untouched.

Brazilian Bank Issues Record Grant Money to Guard Amazon

Posted August 10, 2017, 11:10 A.M. ET

By Michael Kepp

Brazil's Development Bank issued a public call Aug. 9 for projects eligible to receive an unprecedented 150 million reais (US $47.5 million) in grants from a fund dedicated to preserving the Amazon rainforest.

The bank (BNDES) is doubling its efforts to solicit environmental projects, after the bank awarded a combined $42.8 million in grants to 15 projects in 2012 and 2015.

It's the latest public call is the largest award to projects since the bank set up the Amazon Fund in 2008, Juliana Santiago, the BNDES director of the Amazon Fund, told Bloomberg BNA Aug. 9.

The bank's solicitation comes at a time when Norway—the biggest contributor to the Amazon Fund's $1.135 billion supply— is reducing its contributions after the country's Ministry of Climate and Environment announced in June that Brazil's commitment to environmental protection "might be in retreat."

Germany has contributed $28 million to the fund. Norway will contribute a maximum of $35 million in 2017—only about one-third of its yearly average—because of a spike in Brazilian Amazon deforestation rates, the ministry said.

Projects eligible for grants must focus on the conservation and sustainable use of the Amazon, and will be awarded in April 2018 with grants of $3.6 million to $9.5 million.

The BNDES has committed $565 million worth of Amazon Fund grants, around half the $1.135 billion in donations it has received, and has disbursed most of it. But only $90.3 million in grants have been awarded based on public calls for project submission proposals.

Enforcement

Around $475 million of the $565 million has been for larger projects outside of the bank's calls for projects, mainly for enforcement of Amazon protection efforts.

In November 2016 the BNDES agreed to give IBAMA, the enforcement arm of the Environment Ministry, $17.8 million from the fund to pay for leasing helicopters and four-wheel drive vehicles, the second such award to IBAMA, which normally operates with government funds.

The BNDES will soon issue another public call for Amazon Fund projects to reforest the rainforest, eligible for an additional $47.6 million, Santiago told Bloomberg BNA.

Pesticides
Bee Pesticide Ban Debate Could Arise in Next Farm Bill
Rep. Earl Blumenauer (D-Ore.) wants to include a ban on pesticides linked to declining bee health in next year's farm bill, one of several initiatives he is pushing in the legislation to reauthorize agriculture and nutrition programs.

News

Air Pollution
Germany Considering Fund to Pay for Reducing Diesel Emissions
Chancellor Angela Merkel's government is considering setting up a fund to help pay for programs to cut diesel emissions as cities consider bans and allegations of cheating by German automakers cast doubts on the survival of the technology.

Brownfields
Brownfields Funding Bills Advance to Floor on Bipartisan Effort
Brownfields bills headed to the House and Senate floors would continue funding projects that put contaminated land back into productive use.

Climate Policy
Ontario's 'Green' Building Code Could Cause Sticker Shock
Construction costs could rise in Ontario for contractors and their customers under proposals to "green" the province's building codes.

Coal Mining
House Bills Easing Coal Industry Burden Likely to Move in Fall

Two House bills intended to ease regulatory burdens on the coal industry appear to be the next pieces of environmental legislation that the Natural Resources Committee will take up following the August recess.

Congress

Russia Sanctions Bill Passes Senate With Limits on Trump

The U.S. Senate gave final approval to legislation strengthening sanctions on Russia and giving Congress the power to block President Donald Trump from lifting them, setting up a possible clash with the White House.

Contribution

Expert Pins Down Car Dealer's Superfund Liability

A car dealership's affidavit is no match for an expert opinion that waste from the business contained hazardous materials, the Southern District of Texas ruled July 26 (USOR Site PRP Grp. v. A&M Contractors, Inc., 2017 BL 259050, S.D. Tex., No.14-cv-2441, 7/26/17).

Drinking Water

Water Infrastructure Bill Draws Bipartisan House Panel Support

The House this fall is expected to take up a rare bipartisan bill involving the Environmental Protection Agency.

Electronic Commerce

Amazon-Like Marketplaces Taxed Under Pennsylvania Proposal

The Pennsylvania Senate narrowly approved a proposal that would generate $43.5 million by requiring internet marketplaces like Amazon.com Inc., Etsy Inc., and Ebay Inc., to collect a 6 percent sales tax on third-party sales facilitated through their platforms.

Energy

Alaska Threatened by Zinke on Senator's Health Bill Vote

Interior Secretary Ryan Zinke has threatened Alaska's senators with retribution on major energy and public lands decisions because one of them voted against repealing Obamacare.

Energy

GOP Renews Fight for Edison's Light Bulb as Industry Goes LED

Congressional Republicans renewed their effort to save the traditional light bulb, passing a measure to block federal energy standards that have come to symbolize government overreach for many consumers but are largely embraced by manufacturers as the cost of the newer bulbs has plummeted.

Energy

House Passes Energy Funding, But Stopgap Bill Possible

The House passed a $37.6 billion energy and water spending bill to fund the Energy Department, the Army Corps of Engineers and related agencies as part of a larger spending package with an uncertain future.

Energy

Pipelines Awaiting Approval Pile Up at Federal Energy Regulator

The backlog of natural gas pipelines awaiting Federal Energy Regulatory Commission approval is piling up as the agency enters its sixth month without enough members to approve $14 billion worth of infrastructure projects, and gas suppliers and pipeline companies could face longer-term impacts.

Mergers and Acquisitions

Dow, DuPont Mull Post-Deal Split into More Than Three Companies

Dow Chemical Co. and DuPont Co. are weighing whether to carve out more separate companies following their historic $75 billion merger than the three originally envisioned.

Michigan

Enbridge Energy Wins Oil Spill Appeal

Enbridge Energy is entitled to summary dismissal of illness claims arising from a pipeline rupture that spilled 840,000 gallons of oil, the Michigan Supreme Court ruled July 25 (Lowery v. Enbridge Energy L.P., 2017 BL 258807, Mich., No. SC:151600, 7/25/17).

Motor Vehicles

Volkswagen Gets Green Light for Emissions Fix to Diesel Cars

Volkswagen can begin fixing an additional 326,000 diesel engine cars across the U.S. that included software to cheat on nitrogen oxides emissions tests after the EPA and California signed off on its buyback and repair plan July 27.

Natural Gas

If Petronas Can't Beat U.S. LNG Suppliers, It Could Join Them

By Natalie Obiko Pearson, Ryan Collins and Kevin Orland: Malaysia's Petroliam Nasional Bhd has pulled the plug on its $27 billion plan to ship liquefied natural gas from Canada's west coast to Asia, losing out to U.S. suppliers who got to market first.

Oil & Gas

Natural Gas Severance Tax Bill Passes in Pennsylvania Senate

Natural gas drillers in Pennsylvania would pay a severance tax and consumers will pay higher taxes on natural gas under a proposal the Pennsylvania Senate narrowly approved today. House Bill 542, which passed the Senate 26-24, would levy a severance tax on the extraction of natural gas on top of the state's existing impact fee, which is levied on natural gas producers per well drilled. The bill would also impose a new gross receipts tax on natural gas that will be paid by consumers.

Renewable Energy

Growth-Starved Utilities Have Found a New Way of Making Money

By Chris Martin, Jim Polson and Mark Chediak: There's a new model emerging for growth-starved utilities looking to profit from America's solar and wind power boom.

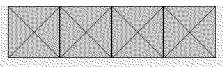
EPA CONTINUES TO WORK WITH STATES ON 2015 OZONE DESIGNATIONS

EPA continues to work with states on technical issues, disputed designations and insufficient information

(WASHINGTON) – The U.S. Environmental Protection Agency (EPA) is moving forward with 2015 ozone designations, working with states to help areas with underlying technical issues, disputed designations, and/or insufficient information. This will help ensure that more Americans are living and working in areas that meet national ambient air quality standards (NAAQS).

"We believe in dialogue with, and being responsive to, our state partners. Today's action reinforces our commitment to working with the states through the complex designation process," said **EPA Administrator Scott Pruitt.**



The Clean Air Act gives EPA the flexibility to allow one additional year for sufficient information to support ozone designations. EPA may take future action to use its delay authority and all other authority legally available to the Agency to ensure that its designations are founded on sound policy and the best available information.

Earlier this summer, it was evident that the Agency would not meet the October 1 deadline to designate all areas, due to underlying complexities, methodological, and informational questions with regard to this new ozone NAAQS standard. For example, the question of whether or not this ozone NAAQS was set so low as to implicate natural "background" ozone levels in some parts of the country has repeatedly been raised.

In June, EPA issued a Federal Register notice announcing that it was delaying its deadline for designations by one year, from October 1, 2017 to October 1, 2018. Previous EPA administrations had repeatedly invoked this statutory power to delay designations for part or all of the country. Today's announcement replaces our earlier action that delayed the Agency's designation deadline on a nationwide basis and clarifies our path forward, so that the Agency can be more responsive to local needs.

"Under previous Administrations, EPA would often fail to meet designation deadlines, and then wait to be sued by activist groups and others, agreeing in a settlement to set schedules for designation," said **EPA Administrator Scott Pruitt.** "We do not believe in regulation through litigation, and we take deadlines seriously. We also take the statute and the authority it gives us seriously."

Today on Climate Beat . . .

. . . we headed West, highlighting a pair of stories about how President Trump's moves on climate change are affecting both sides of the partisan divide in California, including GOP activist pushback against a Republican state lawmaker who voted to extend the state's greenhouse gas cap-and-trade system.

Staying out in the states, we highlighted a new op-ed from a University of Virginia law professor arguing that the Trump administration's efforts to cast its deregulatory agenda as empowering states will stifle rather than promote state innovation in addressing environmental policy challenges because few states are likely to step up.

And back at EPA, we looked at whether the agency's sudden reversal of its plans to delay implementing Obama-era ozone standards is the second strike in Administrator Scott Pruitt's deregulatory agenda, after a court rejected the agency's attempt to pause implementation of methane oil and gas rules.

Subject: D.C. Circuit orders EPA to resume enforcing methane rule

By Alex Guillén

07/31/2017 06:39 PM EDT

The full D.C. Circuit Court of Appeals today ordered EPA to resume enforcing its methane rule for new oil and gas wells, a potentially temporary but important loss for EPA Administrator Scott Pruitt's deregulatory agenda.

A three-judge panel ruled on July 3 that Pruitt improperly imposed a 90-day stay of the rule amid a reconsideration of key leak detection and repair requirements.

The court agreed to keep the stay in place for two weeks to give EPA time to decide on an appeal, a timeline that expired last week. The agency has not asked for an appeal, but industry groups and states critical of rule have. The court ordered responses to those appeal petitions be turned in by Wednesday afternoon, with any further reply due Thursday, indicating the court will move quickly on the appeal.

The order was issued by a 9-2 vote. Judges Janice Rogers Brown, who will retire from the court effective Aug. 31, and Brett Kavanaugh voted against reinstating the rule immediately.

EPA is taking comment through Aug. 9 on a proposed two-year stay of the rule through 2019 and could have it in place by September. That longer-term stay may not face the same legal issues as the 90-day one since EPA will incorporate public comment.

WHAT'S NEXT: The court could decide as early as this week whether to hear an en banc appeal. Pruitt's 90-day stay would expire on Aug. 31 anyway, putting a ticking clock on the court proceedings before the matter becomes moot.

CHARLESTON GAZETTE-MAIL

ICYMI: Sen. Shelley Moore Capito: Trump EPA Bringing Positive Change

Charleston Gazette-Mail
November 27, 2017
Senator Shelley Moore Capito
https://www.wvgazettemail.com/opinion/daily_mail_opinion/commentary/sen-shelley-moore-capito-trump-epa-bringing-positive-change-daily/article_1a739990-2eb7-5a57-a274-d9069e795c83.html

This Tuesday and Wednesday, the Environmental Protection Agency is holding a listening session in Charleston on its proposal to withdraw from the Obama administration's so-called Clean Power Plan.

The Trump administration's decision to withdraw from this plan, and the decision to hear directly from West Virginians, demonstrate a positive change from the job-killing policies of the previous administration.

West Virginians expect federal agencies to follow the law. We want leaders to consider the impact of regulations on jobs and the economy. And, importantly, officials must listen to those Americans who will be most impacted by their decisions. It's clear that this administration and EPA Administrator Scott Pruitt are changing course.

The Clean Power Plan was an effort by the Obama administration to force states to turn away from coal-powered electricity. Congress never gave EPA the authority to implement such a sweeping regulatory change — and that is why the U.S. Supreme Court took the rare step of blocking implementation of the rule before it could take effect.

Legislation I introduced to overturn the rule was passed by both the Senate and the House, but was vetoed by President Barack Obama.

West Virginia is the nation's second-largest coal producing state. Because coal accounts for over 94 percent of electricity generation in our state, West Virginians would have been disproportionately impacted by the Clean Power Plan.

Our state lost thousands of good-paying jobs due in large part to other EPA overreaches. And government budgets at the state and local levels were decimated by the loss of tax revenue that coal has long provided in our state.

But Obama's EPA refused to hold a listening session on the Clean Power Plan in West Virginia.

Instead, the previous administration chose to listen in places like San Francisco, Boston and New York City.

It was clear that Obama's EPA had no desire to hear from the miners, truck drivers, railroad workers, small businesses and many others across coal country whose livelihoods would be most impacted by the rule.

At a Senate hearing, I asked former EPA Air Chief Janet McCabe why the Obama administration chose not to visit West Virginia. She responded that EPA held its public events where it was "comfortable."

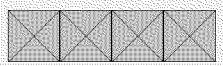
After a difficult eight years, it is refreshing to see that the Trump administration is comfortable listening to the needs of working families here in West Virginia.

President Donald Trump and our Republican congressional majority are rolling back some of the worst regulatory abuses of the previous administration. In February, Congress passed, and Trump signed, legislation to block a last-minute rule proposed by Obama's Interior Department that could have cost thousands of jobs.

Everyone agrees that we need clean air and clean water; still, West Virginians should not be forced to choose between economic prosperity and a clean environment. We expect both.

That is why federal environmental laws like the Clean Water Act, and the Clean Air Act provide for cooperation between federal authorities and state officials. This structure allows states to make decisions that are best for local communities' economic and environmental needs.

The last administration upset that balance in favor of heavy-handed control from Washington. That led more than half the states to follow West Virginia's lead in filing suit against the Clean Power Plan.



Congress and the Trump administration are working to restore the proper balance that enforces our environmental laws while protecting our jobs. And we are already seeing positive results. West Virginia coal production was up 23 percent in the first half of 2017 as compared with the first half of 2016.

The Trump administration is bringing the change to regulatory policy that West Virginians voted for. I welcome the new EPA to Charleston and will continue working with President Trump to keep West Virginia a leading energy producer for generations to come.

But facing blistering criticism that she's out of touch with the progressive left, Feinstein - the oldest member of the Senate - is facing fresh criticism from liberals for her centrist politics."

"Buzz in state political circles increasingly centers on one prospective Democratic challenger, Kevin de Leon of Los Angeles, the first Latino to hold the powerful position of state Senate pro tem in more than 120 years. ... De Leon won national notice last week when he took public umbrage after Feinstein's seemingly conciliatory remarks about Trump. His public rebuff - the toughest from any prominent state Democrat - was pointed: 'This president has not shown any capacity to learn and proven he is not fit for office. It is the responsibility of Congress to hold him accountable - especially Democrats - not be complicit in his reckless behavior.'" **Full story here.**

THE BIG QUESTION - POLITICO's Josh Dawsey and Burgess Everett ask, "Does President Donald Trump want to wallop or woo Democrats?": "Trump's aides have teamed up with the National Republican Senatorial Committee to target vulnerable Democrats and plan presidential travel to help the GOP maintain its congressional majorities during the elections that are 14 months away. ... But, as shown Wednesday, Trump is a wild card - and seems increasingly inclined to work with Democrats. Trump took a soft touch during a tax reform event with Sen. Heidi Heitkamp , who is among the most at-risk Democrats in a state that Trump carried by 36 points in November." **Full story here.**

HAPPENING TODAY - Trump Jr. to meet with Senate: Donald Trump Jr. is slated to meet with the Senate Judiciary Committee today to discuss the Trump campaign's contacts with Russian officials. POLITICO's Darren Samuelsohn reports: "The closed-door session involving aides and senators has long been in the works, though the exact details of when the meeting would occur have remained under wraps until now. Trump Jr. was called to publicly testify before the Senate committee in July, but the president's oldest son instead offered to conduct both a private interview and hand over documents for committee investigators. Alan Futerfas, Trump Jr.'s attorney, confirmed in an email to POLITICO the interview would take place on

Thursday." **Full story here.**

- Darren also reports: "Facebook says Russian-linked accounts bought election ads": "Facebook accounts with apparent Russian ties purchased about $150,000 in political ads aimed at American voters during key periods of the 2016 presidential campaign, according to a new analysis released Wednesday by the social networking company. The internal Facebook findings - which it said in a blog post it had already turned over to U.S. authorities - comes as the Silicon Valley giant faces intense scrutiny from special counsel Robert Mueller and congressional committees concerned about how both real internet trolls and fake news bots preyed on U.S. voters during last year's election." **Full story here.**

- Good government groups immediately looked at the FEC: The Facebook report indicates the agency should be more aggressive on Russian election interference, they argue. "The Commission's intransigence on the issue of curbing the threat of foreign influence in our elections must stop now as this is likely only the tip of the iceberg," Common Cause President Karen Hobert Flynn said in a statement.

Days until the 2017 election: 61.

Days until the 2018 election: 425.

RETIREMENT SIREN - "Reichert to retire from House after this term," by Campaign Pro's Elena Schneider: "Rep. Dave Reichert (R-Wash.) announced he would not run for another term on Wednesday, opening a key pickup opportunity for Democrats for a seat that hasn't backed a Republican presidential candidate in years. ... Reichert, who was first elected in 2004, has frustrated Democrats for more than a decade by holding on to the central Washington seat, even as Democratic presidential candidates continued to win the district." Full story here.

- Of note: The Cook Political Report swiftly moved Reichert's district all the way from "likely Republican" to "toss up" after the announcement.

FIRST IN SCORE - NRSC targets Casey in digital ad: The NRSC is running a digital ad attacking Democratic Sen. Bob Casey as a flip-flopper. "The 2006 Bob Casey is gone," a male narrator says. "The new Bob Casey is just another Washington liberal." The ad notes Casey's 100 percent rating from NARAL and support for Manchin-Toomey. Watch the ad here.

OUCH - "Biss Drops Ramirez-Rosa From Ticket in Bid for Illinois Governor," by NBC5's Mary Ann Ahern and Shelby Bremer: "Biss announced the change to his ticket less than a week after revealing Ramirez-Rosa as his choice for lieutenant governor, and after backlash -

including a lost endorsement - over Ramirez-Rosa's past comments on Israel. Congressman Brad Schneider withdrew his support for Biss' campaign Sunday, citing concerns about Ramirez-Rosa's 'past comments about the United States support of our ally Israel, and his affiliation with a group that is an outspoken supporter of the Boycott, Divestment and Sanctions movement against Israel.' The group Schneider was referring to is the Democratic Socialists of America, a political activism organization that is, according to its website, the largest socialist organization in the country." Full story.

ADS ADS ADS - SLF runs first digital ad against McCaskill: The Senate Leadership Fund launched its first digital ad against Missouri Sen. Claire McCaskill on Wednesday. The ad, backed by a $5,000 buy, focuses on last spring's flap over McCaskill's contact with Russian officials and dubs her "comrade Claire." **Read more in The Hill.**

- Not One Penny, a liberal group fighting tax reform, pressured Heitkamp with a five-figure television ad buy ahead of Trump's visit. **Watch it here.**

YOUR DAILY ROLL TIDE - Endorsements edition: "U.S. Chamber of Commerce endorses Strange," by POLITICO's Daniel Strauss: "The U.S. Chamber of Commerce is endorsing Sen. **Luther Strange** in the Republican runoff for the Alabama special Senate race, a top Republican with knowledge of the move confirmed to POLITICO. The endorsement comes just 20 days before the runoff between Strange and former state Chief Justice Roy Moore. The move marks another major establishment-aligned Republican group backing Strange and bucking Moore." **Full story here.**

- Meadows endorses Moore, Strauss reports: House Freedom Caucus Chairman Mark Meadows endorsed former Alabama Chief Justice Roy Moore for the Senate on Wednesday, delivering another conservative boost to Moore in the hotly contested primary. **Full story here.**

IN THE COURTS - Lawmakers file brief opposing gerrymandering: "Arnold Schwarzenegger's push for nonpartisan redistricting gained significant Republican support on Tuesday, with Ohio Gov. John Kasich signing on to his amicus brief at the Supreme Court and Arizona Sen. John McCain filing a separate friend-of-the-court brief," POLITICO's Edward-Isaac Dovere reports. "The court is scheduled to hear a case in October, *Gill v. Whitford* , that could abolish partisan gerrymandering. Schwarzenegger, the former California governor, has made gathering support for it a priority. He spent last week calling members of Congress and governors directly, urging them to sign on."

YOUNG GUNS - Heller and Flake are much younger than previous GOP senators facing primaries, SmartPolitics notes: University of Minnesota professor Eric Ostermeier notes Nevada Sen. Dean Heller and Arizona Sen. Jeff Flake are different than previous GOP senators who faced serious primary challenges in two major ways: They're much younger, and have spent much less time in the Senate. "The average age of the aforementioned 10 Republicans at the time of their primary challenge was 74.6 years," Ostermeier writes. "By contrast, Heller will be 58 and Flake 55 at the time of their 2018 primaries." Most challengers were a decade younger than senators they ran against. Previous senators facing tough primaries had served an average of 25 years in the upper chamber, much longer than Heller and Flake. **Full story.**

QUOTE OF THE DAY: "You listening, Heidi? She's listening. She heard that. We're not going to put her on the spot. I'm not doing it." - President Donald Trump, while speaking about tax reform in North Dakota on Wednesday with Heitkamp in attendance.

EPA Administrator Pruitt Visits Kentucky
Meets with Farmers and State Officials

Louisville, Ky. (November 30, 2017) – Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt visited Kentucky to address members of the Kentucky Farm Bureau Federation and meet with Governor Matt Bevin and members of his cabinet to discuss ways to strengthen the Agency's partnership with the state.

"Farmers and ranchers are some of the nation's first environmentalists," **said EPA Administrator Scott Pruitt**. "We should be working with them, as partners, to conserve our natural resources – while continuing to support and grow our local economies."

While meeting with the Kentucky Farm Bureau, Administrator Pruitt discussed a variety of environmental issues. The topics included EPA's recent proposal to rescind the 2015 "Waters of the United States" (WOTUS) rule to help ensure regulatory certainty for America's farmers and landowners and prioritize keeping America's water clean. He also discussed the Agency's new requirements on the pesticide dicamba that will allow farmers to make informed choices for seed purchases for the upcoming 2018 growing season and minimize potential drift to damage neighboring crops.

Following the farm bureau meeting, the Administrator joined Kentucky Governor Bevin and some of his cabinet officials for a working lunch.

"America is blessed to have a public servant like EPA Administrator Scott Pruitt, who works diligently to be a good steward of the earth and protect America's working class," **said Governor Matt Bevin**. "His time spent with local, state and federal officials to enact thoughtful environmental regulations has been extraordinary, and we are thankful for his leadership."

"We appreciate the EPA Administrator visiting our annual meeting to listen to farmers about their conservation efforts and concerns related to their operations," **said Kentucky Farm Bureau President Mark Haney.** "Administrator Pruitt, a fellow Kentuckian, knows the hard work our farmers put in on a daily basis to keep our farms financially and environmentally sustainable."

EPA Administrator Scott Pruitt addresses members of the Kentucky Farm Bureau.

EPA Administrator Scott Pruitt meets with Kentucky Governor Matt Bevin and members of his cabinet.

Subject: BREAKING NEWS: Ryan: House willing to go to conference on Obamacare repeal

Speaker Paul Ryan (R-Wis.) issued a statement saying the House is willing to go to conference on Obamacare repeal in a bid to adress the concerns of GOP senators who won't vote for the "skinny repeal" bill otherwise.

"Senators have made clear that this is an effort to keep the process alive, not to make law. If moving forward requires a conference committee, that is something the House is willing to do," Ryan said in his statement.

September 18, 2017

Today on Climate Beat . . .

. . . we reported on former Obama administration officials' optimism on climate change and clean energy despite Trump administration efforts.

Speaking of the Trump administration, our daily news round up examined reports that officials may remain in the agreement "under the right conditions.

And we went to court, where EPA is asking to continue to to hold in abeyance a case that challenges the agency's first-time rule requiring trailers to take steps to cut greenhouse gas emissions.

RADIATION
Control of Sources of Ionizing Radiation
Arkansas RADIATION

Final rule of the Department of Health, Radiation Control Section, amends regulations regarding the control of sources of ionizing radiation. The rule addresses reportable safety events involving special nuclear material by increasing the time Nuclear Regulatory Commission licensees are allowed to submit a written follow-up report from 30 to 60 days after the initial report of an event, updating the reporting framework for certain situations, and removing unnecessary reporting requirements. The rule also conforms provisions with NRC regulations based on International Atomic Energy Agency 2009 standards for the international transportation of radioactive material and ensures consistency with other federal standards. In addition, the rule clarifies transportation requirements, re-establishes restrictions on materials that qualify for the fissile material exemption, and updates administrative procedures. The rule is effective Oct. 1, 2017. Contact: DOH, Radiation Control Section; 501-661-2301; adh.ram@arkansas.gov

Regulatory Update

WATER
Floodplain Administrator Accreditation Program
Arkansas WATER

Proposed rule of the Natural Resources Commission would amend regulations under Title 18 regarding the floodplain administaror accreditation program. The rule would allow for expedited accreditation for active duty military, returning military veterans, and spouses; for military training and experience to be accepted in lieu of experience or education; and for temporary accreditation for active duty military, returning veterans, and spouses when they hold a substantially equivalent accreditation issued by another state that is in good standing. The rule also would allow an exemption from continuing education requirements for such individuals. In addition, the rule would provide that certification issued to active duty military members or

spouses will not expire until 180 days following their return from active deployment. A hearing is scheduled for Dec. 11, 2017, in Little Rock. Comments are due Dec. 27, 2017. Contact: Bruce Holland; NRC, Water Resources Management Division; 501-682-1611

Regulatory Update

WATER
Permit Fees
Arkansas WATER

Final rule of the Department of Environmental Quality, Pollution Control and Ecology

Commission, amends Regulation 9 regarding permit fees. The rule adds a definition of "quantity" and clarifies formulas for calculation of water permit fees. The rule also incorporates a fee calculation for minor municipal and nonmunicipal facilities with National Pollutant Discharge Elimination System permits for limits of toxic pollutants based on total maximum daily load to allow the agency to assess lower water permit fees for qualifying facilities. In addition, the rule updates the fee schedule to reflect permits currently offered by the Office of Water Quality and removes four obsolete general permits. Finally, the rule modifies provisions concerning contribution fees for the Nonmunicipal Domestic Sewage Treatment Works Trust Fund. The rule is effective Oct. 8, 2017. Regulatory Update

Florida

WATER
St. Johns River WMD/Consumptive Use Permits
Florida WATER

Final rule of the St. Johns River Water Management District amends regulations under FAC 40C-2.031 through .900 (nonconsecutive) to revise consumptive use permit (CUP) procedures and exemptions. The rule removes the secondary user permit requirement and allows only one pending CUP application at a time. The rule also establishes a general permit-by-rule for temporary emergency water uses, expands the permit exemption for fire protection, removes water quality permitting criteria, and expands the use of permit modifications by letter. In addition, the rule clarifies the Water Audit Form and adds market conditions to the list of factors for agricultural CUPs for irrigation that will not result in reduction of the permitted allocation during the permit term. The rule is effective July 1, 2018. Contact: Thomas Mayton; SJRWMD; 386-329-4108; tmayton@sjrwmd.com

Sent: Thur 9/7/2017 2:05:35 PM
Subject: POLITICO's Morning Transportation, presented by Citizens for On Time Flights: FAA could be on House floor next week — Eyes turn to the Senate on self-driving cars — NY, NJ pols to talk Gateway with Trump today

By Brianna Gurciullo | 09/07/2017 10:00 AM EDT

With help from Tanya Snyder and Kathryn A. Wolfe

MARK YOUR CALENDARS: The House's FAA bill is currently scheduled to hit the floor Sept. 13, but that date could slip depending on how negotiations on appropriations and an aid package for Hurricane Harvey go. Next Wednesday "was what the original schedule was. So hopefully we'll stick to that," Rep. Sam Graves (R-Mo.) told us . No matter what, lawmakers will have to clear an extension before the end of the month, and Graves said his preference would be to extend the FAA's authorization through the end of the year. Asked about the length of an extension, Rep. Bill Shuster (R-Pa) would only say: "Whatever makes sense." Senate Commerce Chairman Sen. John Thune (R-S.D.), meanwhile, said he preferred something more like six months.

Hitching a ride? Thune indicated that an FAA extension could be attached to the continuing resolution Congress is expected to pass this month. But Shuster and Graves said they didn't think the House would go that route.

Working vacation: Graves told MT that some of his colleagues asked him to discuss Shuster's bill (H.R. 2997 (115)) with members of their general aviation communities over the August recess. He said he made about 20 calls while Congress was out.

At an impasse: We also checked in with Thune on the provision he championed in the Senate's FAA bill (S. 1405 (115)) to tweak co-pilot training requirements. "Not making any headway at the moment," he said.

IT'S THE DAY BEFORE FRIDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Be sure to send tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"But the girl on the car in the parking lot / Says, "Man you should try to take a shot / Can't you see my walls are crumbling?"

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

HOUSE SPENDING BILL MOVING: Late Wednesday evening, the House began considering the fiscal 2018 bill that funds transportation programs (H.R. 3354 (115)). The eight-billed hydra, of which the THUD spending bill is one, wasn't completed Wednesday, but lawmakers effectively concluded consideration of the DOT portion. That includes adopting an amendment

that would "reduce and restore" cuts to transit formula grant programs. Other amendments that attempted to hew to President Donald Trump's proposed fiscal 2018 budget cuts to Amtrak and the Essential Air Service program were defeated. Final passage of the bill could come Thursday. Mary Lee has more for Pros. The Homeland Security-related section of the broader bill will be up Thursday.

IATA CHIEF IN SHUSTER'S CORNER: The head of the International Air Transport Association backs Shuster's air traffic control proposal, which he said would "eliminate one of the primary roadblocks to ATC modernization: the unpredictable annual federal budget process." Alexandre de Juniac, the director general and CEO of IATA, made his comments in a blog post Wednesday.

WHO SAYS NOTHING GETS DONE IN WASHINGTON? The House passed a bill (H.R. 3388 (115)) to create a regulatory framework for self-driving cars Wednesday, a first-of-its kind effort. The Senate hasn't quite moved as quickly. Thune said he hopes to release the text of the Senate's self-driving car bill "maybe by the end of this week." Thune's committee also announced a hearing on the topic for next week.

Haggling over trucks: One reason the Senate is lagging may have to do with an ongoing spat over whether a driverless car bill should exempt commercial trucks. The House's bill deals primarily with passenger cars. Democrats insist that trucks should be kept out of the bill over concerns about safety and effects on the workforce. But Thune told reporters Wednesday, "at some point we have to address trucks." Thune, like many people, thinks trucking could be one of the earliest sectors to adopt self-driving technology.

TRUMP AND NY, NJ POLS TO TALK GATEWAY: Trump will sit down today with New York and New Jersey leaders to discuss the multibillion-dollar project, The New York Times' Shane Goldmacher and Emma G. Fitzsimmons report. The invitees: Gov. Andrew Cuomo (D-N.Y.), Gov. Chris Christie (R-N.J.), Senate Minority Leader Chuck Schumer (D-N.Y.), Sen. Kirsten Gillibrand (D-N.Y.), Sen. Cory Booker (D-N.J.) and House lawmakers representing parts of New York and New Jersey. (Note: Sen. Bob Menendez (D-N.J.) is out of town because of his trial for alleged corruption.)

TBT: Cuomo visited Washington in late July to speak with Transportation Secretary Elaine Chao about Gateway.

NO FINES FOR UNITED: After a customer was dragged off a United Airlines flight, DOT has chosen not to fine the carrier over the incident, Reuters reports. Consumer group Flyers Rights blasted DOT, telling Reuters that for the government "to conclude that United Airlines' conduct did not warrant an enforcement action is a dereliction of duty." In a letter to United, DOT said the airline failed give David Dao or his wife an over-sales notice in writing.

** **A message from Citizens for On Time Flights:** America invented aviation, yet our Air Traffic Control System is a World War II relic. This costs you time and money. After decades of falling behind, Congress must lead us forward. Tell your Member of Congress to seize this chance to modernize America's ATC system. Visit OnTimeFlights.org to be heard. **

RISING UP, BACK ON THE STREET: State and local officials have until Oct. 16 to apply for $500 million in TIGER grants, DOT said Wednesday. "The selection criteria remain fundamentally the same as previous rounds of the TIGER grants program, but the description of each criterion was updated," DOT said in a release. "Additionally, the FY 2017 TIGER program will give special consideration to projects which emphasize improved access to reliable, safe, and affordable transportation for communities in rural areas." The White House proposed killing TIGER in its fiscal 2018 budget request.

POINT: A little bird sent MT a copy of a "Dear Colleague" letter by Rep. Jason Lewis (R-Minn.) panning the passenger facility charge cap hike included in the Senate's THUD spending bill. "If an airport has valid infrastructure needs, each individual airport has revenue streams in their control that can be used to fund projects while remaining accountable to the traveling public," the letter reads. "There is no need for Congress to authorize a tax increase." The letter asks that Senate Appropriations Committee leaders strip the hike from the THUD bill before it reaches the floor.

Counterpoint: In a letter to Lewis responding to his appeal to colleagues, the Transportation Construction Coalition wrote: "Given the drastic needs of our nation's airports, it is long-overdue that we lift the restrictions imposed at the federal level on local officials to collect necessary revenues to make much-needed improvements."

MT MAILBAG: The Senate Democratic duo we have dubbed "Blumenarkey" wants DOT to look into alleged airfare price gouging amid Hurricane Irma. In a letter to Chao, Sens. Richard Blumenthal of Connecticut and Ed Markey of Massachusetts write that "a number of troubling reports ... have surfaced that detail exorbitantly high airfares on a number of airlines."

SHIFTING GEARS: Lyft brought on Jake Swanton as a senior federal public policy manager, Pro Technology's Li Zhou reports. Swanton was a legislative director for former Sen. Mark Udall and a director of government relations at the Pew Charitable Trusts. Lyft also hired Tommy Leander to be a federal public policy associate. Leander served as a legislative assistant to Rep. David Schweikert (R-Ariz.). Meanwhile, Lauren Belive was promoted to director of federal government relations at the ridesharing company.

Bonus shift: Emily Feenstra has left the US Water Alliance, where she served as deputy director, to once again be the American Society of Civil Engineers' director of public affairs and infrastructure initiatives. (h/t POLITICO Influence)

MEMBER UP: Lyft, Third Way, the American Council of the Blind, the R Street Institute and the Competitive Enterprise Institute have joined the Coalition for Future Mobility, which advocates on legislation related to self-driving cars.

THE AUTOBAHN:

- "Appropriators prepare 'anomalies' list for spending stopgap." Pro Budget & Appropriations Brief.

- "Pruitt tightens political reins on key operations." E&E News.

- "This Delta flight raced Irma and won." The Washington Post.

- "JetBlue, American capping fares at $99 ahead of Irma." The Miami Herald.

- "Alarm didn't ring at Waymo before Uber was sued for theft." Bloomberg.

- "No shortage of drama as Menendez trial kicks off." POLITICO New Jersey.

- "JetBlue: help wanted. Pilots can be paid as instructors while training to join airline." USA Today.

THE COUNTDOWN: DOT appropriations run out in 24 days. The FAA reauthorization expires in 24 days. Highway and transit policy is up for renewal in 1,120 days.

** **A message from Citizens for On Time Flights:** Flying shouldn't be us vs. them. Yet it's hard to look past the fact that the millions of Americans flying commercial every day are subsidizing the .01 percent flying private jets. Their sweetheart deal is surely why private jet owners oppose Air Traffic Control reform. The status quo has been good to them. But the ATC reform bill before Congress would make air travel better for everyone: shorter flights, lower emissions, and fewer cancellations and delays. That's time, and that's money. A modern system benefits all Americans. Visit OnTimeFlights.org and tell Congress it's time to leave the status quo behind. **

Subject: BREAKING NEWS: Senate overwhelmingly approves Russia sanctions bill

The Senate voted 98-2 to send a bipartisan sanctions package against Russia, Iran, and North Korea to President Donald Trump's desk. The White House remains noncommittal on whether he will sign it, though a veto would almost certainly be overridden.

Subject: Sierra Club sues EPA over unfulfilled public records requests

By Anthony Adragna

09/18/2017 05:42 PM EDT

The Sierra Club filed a lawsuit today in federal district court seeking to compel EPA to release a host of records about the activities of Administrator Scott Pruitt, including his schedule, list of meetings and records of communications with outside parties.

"EPA has chosen to engage in a pattern of unlawfully rebuffing, or vaguely and indefinitely delaying response to, FOIA requests from a variety of public-interest requesters, including Sierra Club," the group wrote in its lawsuit, filed in the U.S. District Court for the District of Columbia.

The green group originally filed its Freedom of Information Request in June and the agency has not yet produced responsive records nor provided any indication of when it might be able to.

In addition to Pruitt's communications, Sierra Club filed similar requests for several senior EPA officials. They included external communications and calendars of Chief of Staff Ryan Jackson and Associate Administrator Samantha Dravis; records from Pruitt's scheduler and communications between Senior Policy Advisor Mandy Gunasekara and specific members of the National Mining Association.

An EPA spokesperson said the agency would not comment on pending litigation.

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

AIR
Missouri SIP/2008 Ozone NAAQS Infrastructure Requirements
AIR

Notice of the EPA announces the withdrawal of an Oct. 6, 2017, direct final rule (82 FR 46679) that would have approved portions of revisions to the Missouri SIP regarding infrastructure requirements for the 2008 ozone NAAQS. The revisions address prevention of significant deterioration of air quality (prong 3). The agency took no action on significant contribution to nonattainment (prong 1) or interference with maintenance of the NAAQS (prong 2) because those elements were not addressed in the SIP revision submittal. The agency will act separately on proposed revisions concerning protection of visibility (prong 4). The withdrawal is in response to adverse comments. The agency will proceed with a final rule based on the related proposed rule (82 FR 46741; 10/06/2017). The withdrawal is effective Nov. 28, 2017. Contact: Tracey Casburn; EPA Region 7, Air Planning and Development Branch; 913-551-7016; casburn.tracey@epa.gov. Citations: 40 CFR 52.1320

Regulatory Update

AIR
Missouri SIP/2010 SO2 NAAQS Infrastructure Requirements
AIR

Notice of the EPA announces the withdrawal of an Oct. 6, 2017, direct final rule (82 FR 46672) that would have approved portions of revisions to the Missouri SIP regarding infrastructure requirements for the 2010 sulfur dioxide (SO2) NAAQS. The rule would have approved revisions concerning prevention of significant deterioration of air quality (prong 3). The agency took no action on revisions concerning significant contribution to nonattainment (prong 1), interference with maintenance of the NAAQS (prong 2), or certain requirements for designated nonattainment areas. Revisions concerning protection of visibility (prong 4) will be addressed in a separate rulemaking. The withdrawal is in response to adverse comments. The agency will proceed with a

final rule based on the related proposed rule (82 FR 46742; 10/06/2017). The withdrawal is effective Nov. 28, 2017. Contact: Tracey Casburn; EPA Region 7, Air Planning and Development Branch; 913-551-7016; casburn.tracey@epa.gov. Citations: 40 CFR 52.1320(e)

82 FR 56172 (11/28/2017)

Regulatory Update

AIR
Nebraska SIP/Operating Permits Program
AIR

Notice of the EPA announces the withdrawal of an Oct. 5, 2017, direct final rule (82 FR 46420) that would have approved portions of revisions to the Nebraska SIP, the operating permits program, and the Section 112(l) program. The revisions incorporate by reference the list of organic compounds that are exempt from the definition of volatile organic compound and update notification requirements for the operating permits program. The revisions also extend the process of off-permit changes to Class I operating permits. The withdrawal is in response to adverse comments. The agency will proceed with a final rule based on the related proposed rule (82 FR 46453; 10/05/2017). The withdrawal is effective Nov. 28, 2017. Contact: Greg Crable; EPA Region 7, Air Planning and Development Branch; 913-551-7391; crable.gregory@epa.gov. Citations: 40 CFR 52.1420; 70, Appendix A

GENERAL ENVIRONMENT AND SAFETY
Army Corps of Engineers Regulatory Review Report
GENERAL ENVIRONMENT AND SAFETY

Notice of the U.S. Army Corps of Engineers announces the availability of a report that assesses potential changes to regulations to reduce limitations on the development and use of domestic energy resources, including oil, natural gas, coal, nuclear energy, and renewable energy. The report, which is required by Executive Order 13783 on promoting energy independence and economic growth (82 FR 16093; 03/31/2017), proposes changes to nine nationwide permits that authorize activities under Section 10 of the Rivers and Harbors Act and Section 404 the Clean Water Act. The permits relate to maintenance, utility line activities, hydropower projects, surface coal mining, commercial and institutional developments, coal remining, underground coal mining, land-based renewable energy generation projects, and water-based renewable energy generation pilot projects. Contact: David Olson; USACE; 202-761-4922

82 FR 56192 (11/28/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
California/Pure Water San Diego Program, North City Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Bureau of Reclamation announces the availability of a draft environmental impact

statement regarding the North City Project in San Diego. The project is the first phase of the Pure Water San Diego Program, a water and wastewater facilities plan to produce potable water from recycled water via construction of new water and wastewater treatment facilities, pump stations, and pipelines. The proposed project involves expansion of the North City Water Reclamation Plant through construction of an adjacent North City Pure Water Facility with a purified water pipeline to Miramar Reservoir. The project also involves construction of the North City Renewable Energy Facility to receive landfill gas from the Miramar Landfill gas collection system via a gas pipeline. The notice specifies that a project alternative would involve the installation of a longer pipeline to deliver water to San Vicente Reservoir. Comments are due Jan. 8, 2018. Contact: Doug McPherson; Department of the Interior, Bureau of Reclamation; 951-695-5310; dmcpherson@usbr.gov

82 FR 56264 (11/28/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Electric Utilities/Performance During Faults, Training for Personnel
GENERAL ENVIRONMENT AND SAFETY

Proposed rule of FERC would approve reliability standards PRC-027-1 (coordination of protection systems for performance during faults) and PER-006-1 (specific training for personnel) submitted by the North American Electric Reliability Corp. (NERC). The rule would maintain the coordination of protection systems installed to detect and isolate faults on bulk electric system elements and ensure that personnel are trained on specific topics essential to reliability to perform or support real-time operations of the bulk electric system. The commission proposes that NERC modify proposed reliability standard PRC-027-1 to require an initial protection system coordination study to ensure that applicable entities will perform a study demonstrating proper coordination of its protection systems. The rule also would approve associated violation risk factors, violation severity levels, implementation plans, and effective dates proposed by NERC and approve the retirement of reliability standard PRC-001-1.1(ii)(system protection coordination). In addition, the rule would approve new and revised definitions of "protection system coordination study," "operational planning analysis," and "real-time assessment." Comments are due Jan. 29, 2018. Contact: Juan Villar; FERC, Office of Electric Reliability; 772-678-6496; Juan.Villar@ferc.gov. Citations: 18 CFR 40

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Energy Conservation Standards Program Design
GENERAL ENVIRONMENT AND SAFETY

Notice of the Energy Department, Office of Energy Efficiency and Renewable Energy, announces a request for information regarding the potential advantages and disadvantages of revising the U.S. Appliance and Equipment Energy Conservation Standards (ECS) program to include additional compliance flexibility. Feedback is requested on the possible design of such a program, with particular interest expressed for designs that incorporate market-based policy mechanisms, such as averaging, credit trading, or feebate programs. Feedback also is requested on possible economic efficiency gains, impacts on consumer and manufacturer costs and on energy savings, and suggestions for a pilot product category and/or phase-in of revisions across

the ECS program. In addition, the agency requests feedback on potential challenges with designing and implementing flexible program approaches as well as possible solutions. Comments are due Feb. 26, 2018. Contact: DOE, Office of Energy Efficiency and Renewable Energy; 202-287-1445; ProgramDesign2017STD0059@ee.doe.gov. Citations: 10 CFR 430

Subject: Sources: White House sends Democratic FERC nomination to Senate

By Darius Dixon

08/02/2017 06:13 PM EDT

The White House today sent the much-awaited paperwork of Democratic FERC nominee Rich Glick to the Senate, according to multiple Senate aides, opening up the chance that the agency's quorum may be restored before the upper chamber goes on recess.

FERC has been without a leadership quorum since early February, leaving it unable to decide on major interstate natural gas pipelines, liquefied natural gas export terminals, anti-market manipulation cases or contested electric rate plans.

GOP picks Neil Chatterjee and Rob Powelson were approved by the Senate Energy and Natural Resources Committee in June, but they have been stalled since as Democrats used procedural tactics to slow-walk confirmations for most Trump nominees amid GOP efforts to repeal Obamacare.

After the latest effort to repeal the health care law fizzled last week, Senate Minority Leader Chuck Schumer said that "a whole lot" of nominees may get floor time. The Senate plans to leave for recess no later than next week, and negotiations are ongoing over a package of nominees that may be confirmed before then.

FERC nominees typically get confirmed in bipartisan pairs, and the absence of Glick's nomination has been a sticking point for Democrats looking for insurance that he gets on the commission in addition to three open Republican seats.

There is not enough time to get Glick through committee before recess. But the paperwork for President Donald Trump's pick for FERC chairman, Kevin McIntyre, has not yet been sent to the Senate, so the two could be confirmed in tandem when the Senate returns in September.

WHAT'S NEXT: With Glick's nomination paperwork in the Senate, it's possible Chatterjee and Powelson get approved on the Senate floor with a voice vote or by unanimous consent, however the timing is unclear and negotiations over nominees is still delicate.

Subject: POLITICO's Morning Energy, presented by Chevron: Energy amendments ready for House debate — Little new energy talk from Trump in North Dakota — EPA preps as Hurricane Irma hits Caribbean

By Anthony Adragna | 09/07/2017 10:00 AM EDT

With help from Eric Wolff, Ben Lefebvre and Darius Dixon

TEED UP, READY TO GO: House Rules Committee lawmakers readied 80 EPA and Interior amendments for floor consideration as the chamber moves through its mammoth, 1,300-page spending package H.R. 3354 (115) starting today. Here are six worth watching as debate moves along:

1. An amendment from senior Natural Resources Committee Democrats restoring funding to EPA's environmental justice program by taking funds from the Interior secretary's office,

2. An effort by New York Republican Rep. John Katko to restore $250 million in Clean Water State Revolving Funds, an infrastructure program that usually enjoys broad bipartisan support,

3. A push by Rep. Gary Palmer to eliminate funding for the Diesel Emissions Reduction Act, which helps convert diesel engines to more efficient ones. Several dozen groups sent a letter to House members opposing the move.

4. A bipartisan amendment from Republican Frank LoBiondo and Democrat Don Beyer to block offshore drilling in a host of Atlantic sites,

5. An amendment from Rep. Scott Perry blocking EPA from issuing any regulations under Section 115 of the Clean Air Act, feared by some conservatives as a hidden weapon to mandate carbon regulations,

6. A Republican amendment that would bar federal agencies from using funds to cover legal fees associated with Clean Air Act, Clean Water Act and Endangered Species Act settlements.

Other Democratic amendments expected to fail would block President Donald Trump's administration from delaying ozone standards, being able to unilaterally withdraw the Waters of the U.S. rule and preparing a new five-year offshore oil and gas leasing plan.

A full list of amendments is available here.

NOT MUCH ENERGY CHATTER IN MANDAN: Trump's tax talk at Andeavor's refinery in Mandan, N.D., yielded little fresh energy news on Wednesday. Addressing a crowd at the plant that had expanded in 2012 to take in more Bakken crude, Trump warned of a tax code that caused businesses to be "regulated out of existence." Continental Resources CEO and Trump pal Harold Hamm made a brief cameo in sunglasses to say: "You find oil in North Dakota! And the

Bakken!"

Trump freestyled on energy regulations and pipelines: "The Dakota Access Pipeline is finally open for business. Now, what other politician, if elected President, would have done that one? They would have stayed so far away. And I did it immediately, and I didn't even do it in that case for jobs. It was the right thing to do. And that is flowing now beautifully." ME would note that any of the other 2016 GOP presidential candidates would have approved the pipeline if elected.

Memorable: Trump, who tried a softer touch to get centrist Sen. Heidi Heitkamp on board with tax reform that he used on Missouri Sen. Claire McCaskill, may have inadvertently written the Democrat's first reelection ad by calling her on stage and proclaiming her a "good woman." Heitkamp tweeted an (awkward) selfie with refinery workers, while potential challenger Rep. Kevin Cramer posted a selfie with Trump.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and NEI's Robert Powers was first up to identify Alaska as our least densely populated state. For today: In what state was the first ATM in the U.S. installed (back in 1969)? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

** **A message from Chevron:** Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://politi.co/2grzhhE **

U.S. TERRITORY BRACES FOR IRMA: There are already reports of massive damage from the massive Category 5 Hurricane Irma across the Caribbean, but Puerto Rico's electric company warned Wednesday the storm with 185 miles an hour winds could leave the island without power for four to six months, the Miami Herald reports. Meanwhile, EPA Administrator Scott Pruitt approved an emergency fuel waiver for Florida and the agency said it was securing 22 current or former Superfund sites in the 100 southernmost miles of the state.

In an all-staff email, Pruitt thanked employees for their response efforts to Hurricane Harvey in Texas and said the agency had already begun preparations for Irma's landfall. "While Harvey caused extreme flooding, our biggest health and environmental concerns in Puerto Rico and the U.S. Virgin Islands are potential oil spills and the potential impacts of power disruptions on drinking and waste water systems," he wrote. The agency is working with regions 2 and 4 to secure Superfund sites and drinking and waste water systems to prevent spills. And the Miami Herald looks at what two Florida nuclear plants are doing to get ready.

NEW ENERGY BUYERS GROUP FORMS: A collection of corporate giants - Microsoft, Walmart, Amazon, Salesforce, Lockheed Martin and Aligned Energy, among them - is today launching the Advanced Energy Buyers Group. The new entity, coordinated by Advanced Energy Economy, will push to expand the market for purchasing renewable and other advanced energy sources as large companies seek to hit their sustainability targets. "We've made good progress, but more work needs to be done to advance policies that make it easier and cheaper for more companies, schools, hospitals and families to buy clean energy," Rob Bernard, chief

environmental strategist at Microsoft, said in a statement.

ENERGY INDUSTRY HITS BACK AT EXXON STUDY: Energy in Depth argues in a Wednesday post that a Harvard study asserting that Exxon Mobil misled the public on climate change left out many of the company's public advertorials on the subject, an oversight that would have "severely weakened" the study's conclusions. They say some of the pieces included in the research came mainly from Mobil before it merged with Exxon, meaning the study "largely compared the climate research of one company with the advertorials of a different company." Neither author responded to requests for comment.

WILDFIRE FUNDING MAY HITCH A RIDE: Lawmakers are poised pass an initial injection of relief funding for Hurricane Harvey, but senior Republicans want a second bill to also address the dozens of wildfires throughout the West. "There will be more disaster relief coming up obviously and I would suspect that wildfire will be part of that," Rep. Mike Simpson, a senior appropriator, told reporters. "There are other things than just hurricanes and right now they're burning in the west." House Natural Resources Chairman Rob Bishop said he could go along with that approach, but still hoped to pursue broader reforms to how the federal government responds to wildfires.

RUMOR QUASHED: Any idea that Interior Secretary Ryan Zinke might mount a 2018 challenge to Democratic Sen. Jon Tester seemed to die Wednesday when his wife, Lola, signed on as campaign chair for Tester challenger Troy Downing. "I first met Troy on a fishing trip and his kindness, intelligence, youthful enthusiasm, business experience and amazing military history made me think that one day he must serve his state and country again," she said. "And right now is the perfect time."

NOMINEE TRAIN KEEPS ON ROLLING: The Senate will take a big step for FERC today when the Energy and Natural Resources Committee runs Trump's latest picks for the agency through the ringer - but don't expect all too much pulse-pounding excitement. Kevin McIntyre, Trump's FERC chairman-in-waiting, is likely to get peppered by Democrats about his long list of energy industry clients during his long stretch with Jones Day, and commitments to maintain FERC's independence. On the other hand, Rich Glick, general counsel for ENR Democrats, is generally well-liked on both sides of the aisle. But the reason FERC nominees, and members of other federal commissions, from different parties tend to move together is so everyone has something to gain and good reason to hold their fire. By all accounts, McIntyre and his record are boring - which will work in his favor. But much like earlier FERC nomination hearings, expect questions about the growth of renewables, the survival of coal and the threats of climate change.

Two Interior noms up too: Joseph Balash, Sen. Dan Sullivan's chief-of-staff and a deputy commissioner of the Alaska Department of Natural Resources, gets his hearing on his bid to become Interior's assistant secretary for land and mineral management. And Ryan Nelson, general counsel for Idaho-based Melaleuca, an online "wellness shopping club" since 2009, gets his day in the hot seat as he vies to become Interior's solicitor. Take a look at his newly-obtained ethics and financial documents.

If you go: The hearing is slated to begin at 10:30 a.m. in Dirksen 366.

SVINICKI SAYS SUMMER SHUTDOWN HIT 35 AT NRC: Plans to scuttle the Summer nuclear project may cause about 35 NRC employees to find other jobs at the agency, NRC Chairwoman Kristine Svinicki said Wednesday. "Summer was in the neighborhood of 35 agency-wide positions impacted," she said at an agency all-hands meeting, amid a years' long effort to resize the NRC's staffing and mission as the nuclear industry declines. But, Svinicki said, in spite of the heartache for those employees, it doesn't represent a major shift for an agency with more than 3,200 employees. "The project has been canceled so efforts are ongoing to look at positions where those same skill sets of those individuals might align," she said.

Svinicki: DOE didn't ask us to help on grid study: An NRC staff meeting is its own kind of jargonfest, and one staffer took issue with nuclear-related language in DOE's recent grid study that seemed to confuse regulators. Among its recommendations, the study urged the NRC to revisit "nuclear safety rules under a risk-based approach," without giving the term much context. "I'm not certain if they recognized the distinction between risk-informed and risk-based," Svinicki said. The NRC leans more heavily on "risk-informed" regulation, which factors in safety elements that aren't purely calculations of issues that could lead to accidents. The NRC reached out to DOE to help with the report, Svinicki said, but "to my knowledge, they appreciated that but did not take us up on it. I think it's fair to say that the language DOE used was developed by them without really any kind of reaction from NRC or any of our experts."

DOE ELECTRICITY GROUP SHRUNK: Energy Secretary Rick Perry has decided to reduce the size of the Energy Department's Electricity Advisory Committee from 32 to 24 people, Pro's Darius Dixon reports. But he's decided to install six new members even as he reduces the board's overall size. The electricity advisory committee will meet next Wednesday and Thursday in Arlington, Va.

MURKOWSKI LOOKING AT GRANTS ISSUE: Sen. Lisa Murkowski, who oversees the Appropriations subcommittee in charge of EPA funding, told reporters she's looking into reports the agency halted all grants to Alaska for several weeks in the aftermath of her vote against the GOP health care bill. "I want to know, is this really so? Cause, if so, that's kind of upsetting," she said. An agency spokeswoman pushed back on the reports, telling TPM "a state was never was singled out in the grant review process; grants were never withheld."

STEEL GROUP BACKS SUNIVA SOLAR TRADE PETITION: The Steel Manufacturers Association, representing 30 North American producers, is backing a bid from Suniva and SolarWorld Americas to have the ITC impose steep tariffs on imported solar cells and modules. "The steel industry fought back in 2001 and was awarded temporary relief that gave the industry the chance to recover," Philip Bell, president of the group, wrote in a letter. "The American solar industry deserves a similar chance."

NEW MEXICANS PUSH ZINKE ON LAND LEASING: Sens. Tom Udall and Martin Heinrich, as well as Rep. Ben Ray Luján , asked Zinke to uphold a previous commitment to defer all leases on land near Chaco Culture National Historical Park as the federal government mulls how to manage the area. "We further appreciate your recent public support for the BLM

and BIA's cooperative approach, and respectfully request that you maintain the status quo and defer leasing" until the process is completed, they wrote in a letter.

SCALING ON UP: The World Resources Institute, in a report out today, urges cities to accelerate the shift to cleaner cooking, work to scale up distributed renewable energy sources and prioritize expanding energy efficiency of buildings and appliances as they push to expand energy access amid rapid growth.

AN ELECTRON STORED IS AN ELECTRON EARNED: Utility customers installed a record number of behind-the-meter batteries and other power storage systems in the second quarter of 2017, GTM Research and the U.S. Energy Storage Association say in a report out this morning. Behind-the-meter systems are typically smaller than big utility-scale systems, and are usually installed by residential or commercial customers. The numbers are still tiny, as only 32 megawatt hours of capacity were installed, led by California, Hawaii and New York, all of which have incentive programs.

CONTOURING THE EVER-ELUSIVE CARBON TAX: The R St. Institute is out with a new paper this morning looking at how to structure a border-adjusted carbon tax "to deal with imports from and exports to other nations that do not have an equivalent carbon price."

MOVER, SHAKER: Elbert Lin has left his post as solicitor general for West Virginia to go to Hunton & Williams. Lin made his name when he helped persuade the U.S. Supreme Court to put a stay on the Clean Power Plan. Lin will be joined at Hunton by Virginia Solicitor General Stuart Raphael.

Dave Hoppe, Speaker Paul Ryan's chief of staff until January, has joined 38 North Solutions as a senior principal. The group advises groups primarily in the energy and tech sectors. "His vast experience in public policy and political strategy complements our team's expertise in clean energy and technology innovation," Katherine Hamilton, the firm's chair, said in a statement.

BROMIGOS? After "horsing around" during an earlier visit to New Mexico, Heinrich tweeted a picture of him getting back at Zinke with a headlock Wednesday.

Subject: Today on Climate Beat

July 10, 2017

Today on Climate Beat . . .

. . . we took a trip to the Mountain State, where several contenders, all sharp critics of EPA greenhouse gas regulations, will face off in a primary vying to be the GOP contender to challenge West Virginia's Democratic senator, Joe Manchin, who is up for re-election in 2018.

Across the pond, the United States was isolated on climate at the G-20 leaders' summit, which concluded over the weekend. The United States was relegated to a footnote in the G-20 climate and energy action plan, and the other 19 nations united to give a strong endorsement of the Paris Agreement's implementation.

And in the courts, environmental and tribal groups have sued the Bureau of Land Management over its administrative stay of several deadlines in its methane venting and flaring rule, joining the attorneys general of California and New Mexico who challenged the action last week.

Subject: BREAKING NEWS: Three GOP senators threaten to block Obamacare repeal bill

Three Republican senators said they will block the GOP's "skinny" Obamacare repeal bill without an ironclad guarantee from House Speaker Paul Ryan that the bill will go to conference committee and not simply be passed by the House and sent to President Donald Trump.

Some House members have suggested the plan could be quickly approved by the House after the Senate passes it. "I need a guarantee," said Sen. Lindsey Graham of South Carolina, who was joined by John McCain of Arizona and Ron Johnson of Wisconsin.

Subject: Bishop defends Zinke pressure on Alaska senators

By Esther Whieldon

07/27/2017 04:45 PM EDT

House Natural Resources Chairman Rob Bishop today defended Interior Secretary Ryan Zinke's recent call to Sen. Lisa Murkowski (R-Alaska) in which the secretary reportedly threatened to pull his support for energy and public land issues Murkowski cares about after she voted against taking up a bill to repeal Obamacare.

"That is not unprecedented, [he] has a right to do that," Bishop told reporters in the Capitol. Bishop said former Interior Secretary Sally Jewell would call him "complaining about some things that we were doing."

Bishop said President Barack Obama in 2009 had members of his Cabinet press senators over funding for F-22s in a defense authorization bill.

"When Obama sent his cabinet to lobby the Senate for a week on F-22, you don't think there was bullying and threatening that was going on with that? ... Come on, this has happened all the time," Bishop said. "There is nothing unique about this, there is nothing new about this. ... This is tradition."

Democrats are demanding an investigation into Zinke's calls to Murkowski and fellow Alaska Sen. Dan Sullivan.

Subject: Senate confirms Rao as Trump's regulatory czar

By Alex Guillén

07/10/2017 06:35 PM EDT

The Senate today approved George Mason law professor Neomi Rao to serve as President Donald Trump's regulatory czar, giving her oversight of the government-wide effort to rein in rules.

Rao was confirmed 54-41 to be administrator of the White House Office of Management and Budget's Office of Information and Regulatory Affairs. The post will give her broad powers to oversee regulatory issues under an administration that has decried the "administrative state." Rao will oversee most federal rulemaking, and EPA alone is working to reverse or delay dozens of Obama-era rules.

Rao, who founded the George Mason law school's Center for the Study of the Administrative State, has been with the university since 2006. Before that she spent more than a year as associate White House counsel. She clerked for Justice Clarence Thomas in 2001 and 2002.

She is a noted critic of the Chevron doctrine, which directs judges to defer to an agency's reasonable interpretation of ambiguous laws. Rao has also called for greater White House control of independent rulemaking agencies such as FERC or the Consumer Financial Protection Bureau.

Rao earned plaudits from a bipartisan collection of former OIRA chiefs, including Obama's second-term pick, Howard Shelanski. Meanwhile, a coalition of progressive groups, including some environmental groups, opposed her nomination, saying she "holds views well outside the mainstream."

PHOTOS: Pruitt Continues State Action Tour in Indiana

INDIANAPOLIS (August 2, 2017) — U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt continued his state action tour in Indiana today, his sixth state in three weeks.

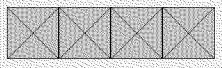
"The agriculture industry should not be burdened with unnecessary government overreach," **said EPA Administrator Scott Pruitt.** "By beginning the process to redefine WOTUS, we are prioritizing clean water across the country, while also respecting states' traditional regulatory role over their own waters and providing much-needed certainty to farmers and landowners."

While in the Hoosier state, Administrator Pruitt met with Governor Eric Holcomb, Lt. Governor Suzanne Crouch, and other state officials to discuss EPA's recent decision to begin the process of redefining the definition of a "Water of the United States" (WOTUS). EPA is reassessing the proper scope of federal jurisdiction so as to provide stakeholders with regulatory certainty. Following their meeting, Administrator Pruitt and Governor Holcomb hosted a roundtable discussion on WOTUS at Mike Starkey Farms in Boonville, Ind.

"It's an honor to welcome Administrator Pruitt to Indiana once again and to connect him with members of our agriculture community," **Governor Eric Holcomb said**. "They have experienced firsthand the ways that unduly burdensome federal regulations can hinder farmers' financial security and growth. I am encouraged by and greatly appreciate this federal administration's willingness to listen and partner with the states to find solutions."

"As Secretary of Agriculture and Rural Development, I am extraordinarily proud of Indiana agriculture's history as a leader in conservation," said **Lt. Governor Suzanne Crouch**. "The Indiana agricultural community looks forward to participating in the re-creation of this important initiative under the leadership of Administrator Pruitt and his team."

After touring Mike Starkey Farms, Administrator Pruitt visited Liberty Mine, Brownsburg, Ind. to discuss methods to improve environmental conditions, while also safeguarding critical coal mining jobs.



EPA Administrator Scott Pruitt meets with Indiana Governor Eric Holcomb, Indiana Lt. Governor Suzanne Crouch, and other state officials.

Subject: Court indefinitely freezes challenges to carbon rule for future power plants

By Alex Guillén

08/10/2017 01:57 PM EDT

The D.C. Circuit Court of Appeals today said it will keep lawsuits challenging the Obama administration's carbon emissions rule for future power plants on hold indefinitely.

The suspension comes on the heels of the court's Tuesday order freezing litigation over the Clean Power Plan for another 60 days. That order came with a note from two judges indicating they are growing impatient with the Trump administration's lack of action in that case.

In today's one-page order, the court directed EPA to provide updates on its progress in reviewing the rule for future plants every 90 days.

Unlike the Clean Power Plan, the new plant rule is in effect, although other regulatory and market challenges mean no new coal-fired power plants are actively being planned.

WHAT'S NEXT: EPA must file its first status report on Oct. 27.

GENERAL ENVIRONMENT AND SAFETY
California Capital Access Program/On-Road Heavy-Duty Vehicle Air Quality Loan Program
California GENERAL ENVIRONMENT AND SAFETY

Proposed rule of the Pollution Control Financing Authority would amend regulations under 4 CCR 8070 through 8078 regarding the California Capital Access Program (CalCAP) small business loan program. The program authorizes the PCFA to contract with specified financial institutions to make loans to eligible small businesses that may have difficulty obtaining capital. The rule would revise definitions and program requirements, add a recapture mechanism to recycle older contributions to support future loan enrollments, and remove outdated provisions. The rule also would establish the CalCAP Air Resources Board On-Road Heavy-Duty Vehicle Air Quality Loan Program to assist owners and operators of small fleets of heavy-duty diesel trucks in achieving early compliance with statewide truck and bus requirements to reduce diesel particulate matter emissions. In addition, the rule would clarify rules and procedures for participation in the Collateral Support Program within CalCAP's existing Small Business Loan Program. The proposal currently is in effect as an emergency rule, expiring Feb. 6, 2018. Hearing requests are due Dec. 26, 2017. Comments are due Jan. 8, 2018. OIL AND GAS INDUSTRY

Oil and Gas Exploration and Production

Maryland OIL AND GAS INDUSTRY

Notice of the Department of the Environment announces the withdrawal of a Nov. 14, 2016, proposed rule that would have amended regulations under COMAR 26.19.01 regarding oil and gas exploration and production, including hydraulic fracturing and horizontal drilling. The rule would have addressed requirements for drilling, well and well pad construction, integrity and pressure testing, chemical storage, setbacks and location restrictions, water quality monitoring, water supply replacement, and stormwater management and a prohibition on drilling in the Deep Creek Lake watershed. The rule also would have established requirements for best available technology for control of air emissions, leak detection and repair, and reporting and offset of methane emissions and addressed requirements for emergency response planning, prompt notification and cleanup of spills and other incidents, site security, provision of chemical information to medical personnel, and blowout prevention. In addition, the rule would have addressed provisions for comprehensive development planning, the permit review process for wells, public disclosure of chemical information, closed-loop management and recycling of

flowback and produced water, and a prohibition on disposing flowback produced water through underground injection. Finally, the rule would have added standards for well plugging; site reclamation; and department oversight, including requiring operators to conduct drilling and hydraulic fracturing on only one well at a time. Carbon Tax Backers Ramp Up Pitch, Selling Plan As Key To Tax Reform

Carbon tax backers are ramping up ongoing efforts to carve out a political opening for the policy as part of a broader Capitol Hill discussion on overhauling the tax code, suggesting that the climate policy has more viability than most assume as other potential funding sources to finance a revenue-neutral tax bill struggle to gain traction in the Republican Congress.

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Energy Department Denies Perry's Move to Homeland Security Post

Posted August 02, 2017, 11:41 A.M. ET

By Jennifer A. Dlouhy and Jennifer Jacobs (Bloomberg News)

A Department of Energy official Twitter accounted denied the Trump administration is considering Energy Secretary Rick Perry for the top position at the Department of Homeland Security.

"While @SecretaryPerry is honored to be mentioned, he is happy where he is & focused on carrying out mission POTUS gave him to lead @ENERGY," DOE Press Staff wrote on Twitter. Earlier Bloomberg reports suggested Perry, the former Texas governor, could be a possible replacement for John Kelly, who left the job when he was named White chief of staff.

Another name some administration officials are said to favor is House Homeland Security Committee Chair Michael McCaul, a Texas Republican who was previously considered for the Homeland Security job before Trump nominated Kelly.

Lawsuit Claims Duke Energy Storing Ash in 'Open Dump'

Posted August 02, 2017, 03:14 P.M. ET

By Andrew M. Ballard

Duke Energy is operating an "illegal open dump" at its Roxboro, N.C., facility, an environmental group said in a lawsuit seeking to alter the utility's coal ash storage plans.

Coal ash pits on the site in Person County are polluting groundwater and nearby Hyco Lake, according to Frank Holleman, a senior attorney with the Southern Environmental Law Center in Chapel Hill, N.C.

The utility "needs to put forward a plan to get its ash out of the groundwater, to remove the ash from

the floodplain, to get rid of its dangerous dams, and to safely store its coal ash where it won't pollute," Holleman said in a statement.

The lawsuit, filed Aug. 2, claims that Duke Energy's closure plan violates the federal Resource Conservation and Recovery Act and associated coal ash regulations, and the ash should be removed and managed in lined landfills (Roanoke River Basin Assn. v. Duke Energy Progress, LLC, M.D.N.C., No. 1:17-cv-707, complaint 8/2/17).

Danielle Peoples, a spokeswoman for Duke Energy in Charlotte, N.C., called the lawsuit "yet another example of SELC's extreme agenda," adding the environmental group seeks to get courts to "upend strong state and federal policy regulating the closure of ash basins."

'Strong Progress'

Duke Energy is "making strong progress at the Roxboro plant" by building lined retention basins to manage water and fully convert to dry coal ash management in future disposal, Peoples said.

"Excavating all ash basins is the most extreme and disruptive approach" and federal rules not only allow for capping in place but also require decades of groundwater monitoring after they are closed, she told Bloomberg BNA Aug. 2.

Duke Energy has 14 coal ash sites in North Carolina and has been the subject of several lawsuits by the Southern Environmental Law Center and other conservation groups over ash storage and management practices at its facilities.

GE Claims Vestas Infringes Wind Turbine Power Control Patent

Posted August 02, 2017, 01:58 P.M. ET

By Susan Decker, Christopher Martin and Anna Hirtenstein

General Electric Co., which lost its top spot in wind turbine sales this year, claims new market leader Vestas Wind Systems A/S is using its technology to protect their turbines from dramatic fluctuations in power.

The dispute comes as the U.S. wind industry is gearing up for significant growth. At the end of June, more than 25.8 gigawatts of wind farms were under construction or in advanced development in the U.S., up 41 percent from a year earlier, according to a report from the American Wind Energy Association. That's on top of the 84 gigawatts already installed.

GE and Vestas dominate the market with a combined 83 percent of those projects that have contracts for turbines. Vestas has installed more wind turbines than any other firm, working in 33 countries across six continents last year. It recently surpassed GE to take the biggest market share in the U.S.

Vestas Chairman Bert Nordberg said he was concerned about maintaining this lead in an April interview, anticipating sharper competition from GE.

The patent covers a technology known as zero voltage ride through, which enables wind turbines to remain connected to the grid without damage during voltage fluctuations such as those caused by lightning strikes or short circuits. Typically the turbines were designed to disconnect from the grid.

Vestas said in a statement that it's not been able to study the complaint in detail.

"Based on our initial assessment we strongly believe that the complaint is without merit and intend to challenge it," the company said.

Earlier Dispute

The patent is the same one that GE successfully asserted in a 2010 lawsuit against Mitsubishi Heavy Industries Ltd. A federal jury awarded $170 million to GE, though the companies later settled.

GE contends Vestas is using the technology for marketing and at wind farms in 11 U.S. states. Vestas knew of the patent because one of its engineers was subpoenaed to provide documents and testimony in the Mitsubishi Heavy case, according to the complaint GE filed Aug. 1 in federal court in Los Angeles.

Anticipated advances in windmill technology is one of the key drivers pushing down the costs of wind farms. As turbines get bigger and more efficient, developers can reduce costs and generate returns more quickly by selling greater volumes of electricity to the grid. Manufacturers keep the contents inside the turbine nacelles, the boxes covering all the power-generating components, a tightly held secret.

GE contends that it's entitled to cash compensation for the unauthorized use of its invention and will seek a court order that would block further use of the ride-through invention by Vestas.

The case is General Electric Co. v. Vestas Wind Systems A/S, 17-5653, U.S. District Court for the Central District of California (Los Angeles).

South Carolina May Spend 60 Years Paying for Nukes Never Built

Posted August 02, 2017, 8:35 A.M. ET

By Lynn Doan and Mark Chediak

Utility customers in South Carolina may end up spending the next 60 years paying billions for two nuclear reactors that'll never get built, based on a proposal that Scana Corp. filed with regulators late Aug. 1.

Scana is seeking state approval to collect $4.9 billion from customers to cover the costs of scrapping two half-finished reactors after construction delays and billions in cost overruns forced the utility owner to pull the plug. Scana is proposing to gradually recover abandonment expenses through customer rates over six decades. Going through with the project would've ultimately cost more than $20 billion, based on company forecasts.

Scana's estimates land the V.C. Summer project a place among the costliest nuclear power plants that failed to be built in the U.S., underscoring the ballooning price that consumers have paid for a long-hyped nuclear renaissance that has yet to materialize. Duke Energy Corp., Dominion

Resources Inc. and NextEra Energy Inc. are among the utilities that have been cleared by regulators to charge at least $1.7 billion for reactors that exist only on paper, filings analyzed by Bloomberg last August show.

A 60-year recovery period will at least "minimize the near-term rate impact" to South Carolina customers, Paul Patterson, an analyst for Glenrock Associates LLC, said.

Scana pointed out Aug. 1 that a tax deduction could reduce the impact on ratepayers. The utility also said in its filing that "mitigating adjustments" such as guaranteed payments from Toshiba Corp.—the parent of the project's now-bankrupt contractor Westinghouse Electric Co.—will mean customers won't see cost increases "for a number of years."

According to Scana's filing, the South Carolina Public Service Commission had originally approved a forecast capital cost for the project of $6.3 billion. The utility estimated in a recent review that the reactors would cost it about $8.8 billion to complete. The economics of such nuclear projects have meanwhile been undermined by low natural gas prices and the onslaught of cheap, renewable power.

Scana is relying on a South Carolina law that allows for a utility to collect capital costs for an abandoned plant so long as it can prove the decision to halt construction was "prudent." And after the company's partner in the project, Santee Cooper, decided to pull out July 31, Scana said, the only prudent course of action was to stop construction.

Israeli-French Satellite to 'Observe in Detail Climate Change'

Posted August 02, 2017, 5:20 A.M. ET

By Matthew Kalman

Israel and France launched an environmental observation satellite that will monitor climate, soil, water and pollution at more than 100 sites around the world.

Developed jointly by the Israel Space Agency and the Centre National d'Etudes Spatiales of France, the 265 kilogram (584 pound) satellite was launched Aug. 2 Israel-time on a Vega rocket from the Kourou Space Center in French Guiana. It will orbit the Earth on a polar trajectory 29 times every 48 hours, operated from ground facilities in Tel Aviv and Haifa in Israel, Toulouse, France, and Kiruna, Sweden.

Israel's first environmental satellite—dubbed VENUS for vegetation and environment monitoring on a new micro satellite—is equipped with a multispectral camera built by Israel's Elbit Electro-Optic Systems, Elop Ltd., that will scan the Earth on 12 wavelengths. Israel joins a handful of nations operating environmental satellites, which were first launched by the U.S. in the 1970s.

Invisible Gases

The satellite will provide some information that is currently unavailable to scientists studying climate change, said Arnon Karnieli, head of Ben-Gurion University's remote sensing laboratory at the Jacob Blaustein Institutes for Desert Research in Sede Boqer, Israel.

"We will develop new concepts for monitoring the Earth, which will be different from the common Earth observations because of the special characteristics of the satellite," Karnieli told Bloomberg BNA in a telephone interview July 30. "We will be able to give the scientists data every other day at the same angle with a very high resolution at the spectral bands that they need for monitoring the Earth's vegetation and land."

The camera's broad wavelength can detect gases invisible to the naked eye, enabling researchers to measure pollution, disease and other issues on land and sea. By analyzing and comparing the series of images of the same location, researchers will be able to assess the state of the soil, understand how vegetation is developing, and detect the spread of disease or contamination.

"Venus will allow us to observe in detail climate change," said Jean-Yves Le Gall, president of the French space agency CNES, in a recent ceremony at Israel Aircraft Industries. "It will observe vegetation with an immensely high resolution showing details up to 5 meters every two days on 110 different scientific sites."

The satellite will operate about 450 miles above the earth's surface, and the first phase of its missions is scheduled to last 2 1/2 years.

Siberian Permafrost

The Max-Planck Institute in Germany will use the satellite's imagery of permafrost in Siberia for its project to improve land cover maps and track changes in planet cover, snow cover, surface water and flood zones.

"No other sensor currently in orbit combines this kind of revisit rate and resolution for keeping track of vegetation," the French space agency said.

The launch also carried another payload, a spy satellite built by Israeli contractors for the Italian government. Israel's previous space projects have all been for defense, sponsored by the government, or commercial communication. The last attempt, the communications satellite Amos-6, was destroyed by fire two days before its planned launch by Elon Musk's SpaceX Inc. in September 2016.

Venus cost about 100 million euros ($118 million) with 40 million euros each contributed by Israel and France, and 20 million euros by Rafael Advanced Defense Systems Ltd. and Israel Aircraft Industries, the government-owned companies that built most of the equipment.

Coal Giant to Australia: Focus on Economy Before Paris Pact

Posted August 02, 2017, 9:05 A.M. ET

By Perry Williams

Australia may need to consider delaying its goals to combat global climate change in order to prioritize energy security and economic prosperity, according to a senior executive at Glencore Plc.

The country's emerging energy crisis, in conjunction with government-imposed clean-energy targets, has undermined investor confidence and may force businesses to shut or move offshore, the commodity giant's global coal head, Peter Freyberg, said in a speech Aug. 2 in Sydney.

"If that means Australia needs to consider a possible delay in meeting its emission reduction targets under the Paris Agreement in order to prioritize energy security and economic prosperity, then its worthy of further discussion," he said, adding that Swiss-based Glencore has invested $20 billion in its Australian assets and last year contributed more than $12 billion to the economy.

Australia, one of the world's biggest coal and natural gas exporters, was among more than 150 signatories to the November deal in Paris, aimed at lowering carbon dioxide emissions to limit a rise in global temperatures. Meanwhile, rising power and gas prices in the past year, as well as occasional blackouts, have put the nation's energy security under scrutiny, a situation Freyberg said stemmed from "a decade of poorly designed and uncoordinated energy policy."

"Renewable energy has a role to play in Australia's energy mix, but not at any cost and not at the expense of grid stability, reliability or other energy options," he said in his speech.

Falling Demand

Global coal consumption dropped 1.7 percent last year compared with an average 1.9 percent yearly rise from 2005 to 2015, BP Plc said in its annual review of global energy trends. Use is falling as the world's biggest energy companies promote cleaner-burning natural gas and as China, which accounted for about half of all coal burned, evolves to focus more on services than heavy manufacturing, while renewable energy like wind and solar becomes cheaper, according to BP's analysis, published in June.

Freyberg's defense of coal in Australia contrasts with comments last month by Andy Vesey, head of the nation's largest power generator, AGL Energy Ltd., who urged the government to exclude coal from its planned clean energy target and said there's no appetite among private investors to fund new coal-fired plants.

Outside of Australia, coal provides secure and reliable baseload energy for Asia's developing economies, Freyberg said Aug. 2, which in turn provides Glencore with investment opportunities. That explains the company's $1.1 billion deal with Chinese miner Yancoal Australia Ltd. last week for Rio Tinto Group's Australian coal assets, he said.

Next-generation coal technology in a growing economy like India—including high-efficiency, low-emission plants and carbon capture and storage—can do more to reduce emissions than building new wind turbines in Europe or solar farms in Australia, Freyberg said.

Peter Grauer, the chairman of Bloomberg LP, is a senior independent non-executive director at Glencore.

Ikea Starts Selling Solar Batteries to U.K. Homeowners

Posted August 02, 2017, 03:21 P.M. ET

By Jessica Shankleman

Home retailer IKEA of Sweden AB will start selling batteries for rooftop solar panels in the latest sign that once-costly storage technologies are becoming mainstream.

The Solar Battery Storage system was announced Aug. 2 in partnership with U.K. panel provider Solarcentury Holdings Ltd., providing potential savings on electricity bills by enabling users to use stored solar power when the sun is down and power grid costs are high.

The news came after the U.K. government set out last month to help energy consumers and industries save as much as 40 billion pounds ($52 billion) on their electricity bills by opening the grid to battery storage devices. The cost of lithium-ion cells used in batteries has already fallen 73 percent since 2010 and more price declines are expected.

A solar panel and battery storage kit from IKEA would cost from 6,925 pounds ($9,155), which would be returned over 12 years, according to the statement by IKEA on its website.

"With energy bills already going up 15 percent this year, there's never been a better time for customers to take back control of their electricity bills and maximize their savings by switching to solar and solar storage," Hege Saebjornsen, sustainability manager for IKEA U.K. & Ireland, said in a statement.

Centrica Plc on Aug. 1 hit U.K. households with a 12.5 percent rise in electricity prices, defying a government pledge to lower costs. SSE Plc, Innogy SE's Npower unit, Iberdrola SA's ScottishPower business and EON SE have all announced price increases since the start of the year.

Hurricane Harvey Challenges Response to Energy Facility Incidents

Posted August 29, 2017, 03:13 P.M. ET

By Nushin Huq

A 14-inch pipeline in La Porte, Texas, spewed a toxic gas for several hours, the latest in several energy infrastructure incidents challenging regulators as Hurricane Harvey continues to dump feet of rain on the state.

Some parts of the state have received over 50 inches of rain, and water being released from reservoirs and levees to relieve the pressure building behind them only compounds the problem of monitoring and responding to leaks and other incidents.

The National Response Center, operated by the U.S. Coast Guard, received more than 30 calls for spilled gasoline, crude oil, petroleum, and the release of contaminants from flare stacks in areas affected by Hurricane Harvey.

According to the response center's records, a caller reported natural gas leaking from a transmission pipeline on Aug. 26 in Ingleside, along the Texas coast. The Pipeline and Hazardous Materials Safety Administration is investigating the issue.

Potential for Environmental Damages

State and federal regulators have their hands full responding to incidents at energy facilities during the monster storm. They not only will have to contend with the possibility of billions of dollars in infrastructure damage, but potential environmental damages as well.

It still has not been determined what caused anhydrous hydrogen chloride to leak Aug. 28 from the pipeline owned by Williams Field Services Gulf Coast, Andrea Morrow, Texas Commission of Environmental Quality, told Bloomberg BNA. The gas mixed with moisture in the air to produce hydrochloric acid, a corrosive that can damage respiratory organs, eyes, skin, and intestines. The pipeline was depressurized and the leak ended after a couple of hours, around 7 p.m.

Two other hurricane-related incidents were reported Aug. 26 and 27.

In the first, Kinder Morgan notified the railroad commission oversight and safety division that a tank at the Kinder Morgan Pasadena Terminal had tilted due to the large volume of rain from Hurricane Harvey, Ramona Nye, spokeswoman for the Texas Railroad Commission, told Bloomberg BNA.

The tilting resulted in the release of an unknown amount of gasoline into a containment dike surrounding the dike. Kinder Morgan reported that fire retardant foam had been placed over the exposed liquid contained in the dike, and Kinder Morgan was emptying the liquid from the tank and containment dike.

A day later, the Houston office of the railroad commission, the state's energy and gas regulator, was notified of a fire in Jefferson County and dispatched a inspector, Nye said. Initial reports indicated a lightning strike on a fiberglass storage tank with resulting fire burning two tanks, releasing fluids into the firewall. An estimated five barrels of crude oil and 20 barrels of produced water was released, but contained within the firewall. Vacuum trucks were brought in to pick up released fluids. The operator was reported as Karbuhn Oil Company.

Texas is home to one of the largest concentrations of energy infrastructure and production in the country. The state has 5.6 million barrels per day of petroleum refining capacity, much of that along the coast. There are no levees or barrier islands protecting that infrastructure from hurricane storm surge.

Monitoring for Incidents

The Texas Commission of Environmental Quality has been monitoring facilities that have reported spills and providing technical guidance to wastewater facilities in flood-impacted areas, Andrew Keese, TCEQ spokesman, told Bloomberg BNA. High water can also pose a risk to energy infrastructure and state regulators are watching for leaks and other incidents.

Currently, the TCEQ and other state agencies are giving priority to protecting and preventing imminent threats to public health. Once flood waters have receded, and it is safe to enter flooded areas, debris removal activities will commence.

"The TCEQ is aware that spills occur during flooding events, and the appropriate primary agency will monitor and work with the responsible party, if known, to take appropriate actions as conditions allow," Keese said. "Throughout the flooding event, the TCEQ remains in constant contact with state partners in spill response. "

Oil, gas and pipelines inspectors at Texas Railroad Commission are on call to respond to reported spills or other incidents as soon as it is safe to do so, Nye, the spokeswoman, said.

The commission has jurisdiction over intrastate pipelines, and the U.S. Department of Transportation's Pipeline and Hazardous Materials Safety Administration (PHMSA) oversees pipelines that cross state boundaries.

The U.S. Chemical Safety and Hazard Investigation Board is urging oil refineries and chemical plants to follow safety precautions when restarting operations. The board notes that floodwater may leak into tanks or become trapped in insulation, while debris can damage electric motors and block sewers.

The Pipeline and Hazardous Materials Safety Administration is working with pipeline operators to get a better view of their facilities, agency spokesperson Darius Kirkwood said.

"Operators have already contracted staff capable of inspecting critical infrastructure after the storm and they are preparing for aerial inspection of pipeline right-of-ways when it is safe to do so," he told Bloomberg BNA.

Harvey has been downgraded to a tropical storm and is currently hovering over the Gulf of Mexico. It will move east and hit Louisiana on Aug. 30, the National Weather Service predicted.

—With assistance from Sylvia Carignan

Harvey's Water Effects | Disaster Aid Surges | Pruitt Audited

Posted August 29, 2017, 7:00 A.M. ET

By Sylvia Carignan

One giant concern for Texans living and working in Harvey's path: water contamination.

Though the EPA is prioritizing search and rescue efforts for those in immediate danger, the agency will soon take floodwater samples and work with wastewater treatment plants to get them up and running after the storm.

Each response team and company operating in the affected area is dealing with limited transportation options: ports are shut down and trucks and trains can't get through.

In addition, once the floodwaters recede, project managers will assess every Superfund site in the hurricane-affected area for damage, David Gray, acting deputy regional administrator for the EPA's south central region, told Bloomberg BNA.

Trump Promises Disaster Aid

Nearly half a million Texans are expected to apply for disaster aid in the aftermath of the hurricane.

President Donald Trump, speaking Monday at a joint press conference with Finnish president Sauli Niinisto, said he expects to see "rapid action" from Congress in response to the storm.

"You're going to get your funding," Trump said. "It's a terrible tragedy."

Vice President Mike Pence sought to tamp down worries that Congress might be slow to reach for its wallet, telling Houston-based radio station KHOU Monday he's "very confident" that Congress "is going to be there to provide the resources necessary" to get the state back on its feet.

Pruitt's Travel Audited

EPA Administrator Scott Pruitt and his travel budget now face scrutiny from a new source—the agency's inspector general. The independent office wants to look at the frequency and cost of his trips, including his flights home to Oklahoma.

Three Democratic members of the U.S. House Energy and Commerce Committee called for the review.

EPA spokeswoman Amy Graham defended Pruitt's travel schedule in a statement to Bloomberg BNA.

The administrator is traveling to "hear directly from the people impacted by EPA's regulations outside of the Washington bubble," Graham said. "This is nothing more than a distraction from the administrator's significant environmental accomplishments."

What Else?

• Secretary of State Rex Tillerson wants to eliminate several special envoy positions, including one for climate change.

• EPA's schedule for deciding whether areas are meeting federal sulfur dioxide air quality standards will remain unchanged following a court ruling Monday.

• Shell is ignoring the effects of climate change and endangering communities near its Providence River terminal, according to a lawsuit filed by the Conservation Law Foundation.

• China is creating the world's largest power company with a merger of giants: Shenhua Group Corp., the country's top coal miner, and China Guodian Corp., one of its largest power generators.

Today's Events

10:00 a.m. | EPA Science Advisory Board | Advisory panel discusses costs and benefits of environmental regulations

11:30 a.m. | Rep. Bobby Scott (D-Va.) will tour a manufacturing plant that modified its operations to avoid higher regulatory costs under a pending OSHA rule on beryllium exposure

1 p.m. | EPA webinar | Reducing plastic pollution with replacement products

From Our Inbox

• EPA is seeking comments on nominees for the Clean Air Scientific Advisory Committee, which offers the agency scientific advice on national standards for ozone and other pollutants.

• EPA is offering grants to promote environmental health for children living along the U.S.-Mexico border.

• EPA's Inspector General: The agency needs to keep a closer eye on employees' requests to use paid time off from the agency's leave bank program.

All About: Biofuel Blending Exemptions

The oil industry is cheering on the Trump administration's regulatory rollback. But in at least one policy area, the industry is preparing for internal conflict.

Nearly all refineries complain about the financial and logistical costs tied to the EPA's Renewable Fuel Standard. However, a recent court decision and new congressional instructions are paving the way for more biofuel blending exemptions for small oil refineries.

If that happens, larger refiners would see increased obligations under the RFS program. That's because exemptions don't affect the aggregate blending requirements that EPA sets for the industry each year.

"The exemptions take that obligated volume out of the stream, and you can't wave a magic wand and take that biofuel out of the total requirement," Haynes and Boone LLP attorney Suzanne Murray told Bloomberg BNA. "Maybe with a couple of guys on the margins, it's OK, but when you start getting more and more folks, sooner or later it adds up to real volume."

Shell Sued by Group Alleging Climate Change Risk Ignored

Posted August 29, 2017, 03:16 P.M. ET

By Adrianne Appel

Shell Oil is the second target of an environmental organization that is suing oil and gas companies for allegedly not preparing for climate change impacts at their New England coastal terminals.

Shell Oil Products has not fortified its Providence, R.I., terminal against expected sea level rise and storms due to climate change, a violation of the federal Clean Water Act, the Conservation Law Foundation alleges in a complaint filed in federal district court in Rhode Island Aug. 28 (Conservation Law Foundation Inc. v. Shell Oil Products, R.I. Dist. Ct., No. 17-cv-00396, Complaint 8/28/17).

Storm damage could cause the terminal to release pollutants that would endanger the Providence River, Providence Harbor, and Narragansett Bay, the group says. Other ports and terminals in New England owned and operated by major petroleum companies also are at risk from climate change, and CLF plans to file suits against some of them, Bradley Campbell, CLF president, told Bloomberg BNA Aug. 29 in an interview.

The Conservation Law Foundation filed a similar lawsuit in 2016 against Exxon Mobil Corp., charging that its Everett terminal facility, which sits on the Mystic River that empties into Boston Harbor, is not prepared to withstand climate change. Exxon is seeking dismissal of the suit. The federal court will hear the Exxon suit Sept. 16.

"Facilities handling oil and hazardous substances have an obligation under the CWA and other laws to take every reasonable measure to avoid an unintended spill," Campbell said in an interview. "Shell has done nothing to prepare this very vulnerable facility to climate change," he said in a statement.

Shell, a wholly owned subsidiary of Royal Dutch Shell PLC, did not respond to requests for

comment by Bloomberg BNA Aug. 28 and 29. It has 60 days to respond to the complaint. The American Petroleum Institute also did not respond to a request for comment by Bloomberg BNA Aug. 29.

Storm Surges

The CLF's complaint alleges that Shell recognizes the risk posed by climate change to its 75-acre, 25-tank Providence terminal, which sits on the Providence River at the head of Narragansett Bay.

The terminal would be partly or completely inundated with water by storms ranging from category 1 to category 4, the complaint alleges. Shell needs to protect the facility's tanks from collapsing in a storm and to determine what else at the terminal, from pipes to pilings, needs to be protected, it says.

The CLF also alleges that the Shell facility regularly discharges pollution into Narragansett Bay due to a failure to manage storm water, another violation of the Clean Water Act.

Narragansett Bay, at 147 square miles, is New England's largest estuary that was badly polluted before a 10-year effort to clear it of storm water discharges improved it significantly, CLF says.

The foundation is seeking injunctive relief, or a court order to stop the alleged violations of the Clean Water Act, and civil penalties, attorneys' fees and environmental restoration.

The lawsuit was filed by CLF attorneys Amy Moses, Christopher Kilian and Heather Murray, with Allan Kanner of Kanner & Whiteley LLC in New Orleans. Kanner also is participating in the Exxon suit. Kanner represented plaintiffs against BP following its Deepwater Horizon spill.

Duke's Florida Plan Builds More Solar, Scraps Nuke Project

Posted August 29, 2017, 03:12 P.M. ET

By Chris Marr

Duke Energy could add 700 megawatts of solar power to Florida's grid by 2021 and stop billing customers for a halted nuclear project under a plan filed with state utility regulators Aug. 29.

The company's plan, if approved by the Florida Public Service Commission, would settle disputes with a range of clean energy and business groups on such issues as the rates it charges customers for electricity and its continued customer billing to cover costs for a halted nuclear project in Levy County.

The plan calls for capital investments of $6 billion over four years, and Duke would stop billing customers for the costs of the Levy project. The company said when announcing the settlement agreement it would no longer move forward with the Levy project.

The Southern Alliance for Clean Energy applauds the plan for embracing "smart technologies that are both good for consumers and the environment," Stephen A. Smith, executive director for the alliance, said in a written statement today. Several other groups also indicated their support for the plan, which would take effect in January 2018, if approved.

The company's plan would let Duke build up to 50 megawatts of large-scale battery storage and

install 500 electric-vehicle charging stations in the state. And it would call for Duke to collect data on customer-owned solar usage and related rate structures.

Harry Sideris, state president for Duke Energy in Florida, said in a statement the settlement would let the company make "smart investments that will offer customers more information, choices and control of their energy needs while also providing greater reliability."

The settlement would give Duke initial authority to plan for up to 700 megawatts of new solar power generation. The company still would have to file specific projects to the commission for approval on rate increases to pay for construction. The agreement would take effect in January 2018, pending commission approval.

The company provided specifics on about a 10th of its solar power plans. It expects to start construction in early 2018 on a 75-megawatts solar power plant in Hamilton County, Fla., the company's sixth solar power plant in the state, it said.

The proposed settlement has support from the Florida Industrial Power Users Group, the Florida Retail Federation, White Springs Agricultural Chemicals Inc., and Florida's Office of Public Counsel, which represents the public's interests in PSC proceedings.

Air Pollution Economic Impact Model Lacks Clarity: EPA Advisers

Posted August 29, 2017, 03:48 P.M. ET

By Sylvia Carignan

The EPA's model for evaluating the broad economic costs and benefits of air pollution regulations isn't clear enough to help the general public, members of the agency's Science Advisory Board said Aug. 29.

The analysis is intended to help utilities, industries, and the Environmental Protection Agency's policymakers determine the effects of federal regulations on factors like energy prices and employment. A recent court decision in Murray Energy Corp. v. EPA gave the agency latitude to carry out cost-benefit reviews as it and its advisers deem appropriate.

Members of the science board, who met Aug. 29 to discuss their draft report on EPA's draft economy-wide model, sought clarifications and transparency on the model's shortcomings.

"These models are very intricate, very complex—a lot of moving parts—and in some cases those are grounded in careful econometric estimates," said Robert Johnston, a board member and economics professor at Clark University. "But in many cases, we don't have the data, and these models are based on long-maintained assumptions."

A Science Advisory Board sub-panel formed to create the report will make revisions and send the report to Administrator Scott Pruitt once the panel's chair, Peter Wilcoxen, has signed off.

"This is a tremendously costly endeavor, and that's why we haven't done it already," Wilcoxen, an environment and international policy professor at Syracuse University, said.

Members of the chartered Science Advisory Board include consultants, researchers and analysts at U.S. universities, environmental advocacy groups, Dow Chemical, Procter & Gamble, and

ExxonMobil.

Fewer Brazilian Renewable Projects Returned in Reverse Auction

Posted August 29, 2017, 8:25 A.M. ET

By Vanessa Dezem

Fewer renewable energy developers took up the Brazilian government's offer to bid for the right to cancel licenses for new power plants in a so-called reverse auction.

Energy companies who took part paid the government to get out of contracts to build 557.36 megawatts of renewable power plants, out of almost 5 gigawatts of projects that were registered to participate in the event.

About 307.7 megawatts of contracts were canceled by wind developers, while solar companies canceled 249.6 megawatts, according to information posted on the website of Electric Energy Trading Board, known as CCEE. No hydropower project was canceled.

The so-called reverse auction offered relief for developers contracted to deliver electricity from stalled clean-power projects and for a government that's seeking to swell its coffers. A deep recession and exchange rate volatility have made it tough for companies to line up financing. Given slowing demand for electricity, the extra capacity wasn't needed.

"We expected a bigger auction," said Thais Prandini, director at the Thymos Energia consultancy in Sao Paulo. "In an ideal world, developers in a difficult situation would be able to return projects, but the government tightened the penalty and many companies gave up."

Brazil's government will pocket 105.9 million reais ($33.4 million) from the reverse auction, according to the website. Bloomberg New Energy Finance had estimated the government would be able to cancel 1.4 gigawatts of wind and solar projects. Thymos had estimated more than 2 gigawatts of hydroelectric, solar and wind power projects would be canceled.

In a reverse auction, developers bid the amount of the fine they're willing to pay to cancel their contracts. Companies bid with an initial premium of 33.68 reais per megawatt-hour for each contract they wanted to cancel. The average premium of the auction was 66.02 reais per megawatt-hour.

Wind power got the highest average bid of 72.74 reais per megawatt-hour, while solar got 50.27 reais per megawatt-hour.

After cancelling contracts, winners will be unable to participate in the two next power auctions.

"It was a competitive tender," said Ana Karina Souza, partner of infrastructure at Machado Meyer in Sao Paulo. "Many people that registered are now interested in keep building their projects. And looking at the bright side, the government has discovered a new mechanism to balance the power sector."

Argentina OKs Hydroelectric Dams, Halts Nuclear Plan in Patagonia

Posted August 29, 2017, 03:15 P.M. ET

By David Haskel

Argentina gave the final go-ahead to build two hydroelectric dams in southern Patagonia, as a province in that area said it was dropping plans to build a nuclear power plant due to community resistance.

First announced in 2015, the dams were put on hold by President Mauricio Macri soon after he took office in December after complaints about their potential threat to glaciers, wildlife, and other environmental assets in a region that prides itself of its pristine natural resources.

After a government review, construction plans were downsized to a total 1,310 megawatts output—representing 5 percent of the current electricity demand in Argentina—from the original 1,740 megwatts, and they were sited away from a lake to help preserve the area.

The Energy Ministry and the Environment Ministry announced final approval Aug. 28 in Joint Resolution No. 3-E/2017 published in the official gazette, which said the government had taken into account environmental concerns.

But Rio Santa Cruz Sin Represas, a coalition of groups opposed to the dams, claimed the environmental impact assessment for the dams was incomplete.

Both hydroelectric dams in the Santa Cruz province will be financed and built by China's Gezhouba Group, and an Argentine consortium of Electroingenieria S.A. and Hidrocuyo S.A.

Nuclear Plans

Meanwhile, Rio Negro province Gov. Alberto Weretilneck, who until as recently as May was a staunch supporter of plans to build a nuclear facility in that Patagonian state, said he has changed his mind due to strong resistance to the project, including public hearings, social media campaigns, letters to authorities, and citizen protests.

"I've always said that the nuclear plant would be installed only if there was social acceptance. Evidently, there wasn't any," he said in a video posted on the provincial government website.

The plant was one of two worth a total $15 billion that Argentina, which has three operating nuclear plants, was planning to build with engineering and financing backing from China National Nuclear Corporation to help with a severe lack of energy stifling economic growth. Location for the other nuclear plant was still under discussion.

Jordan Plans to Boost Renewables Almost Five Times by 2020

Posted August 29, 2017, 9:21 A.M. ET

By Mohammad Tayseer

Jordan plans to boost its capacity to produce renewable energy by almost five times in the next three years, with several projects set to be announced in the next few months, according to Abdel Fattah Daradkeh, director general of the country's National Electric Power Co.

New solar and wind projects to be signed in the next few months will help increase the nation's renewable energy capacity to 2,400 megawatts by 2020, from 500 megawatts now, Daradkeh said in an interview Aug. 29 in Amman.

Jordan wants to generate about 20 percent of its electricity from renewables by 2020, Minister of Energy and Mineral Resources Ibrahim Saif said earlier this year. Middle East countries including Saudi Arabia, the United Arab Emirates and Morocco are developing wind and solar power plants to either curb their fuel imports or conserve more valuable oil that could be exported instead of used domestically.

Jordan is also expanding its conventional power capacity, to 4,600 megawatts by 2020 from 3,850 megawatts currently, Daradkeh said. A 470-megawatt power plant that uses oil shale will start construction before the end of the year and be completed in 2020, he said.

Electricity may be exported to Syria and Iraq, and there are plans to connect the grid to Saudi Arabia, he said.

Saudi Arabia Tenders for First Wind Power Plant to Cut Oil Use

Posted August 29, 2017, 8:08 A.M. ET

By Dana Khraiche

Saudi Arabia, the world's biggest exporter of crude oil, is seeking bids for its first utility-scale wind power project as part of the kingdom's plan to wean its economy off oil.

The Renewable Energy Project Development Office, part of the energy ministry, released requests for proposals to build the 400-megawatt plant at Dumat Al Jandal in the kingdom's northwestern Al Jouf region, it said Aug. 29 in an emailed statement. The office has qualified 25 companies for the project, with bidding set to close in January 2018.

The ministry plans to start a second round of renewable energy projects before the end of the year, "keeping us firmly on track to deliver 9.5 gigawatt of renewable energy by 2023," Energy Minister Khalid Al-Falih said in the statement. The nation currently has no wind capacity, according to Bloomberg New Energy Finance.

Saudi Arabia plans to develop 30 solar and wind projects over the next 10 years as part of a $50 billion program to boost power generation and cut its oil consumption. The country will produce 10 percent of its power from renewable energy by 2023, Al-Falih said in April. The projects are part of a plan to transform the Saudi economy by weaning it off oil and creating new industries.

The government announced plans to offer tenders for renewable energy projects to generate 700 megawatts this year. The country sought bids in April for a 300-megawatt solar project and aims to announce a winner in November.

Qualified potential bidders include General Electric Co., Marubeni Corp., Mitsui & Co., Siemens Project Ventures, Sumitomo Corp., Korean Electric Power Corp., Toyota Tsusho Corp., EDF Energies Nouvelles, Abu Dhabi's Masdar and Saudi Arabia's ACWA Power International.

Subject: Greens pan EPA defense of stay on methane rule

By Alex Guillén

06/20/2017 03:43 PM EDT

Environmental groups today asked a federal court to reinstate EPA's methane rule for new oil and gas wells, arguing the agency has no right to favor oil and gas companies over the people who live near their wells.

EPA put the rule on hold for 90 days while it reconsiders several key provisions, a decision that would save millions of dollars in compliance costs. But the agency said that decision would not create a public health emergency because leaving the rule in place would prevent just 0.046 percent of annual industry emissions.

Environmental groups said that EPA's justification violated the Clean Air Act by ignoring the residents who live downwind from drilling operations, especially children, people with asthma and other groups most vulnerable to air pollution.

"It is irrelevant because it does not reduce the burden felt by Petitioners' members who live near sources whose emissions would be abated but for the unlawful stay, especially those in nonattainment areas where *any* additional VOC emissions may increase local ozone concentrations," the groups wrote in their brief today. "And it is disingenuous because those massive emissions are the result of EPA's own failure to regulate existing oil and gas wells."

The green groups also panned EPA's arguments that the industry would face millions of dollars' worth of compliance if the stay were lifted when "these same wells produce billions of dollars of revenue annually."

WHAT'S NEXT: The D.C. Circuit Court of Appeals will decide whether to grant environmentalists' emergency request to lift EPA's stay of the methane rule. There is no specific deadline to do so, but the court has indicated it will consider the request on an expedited timetable.

Subject: "New York Times Guilty of Large Screw-Up on Climate-Change Story"

THE WASHINGTON POST

New York Times Guilty of Large Screw-Up on Climate-Change Story

The Washington Post
August 10, 2017
https://www.washingtonpost.com/blogs/erik-wemple/wp/2017/08/09/new-york-times-guilty-of-large-screw-up-on-climate-change-story/?utm_term=.209c6c2d9486

The New York Times on Wednesday appended a correction to a story about a climate change study:

> Correction: August 9, 2017
>
> An article on Tuesday about a sweeping federal climate change report referred incorrectly to the availability of the report. While it was not widely publicized, the report was uploaded by the nonprofit Internet Archive in January; it was not first made public by The New York Times.

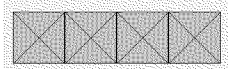
That correction, which sits at the foot of the story, dutifully straightens out the record. Yet given the magnitude of the screw-up, it should sit atop the story, surrounded by red flashing lights and perhaps an audio track to instruct readers: Warning: This story once peddled a faulty and damaging premise.

That premise suggests that the Trump administration is stifling a damaging draft report — part of the congressionally mandated National Climate Assessment — with dire warnings about climate change. "The average temperature in the United States has risen rapidly and drastically since 1980, and recent decades have been the warmest of the past 1,500 years, according to a sweeping federal climate change report awaiting approval by the Trump administration," noted the lead of the article, which was written by Lisa Friedman.

As it detailed the conclusions of the draft report, the New York Times highlighted an equally scary prospect: That without the intervention of the New York Times, it might not have seen the light of day. Examples:

- "One government scientist who worked on the report, and who spoke to The Times on the condition of anonymity, said he and others are concerned it will be suppressed."
- "A copy of it was obtained by The New York Times."
- "The draft report by scientists from 13 federal agencies, which has not yet been made public, concludes that Americans are feeling the effects of climate change right now."

As part of its corrective effort, the New York Times has pulled the language saying that "a copy of it



was obtained by the New York Times," as well as the mistaken assertion that it has "not yet been made public." Even so, the article continues to carry this line: "Another scientist involved in the process, who spoke to The New York Times on the condition of anonymity, said he and others were concerned that it would be suppressed." As well as this one: "Scientists say they fear that the Trump administration could change or suppress the report."

Though it may be the case that certain scientists maintain such fears, that's a pretty tough position in light of the fact that the report "was uploaded by the nonprofit Internet Archive in January" and publicized by the New York Times in August.

It is unclear how such a mistake came about. Maybe reporter Lisa Friedman failed to consult one Bob Kopp, or others who cited the error on Twitter:

Lawsuit Claims Duke Energy Storing Ash in 'Open Dump'

Posted August 02, 2017, 03:14 P.M. ET

By Andrew M. Ballard

Duke Energy is operating an "illegal open dump" at its Roxboro, N.C., facility, an environmental group said in a lawsuit seeking to alter the utility's coal ash storage plans.

Coal ash pits on the site in Person County are polluting groundwater and nearby Hyco Lake, according to Frank Holleman, a senior attorney with the Southern Environmental Law Center in Chapel Hill, N.C.

The utility "needs to put forward a plan to get its ash out of the groundwater, to remove the ash from the floodplain, to get rid of its dangerous dams, and to safely store its coal ash where it won't pollute," Holleman said in a statement.

The lawsuit, filed Aug. 2, claims that Duke Energy's closure plan violates the federal Resource Conservation and Recovery Act and associated coal ash regulations, and the ash should be removed and managed in lined landfills (Roanoke River Basin Assn. v. Duke Energy Progress, LLC, M.D.N.C., No. 1:17-cv-707, complaint 8/2/17).

Danielle Peoples, a spokeswoman for Duke Energy in Charlotte, N.C., called the lawsuit "yet another example of SELC's extreme agenda," adding the environmental group seeks to get courts to "upend strong state and federal policy regulating the closure of ash basins."

'Strong Progress'

Duke Energy is "making strong progress at the Roxboro plant" by building lined retention basins to manage water and fully convert to dry coal ash management in future disposal, Peoples said.

"Excavating all ash basins is the most extreme and disruptive approach" and federal rules not only allow for capping in place but also require decades of groundwater monitoring after they are closed,

she told Bloomberg BNA Aug. 2.

Duke Energy has 14 coal ash sites in North Carolina and has been the subject of several lawsuits by the Southern Environmental Law Center and other conservation groups over ash storage and management practices at its facilities.

Energy Department Denies Perry's Move to Homeland Security Post

Posted August 02, 2017, 11:41 A.M. ET

By Jennifer A. Dlouhy and Jennifer Jacobs (Bloomberg News)

A Department of Energy official Twitter accounted denied the Trump administration is considering Energy Secretary Rick Perry for the top position at the Department of Homeland Security.

"While @SecretaryPerry is honored to be mentioned, he is happy where he is & focused on carrying out mission POTUS gave him to lead @ENERGY," DOE Press Staff wrote on Twitter. Earlier Bloomberg reports suggested Perry, the former Texas governor, could be a possible replacement for John Kelly, who left the job when he was named White chief of staff.

Another name some administration officials are said to favor is House Homeland Security Committee Chair Michael McCaul, a Texas Republican who was previously considered for the Homeland Security job before Trump nominated Kelly.

GE Claims Vestas Infringes Wind Turbine Power Control Patent

Posted August 02, 2017, 01:58 P.M. ET

By Susan Decker, Christopher Martin and Anna Hirtenstein

General Electric Co., which lost its top spot in wind turbine sales this year, claims new market leader Vestas Wind Systems A/S is using its technology to protect their turbines from dramatic fluctuations in power.

The dispute comes as the U.S. wind industry is gearing up for significant growth. At the end of June, more than 25.8 gigawatts of wind farms were under construction or in advanced development in the U.S., up 41 percent from a year earlier, according to a report from the American Wind Energy Association. That's on top of the 84 gigawatts already installed.

GE and Vestas dominate the market with a combined 83 percent of those projects that have contracts for turbines. Vestas has installed more wind turbines than any other firm, working in 33 countries across six continents last year. It recently surpassed GE to take the biggest market share in the U.S.

Vestas Chairman Bert Nordberg said he was concerned about maintaining this lead in an April interview, anticipating sharper competition from GE.

The patent covers a technology known as zero voltage ride through, which enables wind turbines to remain connected to the grid without damage during voltage fluctuations such as those caused by lightning strikes or short circuits. Typically the turbines were designed to disconnect from the grid.

Vestas said in a statement that it's not been able to study the complaint in detail.

"Based on our initial assessment we strongly believe that the complaint is without merit and intend to challenge it," the company said.

Earlier Dispute

The patent is the same one that GE successfully asserted in a 2010 lawsuit against Mitsubishi Heavy Industries Ltd. A federal jury awarded $170 million to GE, though the companies later settled.

GE contends Vestas is using the technology for marketing and at wind farms in 11 U.S. states. Vestas knew of the patent because one of its engineers was subpoenaed to provide documents and testimony in the Mitsubishi Heavy case, according to the complaint GE filed Aug. 1 in federal court in Los Angeles.

Anticipated advances in windmill technology is one of the key drivers pushing down the costs of wind farms. As turbines get bigger and more efficient, developers can reduce costs and generate returns more quickly by selling greater volumes of electricity to the grid. Manufacturers keep the contents inside the turbine nacelles, the boxes covering all the power-generating components, a tightly held secret.

GE contends that it's entitled to cash compensation for the unauthorized use of its invention and will seek a court order that would block further use of the ride-through invention by Vestas.

The case is General Electric Co. v. Vestas Wind Systems A/S, 17-5653, U.S. District Court for the Central District of California (Los Angeles).

—With assistance from Christian Wienberg.

South Carolina May Spend 60 Years Paying for Nukes Never Built

Posted August 02, 2017, 8:35 A.M. ET

By Lynn Doan and Mark Chediak

Utility customers in South Carolina may end up spending the next 60 years paying billions for two nuclear reactors that'll never get built, based on a proposal that Scana Corp. filed with regulators late Aug. 1.

Scana is seeking state approval to collect $4.9 billion from customers to cover the costs of scrapping two half-finished reactors after construction delays and billions in cost overruns forced the utility owner to pull the plug. Scana is proposing to gradually recover abandonment expenses through customer rates over six decades. Going through with the project would've ultimately cost more than $20 billion, based on company forecasts.

Scana's estimates land the V.C. Summer project a place among the costliest nuclear power plants that failed to be built in the U.S., underscoring the ballooning price that consumers have paid for a long-hyped nuclear renaissance that has yet to materialize. Duke Energy Corp., Dominion Resources Inc. and NextEra Energy Inc. are among the utilities that have been cleared by regulators to charge at least $1.7 billion for reactors that exist only on paper, filings analyzed by Bloomberg last August show.

A 60-year recovery period will at least "minimize the near-term rate impact" to South Carolina customers, Paul Patterson, an analyst for Glenrock Associates LLC, said.

Scana pointed out Aug. 1 that a tax deduction could reduce the impact on ratepayers. The utility also said in its filing that "mitigating adjustments" such as guaranteed payments from Toshiba Corp.—the parent of the project's now-bankrupt contractor Westinghouse Electric Co.—will mean customers won't see cost increases "for a number of years."

According to Scana's filing, the South Carolina Public Service Commission had originally approved a forecast capital cost for the project of $6.3 billion. The utility estimated in a recent review that the reactors would cost it about $8.8 billion to complete. The economics of such nuclear projects have meanwhile been undermined by low natural gas prices and the onslaught of cheap, renewable power.

Scana is relying on a South Carolina law that allows for a utility to collect capital costs for an abandoned plant so long as it can prove the decision to halt construction was "prudent." And after the company's partner in the project, Santee Cooper, decided to pull out July 31, Scana said, the only prudent course of action was to stop construction.

Pot Laced with Pesticides Forces States to Act as EPA Stays Away

Posted August 02, 2017, 8:26 A.M. ET

By Jack Kaskey (Bloomberg News)

Whenever Josh Wurzer buys legal California pot, he makes certain it was grown without pesticides.

That's because Wurzer, as president of cannabis-testing company SC Labs, knows how prevalent the use of health-threatening chemicals are in an industry that until recently operated mostly in the shadows. Three to four of every 10 samples that SC tests reveal the presence of pesticides that shouldn't be used on cannabis, including one that turns into a poisonous gas when ignited, he said.

"I don't want some farmer with no one looking over their shoulder spraying away all kinds of pesticides that they don't really understand, that they are not really trained to use," said Wurzer, who has a doctor's prescription to buy pot. "I choose to get cannabis from people I know aren't using pesticides."

With 29 states and the District of Columbia now allowing medical or recreational cannabis use, the $6 billion U.S. industry is expected to reach $50 billion by 2026, according to investment bank Cowen & Co. Yet many states are just beginning to check for pesticides, while some have no testing program at all. California, where voters approved medical marijuana 20 years ago, won't begin testing for impurities until recreational sales begin Jan. 1.

Regulating pesticides for marijuana plants is a state issue because the federal government still classifies pot as an illegal drug. That's prevented the Environmental Protection Agency from evaluating the safe use of cannabis pesticides, as it does for all other crop chemicals. An attempt by Scotts Miracle-Gro Co. to register some pesticides for pot was rebuffed in June by EPA Administrator Scott Pruitt.

Colorado last year found that 49 percent of cannabis samples tested in response to complaints had residue of unapproved pesticides, according to state Department of Agriculture data. The failure rate so far this year is 13 percent, demonstrating how testing improves the safety of marijuana, according to Jan Stapleman, a spokeswoman for Colorado's Department of Public Health and Environment.

Oregon also is seeing an improvement after mandatory testing that started late last year resulted in hundreds of failures, Jonathan Modie, a spokesman for the state Health Authority, said.

The advent of state-regulated cannabis testing has gone a long way toward ensuring legal pot can "reasonably be considered safe," Whitney Cranshaw, an entomologist and pesticide expert at Colorado State University, said. "Prior to that point, we were in a Wild West period with pesticide use, since not only the federal agencies but also the state agencies avoided the issue entirely."

Testing is only now getting started because marijuana was illegal for so long, said Natalie Darves, who runs Cougar Acres Consulting and teaches at Oaksterdam University in Oakland, Calif., which bills itself as America's first cannabis college. The long prohibition and current quasi-legal status has politicized marijuana, making states hesitant to step into the federal government's regulatory role, she said.

When they do step in, states struggle with implementing a pot-testing program, said Julianne Nassif, director of environmental health at the Association of Public Health Laboratories. Lacking federal guidance, they must develop regulations, license private labs if they aren't going to test samples in state facilities and determine what types of pesticides, pathogens, fungal toxins and heavy metals to monitor. And funding is always an issue, she said.

Baked Goods

Cannabis regulation is further complicated by the dizzying number of ways pot can be consumed in recreational markets like Colorado, John Scott, pesticide section chief for the state agriculture department, said. In addition to smoking, cannabis can be ingested through baked goods, eye drops, skin lotions and even suppositories, Scott said. Smokable extracts not only concentrate marijuana's active ingredients, but also any pesticide residue, he said.

"Marijuana is unlike any other agricultural crop that we have ever dealt with," Scott said.

Three pesticides accounted for more than one-third of about 900 cannabis failures in Oregon since October, according to state testing data compiled by Bloomberg. The most common was spinosad, a relatively safe insecticide used to control caterpillars on crops such as corn, cotton and tobacco. The second leading cause of failure was piperonyl butoxide, a chemical used with other insecticides to boost effectiveness that the EPA says is a possible human carcinogen.

Myclobutanil, the third-most-common pesticide detected, can be dangerous on cannabis because heating the chemical creates hydrogen cyanide, a poisonous gas. In Canada, where medical marijuana is legal nationwide, the discovery of myclobutanil and piperonyl butoxide residue in

cannabis this year prompted product recalls and the start of a mandatory testing program.

Clean Cannabis

Sold by Dow Chemical Co. as Eagle 20, myclobutanil is typically used to combat powdery mildew. But it's unnecessary for cannabis when growers can turn to safe solutions such as Regalia, a nontoxic treatment for the pest, Oaksterdam's Darves said.

Regalia is made by Marrone Bio Innovations Inc., a publicly traded producer of biopesticides. Pam Marrone, chief executive officer of Marrone Bio, said she had no plan to supply pot farmers when Regalia became a hot topic in online chat rooms. Growers flooded customer-service lines with requests for the plant-based product. So Marrone hired a distributor, Vital Garden Supply, to sell Regalia, Grandevo and other biopesticides to the cannabis market.

"They were a little nervous about going into the cannabis industry," Paul Harton, a Vital sales manager, said. "We sell a phenomenal amount of their products, and it's growing exponentially."

Some businesses are catering to customers concerned about pesticides by offering so-called clean cannabis. Amy Andrle, co-owner of L'Eagle Services, a Denver dispensary and grower, said non-toxic treatments like neem oil and garlic sprays—along with dehumidifiers and high-grade air systems—help her prevent common pot pests like powdery mildew. She also uses beneficial bugs and biological treatments to control damaging insects. Third-party tests provide proof to customers that L'Eagle weed is pesticide-free.

Finding clean-cannabis suppliers may be the best route for pot users concerned about pesticide residues in states where there is no testing regime. Arizona, for instance, has no plans to establish such a program because that wasn't part of the voter-approved referendum allowing medical marijuana, said Holly Ward, a spokeswoman for the state Department of Health Services. More than 137,000 residents are enrolled in Arizona's medical marijuana program.

Wurzer, who runs the California testing lab, said he's relieved consumers won't need to worry about hazards in their weed once the state implements its program in the new year.

"It's really a good thing for the general cannabis consumers that California is regulating now," Wurzer said. "People can assume that someone is actually looking out for them."

Jacobs Seeks Splash in Water Business With $2.85 Billion Deal

Posted August 02, 2017, 03:15 P.M. ET

By Richard Clough, Phil Serafino and Oliver Sachgau

Jacobs Engineering Group Inc. is opening up the checkbook to capitalize on growing demand worldwide for water and other infrastructure projects.

The construction giant agreed to buy CH2M HILL Cos. Ltd. for $2.85 billion, a deal that could give Jacobs a leading position in a potential $100 billion market for wastewater treatment, desalination

and water supply, the companies said Aug. 2.

"One of the top priorities was the water business that we're acquiring, which is one of the highest growth businesses in our industry," Steve Demetriou, chief executive officer of Jacobs, said on a conference call. "That's a business that's been growing industrywide around 8 to 10 percent, so that is exciting for us."

The deal, slated to close by the end of 2017, broadens the reach of one of the world's largest engineering and construction firms at a time when President Donald Trump is calling for greater spending on U.S. infrastructure. CH2M, which makes most of its money from government contracts, has worked on high-profile projects such as the 2012 London Olympics and an expansion of the Panama Canal.

Demetriou pointed to the western and midwestern U.S.—"where aging infrastructure has been neglected for quite some time"—along with Australia and Southeast Asia as potential growth markets. In addition to Jacobs's infrastructure operations, the aerospace and industrial businesses also stand to benefit from the combination with CH2M, he said.

Annual Sales

The combined company will have pro forma annual sales of $15.1 billion. About 56 percent of sales will come from infrastructure and government services, an increase from Jacobs' previous total of about 45 percent, Demetriou said.

"Our two companies are highly complementary with very little overlap," he said.

The acquisition will boost Jacobs' adjusted per-share earnings by 15 percent in the first full year after closing, the companies said in a statement. Adjusted cash earnings will increase 25 percent a share. The purchase values CH2M at $3.27 billion including net debt, or about 6.9 times adjusted profit.

Apollo Global Management LLC, which has a voting stake in CH2M of about 18 percent, has agreed to vote in favor of the transaction, according to the statement.

Worker Controlled

CH2M, based in Englewood, Colo., is one of the largest employee-controlled companies in the U.S., owned by around 20,000 stockholders, including active and former employees, according to its website. The company has singled out Trump's promised infrastructure spending as a source of future revenue.

Perella Weinberg Partners LP and Morgan Stanley are advising Jacobs on the deal, while Fried, Frank, Harris, Shriver & Jacobson LLP and Wachtell, Lipton, Rosen & Katz are providing legal advice. Bankers from Bank of America Merrill Lynch and Credit Suisse are advising CH2M with Latham & Watkins LLP and Richards, Layton & Finger P.A. as legal counsel.

Israeli-French Satellite to 'Observe in Detail Climate Change'

Posted August 02, 2017, 5:20 A.M. ET

By Matthew Kalman

Israel and France launched an environmental observation satellite that will monitor climate, soil, water and pollution at more than 100 sites around the world.

Developed jointly by the Israel Space Agency and the Centre National d'Etudes Spatiales of France, the 265 kilogram (584 pound) satellite was launched Aug. 2 Israel-time on a Vega rocket from the Kourou Space Center in French Guiana. It will orbit the Earth on a polar trajectory 29 times every 48 hours, operated from ground facilities in Tel Aviv and Haifa in Israel, Toulouse, France, and Kiruna, Sweden.

Israel's first environmental satellite—dubbed VENUS for vegetation and environment monitoring on a new micro satellite—is equipped with a multispectral camera built by Israel's Elbit Electro-Optic Systems, Elop Ltd., that will scan the Earth on 12 wavelengths. Israel joins a handful of nations operating environmental satellites, which were first launched by the U.S. in the 1970s.

Invisible Gases

The satellite will provide some information that is currently unavailable to scientists studying climate change, said Arnon Karnieli, head of Ben-Gurion University's remote sensing laboratory at the Jacob Blaustein Institutes for Desert Research in Sede Boqer, Israel.

"We will develop new concepts for monitoring the Earth, which will be different from the common Earth observations because of the special characteristics of the satellite," Karnieli told Bloomberg BNA in a telephone interview July 30. "We will be able to give the scientists data every other day at the same angle with a very high resolution at the spectral bands that they need for monitoring the Earth's vegetation and land."

The camera's broad wavelength can detect gases invisible to the naked eye, enabling researchers to measure pollution, disease and other issues on land and sea. By analyzing and comparing the series of images of the same location, researchers will be able to assess the state of the soil, understand how vegetation is developing, and detect the spread of disease or contamination.

"Venus will allow us to observe in detail climate change," said Jean-Yves Le Gall, president of the French space agency CNES, in a recent ceremony at Israel Aircraft Industries. "It will observe vegetation with an immensely high resolution showing details up to 5 meters every two days on 110 different scientific sites."

The satellite will operate about 450 miles above the earth's surface, and the first phase of its missions is scheduled to last 2 1/2 years.

Siberian Permafrost

The Max-Planck Institute in Germany will use the satellite's imagery of permafrost in Siberia for its project to improve land cover maps and track changes in planet cover, snow cover, surface water and flood zones.

"No other sensor currently in orbit combines this kind of revisit rate and resolution for keeping track of vegetation," the French space agency said.

The launch also carried another payload, a spy satellite built by Israeli contractors for the Italian government. Israel's previous space projects have all been for defense, sponsored by the government, or commercial communication. The last attempt, the communications satellite Amos-6, was destroyed by fire two days before its planned launch by Elon Musk's SpaceX Inc. in September 2016.

Venus cost about 100 million euros ($118 million) with 40 million euros each contributed by Israel and France, and 20 million euros by Rafael Advanced Defense Systems Ltd. and Israel Aircraft Industries, the government-owned companies that built most of the equipment.

Ikea Starts Selling Solar Batteries to U.K. Homeowners

Posted August 02, 2017, 03:21 P.M. ET

By Jessica Shankleman

Home retailer IKEA of Sweden AB will start selling batteries for rooftop solar panels in the latest sign that once-costly storage technologies are becoming mainstream.

The Solar Battery Storage system was announced Aug. 2 in partnership with U.K. panel provider Solarcentury Holdings Ltd., providing potential savings on electricity bills by enabling users to use stored solar power when the sun is down and power grid costs are high.

The news came after the U.K. government set out last month to help energy consumers and industries save as much as 40 billion pounds ($52 billion) on their electricity bills by opening the grid to battery storage devices. The cost of lithium-ion cells used in batteries has already fallen 73 percent since 2010 and more price declines are expected.

A solar panel and battery storage kit from IKEA would cost from 6,925 pounds ($9,155), which would be returned over 12 years, according to the statement by IKEA on its website.

"With energy bills already going up 15 percent this year, there's never been a better time for customers to take back control of their electricity bills and maximize their savings by switching to solar and solar storage," Hege Saebjornsen, sustainability manager for IKEA U.K. & Ireland, said in a statement.

Centrica Plc on Aug. 1 hit U.K. households with a 12.5 percent rise in electricity prices, defying a government pledge to lower costs. SSE Plc, Innogy SE's Npower unit, Iberdrola SA's ScottishPower business and EON SE have all announced price increases since the start of the year.

Coal Giant to Australia: Focus on Economy Before Paris Pact

Posted August 02, 2017, 9:05 A.M. ET

By Perry Williams

Australia may need to consider delaying its goals to combat global climate change in order to prioritize energy security and economic prosperity, according to a senior executive at Glencore Plc.

The country's emerging energy crisis, in conjunction with government-imposed clean-energy targets, has undermined investor confidence and may force businesses to shut or move offshore, the commodity giant's global coal head, Peter Freyberg, said in a speech Aug. 2 in Sydney.

"If that means Australia needs to consider a possible delay in meeting its emission reduction targets under the Paris Agreement in order to prioritize energy security and economic prosperity, then its worthy of further discussion," he said, adding that Swiss-based Glencore has invested $20 billion in its Australian assets and last year contributed more than $12 billion to the economy.

Australia, one of the world's biggest coal and natural gas exporters, was among more than 150 signatories to the November deal in Paris, aimed at lowering carbon dioxide emissions to limit a rise in global temperatures. Meanwhile, rising power and gas prices in the past year, as well as occasional blackouts, have put the nation's energy security under scrutiny, a situation Freyberg said stemmed from "a decade of poorly designed and uncoordinated energy policy."

"Renewable energy has a role to play in Australia's energy mix, but not at any cost and not at the expense of grid stability, reliability or other energy options," he said in his speech.

Falling Demand

Global coal consumption dropped 1.7 percent last year compared with an average 1.9 percent yearly rise from 2005 to 2015, BP Plc said in its annual review of global energy trends. Use is falling as the world's biggest energy companies promote cleaner-burning natural gas and as China, which accounted for about half of all coal burned, evolves to focus more on services than heavy manufacturing, while renewable energy like wind and solar becomes cheaper, according to BP's analysis, published in June.

Freyberg's defense of coal in Australia contrasts with comments last month by Andy Vesey, head of the nation's largest power generator, AGL Energy Ltd., who urged the government to exclude coal from its planned clean energy target and said there's no appetite among private investors to fund new coal-fired plants.

Outside of Australia, coal provides secure and reliable baseload energy for Asia's developing economies, Freyberg said Aug. 2, which in turn provides Glencore with investment opportunities. That explains the company's $1.1 billion deal with Chinese miner Yancoal Australia Ltd. last week for Rio Tinto Group's Australian coal assets, he said.

Next-generation coal technology in a growing economy like India—including high-efficiency, low-emission plants and carbon capture and storage—can do more to reduce emissions than building new wind turbines in Europe or solar farms in Australia, Freyberg said.

Peter Grauer, the chairman of Bloomberg LP, is a senior independent non-executive director at Glencore.

Susan Bodine Nomination Moves To Senate For Full Consideration

WASHINGTON, D.C. (July 12, 2017) Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt applauded the U.S. Senate Environment and Public Works (EPW) Committee's vote in favor of Susan Bodine, nominee to be assistant administrator of the Office of Enforcement and Compliance Assurance (OECA) at EPA. Bodine's nomination now moves to the Senate for full consideration. Administrator Scott Pruitt released the following statement following this vote:

"Susan is highly qualified, with decades of experience having worked at EPA under the Bush Administration, and in both the House and Senate environmental committees. I look forward to her consideration before the full Senate and her eventual confirmation. I know Ms. Bodine will bring a pragmatic and principled perspective to the Agency."

Subject: EPA names Wisconsin official to Region 7 post

By Alex Guillén

08/29/2017 02:48 PM EDT

EPA has picked the Cathy Stepp, the head of Wisconsin's Department of Natural Resources, to be principal deputy regional administrator for Region 7.

"Stepp has consistently strived to promote clean air, water and land while ensuring regulatory certainty at the state level to promote a strong and growing economy," EPA spokeswoman Liz Bowman said in a statement.

Stepp told state lawmakers earlier this year that she turned her agency from one feared by businesses to a "safe space" where operators can learn how to avoid violating environmental laws, according to a local report.

EPA has yet to name a permanent regional administrator for Region 7, which covers Iowa, Missouri, Nebraska and Kansas, but not Wisconsin. The Milwaukee Journal Sentinel reported Stepp has a home in Branson, Mo.

A former construction company owner, Stepp previously was a state senator in Wisconsin from 2003 to 2007, followed by stints on Sen. John McCain's presidential campaign in 2008 and as treasurer for the state GOP. She spoke at a campaign rally for then-candidate Donald Trump in September 2016.

Driving the Day

Good Saturday morning. SPOTTED: Russian Ambassador Sergey Kislyak in a very good mood at Cafe Milano Friday night. He walked into the restaurant by himself.

PRESIDENT DONALD TRUMP is continuing his meetings at the G-20. He returns to Washington at the end of the day. Earlier today, he and British Prime Minister Theresa May gave brief remarks. Trump said "they would have 'tremendous talks' and reach a very big 'a very powerful deal' on trade 'very very quickly,'" according to the pool report. Pooler Andrew Beatty of AFP noted: "in the corner of the room was a late TV, still on, but silent, showing Fox News."

-- ON RUSSIA: Trump said he had a "tremendous meeting" with Putin. According to the pool report: "POTUS did not answer a shouted [question] about whether Russia lied about his meeting yesterday."

-- ON VISITING ENGLAND: "I will be going to London." No details on when.

Indonesian President Joko Widodo , known as Jokowi, also met Trump in a bilateral meeting room, saying it was "a great honor" to meet with him. "Jokowi spoke in English, wishing Trump 'warm greetings' from his 'millions of fans' in Indonesia. He said they all want to know is when Trump will go there. 'We'll get there, we'll get there. It's a place I'd like to go,' POTUS responded," per the pool. **NOTE:** Us too!

-- ON TRADE: "We're going to do a lot of trade deals," Trump said of working with Indonesia, according to the pool report. "We are going to do a lot of business."

-- **"Ivanka Trump Sat In for Her Father at the G-20 Leaders' Table,"** by Bloomberg's Craig Gordon (with a rare byline) in Hamburg: "A photo on Twitter shows Ivanka Trump sitting at her father's place, between Chinese President Xi Jinping and British Prime Minister Theresa May. One official who was watching the session said she has taken her father's place at the table on at least two occasions today and did not speak. A spokesman for Ivanka Trump said she had been sitting in the back of the room and then briefly joined the main table when the president stepped out." https://bloom.bg/2sAgjqs ... ***Pic of Ivanka at the table*** http://bit.ly/2tTDC2n

MOLLY K. MCKEW in POLITICO Magazine, **"Trump Handed Putin a Stunning Victory:** From his speech in Poland to his two-hour summit in Hamburg, the president seemed determined to promote Russia's dark and illiberal view of the world": "In very concrete terms, through speech and action, the president signaled a willingness to align the United States with Vladimir Putin's worldview, and took steps to advance this realignment. He endorsed, nearly in its totality, the narrative the Russian leader has worked so meticulously to construct. The readout of Trump's lengthy meeting with Putin included several key points. First, the United States will 'move on' from election hacking issues with no accountability or consequences for Russia; in fact, the U.S. will form a 'framework' with Russia to cooperate on cybersecurity issues, evaluating weaknesses and assessing potential responses jointly.

"Second, the two presidents agreed not to meddle in 'each other's' domestic affairs-equating American activities to promote democracy with Russian aggression aimed at undermining it, in an incalculable PR victory for the Kremlin. Third, the announced, limited cease-fire in Syria will be a new basis for cooperation between the U.S. and Russia; Secretary of State Rex Tillerson went so far as to say that the Russian approach in Syria-yielding mass civilian casualties, catastrophic displacement, untold destruction and erased borders-may be 'more right' than that of the United States.'" http://politi.co/2uVCV5A

MICHAEL CROWLEY in Hamburg: **"Trump's pursuit of friendship with Putin fulfills his campaign promise":** "When it comes to dealing with Russia, President Donald Trump is keeping his promise. As president, Trump has backed away from campaign promises to impose tariffs on China, scrap the Iran nuclear deal and quickly build a wall on the Mexican border. But nothing has deterred him from his vow to test the possibilities of diplomacy with Russian President Vladimir Putin. Not three federal investigations, not talk of impeachment -- not even his wife.

"First lady Melania Trump interrupted her husband's Friday meeting with Russian President Vladimir Putin here at the G-20 summit in an unsuccessful attempt to end an unexpectedly long and chatty session between the leaders of two ostensibly hostile powers. 'We went another hour after she came in to see us,' Secretary of State Rex Tillerson told reporters in a briefing afterwards, with top White House and State Department aides looking on. 'There was such a level of exchange and engagement,' between Trump and Putin, he added, 'neither of them wanted to stop.'" http://politi.co/2tAdZkC

-- **@markknoller:** "You're hearing soundbites of Secy Tillerson describing the Trump/Putin Summit because the WH barred TV camera coverage of his briefing." ... **@RichardHaass:** "Differing US, Russian accounts of Trump-Putin bilateral is one reason you have an NSC aide attend important meetings as note taker" ... **@yashar:** "WATCH: Putin, clearly prepared for the meeting, gestures to journalists and says 'these are the ones hurting you?'" http://bit.ly/2sQT8Mx ...

... **@abbydphillip:** "In this version, you can hear Trump reply 'Yeah, they're the ones. You're right about that.'" ... **@Kasparov63:** "This photo already everywhere in Russian media (as was a similar one with Obama). Putin knows how to play this game. Trump reaching to him." http://bit.ly/2u2WjAX

THE STAKES -- "At G-20, world aligns against Trump policies ranging from free trade to climate change," by WaPo's Michael Birnbaum and Damian Paletta in Hamburg: "The growing international isolation of the United States under President Trump was starkly apparent Friday as the leaders of major world economies mounted a nearly united opposition front against Washington on issues ranging from climate to free trade. At a gathering of the Group of 20 world economic powers - normally a venue for drab displays of international comity - there were tough clashes with the United States and even talk of a possible transatlantic trade war.

"The tensions were a measure of Trump's sharp break with previous U.S. policies. They were also a warning signal of Washington's diminished clout, as the leaders of the other nations who gathered in Hamburg mulled whether to fix their signatures to statements that would exclude Trump or to find some sort of compromise. Two European officials said they were leaning toward a united front against Washington." http://wapo.st/2sAnE9p

-- "G20 communique agreed apart from climate issue: EU officials," by Reuters' Paul Carrel and Noah Barkin in Hamburg: "World leaders meeting for a summit in Germany have agreed every aspect of a joint statement apart from the section on climate where the United States is pushing for a reference to fossil fuels, European Union officials said on Saturday. The officials said aides had worked until 2 a.m. to finalize a communique for the Group of 20, overcoming differences on trade after U.S. officials agreed to language on fighting protectionism. ... [O]ne EU official [said:] 'We have all the fundamentals. We have a G20 communique, not a G19 communique' ...

"The section that needs to be resolved by the leaders relates to the U.S. insistence that there be a reference to fossil fuels, the official said. ... Trump ... congratulated

Merkel for her stewardship of the summit. 'You have been amazing and you have done a fantastic job. Thank you very much chancellor,' he said." http://reut.rs/2u3cKxs

SUPPORT ERODING ... TWO SIMILAR STORIES in the **NYT** and **POLITICO: JENNIFER STEINHAUER** and **ROBERT PEAR** on A1: **"G.O.P. Support of Senate Health Repeal Erodes During Break":** "With Congress set to return on Monday after a week's recess, Republican lawmakers are increasingly aware that their seven-year promise to dismantle President Barack Obama's largest policy achievement is deeply imperiled. Senator John Hoeven, Republican of North Dakota, signaled this week that he would not vote for the bill as written, following negative remarks from other senators with large poor and rural populations. That was the 10th defection. Three other Republican senators, Bob Corker of Tennessee, Charles E. Grassley of Iowa and John Boozman of Arkansas, have withheld their support, although they have not declared their opposition, and others have largely remained silent.

"Mr. Grassley told voters on Friday that he was unsure if he would vote for the Senate Republican bill in its current form, according to The Des Moines Register. 'I don't even know if we're going to get a bill up,' said Mr. Grassley, an expert on health policy and taxes who has been in Congress for more than 40 years." http://nyti.ms/2uBzXUr

-- JEN HABERKORN: "Time away from Washington deepens GOP misgivings about health plan: Corralling 50 votes looks even more daunting in the run-up to August recess": "Buffeted by headwinds, Republicans will return to Washington on July 10 facing even longer odds for piecing together a bill that can win over skeptical moderates and conservatives in the three weeks before the August recess.

"The events seemed to validate McConnell's original plan to speed a vote on a draft plan before lawmakers scattered across the country for their holiday break. Controversial legislation rarely looks more appealing after sitting out in the open for a week -- conventional wisdom proved true this week. But after canceling the plan for a late June vote, the GOP may have no other option but try to wrap up repeal efforts before August." http://politi.co/2uVk22E

SPEAKER PAUL RYAN in Madison yesterday, per the Capital Times: "I'm pleased with where we are. We have a very aggressive agenda, and we know that most of these big difficult things take about a year to do, and that's why this will ultimately coalesce around getting these things done in the fall. But we're basically where I was hoping to be." http://bit.ly/2sAXJhO

SIREN -- NYT EDITORIAL BOARD: "Yes, the Trump Administration Has Ideas, and Some Are O.K.": "[A]fter digging through June's pronouncements and bullet points, and consulting the White House, its allies and its critics, we found a few promising ideas amid the blather, as well as some old clunkers. Week One: Infrastructure. A great idea, stalled on the runway. Even the hulking coal barges behind Mr. Trump as he made a 'major' infrastructure speech on June 7 couldn't hide that his biggest job-creation promise, a $1 trillion infrastructure overhaul, has fallen prey to his inattentiveness, a

congressional logjam, Republicans' worries about costs and their aversion to working with Democrats on most anything.

"Week Two: Workforce Development. Mr. Trump wants to expand vocational school, job training and apprenticeship opportunities to fill a deep gap in the manufacturing, health care, technology and construction labor pools. ... Mr. Trump signed an executive order in June directing the labor secretary to channel available money toward programs that provide paying jobs with a training or educational component. It's not a fully formed plan, but it's a solid effort to address a recognized need. Ivanka Trump again promoted her plan for six weeks of paid family leave. Democrats say it's not enough; Republicans recoil at government-funded family leave. She gets credit for pushing Republicans to consider an overdue idea, but it's unclear that she has the commitment and experience to win them over.

"Week Three: Technology. Jared Kushner ... updated tech executives on progress in modernizing the government's technology infrastructure. Once the cameras were off, the chief executives stressed that cybersecurity and system modernization go hand in hand, and have been a priority at least since the Office of Personnel Management data hack during the Obama administration. They established a working group of experts from two dozen companies, which this week began drawing up recommendations for replacing antiquated government computer systems with secure networks. The project has bipartisan support in Congress. (Read: It might actually get funded.)

"Week Four: Energy. Lots of chest pounding by Mr. Trump and Interior Secretary Ryan Zinke about 'energy dominance' and the need to extract even more of what America already has in abundance - oil and natural gas - with little attention to further developing carbon-free energy sources like wind and solar. On the plus side, the president promised to 'revive and expand our nuclear energy sector.'" http://nyti.ms/2sYcgUb

JOHN PODESTA in WaPo, **"Why is Trump tweeting about me when he should be doing his job?":** "What I do know is this, which is why I'm choosing to respond to Trump's tweet: The Russians stole my emails. When they did that, they committed a crime. They also invaded my privacy, and the privacy of a multitude of friends, family and colleagues with whom I communicated. That, combined with vicious lies spread by the alt-right media such as the so-called Comet Ping Pong conspiracy, exposed them to potential harm, as was evidenced by the shooting at Comet. The crime the Russians committed, as the intelligence community has concluded, was for the purpose of helping Trump get elected president.

"So the responsible thing for a U.S. president to do, in these circumstances, is to have the backbone to stand up against Russian interference in U.S. democracy - not to question, as Trump did on Thursday, the competence of our own intelligence community and to publicly doubt, once again, the conclusion that Russia was behind the hacking." http://wapo.st/2u0YO71

FOR YOUR RADAR -- "South Syria truce to allay Jordan, Israel fears about Iran,"

by AP's Karin Laub in Amman, Jordan: "A separate truce for southern Syria, brokered by the U.S. and Russia, is meant to help allay growing concerns by neighboring Jordan and Israel about Iranian military ambitions in the area, including fears that Tehran plans to set up a disruptive long-term presence there. Such apprehensions were stoked by recent movements of Shiite Muslim militias - loyal to Iran and fighting alongside Syrian government forces - toward Jordan's border with Syria, and to another strategic area in the southeast, close to where the two countries meet Iraq." http://bit.ly/2tXcQWu

--"Mosul victory imminent as Islamic State lines collapse: Iraqi military," by Reuters' Stephen Kalin in Mosul and Maher Chmaytelli in Erbil http://reut.rs/2tsAM3o

EPA to Let More Research Office Science Advisers' Terms Lapse

Posted June 20, 2017, 03:32 P.M. ET

By Rachel Leven

The Environmental Protection Agency in August will let go dozens more scientists who advise the agency's Office of Research and Development on its priorities and cancel all of the board's subcommittee meetings in 2017, according to a letter obtained by Bloomberg BNA.

The move is part of the EPA's "need to reconstitute" the Board of Scientific Counselors (BOSC), according to the letter from Robert Kavlock, acting assistant administrator for EPA's Office of Research and Development. The agency hopes the board will be able to restart its work in 2018, Kavlock said.

The EPA in May declined to renew the terms of nine members of the Board of Scientific Counselors. Kavlock said in the letter that members with terms scheduled to expire in August also will not see their terms renewed.

The board's committee chair told Bloomberg BNA the agency's actions would likely leave the research office without this board's advice for nearly a year "when they sorely need it."

"Not only are they [the research office] facing huge proposed changes to their programs (the proposed 2018 budget) but they are also just gearing up for their next 5 year strategic plan," Deborah Swackhamer, chair of the board's executive committee and a professor at the University of Minnesota, said in an email. "So outside advice from BOSC would have been particularly useful this coming year."

Kavlock encouraged board members whose terms expire in August 2017 or March 2018 to reapply before June 30, according to the letter. The EPA didn't immediately respond to Bloomberg BNA's message requesting verification of the letter and additional comment.

EPA Could Offer 1,228 Employees Buyouts, Union Says

Posted June 20, 2017, 03:26 P.M. ET

By Andrew Childers

As many as 1,228 EPA employees will be eligible for buyout offers, according to a proposed memorandum of understanding on the offers released by the agency's union.

The buyouts would need to take effect by Sept. 2, according to John O'Grady, an Environmental Protection Agency employee and union representative based in Chicago, who released the draft memorandum to reporters June 20. The proposed memorandum is similar to those between the agency and unions reached for similar buyout offers in 2014 and 2015, O'Grady said in an email.

In fiscal year 2016, EPA says it employed 15,376 staff members.

Union officials could not be reached for additional comment. The EPA could not predict the number of employees who would take the buyout, but the agency has previously said it would be targeting supervisor positions, with $12 million set aside for the offers.

About 450 employees took the EPA's buyout offers in 2014, the agency's Office of Inspector General said in a March report. Those buyouts cost the agency $11.3 million in incentives.

The EPA's fiscal year 2018 budget request would cut EPA employment lives by approximately 20 percent, bringing its staffing down to mid-1980s levels.

O'Grady said the union hopes to have the memorandum signed by June 30.

Yucca Mountain Offers Lifeline to At-Risk Communities: Perry

Posted June 20, 2017, 03:05 P.M. ET

By Brian Dabbs

Temporary storage of nuclear waste poses an urgent threat to the U.S. public, and Nevada's Yucca Mountain is the "proper" location for a long-term repository, Energy Secretary Rick Perry told House appropriators.

"We can no longer kick the can down the road," Energy Secretary Rick Perry said June 20. "It's your citizens that have the most to lose if we continue to leave this waste in your districts."

Perry testified in support of the White House budget for the Energy Department, which calls for $150 million in funding to resume technical work for the site. Rep. Mike Simpson (R-Idaho), the top appropriator on the subcommittee hosting Perry, backed the endorsement of Yucca Mountain as a nuclear waste storage facility.

Lawmakers have long battled over the site, and Nevada's congressional delegation is united in its opposition to Yucca Mountain, located 90 miles northwest of Las Vegas. Commercial spent fuel from reactors is currently stored mostly at production sites across the U.S.

The House Energy and Commerce's Environment Subcommittee last week approved a draft nuclear waste bill that would move along licensing efforts that the Obama administration mothballed and

allow the Energy Department to enter into contracts with private interim storage facilities, which would store commercial waste before a permanent repository is developed.

Clean Energy Cuts

Meanwhile, the budget document would slash the Energy Department budget by $1.7 billion, an overall 5.4 percent cut. That reduction hits clean energy programs the hardest.

The budget proposal seeks to ax the the Advanced Projects Research Agency-Energy (ARPA-E) office, a investment program targeting immature, high-risk energy technologies. Broad emerging energy research allocations would be cut from $1.84 billion in fiscal year 2017 to $1.55 billion.

Those cuts would jeopardize U.S. climate change initiatives, said Rep. Nita Lowey (D-N.Y.), the House Appropriations Committee's ranking member.

"While you no longer propose to eliminate the agency, your budget would do grievous harm," she said. "There is still time to protect our planet from the disastrous impacts of climate change."

Perry famously urged the elimination of the department on the presidential campaign trail in 2012.

Meanwhile, Perry touted the budget's proposed increase in defense funds. The budge would boost funding for developing and safeguarding nuclear weapons.

Energy Department Grid Study Expected by Month's End, Perry Says

Posted June 20, 2017, 03:00 P.M. ET

By Ari Natter

The Department of Energy's highly anticipated study on the U.S. power grid and how it can help coal and nuclear power "should be" available by the end of the month, Energy Secretary Rick Perry said June 20.

"That's a question about do we have the baseload," Perry testified before a House Appropriations subcommittee. "Where does nuclear come into this, where does our renewables play, what role does carbon capture utilization and sequestration, and coal plants have to play in the baseload?"

The study also will look into the security of the grid, Perry said.

The Trump administration's budget request seeks $28 billion for the energy department in FY18, a reduction of $1.6 billion from current levels, and includes deep cuts to clean energy spending and the elimination of an advanced energy research office.

House Appropriations Committee Chairman Rodney Frelinghuysen (R-N.J.) said he has "concerns" about cuts to nuclear energy and fusion programs, calling them "pretty dramatic."

The budget request would cut $283 million from DOE's nuclear energy program. Perry said the budget reflects tough decisions, and prioritizes protecting taxpayers.

"I was a governor long enough to know that budgets don't always come back to you the way they start, and I think that is a fair statement," the former Texas governor said.

Hundreds of Scientists Recommend Better Oversight of Germ-Killers

Posted June 20, 2017, 02:56 P.M. ET

By Tiffany Stecker

More than 200 scientists and health professionals are urging consumers to avoid two common germ-killers, while recommending that regulators better label products with the chemicals and evaluate the risks the substances may pose to health and the environment.

The federal government has not gone far enough to protect consumers from triclosan and triclocarban, antimicrobial chemicals used in toothpaste, soaps, clothing, and building materials, the scientists said. The chemicals can accelerate the development of antibiotic-resistant microbes, disrupt hormonal function, and break down into toxic and potentially carcinogenic substances in the environment. The scientists also questioned whether antimicrobial use is always the solution for keeping disease at bay.

"Customers may think added antimicrobials are a way to reduce infections, but in most products, there is no evidence that they do," Ted Schettler, science director of the Science and Environmental Health Network, said in a statement.

The Food and Drug Administration published a final rule Sept. 6, 2016—that went into effect one year later—that banned triclosan, triclocarban, and 17 other chemicals for use in antiseptic wash products. But the rule doesn't go far enough, according to the statement.

The scientists recommended that consumers avoid the use of triclosan, triclocarban, and other antimicrobial chemicals except when there is evidence of a health benefit; use alternative antimicrobials when disinfectants are necessary; and label products containing triclosan, triclocarban, and other antimicrobials. They also called for scientific agencies to evaluate the safety of the chemicals throughout the entire product life cycle.

A spokesman for the American Cleaning Institute, whose members make products with the antimicrobials, called the statement outdated and said it doesn't reflect the current science and regulation of the chemicals.

"Consumers can continue to use these products with confidence," Brian Sansoni, ACI's vice president of sustainability initiatives told Bloomberg BNA in an email. Manufacturers of antibacterial soaps began phasing out use of triclosan and triclocarban years before the FDA's final rule. Soap makers are using other antibacterial ingredients and submitting safety and efficacy data to the FDA, Sansoni said.

The Florence Statement on Triclosan and Triclocarban, a consensus agreement signed at the 36th International Symposium on Halogenated Persistent Organic Pollutants in Florence, Italy, was published June 20 in the journal Environmental Health Perspectives.

Zinke Tells Senator Methane Waste Rule Will Follow Law

Posted June 20, 2017, 01:40 P.M. ET

By Alan Kovski

The BLM skirted the law when it halted parts of a rule to waste of methane by oil and gas companies, a Democratic senator said. But Interior Secretary Ryan Zinke assured a Senate committee June 20 that the public will have its chance to participate in the formulation of new regulations governing the venting, flaring, and leaking of natural gas. Zinke was responding to questions from Sen. Maria Cantwell (D-Wash.), who suggested the Bureau of Land Management was cutting the public out of the picture when the agency suspended parts of a rule written to reduce the waste of methane by oil and gas companies operating on federal and Indian lands. She had led a Senate fight to defend the rule.

The revamp of the rule will follow obligations for public notice and comment as the BLM tries to devise a more pragmatic rule, Zinke said during a hearing of the Senate Energy and Natural Resources Committee.

EU Chemicals Agency Tightens Restrictions on Phthalates

Posted June 20, 2017, 01:08 P.M. ET

By Stephen Gardner

A European Chemicals Agency committee adopted an opinion in favor of a wide-ranging restriction under the European Union's REACH law, which would have the effect of largely prohibiting four hazardous phthalates from consumer products sold in the bloc.

The phthalates that would be affected by the ban and the restriction are benzyl butyl phthalate (BBP), bis(2-ethylhexyl) phthalate (DEHP), dibutyl phthalate (DBP) and diisobutyl phthalate (DIBP).

Use of the four phthalates has been banned in the EU since 2015 under REACH (Regulation No. 1907/2006 on the registration, evaluation, and authorization of chemicals) on the basis that the substances are toxic to reproduction, ECHA's Socio-Economic Analysis Committee said June 20. Under REACH, companies can obtain specific continued-use authorizations for the phthalates if they can prove there are no viable alternatives and the substances can be used safely.

The REACH restriction would reinforce the substance ban by prohibiting on the EU market consumer products that contain the phthalates in a concentration greater than 0.1 percent by weight. The phthalates are used as plasticizers and the restriction would potentially affect a range of imported items made from, or that contain, soft plastic, such as vinyl flooring, cables, footwear, and office equipment. Some specialized uses, such as in laboratory equipment, would be exempted from the restriction.

Following the committee's opinion on the phthalates, the European Commission, the EU's executive arm, will adopt a formal decision on the restriction. The restriction will come into force three years after the commission's decision is finalized.

Pipeline Agency Says It Won't Enforce Obama Gas Storage Regs

Posted June 20, 2017, 01:07 P.M. ET

By Ari Natter

Regulations for natural gas storage sites put in place after the Aliso Canyon natural gas leak won't be enforced, PHMSA announces.

The pipeline regulator says enforcement halted "in the interim, and for one year after the publication of a final rule," after receiving a petition for reconsideration of interim rules put in place in December.

The rule revised safety regulations related to well integrity, well-bore tubing and casing. It also codified industry recommended practices related to design and functional integrity.

The leak at Sempra Energy subsidiary resulted in the release of 4.62b cubic feet of natural gas, or the carbon-dioxide equivalent of 500,000 passenger cars driven for 1 year, according to the Pipeline and Hazardous Materials Safety Administration.

Brazil Bank Approves $312 Million in Loans for Wind Farms

Posted June 20, 2017, 01:04 P.M. ET

By Michael Kepp

The Brazilian Development Bank approved 1.04 billion reais ($312 million) in low-cost financing for three utilities to develop wind complexes that will generate enough energy to power 700,000 homes.

The developers are EDF of France, Enel S.p.A. of Italy, and a local developer co-owned by Brazilian mining giant Vale SA, the bank announced June 19.

The bank approved a loan of 486.4 million reais to EDF for a 116.6 megawatt wind complex and 307.8 million reais to Enel for a 96 megawatt wind complex, both in northeastern Bahia state. It also approved a loan of 243.5 million reais for a 98.7 megawatt wind complex in northeastern Ceara state that will be undertaken by Alianca, a Brazilian energy company co-owned by Vale SA and Cemig.

The development bank has approved a total of 2.48 billion reais in financing for wind energy projects this year, a spokeswoman for the bank told Bloomberg BNA June 19.

Wind power is expected to account for 6.6 percent of Brazil's electricity mix in 2017, up from 5.4 percent in 2016, according a division of the Mines and Energy Ministry.

Court Upholds Plant Performance Rule in Largest U.S. Power Grid

Posted June 20, 2017, 12:49 P.M. ET

By Stephen Cunningham

A U.S. appeals court found that the power plant performance standard in PJM Interconnection's annual forward capacity auction is proper, according to a recent opinion.

In June 2015, FERC approved more stringent performance rules for generators competing in annual forward capacity auction held by PJM to address reliability concerns.

Generators that provide supplies during peak-demand periods receive higher payouts, while they're penalized for failing to meet commitments.

The legal challenge was pursued by the Natural Resources Defense Council, Sierra Club, American Public Power Association, and the Advanced Energy Management Alliance (Advanced Energy Mgt. v. FERC, D.C. Cir., No. 16-1234, 6/20/17).

Trump's Emergency Manager Earns Support of Climate Advocates

Posted June 20, 2017, 12:34 P.M. ET

By Christopher Flavelle

Brock Long was cleared by the Senate to become President Donald Trump's emergency-management director June 20 after gaining the support of one unlikely constituency: environmentalists.

While climate advocates panned Trump's selections to head the Environmental Protection Agency and Energy Department, they expressed optimism that Long, Alabama's former emergency manager, would seek to protect Americans from the increased risks of hurricanes, flood and heat waves linked to global warming.

Long was confirmed by a 95-4 vote.

"He is a rare Trump appointee who is a well-known professional in the field in which he was appointed," said Eli Lehrer, president of The R Street Institute, a Washington research group that promotes market-based solutions to climate change. "Every part of his reputation suggests he'll take a careful, deliberate, technocratic approach to the job."

Environmentalists' view of Long's nomination stands in contrast to their response to other Trump appointees. In March, as the vote on Scott Pruitt to lead the EPA was headed to the Senate, environmental groups sent senators a letter arguing his confirmation would be a disaster "for every person in the United States who drinks water or breathes air."

The pick of Rick Perry as Energy secretary was mocked because he had campaigned in the 2012 presidential race on the idea of eliminating the Energy Department and argued in his 2010 book "Fed Up!" that the Earth was in a "cooling trend."

Continuity Signaled

While Pruitt and Perry pledged to reverse Obama-era climate and clean-energy efforts, Long has signaled more continuity for the Federal Emergency Management Agency, or FEMA.

Preparing for storms, floods and other extreme weather is "the cornerstone of emergency management," Long testified June 7. "If we ultimately want to reduce costs in the future for disasters, we have to do more mitigation."

Environmentalists cite two reasons for their optimism that Long will take climate risks seriously.

First, they point to Long's previous experience in Alabama, one of the states most exposed to hurricanes, floods and other types of extreme weather.

Second, Long's testimony during his Senate confirmation hearing this month suggested he will continue efforts started under President Barack Obama to better prepare for floods and storms before they happen. Long told senators that he'll work to make the country more resilient and hinted that he will push back on Trump's proposed cuts to flood mapping and other programs intended to reduce communities' vulnerability to disasters.

"He spoke to the importance of trying to reduce risk on the front end," said Shana Udvardy, a climate-preparedness expert at the Union of Concerned Scientists. "He could be a good advocate when it comes to the president's budget."

Others noted that despite his experience, the emergency management job will be challenging. Trump has called climate change a hoax, pulled out of the Paris climate agreement, and rolled back rules that reduce emissions.

Long will have to persuade his colleagues in the administration that preparing for worsening storms should nonetheless remain a priority. During his confirmation hearing, he avoided mentioning climate change, even as he said preparations for storms and floods must improve.

"That could put him in a tough spot," said Rob Moore, senior policy analyst at the Natural Resources Defense Council.

Lyon Group Plans $501 Million Australia Solar, Storage Project

Posted June 20, 2017, 8:01 A.M. ET

By Perry Williams

Lyon Group will build a A$660 million ($501 million) solar and battery storage project in the Nowingi district of Victoria by January 2018 combining a 250-megawatt solar-power station with 160 megawatt-hours of storage, according to a June 20 statement.

The private-equity backed company has also launched a tender to retailers, generators and large power users to bid for up to 640 megawatt-hours of storage capacity across Nowingi and two other projects in South Australia and Queensland. It hopes contracts will be finalized by October.

Separately, the company's already-announced A$1 billion solar and battery storage project in the Riverland region of South Australia is scheduled to be built by the end of the year while a A$200 million Cape York development in Queensland is on track for the first quarter of 2018.

"Projects like these are the heart of Australia's energy transition, allowing for substantially higher levels of variable, low emissions generation while strengthening the resilience of the system," Lyon Group partner David Green said.

The Finkel Review into Australia's future energy mix released last month recommended consumers should be rewarded for cutting electricity consumption and using power from sources including rooftop solar and battery storage systems.

The Nowingi solar facility will have 2.3 million solar panels, while the storage system would deliver power on demand through 1.1 million batteries.

NYC Planners with Sandy Nightmares Say Barrier May Come Too Late

Posted June 20, 2017, 7:42 A.M. ET

By Henry Goldman

The warming Atlantic Ocean has raised the risk of another Hurricane Sandy. And still, trillions of dollars of real estate and infrastructure near the shores of New York City and northern New Jersey remain vulnerable to devastation.

A storm-surge barrier similar to those in Louisiana and parts of Europe might protect the area, but politicians have questioned its $30 billion cost, effectiveness and environmental impact. A group of scientists, planners and property owners is urging the U.S. Army Corps of Engineers to accelerate its study of the project. It may take another hurricane to speed up the process.

“The danger is increasing as the sea level rises,” said Malcolm Bowman, an oceanographer at the State University of New York at Stony Brook, who is among the group. “It won’t take a monster storm like Sandy to devastate the region.”

Bowman warned of a catastrophic storm as far back as 2005, in a New York Times Op-Ed article. Seven years later, Sandy struck the region, flooding airports and tunnels and ravaging shore communities from Atlantic City, New Jersey, to Bridgeport, Connecticut. It caused $68.9 billion in damage, making it the second-costliest storm in U.S. history after Katrina, according to the National Oceanic and Atmospheric Administration.

Water Wars

Bowman’s group is pushing for an evaluation of a 5-mile (8-kilometer) retractable storm-surge barrier at the mouth of New York Harbor from the Rockaways to New Jersey’s Sandy Hook. That, and another smaller structure at the western edge of Long Island Sound, could protect about 800 miles of shoreline from Port Elizabeth, New Jersey, to the Bronx, Bowman says.

As Bowman describes it, before a major storm, barriers would rise from the seabed or close in a gate-like structure to deflect the force of a wind-blown surge, as occurred with Sandy.

“You have to allow for marine traffic and the daily flow of the tides to flush out the harbor,” Bowman said, “But when a storm is forecast with enough wind at high tide to create a surge, you close the gates or raise it from the seabed so water that wants to flow into the harbor can’t.”

Studying Studies

Weeks after Sandy, New York Governor Andrew Cuomo said his administration planned to talk with city and federal officials about the possibility of installing storm-surge barriers. Corps engineers, in discussions with New York and New Jersey since last August, are still studying what protection strategies merit further study.

"At this point, it is premature to say whether broad-scale solutions such as that advocated by this group, or other more regional or localized potential solutions will fare best," said Corps spokesman Hector Mosley.

Piecemeal Jobs

In the meantime, the state has moved ahead with a $616 million plan for Staten Island that includes a boardwalk promenade that would double as a storm-surge bulwark. The Corps has that project scheduled for completion in 2022, paid mostly by the federal government.

Billions more in federal, state and city funds are being spent along shore areas, enhancing dunes and berms on beaches, cultivating wetlands, building walls and awarding subsidies for waterproofing homes and office buildings. City officials also envision a mostly-U.S. funded $816 million horseshoe-shaped elevated park wrapped along the southern half of Manhattan, dubbed "The Big U," to keep out the Hudson and East Rivers.

Such localized approaches may work as well or better than a mega-project, said Jainey Bavishi, Mayor Bill de Blasio's director of the Office of Recovery and Resiliency. Her concerns about a storm barrier include cost and construction time; possible environmental impact; and whether it would leave densely populated areas of Long Island and New Jersey vulnerable, and perhaps even more exposed to flooding from displaced water.

"A harbor barrier is not the silver bullet," Bavishi said.

Sea Life

Many of these issues have been solved with barriers that protect low-lying populations around the world, said Robert Yaro, former president of New York's Regional Plan Association. Its retractable feature would allow for marine traffic and tidal flow, minimizing impact to sea life and water quality, he said. The technology holds the promise of protecting the region from catastrophic floods for the next 150 years, Yaro said.

"The Dutch have used this engineering for decades and barriers currently protect New Orleans, Stamford, Providence, London and St. Petersburg, Russia," Yaro said. "We in New York are far behind and among the cities on Earth we have the most to lose."

Yaro and Bowman were among several advocates promoting the idea last month at an all-day conference in lower Manhattan attended by 250 municipal bond investors, real estate developers, business owners, insurance companies, and planners.

Lessons Learned

They heard Andrew Kopplin, former director of the Louisiana Recovery Authority, describe how in New Orleans after Katrina, a bipartisan coalition of elected officials and business leaders persuaded Congress to approve a $14.5 billion system of levees and a storm-surge barrier. The barrier, a 1.8-mile array of gates, protected the city from Hurricane Isaac's landfall in 2012, said Kopplin, now president and chief executive officer of the Greater New Orleans Foundation, a non-profit charitable civic group.

"It was simply a matter of political will," he said.

Officials in the Cuomo and de Blasio administrations say they await the Corps' findings.

"We clearly want to see the New York Harbor barrier studied," said James Tierney, Cuomo's deputy environmental commissioner for water resources. "The process requires a full-blown feasibility study. The Army Corps process is what we have to live with."

Next Storm

Marco Pasanella, 54, who lives above his gourmet wine shop on lower Manhattan's South Street that got flooded when Sandy hit, says the pace and scope of government response has been disappointing.

He's says he's seen no measures that would protect his neighborhood if another storm hit. The National Oceanic and Atmospheric Administration has predicted as many as 17 tropical storms, about five more than average, may hit the Atlantic coast this year.

"The decisions have Balkanized the neighborhoods with a piecemeal approach, just a series of uneven, irregular blockades that will not stop the water from finding its way ashore," Pasanella said.

Across Manhattan at Chelsea Piers, a recreational facility situated over the Hudson, Michael Braito, the property's chief engineer, said neighborhood protections won't be enough to stop storm-surge water coursing through his building.

"These piecemeal fixes buy little more than peace of mind," Braito said. "It's like a boat with 100 holes and we've patched half of them and we're going to sink. They need to think bigger."

Green Groups Critical Ahead of Trump Power Grid Report

Posted June 20, 2017, 7:26 A.M. ET

By Patrick Martin and Ari Natter

Critics aren't waiting for opening night to pan a Trump administration study on the U.S. power grid they believe will demonize renewable energy while promoting coal and nuclear generation.

The report, ordered up by Energy Secretary Rick Perry and expected this month, will examine whether policies that favor wind and solar energy are accelerating the retirement of coal and nuclear plants needed to ensure reliable power supplies, according to an April 14 memo obtained by Bloomberg News. A coalition of green energy groups released a report in support of renewables on June 20.

Since taking office, President Donald Trump has reversed policies enacted by Barack Obama that helped solar and wind developers, even as a glut of cheap natural gas from shale continues to pressure coal-fired power generators out of business. Critics fear Perry's report will take on the talking points of fossil fuel producers and muffle science-backed programs that endorse renewable power.

"A report that comes out that supports the conclusion that baseload generation is needed for a

reliable grid and that renewables and certain policies are leading toward deterioration of reliability is problematic for a number of reasons," said Arvin Ganesan, vice president of federal policy at Advanced Energy Economy, a group that promotes clean energy.

Perry's study on electricity markets and reliability will cover power markets and "critical issues central to protecting the long-term reliability of the electric grid," according to the April memo.

In a preemptive strike, Advanced Energy Economy and other green energy groups released a separate study June 20 showing that market forces such as new technologies and the emergence of shale gas are behind coal and nuclear plant retirements, not policies supporting renewable energy.

"All we have to go on is the public comments," Ganesan said in an interview. "We're putting this out in advance of a report coming out to try and inform the conclusions the report might make."

Tom Pyle, who led Trump's Energy Department transition team, called the backlash over Perry's report overblown.

"I think it's perfectly fitting for an incoming secretary to want to get a perspective on these issues in hopes there is a role for the department to ensure we don't have trouble keeping the lights on," Pyle, president of the American Energy Alliance, a conservative, fossil fuel-oriented advocacy group, said in an interview. "It feels like a coordinated attack on a study that was largely designed to be instructive."

Affordable Energy

And while the report could recommend changes to the Federal Power Act, which directs how generators are dispatched during emergencies, major changes to energy legislation are unlikely, said Jeff Navin, acting chief of staff for Ernest Moniz, Obama's energy secretary.

"Using that law to "to favor one source of generation over another would certainly be unprecedented, and it certainly won't hold up in court," Navin said, in an interview.

Charles E. Jones, chief executive officer of coal and nuclear operator First Energy Corp., told analysts on an April earnings call that the Akron, Ohio-based company may delay a bankruptcy filing for one of its units until the study is released.

Fossil Fuels

"I am pleased the Trump Administration and Secretary Perry recognize the importance of fuel diversity in maintaining clean, reliable and affordable supplies of electricity," Jones said in a statement provided to Bloomberg.

Howard Crystal, a senior attorney Center for Biological Diversity, said that assumptions in the April memo may translate into recommendations that support fossil fuel generation. The memo notes that coal and nuclear baseload generation are in decline, a trend that may create reliability issues.

"This grid study is a veiled attempt by the Trump administration to keep dirty and dying power plants on life support by demonizing renewable energy," Crystal said in a June 14 statement. "It's very possible that big polluters had a direct hand in developing the study."

The American Wind Energy Association co-funded the study from the Analysis Group, a consultant with expertise in energy that serves clients including energy producers, suppliers, consumers and tribal governments.

Driving the Day

BULLETIN at 9:50 a.m.: "LONDON (AP) - Family of media titan Samuel Irving 'Si' Newhouse Jr. says he has died." ***NYT obit*** http://nyti.ms/2xPMzL2 ... ***Remembrances from Graydon Carter*** http://bit.ly/2hGiw2Q ... ***and David Remnick*** http://bit.ly/2xPXPr2

POTUS: "POLITICALLY MOTIVATED INGRATES": @realDonaldTrump at 8:22 a.m. from his golf course in Bedminster, New Jersey: "We have done a great job with the almost impossible situation in Puerto Rico. Outside of the Fake News or politically motivated ingrates,..." ... **at 8:26 a.m.:** "...people are now starting to recognize the amazing work that has been done by FEMA and our great Military. All buildings now inspected....." ... **at 8:30 a.m.:** "...for safety. Thank you to the Governor of P.R. and to all of those who are working so closely with our First Responders. Fantastic job!"

TRUMP CRITICIZES REX FOR TALKING TO N.K. -- @realDonaldTrump at 10:30 a.m.: "I told Rex Tillerson, our wonderful Secretary of State, that he is wasting his time trying to negotiate with Little Rocket Man.....Save your energy Rex, we'll do what has to be done!"

-- SUSAN GLASSER (@sbg1): "Can never remember a president publicly undercutting a secretary of state as Trump just has. Ever."

-- THE CHAIN REACTION: The "politically motivated ingrates" comment and the criticism of Tillerson -- delivered by the president from his golf course in New Jersey on a quiet Sunday morning -- will dominate cable news all day today and tomorrow. Are we going to war with North Korea? Lawmakers will be asked. They'll also be asked if they believe Trump critics are "politically motivated ingrates." All of the networks have footage of Puerto Rico, which, according to Ron Mott on NBC this morning, is still

almost entirely "still in the dark."

THE PRESIDENT is going to the President's Cup golf tournament in Liberty, New Jersey tonight. He is participating in the "trophy presentation," according to the White House.

PRESIDENT TRUMP will return to Washington tonight at 8:05 p.m.

SUNDAY BEST -- SAN JUAN MAYOR CARMEN YULIN CRUZ to **GEORGE STEPHANOPOULOS** on **ABC'S "THIS WEEK":** "People are being told to register via Internet for FEMA relief, when we don't have any Internet or very little Internet, even in the San Juan metropolitan area. I recognize the good heart that the FEMA people have. They want to help. But they just don't have the resources, and it's not me who's saying it.

"General Buchanan, a three star general appointed now to take care of the situation, said two days ago, we just don't have the resources in order to handle the logistical support that is needed in San Juan and Puerto Rico. But we have done all that we can. People are out there. They're cleaning the streets. Community kitchens are coming up and we are getting tons of donations. On Thursday, I got three pallets of water, four pallets of food and four pallets of baby supplies from FEMA. All of this, I gave to the mayor of Comerío, a town whose mayor had come to the FEMA distribution center and had been told just wait until next Monday, because we have nothing."

-- CHRIS WALLACE talks to **FEMA DIRECTOR BROCK LONG** on **"FOX NEWS SUNDAY":** "We can chose to look at what the mayor spouts off or what other people spout off, but we can also choose to see what's actually being done."

-- CNN'S JAKE TAPPER speaks with **OMB DIRECTOR MICK MULVANEY** on **CNN'S "STATE OF THE UNION": TAPPER:** "Let me show you one last tweet from President Trump, and then we will get to tax reform. He wrote -- quote -- 'To the people of Puerto Rico, do not believe the #fakenews.' Director Mulvaney, as I'm sure you know, 95 percent of the people of Puerto Rico are without power, 89 percent have no cell service. So they're not seeing this news that the president is attacking. But beyond that obvious disconnect, these stories that CNN is reporting on the ground in Puerto Rico, firsthand accounts from American citizens in dire need, without food, without water, without power, do you think these stories are fake?"

MULVANEY: "No, I -- what you all have done -- I have watched a lot of the coverage of showing what's happening on the ground -- is entirely accurate. I think what you have not shown, however, is the federal effort that we have got in place down there, and the fact that the governor has been very complimentary of the administration. Again, I think there's more than 70 mayors on the island of Puerto Rico, and yet you seem to spend a lot of attention on the one from San Juan. So, I think that's where the president's pushback is. I don't know if there's been coverage, for example, that we have now made it to every single town. The search-and-rescue effort is over. We have made it to every

single place on the island to make sure that folks are safe."

THE WHITE HOUSE released a readout of a call with former Puerto Rican Governor Luis Fortuno, in which the former governor praised Trump's response to the storm. Fortuno is a federal lobbyist based in Steptoe and Johnson's Washington office, but he emailed us that he is "in PR right now. Back later tonight." "Terrible stories. Need lots of help," he told us. ***The phone call, courtesy the White House*** http://bit.ly/2xlxxrk

-- IN THE CARIBBEAN: "Should they go back?: Barbuda is a wasteland. Dominica is devastated. Puerto Rico has no power. Hurricanes have come and gone, but the 2017 season has seen a new category of psychic storm," by WaPo's Anthony Faiola in Antigua and Barbuda, Samantha Schmidt in Puerto Rico and Marc Fisher in Washington. http://wapo.st/2yPKTzl

BEING THERE -- "One Day in the Life of Battered Puerto Rico" - NYT: "Puerto Rico has not been forgotten, but more than a week after Hurricane Maria hit, it's a woozy empire of wreckage; of waiting in line for food, water and gas and then finding another line to wait in some more. A team of New York Times reporters and photographers spent 24 hours - from dawn Wednesday to scorching afternoon heat, to a long uneasy night and Thursday morning without power - with people trying to survive the catastrophe that Hurricane Maria left behind." http://nyti.ms/2xMgTVD

-- L.A. TIMES: "In one Puerto Rican nursing home, a struggle to get power and keep patients alive," by Molly Hennessy-Fiske: http://lat.ms/2yAGsIi

SPOTTED last night at Cafe Milano: Treasury Secretary Steven Mnuchin and his wife Louise Linton, at table one.

Good Sunday morning and happy October. **STEVEN SHEPARD**, POLITICO's polling and weather guru (good combo, right?), tweeted: "Autumn alert: The temperature in D.C. dipped down to 51 degrees this morning - the coolest morning since May 13 (50 degrees)."

THE PRESIDENT is participating in a "deregulation summit" Monday and hosting Prime Minister Prayut Chan-o-cha of Thailand at the White House. He is going to Puerto Rico Tuesday and is hosting a Hispanic heritage celebration Friday at the White House.

PIC INSIDE THE WHITE HOUSE - - A tipster sends this photo from the East Room yesterday. The White House is preparing for the regulatory reform event. A White House aide told us that the huge stack of pages on the right is "the number of pages in the [Code of Federal Regulations] today, which is a measure of all regs on the books (Fed Register are just new ones), versus the # about a half-century ago" on the left side. http://bit.ly/2x6Nnwk

-- Adrian Carrasquillo (@Carrasquillo): "Source sends me the invitation to the White House Hispanic Heritage event on Friday at noon, which will come amid Puerto Rico

furor." http://bit.ly/2ygpsLh

****** **A message from Morgan Stanley**: Disruption in Energy: New renewable energy storage technology has the potential to turn solar energy into a reliable source of power. Read more from Morgan Stanley. ******

THE NEXT HHS SECRETARY, via NYT's Peter Baker and Robert Pear: "The White House had no comment on Saturday, but two advisers who asked not to be identified discussing internal matters said two top candidates were Scott Gottlieb, the commissioner of the Food and Drug Administration, and Seema Verma, the administrator of the Centers for Medicare and Medicaid Services. Both have previously been vetted by the White House, nominated by the president and confirmed by the Senate to their current jobs within recent months, a significant selling point.

"Other names have been floated as well, including David Shulkin, the secretary of veterans affairs and a favorite of the president's. But he has been criticized for a European trip with his wife that mixed business and sightseeing and was partially financed by taxpayers, and Mr. Trump may be reluctant to move him because he has been critical to fixing veterans' care. Some reports floated former Gov. Bobby Jindal of Louisiana, an assistant secretary of health and human services under President George W. Bush. But he was a caustic critic of Mr. Trump during his own brief campaign for the White House that ended in late 2015 after he called the future president a 'narcissist' and 'egomaniacal madman.'" http://nyti.ms/2x6qR6U

BIG READ -- A1, WAPO -- CRAIG WHITLOCK: "How the military handles sexual assault cases behind closed doors": "For the U.S. Air Force, the case of alleged sexual harassment and assault by a senior officer was exactly the type of misconduct Pentagon leaders had promised Congress and the public they would no longer tolerate. The victim at Maxwell-Gunter Air Force Base in Alabama reported in September 2015 that her married boss, a colonel, had repeatedly said he wanted to have sex with her, tracked her movements and sent her recordings of him masturbating in the shower, documents show. She said that she told him to back off but that he would not stop: Twice, she alleges, he trapped her in the office, grabbed her arms and forcibly tried to kiss her. ... In their report, the investigators compiled extensive evidence that the colonel, Ronald S. Jobo, had committed abusive sexual contact against the woman, a civilian in her 30s. ...

"In March 2016, Lt. Gen. John F. Thompson, the senior officer in Jobo's chain of command, decided against charging Jobo with abusive sexual contact, or any crime at all. ... Jobo was forced to retire and demoted one rank, to lieutenant colonel. Because the military keeps most disciplinary actions secret, the case was hidden from public view. There would be no trial, no publicity and no public record - the same for thousands of other sexual assault investigations each year in the armed forces. An examination of the Jobo investigation, based in part on an internal 400-page law enforcement case file obtained by The Washington Post, casts doubt on the military's promises to crack down on sexual misconduct and hold commanders accountable for how they administer

justice." http://wapo.st/2xSxaKy

TRUMP AGENDA WATCH -- "Republicans ignore Trump's bipartisan Dreamers deal," by Rachael Bade and Heather Caygle: "President Donald Trump may want to partner with 'Chuck and Nancy' on a solution for Dreamers, but House Republicans say forget it - at least for now. GOP leaders are resisting Trump's push to salvage the Deferred Action Childhood Arrivals initiative with bipartisan cooperation.

"Instead, at the behest of a conservative conference that loathes the Obama-era program giving work permits to young undocumented immigrants, Republicans are crafting a solution that sticks to party orthodoxy. A GOP working group formed by Speaker Paul Ryan held two meetings last week to discuss immigration, and sources say there was virtually no support among members for Trump's tentative DACA deal with Democratic leaders Nancy Pelosi and Chuck Schumer." http://politi.co/2xIcFke

-- FRONT PAGE of the Arizona Republic: "THE WALL: Unknown stories. Unintended consequences ... IS A WALL NEEDED? ... DHS report says border is more difficult to cross than ever before" http://bit.ly/2g0ObIM ... ***The story*** http://bit.ly/2yh1pfb

KEN VOGEL on **A1** of the **NYT: "How Two Sentences in Tax Plan May Help Unleash $1 Billion in Lobbying":** "Tucked away on Page 8, the sentences refer vaguely to plans to repeal or roll back 'numerous' exclusions and deductions, and to 'modernize' tax rules affecting specific industries 'to ensure that the tax code better reflects economic reality and that such rules provide little opportunity for tax avoidance.'

"That language has prompted concerns among a wide range of businesses and industries about the prospect of losing valuable tax breaks -- from preferential tax treatment for insurers to credits for renewable energy to a prized tax treatment used by the commercial real estate industry. And those fears are being stoked by lobbyists, who are urging clients and prospective clients to get out in front of any changes that could eliminate or weaken sections of the tax code that benefit them.

"'You're either going to be at the table, or you're going to be on the table,' said Thomas M. Reynolds, a former Republican congressman from New York who served on the tax-writing Ways and Means Committee and is now a lobbyist at Holland & Knight focusing on tax issues. Most businesses that could be affected by the tax overhaul 'will not have to be encouraged to engage,' Mr. Reynolds said." http://nyti.ms/2xHL1nm

MORE SUNDAY BEST ... -- JOHN DICKERSON speaks to **SPEAKER PAUL RYAN** on **CBS'S "FACE THE NATION": DICKERSON:** "Will this tax plan increase the debt?" **RYAN:** "It's going to be deficit neutral. That's the budget rules we use, which is called the Byrd rule." **DICKERSON:**"Yeah." **RYAN:** "So this will have to be a deficit neutral tax bill. But we do--" **DICKERSON:** "But --"**RYAN:** "--fundamentally believe that this tax code and this tax reform will give us faster economic growth. Faster economic growth helps raise the economy which raises revenues. And that helps us tackle the deficit. There's two things we've got to do to get rid of this debt. Deal with entitlements, that's

why we're frustrated health care reform hasn't passed the Senate yet. Deal with runaway spending, but also grow the economy. This helps grow the economy. So if you're asking me whether it's going to be deficit neutral tax reform, that's what it has to be for us to be able to pass the bill--"

DICKERSON: "After 10 years? So it will -- but what about the debt, in terms of the additional money to the debt from this? Not deficit year-to-year but overall--" **RYAN:** "If this results in giving us a faster economic growth, that will help us reduce our debt."

-- GEORGE STEPHANOPOULOS speaks with **STEVEN MNUCHIN** on **ABC'S "THIS WEEK": STEPHANOPOULOS:** "In the interest of transparency, can you guarantee that the president won't get a tax cut under his plan and how will you demonstrate it?" **MNUCHIN:** "Again, as I've said all along, the objective of the president is that rich people don't get tax cuts and we're perfectly comfortable, as we go through this process, we'll explain to the American public how that works, and we'll give plenty of examples." **STEPHANOPOULOS:** "Will you give the information about the president himself so he can back up the claims that he's made that he's not going to get a tax cut under this plan." **MNUCHIN:** "George, I can't comment on what the president will do or what he won't do on that, but again, I'm perfectly comfortable that the American public is going to understand this as we go through this process."

-- IMPORTANT: SEN. BOB CORKER to **CHUCK TODD** on **NBC'S "MEET THE PRESS":** "If it looks to me like we're adding one penny to the deficit, I am not going to be for it."

O.J. IS OUT -- "O.J. Simpson freed from prison in Northern Nevada," by Las Vegas Review-Journal's Mike Shoro: "O.J. Simpson became a free man at 12:08 a.m. Sunday when he was released from Lovelock Correctional Center in Northern Nevada. Simpson was released from prison and out on parole after serving nine years for armed robbery, Nevada Department of Corrections spokeswoman Brooke Keast confirmed Sunday morning. She said he was released from Lovelock Correctional Center in Northern Nevada at 12:08 a.m. Sunday, just minutes after he was eligible for release. He had been expected to be taken to High Desert State Prison outside Las Vegas, but Keast said the high-profile nature of the case and public safety concerns prompted officials to release him directly from Lovelock." http://bit.ly/2yAf7py

****** **A message from Morgan Stanley**: New renewable energy storage technology has the power to turn solar and wind energy into a reliable source of electricity generation for U.S. utilities. The demand for storage is expected to grow significantly in

the next two to three years, according to a Morgan Stanley report. Read more. ******

LATE NIGHT BEST - SNL IS BACK! -- THE COLD OPEN last night - "The Chaos President" -- **TRUMP (played by Alec Baldwin):** "Sometimes when you're president you have to make sacrifices. So I skipped the back 9." **SARAH HUCKABEE SANDERS (Aidy Bryant):** "Yeah. I understand Mr. President. ... Sir, Mayor Cruz of San Juan is on the line." **TRUMP:** "I was expecting this phone call. I'm sure she wants to tell me what a great job I'm doing. ... Yes, Mayor you wanted to talk to me." **CRUZ (Melissa Villaseñor):** "Yes Mr. President I'm so glad to have you on the phone. I'm begging you, Puerto Rico needs your help." **TRUMP:** "I hear you loud and clear and you called the best person for the job. Trust me I know things are as the locals say, 'despacito.' We're going to get you more help, immediately, probably by Tuesday or Wednesday at the latest." **CRUZ:** "Mr. President, that's not good enough."

TRUMP: "You should have paid your bills. FEMA takes a few days unless you join FEMA Prime." **CRUZ:** "What are you talking about?" **TRUMP:** "Ma'am, I don't know if you know this but you're in an island in the water. The ocean water, big ocean with fishies and bubbles and turtles that bite. We want to help you but we have to take care of America first." **CRUZ:** "Wait you do know that we're a U.S. territory, don't you?" [Pause] **TRUMP:** "I mean I do, but not many people know that, no." Trump then hangs up the phone. **TRUMP:** "That woman was so nasty." ***6-min. video*** http://bit.ly/2x5WdKW

BONUS GREAT WEEKEND READS, curated by Daniel Lippman:

--"Democrats Don't Need to Win Texas-But They Just Might, Anyway," by Tim Murphy in the Sept./Oct. issue of Mother Jones: Texas Democratic Rep. Beto "O'Rourke's politics, forged in one of the largest border communities on Earth, are in many ways the antithesis of President Donald Trump's; he supports single-payer health care and marijuana legalization, hates the wall, and loves Mexico. ... But ... O'Rourke believes the same frustration that ushered in Trumpism can also be harnessed to thwart it. A year ago, running against Cruz might have looked like a suicide mission-maybe it still is. But something is happening in Texas." http://bit.ly/2x1DT5D

--"Trump Is Making Canada Great Again," by Richard Florida and Joshua Gans in POLITICO Magazine: "While America closes its borders, its northern neighbor is poaching some of the best tech talent in the world." http://politi.co/2kemUXQ

--"The effects of a single terrorist nuclear bomb," by Matthew Bunn and Nickolas Roth in the Bulletin of the Atomic Scientists: "The blast, fire, initial radiation, and long-term radioactive fallout could leave the heart of a major city a smoldering radioactive ruin, killing tens or hundreds of thousands of people and wounding hundreds of thousands more. Vast areas would have to be evacuated and might be uninhabitable for years. Economic, political, and social aftershocks would ripple throughout the world. A single terrorist nuclear bomb would change history. The country - and the world - would never be the same." http://bit.ly/2hCnloD

--**"Notes From an Apocalypse" -** LessWrong: "It's like somebody flipped a light switch. The rise in diversity and in disparity is unequalled by any other moment in Earth's history. Take all the creative power of the last five hundred million years of animal evolution, compress it down to a fraction of a geological instant - that's the power of the Cambrian Explosion." http://bit.ly/2hCZWbY (h/t TheBrowser.com)

--**"Jonathan Lebed's Extracurricular Activities," by Michael Lewis** in the Feb. 25, 2001 issue of the N.Y. Times Magazine - per Longform.org's description: "Using several email addresses and a lot of exclamation points, teenager Jonathan Lebed worked finance message boards in the morning before school and made almost a million bucks. Then he made the head of the S.E.C. look like a fool." http://nyti.ms/2fy9LUd

--**"Casey Neistat: The Most Trusted Name in News,"** by Matthew Belloni in Popular Mechanics: "Casey Neistat sold his video news-sharing app to CNN for $25 million. He's not a journalist, he just wants to show billions of viewers what's going on in the world." http://bit.ly/2fxjpXd

--**"How Military Outsourcing Turned Toxic,"** by ProPublica's Abrahm Lustgarten: "Fraud. Bribery. Incompetence. The military's use of contractors adds to a legacy of environmental damage." http://bit.ly/2fwO6fk

--**"How the Bankruptcy System Is Failing Black Americans,"** by Paul Kiel with Hannah Fresques in ProPublica, co-published with the Atlantic: "Black people struggling with debts are far less likely than their white peers to gain lasting relief from bankruptcy, according to a ProPublica analysis. Primarily to blame is a style of bankruptcy practiced by lawyers in the South." http://bit.ly/2yMSejE

--**"The House of Hugh Hefner,"** by Chris Jones in Esquire's April 2013 issue: "He's turning eighty-seven as Playboy turns sixty. The world has taken its toll on both, but the world is still no match for life at the Mansion." http://bit.ly/2yydWqB

--**"The Inside Story of the Great Silicon Heist,"** by Brendan Koerner in Wired: http://bit.ly/2yMWCz4

--**"Voices from the Storm" -** Texas Monthly staff: "The story of Hurricane Harvey, as told by 28 Texans who helped their state through its darkest hour." http://bit.ly/2fVUrBp (h/t Longform.org)

--**"Jane Sanders: Bernie would have beaten Trump,"** by Irish Times' Suzanne Lynch: "'We didn't win the election, but we won the hearts of young people,' says the Vermont senator's wife, who visits Ireland next week." http://bit.ly/2fBRcyM

--**"Pickering called,"** by Rivka Galchen in the London Review of Books, reviewing "The Glass Universe: The Hidden History of the Women Who Took the Measure of the Stars," by Dava Sobel: "There's some science, of course - but also a tragic drowning, a

fatal case of dysentery and a marriage plot or two. One reason nineteenth-century novels are the way they are is that the nineteenth-century was the way it was. These women have some control over their lives, but chance is a more powerful determinant." http://bit.ly/2xMwIlS ... ***$16.55 on Amazon*** http://amzn.to/2xI5vdd

Playbookers

SPOTTED: Rep. Trey Gowdy (R-S.C.) playing the Old White TPC golf course on Saturday at The Greenbrier.

OUT AND ABOUT -- DC journo band Suspicious Package kicked off a triple concert weekend Friday night at Alfred House in Foggy Bottom. On Saturday the band played a benefit for the Foundation for Sustainable Development and on Sunday, Suspicious Package will play the Bullpen after the Nats game. **SPOTTED:** band members Tim Burger, Bryan Greene, Josh Meyer, Christina Sevilla, and Tom Toles, Rodell Mollineau, Mark Paustenbach, Peter Cherukuri, Steve Rochlin, Paul Kane, Craig Gordon, Gretchen Toles, Tom Williams, Nick Owens, Christian Hudson, Kelly Jane Torrance, Bo Ollison, Kathryn Phelps, Dan Ronayne, Ed D'Agostino, Stone Burnette, Justin Friedman, Tony Capaccio, Bonnie Rollins.

SPOTTED last night celebrating the U.S. "Fiscal New Year" at a party at Hill Prince on H Street NE, hosted by Adam Shifriss of CRFB: Kristen Hawn, Brad Howard, Joel Bailey, Jennifer Bailey, Elizabeth Falcone, Kate Callanan, Joel Riethmiller, Corey Tellez, Michael Lukso, Erica Bordador, Brooke Lillard, David Bond.

WELCOME TO THE WORLD - Bennett Richardson, executive director of POLITICO Focus and co-founder of Hinge, and **Lindsay Richardson** email friends and family: "He's here! Please welcome Andon Dean Richardson. Born at 7:15 a.m. 9lbs 6oz 22.5 inches. Mom and baby are doing great."

WEEKEND WEDDINGS -- Pool report: "AP's **Steve Peoples** and CNN's **Zain Asher** became Mr. and Mrs. Ejiofor Peoples on Saturday in the windswept hills of Sintra, Portugal. Guests came from three continents to witness Steve and Zain's nuptials inside the ornate music salon of Monserrate Palace, once a lush retreat for the Portuguese court. The bride and groom and their guests then traveled to Estoril for sunset cocktails, dinner and dancing at Forte da Cruz, overlooking the Atlantic.

"The reception melded both cultures, from the ceremonial kola nut that Steve presented - speaking a few impressive words of Igbo! - to brother-in-law and actor Chiwetel Ejiofor, representing the bride's family, to the email well-wishes sent by Mitt Romney, whose 2012 presidential campaign Steve chronicled. 'So Steve is settling down, eh?' Romney asked. 'I never imagined that he would ever tie the knot with anyone other than Tom Brady.'" ***Pic*** http://bit.ly/2xPE178

SPOTTED: Julie Bykowicz, Fin Gomez, Kasie Hunt and Matt Rivera, Alison Ogden, Ashley Parker, Rachel Streitfeld and Phil Rucker.

-- Pool report from Maria Sparks, the pride of Silver Spring: **KELLY DIXON,** House Majority Leader Kevin McCarthy's director of legislative operations, married **Glenn Chambers** from Abt Associates, at the George Washington National Masonic Memorial. The bride sparkled in a white strapless sweetheart gown. McCarthy officiated.

SPOTTED: Kevin and Judy McCarthy, Reps. Richard Hudson (R-N.C.), George Holding (R-N.C.), and John Katko (R-N.Y.), Matt and Summer Bravo, Jeff Dressler, Katie Meyer, James Min, Matt and Maria Sparks, Kristin and John Stipicevic, John Leganski, Chris Bien, Chris Vieson, Danielle Burr, Phil Simms, Shuwanza Goff, Lydia Strunk, Nicole Foltz, Cindy Herrle, Parker Polling, Steve Pinkos.

--Teresa Buckley, former chief of staff for Rep. Larry Bucshon (R-Ind.) and now director of federal affairs at PhRMA, and **Aaron Bill,** legislative director for Rep. Phil Roe (R-Tenn.), were married Saturday afternoon in Washington, D.C. at St. Peter's Church followed by a reception at the Capitol Hill Club. Pool report: The couple "were introduced/set-up by Dave and Lizzy Peluso, who thought Teresa and Aaron would be perfect for each other. Dave and Lizzy were obviously right. It was 4 years ago during the government shutdown that they had their first date. Perhaps the best thing to come out of that showdown." ***Pic of the couple with Reps. Bucshon and Roe*** http://bit.ly/2x5RXuZ

SPOTTED: Rep. Larry Bucshon and Dr. Kathryn Bucshon, Rep. Phil Roe and Clarinda Roe, Stephen Martinko and Callie Hoyt, Jared Eichhorn, Sarah Cannon, Tim and Sarah Killeen, Mitch and Janelle Relfe, Jon and Sara Causey, Matt and Olivia Meyer, Dave and Lizzy Peluso, Meghan Dubyak, Geoff Lane, Marni Goldberg, Tara Mazer.

--Taylor Haulsee, press secretary for Sen. Lamar Alexander (R-Tenn.) and the HELP committee, got married last night to **Katie Delzell**, director of development at American Action Network/Congressional Leadership Fund. Their ceremony was on the terrace at DAR, with the Washington monument as their backdrop. The couple met on the Romney campaign in Iowa. ***Pic*** http://bit.ly/2fH8xdi

OBAMA ALUMNI -- "Rachel Tulchin, Kevin Bailey" - N.Y. Times: "Ms. Tulchin, 35, is the global communications manager for sustainability at Anheuser-Busch InBev in New York. ... Mr. Bailey, also 35, is the director for business development at CommonBond, a financial technology company in New York. ... The couple met on a blind date in Washington in the spring of 2014, when both were serving in the Obama administration. The bride worked as a senior policy adviser to the ambassador at large for global women's issues in the secretary's office at the State Department, before moving onto a role as deputy director at the Clinton Foundation in New York. The groom served as a member of Vice President Joe Biden's staff in the White House, and later as senior policy adviser for financial institutions policies at the Treasury Department." ***With pic*** http://nyti.ms/2ygUUZE

BIRTHDAYS: Tommy Andrews, director of member services for Speaker Paul Ryan, the pride of Cincinnati and a Boehnerland alum, is 31 (hat tip: the Ryan comms shop) ... former President Jimmy Carter is 93 ... British Prime Minister Theresa May is 61 ... National Journal managing editor Ben Pershing is 42 (h/t Hanna Trudo) ... NYT's Jose DelReal is 27 ... Tim Hannegan ... Rob Seidman, SVP at Glover Park Group (h/t Liz Johnson) ... Brook Hougesen, comms director for Sen. Joni Ernst (R-Iowa) (h/t Leigh Claffey) ... CNN correspondent Brian Todd ... Joanne Peters, director of media relations at UNC-Chapel Hill... Jennifer Storipan ... Kenny Cunningham, senior associate at Prism Group, is 28 ... Alex Gleason ... AEI's Joe Antos ... Nikolai Wenzel ... Politico's Rose Lichtenfels, Andy Goodwin and Marie French ...

... Cincinnati City Councilman P.G. Sittenfeld is 33 ... Daniel Clifton ... Michael Knopf, director at MediaLink (h/t Christian Emanuel) ... Alexandra Fox ... Debby Wolf ... Susan Peacock ... Jennifer Lenhart ... Lorraine Adams ... Vinh Nguyen ... AFP alum Chris Berg ... IBM's Vera Rhoads ... Charlie Rose, the pride of City Year (h/t Teresa Vilmain)

****** **A message from Morgan Stanley** : Storage makes renewable energy available when it's needed the most. Given the U.S. electric grid's lack of storage capacity, conventional power plants, including gas-fired ones, have remained utilities' most reliable source of electricity. That could be about to change. Morgan Stanley analysts argue that the price of both solar and wind energy, as well as new storage units, have reached a point where renewable energy can finally become a dependable, rather than an unpredictable, source of energy. According to the report, the demand for storage is expected to grow from a less than $300 million a year market to as much as $4 billion in the next two to three years. More affordable battery storage units could enable the growth of renewables or defer costly transmission and distribution projects, and also could lead to significant utility bill savings for solar customers. Read more from Morgan Stanley. ******

Subject: Playbook Power Briefing, presented by the Coalition for Affordable Prescription Drugs (CAPD): SCOTUS reinstates parts of Trump's travel ban -- Senate releases revised health care bill -- CORNYN says health care vote needs to occur this week

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

WHAT THE WHITE HOUSE IS HAPPY ABOUT -- "High Court reinstates Trump travel ban, will hear arguments," by AP Supreme Court reporter Mark Sherman: "The Supreme Court is letting the Trump administration mostly enforce its 90-day ban on travelers from six mostly Muslim countries, overturning lower court orders that blocked it.

"The action Monday is a victory for President Donald Trump in the biggest legal controversy of his young presidency. The court did leave one category of foreigners protected, those 'with a credible claim of a bona fide relationship with a person or entity in the United States,' the court said in an unsigned opinion. The justices will hear arguments in the case in October. ... The ban would apply to citizens of Iran, Libya, Somalia, Sudan, Syria and Yemen." http://apne.ws/2sTjbzB

PRESIDENT TRUMP'S STATEMENT on the travel ban: "Today's unanimous Supreme Court decision is a clear victory for our national security. It allows the travel suspension for the six terror-prone countries and the refugee suspension to become largely effective.

"As President, I cannot allow people into our country who want to do us harm. I want people who can love the United States and all of its citizens, and who will be hardworking and productive.

"My number one responsibility as Commander in Chief is to keep the American people safe. Today's ruling allows me to use an important tool for protecting our Nation's homeland. I am also particularly gratified that the Supreme Court's decision was 9-0."

BY THE WAY ... JUSTICE ANTHONY KENNEDY did not make any announcement about his retirement.

OTHER SCOTUS MOVES -- SAME-SEX MARRIAGE CASE: NYT's ADAM LIPTAK: "The Supreme Court agreed on Monday to hear an appeal from a Colorado baker with religious objections to same-sex marriage who had lost a discrimination case for refusing to create a cake to celebrate such a union. The case will be a major test of a clash between laws that ban businesses open to the public from discriminating based on sexual orientation and claims of religious freedom. Around the nation, businesses like bakeries, florists and photography studios have said, so far with little success, that forcing them to serve gay couples violates their constitutional rights." http://nyti.ms/2tdAi1V

-- "Supreme Court turns down case on right to carry guns," by Josh Gerstein http://politi.co/2taCeaL

-- "Supreme Court rules churches eligible for certain public funds," by Benjamin Wermund: "The Supreme Court ruled Monday that religious institutions may not be excluded from state programs with a secular intent - in this case, making playgrounds safer. However the court framed its decision narrowly, declining to say how far states can go with school choice programs like vouchers being pushed by President Donald Trump as part of a sweeping school choice agenda." http://politi.co/2u8SPcs

Good Monday afternoon. PLAYBOOK has been hitting the road, taking our events across the country. We are trying to find out a bit more information on where you, the Playbook community, live. Please take this two-question survey: http://bit.ly/2u9pcYo

THE WHITE HOUSE has again decided today to hold a press briefing off camera, starving Americans of an opportunity to hear the executive branch discuss its priorities and policies. And they have something to talk about today -- a favorable Supreme Court decision.

NEW -- @seungminkim: "NEW: Here's the revised Senate GOP health care bill with summary of changes" http://bit.ly/2sedjiA ... ***The bill*** http://bit.ly/2tdhy2v ... ***Burgess Everett notes POLITICO broke this story first.***

-- A MAIN CHANGE: You have to wait six months for insurance coverage if you have a two-month lapse.

TRACK THE LATEST DEVELOPMENTS LIVE -- POLITICO has set up a page to follow ALL the twists and turns. http://politi.co/2s9pCkS

-- @JohnCornyn: "I am closing the door. We need to do it this week before double digit premium increases are announced for next year."

GREAT NUGGET FROM BUZZFEED'S TARINI PARTI in Colorado Springs: "Doug Deason, a major Trump backer and Texas-based Koch network donor, said that Republicans could have moved faster on their agenda, but that he's not disappointed with the Trump administration at all. ...

"Deason said he even turned down a meeting with Senate Majority Leader Mitch McConnell, telling the Kentucky Republican he needed to pass those bills first. Deason added that he respected McConnell, but that he'd like to 'see him grow a pair.'" http://bzfd.it/2tN8XRn

SPEAKER PAUL RYAN this evening will swear in the two newest members of Congress, Karen Handel (R-Ga.) and Ralph Norman (R-S.C.).

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study projects pharmacy benefit managers (PBMs) will save Medicare Part D $896 billion over ten years. PBMs drive savings for taxpayers and seniors by negotiating discounts from drug manufacturers; by encouraging the use of lower cost, clinically equivalent drugs; and by providing clinical programs that improve health outcomes. Learn more at affordableprescriptiondrugs.org ******

STATEMENTS FROM THE WHITE HOUSE -- @realDonaldTrump at 8:30 a.m.: "The Democrats have become nothing but OBSTRUCTIONISTS, they have no policies or ideas. All they do is delay and complain. They own ObamaCare!" ... **at 8:37 a.m.:** "The reason that President Obama did NOTHING about Russia after being notified by the CIA of meddling is that he expected Clinton would win.." ... **at 8:50 a.m.:** "...and did not want to 'rock the boat.' He didn't 'choke,' he colluded or obstructed, and it did the Dems and Crooked Hillary no good." ...

... at 8:59 a.m.: "The real story is that President Obama did NOTHING after being informed in August about Russian meddling. With 4 months looking at Russia..." ... **at 9:05 a.m.:** "..under a magnifying glass, they have zero 'tapes' of T people colluding. There is no collusion & no obstruction. I should be given apology!" ... **at 9:14 a.m.:** "Republican Senators are working very hard to get there, with no help from the Democrats. Not easy! Perhaps just let OCare crash & burn!"

NEW NUMBERS -- "Support for Same-Sex Marriage Grows, Even Among Groups That Had Been Skeptical" -- Pew Research Center: "Two years after the Supreme Court decision that required states to recognize same-sex marriages nationwide, support for allowing gays and lesbians to marry legally is at its highest point in over 20 years of Pew Research Center polling on the issue. By a margin of nearly two-to-one (62% to 32%), more Americans now say they favor allowing gays and lesbians to marry than say they are opposed. ...

"For the first time, a majority of Baby Boomers favor allowing gays and lesbians to marry legally. Currently, 56% of Boomers favor same-sex marriage. ... Blacks have long been less supportive of same-sex marriage when compared with whites, but the share of African Americans who favor same-sex marriage has risen 12 percentage points since 2015, from 39% to 51%. ... For the first time, a majority of Republicans and Republican-leaning independents do not oppose allowing gays and lesbians to marry legally. Today, 48% of Republicans and Republican leaners oppose same-sex marriage,

while 47% favor this. ... Overall, white evangelical Protestants continue to stand out for their opposition to same-sex-marriage: 35% of white evangelical Protestants favor same-sex marriage, compared with a 59% majority who are opposed." http://pewrsr.ch/2taGln8

FRANK RICH on the cover of **NEW YORK MAG -- "Just Wait:** Watergate didn't become Watergate overnight, either": "[A]mong those of us who want Donald Trump gone from Washington yesterday, there's a fair amount of fear that he, too, could hang on until the end of a four-year term that stank of corruption from the start. Even if his White House scandals turn out to exceed his predecessor's - as the former director of national intelligence James Clapper posited in early June - impeachment is a political, not a legal, matter, and his political lock on the presidency would seem secure. Unlike Nixon, who had to contend with Democratic majorities in the House and Senate, Trump has the shield of a Republican Congress led by craven enablers terrified of crossing their Dear Leader's fiercely loyal base. That distinction alone is enough to make anti-Trumpers abandon all hope.

"I'm here to say don't do so just yet. There's a handy antidote to despair: a thorough wallow in Watergate, the actual story as it unfolded, not the expedited highlight reel that most Americans know from a textbook précis or cultural artifacts like the film version of All the President's Men. If you look through a sharp Nixonian lens at Trump's trajectory in office to date, short as it has been, you will discover more of an overlap than you might expect." http://nym.ag/2u8rly9 ... ***The cover*** http://bit.ly/2te3KVM

AFTERNOON READS -- "How the Right Gets Reagan Wrong," by Henry Olsen, author of "The Working Class Republican: Ronald Reagan and the Return of Blue-Collar Conservatism," in POLITICO Mag: "[E]lection returns show Americans don't want what Reaganism's high priests are preaching. More crucially, I learned that everything I thought I knew about Reagan was wrong-that Reaganism misrepresents Reagan's own views. Reagan's conservatism actually fit squarely within Franklin D. Roosevelt's New Deal consensus, not the anti-New Deal conservatism that forms Reaganism's heart. Heresy! some readers will cry. How can a man who backed Barry Goldwater, who said that 'libertarianism is the heart of conservatism,' and who told America that 'government is not the solution to the problem, it is the problem' be a New Deal conservative?

"The answer is that while all those statements are true, they exist in the context of a much more pro-government world view than Reaganism admits. The young Reagan was an ardent devotee of FDR and the Democratic Party. His friends from that era say he memorized FDR's 'fireside chats' and incessantly prattled on about New Deal liberalism. Many assume that his political outlook changed so much as he moved to the right that he rejected FDR and the New Deal. But Reagan always said "I didn't leave the Democratic Party, the Democratic Party left me." http://politi.co/2tbARZr ... ***$19.03 on Amazon*** http://amzn.to/2tb53Uv

JACK SHAFER in the July/Aug. issue of POLITICO Mag, **"America's Mayor: The 45th president is trying to run the White House like it's city hall":** "Our classic big-city

mayors all cut a similar figure [as Trump as president]. Even after winning office, they kept campaigning, stumping for their causes without apology. They blustered in the name of the neighborhoods, the parishes and the synagogues. They feuded with their enemies. Loudly. They 'fixed' things, looked for deal-making partners and struck alliances. They maintained peace between labor and capital, and they kept civil order. They played the booster. The classic mayors knew how to shame companies from moving their headquarters out of town, how to crowd their way to the center of any photo opportunity, how to junket and how to get results. Most of all, classic mayors were virtuosos in the art of blowing their own horns.

"It's from this script that Trump has largely governed, which helps to explain why, surrounded by all the trappings of the presidency, he still seems so unpresidential. It also helps explain why the initial months of his administration have accomplished so little. He's a self-proclaimed champion dealmaker. But where are the deals? How can someone with the political skills to become president so totally lack the political skills to be president? Because he basically misunderstands the dimensions of the job. The presidency isn't a supersized mayoralty. Mayors can get away with bullying city councils and acting like a legislature of one because councils are relatively weak. We've seen the approach in the first months of Trump's presidency in the dismissive way he treats Congress-and we've seen it fail, over and over." http://politi.co/2sJxJDx

HAPPENING TODAY -- Former Vice President **Joe Biden** and Dr. **Jill Biden** are launching the Biden Cancer Initiative today in New York City at the Alexandria Center for Life Science. The event will livestream on the initiative's Facebook page starting at 2:45 p.m. http://bit.ly/2u8PBWn

-- Former second lady **Tipper Gore** made a $1-million donation to the National Alliance on Mental Illness to expand their teen mental health program. ***Full release*** http://prn.to/2tbE0Zf

CLICKER -- "The 25 Most Influential People on the Internet," from TIME -- ***With appearances from Matt Drudge, Donald Trump, the founders of the Indivisible Guide, Skimm founders Danielle Weisberg and Carly Zakin and more*** http://ti.me/2tb5o9Z

TODAY'S BEYOND THE BELTWAY -- Universal health care bill shelved in California -- Charlie Baker stumps for Massachusetts with biotech companies http://politi.co/2u8V3bP

MAGICAL WORLD -- "Our 16 Favorite 'Harry Potter' Moments," from the staff of The Ringer, celebrating the 20th anniversary of the first Harry Potter book http://bit.ly/2u8Ms95

-- @JK_Rowling: "20 years ago today a world that I had lived in alone was suddenly open to others. It's been wonderful. Thank you. #HarryPotter20"

SPOTTED: Vernon Jordan (Bill Clinton consigliere) and Healy Baumgardner (Trump original and now lobbyist) sharing a golf cart to pre-board the 8 a.m. Acela from D.C. to NYC this morning ... Rep. Steve King (R-Iowa) at DCA this morning

WEEKEND WEDDINGS - Tom Schaller, professor and chair of the political science department at University of Maryland, Baltimore County, former BaltSun columnist and author of "The Stronghold" and "Whistling Past Dixie," got married on Saturday to **Laura Siemer,** who starts today as senior proposal writer for SOS International, a major government contracting defense-security firm. They had small family wedding of 30 people at the Tabard Inn and are honeymooning next week in Ocracoke on the Outer Banks of North Carolina. The couple met after a WashCaps hockey game in October 2014. *Pic* http://bit.ly/2s9mPbx

--Paige Alwood, who had her last day on Friday as deputy comms director for Sen. Ron Johnson (R-Wis.), got married to **Caleb Burr,** who graduated from seminary a week before their wedding and has taken a job in Raleigh, N.C., as a youth pastor. Their ceremony was at the Church of the Ascension and St. Agnes with their reception down the street at Epic Yoga, "a gorgeous venue space on the second floor overlooked Dupont Circle," she told us.

... They "met about 4 years ago when I moved to DC to do a fellows program through the Falls Church Anglican - it's called the Fellows Initiative. It's an incredible vocational/leadership development program that's been replicated in cities all over the East Coast ... My husband, Caleb, moved to DC around the same time to participate in a different program at the same church ... Because our story played out here even though neither of us are from here - I wanted this to be where we got married." ***Pics*** http://bit.ly/2sek3g6 ... http://bit.ly/2sJ4fWi ... http://bit.ly/2u8IY68

--"Marc Cipullo, Septime Webre" - N.Y. Times: "Mr. Cipullo, 48, ... was until January a director of special projects at South Florida Federal Partners, a private investment firm in Washington. ... Mr. Webre, 55, ... was until last year artistic director of the Washington Ballet. In July, he is to become artistic director of the Hong Kong Ballet." ***With pic*** http://nyti.ms/2s7hu4p ... ***Wedding pics*** http://bit.ly/2sJ9OnS ... http://bit.ly/2tcV9SW (h/t Judy Kopff)

BONUS BIRTHDAYS: NPR's Nicole Beemsterboer ... BerlinRosen VPs Shantha Susman and Niketa Kumar ... Lucy Silver ... Joe Durheim ... Ed Bearss, noted Civil War and military historian, expert battlefield guide for the Smithsonian and other organizations, and pride of Billings, Montana, is 94 ... **(was yesterday):** Matthew Felling, former Lisa Murkowski comms director now Hill+Knowlton VP and US News columnist. He spent the day wearing New Edition t-shirt in protest of the NKOTB (New Kids On The Block) reunion at the Verizon Center (h/t Ryan Taylor, who was on time)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study estimates that Medicare Part D costs would be 58 percent higher without pharmacy benefit managers' (PBMs') clinical tools and price negotiations with drug

manufacturers and pharmacies. The study shows PBMs significantly lower premiums and out-of-pocket costs for Medicare beneficiaries. In fact, PBMs are projected to save Medicare Part D $896 billion over the next decade. Thanks to PBMs, Medicare Part D continues to drive savings and value for taxpayers and beneficiaries, ensuring that more than 39 million American seniors can access the prescription drugs they need. Subject: BREAKING NEWS: Trump says he'll designate North Korea as state sponsor of terrorism

President Donald Trump said on Monday he would designate North Korea as a state sponsor of terrorism, according to a White House pool report.

North Korea was previously designated a state sponsor of terrorism, but in 2008, the designation was rescinded by the State Department. The Trump administration has said for weeks it was considering reinstating the designation.

Subject: Playbook Power Briefing, presented by Morgan Stanley: CONGRESSIONAL AIDES trading stocks that could present conflicts of interest -- ANTHONY WEINER sentenced to 21 months -- BANNON tried to influence Facebook hiring

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Monday afternoon. THERE ARE ROUGHLY 40 LEGISLATIVE DAYS left in 2017.

THE CONGRESSIONAL BUDGET OFFICE is aiming to publish a preliminary analysis of the Graham-Cassidy draft this afternoon. But, the analysis will be of the older bill, not the new legislation with changes. So, it matters a bit less.

-- ... BUT, BUT BUT: "Republicans brace for failure on Obamacare repeal: Skeptical GOP senators have yet to endorse the Graham-Cassidy bill, even after a flurry of 11th hour changes," by Burgess Everett and Josh Dawsey: "Republicans in the Senate and White House are increasingly resigned to defeat in their final bid to repeal Obamacare this week, despite a flurry of last-second revisions meant to win over skeptical senators.

"President Donald Trump seemed far more pessimistic on Monday morning than he had been last week, telling the 'Rick & Bubba' radio show that he expected crippling opposition, calling it 'disgusting' that party leaders can't pass a bill to repeal and replace the 2010 health law. Trump wants to continue the health care fight even though he is said to be resigned it will fail this time, a White House official said.

"Meanwhile, the latest version of the bill by Sens. Lindsey Graham (R-S.C.) and Bill Cassidy (R-La.) has not yet moved any of the 'no' or undecided votes into the 'yes' column. GOP leaders have yet to pull the plug on the effort, but a massive change in dynamics must occur in the sharply divided Senate for the Graham-Cassidy measure to pass. Sen. Rand Paul (R-Ky.) is still opposed to the bill, an aide said on Monday morning. Sen. John McCain (R-Ariz.) has also not changed his position, which hardened on Friday into a 'no' vote against his close friend Graham's legislation.

"And though the latest changes to the bill are intended to woo Sens. Lisa Murkowski (R-Alaska) and Susan Collins (R-Maine), Collins has not budged from her 'lean no' stance and Murkowski has yet to get on board." http://politi.co/2xvLztS

-- **@elysepg**: Murkowski flying from Alaska this morning, spending flight 'thinking about her decision,' per staff."

A GAME OF CONGRESSIONAL CHICKEN -- "House Democrats to oppose FAA extension," by Heather Caygle and Brianna Gurciullo: "House Minority Leader Nancy Pelosi is attempting to block Republican attempts to expedite an FAA extension before the agency's current authority expires at week's end. Pelosi said in a statement that the 'sprawling' bill goes far beyond just extending federal aviation programs and includes many provisions that don't have Democratic backing, including language dealing with the federal flood insurance program and tax credits for hurricane victims. The Democratic leader also cited Republican inaction on the Dream Act - the bipartisan bill that would provide a path to citizenship for some young, undocumented immigrants - as reason for her opposition." http://politi.co/2wfLbhR

MUST READ -- POLITICO INVESTIGATION -- "Congressional aides risk conflicts with stock trades," by Maggie Severns: "A POLITICO review of federal disclosures for 2015 and 2016 found that some senior aides regularly buy and sell individual stocks that present potential conflicts of interest with their work. A smaller number of staffers trade in companies that lobby Congress and the committees that employ them. In all, approximately 450 aides have bought or sold a stock of more than $1,001 in value since May 2015.

"That's likely just the tip of the iceberg, since most congressional aides aren't required to report their trades. Only those in positions earning more than $124,406 per year must reveal their investments. Of the 12,500 staffers working for lawmakers, committees and leadership offices, only about 1,700 make that much, according to data compiled by Legistorm and the Brookings Institution. Government watchdogs say that, at a minimum, staffers should be prevented from buying shares of companies with business before their committees. But they are not. And despite the disparity between the rigorous standards for the executive branch and the laxness of Congress, the House and Senate have taken a permissive approach even to enforcing existing rules." http://politi.co/2yBYr1L

SCOOP -- THE LATEST ON IMMIGRATION REFORM -- "GOP senators to unveil new 'Dreamers' bill," by Seung Min Kim: "A new Senate GOP proposal is being released Monday that creates a pathway to legalization for so-called Dreamers, but it won't allow them to sponsor family members to the United States - one of several provisions that make the bill far more conservative than other relief measures for young undocumented immigrants. The lead Republican writers of the bill - Sens. Thom Tillis of North Carolina and James Lankford of Oklahoma - have touted their plan as a more GOP-friendly vision for the fate of young undocumented immigrants in the United States, especially compared to the Dream Act led by Sens. Dick Durbin (D-Ill.) and Lindsey Graham (R-S.C.).

"Tillis and Lankford hope their legislation, called the Succeed Act, can win support

from conservatives as Congress scrambles for a fix following the White House's decision to begin revoking work permits and deportation protections early next year for hundreds of thousands of Dreamers." http://politi.co/2yogCqW

THE ONE AMERICA APPEAL, the hurricane relief fundraiser spearheaded by all the living former presidents, will be expanded to include hurricane relief for Puerto Rico and the U.S. Virgin Islands after they were devastated by Hurricane Maria. ***Donation page*** http://bit.ly/2y3k26q

****** **A message from Morgan Stanley** : A Morgan Stanley survey found that interest in sustainable investing is stronger than ever, with 75% of individual investors polled- and 86% of Millennials-expressing interest. The survey examined the attitudes, perceptions and behaviors of individual investors toward sustainable investing and considers the broader implications for investors, corporations and governments. Read more. ******

MEDIAWATCH -- WSJ's MIKE BENDER (@MichaelCBender): "GREAT NEWS: Two heavies coming to WSJ - the talented @bykowicz is covering money & politics, & grizzled vet Mike Gordon joins natsec team!"

WEINER SENTENCED -- "Weiner sentenced to 21 months in prison for latest sexting scandal," by POLITICO NY's Laura Nahmias: "Former congressman Anthony Weiner was sentenced to 21 months in prison and three years of supervised release in federal court in Manhattan Monday after pleading guilty in May to transmitting obscene material to a minor. 'The difference here is that this is a very strong compulsion,' said Judge Denise Cote in handing down the sentence, saying that compulsion was evidence by 'the destruction of his career on two occasions.' Weiner, who was unaccompanied by his wife Huma Abedin, buried his face in his hands on hearing the sentence." http://politi.co/2yC2WJO

UPPING THE ANTE -- "North Korea's foreign minister: Trump's words are 'clearly a declaration of war'" http://politi.co/2y3Gs7g

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 7:25 a.m.: "So proud of NASCAR and its supporters and fans. They won't put up with disrespecting our Country or our Flag - they said it loud and clear!" ... **at 7:31 a.m.:** "Many people booed the players who kneeled yesterday (which was a small percentage of total). These are fans who demand respect for our Flag!" ... **at 7:39 a.m.:** "The issue of kneeling has nothing to do with race. It is about respect for our Country, Flag and National Anthem. NFL must respect this!" ... **at 7:44 a.m.:** "The White House never looked more beautiful than it did returning last night. Important meetings taking place today. Big tax cuts & reform." ... **at 9:02 a.m.:** "#StandForOurAnthem" ***The president also retweeted a photo of Pat Tillman, the former NFL player who joined the military and died in Afghanistan.***

-- NASCAR driver Dale Earnhardt Jr. (@DaleJr): "All Americans R granted rights 2 peaceful protests Those who make peaceful revolution impossible will make violent

revolution inevitable-JFK" ... **@bylindsayhjones:** "NFL spokesman Lockhart: 'If the president wants to engage in something positive and constructive, he knows our number.'"

BANNON VS. THE VALLEY -- "Steve Bannon Sought To Infiltrate Facebook Hiring," by BuzzFeed News' Joseph Bernstein: "Steve Bannon plotted to plant a mole inside Facebook, according to emails sent days before the Breitbart boss took over Donald Trump's campaign and obtained by BuzzFeed News. The email exchange with a conservative Washington operative reveals the importance that the giant tech platform -- now reeling from its role in the 2016 election -- held for one of the campaign's central figures.

"And it also shows the lengths to which the brawling new American right is willing to go to keep tabs on and gain leverage over the Silicon Valley giants they used to help elect Trump -- but whose executives they also see as part of the globalist enemy. The idea to infiltrate Facebook came to Bannon from Chris Gacek, a former congressional staffer who is now an official at the Family Research Council, which lobbies against abortion and many LGBT rights." http://bzfd.it/2yB4Wln

-- "No one is tracking the illegal political ads in your Facebook feed," by Vice News' Alex Thompson and Noah Kulwin: "On Facebook and other digital platforms, no one -- not Facebook or the [FEC] -- vets political content that's backed by advertising dollars. This, experts warn, has turned Facebook into a vast, opaque, and unmonitored world where political advocacy has become hard to distinguish from political advertising." http://bit.ly/2yBnm5D

THE LATEST ON RUSSIA -- "White House stonewalls Capitol Hill over records in Russia probe," by CNN's Manu Raju and Jeremy Herb: "Tension is rising between congressional investigators probing Russia meddling and the Trump administration, as the White House and Justice Department withhold a number of records sought by Capitol Hill at a critical time in the investigations. Operating on parallel tracks from special counsel Robert Mueller, the three congressional committees probing Russia's election meddling have asked for scores of documents related to everything from Jared Kushner's security clearance to records surrounding President Donald Trump's discussions with James Comey before he was fired as FBI director.

"At the same time, the GOP leader of the House intelligence committee is threatening to hold a public hearing this week over documents the Justice Department has so far failed to turn over to Capitol Hill regarding the FBI's ties to a British operative who compiled a dossier of allegations on Trump's connections with Russia. And the GOP-led Senate judiciary committee is in a growing standoff with the Justice Department's deputy attorney general, Rod Rosenstein, over several issues, including the department's decision to prevent two senior FBI officials from sitting down for transcribed interviews on Capitol Hill to provide eyewitness accounts of the Comey firing.

"While the Trump campaign has provided lawmakers with thousands of pages of documents thus far, there are numerous requests where the White House, FBI and Justice Department have missed the committees' deadlines, prompting some committee members to threaten to issue subpoenas to the West Wing and Justice Department." http://cnn.it/2y36LL1

HISTORY LESSON -- "Segregation lingers in US schools 60 years after Little Rock," by the AP's Errin Haines Whack and Andrew DeMillo: "Six decades later, the sacrifice of those black students stands as a symbol of the turbulence of the era, but also as a testament to an intractable problem: Though legal segregation has long ended, few white and minority students share a classroom today. The lack of progress is clear and remains frustrating in the school district that includes Central High. The Little Rock School District, which is about two-thirds black, has been under state control since 2015 over the academic performance of some of its schools. The district has seen a proliferation of charter schools in recent years that opponents say contributes to self-segregation." http://bit.ly/2yBBRGA

TRUMP IS ALL IN ON STRANGE -- "Trump calls 'Rick & Bubba,' calls Roy Moore 'Ray' as he stumps for Strange," by AL.com's Leader Gore: "A primary win by 'Ray' Moore would open Alabama's U.S. Senate seat to Democrats, President Donald Trump told radio-hosts 'Rick and Bubba' this morning. Trump called the popular syndicated radio show on Monday morning, just days after appearing at a Huntsville, Alabama rally for Republican Senate nominee Luther Strange.

"'Luther Strange is going to be a great Senator,' Trump said. 'He loves Alabama, he loves the states and he loves the country. He will absolutely win against the Democrat. Ray will have a hard time. If Luther wins, the Democrats will hardly fight. If Ray wins (Democrats) will pour in $30 million.' When host Rick Burgess clarified that Moore's first name was Roy and not Ray, Trump came back with why it's 'not a good sign' when the president doesn't know your name." http://bit.ly/2y3o3Ya

THE DEMOCRATIC GRASSROOTS -- "This is the party boss driving Democrats to the left," by McClatchy's Alex Roarty: "'In some ways, we're the biggest obstacle in our own pathway to success,' [Ilyse] Hogue told her coffee-house crowd, summing up an argument she's made in countless op-eds and interviews. 'By buying into abortion stigma, by not talking about it, by not grounding it in common values, by not having the conversation that needs to be had, we're letting them off the hook.' For the 48-year-old, this point of view comes naturally. She has spent a lifetime in liberal activism, taking on radical projects that might seem far-fetched to some but are at the heart of her mission to change how the nation functions." http://bit.ly/2yBdGrD

WEEKEND WEDDINGS -- Joseph Henchman, EVP at the Tax Foundation, on Saturday married **Ethan Bishop,** an operations associate at the R Street Institute, in a ceremony at the Washington National Cathedral. ***Pic*** http://bit.ly/2wO1zdl

SPOTTED: Scott Hodge, Scott Drenkard, Michael Vogler, Kyle Pomerleau, Nicole

Kaeding, Eli Lehrer, Arthur Rizer, Zach Graves, Devin Hartman, Kevin Kosar, Garrett Watson, Trevor Burrus and Heather Kartsch, Dan Rothschild, Nigel Ashford, Max Behlke, Art Rosen, Stephen Kranz, Tori Bell, Stacey Chamberlin, Mike Godwin, Dave Weigel, Kevin Lees, Heidi Heilig, Hunter Koski and Andrew Moylan.

-- Kay Hagan alumni **Travis Cooke** and **Dorothy Allen** were married Saturday night at an outdoor ceremony in Charleston, S.C. The couple was introduced in the summer of 2012 in DC. Cooke is a senior policy fellow at the Theodore Roosevelt Conservation Partnership, and Allen is a support services advocate at DC SAFE. ***Pic*** http://bit.ly/2xEParH

****** **A message from Morgan Stanley** : Interest in sustainable investing has held steady, and on some fronts grown, according to a new survey published by the Morgan Stanley Institute for Sustainable Investing. The second edition of the survey, Sustainable Signals, examines the attitudes, perceptions and behaviors of individual investors towards sustainable investing and considers the broader implications for investors, corporations and governments. Individual investors, led by Millennials, increasingly see this as a normal and desirable element of any portfolio. 75% of investors-and 86% of Millennials-are interested in sustainable investing, a rise from the previous survey. Investors report an uptick in sustainability-minded investment decisions since 2015 (38%, up from 32%). "As widespread attention to sustainability continues to increase, consumers and investors alike are now more than ever factoring sustainability issues into their investment decisions," said Audrey Choi, Chief Sustainability Officer and Chief Marketing Officer at Morgan Stanley. Read more of the results. ******

Subject: Playbook Power Briefing, presented by the Coalition for Affordable Prescription Drugs (CAPD): TRUMP goes after MCCONNELL again -- Big shakeup at Wells Fargo -- 2016 WARMEST YEAR on record -- SAM CLOVIS, POTUS' pick for top Ag post, stoked birtherism

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Happy Thursday afternoon. THE PRESIDENT, at 12:40 p.m.: "Mitch, get back to work and put Repeal & Replace, Tax Reform & Cuts and a great Infrastructure Bill on my desk for signing. You can do it!"

-- KNOW THIS. There is some consternation that these comments came as Trump is sitting at his golf course in New Jersey. McConnell has been attending events in Kentucky.

FROM A SENATE REPUBLICAN AIDE: "This makes about as much sense as sidelining Tom Brady because you didn't like his answer at a news conference. The reality is both men need each other to succeed. These tweets are unnecessary."

UNPACKING TRUMP VS. MCCONNELL. It's kind of difficult to truly fathom why **PRESIDENT DONALD TRUMP** thinks it wise to lambast Mitch McConnell, the Senate majority leader who has the loyalty of the overwhelming majority of Republican senators. McConnell holds the keys to Trump's entire agenda. Think of McConnell like the D.C. version of Michigan and Wisconsin -- Trump can't win without him. The base Trump needs to please is the 292 Republicans in Congress.

WE'VE spent the morning culling the knowledge of Trump world, Senate and House Republicans and POLITICO's top Hill mind -- the BUREAU CHIEF -- John Bresnahan. Here's what you need to know:

-- YES, THIS TIFF IS COUNTERPRODUCTIVE. Almost everyone we've spoken to acknowledges the back and forth between Trump and McConnell is not helpful. We're going into a September where Congress needs to raise the debt ceiling, fund government and pass a budget. And the White House is promising tax reform on top of that by the end of October (again, this probably won't happen). To have two of the most powerful men in Washington going back and forth is not a useful development if you are long on Washington. With McCain sidelined, McConnell has a 51-seat majority, and that

includes Sen. Susan Collins (R-Maine), who is independent minded, and Sen. Lisa Murkowski (R-Alaska), who Trump thoroughly angered. That's a string-thin margin, and that's a reality the Senate wants the White House to come to grips with.

-- SOME OF THESE CRITICISMS ARE FAIR. McConnell has made clear that he doesn't much care for the president's style. He thinks the phony deadlines set the White House up for failure, and he would prefer the president stay on message. And Trump is not happy that the health care bill failed under McConnell's watch -- neither is McConnell, to be honest.

-- THE TRANSLATION. McConnell is trying to tell Trump to get in the game. You want the debt ceiling lifted? Well, Mr. President, you're going to have to get your shoulder into it. You can't just say, "I want something to sign" and go on your way. You want tax reform? Don't use your health care strategy which was hands off, to put it generously. McConnell wants Trump to be the president. McConnell got Gorsuch through. Now he wants Trump to hold up his end of the bargain.

DOES JOHN KELLY -- a Marine -- think it's a good idea for Trump to be dumping all over the Senate majority leader?

SARAH HUCKABEE SANDERS during a gaggle at Bedminster on the McConnell/Trump feud, per pooler Gregory Korte of USA Today: "You can see the president's tweets. Obviously there's some frustration. I don't have anything more to add."

THE PRESIDENT will appear in front of a pool spray at 4 p.m. today. WILL HE TALK ABOUT MCCONNELL?

BREAKING: "2016 broke global temperature records -- again," by Emily Holden: "2016 was the warmest year on the Earth's surface in nearly 150 years of measuring, scientists said today in an international report that also found the highest sea levels since 1993 and the highest carbon dioxide concentrations in about 800,000 years. It was the third year in a row to set a new global temperature record." http://politi.co/2usP2Lp

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

IMPORTANT MID-DAY READ -- "Deep Divisions Emerge in Trump Administration as North Korea Threatens War," by NYT's Peter Baker in Bridgewater, New Jersey, and Gardiner Harris in Kuala Lumpur, Malaysia: "The spiral of fighting words left the Trump administration debating how to handle a standoff that has defied three presidents and only grown more ominous in recent weeks as North Korea successfully tested

intercontinental ballistic missiles for the first time. Neither Mr. Tillerson nor Mr. Mattis had reviewed in advance Mr. Trump's threat on Tuesday, when he said North Korea 'will be met with fire and fury like the world has never seen.' And the dissonance in their own follow-up statements reflected the struggle inside the Trump administration. ...

"Alexander Vershbow, a former ambassador to South Korea, said the Trump administration 'policy seems incoherent' and the threat of military action 'will likely harden the North Koreans' stance' and make it more difficult to get China to follow through on its support for the United Nations sanctions.

"'If denuclearization is still the goal, the only way to get there is through increased Chinese pressure,' Mr. Vershbow said. 'Since there is no viable military option, the only other course of action is to develop a long-term deterrence and containment strategy -- but that means accepting the unacceptable,' North Korea as a nuclear power." http://nyti.ms/2vmNBNw

MIKE DUFFY on **TIME'S NEW COVER -- "Why General John Kelly is Trump's Last Hope":** "So began a new era at Donald Trump's White House, one that might be his best, or last, chance for success. Almost overnight, Kelly shut the always-open door to the Oval Office, sent hangers-on back to their desks, fired the combustible communications director Anthony Scaramucci and told all the leaders of all the many White House factions to report to him, not to the President. No one knows whether Kelly will succeed, how long he might last or if the general's starched-shirt discipline will be rejected by the client. Early results were mixed, and skeptics are not hard to find. But Kelly clearly arrived with a mission: to fix a broken system that the nation and the world depends on every day to keep the ship called Earth in the middle of the channel." http://ti.me/2upGsgK ... ***See the cover:*** http://bit.ly/2uqimSl

--@maggieNYT: "This type of cover has always gone so well for folks with Trump in the past".

TRACKING MUELLER -- "With Bank Subpoenas, Mueller Turns Up the Heat on Manafort," by Bloomberg's Christian Berthelsen and Greg Farrell: "U.S. special counsel Robert Mueller is bearing down on former Trump campaign chairman Paul Manafort as he directs a wide-ranging probe into Russian interference in last year's presidential election. Mueller's team of investigators has sent subpoenas in recent weeks from a Washington grand jury to global banks for account information and records of transactions involving Manafort and some of his companies, as well as those of a long-time business partner, Rick Gates, according to people familiar with the matter. The special counsel has also reached out to other business associates, including Manafort's son-in-law and a Ukrainian oligarch ... Those efforts were characterized as an apparent attempt to gain information that could be used to squeeze Manafort, or force him to be more helpful to prosecutors." https://bloom.bg/2vSNeLg

BUSINESS BLITZ -- "Embattled Wells Fargo Plans Board Shake-Up," by WSJ's Emily Glazer: "The board of Wells Fargo, grappling with fresh problems even as it tries

to move past the bank's sales-practices scandal, is planning a shake-up that is likely to include Steven Sanger stepping down as nonexecutive chairman, according to people familiar with the matter. Directors are aiming to make final decisions on any changes by Labor Day, some of the people said. Mr. Sanger is expected to step down before the bank's shareholder meeting next spring, one of these people said. Vice Chair Elizabeth Duke, a former Federal Reserve governor, is then likely to take the top spot, some of these people said." http://on.wsj.com/2usD3gU

-- KELLY AYOTTE has joined the board of Caterpillar. http://bit.ly/2wxPiX8 ... **COMPENSATION IN 2016** for board members was roughly $275,000. **AYOTTE** is also on the board of News Corp.

FORMER VIRGINIA GOP REP. RANDY FORBES is joining Greenberg Traurig's office in D.C.

HE'S NOT GONNA LIKE THIS -- "Sebastian Gorka, the West Wing's Phony Foreign-Policy Guru," by Bob Dreyfuss in Rolling Stone: "Gorka views himself as a 'utility infielder, especially in the field of counterterrorism,' and claims to provide behind-the-scenes advice to Trump on how to fight terrorism, while serving under the wing of Steve Bannon, his former boss at Breitbart. 'It's surreal and quite horrifying that someone who's such an amateur has reached such heights,' says David Ucko, associate professor in the Department of War and Conflict Studies at National Defense University. Adds Michael S. Smith II, a veteran terrorism analyst who's had unpleasant run-ins with Gorka, 'This is not somebody who should be working anywhere near the White House.' Even more bluntly, a colleague of Smith's, Cindy Storer, an ex-CIA terrorism analyst, said, 'He's nuts.'" http://rol.st/2uJyWbA

CUE: JUBILATION ON FIRST ST SE -- "The Democratic Party's Looming Fundraising Crisis," by Michael Whitney in POLITICO Magazine: "As one of the people who led Senator Bernie Sanders' fundraising operation during the 2016 primaries, I watched Donald Trump's campaign take many of our ideas and duplicate them, employing language and tactics nearly identical to those we used on the Sanders campaign. What we found to be most powerful wasn't just hiring the right people or using the right technology. What mattered more was figuring out an empowering message of hope and reaching people with it. In the Trump era, the Democratic Party has sputtered along with fundraising appeals focused on scare tactics-understandable, but counterproductive. Meanwhile, Trump-a billionaire who is already president-is still winning grass-roots donors by offering his supporters an empowering message." http://politi.co/2uJIFPa

TRUMP'S CHIEF AG SCIENTIST PICK -- "Trump pick Sam Clovis stoked birther conspiracy, called Eric Holder a 'racist black'," by CNN KFILE's Andrew Kaczynski, Chris Massie, and Paul LeBlanc: "Sam Clovis, Donald Trump's pick to be chief scientist for the Department of Agriculture, pushed unfounded theories about then-President Barack Obama's upbringing and called then-Attorney General Eric Holder a 'racist black,' a CNN KFile review of Clovis's writings and radio broadcasts during 2012 and

2013 has found. Clovis was a conservative radio host and political activist in Iowa before gaining national attention as one of the more vocal supporters of Trump during the presidential campaign. His nomination to head science at the USDA requires Senate confirmation. ...

"The material shows how Clovis regularly engaged with fringe theories that were prevalent in the right-wing radio and blogosphere during Obama's presidency. Clovis did not return a request for comment. A spokesperson for the USDA and the White House also did not respond to emails requesting comment. In a 2012 blog post archived on the website for the Sioux City-based radio station KSCJ, Clovis raised questions about Obama's biography that echoed some of the theories pushed by those in the birther movement who claim that Obama isn't an American citizen." http://cnn.it/2uJIZxC ... ***KFILE's research*** http://cnn.it/2uJqFEM

NEEDLING TRUMP -- TIM BURGER in Town and Country, "Is John McCain's Pick to Lead the International Republican Institute a Strike Against Donald Trump?": "Republicans say the maverick from Arizona, who cast that vote after being diagnosed last month with a brain tumor, has figuratively showed Trump another finger by announcing Daniel Twining, a vocal never-Trumper, as the new president of the International Republican Institute. The IRI is the GOP's democracy-building organization, the twin of the National Democratic Institute, which is chaired by heavy hitter Democrat Madeleine Albright. As the longtime chairman of the IRI, McCain chairs its board and plays a key role in choosing its leadership-and that choice can send a signal. A onetime foreign policy advisor to McCain, Twining is currently counselor and director of the Asia Program at the German Marshall Fund of the United States ... Turns out Albright has something else in common with Twining: She and McCain's new IRI president both endorsed Hillary Clinton for president last year." http://bit.ly/2vqd2vY

VINEYARD UPDATE - "Do Businesses Need Foreign Workers? Martha's Vineyard Is Finding Out -- Shortage of H-2B visas hits summer-season hiring, triggering a search for American employees and novel workarounds," by WSJ's Laura Meckler in Vineyard Haven: "Jamaicans and other foreign workers have long powered the summer economy in the upscale tourist haven of Martha's Vineyard, cleaning hotel rooms, waiting tables and mixing fudge. This year, many local businesses had to come up with a Plan B. Facing a shortage of foreign laborers, local restaurants have reduced hours of operation and pared back menus.

"Managers are cleaning hotel rooms, laundry is piling up and at least one restaurant is using disposable cups to ease the dishwashers' load. The problem is a scarcity of the H-2B visas used to bring foreign seasonal workers to the U.S. It has affected many resorts and other businesses that depend on such workers, including Alaskan fisheries. Isolated locations such as Martha's Vineyard-it has a tiny year-round population and is accessible only by ferry or plane-are especially vulnerable." http://on.wsj.com/2utdyIn

MEDIAWATCH -- SEWELL CHAN has been named the first international news editor at the New York Times. He previously oversaw breaking news in London for the Times.

Full release http://bit.ly/2uJJWGc

-- AL FRANKEN'S newest book, Giant of the Senate, has jumped back up to number one on the New York Times' nonfiction best sellers' list http://politi.co/2usCWC8

SPOTTED: Steve Schmidt, Sheila Johnson and Catherine Reynolds and Matt Brooks dining at separate tables at Mirabelle on Wednesday night.

TRANSITIONS -- Mike Senich has joined Majority Strategies as director of sales operations. He previously worked at Facebook and is a Boehner alum. ... **Susan Phalen** is the new director of external affairs at FEMA. She was previously on the Hill as a comms director for several committees.

WELCOME TO THE WORLD -- Colin Jones, director of social at the Daily Beast and an MSNBC, Vice and N.Y. Daily News alum, and **Lindsey Jones,** a butcher at Fleishers Craft Butchery in Brooklyn, post on Twitter: "Meet Jasper Patrick Jones. This little dude was born [Wednesday] at 3:05 p.m. Mom and kiddo are doing great. I love him so damn much." ***Three pics on one page*** http://bit.ly/2vST4wW

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Leading the News

Water Pollution
D.C.'s Wipes Law: Flush it or Flaunt It?
A battle in the District of Columbia over what kinds of disposable wipes can be flushed down the toilet has pitted the city government and municipal wastewater utilities against manufacturers, such as Kimberly-Clark Corp. and Procter & Gamble.

Special Report

Oil & Gas
Liquefied Natural Gas Export Plans Face Years of Oversupply
Plans for exports of U.S. liquefied natural gas have multiplied as a global supply glut has developed, raising the prospect that some exporters may lose money for several years.

News

Air Pollution
Bill Delaying EPA's Ozone Standards Heads to Senate
A bill to postpone deadlines under the EPA's updated ozone air pollution standards sailed through the House and heads to the Senate where its outlook is murkier.

Air Pollution

EPA Must Revisit Toxic Air Pollution Standards, Court Says

Environmentalists will press for new toxic air pollution limits on petroleum refineries, chemical plants, and pesticide manufacturers after a federal court ordered the EPA to provide further evidence that it has adequately regulated those emissions.

Air Pollution

EU Finalizes International Ozone, Air Pollution Agreements

The European Union has formally accepted amendments to United Nations agreements to fight air pollution and the emissions of global warming gases.

Air Pollution

Switching Airplanes to Unleaded Difficult with EPA Vacancies

Federal efforts to phase out leaded fuel in the aviation industry are stalling as a result of a leadership vacuum at the EPA, an agency official said.

Biodiversity

Listing Triggers Northwest Territories Protection Plan for Bison

Canada's Northwest Territories is ratcheting up a recovery strategy for wood bison after the species was moved to the territory's List of Species at Risk as a threatened animal.

Biofuels

Two Biofuel Company Owners Sentenced for Fraud

The co-owners of Indiana biolfuel company Triton Energy LLC each were sentenced to more than two years in prison in connection with a scheme that generated more than $60 million in fraudulent tax credits.

Biotechnology

Norway Tweaks Review Process for Genetically Modified Seeds

Norway streamlined its approval processes for using and importing living genetically modified organisms, such as seeds, bringing the country in line with a European Union directive.

Chemicals

Harm From Low Doses of Chemicals Could Be Overlooked: Academies

Potential health problems associated with low doses of hormonally-active chemicals could be missed unless the EPA specifically looks for them, according to a National Academies report released July 18.

Disclosure

Some Sustainability Reports Better Than Others, Study Shows

Companies that follow the world's most commonly used sustainability reporting framework provide higher quality disclosures than those that don't, according to a study released July 18.

EPA

EPA Chemical Office Pick Has Risk Experience, Industry Ties

President Donald Trump's choice to head the EPA's chemical safety and pesticides office is winning praise from the American Chemistry Council and other industry groups, but some ex-agency officials say Michael Dourson's ties to industry need to be scrutinized.

Emissions Trading

Extension of California Climate Program May Spur Funding Fight

California lawmakers have extended the state's greenhouse gas emissions carbon trading program. Now they have to pay for it.

Energy

Energy Grid Security Risks Need Assessment, Democrats Say

The vulnerability of U.S. pipelines and other energy infrastructure to cyberattack needs to be assessed, top energy policy Democrats told the Government Accountability Office.

Energy

Fewer Nuclear Licenses to Force Layoffs at Nuclear Regulator

Up to 20 administrative support workers at the Nuclear Regulatory Commission may lose their jobs as the agency seeks to cut its workforce to help make up for a funding shortfall resulting from fewer licensing applications, an NRC spokesman told Bloomberg BNA July 18.

Energy

Grid Security Funding, Hydroelectric Bills Pass House

Federal funding authorization to help states shore up energy security plans passed the House without opposition July 18.

Energy

Senate Appropriators Vote to Fund Energy Innovation Agency

The Energy Department's innovation office, whose budget House appropriators have proposed to eliminate, would get $330 million in the Senate Appropriations energy and water panel's spending bill.

European Union

EU Courts Remain Closed on Groups' Environment Challenges

European Union courts will remain closed to individuals and campaign groups that want to challenge EU bodies' environmental decisions.

Forests

Brazil President Pushes Amazon Deforestation Bill

By Simone Iglesias: Brazil's President Michel Temer is submitting a bill to Congress that would reduce protections of a large national forest in the Amazon, just weeks after vetoing similar legislation.

Motor Vehicles

German Diesel Makers Get Reprieve as Home States Reject Bans

By Elisabeth Behrmann and Birgit Jennen: Diesel engines received a reprieve in Germany after the home states of BMW AG, Daimler AG and Audi signaled they'd allow upgrades of older motors instead of supporting driving bans that some cities are pushing to cut air pollution.

Pesticides

Court Hands EPA Win in Fight Over Dow Pesticide

The EPA's decision not to ban a widely used insecticide gained the backing of a federal appeals court, which said the agency followed court orders when it denied a request from environmental groups to restrict chlorpyrifos.

Proxy Voting

Vanguard's Votes on Climate Change Up for Their Own Vote

Mutual fund giant Vanguard Group, at a rare shareholder meeting later this year, will

consider an even rarer request from fund participants to review and report on how it casts proxy votes on climate change.

Renewable Energy

Clean Energy Is Trouncing Oil, Gas and Coal in Trump Era

By Joe Ryan, Christopher Martin and Brian Eckhouse: President Donald Trump took office vowing to revive the coal industry's fortunes. So far, the smart money has been on clean energy.

Renewable Energy

German Green Power Output Up 10 Percent After Wind, Solar Boom

By Brian Parkin: Power generated in Germany by green sources jumped 10 percent in the first half of the year compared with a year ago, according to the latest report of the Federal Environment Office.

Sales and Use Taxes

California Cap-and-Trade Bills Expand Sales Tax Exemption

A package of bills to extend California's carbon cap-and-trade program includes last-minute changes to expand an underutilized sales and use tax exemption for manufacturing equipment purchases.

Toxic Substances

Ametek Can't Shake Elementary School Contamination Suit

A teacher and students at a Southern California elementary school presented enough exposure and causation evidence to proceed with claims stemming from a toxic plume that migrated from an adjacent industrial site, the Southern District of California ruled (Trujillo v. Ametek, Inc., 2017 BL 246482, S.D. Cal., No. 15-cv-1394, 7/17/17).

Driving the Day

KEEP YOUR HOLIDAY PLANS ... MAYBE!: MCCONNELL PREDICTS NO SHUTDOWN: GEORGE STEPHANOPOULOS speaks to **SENATE MAJORITY LEADER MITCH MCCONNELL** on **ABC'S "THIS WEEK": STEPHANOPOULOS:** "Republicans have a majority in the House and the Senate. Can ... you keep the government open on your own?" **MCCONNELL:** "Look there's not going to be a government shutdown. It's just not going to happen."

THE BIG PICTURE: REMOVE THE BLUE BAG -- PETER BAKER on **A1** of the **SUNDAY TIMES -- "Wrenched From Scandal to Success, Trump Looks Ahead, and Over His Shoulder":** "The highs and lows of a presidency rarely come in such quick succession. But within hours, President Trump watched as one of his closest former aides pleaded guilty and promised to help prosecutors seek out more targets, then stayed up late to cheer on the Senate as it broke through months of gridlock to pass the largest tax cuts in years.

"Scandal and success in short order left the White House whipsawed and searching for a path forward that would generate more of the latter while knowing that the former is not going away anytime soon. Michael T. Flynn, the former national security adviser who pleaded guilty to a felony on Friday, was the fourth person near Mr. Trump to be charged and few in Washington expect him to be the last.

"No president in modern times has faced such a major investigation so early in his term even as he was still seeking to establish his political footing, much less one with as little popular support in polls as Mr. Trump has. The challenge for Mr. Trump in the weeks to come will be how to press forward on his agenda without letting the ominous drumbeat of indictments and court hearings consume his presidency."

http://nyti.ms/2nq5Pvy

Good Sunday morning. WHAT'S ON THE PRESIDENT'S MIND -- @realDonaldTrump at 8:36 a.m.: "Report: 'ANTI-TRUMP FBI AGENT LED CLINTON EMAIL PROBE' Now it all starts to make sense!" ... **at 8:15 a.m.:** "People who lost money when the Stock Market went down 350 points based on the False and Dishonest reporting of Brian Ross of @ABC News (he has been suspended), should consider hiring a lawyer and suing ABC for the damages this bad reporting has caused - many millions of dollars!"

... at 8 a.m.: "After years of Comey, with the phony and dishonest Clinton investigation (and more), running the FBI, its reputation is in Tatters - worst in History! But fear not, we will bring it back to greatness." ... **at 7:42 a.m.:** "Tainted (no, very dishonest?) FBI 'agent's role in Clinton probe under review.' Led Clinton Email probe. @foxandfriends Clinton money going to wife of another FBI agent in charge."

THE TRUMP TWEET EVERYONE IS TALKING ABOUT: @realDonaldTrump at 6:15 a.m.: "I never asked Comey to stop investigating Flynn. Just more Fake News covering another Comey lie!"

-- AP'S CALVIN WOODWARD and **KEN THOMAS:** "Trump shifted his story Saturday on why he fired Flynn, lumping in the retired Army lieutenant general's lies to the FBI along with his untruthfulness with Vice President Mike Pence. The president's initial explanation was that Flynn had to go because he hadn't been straight with Pence about contacts with Russian officials. Lying to the FBI is a crime, and one that Flynn acknowledged Friday in pleading guilty and agreeing to cooperate with the special counsel's Russia investigation.

"Trump tweeted Saturday: ' I had to fire General Flynn because he lied to the Vice President and the FBI. He has pled guilty to those lies. It is a shame because his actions during the transition were lawful. There was nothing to hide!' Amid questions raised by the tweet, Trump associates tried to put distance Saturday evening between the president himself and the tweet. One person familiar with the situation said the tweet was actually crafted by John Dowd, one of the president's personal attorneys. Dowd declined to comment when reached by The Associated Press on Saturday night." http://bit.ly/2zJrtN2

-- JAKE TAPPER talks with **SEN. MARK WARNER (D-VA.)** on **CNN'S "STATE OF THE UNION": TAPPER:** "President Trump says he never asked Comey to stop investigating Flynn. As you know better than I, Comey testified under oath before your committee in June that President Trump did ask him to drop the investigation. Whom do you believe?" **WARNER:** "I believe FBI Director Comey. I think he was very credible in his testimony and his private meetings with us. And it's not just Comey. You had -- clearly, you had an attorney general who has had to recuse himself because of untold contacts with Russians. You had the president of the United States trying to intervene, as has been reported, with other national intelligence leaders, who he appointed,

saying, could you back off?"

-- TAPPER with **SEN. TIM SCOTT (R-S.C.): TAPPER:** "Your fellow senator from South Carolina, Lindsey Graham, told CNN that he would urge President Trump to pledge to not pardon Michael Flynn. Do you agree with that?" **SCOTT:** "I do. At the end of the day, here's what we know. We have to have a way to restore confidence of the American people in their elected officials and the leaders of this country. One way that you do that is by holding those folks who are, A, lying to the FBI, you hold those folks accountable, and, B, you have a process that is clear and transparent. When the Intel ... Committee is finished, we will have the facts."

NYT'S MIKE SCHMIDT, SHARON LAFRANIERE and **SCOTT SHANE: "Emails Dispute White House Claims That Flynn Acted Independently on Russia":** "When President Trump fired his national security adviser, Michael T. Flynn, in February, White House officials portrayed him as a renegade who had acted independently in his discussions with a Russian official during the presidential transition and then lied to his colleagues about the interactions. But emails among top transition officials, provided or described to The New York Times, suggest that Mr. Flynn was far from a rogue actor.

"In fact, the emails, coupled with interviews and court documents filed on Friday, showed that Mr. Flynn was in close touch with other senior members of the Trump transition team both before and after he spoke with the Russian ambassador, Sergey I. Kislyak, about American sanctions against Russia. While Mr. Trump has disparaged as a Democratic 'hoax' any claims that he or his aides had unusual interactions with Russian officials, the records suggest that the Trump transition team was intensely focused on improving relations with Moscow and was willing to intervene to pursue that goal despite a request from the Obama administration that it not sow confusion about official American policy before Mr. Trump took office.

"**On Dec. 29, a transition adviser to Mr. Trump,** K. T. McFarland, wrote in an email to a colleague that sanctions announced hours before by the Obama administration in retaliation for Russian election meddling were aimed at discrediting Mr. Trump's victory. The sanctions could also make it much harder for Mr. Trump to ease tensions with Russia, 'which has just thrown the U.S.A. election to him,' she wrote in the emails obtained by The Times. It is not clear whether Ms. McFarland was saying she believed that the election had in fact been thrown. A White House lawyer said on Friday that she meant only that the Democrats were portraying it that way." http://nyti.ms/2zldyad

MORE RUSSIA TIES -- "Operative Offered Trump Campaign 'Kremlin Connection' Using N.R.A. Ties," by NYT's Nick Fandos: "A conservative operative trumpeting his close ties to the National Rifle Association and Russia told a Trump campaign adviser last year that he could arrange a back-channel meeting between Donald J. Trump and Vladimir V. Putin, the Russian president, according to an email sent to the Trump campaign.

"A May 2016 email to the campaign adviser, Rick Dearborn, bore the subject line

'Kremlin Connection.' In it, the N.R.A. member said he wanted the advice of Mr. Dearborn and Senator Jeff Sessions of Alabama, then a foreign policy adviser to Mr. Trump and Mr. Dearborn's longtime boss, about how to proceed in connecting the two leaders. Russia, he wrote, was 'quietly but actively seeking a dialogue with the U.S.' and would attempt to use the N.R.A.'s annual convention in Louisville, Ky., to make "first contact." ...

"'Putin is deadly serious about building a good relationship with Mr. Trump,' the N.R.A. member and conservative activist, Paul Erickson, wrote. 'He wants to extend an invitation to Mr. Trump to visit him in the Kremlin before the election. Let's talk through what has transpired and Senator Sessions's advice on how to proceed.'" http://nyti.ms/2jaUxHa

WHAT AMERICA IS WAKING UP TO -- BIRMINGHAM NEWS -- "Will black voters turn out Dec. 12?" http://bit.ly/2il8Ntl ... **DES MOINES REGISTER:** "Despite warnings, few Iowa farmers face tax" http://bit.ly/2BCYFr3

****** **A message from PhRMA: How much are hospitals marking up medicine prices?** According to new Moran Company analysis, hospitals mark up medicine prices nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. Read more: http://onphr.ma/2hSaqox ******

KELLY FILES -- "Trump Finds Loopholes in Chief of Staff's New Regime," by WSJ's Mike Bender: "Chief of Staff John Kelly over the past five months has imposed discipline and rigorous protocols on a freewheeling White House. But President Donald Trump has found the loopholes. The president on occasion has called White House aides to the private residence in the evening, where he makes assignments and asks them not tell Mr. Kelly about the plans, according to several people familiar with the matter. At least once, aides have declined to carry out the requested task so as not to run afoul of Mr. Kelly, one of these people said.

"The president, who values counsel from an informal group of confidants outside the White House, also sometimes bypasses the normal scheduling for phone calls that give other White House staff, including Mr. Kelly, some control and influence over who the president talks to and when. Instead, some of his friends have taken to calling Melania Trump and asking her to pass messages to her husband, according to two people familiar with the matter. They say that since she arrived in the White House from New York in the summer, the first lady has taken on a more central role as a political adviser to the president. 'If I don't want to wait 24 hours for a call from the president, getting to Melania is much easier,' one person said." http://on.wsj.com/2Aocdsk

JOKES! -- HOUSE REPUBLICAN CONFERENCE CHAIRMAN CATHY MCMORRIS RODGERS spoke at the Gridiron Dinner last night. What she said: "I know, it's been a long evening already, but don't try to leave early. Matt Lauer helped us with all the locks. ... My dear friend Vice President Pence had a lot of fun at the spring dinner. I asked him

once 'Mike, if you could pick any color to be -- what would you choose?' And he said: 'Definitely never nude!' ... Seriously, I am so proud of our work this Congress. Without the brave and steady hand of Paul Ryan and Mitch McConnell, those 3 pieces of legislation would never have become law."

-- SEN. TAMMY DUCKWORTH (D-ILL.) also at the Gridiron: "Look at us all here. My goodness. We're all dressed like we're getting a huge tax cut. ... I actually just heard there's another event like this at the White House tonight, but it's not black tie. It's orange jumpsuit. ... Is Donald Trump's next book going to be 'The Art of the Plea Deal?' ... It used to be getting invited to speak at the Gridiron was the ultimate sign that you have made it in D.C. No offense, but now that ultimate sign is being mentioned in a Donald Trump tweet. As journalists, you have not arrived until you win Donald Trump's 'fake news' trophy.

"Senators, for us, we have to wait until Donald Trump gives us an insulting nickname -- Crooked Hillary, Little Marco, Lyin Ted. Seriously, Pocahontas? But what about me? What's a girl gotta do to get some of Donald Trump's attention? On second thought -- don't answer that. I'm Asian. I was born in a foreign country. I'm disabled. I'm a woman. And we know he doesn't like people who were shot down. So I deserve an insensitive nickname, too. I may have some suggestions for our president.

"How about Not So Fly Girl? Peking Duckworth. Lame Duckworth. Tammy Duckworthless. Or maybe because of my bionic powers, Tammy Duckworth the $6 million woman -- which might not sound like an insult, but remember, $6 million ain't gonna get you in the Trump Cabinet. It's barely enough to get you one of Paul Manafort's suits. You can't even take Mrs. Mnuchin on a date night with that."

PAGE TURNER -- COREY AND BOSSIE'S NEW BOOK -- "Trump's campaign: Big Macs, screaming fits and constant rivalries," by WaPo's Michael Kranish: "Elton John blares so loudly on Donald Trump's campaign plane that staffers can't hear themselves think. Press secretary Hope Hicks uses a steamer to press Trump's pants -- while he is still wearing them. Trump screams at his top aides, who are subjected to expletive-filled tirades in which they get their 'face ripped off.' And Trump's appetite seems to know no bounds when it comes to McDonald's, with a dinner order consisting of 'two Big Macs, two Fillet-O-Fish, and a chocolate malted.'

"The scenes are among the most surreal passages in a forthcoming book chronicling Trump's path to the presidency co-written by Corey Lewandowski, who was fired as Trump's campaign manager, and David Bossie, another top aide. The book [is] 'Let Trump Be Trump' ... 'Sooner or later, everybody who works for Donald Trump will see a side of him that makes you wonder why you took a job with him in the first place,' the authors wrote. 'His wrath is never intended as any personal offense, but sometimes it can be hard not to take it that way. The mode that he switches into when things aren't going his way can feel like an all-out assault; it'd break most hardened men and women into little pieces.'" http://wapo.st/2BtHBmw ... ***$17.70 on Amazon*** http://amzn.to/2jFW1Zq

IF YOU READ ONE THING - "Inside the secretive nerve center of the Mueller investigation," by WaPo's Bob Costa, Carol Leonnig and Josh Dawsey: "In the past two months, Mueller and his deputies have received private debriefs from two dozen current and former Trump advisers, each of whom has made the trek to the special counsel's secure office suite. Once inside, most witnesses are seated in a windowless conference room where two- and three-person teams of FBI agents and prosecutors rotate in and out, pressing them for answers.

"Among the topics that have been of keen interest to investigators: how foreign government officials and their emissaries contacted Trump officials, as well as the actions and interplay of Flynn and Jared Kushner, the president's son-in-law. Often listening in is the special counsel himself, a sphinx-like presence who sits quietly along the wall for portions of key interviews. ... Meanwhile, some witnesses who have been interviewed came away with the impression that the probe is unfolding and far from over. ...

"The volume of questions about Kushner in their interviews surprised some witnesses. 'I remember specifically being asked about Jared a number of times,' said one witness. ... Some witnesses were introduced to so many federal agents and lawyers that they later lamented that they had largely forgotten many of their names by the time one team left the room and a new team entered. ... People familiar with the Mueller team said they convey a sense of calm that is unsettling. 'These guys are confident, impressive, pretty friendly - joking a little, even,' one lawyer said. When prosecutors strike that kind of tone, he said, defense lawyers tend to think: 'Uh oh, my guy is in a heap of trouble.'" http://wapo.st/2At793U

SEN. DIANNE FEINSTEIN (D-CALIF.) talking with **CHUCK TODD** on **NBC'S "MEET THE PRESS"** about the Mueller investigation: "And, I think, what we're beginning to see is the putting together of a case of obstruction of justice. I think we see this in the indictments, the four indictments and pleas that have just taken place, and some of the comments that are being made. I see it in the hyper-frenetic attitude of the White House: the comments every day, the continual tweets. And I see it, most importantly, in what happened with the firing of Director Comey and it is my belief that that is directly because he did not agree to lift the cloud of the Russia investigation. That's obstruction of justice."

ON THE WORLD STAGE -- "Trump Boycotts U.N. Migration Talks: The White House's 'America First' policy makers see little gain in setting the global rules for migration," by Foreign Policy's Colum Lynch: "President Donald Trump has decided to boycott a global conference on migration scheduled to begin Monday in Puerto Vallarta, Mexico, sending a blunt signal that the United States is no longer interested in forging a concerted response to the world's burgeoning migration crises. ...

"The U.S. president's decision to pull out of the negotiations highlighted the enduring influence of Stephen Miller, the 32-year-old senior White House policy

advisor who has championed the Trump administration's effort to sharply restrict immigration to the United States. In recent weeks, Miller led efforts to pull out of the migration talks. ...

"White House chief of staff John Kelly, who previously led the Department of Homeland Security's crackdown on illegal immigrants, and Attorney General Jeff Sessions strongly backed a pullout, according to diplomatic sources familiar with the deliberations. The State Department initially opposed the withdrawal, but its policy planning chief, Brian Hook, who represented Secretary of State Rex Tillerson at the principals' meeting, reversed course and recommended ditching the negotiations. The meeting ended in deadlock, with Nikki Haley, the U.S. ambassador to the United Nations, expressing the lone dissent. Haley had argued that the United States would have a better shot at influencing the outcome of the negotiations if it participated in the process." http://atfp.co/2nkQFrs

THE LATEST IN ALABAMA -- "Is Roy Moore winning? Don't ask the pollsters," by Steven Shepard: "Roy Moore appears to have inched back in front of Democrat Doug Jones in the latest Alabama Senate election polls, according to the oft-cited RealClearPolitics average - a change in fortune from mid-November, when sexual misconduct allegations against Moore first surfaced. The reality? No one really has a clue about where things stand with Alabama voters in the December 12 special election.

"For all the national attention and the millions of dollars spent to win the seat, there's relatively little public polling in the contest. Only three public surveys in the average have been conducted since the Thanksgiving holiday, and odds are you've never heard of two of the three pollsters. And that's precisely the problem. The most important and closely watched election in the nation is taking place in the equivalent of a polling black box." http://politi.co/2ArzO9q

-- "Jones rallies black voters to turn out against Moore: The Alabama Democrat visits Selma as he tries to charge up the African-American vote for the Senate race," by Daniel Strauss in Selma: "Doug Jones' hunt for votes took him over the Edmund Pettus Bridge and into Selma's annual Christmas parade Saturday, seeking to energize his most important bloc of supporters in Alabama's special Senate election: African-Americans. Jones' visit to a civil rights movement landmark epitomized his strategy in the final days of the Alabama race. Jones simply cannot win without African-American voters flooding to the polls on December 12, when he faces scandal-plagued Republican Roy Moore and hopes to become the first Democrat in years to win a statewide race in Alabama. ...

"[Y]ears of Democratic losses have weakened voter interest and atrophied the state party, which is also riven by conflict between the different factions that remain. That has forced Jones to build a coalition almost from scratch in the last few months, leading some to criticize Jones for starting black outreach too late." http://politi.co/2zK7jCM

THE BATTLEFIELD -- "Battle for the House: GOP targets Democrats in Trump

districts," by Elena Schneider: "When Democratic Rep. Matt Cartwright woke up on Election Day 2016, he represented a safe blue Pennsylvania district. But by the time he went to sleep that night, Donald Trump had painted Cartwright's turf red beneath his feet. Cartwright still won a third term, but Republicans hope to follow up on Trump's top-of-the-ticket success by targeting Cartwright and 11 other House Democrats in Trump districts in 2018.

"A well-funded Republican jumped in to oppose Cartwright for the first time, while Cheri Bustos - the only Midwesterner in House Democratic leadership - has also drawn a stronger challenger than last year. Other Trump-district Democrats in Iowa, Minnesota and Wisconsin are also top Republican targets, as are open seats in the Las Vegas suburbs and southern New Hampshire.

"Republicans are mostly on defense in the House of Representatives ahead of the 2018 midterm elections, with Democrats looking to erase the GOP's 24-seat advantage and take back the majority. But Republicans are also confident they can pad their margin by picking off some Democrats in heavily white, blue-collar districts next fall, despite the political winds blowing against them elsewhere in the U.S. - and Democrats are relying on those members to learn the lessons of Hillary Clinton's 2016 loss to avoid 2018 surprises." http://politi.co/2zY33DQ

FASCINATING MCCONNELL QUOTE -- "'This is class warfare': Tax vote sparks political brawl over populism that will carry into 2018 elections," by WaPo's Dave Weigel, Bob Costa and Paul Kane: "'They tend not to be popular,' Senate Majority Leader Mitch McConnell (R-Ky.), referring to bills passed with only one party's support, told The Washington Post in an interview Saturday. 'Generally speaking, in the beginning, people decide they don't like it.' The test for Republicans is whether they can convince voters that this legislation will put more money in their wallets - and the GOP leader is not sure whether they can do that in time for the 2018 elections. 'We don't know,' McConnell said. But he said he thinks that in the long run, the economic boost will come and voters will eventually reward Republicans. 'Whether it's immediately popular or not becomes irrelevant if it does what you hope,' he added." http://wapo.st/2zKsi8w

SUNDAY BEST -- CHRIS WALLACE talks to **H.R. MCMASTER** on **"FOX NEWS SUNDAY": WALLACE:** "Let me ask you about another personnel issue which bubbled up this week. White House officials are talking openly about a plan to replace Secretary of State Tillerson by January of the first anniversary of President Trump being sworn into office. The president and Secretary Tillerson pushed back on that hard. But, can you flatly deny that there is any plan in place to replace Secretary Tillerson over the next couple of months?" **MCMASTER:** "Yeah, I'm not aware of any plan at all. What I'm aware of is that the secretary of state is traveling today to advance and protect our interests, as is our secretary of defense."

-- JOHN DICKERSON talks with **OMB DIRECTOR MICK MULVANEY** on **CBS'S "FACE THE NATION": DICKERSON:** "[L]et me ask you about the shutdown which

might be coming. Government's [going to] run out of money. Democrats wouldn't meet with the president. What's the status of things?" **MULVANEY:** "You know, it's funny to see now that the Republicans are in charge I think there's a group of right-wingers in the House who say they want to shut the government down. There's a group of Democrats who want to shut the government down over DACA. And there's a group of lawmakers from some of the hurricane states who want to shut the government down until they get what they want. This just sheds light on the fact that the spending system is broken when any little group can sort of hold the government hostage. We need to get beyond that. I think that we will. I don't think you'll see a government shutdown."

DICKERSON: "People used to say that about you. You were in one of those little groups when you wanted to shut the government down for reasons. You've changed your stripes." **MULVANEY:** "Well, all the more reason the system should be fixed. We don't spend money properly in Washington, D.C. We jump these massive bills to massive bills. The government shut down I think, John, 17 times in 20 years between '80 and '94 or something like that."

TV TONIGHT -- On MSNBC's "Kasie DC": former Sen. Kelly Ayotte (R-N.H.), Rep. Eric Swalwell (D-Calif.), Rep. Cheri Bustos (D-Ill.), Jake Sherman, Shawna Thomas, Nick Confessore, Natasha Bertrand, Jeremy Bash, Ken Dilanian, Marin Cogan, Ben Schreckinger

PHOTO DU JOUR: President Donald Trump approaches the South Lawn of the White House aboard Marine One on Dec. 2. Trump was returning from a fundraising trip to New York. | Shawn Thew-Pool/Getty Images

SNL COLD OPEN - "White House Christmas Cold Open: President Donald Trump (Alec Baldwin) is visited by the spirits of Michael Flynn (Mikey Day), Billy Bush (Alex Moffatt), Vladimir Putin (Beck Bennett) and Hillary Clinton (Kate McKinnon)" - **FLYNN** (in chains): "Donald J. Trump. Donald J. Trump." ... **TRUMP:** "You've come to get me, I knew it. It's the Muslim stuff, right?" **FLYNN:** "No." **TRUMP:** "It's for calling Mexicans rapists?" **FLYNN:** "No." **TRUMP:** "The Roy Moore stuff?" **FLYNN:** "No." **TRUMP:** "Draft-dodging?" **FLYNN:** "No." **TRUMP:** "The birther stuff?" **FLYNN:** "No." **TRUMP:** "Pocahontas?" **FLYNN:** "No." **TRUMP:** "The Central Park Five? No wait. Making fun of

the handicapped reporter like this?" **FLYNN:** "No, sir. Sir. I'm not here for any of that."

TRUMP: "Who are you? Jacob Marley? You've got a lot of chains on." FLYNN: "No, I am Michael Flynn, the ghost of witness flipped. Mr. President, I came to warn you. It's time to come clean for the good of the country." **TRUMP:** "What the good of the?" **FLYNN:** "The good of the country." **TRUMP:** "The goobadacomcom?" ***6-min. video*** http://bit.ly/2AQvwLO

FOR YOUR RADAR -- "Pentagon evaluating U.S. West Coast missile defense sites - officials," by Reuters' Mike Stone in Simi Valley, California: "The U.S. agency tasked with protecting the country from missile attacks is scouting the West Coast for places to deploy new anti-missile defenses, two Congressmen said on Saturday, as North Korea's missile tests raise concerns about how the United States would defend itself from an attack. West Coast defenses would likely include Terminal High Altitude Area Defense (THAAD) anti-ballistic missiles, similar to those deployed in South Korea to protect against a potential North Korean attack." http://reut.rs/2AQRJti

MICHAEL GRUNWALD -- "Trump Wants to Dismantle Elizabeth Warren's Agency. Good Luck With That": "The Consumer Financial Protection Bureau is now the star of a bizarre legal and bureaucratic drama, a Rome-versus-Avignon power struggle unfolding a block from the White House. The resignation of the bureau's director, Richard Cordray, has created a soap-opera succession battle tailor-made for the frenzied Washington news cycle, with two dueling officials claiming his job and furious partisans arguing both sides." http://politi.co/2ArktFR

HEALTH CARE FALLOUT -- "GOP Medicaid work rules imperil care for opioid abusers," by Rachana Pradhan and Brianna Ehley: "Red states ravaged by the opioid crisis are pushing for Medicaid work requirements that could push people out of treatment as they try to get off drugs. Kentucky, New Hampshire, Maine and Indiana are among at least eight GOP-led states seeking federal approval to require Medicaid enrollees to work as a precondition of their health coverage. All four states have been hard hit by drug addiction, which claims 140 lives a day nationally.

"Governors say they would exempt people with chronic drug problems or severe mental illness from the Medicaid work requirements, but who would qualify and under what circumstances hasn't been spelled out. Critics fear that many addicts could lose benefits, particularly if they go in and out of treatment, or have relapsed - a not uncommon occurrence. Employers' resistance to hiring people who have failed drug tests or have criminal records could also put health benefits at risk." http://politi.co/2npdwCk

MEDIAWATCH -- "ABC News suspends Brian Ross for 4 weeks over erroneous Flynn story," by CNN's Oliver Darcy: "ABC News announced Saturday that it has suspended investigative reporter Brian Ross for four weeks without pay after Ross was forced to correct a bombshell on-air report about Michael Flynn. 'We deeply regret and apologize for the serious error we made [Friday]. The reporting conveyed by Brian Ross

during the special report had not been fully vetted through our editorial standards process,' ABC said in a statement. 'As a result of our continued reporting over the next several hours ultimately we determined the information was wrong and we corrected the mistake on air and online.' 'It is vital we get the story right and retain the trust we have built with our audience -- these are our core principles,' the statement added. 'We fell far short of that [Friday].'" http://cnnmon.ie/2ADn4iu

--@BrianRoss: "My job is to hold people accountable and that's why I agree with being held accountable myself."

****** **A message from PhRMA:** According to new analysis from the Moran Company, hospitals mark up medicine prices, on average, nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. While hospital markups lead to higher costs for patients, employers and payers, these markups are often overlooked in conversations about medicine costs. As the provider market continues to become more concentrated and the number of medicines being administered in hospital-owned facilities is growing, the amount hospitals mark up medicine prices needs greater scrutiny. http://onphr.ma/2Ba0TOa ******

BONUS GREAT WEEKEND READS, curated by Daniel Lippman:

-- "The Lost Genocide," by Doug Bock Clark in Longreads: "One [Rohingya] survivor described watching an attack on the town's elderly religious leader as he was being carried from the flaming village on his son's back. Soldiers knocked the son down, and then four of them grabbed the imam by his limb. They rocked back and forth to start the old man swinging and then hurled him into the inferno." http://bit.ly/2jE2Ri5

-- "The Recruiters: Searching For The Next Generation Of Warfighters In A Divided America," by Adam Linehan in Task and Purpose - per TheBrowser.com's description: "To join the US Army you need good physical and mental health, no tattoos on face or hands, a high-school diploma and a clean police record. Only 29% of Americans in the 17-24 age group meet those criteria. It's easiest to recruit in the south and west around military bases where the army is familiar, hardest in the north and east. Since the draft ended in 1973, recruiting has become 'one of the most important jobs in the military'. Here's how the Army goes about it." http://bit.ly/2AzKGo8

-- "A Mother's Ninth-Century Manual on How to Be a Man," by Edward White in the Paris Review: "Dhuoda's book outlines the subjects that should most concern a man of high birth, such as how to pray and read the Bible; how to distinguish vice from virtue; how best to honor his parents; how to serve God and the Crown; how to handle illness, affliction, and hardship. The Liber Manualis beguiles with its intimacy and exquisite intricacy, a glittering portal to a culture that can seem entirely alien from our own." http://bit.ly/2zHCdLT

-- "The Refugee Scandal on the Island of Lesbos," by Giorgos Christides and Katrin

Kuntz in Der Spiegel: "Those wishing to visit ground zero of European ignominy must simply drive up an olive tree-covered hill on the island of Lesbos until the high cement walls of Camp Moria come into view. The dreadful stench of urine and garbage greets visitors and the ground is covered with hundreds of plastic bags. Inside, you see containers meant for six people packed with 14, overflowing toilets and garbage bins that nobody empties with mothers changing their babies' diapers right next to them." http://bit.ly/2A7o51O

-- "The Conflict in Yemen: A Primer," by Clare Duncan in Lawfare: "The war is at a stalemate. There are functionally two governments: the Houthis in Sanaa, and Hadi in Aden. Yemenis are facing famine, primarily the consequence of a blockade by the Saudi-led coalition. For decades, Yemen has relied on imports for around 90 percent of its food needs, and the Saudi blockade-meant to prevent arms shipments to the Houthis-has cut off Yemenis' access to food, along with medicine, fuel, and other humanitarian aid." http://bit.ly/2AOvLH1

-- "Understand and Survive in a Chinese Office," by Qianwei Zhang on Medium: "Despite the fact that Chinese people are more and more open to outside influence, and economic opportunities have encouraged them to pursue individuality and freedom, deep down, they are still the sons and daughters of Confucius who were taught to respect collective interest and bow to the man above your rank." http://bit.ly/2iDzekz

-- "The Christian Legal Army Behind 'Masterpiece Cakeshop': A special investigation into the rise of Alliance Defending Freedom," by Sarah Posner in the Nation: "The organization, which once aspired to be merely a Christian antidote to the secular ACLU, has fast become a training ground for future legislators, judges, prosecutors, attorneys general, and other government lawyers-including, notably, in the Trump administration." http://bit.ly/2hXmwZO

-- "What Do We Do with the Art of Monstrous Men?" by Claire Dederer in the Paris Review: "The real question is this: can I love the art but hate the artist? Can you? When I say we, I mean I. I mean you." http://bit.ly/2zY33Aq

-- "'A tale of decay': the Houses of Parliament are falling down," by Charlotte Higgins in the Guardian: "As politicians dither over repairs, the risk of fire, flood or a deluge of sewage only increases. But fixing the Palace of Westminster might change British politics for good - which is the last thing many of its residents want." http://bit.ly/2j71vg5

-- "Terry McAuliffe's Dead-Serious Advice For Democrats: Have Fun!" by BuzzFeed's Ruby Cramer: "Terry McAuliffe spent 35 years chasing checks from donors, raising millions for Democrats, amassing success and scandal, befriending the Clintons, and earning legendary political status as the high-energy, fun-loving fundraiser known as 'the Macker.' Now he's a governor with a serious record, in a state where Democrats just won big. So what's changed about him? As it turns out, not much." http://bzfd.it/2AlUz8w

-- **"Trump Tower's Murky History and Murkier Future: Slumping Sales, Pentagon Leases, and Shadowy L.L.C.S,"** by Suzanna Andrews in Vanity Fair: "Once home to celebrities like Bruce Willis and Michael Jackson, apartments in Trump Tower are now frequently owned by shadowy L.L.C.s-and even a few criminals. With security up and sales slumping, what does the future hold for the Trump Organization's flagship property?" http://bit.ly/2zKEdTu

Subject: Interior No. 2 tells employees to follow the law, not 'parrot' special interests

By Esther Whieldon

08/02/2017 03:44 PM EDT

Interior Deputy Secretary David Bernhardt, a former lobbyist, believes a few bad apples within the department have "forgotten their oath" and "choose to parrot comments of special interests rather than carry out their governmental duties to move the country forward," he told employees in an introductory email sent after he was sworn in Tuesday.

"By doing so, they often avoid grounding their views in the actual facts or the law. Such conduct is arbitrary. It is lazy. We must always refrain from taking such a path," Bernhardt wrote in the email, a copy of which was obtained by POLITICO today.

Before being confirmed as Interior Secretary Ryan Zinke's second-in-command, Bernhardt spent years as a lobbyist for clients including Westlands Water District. Bernhardt pledged during his confirmation process to recuse himself from matters involving past clients for two years.

In the email, Bernhardt promised to respect employees at the Interior Department, where he served a previous stint under President George W. Bush. But he stressed that they were bound by laws set by Congress and obligated to exercise discretion in implementing those laws to accord with the administration's views.

The agency's authority has limits, he wrote, and instead of trying to "stretch the law like a fraying rubber band to fit a particular policy vision," the agency should ask Congress for help.

Bernhardt told the Senate Energy and Natural Resource Committee in May that the president's views, not the recommendations of climate scientists, would guide the department's policies where possible.

Subject: EPA could cut more than 1,200 employees with buyouts

By Alex Guillén

06/20/2017 02:47 PM EDT

EPA's early retirement and buyout programs could shrink the agency's 15,000-person workforce by as many as 1,228 people by September, according to an agency email.

Though the programs must still be approved by the Office of Personnel Management and the Office of Budget and Management, EPA attorney Robert Coomber wrote to union leaders that the program will be offered to a maximum of 1,228 workers across the agency, although it is not known whether those people will accept them.

In a separate agency-wide memo, Acting Deputy Administrator Mike Flynn wrote that "we expect a limited number of employees" will be given an offer under the buyout programs, known in federal lingo as VERA and VSIP. Anyone who applies and accepts an offer would have to leave by early September.

The "voluntary separations" help EPA "complete workforce restructuring with minimal disruption to the workforce," Flynn added. EPA has at least $12 million set aside to pay for the buyouts.

EPA's proposed budget calls for reducing EPA's workforce by 3,200 positions, or about 21 percent of the agency, although congressional appropriators indicated they will not grant that request.

As much as a third of the federal workforce is currently eligible for retirement, although it is not clear what the exact figure is at EPA.

Subject: POLITICO's Morning Transportation: V2V mandate in question — TSA checkup coming up — Terrorist-proofing bike paths

By Tanya Snyder and Brianna Gurciullo | 11/02/2017 10:00 AM EDT

With help from Stephanie Beasley and Adrienne Hurst

V2V MANDATE IN QUESTION: The administration has placed an Obama-era connected car rule on "long-term" status and removed it from a list of regulations actively under consideration, raising questions about whether DOT is pulling the proposed rule requiring automakers to install vehicle-to-vehicle communication technology in new cars. DOT denies that it's made any decisions and the item remains on the DOT's monthly regulatory report, but the move seems to signal that it's slipped to a low priority item, or worse.

Tech firms celebrate, autos not so much: Assuming the rule is being put on ice, Silicon Valley, which has long opposed the rule as mandating an outdated technology, has something to celebrate. They say industry is doing fine on its own and the government should just give them space to set their own standards. They also can't wait to be free of the DSRC technology they say has long since been overtaken by wireless technology and will be blown out of the water entirely next year with the arrival of 5G. But it's a blow for automakers, who have been depending on the administration to set standards for the technology that will help roll out increasingly connected cars. They'd also like to see the administration help settle the debate over the 5.9 gHz band of spectrum, which they'd like to see preserved exclusively for connected cars unless it could be definitively proven that sharing it with other wireless uses would have no impact on safety.

Not breaking out the champagne: It's a safety issue, too. A joint statement issued by organizations representing the transportation technology industry, transportation engineers and state DOTs called the issue "a matter of life and death" and asked for "federal leadership to reduce the uncertainty concerning V2V and to help deploy this technology faster."

IT'S THURSDAY: Thanks for docking at POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Tanya will be in the MT driver's seat for the next few months, so be sure to reach out to her: tsnyder@politico.com or @TSnyderDC.

"A sinking ship, an awkward kiss / A chance to set things straight."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

FOR YOUR RADAR: DOT announced that Transportation Secretary Elaine Chao will formally kick off the Trump administration's drone pilot program today. Attendees will include FAA Administrator Michael Huerta and Association for Unmanned Vehicle Systems International President and CEO Brian Wynne. Watch the livestream here. A notice in the Federal Register will also go up today "detailing the timeframe, requirements and goals of the new program,"

according to DOT.

HOUSE HEARING ON TSA SCREENINGS: Steph got the scoop on the House Homeland Security Committee's plan to hold a hearing on TSA's efforts to protect transportation systems. The Nov. 8 hearing will follow a classified briefing with TSA Administrator David Pekoske and DHS Inspector General John Roth on findings from the IG's latest audit of TSA airport screenings. Pekoske and Roth are also expected to testify at the hearing regarding the IG findings, which have not yet been publicly been released.

A sprinkle of optimism: New Jersey Democrat Bonnie Watson Coleman, the ranking member of the transportation security subpanel, said she would keep an "open mind" going into next week's briefing but expected to see significant improvements from the failures highlighted in the IG's 2015 audit. "If it reveals that there are similar deficiencies, I need to know what [the IG] is recommending and I need to know from TSA what they're doing about them," she said.

ALSO NOV. 8: Kirstjen Nielsen, Trump's nominee to be DHS secretary, will appear before the Senate Homeland Security and Governmental Affairs Committee on Nov. 8. Nielsen is White House chief of staff John Kelly's deputy and was Kelly's chief of staff when he led DHS.

FOR YOUR BOOKMARKING: The House's calendar for 2018, released Wednesday, is here.

N.Y. SEN. CALLS FOR TRAFFIC BARRIERS: Sen. Kirsten Gillibrand (D-N.Y.) is pushing DOT to create a grant program to help fund the construction of traffic barriers that could prevent attacks similar to the one that happened in New York City this week when a man intentionally drove into a bike lane. Gillibrand introduced legislation that would provide $50 million to local governments over the next 10 years for traffic barriers that would keep vehicles separate from bike paths, sidewalks and other public pedestrian areas. It is similar to a House bill, H.R. 4051 (115).

ON THE TRUCK-IT LIST: Neither chamber's self-driving car bill currently covers trucks and buses, but trucks could get special treatment from the House Transportation Committee. Rep. Sam Graves told MT Wednesday that the committee will tackle self-driving trucks in a separate bill - or, "at least that's what the plan is right now," he said.

Graves on infrastructure: Graves also told a conference of drone industry professionals Wednesday that the infrastructure bill will be released next year, though they had hoped to do it this year. He also said the bill could seek to standardize lane markings and signage to pave the way for driverless cars. (h/t Eno's Greg Rogers)

COLGAN FAMILIES CRY FOUL: Families of the victims of the 2009 Colgan Air crash Tuesday called the recent release of Aviation Rulemaking Committee recommendations on pilot training "just another attempt by the regionals and their lobbyists to sneak a Trojan horse right under the noses of DOT and FAA." The recommendations, whose release was requested by Sen. John Thune (R-S.D.) in support of a similar provision he included in the Senate FAA bill, S. 1405 (115), suggested allowing some airline-provided training programs to count as flight hours for pilot certification for people with certain military or academic backgrounds. The Colgan

families said "it is patently unfair to the flying public to sacrifice actual flying experience in exchange for these enhancements."

'A HUGE MISTAKE': Rep. John Delaney (D-Md.) wants overhauling the tax code to get bipartisan - and is arguing that pulling infrastructure into tax legislation is the best route. "The GOP is making a huge mistake in leaving infrastructure out of their plan, because that's something that we all agree on and it's a way to start having a real bipartisan negotiation," Delaney said in a statement Wednesday. "If they do jam through tax reform without any new funding for infrastructure, then they might as well put up a flashing billboard on the mall that says 'There Won't Be Any Infrastructure Bill' because there won't be any money left to pay for one."

TWEET DU JOUR: For National Native American Heritage Month, the FAA tweeted on Wednesday that it was recognizing Mary Riddle, "who became the first #NativeAmerican woman to obtain a pilot's license 87 years ago."

MT INFLUENCE: The Hill on Wednesday unveiled its 2017 list of top lobbyists for associations, featuring: Mitch Bainwol for the Alliance of Automobile Manufacturers; John Bozzella for Global Automakers; Mark Baker for the Aircraft Owners and Pilots Association; Nicholas Calio for Airlines for America; Kevin Burke for Airports Council International-North America; Roger Dow and Jonathan Grella for the U.S. Travel Association; Ed Hamberger for the Association of American Railroads; David Melcher for the Aerospace Industries Association; and Stephen Sandherr for the Associated General Contractors of America.

CONSOLIDATION CONSOLATION: A new report from the Eno Center for Transportation says the average consumer has benefited from airline consolidation, even with just four airlines - America, Delta, United and Southwest - dominating the domestic market. Having fewer carriers to choose from has boosted the availability of seat miles and nonstop flights, according to the report, but it's also concentrated traffic at the biggest airports and could "negatively affect passengers if it forces more connecting flights for customers not flying out of large hubs."

FLY-IN: Employees of Delta Air Lines are in Washington this week to talk Open Skies with lawmakers and aides. It's the fifth D.C. trip by Delta employees this year, airline spokeswoman Elizabeth Wolf told MT in a statement. "Taken together with earlier meetings, Delta people have visited hundreds of congressional offices" in 2017, Wolf said.

On one side: Meanwhile, the Partnership for Open and Fair Skies, of which Delta is a member, paid for a full-page print advertisement in Wednesday's New York Times and New York Post. The ad is a letter to Trump boasting that 300 lawmakers have signed letters taking the side of Delta, United Airlines and American Airlines in their fight against Etihad Airways, Emirates Airline and Qatar Airways.

And the other: U.S. Airlines For Open Skies, which includes JetBlue Airways and Hawaiian Airlines, is responding with an infographic and video aimed at Trump.

SHIFTING GEARS: Amtrak is promoting Christian Zacariassen from associate vice president

for product, portfolio and customer management to chief information officer. ... John Degnan, the former Port Authority of New York and New Jersey chairman, will be president and CEO of the American Insurance Association starting next week. (h/t POLITICO Influence)

Subject: Morning Energy: NRC, EPA nominees get their date in committee today — Tillerson's first post-Paris trip to Capitol Hill — State regulators pitch Federalism 2.0

By Anthony Adragna | 06/13/2017 05:42 AM EDT

With help from Alex Guillén, Esther Whieldon and Darius Dixon

NUCLEAR NOMS REACH CRITICAL: The Senate Environment and Public Works Committee is lining up this morning to hear from Trump's trio of Republican nominees for the Nuclear Regulatory Commission. The toughest questions for NRC Chairwoman Kristine Svinicki and nominees Annie Caputo and David Wright are likely to be parochial in nature. Nuclear power is a fairly contentious issue in New York and California, so Sens. Kirsten Gillibrand and Kamala Harris may press the nominees on home state concerns. Sen. Ed Markey is also a regular needler of NRC officials. Top EPW Democrat Tom Carper told ME he met with Caputo and Wright Monday afternoon and said "at first blush, both appear to be well-qualified" for the NRC slots.

Svinicki's term expires June 30 — just under three weeks! — but the White House dragged its feet in sending the three nominations to the Senate and EPW leaders are now trying to make up for lost time: The panel has already scheduled a Thursday morning vote on Svinicki's renomination and intends to move her ASAP. Meanwhile, Carper has said — and reiterated Monday — that he'd like to eventually package Caputo and Wright with a renomination of NRC Commissioner Jeff Baran, a Democrat whose term runs out next summer.

Also, up for a turn in the hot seat is Trump's pick to serve as EPA enforcement chief, Susan Bodine. She'll likely get hammered on the White House's proposed budget cuts, which hit enforcement along with most other areas at a time when many states have scaled back their own policing of environmental crimes. Senators may bring up the Justice Department's new policy blocking so-called "third party settlements" that pay for environmental projects, though she can easily enough deflect that as a matter to raise with DOJ. Bodine is a getting a lot more bipartisan support than her soon-to-be-boss; EPA rounded up compliments Monday from Obama-era officials like John Cruden and Avi Garbow.

One other thing to watch: Carper's been frustrated by the lack of responses to his oversight requests from EPA Administrator Scott Pruitt's agency and told ME there would be a "robust conversation about it" at the hearing. Look for him to possibly push Bodine to commit to responding to information requests from both parties and request Chairman John Barrasso echo the comments of Senate Judiciary Chairman Chuck Grassley that the administration's policy of only responding to Republican chairmen is " nonsense."

If you go: The hearing starts at 10 a.m. in Dirksen 406.

ALSO FOR YOUR RADAR: Secretary of State Rex Tillerson appears before the Senate Foreign Relations Committee today at 10 a.m. and then heads to a Senate Appropriations

subpanel at 2:30 p.m. to testify on the State Department's budget request. ME isn't a betting man, but expects the Trump administration's withdrawal from the Paris climate agreement will come up along with other international climate diplomacy questions. Tillerson, of course, favored remaining a part of the Paris pact and was notably absent from Trump's Rose Garden speech announcing the pull out.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and Kansas is the state that has gone longest without a Democratic senator (none since the 1930s). For today let's flip it around: Which state has gone longest without a Republican senator? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

HONEY I SHRUNK BEARS EARS? Interior Secretary Ryan Zinke recommended Monday trimming back the controversial Bears Ears National Monument, Pro's Esther Whieldon reports. But Zinke did appear to rule out fully doing away with it. "Rescinding the monument was an option, but looking at it, there are some antiquities within the monument that I think deserve to be protected," he said in a press call. Zinke also suggested that Congress pass legislation to treat some of the land as national conservation or recreation areas and give tribes the ability to co-manage whatever remains of the monument. Any effort to reshape the boundaries of the monument are sure to face challenges from environmental advocates and tribal groups. The secretary has until Aug. 24 to send his final recommendations to the White House on more than two dozen prior monument designations under the Antiquities Act.

Many groups quickly slammed the decision: Earthjustice and the Natural Resources Defense Council threatened to sue if Trump adopts the recommendation. "No president of the modern era has ever attempted to significantly alter the boundaries of a national monument, and we believe executive branch actions to reverse or otherwise undermine a single monument would jeopardize the future of all monuments," Joel Webster, director of Western lands for the Theodore Roosevelt Conservation Partnership, said in a statement. And Defenders of Wildlife's Jamie Rappaport Clark urged Zinke to "consider the full record" and warned "an attack on one monument is an attack on them all."

But Utah politicians raved: House Natural Resources Chairman Rob Bishop backed the recommendations even though he pushed to fully rescind the monument. "I commend Secretary Zinke for actually listening to local voices on the issue and conducting a thoughtful and deliberative review to help inform the president's ultimate decision," he said in a statement. Gov. Gary Herbert called the interim report an "important first step toward re-establishing sound land management practices" in the area and urged Trump to "take this recommendation seriously." Esther has more on the reaction here.

VA BENE? A subsidiary of Italian oil company Eni is seeking permission to drill from an already existing facility in Alaska state waters in the Beaufort Sea, Pro's Ben Lefebvre reports. BOEM is accepting comments through June 22 on the scope of its environmental review and through July 3 on Eni's drilling plan itself. Eni has proposed to start drilling in December of this year and continue into 2019.

REIMAGINING FEDERALISM FOR 2017: State environmental regulators are rethinking how they can best deal with EPA to respond to national and global threats while responding to local concerns and keeping regulatory costs manageable. The Environmental Council of the States released an outline of its Cooperative Federalism 2.0 approach between EPA — which "should continue to lead in setting and adopting national minimum standards to protect public health and the environment" — and the states who are responsible for much of the implementation of federal environmental laws. "State flexibility to determine the best way for its programs to achieve national minimum standards ... is a particularly important aspect of ensuring that environmental protection and economic prosperity go hand-in-hand with healthy and vibrant communities," ECOS writes.

While ECOS did not cite specific examples, it said states "should generally have the ability to set standards that are more stringent or that are broader in scope than federal standards." (The Trump administration is mulling whether to let California keep its Clean Air Act waiver for tough vehicle emissions rules.)

SHAKING THE CONVENTIONAL WISDOM ON CHINA: The Council on Foreign Relations' Elizabeth Economy argues in POLITICO Magazine that China has undeservedly seized the mantle of a world climate change leader — at least so far. "Filling the void left by the United States must be earned, not simply granted by overeager officials and pundits. China may one day earn that right, but not today," Economy writes. She argues true global leadership requires nations subordinate their own narrow interests to those of the larger international community and President Xi Jinping has not shown this will happen on climate change for China.

RED ALERT: Government officials and energy sector leaders were scrambling Monday to analyze a newly discovered cyber weapon that could map grid networks, sabotage safety equipment and paralyze power companies, Pro Cybersecurity's Eric Geller reports. The weapon, which may be the work of Russia-linked cyber warriors, can seize control of switches and circuit breakers and wipe servers to delete all traces of itself. It's worth noting the industry has plotted for such scenarios for years, the government has improved its ability to respond quickly to potential threats and there's no indication the malware has infiltrated U.S. power grid networks to date.

HOUSE PASSES BUNCH O'ENERGY BILLS: Lawmakers approved 10 energy infrastructure and energy efficiency measures in the House on Monday night. Among the highlights: The HYPE Act (H.R. 2274), which would allow FERC flexibility to extend deadlines on hydropower project permitting; H.R. 627, which helps schools learn about federal funding for energy efficiency projects; H.R. 338, which hopes to expand education and training opportunities for energy and manufacturing-related jobs; and H.R. 1109, which would amend the Federal Power Act to set $10 million as the minimum threshold for mergers and acquisitions subject to FERC jurisdiction. All of those passed by voice vote.

ZINKE KICKS OFF NEW ENGLAND SWING: Zinke kicks off a four-day trip through New England today where he'll tour several national monuments and scope out additional agency lands and holdings. First up: Zinke speaks to the National Congress of American Indians at

Mohegan Sun in Connecticut and then drives over to New Hampshire to announce a major conservation grant.

GREEN GROUPS PUSH PERRIELLO IN VIRGINIA PRIMARY: 350 Action supporters from all 50 states made calls Monday urging voters to back former Rep. Tom Perriello over Lt. Gov. Ralph Northam in today's Virginia Democratic gubernatorial primary. Climate Hawks Vote, Bill McKibben and Friends of the Earth are among the environmental endorsements Perriello has racked up in the primary campaign. Former Republican National Committee chair Ed Gillespie is a heavy favorite in the Republican primary. Polls close at 7 p.m.

FORMER EPA EMPLOYEES HIT PROPOSED TRUMP CUTS: Ahead of Pruitt's Thursday testimony on his agency's budget request, the Environmental Protection Network released an analysis finding the administration's push to slash EPA's budget by nearly one-third would "severely affect almost every aspect of EPA's programs and operations" and hit younger employees especially hard. "Staff layoffs most likely will hit younger, more recently hired staff, decimating the next generation of environmental professionals and crippling EPA and state efforts for years to come," the report from the bipartisan group of former agency employees concludes.

Speaking of which, Rep. Dan Kildee holds a press conference at 11 a.m. this morning Sierra Club and the American Federation of Government Employees in opposition to proposed budget cuts to the Great Lakes region and agency more broadly.

A $3.4 BILLION (REQUIRED) SALE: General Electric must sell its Water & Process Technologies division if it wants DOJ's sign off on a merger with oilfield services giant Baker Hughes, Pro's Alex Guillén reports. GE announced plans to do precisely that in a deal $3.4 billion deal with Suez, a French water and energy company. The Trump administration filed a lawsuit to block the merger today, along with a proposed settlement that would resolve the antitrust concerns, according to the department.

MAIL CALL! HANDS OFF OUR MONUMENTS: Hot on the heels of Zinke's Bears Ears interim report, California Democratic Sens. Dianne Feinstein and Kamala Harris released a letter urging Interior not to alter the boundaries of six existing national monument in their state. "We respectfully request that your Department not recommend to the President that California's national monuments be rolled back or otherwise reduced," they wrote.

GET THOSE E15 PITCHES IN: More than two dozen advanced biofuel producers and trade associations, led by the Biotechnology Innovation Organization and Advanced Biofuels Business Council, sent Barrasso and Carper a letter Monday urging support for the Consumer and Fuel Retailer Choice Act (S. 517). That measure, which would allow year-round sales of the E15, is slated for a hearing in EPW on Wednesday.

ARPA-E GETS A HEALTH CHECK: The National Academies of Sciences, Engineering, and Medicine releases a report at 11 a.m. today looking at how good DOE's ARPA-E program, which aims to support radical new energy technologies, has been over its first six years. ME readers likely remember the Trump administration has called for zeroing out the program's

funding.

REPORT: MINIMAL OVERLAP BETWEEN SAGE GROUSE, ENERGY DEVELOPMENT: Backcountry Hunters and Anglers is releasing a new report today finding 79 percent of areas with medium to high potential for energy development fall outside of the greater sage grouse's habitat. It comes as Interior launched a review of the sage grouse conservation plans already in place.

NEW CAMPAIGN PUSHES NATURAL GAS: The American Gas Association launched a new national campaign — entitled "Your Energy" — educating consumers about what it says are the positive benefits of natural gas and the role it plays in their lives. State-specific programming kicks off in Connecticut and Virginia first. New website here (with autoplay!).

AWARDS SEASON: The Edison Electric Institute's Board of Directors gave retiring Executive Vice President David Owens the Thomas A. Edison Legacy Award, while the Institute for Electric Innovation awarded Pepco Holdings' Karen Lefkowitz with its Technology Leadership Award.

MOVER, SHAKER: Steptoe & Johnson has added Monique Watson as of counsel, working in the energy group. She previously spent 15 years at the Federal Energy Regulatory Commission, where she focused on oil and natural gas pipeline issues (h/t POLITICO Influence).

Stories from POLITICO Pro

Carper has asked Barrasso to reconfirm Svinicki solo Back

By Darius Dixon | 06/08/2017 03:31 PM EDT

A Senate Democrat said today that he's asked Republicans to split up the confirmations of Nuclear Regulatory Commission nominees in order to fast track the reappointment of Kristine Svinicki.

Sen. Tom Carper, the top Democrat on the Senate Environment and Public Works Committee, told reporters that he supports Svinicki's renomination and pitched to EPW Chairman John Barrasso that she get confirmed while the panel reviews the other two Republican nominees.

"She's been through several times, so it shouldn't be too heavy a lift," the Delaware Democrat said.

Carper said the other nominees, Annie Caputo and David Wright, could be packaged with a renomination of NRC Commissioner Jeff Baran, a Democrat whose term runs out next summer.

"One of the things I've suggested to Chairman Barrasso is to find a way to pair those two maybe with one Democrat, and there's a Democrat on the NRC whose term expires ... next year," Carper said. "The idea of going ahead and moving his renomination along with a couple of Republicans would be of interest to me."

Repackaging the two new GOP nominees with Baran would mean "we wouldn't have to do them, like, next week," Carper said.

Svinicki, who has been an NRC commissioner for nine years, was elevated to the agency's chairmanship by Trump in January. But she's facing a time crunch and would have to step down,

even temporarily, if the Senate fails to confirm her for another five-year term by June 30.

WHAT'S NEXT: The Senate Environment and Public Works Committee has scheduled a nomination hearing to review all three GOP NRC nominees on June 13.

Grassley rips Trump administration for blowing off certain oversight requests Back

By Burgess Everett | 06/09/2017 11:25 AM EDT

The Trump administration's policy of ignoring the oversight requests of Democrats and rank-and-file members has earned it a powerful enemy: Senate Judiciary Committee Chairman Chuck Grassley.

In a letter to President Donald Trump, the veteran Iowa Republican senator urged Trump to reverse a policy instituted by the White House and the Department of Justice's Office of Legal Counsel to answer oversight requests only from committee chairmen, all of whom are Republicans because of GOP control of Congress. Though Grassley said that the Obama administration did sometimes ignore him, he said the formalization of a policy of ignoring the minority party "doesn't drain the swamp, Mr. President. It floods the swamp."

"I respectfully request that the White House rescind this OLC opinion and any policy of ignoring oversight request from non-Chairmen. It harms not just the members who happen to be in the minority party at the moment, but also, members in the majority party who are not currently chairmen. It obstructs what ought to be the natural flow of information between agencies and the committees, which frustrates the constitutional function of legislating," Grassley wrote.

He was not near done. In the seven-page letter to the president, Grassley calls the administration's opinion "nonsense" and argues that the president is being "ill-served and ill-advised" by his staff.

"To so fundamentally misunderstand and misstate such a simple fact exposes its shocking lack of professionalism and objectivity. Indeed, OLC appears to have utterly failed to live up to its own standards," Grassley added.

The Justice Department declined to comment to Grassley's letter. The White House did not immediately respond.

Fearing the weaponization of oversight requests by Democrats amid a deepening investigation into the administration's ties to Russia, White House officials instructed government agencies not to respond to oversight requests from anyone other than chairmen last month. Also in May, OLC wrote a guidance memo that formally restricted the flow of information to Democrats.

"Individual members of Congress, including ranking minority members, do not have the authority to conduct oversight in the absence of a specific delegation by a full house, committee, or subcommittee," OLC wrote in the memo.

There have been some exceptions to this policy on subjects like national security and at the Treasury Department, according to Democratic and Republican Hill staffers. But Democrats released dozens of letters on Thursday that they said have gone substantively unanswered by the Trump administration.

Democrats are outraged at the moves by the Trump White House to squash their requests, which range from overtly partisan letters asking for information that would likely damage the president to parochial issues that will never grab headlines. And now, some Republicans are, too.

"Members of Congress simply do not treat executive branch officials with such contempt and they do not deserve such treatment in return," Grassley wrote. "Unlike virtually all executive branch officials, Members are elected to constitutional positions. Instead, the executive branch should work to cooperate in good faith with all congressional requests to the fullest extent possible."

Zinke recommends shrinking Bears Ears monument Back

By Esther Whieldon | 06/12/2017 04:07 PM EDT

Interior Secretary Ryan Zinke proposed shrinking the Bears Ears National Monument on Monday, trimming back the controversial Utah monument created by former President Barack Obama during his final days in office.

A preliminary review of the 1.4 million-acre monument that Zinke sent to the White House over the weekend shows his "belief that the monument needs to be right-sized," Zinke said in a statement.

Any move by President Donald Trump to alter the monument designed to protect thousands of sensitive archaeological sites will set off a legal fight with tribes and conservation groups that have complained the Native American ruins there were being damaged and would be threatened by oil and gas development in the area.

Zinke's preliminary recommendations to Trump show he did not plan to go as far as revoking Obama's monument designation — a move that has been sought by the state's congressional delegation.

"Rescinding the monument was an option, but looking at it, there are some antiquities within the monument that I think deserve to be protected," he said in a press call.

Trump has ordered Zinke to review 22 of the national monuments that were established in the past two decades to determine if they should be altered or revoked. The secretary has until Aug. 24 to send his final recommendations to the White House, and Zinke has extended the comment period on Bears Ears to July 10.

Zinke is also pressing Congress to look at the Bears Ears boundaries "to see whether the lands are more appropriately designated as national conservation areas or national recreation areas," he said. "There's certainly a high demand of recreation. There's certainly a demand for conservation in some parts, but we believe that those areas are better suited under congressionally mandated designations than they are a monument."

The secretary also asked Congress to grant tribes the ability to co-manage specific areas within Bears Ears, and for Congress to clarify how wilderness areas that overlap with monuments should be treated, an issue for Bears Ears and some other monuments under review.

A former congressman from Montana, Zinke cited his concern that the federal government restricts activities on the land it designates as protected, saying that designating a monument the size of Bears Ears where "multiple-use management is hindered or prohibited is not the best use of the land and is not in accordance with the intention of the Antiquities Act."

President Barack Obama created the monument in southeast Utah in December, angering Republicans who accused the administration of federal overreach by ignoring locals who opposed the move and using the Antiquities Act to cut off commercial activity such as mining and oil and gas drilling.

Prior legislative attempts by the Utah delegation to curb federal monuments in the state have failed. Utah Republicans Rob Bishop and Jason Chaffetz did manage last year to get their Utah Public Lands Initiative legislation through the Natural Resources Committee, which Bishop chairs, but it never received a floor vote.

If Trump ultimately decides to alter Bears Ears or the other monuments on the list, he is certain to face legal challenges from environmental groups. "An attack on one monument is an attack on all of them," said Jesse Prentice-Dunn, advocacy director at the Center for Western Priorities.

Past presidents have changed the size of monuments but none have revoked them entirely, and legal questions remain as to whether the law allows a president to fully undo their predecessor's actions.

Zinke last month traveled to the Bears Ears and Grand Staircase-Escalante monuments and this week he will head to New England to visit the Katahdin Woods and Waters National Monument in Maine, which is also under review.

Zinke has repeatedly talked about the need to balance conservation with commercial and

recreational demands on public lands, and has already this year ended the moratorium on new coal leases and launched reviews on ways to open up more areas for oil and gas development.

Back

Greens pan Zinke's Bears Ears plan, Utah lawmakers offer praise Back

By Esther Whieldon | 06/12/2017 05:02 PM EDT

Environmental and recreation groups slammed Interior Secretary Ryan Zinke's recommendation that President Donald Trump should shrink the Bears Ears National Monument, warning they would fight the move in court.

Earthjustice and the Natural Resources Defense Council threatened to sue if Trump adopts the recommendation, and NRDC President Rhea Suh said Zinke's proposal "sends a chilling signal about the Trump administration's intent to hand over irreplaceable American landscapes to mining and fossil fuel interests."

Zinke's preliminary report recommended Trump downsize the 1.4 million-acre Bears Ears monument and suggested Congress pass legislation that designates some portions as national recreation areas or national conservation areas.

But the Outdoor Industry Association noted that previous attempts to pass legislation on monuments in the last congress had fizzled. "We are worried that the legislative process would fail again, leaving these important areas unprotected," said Amy Roberts, OIA executive director.

Utah's Congressional delegation praised Zinke's call to reduce the size of the monument, even though the lawmakers had pushed to revoke the monument. Many of Zinke's recommendations are similar to a bill the delegation backed in the last Congress.

Sen. Orrin Hatch (R-Utah) in a tweeted video said Zinke's recommendation "reflects a balance of our shared priorities in protecting this land and the antiquities that are found on it, while still preserving local involvement and taking into consideration the needs of local communities." And Rep. Rob Bishop (R-Utah) said Zinke's report "recognizes that local input should matter."

WHAT'S NEXT: Zinke has until Aug. 24 to make his final report on all 22 monuments he is reviewing and the agency is accepting public comments on all of them through July 10.

Eni submits plan to drill in Alaska's Beaufort Sea Back

By Ben Lefebvre | 06/12/2017 05:54 PM EDT

BOEM is asking the public to weigh in on whether it should allow a subsidiary of Italian oil company Eni to drill in Alaska's Beaufort Sea.

Eni's move coincides with the Trump administration's push to open up more federal waters for oil and gas development. The Interior Department is currently reviewing how much of federal offshore holdings should be open to drilling.

Eni would drill into federal waters from its already existing facility in Alaska state waters, according to the plan it submitted to BOEM. The company proposes to start drilling in December of this year and continue into 2019.

WHAT'S NEXT: BOEM is accepting comments through June 22 on the scope of its environmental review and through July 3 on Eni's drilling plan itself. The agency will take 30 days to evaluate Eni's plan.

Why China Is No Climate Leader Back

By Elizabeth Economy | 06/12/2017 04:57 PM EDT

When President Donald Trump yanked America's support for the Paris Climate Accords, pundits were quick to hail China as the world's new environmental leader. Two veteran journalists wrote that the decision was "the greatest strategic gift to the Chinese, who are eager to fill the void that Washington is leaving around the world."

But is leadership on climate change really a strategic gift? Do the Chinese want it? And above all, do they merit it? The quick answer is no, no and no.

True global leadership is costly: It requires vision, creativity, perseverance, deft diplomacy and often cold, hard cash. It also demands a willingness on the part of political leaders to align, and in some cases subordinate, their own narrow interests to those of the larger international community. The Chinese, including President Xi Jinping, understand this. That is why any number of Chinese analysts have been quick to reject the idea that Chinese leadership on climate change is realistic, arguing as one did, "Taking on global leadership is too much, too soon for China." Xi Jinping, himself, is somewhat less willing to reject the idea out of hand. China as a global power shaping norms and institutions is a central element of his rejuvenation narrative. He therefore flirts with the prospect, proclaiming China ready to defend globalization and to protect

the Paris climate agreement. But nowhere does Xi say that China will actually lead; that is left to others.

So where does China stand on the climate leadership spectrum? First, the good. It will meet its Paris commitment: By 2030, China's CO2 emissions will peak and its energy intensity (the amount of energy consumed per unit of GDP) will be reduced by 60-65 percent. In addition, Beijing is making strides toward rebalancing its energy mix. This year it cancelled 85 new coal fired power plants on top of the 18 that it cancelled last year; if brought on line, these 103 new plants would have exceeded China's 2020 targets of 1100GW of coal-fired power capacity by 150 GW. (By way of comparison, total U.S. energy produced from coal is 350GW.) Moreover, China has pledged not to approve new coal-fired power plants in as many as 13 provinces and regions until 2018. (Of course, one might reasonably ask what is happening in the other 18 provinces and regions, and what 2018 might bring.) China has also stepped up its commitment to renewable energy. In 2016 China invested $78.3 billion in renewable energy—topping both Europe ($59.8 billion) and the United States ($46.4 billion). China also ranks first in terms of total installed renewable electric capacity. Much of this capacity, however, remains idle. In 2016, in three of the most wind power-rich provinces and regions—Gansu, Xinjiang and Inner Mongolia—for example, levels of curtailment (capacity not utilized) reached 43 percent, 38 percent and 21 percent respectively. The curtailment rate for solar energy was similarly high. In contrast, curtailment rates in the United States and Europe are generally between 0-5 percent. In the wait and see category, China is reportedly set to launch a nationwide CO2 cap and trade system sometime this year. This system could be spectacular, or it could be spectacularly embarrassing.

Now the bad. China is still the largest emitter of CO2 on the planet by a substantial margin, contributing 29 percent of the world's total CO2 emissions in 2015. The United States comes in a distant second at 14 percent. In addition, while Beijing is cutting back on coal-fired power plants—particularly in its wealthy and pollution-conscious coastal provinces—it is upping its count of CO2 emitting coal-to-chemical (including coal-to-gas) plants. There are 46 coal-to-chemical plants in operation and another 22 under construction that will add another 193 million tons of carbon emissions annually. A conservative estimate suggests that by 2020, such plants will contribute as much CO2 as all of Poland's contribution to global carbon emissions, while the extreme scenario—if China builds all the coal-to-chemical plants outlined in its 13th Five Year Plan—will lead to a contribution of almost 800 million tons per year, more than German's total carbon emissions in 2015, and equal to roughly 10 percent of China's current CO2 contribution.

China also falls short in the eyes of some independent monitoring groups that assess countries' climate commitments. The 2017 annual report by German Watch and the Climate Action Network ranks China 48th—just a few places behind the United States at 43rd—in terms of how much it has done to avoid climate change and how much it plans to do. True climate leadership belongs to the Europeans—France, Sweden and the United Kingdom, in particular—although even these climate leaders come in for some criticism. Moreover, the Climate Action Tracker, produced by three international research institutions, indicates that China's current emission reduction targets are not consistent with ensuring that the earth's warming remains below 2 degrees C.

And finally the ugly. Whatever positive steps China is taking at home are not being replicated in its behavior abroad. China is the world's largest exporter of coal-fired power plant finance and technology. Even as Xi is calling for an "international coalition for green development on the Belt and Road" (his comprehensive new trade and development initiative involving 65 countries), Beijing is backing more than 100 new coal-fired power projects in the Belt and Road countries. China's much-touted Belt and Road deals in Pakistan, for example, include plans for as many as 12 coal-fired power plants—even in areas recognized for their superior solar energy potential. In addition, China is actively pushing coal-to-chemical plants abroad. The Paris accords don't account for countries' actions outside their own borders, so China is not breaking the letter of its Paris commitments, but these Belt and Road investments are certainly not in keeping with the spirit of the agreement.

Beyond the clear limitations of China's climate policies at home and abroad, there remains the larger question of diplomatic leadership. Will China rally other countries to adopt another round of more ambitious greenhouse gas reduction targets? Will it stop the overseas financing and sale of coal-fired power plants and coal-to-chemical plants? Will it push forward to limit other harmful greenhouse gas emissions, such as methane? Will it accede to international monitoring and verification of its emissions, an important measure it continues to reject? Thus far, there is no indication that China has plans to adopt any of these leadership-worthy measures.

When Trump, in the midst of withdrawing the United States from the Paris agreement, offered up the possibility of renegotiating the climate pact, the rest of the world in effect said, "not going to happen." Undoubtedly other countries are becoming accustomed to the idea of a world without American leadership. But filling the void left by the United States must be earned, not simply granted by overeager officials and pundits. China may one day earn that right, but not today.

Electric sector, feds rush to thwart 'milestone' cyber weapon Back

By Eric Geller | 06/12/2017 04:09 PM EDT

Government officials and energy sector leaders scrambled Monday to analyze a newly discovered cyber weapon that researchers are calling a "milestone" for hackers hoping to cripple power grids.

But while all involved concede that the weapon — which may be the work of Russia-linked cyber warriors — has the power to unleash never-before-seen cyberattacks, security experts and industry representatives cautioned that the U.S. power grid is better suited than many others to fend off such a digital assault.

The energy sector has spent years wargaming such scenarios, and it has systems in place to

replace damaged equipment, share resources and swap information in the wake of a massive power outage. The government has also improved its rapid-response capabilities in recent years for just such instances. And as of yet, industry representatives noted, there is no indication the malware has infiltrated U.S. power grid networks.

"Our grid benefits from significant experience with weather and other challenges and is very robust," said John Hultquist, director of cyber espionage analysis at iSIGHT, a division of the security firm FireEye.

The new digital weapon leapt into the public eye Monday morning via reports from security firms Dragos and ESET . Researchers described it as a highly customized toolkit for mapping grid networks, sabotaging safety equipment and paralyzing power companies. The malware — which Dragos calls CrashOverride and ESET calls Industroyer — can seize control of switches and circuit breakers and wipe servers to delete all traces of itself. ESET claimed that it can also disable equipment designed to prevent grid overloads, potentially letting hackers cause widespread physical damage.

"This is a milestone for critical infrastructure in the West where it's been anxiously anticipated for quite some time," said Hultquist.

Experts believe Russian hackers tested the malware's new powers in a little-noticed cyberattack on the Ukrainian power grid last December, an incident that was largely overlooked amid concerns about Moscow's alleged meddling in the U.S. presidential race. The attack — which mirrored a first-of-its-kind 2015 digital strike on Ukraine's power grid — briefly turned off one-fifth of the electric power generated in Kiev, Ukraine's capital.

"This capability now appears to be in the hands of a government who has violated every norm in this space with increasingly aggressive behavior," Hultquist said. "I doubt Ukraine is the last place we will see this capability deployed."

The electric sector jumped into action shortly before the reports dropped. Researchers briefed the industry's cyber information sharing center on Sunday morning, and the group began distributing technical data about the malware that afternoon. An industry coordinating group known as the Electricity Subsector Coordinating Council is also in contact with the Department of Energy, according to Scott Aaronson, the group's secretary.

Elsewhere, the North American Electric Reliability Corporation — the electricity industry's main nonprofit regulatory body — is preparing a public alert on the new malware and will release it "as soon as possible," according to spokeswoman Kimberly Mielcarek.

"There is no question that cyberthreats like the one in Ukraine are real and that constant vigilance is needed to protect the reliability of the North American grid," Mielcarek said.

Industry forces are also working with DHS, which has a cyber command center constantly monitoring hacking threats. NERC has a representative at the that center — known as the National Cybersecurity and Communications Integration Center — who helps coordinate

between DHS and the electric sector.

A DHS spokesman said the department was aware of the malware and was "working with the researchers and industry on this issue," but declined to discuss specifics.

For years, the public and private sectors have operated joint exercises to try and prepare for the types of bruising attacks that CrashOverride may unleash. Electric companies and government agencies gather every two years for drills that simulate digital and physical disruptions at power facilities and encourage collaboration to resolve the problems.

The most recent exercise, in 2015, brought together top executives from energy firms and senior officials from DHS, the Pentagon, the FBI, the Department of Energy, the White House and other federal agencies.

The exercise "highlighted the importance of well-coordinated communications," according to a summary report. But participants complained that the information sharing center's portal "needed enhancements to handle real-time, urgent communication," the report said. "During the exercise, information was quickly buried within the portal and it became difficult to highlight important information."

A major priority for electric companies is being able to continue operations despite network disruptions — what Aaronson called operating "in a degraded state."

"What we have learned from any number of these incidents [is] that you cannot protect everything from everything," Aaronson said. "We have to focus on restoration, response and recovery in order to ensure that we can continue to provide the product that is critical to the life, health and safety of Americans."

The electric sector also prides itself on what Aaronson called "cyber mutual assistance," in which unaffected companies send technicians to assist the digitally-targeted operators.

In general, security experts said, the American power system is less vulnerable to a large-scale digital disruption than systems in other countries.

But those same experts, as well as federal officials and even industry representatives, acknowledge that the threat is still grave and that more work needs to be done. And preparations for thwarting CrashOverride's potentially damaging, information-wiping, recovery-system-immobilizing attacks are based on the scant few examples of what such an incapacitating cyberattack might look like.

The CrashOverride toolkit is only the second known example of malware designed to disrupt a power facility. The United States and Israel are believed to have deployed the first such virus, codenamed Stuxnet, in the mid-2000s to sabotage Iranian nuclear centrifuges. But despite its formidable design and potentially devastating consequences, experts said the industry would handle it through normal channels.

CrashOverride is "another example of malware that has the potential to have an impact on grid operations," said Aaronson. "But notice the word that I used there: it is another one. And there will be another one tomorrow, and another one after that."

John Chirhart, federal technical director at the security firm Tenable, said it was important to note that the malware did not use any zero-day vulnerabilities, pieces of code that exploit undiscovered flaws.

"With all of the buzz around Industroyer being 'the next Stuxnet,' you'd think it was one of the most sophisticated threats out there," he said, "but with no zero days in the Industroyer payload, the significance of this malware as a stand-alone event is small."

Aaronson cited the flurry of chatter that started Sunday as evidence that the proper response mechanisms were in place.

"I think we are well positioned to deal with this particular threat and all of the ones that are yet to come," he said.

Tim Starks contributed to this report.

DOJ will require GE to sell refinery chemicals business before Baker Hughes merger Back

By Alex Guillén | 06/12/2017 03:52 PM EDT

The Justice Department today said it will require General Electric to sell off its Water & Process Technologies division if it wants the government's blessing to merge with oilfield services giant Baker Hughes.

GE in March announced plans to sell that division to Suez, a French water and energy company, for $3.4 billion. Carrying out that sale will satisfy the DOJ.

GE and Baker Hughes together represent two of the four major providers of refinery chemicals and services, which are classified as "process technologies." Allowing GE and Baker Hughes to combine their refinery chemicals division would hurt competitiveness and drive up prices, the DOJ argued.

The DOJ filed a lawsuit to block the merger today, along with a proposed settlement that would resolve the antitrust concerns, according to the department. The proposal is subject to 60 days of public comment and court approval.

Zinke orders review of sage grouse plans Back

By Esther Whieldon | 06/07/2017 07:17 PM EDT

Interior Secretary Ryan Zinke signed a secretarial order on Wednesday launching an internal review of the agency's sage grouse conservation plans across 11 Western states that aims to foster increased energy development.

The order, which will be released Thursday morning, directs the Bureau of Land Management, U.S. Fish and Wildlife Service and the U.S. Geological Survey to identify parts in BLM's 98 land use management plans that should be tweaked or rescinded because of their effect on development or due to differences with each state's own plans.

The review will focus on principal threats to the sage grouse habitat, such as invasive grasses and wildland fire, and will consider options like captive breeding and setting population targets — something the governors of Wyoming and Colorado warned may not be the right approach. Zinke directed the team to report back within 60 days.

Some governors have complained that the current management plans set under the Obama administration hinder their ability to develop oil and gas resources and create hurdles for timber harvesting and recreation, Zinke said in a press call.

But former Interior Secretary Sally Jewell told POLITICO on Wednesday the existing management plans were "designed to be very flexible and to allow the states and the federal land management agencies to work together" to support both sage grouse conservation and energy development.

However, she acknowledged the agency's 2015 decision not to list the sage grouse as endangered or threatened was not fully hashed out. "When you do something on this scope and scale, you haven't refined all the details yet," Jewell said. What matters is that "everybody understands that they need to protect critical habitat if that decision to not list the bird is going to stick."

The Western Energy Alliance, an oil and gas industry group, has challenged some of the existing plans in court and says the agency ignored the technological advances that reduce the impact of fossil fuel extraction on the sage grouse habitat, which spans all of the major producing basins in Wyoming, Utah, Montana and parts of Colorado.

Alliance President Kathleen Sgamma said Interior should defer more to states since they know where the sage grouse is most active, and she isn't worried that reworking the plans could take years.

"What risk is there?" Sgamma said. "Development is at practically a standstill already in sage

grouse habitat."

Conservation groups contend Zinke's move will prioritize energy development over conservation.

"Zinke seems to believe that the highest and best use of America's public lands is for the development of dirty fossil fuels and so it's unsurprising that he's proposing to take a look at gutting protections for an imperiled species to benefit that industry," said Ted Zukoski, an Earthjustice staff attorney who has represented conservation groups in legal battles over sage grouse plans in Wyoming and Utah.

Collin O'Mara, president and CEO of the National Wildlife Federation, said Zinke's idea to set population targets for states could actually increase the likelihood the FWS will later list the bird, since the agency would have to revisit the decision if states fail to meet their targets.

"The very thing that some folks and industry are fearing, which is not being able to do anything, would almost definitely occur if they went on the path they're proposing," O'Mara said.

Nada Culver, senior counsel and director of The Wilderness Society's BLM Action Center, said the existing plans do not need to be scrapped but rather the agency can better clarify how fossil fuel and renewable energy projects can be developed in sage grouse habitat. "There's room in the plan to do that," she said.

Subject: POLITICO Pro Breaking News: Nebraska approves Keystone XL pipeline

Nebraska regulators approved the Keystone XL pipeline, removing the last big regulatory hurdle for the oil project after years of bitter protests from environmentalists and landowners, and giving President Donald Trump a victory in his campaign for U.S. "energy dominance."

The Nebraska Public Service Commission voted 3-2 to approve the route through the state for the pipeline that will transport up to 830,000 barrels per day of crude from Canada and North Dakota to oil refineries on the Gulf Coast. Former President Barack Obama had blocked the permits for the pipeline in 2015, citing the oil sands' impact on climate change, but Trump quickly reversed that decision after taking office.

Today's approval comes just days after the original Keystone Pipeline ruptured and dumped 210,000 gallons of oil into a rural area of South Dakota. But Nebraska law barred regulators from considering spills or pipeline safety in its decision-making process.

To: Maisano, Frank[frank.maisano@bracewell.com]
From: Maisano, Frank
Sent: Mon 9/25/2017 4:11:03 PM
Subject: Sept 25 PRG Energy Update: Solar Case, Clean Energy Week, Taxes/Healthcare

Friends,

L'Shana tova… I hope all will have a good fast this Friday for Yom Kippur. Starting today with the long ball… Yes, my friends Mike Allen and Fred Frommer tell me that Kansas City's Alex Gordon last week broke Major League Baseball's season home run record with 12 days to spare, hitting the 5,694th long ball of 2017. No word on why the ball is flying out of the park more, but I wonder if can potentially be linked to climate change.

Welcome to National Clean Energy Week… And what a way to launch into the week with the Friday US International Trade Commission decision on the solar 201 tariff case. The ITC ruled that an injury did occur while considering a petition filed by two bankrupt companies. Now the case moves on to the remedy phase where ITC, and eventually the Administration, will consider what to do. In this phase, the Energy Trade Action Coalition – which represents other sectors impacted like utilities, contractors, cooperatives, retailers and conservative groups – will play a more aggressive role in highlighting economic impacts of higher tariffs on the broader economy, which is a factor the President must take into consideration in his final decision. See a full round up below...

If we can stop talking about the NFL, this week Congress should dig into the health care and tax reform issues as we approach the end of the actual fiscal year on Saturday. While budgets have been extended, reconciliation consideration of health care (meaning 50 votes to pass) ends. On energy, it is still busy with Clean Energy week including an event tomorrow featuring Interior Secretary Ryan Zinke, Energy Secretary Perry, Sen. Lindsey Graham and Rep. Cathy McMorris Rodgers; a Senate Energy DOE nomination hearing and a House Oversight hearing on nuclear waste. Wednesday events include Shale Insight in PA and Wilson's North American Energy Forum. On Thursday, there is a Clean Energy Forum at conservative group R Street and Friday at 11:30 a.m., Heritage hosting a major policy address by Zinke.

Speaking of the tax debate, check out this week's edition of the Bracewell PRG podcast "The Lobby Shop" which host Josh Zive interviews Associated Builders and Contractors tax expert Liam Donovan on the upcoming tax debate in Congress. (You can subscribe to it on iTunes and SoundCloud). And don't forget Platt's Capitol Crude as well which this week features *Windfall* author Meghan O'Sullivan, the deputy national security adviser on Iraq and Afghanistan.

And don't forget that next week – Wednesday to Saturday – the Society of Environmental Journalists will hold its annual meeting in Pittsburgh. Great day trips, policy/political Panels and the 15th annual Bracewell PRG Reception on Thursday evening.

Call with questions. Best,

Frank Maisano

(202) 828-5864

c. (202) 997-5932

FRANKLY SPOKEN

"As the remedy phase moves forward, I am determined to reach a conclusion that will protect the solar industry, our workers and the American public from what amounts to a shakedown by these two companies. An improper remedy will devastate the burgeoning American solar economy and ultimately harm America's manufacturers and 36,000 people currently engaged in solar manufacturing that don't make cells and panels."

Abigail Ross Hopper, president and CEO of the Solar Energy Industries Association (SEIA).

"Utilities, power co-ops, retailers, manufacturers and other large commercial users, along with conservative groups who have criticized federal solar subsidies, all agree that unwarranted tariffs would cause severe damage to the solar industry while setting a terrible precedent for future trade cases. Artificially raising the price of solar products would increase costs for solar power consumers and jeopardize tens of thousands of U.S. manufacturing jobs."

Paul Nathanson, spokesman for the Energy Trade Action Coalition (ETAC), a group of companies, associations and organizations who joined together to oppose the trade petition.

"Policymakers and candidate who embrace clean energy showcase independent governing and smart thinking on actions that can be equally good for the economy, national security and environment."

ClearPath Action Founder Jay Faison, in announcing new GOP polling results on clean energy.

THE BIG NEWS

Solar Case to Move Forward – On Friday, the US International Trade Commission found that imported solar panels have harmed domestic solar manufacturers, setting up a high-stakes decision on tariffs for the Trump administration. The ITC will submit formal recommendations to the White House by November, after which President Trump has two months to decide on a final policy.

Some Video – Renewable Energy World has a great explanation on the case with some video. They will also host a webinar on the next phase on Thursday at 2:00 p.m. featuring SEIA's Hopper and others. See more details here.

SEIA Calls Case Deeply-Flawed, Harmful to Industry – SEIA's Abby Hopper said the ITC's decision was disappointing for nearly 9,000 U.S. solar companies and the 260,000 Americans they employ. Foreign-owned companies that brought business failures on themselves are attempting to exploit American trade laws to gain a bailout for their bad investments. Hopper: "Analysts say Suniva's remedy proposal will double the price of solar, destroy two-thirds of demand, erode billions of dollars in investment and unnecessarily force 88,000 Americans to lose their jobs in 2018. While we continue to believe that this is the wrong decision, based on Suniva and SolarWorld's mismanagement, we respect the commission's vote and we will continue to lead the effort to protect the solar industry from damaging trade relief. We expect to be front and center in the ITC remedy process, and in the administration's consideration of this deeply-flawed case."

Coalition Also Hits Back at Ruling – The Energy Trade Action Coalition (ETAC) expressed disappointment at the vote to continue the case. ETAC also pledged to remain fully engaged in the trade case to strongly advocate that the ITC and President Trump avoid imposing any remedies that would threaten the U.S. solar industry and the many related industry sectors that use solar. "The ITC decision to find injury is disappointing because the facts presented made it clear that the two companies who brought this trade case were injured by their own history of poor business decisions rather than global competition, and that the petition is an attempt to recover lost funds for their own financial gain at the expense of the rest of the solar industry," said ETAC Spokesperson Paul Nathanson. "ETAC will continue to fight vigorously during the remedy phase, encouraging Administration officials and Members of Congress to help ensure that no remedies are imposed that would threaten the solar industry's ability to compete with other energy sources."

Some Other Key Views

Scott Segal, Executive Director of the Electric Reliability Coordinating Council,

"The imposition of trade remedies on solar technology sought by the two petitioners in this case, Suniva and SolarWorld, could fundamentally change those carefully calibrated assessments of grid stability -- and do so without any consequent societal benefits. Ill-conceived energy protectionism in the guise of a trade remedy, on the other hand, will only do more harm than good. We would all do well to take heed of recent events and remember to prioritize the importance of maintaining a diverse and resilient electric grid. The government should say no to the Section 201 trade petition for solar."

(ERCC is a group of utilities that includes Ameren, Southern, DTE and several others.)

Diane V. Denton, Managing Director of Federal Policy for Duke Energy

"In the event that imported modules are subject to an artificial floor price or significant import tariff as requested by the petitioners in this case, the module market, and Duke Energy's plans to procure modules, will likely be significantly disrupted. If such a remedial floor price or tariff is imposed, we expect that the installed cost of solar projects will increase 30% or more and that demand for modules would contract precipitously. As solar energy is just approaching parity with the traditional grid resources in a number of states, a significant reduction in demand for new solar projects could deliver a serious blow to continuing development and evolution of this market."

John M. Grau, CEO of the National Electrical Contractors Association

"Solar energy is one of the most promising sectors in the American economy, providing good construction and manufacturing jobs and valuable products at a low cost to consumers. It's been creating jobs for electricians who install utility scale and roof top solar systems around the country. These are good, middle-class jobs that promote apprenticeship, community based hiring, and veterans. All this progress would be placed at risk if the government decided to cut off the cells and modules that form the basic ingredients of the U.S. solar supply chain."

Paul Spencer, CEO/Founder of Clean Energy Collective

The trade barriers proposed would needlessly make solar more expensive at a time when we are seeing record low prices that make solar cheaper for consumers and provide ever-increasing benefits for the global environment.

(CEC works with rural cooperatives and others to develop Community Solar projects)

David French, Senior Vice President, Government Relations at the National Retail Federation

The trade restrictions that would result from this petition would raise the price of solar cells and modules, the basic ingredients of solar panels, brought into the U.S. from anywhere in the world. This trade case threatens the competitiveness of solar power and could negatively impact retailers across the country who have proactively moved to diversify their energy sources.

Karla Jones, Director of International Relations & Federalism, American Legislative Exchange Council

"Long a champion of free markets, ALEC opposes the ITC's decision as protectionism that will ultimately harm the U.S. economy and cost American jobs. We urge the President, who will make the final determination on whether to accept or reject the ITC's recommendation, to choose free market principles over protectionism."

Katie Tubb, trade policy specialist at the Heritage Foundation

"The tariffs requested by Suniva and SolarWorld will make solar products and services in America more expensive and less competitive by removing inexpensive, often imported choices

from other solar companies and their customers."

IN THE NEWS

ClearPath Polling Shows Strong GOP Support for Clean Energy – A survey of GOP and independent voters in states key to the 2018 congressional midterm election show strong support for Republican candidates who take action on clean energy. In the eight states surveyed,

Republicans gained a 25% swing on average over the generic ballot after focused messaging on clean energy, according to the early June poll commissioned by ClearPath Action. Among those who voted for President Trump, 77 percent said they support accelerating clean energy, with 39 percent citing strong support. Nearly 90 percent of independents said they support accelerating clean energy, with more than 60 percent citing strong support. ClearPath Action Founder Jay Faison said the polling results are far stronger than what he expected and stronger than what he saw last cycle. Faison: "Policymakers and candidate who embrace clean energy showcase independent governing and smart thinking on actions that can be equally good for the economy, national security and environment." The survey shows significant ballot movement and momentum favoring Republicans who back clean energy across all eight states. That includes more than a 25-point ballot movement statewide in Nevada, Michigan and Arizona using a sample of all likely voters. Full details and More specifics here.

Senate Energy Approves Final Two FERC Noms – The Senate Energy Committee unanimously approved Kevin McIntyre and Richard Glick to serve on FERC. The panel also approved Ryan Nelson to be solicitor of the Interior Department, David Jonas to serve as general counsel of the Energy Department and Joseph Balash to be assistant secretary for land and minerals management at Interior, thus advancing all five nominees to the full Senate.

SMU Expert: Oil/Gas Resilient Through Hurricane – US oil and natural gas markets will shrug off the impacts of Hurricanes Harvey and Irma soon and move further along the path to stability and possibly modest growth this year and next, according to analysts. Our friend Bud Weinstein of the SMU Maguire Energy Institute recently wrote the oil and gas infrastructure along the Gulf Coast also sustained very little damage, certainly compared with Hurricane Katrina. Weinstein said overall, the refining and petrochemical industries along the Gulf Coast, as well as pipelines and offshore production platforms, proved to be extraordinarily resilient as more than 50 inches of rain inundated Houston and Beaumont-Port Arthur over four days. "The untold story is that after Hurricanes Rita, Katrina and Ike the energy industry spent billions upgrading their facilities along the Gulf Coast so they could withstand future catastrophic storms," Weinstein wrote.

Partners Conducting Wildlife Study at RI Offshore Project – Deepwater Wind is partnering with researchers from the U.S. Fish and Wildlife Service (FWS), the University of Rhode Island (URI) and the University of Massachusetts-Amherst on studies of bird and bat activity off the Atlantic Coast. The studies, funded by BOEM, provide data on offshore movements of high-priority species to inform conservation efforts, says Deepwater. In August, Deepwater Wind installed a wildlife tracking station on the easternmost foundation platform at the Block Island Wind Farm, located three miles off the coast of Block Island, R.I. The tracking station contains four antennas, plus a receiver that collects data on migrating patterns of birds and bats that scientists have previously tagged with tiny, very high-frequency (VHF) transmitters, weighing

less than 1.5 grams each. These transmitters provide data on any tagged species that fly within a 20-mile radius of the wind farm.

ON THE SCHEDULE THIS WEEK

NATIONAL CLEAN ENERGY WEEK – September 25-29th. Hosted by Citizens for Responsible Energy Solutions, the American Council on Renewable Energy, Advanced Energy Economy, the American Wind Energy Association (AWEA), the Business Council for Sustainable Energy, the Biomass Power Association, Clean Energy Business Network, the Nuclear Energy Institute, the National Hydropower Association, and the Solar Energy Industries Association (SEIA). Sects. Perry and Zinke will launch the event tomorrow at the Reserve Officers Association on Capitol Hill in a discussion moderated by former New Hampshire Sen. Kelly Ayotte. Also expected to speak throughout the day are Rep. Cathy McMorris Rodgers, Sen. Tom Carper and Sen. Lindsey Graham.

Wharton DC Hosts Innovation Summit – The Wharton DC Innovation Summit will be held today at the Marriott Bethesda North Conference Center. The Wharton DC Summit has a rich history of getting at key questions for venture capitalists, a seasoned entrepreneurs, an aspiring entrepreneurs or the intellectually-intrigued by innovation. Interesting panels on transportation, (AVs), drones and many other topics.

AEE Holds Michigan Energy Future Conference – The Advance Energy Economy will hold its 4th Annual Michigan Energy Future Conference today at the College for Creative Studies in downtown Detroit. The global market for mobility solutions is growing rapidly, building on innovation, information technology, and new transportation business models. Focusing on this convergence, the event, sponsored by our friends at DTE Energy, will dive deep into the intersection of energy, telecommunications, and transportation. While other conferences have explored these issues independently, the Michigan Energy Future Conference will be the first comprehensive look at the synergies between sectors, exploring opportunities for the U.S. to benefit as the pace of convergence between these sectors accelerates.

Forum to Look at Petro Diplomacy – The Arab Gulf States Institute in Washington will hold a conference this afternoon looking at critical issues facing the oil industry against the background of the shifting economic and political landscape in the region. The Lunch Keynote will feature Majid Al-Moneef, former Secretary General of the Supreme Economic Council of Saudi Arabia and Member of the Board of Directors of Saudi Aramco. Then a panel featuring Columbia

University energy policy expert Jason Bordoff and others will follow.

Senate Energy to Hear from DOE Noms – The Senate Energy Committee will convene a hearing tomorrow at 10:00 a.m. to consider the DOE nominations for the office of Electricity Delivery and Energy Reliability and Fossil Energy. Nominees Bruce Walker and Steve Winberg will testify.

WCEE Event to Look at MD Offshore Wind – The Women's Council on Energy and the Environment (WCEE) will hold a lunch forum tomorrow at Dentons looking at the latest insights into the Maryland PSC's work on offshore wind and energy efficiency, the political challenges faced and the businesses opportunities created. Marissa Gillett, Senior Advisor to the Public Service Commission's Chairman, will be the speaker.

ELI to Look at Ocean Energy – Tomorrow at Noon, the Environmental Law Institute will hold a forum on ocean energy technologies (wave, tidal, and current hydrokinetic energy) under development. Wave and tidal energy developers claim that federal subsidies and tax cuts are insufficient to promote research and development, and some of the most successful ocean energy companies have moved overseas. A panel of experts will look at key questions to improve development of the hydrokinetic technology sector in the U.S. Among the panelists, Annie Jones, FERC Energy Projects advisor.

Gas Tech CEO to Address Roundtable – The Natural Gas Roundtable will host that David Carroll, president of the International Gas Union at its next luncheon tomorrow. Carroll is the President and CEO of the Gas Technology Institute. He oversees the company's operations and directs its programs for developing technologies, products, and services for customers in the natural gas and related industries. Carroll assumed the additional role of President of IGU for a three-year term in 2015.

Forum to Look at Future of Nuclear – The Global America Business Institute (GABI) is hosting a special workshop tomorrow looking at the future of nuclear power globally, focusing on technological, security, and geopolitical considerations. Achieving progress towards decarbonizing and reducing the environmental impact of energy generation is arguably impossible without a significant expansion of nuclear power internationally. However, improving and strengthening the global nuclear governance system and maintaining high international standards in nuclear safety, security, and nonproliferation are essential for nuclear power to become a more integral part of the world's energy portfolio. Speakers will include

Partnership for Global Security President Kenneth Luongo and NEI's Everett Redmond.

Coal Event to Hear from Alpha CEO – The 40th annual Coal Marketing Days forum will be held tomorrow and Wednesday at the Omni William Penn Hotel in Pittsburgh. The event hosts a variety of coal suppliers and buyers, coal transport companies, and industry-wide analysts who exchange in-depth knowledge on the current state of the global and domestic coal-producing markets and focuses on the current trends and challenges shaping the business. Alpha Natural Resources CEO David Stetson is the keynote.

Ideas Conference Set – *The Atlantic* and the Aspen Institute holds its 9th annual Washington Ideas conference tomorrow through Thursday. "Washington Ideas" convenes the nation's leaders in politics, business, health, science, technology, arts, culture and journalism for three days of can't miss conversation and connections. In the heart of the nation's capital, we will tackle the most consequential issues facing the country and the world.

House Oversight to Look at Nuclear Waste – The House Oversight Committee's Subcommittee on the Interior, Energy, and Environment will convene a hearing tomorrow at 2:00 p.m. examining America's nuclear waste management and storage to examine the management of the nation's increasing amount of nuclear waste and to highlight the challenges communities across the country face when dealing with nuclear waste. Witnesses will include Maryland PSC Commissioner Anthony O'Donnell, Aiken County, SC Councilmember Chuck Smith, David Victor of UC-San Diego School of Global Policy & Strategy (who also chairs San Onofre Nuclear Generating Station's Community Engagement Panel and our friend Katie Tubb of the Heritage Foundation.

Wilson to Hold Energy Forum – The Mexico and Canada Institutes will host the Wilson Center's 2017 North America Energy Forum on Wednesday. The Forum is now in its fourth year and will focus on the major challenges and opportunities facing energy producers and consumers in the region, with a strong focus on innovation in the energy sector. Chamber Energy President Karen Harbert and NOIA head Randy Luthi will be among the speakers.

EMA Sets Annual Forum – The Environmental Markets Association holds its 21st Annual Meeting on Wednesday to Friday at the Renaissance Nashville Hotel. The event focuses on trading, legislation and regulation of environmental markets. The agenda includes panel sessions covering Carbon / RGGI, what's next after the Clean Power Plan, update on current developments and trends in other existing environmental markets such as the SO2 and Nox programs and a general REC Market Overview that provides an update on supply and demand as well as estimates on potential growth as the market faces pricing pressure.

PA Shale Conference Set – SHALE INSIGHT 2017 will be held on Wednesday and Thursday at the Pittsburgh Convention Center. The event holds the most important discussions on shale development, featuring some of the most prominent industry and government leaders. Influential industry executives and innovative thought leaders will work through two days of technical and public affairs insight sessions, major keynote addresses, and a dynamic exhibit hall featuring all the major shale players.

Forum to Look at Storage During Hurricanes – The Congressional Advanced Energy Storage Caucus will hold a forum on Wednesday at 2:00 p.m. on potential issues with storage and hurricanes. Caucus co-chairs Rep. Chris Collins (R-NY) and Rep. Mark Takano (D-CA) will provide an update on the U.S. energy storage market, and a briefing on the role of energy storage in electric infrastructure resilience.

Smart Mobility Forum Set – The C3 Group hosts the 3rd annual Smart Mobility Forum on Capitol Hill on Wednesday at 2:30 p.m. in the Capitol Visitors Center. The Forum will include presentations by experts on the deployment of autonomous vehicle technology and its impact on automotive, transportation, society and policy followed by an interactive Q&A. Featured Speakers include C3 Group President and smart mobility expert Doug Newcomb, Autotrader Senior Analyst Michelle Krebs and Dushyant Wadivkar of Bosch Automated Vehicles.

Senate Ag Looks at Energy Programs in Farm Bill – The Senate Committee on Agriculture will convene a hearing Thursday at 9:30 a.m. on rural development and energy programs. They will focus on perspectives for the 2018 Farm Bill.

R Street Hosts Clean Energy Event – R Street will host a forum on Thursday at 10:00 a.m. with panelists from Microsoft, the American Coalition of Competitive Energy Suppliers (ACCES), Advanced Energy Economy (AEE), and Citizens for Responsible Energy Solutions (CRES) to discuss clean energy opportunities. Affordable clean energy future rests with the advancement of competitive energy markets and consumer choice. Such policies provide better opportunities to facilitate distributed generation and rest at the intersection of conservative and green agendas. Speakers will include Microsoft's Michelle Patton, AEE's Dylan Reed, Devin Hartman of R Street and Frank Caliva of ACCES.

Trade Expert to Discuss Solar Case Next Steps – *Renewable Energy World* holds a webinar on Thursday at 2:00 p.m. looking at what happens next following the Sept. 22 ITC ruling. The webcast will include SEIA President and CEO Abigail Ross Hopper; NEXTracker CEO Dan Shugar and Matthew Nicely, the trade lawyer arguing against the petition.

CSIS, Fortune Smart Women Conference to Feature Ernst – On Friday at 9:00 a.m., the Smart Women, Smart Power Initiative holds a conversation with Senator Joni Ernst (R-IA). The topics will include North Korea, Syria, Afghanistan, and other global hotspots with Senator Ernst, a member of the Senate Armed Services Committee. She is the first female combat veteran elected to the U.S. Senate. The event is – as always – moderated by Nina Easton of Fortune.

JHU to Host Italian CEO on NatGas Europe – On Friday at 9:45 a.m., the Johns Hopkins University Center for Trans-Atlantic Relations will hold a discussion with Marco Alverà, CEO at Snam to discuss natgas in Europe. He will join JHU SAIS Dean Vali Nasr. Introductory remarks will be given by Daniel Hamilton, Executive Director of Johns Hopkins SAIS Center for Transatlantic Relations. Alverà has been the Chief Executive Officer of Snam, a European leader in the construction and integrated management of natural gas infrastructure, since April 2016. He also serves as Managing Director of Snam Rete Gas and as ad interim Chief Industrial Assets Officer of Snam.

Wilson to Host Arctic Enviro Forum – The Wilson Center's Polar Initiative will host a forum on Friday at 10:00 a.m. on the future of the Arctic Environment. Leading Arctic scientists, policymakers, and emergency response officials will present and discuss the most recent research on Arctic change, extreme weather, indigenous communities, and emergency response operations. Among the Speakers will be former State Department Official Sherri Goodman among others.

Heritage to Host Zinke – On Friday at 11:30 a.m., the Heritage Foundation will host a major policy address by the U.S. Secretary of the Interior, Ryan Zinke in its Allison Auditorium. Secretary Zinke will discuss President Donald Trump's American energy dominance agenda, focusing specifically on the importance of American energy production and how the federal government can be a better business partner.

IN THE FUTURE

Geothermal Conference Set for Utah – The Geothermal Energy Association (GEA) is holding

GEOEXPO+ on October 1-4th at the Salt Palace in Salt Lake City, UT. The meeting will be held in conjunction with the GRC Annual Meeting.

WCEE Hosts Federal Lands Discussion – Next Monday at Noon, the Women's Council on Energy and the Environment (WCEE) holds a forum to discuss current opportunities and challenges for the development of energy and mineral resources under the new Administration. Among other hotly debated topics, the event will cover the role of climate change considerations in decision-making, potential changes in mitigation requirements, issues regarding royalty valuation and payment, and still unresolved issues regarding the scope of Presidential withdrawal authority onshore and offshore under decades-old statutes.

CCS Forum to Look at Norway Success Story – The Global CCS Institute will hold a forum on Tuesday, October 3rd at 9:00 p.m. in National Press Club's Zenger Room on the Innovation and low-carbon policies that are driving the development of clean energy technologies around the world. The discussion will explore how Norway has fostered the development of its carbon capture infrastructure, as well as the emerging business case for carbon capture in the U.S. and globally. Featured speakers Gassnova CEO Trude Sundset, Rich Powell of ClearPath Foundation, Thina Saltvedt of Nordea Bank Norge and Statoil VP of New Energy Solutions Steinar Eikaas, who operates the world's most successful carbon capture project in the North Sea.

Forum to Look at Iran Deal – On Tuesday, October 3rd from 1:30 p.m., the Center for a New American Security will hold two panel discussions on the implications of the potential collapse of the Joint Comprehensive Plan of Action (JCPOA). The discussion will focus on what happens if President Trump begins unraveling the nuclear agreement in mid-October by not certifying Iranian compliance to Congress and will also examine other potential collapse scenarios. Our friend Elizabeth Rosenberg is among the panelists.

SEJ Set for Pittsburgh – Speaking of Pittsburgh, SEJ's 27th annual conference is set for October 4-8 in Steel City.

Vets in Energy Forum Set – Veterans In Energy will hold a forum on October 5th through 7th at NRECA in Arlington. VIE provide transition, retention and professional development support to the growing population of military veterans who have chosen energy careers. Speakers will include Chris Hale of GI Jobs and Gen. John Allen, former Dep Commander of US Central Command.

CSIS to Look at Electricfication – The CSIS Energy & National Security Program will host a discussion on Thursday October 5th at 9:30 a.m. looking at the future of electrification with Arshad Mansoor, Senior Vice President of Research and Development at the Electric Power Research Institute (EPRI). Mansoor will provide an overview of the recent EPRI report, *The Integrated Energy Network: Connecting Customers with Reliable, Affordable and Cleaner Energy*, which calls for a more interconnected and integrated energy system through greater electrification. Frank O'Sullivan, Director of Research and Analysis at the MIT Energy Initiative, and Ken Colburn, Principal and U.S. Program Director at the Regulatory Assistance Project, will follow with views on the opportunities and benefits, as well as obstacles and potential drawbacks of a path to a more electrified economy. This event is part of CSIS's ongoing work on Electricity in Transition, which surveys the current landscape of the U.S. and global electricity sector.

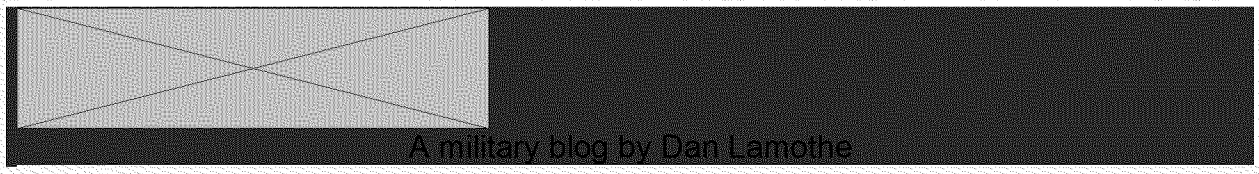
Forum to Look at LNG in Latin America – The Atlantic Council hosts a forum on Thursday, October 5th at Noon looking at the Growing Role of LNG in Latin America. Natural gas is emerging as a critical source of energy in the Americas and around the world, and Latin America is rapidly becoming a key destination for US LNG exports. Latin America is currently the number one destination for US LNG exports, accounting for over 40%. Many governments in the region see natural gas as a low-carbon energy option that can support their increasing turn towards renewables. Additionally, lower global LNG prices, the impacts of drought conditions on the region's hydropower sector, and a departure from industries such as coal and diesel have driven the demand for LNG and calls into question whether this is an opportunity for Latin America to become more integrated. The forum will feature a conversation with Argentinian Ministry of Energy and Mining Transport Director Gonzalo Aguirre, Jose Luis Castro of Sociedad Portuaria El Cayao (SPEC), Giovani Machado of Empresa de Pesquisa Energética and the State Department's acting Deputy Assistant Secretary of Energy Resources Sue Saarnio.

ELI, DC Bar to Look at Policy Reversals – The Environmental Law Institute and the DC Bar are hosting a forum on Thursday October 5th on how agencies often reverse policy. Since the presidential transition, EPA and other agencies have used a variety of tools to change policies and regulations. Three common tools they have used are stays, remands, and reconsideration. Agencies administratively stay the effective date of rules preventing them from going into effect, seek voluntary remand of rules in litigation to revisit rules administratively while avoiding a judicial decision, and administratively reconsider rules. Some of these actions have been the subject of the heated litigation, and the courts have acted to constrain agency discretion, including in an important D.C. Circuit decision rejecting EPA's stay of the oil and gas methane rule. Expert panelists will discuss the use of these legal tools in changing agency policy, and offer cutting-edge perspectives from the government, the private sector, and the environmental advocacy community.

ACORE Finance Forum Set – The American Council on Renewable Energy will hold forum on the state of the renewable energy public policy, financial markets and corporate renewables strategy when they hold ACORE Finance West on October 12th at the Bently Reserve in San Francisco. This annual conference convenes senior investors, industry executives, and other top transactional professionals to address market trends in the context of renewable investment opportunities in the Western U.S.

Bloomberg Hosts Sustainability Forum – Bloomberg holds its 3rd annual Sustainable Business Summit on October 12-13th in its New York offices to discuss how companies are yielding positive returns for investors, creating sustainably valuable products and processes, and developing innovative sustainable business models. Uniquely positioned at the intersection of sustainable business and sustainable investing, the summit will explore the challenges and even greater opportunities emerging across industries.

WAPA to Host Road Rally – The Washington Automotive Press Association holds its 2017 WAPA Rally on October 12th. This year's event will be a drive event on the roads just beyond the Chesapeake Bay Bridge on the scenic Eastern Shore of Maryland. The event provides the opportunity to drive or ride in the latest and greatest cars, trucks and SUVs provided by WAPA's automotive partners.



Renewable Tour Set for October Shenandoah Fall – JMU's Center for Wind Energy joins the nonprofit American Solar Energy Society (ASES) and hundreds of solar-savvy installers and grassroots organizations throughout America to showcase thousands of solar-powered homes, schools and businesses in Virginia and across North America -- for the 22nd Annual National Solar Tour, the world's largest grassroots solar event. The ASES National Solar Tour shows families and businesses real-life examples of how their neighbors are harnessing free energy from the sun to generate electricity, warm and cool their homes, heat water and slash monthly utility bills.

Green Bonds Conference Set for NYC – Environmental Finance will host Green Bonds 2017 at 10 on the Park in New York City on October 23rd. According to the Green Bonds Database, the American green bonds market has continued its rapid growth with over 17$ billion issued in the last twelve months.

At the conference this year we will look at the drivers behind this boom and how to ensure

sustainable growth as the market matures.

Driving the Day

Good Saturday morning. PRESIDENT DONALD TRUMP walked out of the White House this morning and took questions from the press, according to pooler James Osborne of the Houston Chronicle.

-- ON THE SENATE TAX BILL: "It was a fantastic evening last night. We passed the largest tax cuts in the history of our country and many other things along with it. Now we go onto conference and something beautiful is going to come out of that mixer. People are going to be very, very happy. They're going to get tremendous, tremendous tax cuts and tax relief, and that's what this country needs. Business tax all the way down from 35 to 20. It could be 22 when it comes out but it could also be 20. We'll see what ultimately comes out."

-- ON FLYNN: "What has been shown is no collusion, no collusion. There's been absolutely no collusion, so we're very happy. And frankly last night was one of the big nights. We'll see what happens."

Trump left at 9 a.m. for Joint Base Andrews for a day trip to New York City.

ONE STEP CLOSER TO A LEGISLATIVE ACHIEVEMENT -- A.P. BULLETIN at 1:51 a.m.: "WASHINGTON (AP) - Senate narrowly OKs near-$1.5 trillion tax bill, pushing President Trump and GOP close to year's biggest legislative win."

-- SEUNG MIN KIM, BRIAN FALER, COLIN WILHELM and **BERNIE BECKER:** "The 51 to 49 vote came after Senate Republicans frantically rewrote the multi-trillion dollar legislation behind closed doors to win over several final holdouts, and left congressional Republicans just a few steps away from sending legislation to President Donald Trump's

desk. The House passed its own plan in November.

"Sen. Bob Corker of Tennessee was the only Republican to oppose the measure, in what's also a big victory for Senate Majority Leader Mitch McConnell (R-Ky.), who repeatedly fell short in his efforts to push through an Obamacare repeal measure this year. 'I think one reason we were able to get there was because there's widespread interest,' McConnell said in an interview with POLITICO. 'Every single member of our conference wanted to get to yes, and all but one did.'" http://politi.co/2AkigOo

-- WAPO'S HEATHER LONG: "How an unequal tax cut grew more unequal": "As Republicans moved closer to a final vote on the bill Friday night, they made several tweaks to the tax legislation. They announced more benefits for business owners, particularly wealthy ones, but they voted down a proposal by Sens. Marco Rubio (R-Fla.) and Mike Lee (R-Utah) to give low-income families a bigger tax break.

"The disparate treatment underlined how the legislation -- a massive rewrite of the individual and corporate tax code -- has evolved since its first incarnation: What began as an effort that would favor wealthy individuals and corporations became, in many ways, even more tilted in their favor as the legislation made its way through the Senate.

"Rubio and Lee had suggested paying for their idea by lowering the corporate tax rate from 35 percent to 21 percent instead of 20 percent. 'We could have helped so much more,' an exasperated Rubio had said earlier Friday, anticipating defeat. 'With less than that one percent difference, we can make a huge difference in the lives of millions of Americans making between $20,000 and $50,000.'" http://wapo.st/2kiGcff

-- **"A Hasty, Hand-Scribbled Tax Bill Sets Off an Outcry,"** by NYT's Jim Tankersley and Alan Rappeport: "By midafternoon on Friday, Republicans had the votes to pass their tax bill in the Senate. What they did not have was a bill. The legislation, covering nearly 500 pages, finally surfaced well after the sun had set. It appeared first in the lobbying shops of K Street, which sent back copies to some Democrats in the Senate, who took to social media to protest being asked to vote in a matter of hours on a bill that had yet to be shared with them directly. The drafts that leaked to journalists included changes scrawled in looping handwriting in the margins. Democrats posted screenshots and accompanying complaints." http://nyti.ms/2AoY9wz

-- @SenatorTester: "I was just handed a 479-page tax bill a few hours before the vote. One page literally has hand scribbled policy changes on it that can't be read. This is Washington, D.C. at its worst. Montanans deserve so much better." ***1-min. video*** http://bit.ly/2nneEGG

-- ONE SMALL DEM VICTORY: "Democrats defeat GOP bid to shield conservative college from endowment tax," by Michael Stratford: "Four Senate Republicans joined with Democrats to strip from the GOP tax bill a last-minute provision that would have shielded Hillsdale College, a prominent conservative school, from a new tax on university endowments. An amendment offered by Sen. Pat Toomey (R-Pa.) - and

incorporated into a package of changes Republicans unveiled Friday evening to their tax plan, H.R. 1 (115) - would have exempted all colleges that don't accept federal student aid from the endowment tax.

"But Democrats immediately cried foul over the plan because it appeared to benefit only a single college, Hillsdale College, whose president, Larry Arnn, is influential in conservative intellectual circles. Arnn, who was floated last year as a potential pick to be President Donald Trump's Education secretary, has served as a Heritage Foundation trustee since 2002. The school also has close ties to the family of Education Secretary Betsy DeVos.

"Republican Sens. Susan Collins of Maine, Deb Fischer of Nebraska, John Kennedy of Louisiana, and Lisa Murkowski of Alaska joined with Democrats early Saturday morning to pass an amendment by Sen. Jeff Merkley (D-Ore.) that stripped the provision from the tax bill." http://politi.co/2BFpX00

THE SEUNG MIN KIM QUICK-TURN TICK TOCK (published at 3:16 a.m.) -- **WITH MCCONNELL INTERVIEW: "How McConnell got a win on taxes":** "On a recent phone call to discuss the GOP's tax push, Senate Majority Leader Mitch McConnell suggested President Donald Trump focus his personal lobbying efforts on one senator in particular: Ron Johnson. For weeks, the Wisconsin Republican had made it clear he would seek more generous tax treatment of certain small businesses - and that he was willing to use his vote as leverage.

"But after several phone calls from Trump and one final negotiating session inside Senate Majority Whip John Cornyn's ornate Capitol office, Johnson said early Friday he would finally support the bill. That announcement made passage seem all but inevitable just one night after the bill nearly collapsed in spectacular fashion on the Senate floor. McConnell and his leadership team ultimately secured passage of the tax code rewrite in the early hours of Saturday morning after weeks of methodically working each wavering vote, and by trying to learn the lessons of their Obamacare repeal failure.

"It worked. By moving the tax bill through the committee process and letting more GOP senators give more input as they drafted the bill, the Kentucky Republican delivered a sorely-needed legislative achievement to his party in a year marked by turbulence on both ends of Pennsylvania Avenue." http://politi.co/2norXXm

MCCONNELL ASSESSMENT OF THE YEAR: "It's been quite a year for Senate Republicans," McConnell said in an interview with POLITICO as the chamber prepared to pass the bill. "We've changed the Supreme Court for a generation and done the first comprehensive tax reform in 31 years. Big year for us."

TRUMP ON REPUBLICANS -- @realDonaldTrump at 7:54 a.m.: "Biggest Tax Bill and Tax Cuts in history just passed in the Senate. Now these great Republicans will be going for final passage. Thank you to House and Senate Republicans for your hard work and commitment!"

THE MACRO -- The Republican Senate passed the largest rewrite of the tax code in a generation, after failing to gut the health care law championed by President Barack Obama. **THE MICRO --** This passed at nearly 2 a.m. after a slew of backroom deals between Republican leaders and senators. This is the same stuff the GOP nailed Democrats on for years.

WHAT HAPPENS NOW? -- The House will vote on Monday to begin a formal negotiation -- called a conference -- to reconcile the differences in the two bills. Senior aides we speak to think a conference will go pretty quickly.

REMEMBER: The government shuts down in less than a week. There are severe misgivings about the GOP plan to pass a short-term funding bill until Dec. 22, and then another until January. But the House GOP announced Saturday morning that they would proceed with that plan, scheduling a meeting of the Rules Committee to set the guidelines for debate.

****** **A message from PhRMA: How much are hospitals marking up medicine prices?** According to new Moran Company analysis, hospitals mark up medicine prices nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. Read more: http://onphr.ma/2hSaqox ******

BREAKING at 10:06 a.m.: "LANSING, Mich. (AP) - 3 Democrats tell AP longtime Democratic Rep. Sander Levin of Michigan to retire, won't seek re-election to 19th term."

SPLIT SCREEN -- PELOSI, DCCC CHAIRMAN call for Rep. Ruben Kihuen (D-Nev.) to resign.

-- THE STORY: BUZZFEED'S KATE NOCERA and **TARINI PARTI: "She Says She Quit Her Campaign Job After He Harassed Her. Now He's In Congress":** "Last year, a 25-year-old woman left her job on Democratic Rep. Ruben Kihuen's campaign because of what she says were repeated, unwanted propositions for dates and sex. ... Kihuen said on Friday, 'I sincerely apologize for anything that I may have said or done that made her feel uncomfortable.'

"On Feb. 6, 2016, Samantha says she accompanied Kihuen to a fundraiser - a normal function of her job as finance director. As she attempted to leave when the event wrapped up, she says Kihuen walked her to her car. 'He followed me to my car and said, "You look really good, I'd like to take you out if you didn't work for me,"' she recalled. Samantha said she quickly stated that she had a boyfriend, got in her car, and left. The advances became more frequent and more aggressive after that, asking if she had ever 'cheated on her boyfriend' and repeating that he would take her out if she did not work for him.

"On Feb. 19, Samantha says she accompanied Kihuen to a meeting with Rep. Tony Cárdenas at the Aria Hotel. Cárdenas was in town to support presidential candidate Hillary Clinton ahead of the Nevada caucuses. Cárdenas' office confirmed that he and his wife stayed in the hotel that weekend. In the elevator on the way to the meeting, Samantha said Kihuen told her, 'We should get a hotel room here.'

"'I said 'no' very firmly and he just laughed at me. It was humiliating,' she told BuzzFeed News. Kihuen drove on the way back from the meeting to their campaign office, with Samantha in the passenger seat. Samantha said Kihuen again asked if she'd ever cheated on her boyfriend, and started touching her thigh. She told him to stop, and said she said 'no' and began talking about her boyfriend. A separate time, in March, Kihuen asked for help with something on the computer during 'call time' -- when a candidate makes fundraising calls -- and Samantha alleges he grabbed the back of her thigh while she looked at the screen." http://bzfd.it/2j9GaTj

-- HEATHER CAYGLE and **ELANA SCHOR:** "House Minority Leader Nancy Pelosi is calling on Nevada Rep. Ruben Kihuen to resign amid allegations that the freshman Democrat sexually harassed a campaign staffer during the 2016 election. 'In Congress, no one should face sexual harassment in order to work in an office or in a campaign. The young woman's documented account is convincing, and I commend her for the courage it took to come forward,' Pelosi said in a statement after talking with Kihuen. 'In light of these upsetting allegations, Congressman Kihuen should resign.' ...

"'Members and candidates must be held to the highest standard. If anyone is guilty of sexual harassment or sexual assault, they should not hold elected office. Congressman Kihuen should resign,' Rep. Ben Ray Luján (D-N.M.), chairman of the Democratic Congressional Campaign Committee, said in a statement. Kihuen signaled Friday evening that he did not intend to resign." http://politi.co/2AE1j26

-- IT'S WORTH NOTING: House Democratic leaders moved much faster here than they did when Rep. John Conyers (D-Mich.) was accused of improper behavior. Pelosi and DCCC Chair Ben Ray Lujan both called for Kihuen's resignation on the same day the report surfaced. It took Pelosi several days before she called for Conyers to step down.

DEMOCRATIC OPERATIVES we talk to tell us the more closely the Democratic Party is associated with the "swamp" the harder it is for them to be able to pick up seats and make a real run at the majority. That's why you'll see them move swiftly to throw lawmakers overboard.

ON THE OTHER SIDE OF THE AISLE -- "Republicans divided on Farenthold resignation," by John Bresnahan and Rachael Bade: "Speaker Paul Ryan and his conference's top advocate on sexual harassment appear divided about whether Rep. Blake Farenthold should resign following news of his taxpayer-funded sexual harassment settlement. Ryan will not call on the Texas Republican to resign following a POLITICO report that he used $84,000 in taxpayer funds to pay off an accuser, his office said Friday night -- even though he has called for Democratic Rep. John Conyers

(D-Mich.) to step aside over similar sexual harassment allegations.

"But GOP Rep. Barbara Comstock (Va.), who's led the charge for Republicans against sexual harassment on Capitol Hill, said through a spokesperson that Farenthold should step aside. Comstock also called on Farenthold to reimburse taxpayers for the full $84,000 settlement and for both parties to waive their confidentiality agreement so they can testify about what happened." http://politi.co/2Bt3FgX

OTHER SETTLEMENTS COME TO LIGHT -- "Gowdy, Benghazi panel settled wrongful firing suit with $150,000 in public funds," by WaPo's Elise Viebeck and Michelle Ye Hee Lee: "As chairman of the House Select Committee on Benghazi, Rep. Trey Gowdy (R-S.C.) used $150,000 in taxpayer dollars to settle with a former aide who alleged he was fired in part because he was not willing to focus his investigative work on Hillary Clinton. The Post confirmed the confidential settlement reached between Gowdy and the Benghazi panel and Bradley Podliska after it appeared in a list of settlements released Friday by the congressional Office of Compliance. Gowdy is now the chairman of the House Oversight Committee." http://wapo.st/2AAuwLI

MUELLER WATCH -- "Trump keeps playing nice with Mueller, for now," by Darren Samuelsohn: "President Donald Trump's lawyers have been counseling him since this past summer to play nice with special counsel Robert Mueller. Cooperation with the Russia probe, the president's attorneys have argued, is the best path to the exoneration Trump has craved all year - a way not just to get things over with quickly, but also to signal to prosecutors that the administration has good intentions and nothing to hide.

"Now, as Mueller's probe moves deeper into the president's inner circle, some of Trump's longtime advisers are urging him to stick with the approach outlined by White House lawyer Ty Cobb. 'Take a deep breath, follow Ty Cobb's lead, trust the process,' said former Trump legal spokesman Mark Corallo. 'Antagonizing prosecutors is never a good idea. This is not arbitration. This is not mergers and acquisitions. This is not real estate law. This is criminal law. Prosecutors can do things with their almost unlimited resources, time and authority.'" http://politi.co/2Aladkh

THE MICHAEL FLYNN EARTHQUAKE -- "Mueller's swift moves signal mounting legal peril for the White House," by WaPo's Ros Helderman, Tom Hamburger and Karen DeYoung: "According to the filings, Flynn consulted with multiple senior Trump officials during the transition. One adviser, described in court documents as a 'very senior member' of the transition team, directed Flynn in December to reach out to Kislyak and lobby him about a United Nations resolution on Israeli settlements. People familiar with the investigation identified the adviser as Trump's son-in-law, Jared Kushner. Kushner lawyer Abbe Lowell declined to comment.

"Likewise, Flynn spoke to Kislyak about new U.S. sanctions imposed on Russia by President Barack Obama in late December only after discussing the matter with a senior Trump official who had accompanied him on a trip to Trump's private Mar-a-Lago club ... The senior official was Flynn's deputy, K.T. McFarland, according to two people

familiar with the conversation." http://wapo.st/2i7UvPo

--"Trump White House caught off guard by Flynn plea," by Andrew Restuccia, Annie Karni and Nancy Cook: "[T]here is a growing sense of dread among Trump's closest confidants that the noose is tightening - if not around the president, then around his closest advisers and family members. ... One person close to the White House described the mood this way: 'What they're freaked out about is that there are no leaks. Papadopoulos didn't leak. Flynn didn't leak. They feel like they can't trust anyone. Their own counsel didn't know.'" http://politi.co/2AzNukZ

-- "Trump Fumed for Weeks About Flynn Turning on Him," by The Daily Beast's Lachlan Markay and Asawainn Suebsaeng: "For weeks, Trump has vented privately to advisers and confidants about his anxiety over signs that Flynn had flipped. He noted the possibility that Flynn had 'turned on me,' three sources close to the president independently recall him saying. These sources had relayed details of these conversations to The Daily Beast over the course of the past week." http://thebea.st/2izAFjQ

-- JEFFREY TOOBIN in The New Yorker, "Michael Flynn's Guilty Plea Sends Donald Trump's Lawyers Scrambling: The President insists that the investigations into Russian meddling amount to nothing more than fake news. But the truth is now emerging." http://bit.ly/2jEIaSV

-- "What Michael Flynn's Plea Deal Means: Eleven legal experts weigh in" -- POLITICO Magazine: http://politi.co/2jDLhuH

HMM -- @brianstelter: "Via CNN's @GloriaBorger: 'One source close to the president attempted to mitigate the severity of the charge against Flynn by pointing out that everyone lies in Washington.'"

PIC DU JOUR -- @mflynnJR: "Family is the most important thing in life.....don't ever take yours for granted. Thanks everyone for the support." http://bit.ly/2As9Na9

--@TheDailyShow: "Curl up and enjoy the Mike Flynn 'Lock Her Up' Yule Log, just in time for the holiday season!" http://bit.ly/2j91M2j (h/t Matt Negrin)

OOPS: "ABC News corrects bombshell Flynn report," by CNN's Oliver Darcy: "ABC News on Friday evening corrected an explosive special report that aired in the morning saying that Donald Trump, as a candidate for president, had asked Michael Flynn to make contact with Russians. During 'World News Tonight,' ABC News investigative reporter Brian Ross said the source who had provided the initial information for his story later told him that it was as president-elect, not as a candidate, that Trump asked Flynn to contact the Russians.

"The initial report, based on one anonymous source, prompted a dramatic reaction in the financial markets, and the Dow fell more than 350 points. ... A tweet published by

ABC News containing Ross' initial report had been retweeted more than 25,000 times and embedded in various news stories online before it was deleted. ABC posted a 'clarification' on Twitter around 8 p.m." http://cnnmon.ie/2i8YMlu

TRUMP'S SATURDAY -- THE PRESIDENT is in New York. He speaks at a breakfast fundraiser at 11:20 a.m., an RNC lunch fundraiser at 12:35 p.m., participates in an RNC roundtable at 1:40 p.m. and arrives back in D.C. by 4:45 p.m.

SIREN -- WAPO: "Alabama race is neck and neck, with voters divided over Roy Moore allegations, poll finds," by Michael Scherer and Scott Clement: "With less than two weeks to go, support for Democrat Doug Jones stands at 50 percent vs. [Republican Roy] Moore's 47 percent support among likely voters -- a margin of a scant three points that sets up a nail-biter for the oddly timed Dec. 12 special election." http://wapo.st/2iCcMrO

-- AP'S STEVE PEOPLES: "Alabama Republican Roy Moore has celebrated his isolated fight against the political establishment in both parties. The outsider story may resonate with Alabama voters, but the reality has a clear downside: The Senate candidate and his allies are almost completely cut off from the GOP's traditional donor network and struggling to raise money for the final-weeks sprint to Election Day. Federal fundraising reports released Friday reveal that Moore is losing the battle for campaign cash to Democrat Doug Jones. And he's losing badly. Moore raised $1.7 million from Oct. 1 to Nov. 22, according to a filing with the Federal Election Commission. Jones raised $9.9 million over the same period." http://bit.ly/2i9PxBv

MEDIAWATCH -- "Minutes after slamming 'fake news,' Trump welcomes 'my friends in the media' for Christmas party: President tells reporters they are 'honestly in many ways very special people - at least many of you,'" by Jason Schwartz: "After spending most of the year attacking the media's credibility, President Donald Trump gave brief, but friendly, welcoming remarks to a large turnout of reporters and editors at his White House Christmas party on Friday afternoon. Those in attendance described the event as, in many ways, like any other White House holiday party ...

"Following his remarks, which lasted two minutes, Trump spent another two or three minutes shaking hands near the front of the crowd before leaving ... In previous years, presidents have stayed usually for about two hours to take pictures with media members. White House chief of staff John Kelly, press secretary Sarah Huckabee Sanders and counselor to the president Kellyanne Conway made appearances, though many senior administration officials skipped the party or stayed only a brief time." http://politi.co/2iDj3n1

SPOTTED: Kellyanne Conway chatting with Laura Ingraham and Sean Hannity, James Rosen, Steve Doocy chatting with Greta Van Susteren, John Coale, Jonathan Karl, Devin Dwyer, Justin Fishel, Michael Anton, Hogan Gidley, Brian Kilmeade, Annie Linskey, Matt Viser, Jen Jacobs, Michael Falcone, Kevin Cirilli, Jesse Watters, Howard Kurtz and Judy Kurtz, Hunter Walker, Byron York, Francesca Chambers, Peter Doocy,

Trey Yingst, Chris Isham, Charlie Spiering, Eliana Johnson, Annie Karni, Tara Palmeri, Craig Gordon, Alex Pappas, Ed Henry, Norah O'Donnell, Jackie Alemany, Louise Dufresne, Kristen Welker, Louise Radnofsky, Alice Lloyd, Jeff Mason, Steve Thomma.

YOU'RE INVITED -- Our first live podcast taping next Thursday night (Dec. 7) at 7 p.m. at Sixth and I. Our inaugural guests: **MICHAEL BARBARO**, host of the New York Times' hit podcast "The Daily," **DCCC EXECUTIVE DIRECTOR DAN SENA and NRCC EXECUTIVE DIRECTOR JOHN ROGERS**. And a panel of **POLITICO** stars: **RACHAEL BADE, SEUNG MIN KIM a**nd **ANNIE KARNI**. Get your tickets now! http://bit.ly/2hWK7tF

Playbook Reads

PHOTO DU JOUR: Senate Majority Leader Mitch McConnell (R-KY) gives a thumbs-up as he and his Director of Operations Stephanie Muchow head for the Senate floor on Dec. 1. | Chip Somodevilla/Getty Images

TV MONDAY - THE HOLLYWOOD REPORTER: "Billy Bush Books 'Late Show With Stephen Colbert,' Appearance": http://bit.ly/2jGoOx4

TRUMP WHITE HOUSE DEPARTURE LOUNGE - "Former White House southeast political director running Tennessee Senate campaign," by Daniel Strauss and Daniel Lippman: "Thomas Midanek, formerly the White House southeast regional political director, has left the Trump administration and joined former Tennessee Rep. Stephen Fincher's Senate campaign as campaign manager." http://politi.co/2jEvJXg

HOLY LAND READ -- "Trump inches toward moving U.S. Embassy to Jerusalem," by Andrew Restuccia and Eliana Johnson: "President Donald Trump and his senior aides are mulling a plan to eventually move the U.S. Embassy in Israel from Tel Aviv to Jerusalem, a decision that could derail Trump's attempts to restart peace talks between the Israelis and the Palestinians. A leading option under consideration: temporarily keeping the U.S. embassy in Tel Aviv while also outlining a longer-term strategy to begin the process of moving the embassy to Jerusalem, according to two administration officials. The plan is meant to strike a middle ground on the politically treacherous issue. One of the officials also said the administration is weighing whether to officially recognize Jerusalem as the capital of Israel." http://politi.co/2zSjVeY

FLYING SOLO -- "Kushner Is Leaving Tillerson in the Dark on Middle East Talks, Sources Say," by Bloomberg's Nick Wadhams and Erik Schatzker: "Secretary of State Rex Tillerson is increasingly alarmed by what he sees as secret talks between Jared Kushner, President Donald Trump's son-in-law and senior adviser, and Saudi Arabian Crown Prince Mohammed bin Salman -- fearful that the discussions could backfire and tip the region into chaos, according to three people familiar with Tillerson's concerns.

"The central goal of the Kushner-Prince Mohammed negotiations ... is for an historic agreement featuring the creation of a Palestinian state or territory backed financially by a number of countries including Saudi Arabia, which could put tens of billions of dollars toward the effort. ... Tillerson believes Kushner hasn't done enough to share details of the talks with the State Department ... leaving senior U.S. diplomats in the dark on the full extent of the highly sensitive negotiations." https://bloom.bg/2AkDBqR

****** **A message from PhRMA:** According to new analysis from the Moran Company, hospitals mark up medicine prices, on average, nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. While hospital markups lead to higher costs for patients, employers and payers, these markups are often overlooked in conversations about medicine costs. As the provider market continues to become more concentrated and the number of medicines being administered in hospital-owned facilities is growing, the amount hospitals mark up medicine prices needs greater scrutiny. http://onphr.ma/2Ba0TOa ******

CLICKER - "The nation's cartoonists on the week in politics," edited by Matt Wuerker -- ***14 keepers*** http://politi.co/2ApI7Co

GREAT WEEKEND READS, curated by Daniel Lippman:

--"Where Millennials Come From," by Jia Tolentino in the New Yorker: "Millennials, according to recent headlines, are killing hotels, department stores, chain restaurants, the car industry, the diamond industry, the napkin industry, homeownership, marriage, doorbells, motorcycles, fabric softener, hotel-loyalty programs, casinos, Goldman Sachs, serendipity, and the McDonald's McWrap." http://bit.ly/2AblR1y

--"How Peter Thiel and the Stanford Review Built a Silicon Valley Empire," by Andrew Granato in Stanford Politics: "But 30 years ago, as a sophomore at Stanford, Thiel ... co-founded ... the Stanford Review. ... Thiel continues to meet with the publication's editors, and he is substantially more open with them about his beliefs than he is with the general public, including on highly controversial issues like race and immigration. And across the Bay Area, many of The Review's alumni, spearheaded by Thiel, have built a relatively small but tight-knit network that extends across three decades and has a net worth that extends into the billions." http://bit.ly/2j8PgQd

--"Feeding Puerto Rico," by Anderson Cooper in CBS' "60 Minutes": "José Andrés has some 30 popular restaurants across the United States, but he's barely stepped foot in them for two months. He and an army of chefs and volunteers have been serving the people in Puerto Rico." http://cbsn.ws/2AzbNjJ

--"A failed vision," by LA Times' Richard Marosi in Veracruz, Mexico: "Mexico promised affordable housing for all. Instead it created many rapidly decaying slums."

http://lat.ms/2AbBxl4

--"When Does a Watershed Become a Sex Panic?" by Masha Gessen in the New Yorker: http://bit.ly/2mqEcSK

--"On the other side of the catcall," by Natalie Johnson in March 2014 in the Libertarian Republic: "I have never in my life been more aware of my gender until I traveled to Europe. This is not to say that I didn't feel objectified and degraded through various forms of harassment prior to studying abroad. ... This unexplainable feeling of entitlement that many men have toward women is nothing new to me. However, I have never in my life experienced it to the scale that I have while abroad." http://bit.ly/2BCrfc9

--"Kick Against the Pricks," by Laura Kipnis in the N.Y. Review of Books, reviewing "Be Fierce: Stop Harassment and Take Your Power Back," by Gretchen Carlson: "Toppling power isn't about storming the Bastille these days, it's about changing the way people talk and think. Creating a crisis of authority for those in power is how the world changes. But we're reminded by recent events that the agents of progress can be unlikely: just as the military was a major force in desegregation, now we have corporations like News Corp acting like progressives on sexual harassment." http://bit.ly/2ApHlFu ... ***$16.60 on Amazon*** http://amzn.to/2jFUjXY (h/t TheBrowser.com)

--"Trapped: The Grenfell Tower Story," by Tom Lamont in GQ: "Buildings aren't supposed to burn the way London's Grenfell Tower did. But to the residents stuck inside, and to the firefighters who rushed to save them, this was a different kind of fire, a blaze that burned at 1,800 degrees, a devastating inferno that killed dozens and shocked an entire nation. This is the untold story of what it felt like to fight that fire and to flee it-a story of a thousand impossible decisions and the people who dared that night to make them." http://bit.ly/2iB3X1l (h/t Longform.org)

--"Every Parent Wants to Protect Their Child. I Never Got the Chance," by Jen Gann in NYMag's The Cut: "In what's called a wrongful-birth case, plaintiffs sue a medical practitioner for the failure to diagnose or inform them of a disease or disability possible to detect in utero. The money awarded goes toward the cost - astronomically high - of the child's medical care. A mother desperate to help her child declares that she would not have had that child." http://bit.ly/2zIfbZx

--"Europe's Heart of Darkness," by Alexander Clapp in 1843 Magazine: "A fledgling human-trafficking trade takes in refugees from the Aegean Sea, hustles them over to the Adriatic and on to Italy. Guns come by boat from Albania or Ukraine. Hash arrives from Crete, heroin from the Turkish border, cocaine in car parts imported from South America. The contraband cigarette business makes ???1bn of illegal profit in Greece alone." http://bit.ly/2jCefL6

--"Lake Chad: The World's Most Complex Humanitarian Disaster," by Ben Taub in the New Yorker: "Boko Haram, climate change, predatory armies, and extreme hunger are converging on a marginalized population in Central Africa." http://bit.ly/2n91NYe

--"The Case for Not Being Born," by Joshua Rothman in the New Yorker: "The anti-natalist philosopher David Benatar argues that it would be better if no one had children ever again." http://bit.ly/2zJNwrf (h/t ALDaily.com)

--"The new great game in the Middle East," by John Jenkins in the New Statesman: "What we are seeing is the eruption of a previously submerged rivalry between an expansionist Iran and a historically cautious Saudi Arabia that has been years in the making. The rivalry flows from Lebanon through Syria and Iraq, across to Bahrain, Oman and Yemen and up the Red Sea. It also affects Pakistan and Afghanistan." http://bit.ly/2Alaeoj

--"The secret tricks hidden inside restaurant menus," by Richard Gray on BBC: "Great thought and effort go into creating restaurant menus - and there are some very powerful psychological tricks employed to make you choose." http://bbc.in/2mObDPb

--"How the sandwich consumed Britain," by Sam Knight in the Guardian: "The industry has its own 80:20 rule: 80% of sales come from 20% of the flavours. These are often referred to as 'the core' - the egg mayonnaise, the BLT, the chicken salad. Pret's best-selling sandwiches (the top three are all baguettes: chicken caesar and bacon, tuna and cucumber, cheddar and pickle) have not changed for seven years. [Marks and Spencer's] prawn mayo has been its No 1 for 36." http://bit.ly/2mVUZNL

--"A Generation in Japan Faces a Lonely Death," by NYT's Norimitsu Onishi in Tokiwadaira, Japan - per Longreads.com's description: "With a population of 127 million, Japan has the most rapidly aging society on the planet. Elderly individuals often live in extreme isolation, albeit only a few feet from neighbors on all sides, 'trapped in a demographic crucible of increasing age and declining births.' Their fate? A 'lonely death' where their body may remain undiscovered in their small government apartment for days (or even years) because family is distant both physically and emotionally, and friends have all long since passed away." http://nyti.ms/2zFhHvr

TRY AGAIN -- "Milo Yiannopoulos' crusade fizzles in California, so he heads to Australia," by LA Times' Ben Oreskes: Cal State "Fullerton was supposed to be just one stop in what Yiannopoulos billed as a major national tour in which he would bring hard-right attitude to liberal campuses and other venues. But the tour has largely fizzled. Of the at least eight planned events nationally in October and November, Fullerton was the only one on a college campus that ended up happening. (He also spoke at a book signing with former Trump advisor Roger Stone in mid-October in Orlando, Fla.). A spokeswoman for the writer's company disputed these numbers but declined to offer more details about where else he may have spoken." http://lat.ms/2zVBF9z

****** **A message from PhRMA:** According to new analysis from the Moran Company, hospitals mark up medicine prices, on average, nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. While hospital markups lead to higher costs for patients, employers and payers, these markups are often overlooked in conversations about medicine costs. As the provider market continues to become more concentrated and the number of medicines being administered in hospital-owned facilities is growing, the amount hospitals mark up medicine prices needs greater scrutiny. http://onphr.ma/2Ba0TOa ******

Energy and Climate Report

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Pipelines Awaiting Approval Pile Up at Federal Energy Regulator

Posted July 27, 2017, 7:00 A.M. ET

By Rebecca Kern

The backlog of natural gas pipelines awaiting Federal Energy Regulatory Commission approval is piling up as the agency enters its sixth month without enough members to approve $14 billion worth of infrastructure projects, and gas suppliers and pipeline companies could face longer-term impacts.

The pipelines awaiting regulatory approval include the proposed $5.5 billion Atlantic Coast Pipeline, owned by Dominion Energy and other partners, and the $2.1 billion Nexus pipeline, a joint project from DTE Energy Co. and an Enbridge subsidiary.

"The situation is manageable for the time being, but just barely, because we are a few months away from major delays, which would be disruptive to the construction of pipelines and gas producers," James Lucier, managing director of Capital Alpha Partners LLC, a policy research firm that follows energy investments, told Bloomberg BNA.

"If we don't have a quorum by September, we definitely need to worry," he said.

Pipeline companies are calling on the Senate to act quickly to confirm two Republican FERC nominees—Robert Powelson and Neil Chatterjee—who can return the agency to a quorum to address the pending pipelines. When fully staffed, the independent agency has five commissioners, but it is among the agencies with a long list of appointed officials that Congress has yet to confirm.

Down to One Commissioner

FERC has been without a voting quorum of three commissioners since February, and is now down to one commissioner—Acting Chairman Cheryl LaFleur. Without a quorum, it can't issue certificates authorizing construction and operation of natural gas pipelines, approve liquefied natural gas terminals or vote on contested rate hearings.

If the quorum isn't returned and the pipelines are delayed, down-the-line impacts are possible on construction jobs, and natural gas producers and shippers, pipelines companies say. This is the first time FERC has been without a voting quorum in its 40-year history. The latest pipeline awaiting a FERC vote is the proposed Atlantic Coast Pipeline, spanning 600 miles from West Virginia to North

Carolina, which received a favorable final environmental impact statement (EIS) from FERC staff July 21. It joins other high-profile pipelines including the proposed Nexus pipeline, owned by DTE Energy and Spectra Energy Partners LP (acquired by Enbridge), which received its environmental impact statement—the last step before a FERC vote—in November 2016.

"Quick action by the U.S. Senate on the FERC nominees will have an immediate impact on the nation's economy and Infrastructure," Jerry Norcia, president and chief operating officer at DTE Energy, told Bloomberg BNA.

Recently environmental groups opposing fracking and the development of natural gas pipelines have increased their efforts to put pressure on FERC.

The Sierra Club said it has opposed the nominations of Chatterjee and Powelson.

"Unfortunately, Donald Trump's nomination of Neil Chatterjee and Rob Powelson will continue FERC's status quo of approving unneeded fracked gas pipelines that take private land for corporate gain and lock Americans into higher electricity rates while increasing our dependency on fossil fuels for decades to come," Lena Moffitt, Sierra Club's director of the Our Wild America campaign aimed at protecting public land, told Bloomberg BNA.

Also, the Natural Resources Defense Council is an intervenor in the natural gas certificate cases at FERC for the Atlantic Coast and Mountain Valley pipelines. John Moore, director of the NRDC's Sustainable FERC Project, told Bloomberg BNA that his group believes these projects aren't necessary because there isn't enough demand for the fuel and other clean energy alternatives are available.

Senate Impasse

Chatterjee and Powelson were reported favorably out of a Senate committee in a 20-3 vote and are awaiting a Senate floor vote. Senators Ron Wyden (D-Ore.), Bernie Sanders (I-Vt.) and Mazie Hirano (D-Hawaii) were the three members who voted against them.

Two more nominees, Richard Glick (a Democrat) and Kevin McIntyre (a Republican)—have been named by President Donald Trump, but their nominations haven't been formally sent to the Senate to begin their hearing and confirmation process. Without agreements on vote timing between Senate Majority Leader Mitch McConnell (R-Ky.) and Senate Minority Leader Charles Schumer (D-N.Y.), FERC's quorum may not be restored until after Labor Day, Christi Tezak, managing director of research at ClearView Energy Partners LLC, told Bloomberg BNA. And the value of backlogged pipeline projects could reach $17 billion by October, she projected.

Sen. Lisa Murkowski (R-Alaska), chairman of the Senate Energy and Natural Resources Committee, which favorably reported out Powelson and Chatterjee, has said it is "critical to restore a working quorum at FERC as soon as possible." Sen. Maria Cantwell (D-Wash.), the committee's ranking member, also voted in favor of both nominees and has supported FERC returning to a quorum.

Impacts on Jobs, Suppliers, Consumers

The lack of FERC quorum "has implications that go pretty far beyond the pipeline companies," Don Santa, president of the Interstate Natural Gas Association of America, told Bloomberg BNA.

DTE Energy's Norcia said that if FERC approves the proposed Nexus pipeline, it would provide

more than 7,000 construction jobs to Ohio and Michigan. Atlantic Coast Pipeline says it will employ more than 17,000 construction workers West Virginia, Virginia and North Carolina.

Smaller pipelines such as the $1 billion proposed Penn East pipeline, owned by a group of companies including Spectra Energy and NJR Pipeline Co., would run through New Jersey and Pennsylvania and provide up to 3,000 construction jobs.

Santa, whose trade group represents the major U.S. pipeline companies, said uncertainty of the FERC approval timeline could lead to potential construction delays.

In addition, pipeline companies could be subject to paying penalties to shippers if contracts aren't met due to delayed approval, and the companies' shareholders may not get the returns on their investments if there are delayed in-service dates.

Dena Wiggins, president and CEO of the Natural Gas Supply Association, which represents natural gas producers such as ExxonMobil Corp. and Chevron Corp., said the backlog directly impacts them.

"Natural gas producers have to have pipelines to get their gas to market and we've got an abundant supply, but we've got to have the pipelines," she told Bloomberg BNA.

If there are further delays, consumers may see higher prices.

"When you build new pipeline infrastructure, particularly if you relieve a bottleneck in the pipeline system, that lowers delivered gas prices," Santa said. He said this could lower heating and electricity bills.

'Not a Practice I'd Recommend'

"We are literally driving right up to the end of the cliff. And the good news is that as long as you stay on this side of the edge, you can still be fine. It's just not a practice I'd recommend," Capital Alpha's Lucier said.

One the first pipelines to come online, if approved after a FERC quorum is restored, would likely be the Nexus pipeline. The pipeline will likely be completed some time in 2018, Gerry Anderson, DTE Energy's president and CEO, said in the company's second quarter earnings call July 26.

Other pipelines still project a late 2018 start-date, including the $3.5 billion Mountain Valley pipeline primarily owned by EQT Midstream Partners that would span through Virginia and West Virginia; and Penn East.

TransCanda Corp.'s $2 billion Mountaineer Xpress in West Virginia could be added to the list of potentially delayed projects if FERC doesn't have a quorum until later this year. The company is projecting for the pipeline be operational in late 2018 as well.

The owners of the Atlantic Coast Pipeline—Dominion Energy, Duke Energy, Piedmont Natural Gas and Southern Co.—say that they are confident they will receive FERC approval by the fall, and for the pipeline to be operational by late 2019.

Russian Energy Sanctions Poised for Quick Senate Approval

Posted July 27, 2017, 11:46 A.M. ET

By Brian Dabbs

New restrictions on U.S. energy projects overseas are poised to reach the president's desk in the coming days as part of a broad sanctions package targeting Russia, as well as Iran and North Korea.

Senate Democrats all signed off on the bill (H.R. 3364), which would prohibit U.S. companies from participating in energy projects that have a 33 percent or more Russian stake, a spokesman for Senate Majority Leader Charles Schumer (D-N.Y.) told Bloomberg BNA July 27.

The oil and gas industry lobbied hard against the original Senate version, which would have prohibited U.S. company participation in energy projects with any Russia stake. Exxon Mobil Corp., Chevron Corp., and other U.S. companies participate in joint energy projects across the globe. Marty Durbin, American Petroleum Institute executive vice president and chief strategy officer, told Bloomberg BNA the new bill marks an improvement.

"There remain concerns with how this legislation could affect U.S. business interests in the future, but the amended bill more appropriately focuses sanctions on the intended target—Russia and its energy firms—rather than inadvertently benefiting Russia at the expense of U.S. companies," Durbin said in an email.

Unanimous Republican support would allow the bill to bypass Senate procedural obstacles. A spokesman for Majority Leader Mitch McConnell (R-Ky.) didn't immediately respond to Bloomberg BNA's request for comment.

U.S. sanctions already target a wide range of the Russian energy sector, but existing policy applies only to projects—such as extraction and pipelines—within the Russian Federation. The change to a 33 percent threshold sparked some opposition among senators.

Senate Foreign Relations Committee Chairman Bob Corker (R-Tenn.), however, signaled senators are now willing to shelve those concerns.

"I am glad to announce that we have reached an agreement that will allow us to send sanctions legislation to the president's desk," Corker said late July 26.

GOP Renews Fight for Edison's Light Bulb as Industry Goes LED

Posted July 27, 2017, 12:48 P.M. ET

By Ari Natter

Congressional Republicans renewed their effort to save the traditional light bulb, passing a measure to block federal energy standards that have come to symbolize government overreach for many consumers but are largely embraced by manufacturers as the cost of the newer bulbs has plummeted.

The House passed an amendment to a spending bill late July 26 to block enforcement of Energy Department rules requiring manufacturers to phase out sales of incandescent light bulbs to cut power use. While the measure faces an uncertain future in the Senate, its sponsor called it an

important victory for freedom.

"Congress should fight to preserve the free market," Michael Burgess, a Texas Republican, said on the House floor before the vote. Burgess said he had heard from tens of thousands of people about how the regulations "will take away consumer choice when constituents are deciding which light bulbs they will use in their homes."

Standards Have Curtailed Use

The measure takes aim at rules that were issued under a 2007 bipartisan energy legislation signed into law by Republican President George W. Bush. The standards, which were phased in starting in 2012, have curtailed the use of incandescent light bulbs.

If it becomes law, the measure could have some unintended consequences, critics warn. While it won't change light bulb standards which have been in effect for years, it could hamstring authorities from blocking import of incandescent bulbs from China or other nations that that don't meet the requirements, said Steven Nadel, executive director of the American Council for an Energy-Efficient Economy, a non-profit group that promotes energy conservation.

When Republicans attacked these standards, manufacturers said they would still voluntarily comply with them, and the LED share of the market has surged over the last three years as the cost of those bulbs dropped.

LED light bulbs, which made up just 1 percent of global market share in 2010, are estimated to make up 95 percent that market by 2025, according to research by Goldman Sachs. They accounted for more than a quarter of U.S. sales last year, it said. Other bulbs that have been used to meet the requirements include the ubiquitous curly compact florescent, or CFL, bulbs and halogen lights.

When a similar measure passed into law as a rider in government funding legislation in 2011, the National Electrical Manufactures Association, which represents companies such as Philips Lighting NV and General Electric Co. said light bulb makers planned to comply with them regardless. Tracy Cullen, a spokeswoman for the trade group, did not respond to an email and phone message seeking comment.

'Mind-Boggling'

"It's mind-boggling to me," Elizabeth Noll, legislative director of the Natural Resources Defense Council's energy and transportation program, said. "It just adds uncertainty to their products and the rules of the road they are complying with."

The requirements, which have been put in place over time starting with the 100-watt light bulb in 2012, will cut the nation's electricity costs by $12.5 billion dollars annually and avoid the equivalent of 30 new power plants, the environmental group estimates.

"It's a an ideological objection to government interference in the market place," said Kateri Callahan, president of the Alliance to Save Energy, a Washington-based nonprofit. "All the things that Dr. Burgess and other opponents to those standards said would happen—limited choice by consumer, high prices—none of that has borne out."

Growth-Starved Utilities Have Found a New Way of Making Money

Posted July 27, 2017, 8:54 A.M. ET

By Christopher Martin, Jim Polson and Mark Chediak

There's a new model emerging for growth-starved utilities looking to profit from America's solar and wind power boom.

American Electric Power Co. is using it for a $4.5 billion deal that'll land the U.S. utility owner a massive wind farm in Oklahoma and a high-voltage transmission line to deliver the power. NextEra Energy Inc.'s Florida unit is using it to build solar farms. And in April, the chief executive officer of Xcel Energy Inc. said he'd use it to help add 3.4 gigawatts of new wind energy over the next five years.

Here's how it works: Some utilities that for years contracted to buy electricity from wind and solar farm owners are now shifting away from these so-called power purchase agreements, or PPAs. They're instead seeking approval from state regulators to buy the assets outright and recover the costs from customers through rates. While the takeovers are being branded as a cheaper way of securing power, saving ratepayers millions in the end, they also guarantee profits for utilities.

"We keep wondering why utilities are always signing PPAs that pass the cost through to customers," said Amy Grace, an analyst at Bloomberg New Energy Finance. "If you put it in your rate base, you can get a guaranteed return on it. There's a big upside to ownership."

With the cost of building solar and wind farms sliding and electricity demand weakening, owning renewables is a more attractive proposition than ever for utilities.

"The price of wind has come down enough that it's going to be competitive with anything else you're probably going to propose to build out there," Kit Konolige, a New York-based utility analyst for Bloomberg Intelligence, said by phone July 26.

Biggest Hurdle

The catch, of course, is regulatory buy-in. AEP will need approval from Arkansas, Louisiana, Oklahoma, Texas and federal regulators to purchase the 2,000-megawatt Wind Catcher farm from developer Invenergy LLC, build a 350-mile (563-kilometer) transmission line and bake the costs into customer rates. The company expects to file these plans with regulators on July 31.

Benjamin Fowke, chief executive officer of Minneapolis-based Xcel Energy, said in April that the company would seek approval to add 3.4 gigawatts of new wind energy and bill customers for as much as 80 percent of that investment through rates. He said at the time that wind energy is now the cheapest new form of generation.

NextEra has already gotten Florida's go-ahead to recover the costs of the solar farms its Florida utility is building through customer rates.

Should AEP gain similar approvals, the utility will be embarking on its most expensive renewable energy project yet, underscoring a dramatic shift in America's power mix. Once the largest consumer of coal in the U.S., AEP is now shuttering money-losing plants burning the fuel and

diversifying its resources along with the rest of the utility sector.

The Wind Catcher farm in Oklahoma is set to become the largest wind farm in the nation and the second-biggest in the world, according Invenergy.

AEP estimated that the low cost of the wind power will save customers $7 billion over 25 years. Construction on the farm began in 2016, and the plant is scheduled to go into service in mid-2020, Invenergy said by email.

Natural Gas Severance Tax Bill Passes in Pennsylvania Senate

Posted July 27, 2017, 01:03 P.M. ET

By Leslie A. Pappas

Natural gas drillers in Pennsylvania would pay a severance tax and consumers will pay higher taxes on natural gas under a proposal the Pennsylvania Senate narrowly approved today. House Bill 542, which passed the Senate 26-24, would levy a severance tax on the extraction of natural gas on top of the state's existing impact fee, which is levied on natural gas producers per well drilled. The bill would also impose a new gross receipts tax on natural gas that will be paid by consumers.

The new gas taxes are part of a revenue proposal that includes widespread tax increases, the Senate's solution to plugging a $2 billion hole in the state's fiscal 2017-18 budget. The Pennsylvania Legislature passed $32 billion spending package on June 30 without revenues to back it up, and since then, has been arguing about how to pay for it.

The bill now goes to the House.

If Petronas Can't Beat U.S. LNG Suppliers, It Could Join Them

Posted July 27, 2017, 7:57 A.M. ET

By Natalie Obiko Pearson, Ryan Collins and Kevin Orland

Malaysia's Petroliam Nasional Bhd has pulled the plug on its $27 billion plan to ship liquefied natural gas from Canada's west coast to Asia, losing out to U.S. suppliers who got to market first.

Well, if it can't beat them, it may still join them.

With its Pacific Northwest LNG project now dead, Petronas, as the state-owned company is known, needs to find a home for the gas produced by its Progress Energy Canada Ltd. unit in Canada's massive Montney formation—and exporting from the U.S. might be its best bet.

"Given the high quality of Petronas' liquid-rich shale assets in Canada, it wouldn't be surprising if Petronas tried to monetize some of them into LNG through a U.S. Gulf Coast facility," said David Austin, a Vancouver-based energy lawyer at Clark Wilson LLP who has advised clients working in the Montney, one of the continent's most prolific and cheapest sources of gas.

Petronas' decision to scrap the Pacific Northwest plant underscores how Canada's natural gas

industry has struggled to compete with surging supplies from U.S. shale formations, which are already reaching buyers from Chile to China. As U.S. gas shipments to overseas buyers climb to a record and Canada's export projects remain stalled, Canadian drillers may have little choice but to send their output through Gulf Coast LNG terminals.

"That resource that we own is world class and highly competitive," Progress CEO Mark Fitzgerald said on a conference call Tuesday when asked about the possibility of exporting through the U.S. "We'll look at every option that we can to bring that to market."

Petronas' Progress wouldn't be the first Canadian producer to turn to the U.S. for help in exporting gas. Cheniere Energy Inc., which owns two LNG terminals on the Gulf Coast, signed its first Montney supply deal with Calgary-based Seven Generations Energy Ltd. earlier this year.

Cheniere is "absolutely" looking at other Canadian natural gas suppliers, Corey Grindal, senior vice president of gas supply, said in a June 26 interview in Houston. "We are in conversations with others."

Grindal also said Cheniere is in discussions about whether additional infrastructure needs to be built, potentially with a partner, "to get gas from the Montney down to one or both our terminals." Cheniere operates the Sabine Pass terminal in Louisiana and is building a second near Corpus Christi, Texas.

The Montney, a formation sometimes referred to as the "the Permian of the North" after the massive Texas oil and gas field, straddles the provinces of British Columbia and Alberta. The play holds about 449 trillion cubic feet of marketable natural gas, according to a 2013 estimate from Canada's National Energy Board. That's about half the total reserves of Qatar, the world's biggest exporter of liquefied natural gas.

Seeking Markets

But Canadian oil and gas producers face limited options in finding potential customers for their supply. Regulatory delays and environmental opposition have long stymied pipeline and LNG terminal projects seeking to ship out of Canadian ports to newer, more profitable markets.

Canada "has a tremendous resource, but market outlets are limited," Matthew Phillips, director at Guggenheim Securities LLC in Dallas said.

Petronas spent C$5.2 billion to buy Progress Energy in 2012 to take control of gas fields in the Montney intended to supply the LNG terminal. Progress, with partners China Petrochemical Corp., Japan Petroleum Exploration Co., Indian Oil Corp. and Brunei's state oil company, produce more than 750 million cubic feet equivalent of natural gas per day, according to the company's website.

"There's just a huge amount of it," said Samir Kayande, director at Calgary-based RS Energy Group. "What they need to do is figure out what the market for that gas is."

TransCanada Corp., which was building the North Montney Mainline to supply Montney gas to Petronas' LNG terminal, said earlier this year that the pipeline would be successful even without the facility.

The line "is needed whether or not LNG goes ahead," Shawn Howard, a spokesman for TransCanada, said in an email. "The Montney basin is one of the lowest-cost, most prolific North American shale plays, and production growth in this area requires additional infrastructure to

connect supply to existing or new markets."

Canadian producers looking to boost gas exports to the U.S. will face stiff competition from producers in the Marcellus shale basin of Pennsylvania and West Virginia, Phillips said. A U.S. export valve is unlikely to resolve the basic conundrum facing stranded Canadian producers: better prices.

"It means we're beholden to the U.S.," said Andy Mah, chief executive officer of Calgary-based Advantage Oil & Gas Ltd. "Until we can start recognizing that we have something of value and make it happen, we're going to be at their mercy."

—With assistance from Robert Tuttle.

Subject: NOAA measures largest Gulf dead zone ever

By Annie Snider

08/02/2017 02:44 PM EDT

Federal scientists have measured the largest dead zone in the Gulf of Mexico ever recorded, with this year's oxygen-depleted area covering a space roughly the size of New Jersey.

The National Oceanic and Atmospheric Administration, which lead the measurements, said the sprawling dead zone is fed by nutrient pollution washing down the Mississippi River, primarily from farms and urban and suburban runoff. Such "non-point pollution," in Clean Water Act parlance, is not federally regulated and is difficult to control. These nutrients spawn massive algae blooms that suck oxygen from the water as they decompose.

At 8,776 square miles, the dead zone continues to grow despite efforts launched in the 1990s to shrink it. A task force of state and federal agencies had set a goal in 2001 that aimed for the dead zone to be more than four and a half times smaller by now.

Scientists estimate that to shrink the dead zone to the goal of 1,900 square miles would require a 45 percent reduction in nutrient pollution along the Mississippi River. In 2015, when the federal-state task force missed its goal, it said it would take another two decades to reach those levels using voluntary, state-led efforts. The task force set an interim goal of cutting pollution by 20 percent by 2025.

WHAT'S NEXT: State and federal agencies have promoted voluntary efforts to measure and study nutrient pollution problems in the U.S., but the Trump administration has shown little interest in potentially controversial, more hands-on efforts to stanch nutrient pollution.

News

Air Pollution
Los Angeles Refineries to Pay More for Excessive Flaring
Los Angeles area oil refineries face higher fees for unplanned and repeat flaring events under a new local regulation.

Chemical Safety Board
Safety Board's Push for Exxon Records Carries High Stakes
A years-long dispute over the Chemical Safety Board's access to ExxonMobil Corp. documents will enter a new phase at a Los Angeles federal courthouse in August, posing a test for the agency—and for corporations seeking to avoid disclosure that could prompt new regulations.

Cybersecurity
Russians Are Said to Be Suspects in Nuclear Site Hackings
Hackers working for a foreign government recently breached at least a dozen U.S. power plants, including the Wolf Creek nuclear facility in Kansas, according to current and former U.S. officials, sparking concerns the attackers were searching for vulnerabilities in the electrical grid.

Endangered Species
Sage Grouse Lawsuits on Hold Pending Interior Action
Three court fights over protections for the greater sage grouse were halted as the Interior Department reconsiders its strategy for protecting the birds, which could impact energy production, mining, and livestock operations.

Energy
Cooler Efficiency Rule Issued, Others on Ice at Energy Agency
It was a welcome breath of cold air for refrigeration companies and energy efficiency advocates when the Energy Department released a walk-in cooler and freezer energy efficiency standard that was held at the end of the Obama administration.

Energy
Germany Extends Tax Breaks for Natural Gas Production
A plan to extend significant tax breaks for production of both natural gas and liquefied petroleum gas through 2023 was approved July 7 by German lawmakers, who deemed the measure deemed necessary for the country's problematic transportation sector.

Energy

Germany Moves to Equalize Consumer Electric Grid Costs
The upper house of the German Parliament, the Bundesrat, passed a bill July 7 that clears the way for the government to harmonize long-distance electricity transmission costs across the country by 2023, a move many welcome but say comes too late at too high a cost.

Energy
Millennials and Their iPhones Are Killing Traditional Utilities
It won't be long, experts say, before the average Londoner will be able to program her day to start this way:

General Policy
Week Ahead: Senate Expected to Confirm New Regulatory Chief
The Trump administration's pick for chief regulatory officer is expected to win Senate confirmation, one of several developments on environment and energy issues during the week of July 10.

International Climate
China, EU Bolster Greener Global Shipping to Curb Emissions
The trillion-dollar global shipping industry may soon be forced to curb greenhouse gas emissions under new rules backed by the European Union and China.

Oil Spills
NAFTA Agency Asked to Study Leaks From Oil Sands Operations
The commission that addresses environmental issues under the North American Free Trade Agreement said July 7 it has been asked to review Canada's enforcement of rules that prohibit toxic leaks from oil sands operations in Alberta.

Regulatory Policy
EPA Defeat on Methane Could Hinder Other Regulatory Rollbacks
A defeat in court of the EPA's plan to postpone methane standards for oil and gas wells could bolster challenges to delays of emissions limits for landfills and regulations for new chemical plant security.

Renewable Energy
Tesla to Build World's Largest Energy Storage Battery in Australia
Tesla will install the world's largest energy storage battery in South Australia and will get the job done in 100 days, Premier Jay Weatherill announced July 7.

Vehicle Fuels
France Aims to End Sale of Fossil Fuel-Powered Cars by 2040
France plans to end the sale of gasoline- and diesel-powered vehicles by 2040 in a bid to become a carbon-neutral nation, Energy Minister Nicolas Hulot said, effectively promoting electric cars.

Vehicle Fuels
Late to the Battery-Car Race, VW Says It Can Still Blunt Tesla
Volkswagen AG will start deliveries of its first standalone battery-powered models in 2020, around the time that Tesla Inc. wants to hand over 1 million vehicles a year. So why does the German carmaker think it can stop the U.S. electric-auto pioneer in its tracks?

Subject: EPA inspector general to probe Pruitt's travel to Oklahoma

By Alex Guillén

08/28/2017 03:22 PM EDT

EPA's inspector general will probe Administrator Scott Pruitt's travel in response to complaints from Democratic lawmakers that Pruitt may have violated agency policies during to his visits to his home state of Oklahoma.

House Democrats asked the IG to investigate in July following an Environmental Integrity Project report showing Pruitt spent 43 out of 92 days between March and May in Oklahoma or traveling to or from the state, where he previously was attorney general.

A memo today from the IG's office says the focus will be on "policies, procedures and oversight controls pertaining to the Administrator's travel to Oklahoma."

Investigators will look at the "frequency, cost and extent" of Pruitt's travel to Oklahoma through July 31, whether travel policies were followed for Pruitt and any staff and bodyguards traveling with him, and whether EPA's policies "are sufficiently designed to prevent fraud, waste and abuse with the Administrator's travel that included trips to Oklahoma."

EPA has rejected allegations that Pruitt traveled home improperly on taxpayer money. Pruitt's travel "all serves the purpose of hearing from hard-working Americans about how EPA can better serve the American people," spokeswoman Liz Bowman said last month.

The inquiry was requested by congressional Democrats. A letter today to those lawmakers said the IG's office will also refer their complaint to EPA ethics officials "to determine whether there are any aspects of this matter that they wish to pursue." EIP also requested an IG inquiry.

Summaries

AIR
Air Quality Designations for the 2008 Ozone NAAQS/Philadelphia Area
AIR

Final rule of the EPA determines that the Philadelphia-Wilmington-Atlantic City, Pa.-N.J.-Md.-Del., marginal ozone nonattainment area has attained the 2008 ozone NAAQS based on monitoring data for 2013-2015. The determination does not constitute a redesignation to attainment and is not a clean data determination. The rule is effective Dec. 4, 2017. Contact: Gregory Becoat; EPA Region 3; 215-814-2036; becoat.gregory@epa.gov. Citations: 40 CFR 52.425, 52.1082, 52.1576, 52.2056

82 FR 50814 (11/02/2017)

Regulatory Update

AIR
Clean Air Act Advisory Committee Meeting
AIR

Notice of the EPA announces a meeting of the Clean Air Act Advisory Committee. The committee advises the EPA on issues related to implementation of the 1990 Clean Air Act Amendments. The meeting is scheduled for Dec. 12, 2017, in Washington, D.C. Contact: Tamara Saltman; EPA, Office of Air and Radiation; 202-564-2781; saltman.tamara@epa.gov

Regulatory Update

AIR
Electric Motors and Small Electric Motors Test Procedures
AIR

Notice of the Energy Department, Office of Energy Efficiency and Renewable Energy, announces the receipt of petitions and requests information on potential revisions to the test procedure for electric motors and small electric motors. The petitions, which were submitted by the National Electrical Manufacturers Association, of Arlington, Va., and UL LLC, of Northbrook, Ill., request incorporation of the IEC 60034-2-1:2014 test methods 2-1-1A and 2-1-1B as alternative test methods for determining the energy efficiency of electric motors and small electric motors. Comments are due Jan. 2, 2018. Contact: Jeremy Dommu; DOE, Building Technologies Program; 202-586-9870; ApplianceStandardsQuestions@ee.doe.gov. Citations: 10 CFR 431, Subparts B, X

82 FR 50844 (11/02/2017)

Regulatory Update

AIR
Illinois/Volatile Organic Compounds
AIR

Direct final rule of the EPA approves revisions to the Illinois SIP concerning the control of ozone. The revisions update the definition of volatile organic material to remove the recordkeeping and reporting requirements related to the use of t-butyl acetate and to clarify the list of compounds excluded from the definition. The rule is effective Jan. 2, 2018, unless adverse comments are received by Dec. 4, 2017. Contact: Charles Hatten; EPA Region 5, Air Programs Branch; 312-886-3031; hatten.charles@epa.gov. Citations: 40 CFR 52.720

Regulatory Update

AIR
Illinois/Volatile Organic Compounds
AIR

Proposed rule of the EPA would approve revisions to the Illinois SIP concerning the control of ozone. The revisions update the definition of volatile organic material to remove the recordkeeping and reporting requirements related to the use of t-butyl acetate and to clarify the list of compounds excluded from the definition. A concurrent direct final rule adopts the revisions, effective Jan. 2, 2018. Comments are due Dec. 4, 2017. Contact: Charles Hatten; EPA Region 5, Air Programs Branch; 312-886-3031; hatten.charles@epa.gov. Citations: 40 CFR 52.720

Regulatory Update

AIR
Michigan SIP/Minor New Source Review
AIR

Notice of the EPA announces the reopening of the comment period for an Aug. 15, 2017, proposed rule (82 FR 38651) to approve portions of revisions to the Michigan SIP regarding the permit-to-install (PTI) minor new source review program. The revisions provide a waiver from the

requirement to obtain a PTI prior to the start of construction for minor construction activities and activities not considered construction or reconstruction under NESHAP standards. The revisions also add several categories of exemptions from the requirement to obtain a PTI and address required application materials and the processing of applications. Revisions to the public notice requirements will be addressed in a separate action. In response to multiple requests, comments now are due Dec. 4, 2017. Contact: Rachel Rineheart, EPA Region 5, Air Programs Branch; 312-886-7017; Rineheart.rachel@epa.gov. Citations: 40 CFR 52

82 FR 50853 (11/02/2017)

Regulatory Update

AIR
Minnesota SIP/Clean Air Act State Board Requirements
AIR

Final rule of the EPA approves revisions to the Minnesota SIP that address the Minnesota Pollution Control Agency and state board requirements under Clean Air Act Section 128. The revisions also incorporate state statutes into the SIP to address infrastructure requirements relating to state boards for the 1997 ozone, 1997 particulate matter (PM-2.5), 2006 PM-2.5, 2008 lead, 2008 ozone, 2010 nitrogen dioxide, 2010 sulfur dioxide, and 2012 PM-2.5 NAAQS. The approval does not apply to sources located within Indian country. The rule is effective Dec. 4, 2017. Contact: Eric Svingen; EPA Region 5, Air Programs Branch; 312-353-4489; svingen.eric@epa.gov. Citations: 40 CFR 52.1220

82 FR 50807 (11/02/2017)

Regulatory Update

AIR
Pennsylvania SIP/Lebanon County PM-2.5 Nonattainment Area
AIR

Proposed rule of the EPA would make a determination that the Lebanon County nonattainment area in Pennsylvania has attained the 2012 fine particulate matter (PM-2.5) NAAQS, based on ambient air monitoring data for 2014-2016. Comments are due Dec. 4, 2017. Contact: Maria Pino; EPA Region 3; 215-814-2181; pino.maria@epa.gov. Citations: 40 CFR 52

82 FR 50851 (11/02/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Alaska/Salmon and Annex Creek Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of an environmental assessment for the Salmon Creek and Annex Creek Hydroelectric Project, located in Juneau, Alaska. The project, proposed by Alaska Electric Light & Power Co., of Juneau, consists of the existing Salmon Creek Development and the Annex Creek Development, each including a dam, reservoir, and powerhouse. The project occupies 648.45 acres of Tongass National Forest lands administered by the U.S. Forest

Service. The EA provides the agency's conclusion that relicensing the project with appropriate environmental protective measures would not constitute a major federal action that would significantly affect the quality of the human environment. Comments are due Nov. 24, 2017. Contact: Suzanne Novak; FERC; 202-502-6665; Suzanne.novak@ferc.gov

82 FR 50867 (11/02/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Control of Yellow Toadflax
GENERAL ENVIRONMENT AND SAFETY

Notice of the Animal and Plant Health Inspection Service announces an extension of the comment period for a draft environmental assessment regarding control of yellow toadflax, an invasive plant in pastures and crops, particularly in the northern prairies of North America (82 FR 45796; 10/02/2017). The EA addresses the proposed issuance of permits for the field release of the stem gall weevil into the continental U.S. for classical biological control of yellow toadflax. Comments now are due Nov. 16, 2017. Contact: Colin Stewart; APHIS; 301-851-2327; Colin.Stewart@aphis.usda.gov

82 FR 50855 (11/02/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Florida/Okeechobee Lateral Pipeline Project
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of FERC to prepare an environmental assessment for the Okeechobee Lateral Pipeline Project in Okeechobee County, Fla. The project, proposed by Florida Southeast Connection LLC, of Juno Beach, Fla., would consist of the construction and operation of 5.2 miles of natural gas transmission pipeline to connect the mainline system with the Florida Power & Light Co.'s Okeechobee Clean Energy Center to provide 400 million cubic feet per day of natural gas. Comments are due Nov. 22, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FercOnlineSupport@ferc.gov

82 FR 50864 (11/02/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Oklahoma/Cana Stack Expansion Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a prior notice request by Enable Gas Transmission LLC, of Houston, regarding the proposed Cana Stack Expansion Project in Grady and McClain counties in Oklahoma. The project would include the construction and operation of the Byars Lake Compressor Station; the installation of interconnect facilities consisting of a 12-inch hot tap, overpressure protection, and valves; and the addition of auxiliary equipment at the existing Amber Junction Compressor Station. The agency will complete an environmental assessment or

issue a notice of schedule of environmental review by Jan. 25, 2018. Protests and motions to intervene are due Dec. 26, 2017. Contact: FERC; 866-208-3676; FERCOnlineSupport@ferc.gov

82 FR 50868 (11/02/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Patient Engagement Advisory Committee
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the renewal of the charter of the Patient Engagement Advisory Committee until Oct. 6, 2019. The committee advises the FDA commissioner on medical devices, their effectiveness, and their safety for human use. The committee provides advice and recommendations for agency guidance documents and policies, clinical trial or registry design, patient preference study design, benefit-risk determinations, device labeling, unmet clinical needs, available alternatives, patient reported outcomes, and device-related quality of life or health status issues. HAZARDOUS WASTE CLEANUP
California/Cooper Drum Co. Superfund Site
HAZARDOUS WASTE CLEANUP

Notice of the Justice Department announces a proposed consent decree in United States v. Cooper Living Trust (Civil Action No. 2:17-cv-7836), lodged on Oct. 26, 2017, with the U.S. District Court for the Central District of California, Western Division. The consent decree resolves claims under CERCLA for recovery of response costs incurred by the U.S. and addresses soil and groundwater contamination at the Cooper Drum Co. Superfund Site in Los Angeles County, Calif. The consent decree requires the defendants to sell the property adjacent to the site and to pay the U.S. the greater of 90 percent of the net sales proceeds or $2.5 million. Comments are due Dec. 4, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Fire Brigades Standard
OCCUPATIONAL SAFETY AND HEALTH

Notice of the Labor Department, Office of the Secretary, on behalf of OSHA, announces the submission of a continuing information collection request to the OMB concerning the fire brigades standard. The standard applies to discretionarily established fire brigades, industrial fire departments, and private or contract fire departments, but not airport crash rescue units or forest firefighting operations. The collection addresses requirements for covered employers to

develop and maintain an organizational statement that describes the functions performed by brigade members and the level of training and type of personal protective equipment necessary for members to perform assigned functions safely. The collection also addresses requirements for workers' fitness physician's certificates and hazard communications and safety training for special hazards, including storage and use of flammable liquids and gases, toxic chemicals, radioactive sources, and water-reactive substances. Comments are due Dec. 4, 2017. Contact: Michel Smyth; DOL; 202-693-4129; DOL_PRA_PUBLIC@dol.gov. Citations: 29 CFR 1910.156

Environmentalists, States See Major Legal Barriers To EPA's Ozone Delay

Environmentalists and some states say EPA Administrator Scott Pruitt faces major legal barriers to his plan for delaying by one year designations for whether areas are attaining the 2015 ozone ambient air standard, and suggest Pruitt is aware of the hurdles and that his move aims to "buy time" for EPA to formally undo the 2015 limit.

EPA Anticipates Expedited OMB Review For TSCA Framework Regulations

EPA's acting toxics chief remains confident the agency will meet a looming June 22 statutory deadline for finalizing the trio of framework rules that implement the new Toxic Substances Control Act (TSCA), in part because the agency expects the Office of Management and Budget (OMB) will conduct expedited reviews for the two rules that require it.

Sessions' Ban On Third-Party Monetary Deals Could 'Cripple' SEPs, EIP Says

Attorney General Jeff Sessions' new policy barring monetary payments to third parties as part of civil settlements could "cripple" supplemental environmental projects (SEPs) that have been part of such deals for 40 years and provide additional benefits beyond directly cleaning up pollution at issue in enforcement actions, environmentalists say.

Democrats' Fears Over OIRA Nominee Take Back Seat To Oversight Worries

Democrats appear to have few substantive concerns with the Trump administration's pick to head the White House regulatory review office, even while expressing concern that the nominee, Neomi Rao, could play a major role in rolling back EPA and other agency regulations that protect the environment and public health.

Power Supplier Warns Air Rule Waiver Decision Will Prevent Compliance

A power supplier is warning that an appellate court ruling backing an EPA air toxics rule that does not allow for emissions limit violations even during unit malfunctions will make compliance with other air toxics rules impossible, because the agency will

follow the decision in rulemakings unless the Supreme Court overturns it.

OTC Warns Designations Delay Will Stop 'Momentum' On Reducing Ozone

SARATOGA SPRINGS, NY -- Members of the Ozone Transport Commission (OTC) of Northeast and Mid-Atlantic states are warning that early data show 2017 ozone levels are worsening and that EPA's one-year delay for implementing the 2015 ozone ambient air limit risks stopping the states' “momentum” on tackling ozone air pollution.

9th Circuit Ruling Could Slow EPA Nanomaterial Conditional Registrations

Environmentalists and industry sources agree that an appellate court's striking down EPA's conditional registration of a pesticide containing nanosilver could slow future registrations, as it raises the bar for granting such approvals and could also prompt the agency to revisit prior policy choices for how it handles nano registrations.

Driving the Day

Good Saturday morning. @realDonaldTrump at 8:17 a.m.: "I called Chuck Schumer yesterday to see if the Dems want to do a great HealthCare Bill. ObamaCare is badly broken, big premiums. Who knows!"

-- HERE IS WHAT WE KNOW, MR. PRESIDENT : Republicans control both chambers. The two parties agree on little when it comes to health care. Top Republicans -- including your White House -- sent signals that it opposed a bipartisan health care negotiation between Sens. Lamar Alexander (R-Tenn.) and Patty Murray (D-Wash.) in the Senate. You've threatened to stop Obamacare stabilization payments. If you want a deal with Democrats, it's going to require you abandoning long held positions, which, of course, is possible. But remember: you'll need cooperation of the majority, which doesn't like to feel cut out. And you might need 60 votes. And, remember: many who were opposed to the previous health care bill want an open process. Cutting a deal with Schumer isn't an open process. **ALSO, FROM A DEMOCRATIC AID**E: "Particularly after the birth control decision yesterday, the administration has to stop sabotaging the law before anything real can happen."

SCHUMER'S TAKE: "The president wanted to make another run at repeal and replace and I told the president that's off the table. If he wants to work together to improve the existing health care system, we Democrats are open to his suggestions. A good place to start might be the Alexander-Murray negotiations that would stabilize the system and lower costs."

-- WHERE THE HEALTH CARE FIGHT STANDS: "Health-Care Standoff in Washington Raises Stakes of State-Level Fights," by WSJ's Stephanie Armour: "The collapse of the Republican effort to overhaul the health-care system and the resulting

standoff in Washington has pushed the fight to the states, where a brewing conflict over Medicaid is shaping up as the next battleground. The Trump administration is expected to rule soon on Kentucky's push to impose work requirements and other rules on Medicaid enrollees, as other states line up to follow suit. Democrats say that would weaken the program." http://on.wsj.com/2xpDM48

ALSO ON THE PRESIDENT'S MIND: "Trump cites FCC equal time rule in dig at 'unfunny' late-night comedians," by Brent Griffiths: "President Donald Trump mused Saturday morning about whether he and his fellow Republicans should receive equal time on TV due to what he sees as consistently unfair coverage from late-night comedians. 'Late Night host are dealing with the Democrats for their very 'unfunny' & repetitive material, always anti-Trump! Should we get Equal Time?' Trump wrote on Twitter Saturday. He later added: 'More and more people are suggesting that Republicans (and me) should be given Equal Time on T.V. when you look at the one-sided coverage?'

"Trump appears to be referencing the FCC's equal time rule, which applies to broadcast TV and radio stations, not cable TV. More importantly, the provisions only apply to a legally qualified candidate for public office, so it's unclear how this would apply to the president, who is not up for re-election until 2020. The president also seemed to be inferring that the equal time provision would apply to commentaries, like Jimmy Kimmel's monologues on health care. It is unclear how this would fall under equal time, since the rule is usually invoked when a candidate appears on the program or is granted some other form of free air time." http://politi.co/2z5HRYj

COMING ATTRACTIONS -- PUERTO RICO NEEDS CASH : The governor of Puerto Rico has been calling Washington because the government is in a serious cash crunch. Tax revenue is non-existent at the moment and there are fears the government could shut down, according to multiple Capitol Hill sources involved. The White House is aware of the issue, and Treasury is taking the lead, our sources tell us. This potential cash infusion would be in addition to the disaster relief money Puerto Rico needs. The need to keep ponying up massive amounts of money to help fund relief in Puerto Rico, Texas, Florida and potentially Louisiana could become contentious on Capitol Hill. Republicans have in the past pushed to cut spending to cover the costs of funding bills like these.

ANNIE KARNI: "Kelly hasn't returned former chiefs of staff's messages: The former Marine general has charted his own path in the White House, largely keeping his own counsel rather than leaning on his predecessors": "When John Kelly was named White House chief of staff in July, one of his predecessors in the job, Rahm Emanuel, called his office to wish him luck and offer himself as a resource. Bill Daley, another former chief to President Barack Obama, sent him a note with the same message: My line is open if you need anything.

"Neither message was ever returned. In his first two frenetic months on the job, the retired four-star Marine general and former homeland security secretary has had

minimal contact with the small club of people who have served as gatekeepers to a president before him." http://politi.co/2kytmt5

-- THIS MIRRORS WHAT WE HAVE HEARD on Capitol Hill. Republicans have told us calls to Kelly frequently go unanswered for days, or even weeks. One lawmaker told us it's easier to get in touch with the president than his chief of staff.

BOSTON GLOBE'S ANNIE LINSKEY on **PAGE ONE** of the Saturday paper -- **"John Kelly: The Boston native in charge of bringing order to President Trump's White House"** http://bit.ly/2fZyJzK

WAPO -- "Nearly six dozen charter and military flights by Cabinet members, mapped" http://wapo.st/2xpij6j

IF YOU READ ONE THING - DEXTER FILKINS in The New Yorker, **"Rex Tillerson at the Breaking Point:** Will Donald Trump let the Secretary of State do his job?": "Before taking office, Tillerson ran a corporation whose reach and success have few rivals in American history. In government, he has been uncomfortably subordinate to an unpredictable man. 'I think running a Fortune 500 company is a whole lot easier than working as a Cabinet official, running foreign policy for the United State government,' a senior Trump Administration official told me. 'It's two different worlds. You cannot be God. The big, dirty secret about Washington is that no one has a lot of power in this town, O.K.? Even the wannabe Machiavellis don't do well in this town.' ...

"According to the senior Administration official, Nikki Haley, the U.N. Ambassador, is seen as the most effective diplomat in the crisis; twice she has rallied unanimous support for tighter sanctions at the U.N. Security Council, despite the members' reluctance to discomfit China. 'Nikki's getting it done,' the official told me. 'She's bringing home the bacon.' This has apparently fed an enmity between Tillerson and Haley. 'Rex hates her,' the official said. 'He f***ing hates her.'" http://bit.ly/2y5IW4s

SUICIDE PACT, WHAT SUICIDE PACT? -- A source close to Treasury Secretary Steven Mnuchin is throwing cold water on the report that Mnuchin, Secretary of State Rex Tillerson and Defense Secretary Jim Mattis are part of an agreement that if one of them leaves the administration, all three would leave. "He is not part of any suicide pact. He enjoyed working with the president on the campaign and is honored to serve in his cabinet," the source said.

****** **A message from Koch Industries:** Facing challenges can be intimidating. But at Koch, it's how we work. From creating renewable fuels to designing innovations that make vehicles more aerodynamic and energy-efficient, we challenge the status quo. Our more than 70,000 U.S. employees help reduce waste, and make everyday products better. See for yourself at ChallengeAccepted.com. ******

THE NEW SWAMP -- "Report: Trump-tied lobbyists cash in on their connections," by AP's Tami Abdollah: "Records through Aug. 31 showed at least 44 registered federal

lobbyists with ties to Trump or Vice President Mike Pence. These firms have collectively billed nearly $41.8 million to clients - seven of the 10 most lucrative being foreign interests, according to the analysis of federal lobbying disclosure filings.

"Clients have included the owner of a private equity group that received government approval to take over the major for-profit college chain University of Phoenix, and the directors of Wells Fargo, which has faced increased government scrutiny after its workers created bogus accounts for unwitting clients. Others include the Kingdom of Saudi Arabia, the governments of Afghanistan, Kenya, Iraq, Guatemala and Malaysia, and Moise Katumbi, the opposition leader in the Democratic Republic of the Congo." http://bit.ly/2ghHORs

2018 WATCH -- "Arizona Sen. Flake's vulnerability feeds GOP Senate concerns," by AP's Michael Balsamo and Brian Melley in Phoenix: "Arizona Republican Sen. Jeff Flake's re-election race is becoming a case study in the GOP's convulsions between the establishment, a furious base and angry donors. After bucking Donald Trump in a state the president won, Flake is bottoming out in polls. Yet Republicans look like they may be stuck with a hard-core conservative challenger who some fear could win the primary but lose in the general election.

"A White House search for a candidate to replace former state Sen. Kelli Ward in the primary appears to have hit a wall. And now conservatives want to turn Arizona into the latest example of a Trump Train outsider taking down a member of the GOP establishment. ... Despite discontent among some Republicans over Ward, Bannon met with her last week at a conservative conference in Colorado Springs to encourage her campaign, according to a Republican official who demanded anonymity to disclose the previously unreported private meeting." http://bit.ly/1ckcXew

FOR YOUR RADAR -- "North Korea preparing long-range missile test: RIA cites Russian lawmaker," by Reuters' Jack Stubbs in Moscow: "North Korea is preparing to test a long-range missile which it believes can reach the west coast of the United States, a Russian lawmaker just returned from a visit to Pyongyang was quoted as saying on Friday. Anton Morozov, a member of the Russian lower house of parliament's international affairs committee, and two other Russian lawmakers visited Pyongyang on Oct. 2-6, Russia's RIA news agency reported.

"'They are preparing for new tests of a long-range missile. They even gave us mathematical calculations that they believe prove that their missile can hit the west coast of the United States,' RIA quoted Morozov as saying. 'As far as we understand, they intend to launch one more long-range missile in the near future. And in general, their mood is rather belligerent.'" http://reut.rs/2yOpeHr

FOR YOUR SITUATIONAL AWARENESS -- "Hurricane Nate forms, heads to central Gulf of Mexico" - AP: "Hurricane Nate gained force as it continues rapidly moving over the central Gulf of Mexico early Saturday after drenching Central America in rain that was blamed for at least 21 deaths. Forecasters said it was likely to reach the

U.S. Gulf Coast over the weekend. Louisiana and Mississippi officials declared states of state of emergency and Louisiana ordered some people to evacuate coastal areas and barrier islands ahead of its expected landfall Saturday night or early Sunday. Evacuations began at some offshore oil platforms in the Gulf. Mississippi's government said it would open 11 evacuation shelters in areas away from the immediate coast." http://bit.ly/2hVf7O1

ON LAS VEGAS ... -- "Investigators Probing Whether Others Were in Las Vegas Gunman's Suite," by NBC News' Tom Winter and Pete Williams: "Investigators are trying to nail down whether anyone else was in the hotel suite reserved by the Las Vegas gunman during the time he was registered there, multiple senior law enforcement officials briefed on the investigation into the shooting told NBC News. The investigators are puzzled by two discoveries: First, a charger was found that does not match any of the cell phones that belonged to Stephen Paddock ... And second, garage records show that during a period when Paddock's car left the hotel garage, one of his key cards was used to get into his room. There are several possible explanations for these anomalies, the investigators say, but they want to get to the bottom of it." http://nbcnews.to/2y55rWx

PLAYBOOK METRO SECTION -- "Obama Will Join Columbia Country Club in Chevy Chase," by Washingtonian's Elaina Plott: "Former President Barack Obama has accepted an invitation to join Columbia Country Club in Chevy Chase, Maryland, Washingtonian has learned. It's the second country club he's joined since leaving office; in May ... he joined Robert Trent Jones Golf Club in Gainesville, Virginia. Columbia's board revealed the news in a letter to members on Thursday. 'Following careful deliberation, the Board of Governors voted to extend an invitation for Honorary Membership to former President of the United States Barack Obama,' reads an excerpt shared with Washingtonian. 'We have received official word from Mr. Obama of his acceptance of our invitation.'" http://bit.ly/2kxRIDg

-- ALSO A MEMBER OF COLUMBIA: Tony Kornheiser, a frequent Obama golf partner.

STORY OF THE DAY -- YASHAR ALI in **HUFFPOST**: **"TV Journalist Says Harvey Weinstein Masturbated In Front Of Her":** "Harvey Weinstein once trapped a woman in the hallway of a restaurant that was closed to the public and masturbated in front of her until he ejaculated, she says. The accusation comes a day after Weinstein was the

subject of a bombshell New York Times report that revealed that he has settled at least eight sexual harassment claims.

"The incident took place a decade ago, according to Lauren Sivan, who at the time was a news anchor on a local cable channel in New York, Long Island 12. She says the experience left her shocked, and that while she told friends privately what happened, she remained quiet because she was in a long-term relationship and fearful of the power that Weinstein wielded in the media." http://bit.ly/2xobB5l

-- NYT'S BROOKS BARNES: "Without Harvey Weinstein, His Company Faces Uncertain Future" http://nyti.ms/2fZQJde

AT FIRST STREET -- "Trump supporters eager to 'drain the swamp' help fill Republican Party coffers," by WaPo's Matea Gold: "Fueled by a string of fundraising appeals from President Trump to his supporters, the Republican Party is on track to raise more money from small-dollar contributions than it has collected in more than a decade. The influx of cash from Trump's base is helping the GOP amass a major advantage as the parties prepare to battle for control of Congress in the 2018 elections, with the [RNC] pulling in nearly twice as much money overall as its Democratic counterpart this year. ... This year, more than $40 million of the $68 million in direct contributions to the RNC by the end of August came in donations of $200 and less - nearly 60 percent of contributions." http://wapo.st/2fZuzIo

THE TRUMP FAMILY -- "In book, Ivana Trump relives divorce from future president," by AP's Jonathan Lemire: "A new book from Donald Trump's first wife pulls back the curtain on a tumultuous period of the president's life, including the messy divorce that was splashed across New York's tabloids for weeks. Ivana Trump, who was married to the real estate magnate from 1977 to 1992, writes in 'Raising Trump' that she knew her marriage was over soon after a day in December 1989. 'This young blonde woman approached me out of the blue and said 'I'm Marla and I love your husband. Do you?' writes Ivana Trump. 'I said 'Get lost. I love my husband.' It was unladylike but I was in shock.' ... But she and the president have returned to far warmer terms. She writes that they speak about once a week and that she encourages him to keep using Twitter." http://bit.ly/2y6h7IN

WHAT LANGLEY IS READING -- "CIA vet replaces controversial official for national security post," by Nahal Toosi, Daniel Lippman and Bryan Bender: "President Donald Trump has placed a Central Intelligence Agency veteran in a key White House post that has been a point of friction with the CIA. Michael Barry took over as the National Security Council's senior director for intelligence programs in recent weeks, sources in and outside the Trump administration said. He replaces Ezra Cohen-Watnick, a controversial official who left in August after clashing with some CIA officials, as well as national security adviser H.R. McMaster. ... One ... former intelligence official said he knows 'for a fact' that Barry has served in the CIA." http://politi.co/2fSpaiB

VALLEY TALK - "Behind Tesla's Production Delays: Parts of Model 3 Were Being

Made by Hand," by WSJ's Tim Higgins in Fremont, Calif.: "Tesla Inc. blamed 'production bottlenecks' for having made only a fraction of the promised 1,500 Model 3s, the $35,000 sedan designed to propel the luxury electric-car maker into the mainstream. Unknown to analysts, investors and the hundreds of thousands of customers who signed up to buy it, as recently as early September major portions of the Model 3 were still being banged out by hand, away from the automated production line, according to people familiar with the matter. ... Automotive experts say it is unusual to be building large parts of a car by hand during production. 'That's not how mass production vehicles are made,' said Dennis Virag, a manufacturing consultant who has worked in the automotive industry for 40 years. 'That's horse-and-carriage type manufacturing.' ...

"In a statement, a Tesla spokeswoman declined to answer questions for this article and said, 'For over a decade, the WSJ has relentlessly attacked Tesla with misleading articles that, with few exceptions, push or exceed the boundaries of journalistic integrity. While it is possible that this article could be an exception, that is extremely unlikely.' The Journal disagrees with the company's categorization of its journalism." http://on.wsj.com/2xprMul

****** **A message from Koch Industries:** Flint Hills Resources, a Koch company, is the fifth largest ethanol producer in the United States - with seven ethanol plants, and 850 million gallons of annual capacity. Each year, farmers from America's heartland sell 288 million bushels of their corn to our facilities where we extract the necessary ingredients for both ethanol and high-quality biodiesel. We convert the remaining portions of the kernels into distillers grains, a livestock feed that helps nourish hogs, cattle and poultry. Farmers work hard to grow their crops, and we strive to help create the most value from their harvest. We also focus on reducing waste and leaving more natural resources available for future needs. It's part of Koch's commitment to operate responsibly in the communities across America that are home to our more than 70,000 U.S. employees. Learn more about our renewable fuels at ChallengeAccepted.com. ******

-- "Anger, questions at USC after second medical school dean departs over inappropriate behavior," by L.A. Times' Sarah Parvini, Paul Pringle and Harriet Ryan: http://lat.ms/2fZ1NHy

MEDIAWATCH -- "Dianne Brandi, the Fox News Loyalist Who 'Knows Everything,' is Stepping Aside," by Vanity Fair's Gabe Sherman: On Friday "the network said in a statement that Brandi is taking a 'voluntary leave' from the company. ... Insiders theorize that her roadmap of where the bodies are buried may have protected her. But lately that protection has been weakening. ... At a funeral this August for former Fox head of graphics Rich O'Brien, Brandi told colleagues that she expected to leave the network. 'She's been saying she's unhappy,' the colleague said. 'She said there's no leadership at Fox. And she's been named in suit after suit. It's miserable.'" http://bit.ly/2yNX4w4

-- "Bannon ally wants to turn government media agency into 'legacy' for former Trump adviser," by CNN's Hadas Gold: "Jeffrey Scott Shapiro, a former investigative reporter who has ties to Bannon, was tapped by the White House for a position within

the [Broadcasting Board of Governors] over the summer. ... Shapiro has told colleagues that his goal is to turn the entire [BBG] into a 'Bannon legacy,' according to three sources within or familiar with the agency. He has also said he believes the Castros have infiltrated the Office of Cuba Broadcasting." http://cnnmon.ie/2gio404

-- "A Conversation With Bret Baier, the News Guy at Fox News," by The Atlantic's McKay Coppins: "The Special Report anchor on the "tough year" his network has had, attacks on the media, and his ongoing struggle to book an interview with President Trump." http://theatln.tc/2y0ih6R

-- ROB GIFFORD has been named managing editor of CBSN.

-- Joe Ruiz has been hired by CNN Politics to be senior weekend editor. He most recently has been NPR's weekend editor in charge of digital coverage.

DANIEL'S POSTCARD FROM THE NEW YORKER'S TECHFEST - MICHAEL LYNTON, chairman of Snap and former head of Sony, in a Q&A on Friday with David Remnick: "I think there is room in legislation for what is to be done about privacy. ... Going back to when Brandeis was a professor at Harvard, before he sat on the Supreme Court ... and his partner's daughter was -- it was right when photography started coming into newspapers, and his daughter was photographed going into a party that was put into the Boston Globe ...

"And he was outraged, and Brandeis wrote, at that time in the Harvard Law Review, a long piece on privacy, and how photography and new electronic devices would create a real problem for privacy going forward, and that ... something had to be done with legislation to deal with that. Now, subsequently, nothing has been done, but I think maybe we need to go back and look at when this whole thing first began and revisit it and try and understand whether you can just leave it be the wild west, or you in some way shape or form respect people's privacy."

-- FORMER EPA ADMINISTRATOR GINA MCCARTHY, in a Q&A with Elizabeth Kolbert: "I think if we can realistically remind people that you don't need to be seeing pollution to understand that it impacts your health and your kid's future. ... I don't know of any Republicans that don't want clean air, clean water and safe places for their kids to go to school and play outside. I don't see them rushing to want to live on the fence-line of a refinery where you don't know what the quality of the air is. ... My fear is that more hurricanes and more intense storms may be the price for that delay."

****** **A message from Koch Industries:** It's estimated that by the year 2030 there will be two billion motor vehicles on the world's highways - twice the number currently on the road. Koch companies are already preparing for this challenge with ideas for improving fuel efficiency while still embracing safety. Our researchers are integrating aerodynamic systems into automotive grilles to provide up to 20% weight savings and up to 30% better aero performance. Each step forward puts us closer to the bigger goal of responsibly powering far more automobiles than ever before. From transportation and technology to food, clothing and shelter, Koch is anticipating the needs of tomorrow and working on the solutions today. The quest for better never stops, and our more than 70,000 U.S. employees are helping to lead the way. See them in action at ChallengeAccepted.com. ******

Subject: Pruitt to reconsider parts of 2015 coal ash rule

By Alex Guillén

09/14/2017 04:15 PM EDT

EPA will reconsider key portions of the 2015 coal ash rule, according to a letter from Administrator Scott Pruitt to industry officials released by Earthjustice.

Two petitions were filed in May by AES Puerto Rico and the Utility Solid Waste Activities Group, an umbrella group whose members include the Edison Electric Institute, National Rural Electric Cooperative Association, American Public Power Association and more than a hundred utilities and related companies.

Pruitt's letter does not specify which parts of the rule he plans to reconsider, but both USWAG and AES identified specific issues with the regulation.

USWAG's petition asked that pending deadlines be pushed back and called for the rule to be changed in the wake of a December 2016 law changing the enforcement scheme in order to accommodate new management options based on site-specific risk analyses rather than the original "burdensome, inflexible, and often impracticable requirements." USWAG also argued that various executive orders from President Donald Trump dealing with regulations justify cracking the rule open.

AES' petition focused on requirements for how power plants store their coal ash piles before they are moved off site to be disposed of or to make products such as concrete and wallboard.

Oral arguments at the D.C. Circuit Court of Appeals over the rule are currently scheduled for Oct. 17, but EPA is likely to ask the case be put on hold while it reconsiders the rule.

WHAT'S NEXT: Pruitt will initiate a formal reconsideration process. Any actual changes to the rule will have to go through public comment and will be open to legal challenge.

Summaries

AIR
Alabama SIP/PM-2.5 Infrastructure Requirements
AIR

Proposed rule of the EPA would approve portions of the Alabama SIP regarding infrastructure requirements for the 2012 annual particulate matter (PM-2.5) NAAQS. The rule would approve the state's Dec. 9, 2015, SIP submission for the applicable requirements, with the exception of the interstate transport provisions regarding contribution to nonattainment or interference with maintenance (prongs 1 and 2); visibility protection (prong 4); and the state board requirements, which will be addressed in separate rulemaking actions. Comments are due July 31, 2017. Contact: Tiereny Bell; EPA Region 4, Air Planning and Implementation Branch; 404-562-9088; bell.tiereny@epa.gov. Citations: 40 CFR 52

82 FR 29448 (06/29/2017)

Regulatory Update

AIR
California SIP/San Joaquin Valley Ozone Transportation Conformity
AIR

Notice of the EPA provides the agency's finding that motor vehicle emissions budgets in the San Joaquin Valley 2016 ozone plan are adequate for transportation conformity purposes for the 2008 eight-hour ozone NAAQS. The budgets cover the years 2018, 2021, 2024, 2027, 2030, and 2031. The metropolitan planning organizations in the area and the U.S. Department of Transportation are required to use the budgets for future conformity determinations. The finding is effective July 14, 2017. Contact: Anita Lee; EPA Region 9; 415-972-3958; lee.anita@epa.gov

Regulatory Update

AIR

Engine Emission Defect and Recall Reports

AIR

Notice announces the intention of the EPA to seek OMB approval for a revised information collection request regarding engine emission defect information reports (DIRs) and voluntary emission recall reports (VERRs). The collection addresses requirements for manufacturers of heavy-duty highway and nonroad engines to submit DIRs (Form 5900-301) if emission-related defects that may cause the engines' emissions to exceed Clean Air Act standards are found on engines of the same model year. The collection also addresses requirements for manufacturers to submit VERRs (Form 5900-300) to initiate a voluntary recall and voluntary emissions recall quarterly progress reports (Form 5900-302). The revisions address that EPA may reduce the burden estimate due to the submission of fewer applications for certification of Category 3 engine families than previously estimated. Comments are due Aug. 28, 2017. Contact: Nydia Yanira Reyes-Morales; EPA; 202-343-9264; reyes-morales.nydia@epa.gov. Citations: 40 CFR 85 through 1068 (nonconsecutive)

Regulatory Update

AIR

Gasoline Volatility/Fuel and Fuel Additives

AIR

Notice announces the intention of the EPA to seek OMB approval for a continuing information collection request regarding volatility standards for fuel and fuel additives. The collection addresses requirements for gasoline producers or importers to provide on product transfer documents legible and conspicuous statements that the gasoline contains ethanol and the percentage concentration of ethanol. The collection also addresses requirements for producers or importers seeking testing exemptions from volatility standards for research purposes to submit certain information to the EPA. Comments are due Aug. 28, 2017. Contact: James Caldwell; EPA, Office of Transportation and Air Quality; 202-343-9303; caldwell.jim@epa.gov. Citations: 40 CFR 80.27(d) and (e)

Regulatory Update

AIR

Georgia SIP/Minor New Source Review

AIR

Direct final rule of the EPA approves revisions to the Georgia SIP that clarify that existing exemptions from minor new source review permitting do not extend to sources that are subject to NSPS for stationary sources or NESHAP. The revisions also add a definition of "pollution control project" and provide that such projects are exempt from minor new source review construction permit requirements. The rule is effective Aug. 28, 2017, unless adverse comments are received by July 31, 2017. Contact: Brad Akers; EPA Region 4, Pesticides and Toxics Management Division; 404-562-9089; akers.brad@epa.gov. Citations: 40 CFR 52.570

82 FR 29469 (06/29/2017)

Regulatory Update

AIR
Georgia, South Carolina SIPs/Ambient Air Standards and Definitions
AIR

Direct final rule of the EPA approves revisions to the Georgia SIP and portions of revisions to the South Carolina SIP. The Georgia SIP revisions incorporate definitions concerning fine particulate matter (PM-2.5) and amend state rules to reflect the 2008 NAAQS for lead. South Carolina SIP revisions incorporate the 2010 sulfur dioxide NAAQS, 2010 nitrogen dioxide NAAQS, 2012 PM-2.5 NAAQS, and the 2015 ozone NAAQS. The South Carolina SIP revisions also remove from the SIP the revoked 1997 eight-hour ozone NAAQS and the standard for gaseous fluorides. The rule is effective Aug. 28, 2017, unless adverse comments are received by July 31, 2017. Contact: Brad Akers; EPA Region 4, Air Planning and Implementation Branch; 404-562-9089; akers.brad@epa.gov. Citations: 40 CFR 52.570 and 52.2120

Regulatory Update

AIR
Kentucky SIP/Louisville Metro Air Pollution Control District
AIR

Proposed rule of the EPA would approve portions of revisions to the Kentucky SIP concerning the Louisville Metro Air Pollution Control District's stationary source emissions monitoring and reporting requirements. The revisions authorize the district to require emissions monitoring at stationary sources and require specified sources to maintain emissions records and provide annual emissions statements to the district. Comments are due July 31, 2017. Contact: Richard Wong, EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-8726; wong.richard@epa.gov. Citations: 40 CFR 52

82 FR 29467 (06/29/2017)

Regulatory Update

AIR
Missouri SIP/Operating Permits Program
AIR

Final rule of the EPA approves revisions to the Missouri SIP and operating permits program. The revisions update the emissions fee for permitted sources as set by Missouri law from $40 to $48 per ton of air pollution emitted annually, effective Jan. 1, 2016. The rule also corrects the Jan. 15, 2016, direct final rule (81 FR 2090) that previously approved the revisions by removing the approval and codification under 40 CFR 52.1320 due to an agency error. In addition, the rule corrects the state effective date to March 30, 2015, under 40 CFR 70, Appendix A. The rule is effective July 31, 2017. Contact: Amy Algoe-Eakin; EPA Region 7, Air Planning and Development Branch; 913-551-7942; algoe-eakin.amy@epa.gov. Citations: 40 CFR 52.1320; 40 CFR 70, Appendix A

Regulatory Update

AIR
NOx Budget Trading Program
AIR

Notice announces the intention of the EPA to seek OMB approval for continuing information collection request regarding the NOx Budget Trading Program to reduce the regional transport of ozone. The program has been replaced by ozone-season NOx trading programs under the Cross-State Air Pollution Rule. The collection addresses emissions monitoring and reporting requirements for industrial sources in certain states that continue to report emissions data to the EPA under a NOx SIP call. Comments are due Aug. 28, 2017. Contact: Karen VanSickle; EPA, Office of Atmospheric Programs; 202-343-9220; vansickle.karen@epa.gov. Citations: 40 CFR 75

82 FR 29551 (06/29/2017)

Regulatory Update

AIR
NSPS for Commercial and Industrial Solid Waste Incineration Units
AIR

Notice of the EPA announces the submission of a continuing information collection request to the OMB regarding NSPS for commercial and industrial solid waste incineration units. The collection addresses requirements for owners and operators of affected facilities to submit initial notification, performance tests, and periodic reports and results, and to maintain records of periods of startup, shutdown or malfunction or when the monitoring system is inoperative. Comments are due July 31, 2017. Contact: Patrick Yellin; EPA, Monitoring, Assistance and Media Programs Division; 202-564-2970; yellin.patrick@epa.gov. Citations: 40 CFR 60, Subparts A and CCCC

AIR
Ohio/Clean Air Act Consent Decree
AIR

Notice of the Justice Department announces a proposed consent decree in United States v. Lima Refining Co. (Civil Action No. 3:17-cv-01320-JZ), lodged June 22, 2017, with the U.S. District Court for the Northern District of Ohio. The consent decree would resolve claims regarding alleged Clean Air Act violations at Lima Refining's petroleum refinery located in Lima, Ohio, and claims for stipulated penalties for violations of a 2007 consent decree addendum involving the facility. The consent decree would require the defendant to pay $1 million in penalties and to perform injunctive relief concerning its leak detection and repair program, continuous emissions monitoring system, flare efficiency and minimization, and its sulfur recovery plant. The defendant also would be required to perform a lead paint abatement supplemental environmental project, and to install oxygen enrichment at two of its sulfur recovery units as mitigation. Comments are due July 31, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701; pubcomment-ees.enrd@usdoj.gov

Texas SIP/Collin County Lead Nonattainment Area

AIR

Direct final rule of the EPA provides the agency's determination that the Collin County, Texas, nonattainment area has attained the 2008 lead NAAQS based on complete, quality-assured, and certified ambient air quality monitoring data for 2013-2015, and redesignates the area to attainment. The attainment of the NAAQS and redesignation are due to the discontinuation of smelting operations at the Exide Technologies battery recycling plant in Frisco. The rule also approves revisions to the Texas SIP that address the attainment demonstration and maintenance plan for the 2008 lead NAAQS and a second 10-year maintenance plan for the 1978 lead NAAQS. The rule is effective Sept. 27, 2017, unless adverse comments are received by July 31, 2017. Contact: Robert Todd; EPA Region 6; 214-665-2156; todd.robert@epa.gov. GENERAL ENVIRONMENT AND SAFETY
Alternative Affirmative Defense Requirements for ULSD
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the EPA to seek OMB approval for a continuing information collection request concerning alternative affirmative defense requirements for ultra-low sulfur diesel fuel. The collection applies to retailers, refiners, importers, and distributors, who are deemed liable if a violation of the 15 parts per million sulfur standard is identified at a retail outlet. Such parties may rebut the presumption by establishing an affirmative defense showing that a quality assurance sampling and testing program was conducted. The collection addresses provisions that allow refiners and importers an alternative means of meeting the affirmative defense requirements by participating in a nationwide diesel fuel sampling and testing program. Comments are due Aug. 28, 2017. Contact: Geanetta Heard; EPA, Fuels Compliance Center; 202-343-9017; heard.geanetta@epa.gov

Good Manufacturing Practice for Medical Gases
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a revised draft guidance for industry regarding current good manufacturing practices for medical gases. The guidance provides compliance recommendations for the manufacture, processing, packing, and holding of medical gases. The guidance replaces a May 6, 2003, draft guidance (68 FR 24005) and incorporates stakeholder comments and information from a review of relevant federal drug regulations, including a Nov. 18, 2016, final rule that addresses warning statements on medical gas labels (81 FR 81685). The revisions also address expiration dating for medical gases. Comments are due Aug. 28, 2017. Contact: Frank Perrella; FDA, Center for Drug Evaluation and Research; 301-796-3265. Mountain Valley and Equitrans Expansion Projects
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the final environmental impact statement for the Mountain Valley Project (MVP) and the Equitrans Expansion Project. The projects involve the construction and operation of natural gas pipeline facilities by Mountain Valley Pipeline LLC in Virginia and West Virginia and by Equitrans LP in Pennsylvania and West Virginia. The final EIS, which was prepared in cooperation with the EPA, the U.S. Army Corps of Engineers, the Transportation Department, the U.S. Fish and Wildlife Service, and the Bureau of Land Management, concludes that the project would result in some adverse environmental impacts that would be reduced to less than significant levels through the proposed mitigation measures. Subject: INVESTIGATION: POLITICO probes congressional aides' potential conflicts with stock trades

Senior congressional aides are often more involved in writing legislation than the members themselves. But some regularly trade stocks that present potential conflicts of interest with their work. Some even invest in companies that lobby their committees. Among the regular traders are aides to leaders of both parties, senior staffers on the House and Senate appropriations committees, the Senate Judiciary Committee, and the House Energy and Commerce Committee, which oversees Obamacare. In the executive branch, they could be fired. But a POLITICO investigation found that Congress is far more lax in policing conflicts of interest.

Subject: House appropriators vote to delay, relocate Maryland offshore wind project

By Alex Guillén

07/18/2017 07:43 PM EDT

House appropriators approved an amendment to their 2018 Interior-EPA spending package that would delay development of a Maryland offshore wind farm in order to move it further offshore.

Rep. Andy Harris (R-Md.) said a planned project off the coast of Ocean City is too close, and said research indicates tourists are less likely to return when turbines are visible offshore. The developer, U.S. Wind, is planning a project about 17 miles offshore. Harris' amendment would prohibit the government from approving construction plans for any project closer than 24 nautical miles from Maryland.

Rep. Betty McCollum (D-Minn.), the top Interior-EPA spending Democrat, objected, saying the bill would unnecessarily delay a long-planned project and cost the government $6 million in breach-of-contract fines with the developer. The subcommittee chairman, Rep. Ken Calvert (R-Calif.), said he had questions about whether the measure could inadvertently affect other projects but nonetheless supported Harris' amendment.

It was approved on a voice vote, and Democrats did not call for a recorded vote.

WHAT'S NEXT: The spending bill is set to clear the Appropriations Committee this evening, but it remains to be seen when it would come to the House floor.

Subject: Pruitt Brings State Action Tour To Iowa & Kentucky

Pruitt Brings State Action Tour To Iowa And Kentucky

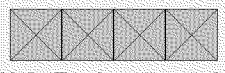
Click Here To Watch Administrator Pruitt's Interview On KCCI-TV Des Moines

The Cedar Rapids Gazette reports that Administrator Pruitt wants to use our natural resources. "The new head of the U.S. Environmental Protection Agency told an Iowa crowd Friday he will work with states when crafting environmental rules, and he criticized the Obama administration for doing the reverse. 'What's important for us in Washington, D.C., to do is to learn and partner and work with folks at the state level to achieve good outcomes together. That just simply has not happened for a number of years,' said EPA Administrator Scott Pruitt, during a stop in Nevada. Pruitt, the former Oklahoma attorney general, also said the United States should use the natural resources it has, not 'put up fences' around them."

The Des Moines Register reports Pruitt called farmers the first 'conservationists, environmentalists.' "Pruitt said the country needed to discuss what 'true environmentalism' means: 'We have been blessed with a bounty of natural resources. And some view that as 'We should simply not use them' — that we should put up fences and not use our natural resources. 'I don't buy that. We, as a country, have an obligation to feed the world and power the world,' he said, getting applause. 'When you have the natural resources like we do, we should use them to benefit our neighbors, our country and world.'"

The Quad-City Times reports that EPA is studying if E15 can be approved for year-round sale. "Pruitt, during his remarks at the Friday afternoon event near Nevada, said his agency is studying whether it has the legal standing to approve E15 for year-round sale. He said if it is determined the agency can do so without Congressional approval, it will make E15 available year-round. If not, Pruitt said he would make a recommendation to Congress to change the law."

In Kentucky, WHAS-TV in Louisville reports that next year, Pruitt will have changes to Obama's WOTUS. "The head of the United States Environmental Protection Agency was in Louisville Thursday with a promise of change to one of the most controversial environmental regulations for Kentucky farmers. Administrator Scott Pruitt told the Kentucky Farm Bureau's 98th Annual Meeting that the "Waters of the United States" regulation will be changed forever by mid-2018."



Click Here To Watch The Video

Finally, the West Kentucky Star reports that Pruitt denounced Obama's WOTUS. "Environmental Protection Agency chief Scott Pruitt found a friendly audience in Kentucky as he

lambasted an Obama-era clean-water rule. Pruitt told a Kentucky Farm Bureau audience on Thursday that the rule aimed at protecting small streams and wetlands from development and pollution was an example of federal overreach. He said the rule tried to redefine the Clean Water Act to cover puddles, dry creek beds and drainage ditches. President Donald Trump's environmental chief drew applause from the farm group as he said the rule is being 'fixed' and said a replacement rule is coming next year."

Water Infrastructure Bill Draws Bipartisan House Panel Support

Posted July 27, 2017, 02:01 P.M. ET

By David Schultz

A Republican bill that would authorize double the funding for an EPA loan program to help localities repair and upgrade their drinking water infrastructure sailed through a House committee today with the backing of the panel's top Democrat.

"I think this will be a noncontroversial bill that we can all support," Rep. Frank Pallone (D-N.J.) said at today's markup.

The bill, introduced by Rep. Gregg Harper (R-Miss.) introduced July 25, would include, among other things, funding for removing lead from school drinking fountains, prevailing wage provisions for federally funded water infrastructure projects, and language that could potentially force out-of-compliance utilities to consolidate with their neighbors.

The House Energy & Commerce Committee approved the water bill, H.R. 3387, on a voice vote. It will now head to the House floor.

Pipelines Awaiting Approval Pile Up at Federal Energy Regulator

Posted July 27, 2017, 7:00 A.M. ET

By Rebecca Kern

The backlog of natural gas pipelines awaiting Federal Energy Regulatory Commission approval is piling up as the agency enters its sixth month without enough members to approve $14 billion worth of infrastructure projects, and gas suppliers and pipeline companies could face longer-term impacts.

The pipelines awaiting regulatory approval include the proposed $5.5 billion Atlantic Coast Pipeline, owned by Dominion Energy and other partners, and the $2.1 billion Nexus pipeline, a joint project

from DTE Energy Co. and an Enbridge subsidiary.

"The situation is manageable for the time being, but just barely, because we are a few months away from major delays, which would be disruptive to the construction of pipelines and gas producers," James Lucier, managing director of Capital Alpha Partners LLC, a policy research firm that follows energy investments, told Bloomberg BNA.

"If we don't have a quorum by September, we definitely need to worry," he said.

Pipeline companies are calling on the Senate to act quickly to confirm two Republican FERC nominees—Robert Powelson and Neil Chatterjee—who can return the agency to a quorum to address the pending pipelines. When fully staffed, the independent agency has five commissioners, but it is among the agencies with a long list of appointed officials that Congress has yet to confirm.

Down to One Commissioner

FERC has been without a voting quorum of three commissioners since February, and is now down to one commissioner—Acting Chairman Cheryl LaFleur. Without a quorum, it can't issue certificates authorizing construction and operation of natural gas pipelines, approve liquefied natural gas terminals or vote on contested rate hearings.

If the quorum isn't returned and the pipelines are delayed, down-the-line impacts are possible on construction jobs, and natural gas producers and shippers, pipelines companies say. This is the first time FERC has been without a voting quorum in its 40-year history. The latest pipeline awaiting a FERC vote is the proposed Atlantic Coast Pipeline, spanning 600 miles from West Virginia to North Carolina, which received a favorable final environmental impact statement (EIS) from FERC staff July 21. It joins other high-profile pipelines including the proposed Nexus pipeline, owned by DTE Energy and Spectra Energy Partners LP (acquired by Enbridge), which received its environmental impact statement—the last step before a FERC vote—in November 2016.

"Quick action by the U.S. Senate on the FERC nominees will have an immediate impact on the nation's economy and Infrastructure," Jerry Norcia, president and chief operating officer at DTE Energy, told Bloomberg BNA.

Recently environmental groups opposing fracking and the development of natural gas pipelines have increased their efforts to put pressure on FERC.

The Sierra Club said it has opposed the nominations of Chatterjee and Powelson.

"Unfortunately, Donald Trump's nomination of Neil Chatterjee and Rob Powelson will continue FERC's status quo of approving unneeded fracked gas pipelines that take private land for corporate gain and lock Americans into higher electricity rates while increasing our dependency on fossil fuels for decades to come," Lena Moffitt, Sierra Club's director of the Our Wild America campaign aimed at protecting public land, told Bloomberg BNA.

Also, the Natural Resources Defense Council is an intervenor in the natural gas certificate cases at FERC for the Atlantic Coast and Mountain Valley pipelines. John Moore, director of the NRDC's Sustainable FERC Project, told Bloomberg BNA that his group believes these projects aren't necessary because there isn't enough demand for the fuel and other clean energy alternatives are available.

Senate Impasse

Chatterjee and Powelson were reported favorably out of a Senate committee in a 20-3 vote and are awaiting a Senate floor vote. Senators Ron Wyden (D-Ore.), Bernie Sanders (I-Vt.) and Mazie Hirano (D-Hawaii) were the three members who voted against them.

Two more nominees, Richard Glick (a Democrat) and Kevin McIntyre (a Republican)—have been named by President Donald Trump, but their nominations haven't been formally sent to the Senate to begin their hearing and confirmation process. Without agreements on vote timing between Senate Majority Leader Mitch McConnell (R-Ky.) and Senate Minority Leader Charles Schumer (D-N.Y.), FERC's quorum may not be restored until after Labor Day, Christi Tezak, managing director of research at ClearView Energy Partners LLC, told Bloomberg BNA. And the value of backlogged pipeline projects could reach $17 billion by October, she projected.

Sen. Lisa Murkowski (R-Alaska), chairman of the Senate Energy and Natural Resources Committee, which favorably reported out Powelson and Chatterjee, has said it is "critical to restore a working quorum at FERC as soon as possible." Sen. Maria Cantwell (D-Wash.), the committee's ranking member, also voted in favor of both nominees and has supported FERC returning to a quorum.

Impacts on Jobs, Suppliers, Consumers

The lack of FERC quorum "has implications that go pretty far beyond the pipeline companies," Don Santa, president of the Interstate Natural Gas Association of America, told Bloomberg BNA.

DTE Energy's Norcia said that if FERC approves the proposed Nexus pipeline, it would provide more than 7,000 construction jobs to Ohio and Michigan. Atlantic Coast Pipeline says it will employ more than 17,000 construction workers West Virginia, Virginia and North Carolina.

Smaller pipelines such as the $1 billion proposed Penn East pipeline, owned by a group of companies including Spectra Energy and NJR Pipeline Co., would run through New Jersey and Pennsylvania and provide up to 3,000 construction jobs.

Santa, whose trade group represents the major U.S. pipeline companies, said uncertainty of the FERC approval timeline could lead to potential construction delays.

In addition, pipeline companies could be subject to paying penalties to shippers if contracts aren't met due to delayed approval, and the companies' shareholders may not get the returns on their investments if there are delayed in-service dates.

Dena Wiggins, president and CEO of the Natural Gas Supply Association, which represents natural gas producers such as ExxonMobil Corp. and Chevron Corp., said the backlog directly impacts them.

"Natural gas producers have to have pipelines to get their gas to market and we've got an abundant supply, but we've got to have the pipelines," she told Bloomberg BNA.

If there are further delays, consumers may see higher prices.

"When you build new pipeline infrastructure, particularly if you relieve a bottleneck in the pipeline system, that lowers delivered gas prices," Santa said. He said this could lower heating and electricity bills.

'Not a Practice I'd Recommend'

"We are literally driving right up to the end of the cliff. And the good news is that as long as you stay on this side of the edge, you can still be fine. It's just not a practice I'd recommend," Capital Alpha's Lucier said.

One the first pipelines to come online, if approved after a FERC quorum is restored, would likely be the Nexus pipeline. The pipeline will likely be completed some time in 2018, Gerry Anderson, DTE Energy's president and CEO, said in the company's second quarter earnings call July 26.

Other pipelines still project a late 2018 start-date, including the $3.5 billion Mountain Valley pipeline primarily owned by EQT Midstream Partners that would span through Virginia and West Virginia; and Penn East.

TransCanda Corp.'s $2 billion Mountaineer Xpress in West Virginia could be added to the list of potentially delayed projects if FERC doesn't have a quorum until later this year. The company is projecting for the pipeline be operational in late 2018 as well.

The owners of the Atlantic Coast Pipeline—Dominion Energy, Duke Energy, Piedmont Natural Gas and Southern Co.—say that they are confident they will receive FERC approval by the fall, and for the pipeline to be operational by late 2019.

Russian Energy Sanctions Poised for Quick Senate Approval

Posted July 27, 2017, 11:46 A.M. ET

By Brian Dabbs

New restrictions on U.S. energy projects overseas are poised to reach the president's desk in the coming days as part of a broad sanctions package targeting Russia, as well as Iran and North Korea.

Senate Democrats all signed off on the bill (H.R. 3364), which would prohibit U.S. companies from participating in energy projects that have a 33 percent or more Russian stake, a spokesman for Senate Majority Leader Charles Schumer (D-N.Y.) told Bloomberg BNA July 27.

The oil and gas industry lobbied hard against the original Senate version, which would have prohibited U.S. company participation in energy projects with any Russia stake. Exxon Mobil Corp., Chevron Corp., and other U.S. companies participate in joint energy projects across the globe. Marty Durbin, American Petroleum Institute executive vice president and chief strategy officer, told Bloomberg BNA the new bill marks an improvement.

"There remain concerns with how this legislation could affect U.S. business interests in the future, but the amended bill more appropriately focuses sanctions on the intended target—Russia and its energy firms—rather than inadvertently benefiting Russia at the expense of U.S. companies," Durbin said in an email.

Unanimous Republican support would allow the bill to bypass Senate procedural obstacles. A spokesman for Majority Leader Mitch McConnell (R-Ky.) didn't immediately respond to Bloomberg BNA's request for comment.

U.S. sanctions already target a wide range of the Russian energy sector, but existing policy applies only to projects—such as extraction and pipelines—within the Russian Federation. The change to a 33 percent threshold sparked some opposition among senators.

Senate Foreign Relations Committee Chairman Bob Corker (R-Tenn.), however, signaled senators are now willing to shelve those concerns.

"I am glad to announce that we have reached an agreement that will allow us to send sanctions legislation to the president's desk," Corker said late July 26.

Volkswagen Gets Green Light for Emissions Fix to Diesel Cars

Posted July 27, 2017, 02:07 P.M. ET

By Carolyn Whetzel

Volkswagen can begin fixing an additional 326,00 diesel engine cars that included software to cheat on nitrogen oxides emissions tests after the EPA and California signed off on its buyback and repair plan July 27.

The plan covers model year 2009 through 2014 Jetta, Golf, Beetle and Audi A3 diesels, which were equipped with software that allowed the vehicles to pass emissions certification tests, but emit higher levels of pollution during routine driving. Owners of those vehicles will have the option of having the software updated to comply with emissions control requirements or selling their cars back to Volkswagen.

The company in January and May had received approval to fix other VW diesel models.

GOP Renews Fight for Edison's Light Bulb as Industry Goes LED

Posted July 27, 2017, 12:48 P.M. ET

By Ari Natter

Congressional Republicans renewed their effort to save the traditional light bulb, passing a measure to block federal energy standards that have come to symbolize government overreach for many consumers but are largely embraced by manufacturers as the cost of the newer bulbs has plummeted.

The House passed an amendment to a spending bill late July 26 to block enforcement of Energy Department rules requiring manufacturers to phase out sales of incandescent light bulbs to cut power use. While the measure faces an uncertain future in the Senate, its sponsor called it an important victory for freedom.

"Congress should fight to preserve the free market," Michael Burgess, a Texas Republican, said on the House floor before the vote. Burgess said he had heard from tens of thousands of people about how the regulations "will take away consumer choice when constituents are deciding which light bulbs they will use in their homes."

Standards Have Curtailed Use

The measure takes aim at rules that were issued under a 2007 bipartisan energy legislation signed into law by Republican President George W. Bush. The standards, which were phased in starting in 2012, have curtailed the use of incandescent light bulbs.

If it becomes law, the measure could have some unintended consequences, critics warn. While it won't change light bulb standards which have been in effect for years, it could hamstring authorities from blocking import of incandescent bulbs from China or other nations that that don't meet the requirements, said Steven Nadel, executive director of the American Council for an Energy-Efficient Economy, a non-profit group that promotes energy conservation.

When Republicans attacked these standards, manufacturers said they would still voluntarily comply with them, and the LED share of the market has surged over the last three years as the cost of those bulbs dropped.

LED light bulbs, which made up just 1 percent of global market share in 2010, are estimated to make up 95 percent that market by 2025, according to research by Goldman Sachs. They accounted for more than a quarter of U.S. sales last year, it said. Other bulbs that have been used to meet the requirements include the ubiquitous curly compact florescent, or CFL, bulbs and halogen lights.

When a similar measure passed into law as a rider in government funding legislation in 2011, the National Electrical Manufactures Association, which represents companies such as Philips Lighting NV and General Electric Co. said light bulb makers planned to comply with them regardless. Tracy Cullen, a spokeswoman for the trade group, did not respond to an email and phone message seeking comment.

'Mind-Boggling'

"It's mind-boggling to me," Elizabeth Noll, legislative director of the Natural Resources Defense Council's energy and transportation program, said. "It just adds uncertainty to their products and the rules of the road they are complying with."

The requirements, which have been put in place over time starting with the 100-watt light bulb in 2012, will cut the nation's electricity costs by $12.5 billion dollars annually and avoid the equivalent of 30 new power plants, the environmental group estimates.

"It's a an ideological objection to government interference in the market place," said Kateri Callahan, president of the Alliance to Save Energy, a Washington-based nonprofit. "All the things that Dr. Burgess and other opponents to those standards said would happen—limited choice by consumer, high prices—none of that has borne out."

Growth-Starved Utilities Have Found a New Way of Making Money

Posted July 27, 2017, 8:54 A.M. ET

By Christopher Martin, Jim Polson and Mark Chediak

There's a new model emerging for growth-starved utilities looking to profit from America's solar and

wind power boom.

American Electric Power Co. is using it for a $4.5 billion deal that'll land the U.S. utility owner a massive wind farm in Oklahoma and a high-voltage transmission line to deliver the power. NextEra Energy Inc.'s Florida unit is using it to build solar farms. And in April, the chief executive officer of Xcel Energy Inc. said he'd use it to help add 3.4 gigawatts of new wind energy over the next five years.

Here's how it works: Some utilities that for years contracted to buy electricity from wind and solar farm owners are now shifting away from these so-called power purchase agreements, or PPAs. They're instead seeking approval from state regulators to buy the assets outright and recover the costs from customers through rates. While the takeovers are being branded as a cheaper way of securing power, saving ratepayers millions in the end, they also guarantee profits for utilities.

"We keep wondering why utilities are always signing PPAs that pass the cost through to customers," said Amy Grace, an analyst at Bloomberg New Energy Finance. "If you put it in your rate base, you can get a guaranteed return on it. There's a big upside to ownership."

With the cost of building solar and wind farms sliding and electricity demand weakening, owning renewables is a more attractive proposition than ever for utilities.

"The price of wind has come down enough that it's going to be competitive with anything else you're probably going to propose to build out there," Kit Konolige, a New York-based utility analyst for Bloomberg Intelligence, said by phone July 26.

Biggest Hurdle

The catch, of course, is regulatory buy-in. AEP will need approval from Arkansas, Louisiana, Oklahoma, Texas and federal regulators to purchase the 2,000-megawatt Wind Catcher farm from developer Invenergy LLC, build a 350-mile (563-kilometer) transmission line and bake the costs into customer rates. The company expects to file these plans with regulators on July 31.

Benjamin Fowke, chief executive officer of Minneapolis-based Xcel Energy, said in April that the company would seek approval to add 3.4 gigawatts of new wind energy and bill customers for as much as 80 percent of that investment through rates. He said at the time that wind energy is now the cheapest new form of generation.

NextEra has already gotten Florida's go-ahead to recover the costs of the solar farms its Florida utility is building through customer rates.

Should AEP gain similar approvals, the utility will be embarking on its most expensive renewable energy project yet, underscoring a dramatic shift in America's power mix. Once the largest consumer of coal in the U.S., AEP is now shuttering money-losing plants burning the fuel and diversifying its resources along with the rest of the utility sector.

The Wind Catcher farm in Oklahoma is set to become the largest wind farm in the nation and the second-biggest in the world, according Invenergy.

AEP estimated that the low cost of the wind power will save customers $7 billion over 25 years. Construction on the farm began in 2016, and the plant is scheduled to go into service in mid-2020, Invenergy said by email.

Natural Gas Severance Tax Bill Passes in Pennsylvania Senate

Posted July 27, 2017, 01:03 P.M. ET

By Leslie A. Pappas

Natural gas drillers in Pennsylvania would pay a severance tax and consumers will pay higher taxes on natural gas under a proposal the Pennsylvania Senate narrowly approved today. House Bill 542, which passed the Senate 26-24, would levy a severance tax on the extraction of natural gas on top of the state's existing impact fee, which is levied on natural gas producers per well drilled. The bill would also impose a new gross receipts tax on natural gas that will be paid by consumers.

The new gas taxes are part of a revenue proposal that includes widespread tax increases, the Senate's solution to plugging a $2 billion hole in the state's fiscal 2017-18 budget. The Pennsylvania Legislature passed $32 billion spending package on June 30 without revenues to back it up, and since then, has been arguing about how to pay for it.

The bill now goes to the House.

If Petronas Can't Beat U.S. LNG Suppliers, It Could Join Them

Posted July 27, 2017, 7:57 A.M. ET

By Natalie Obiko Pearson, Ryan Collins and Kevin Orland

Malaysia's Petroliam Nasional Bhd has pulled the plug on its $27 billion plan to ship liquefied natural gas from Canada's west coast to Asia, losing out to U.S. suppliers who got to market first.

Well, if it can't beat them, it may still join them.

With its Pacific Northwest LNG project now dead, Petronas, as the state-owned company is known, needs to find a home for the gas produced by its Progress Energy Canada Ltd. unit in Canada's massive Montney formation—and exporting from the U.S. might be its best bet.

"Given the high quality of Petronas' liquid-rich shale assets in Canada, it wouldn't be surprising if Petronas tried to monetize some of them into LNG through a U.S. Gulf Coast facility," said David Austin, a Vancouver-based energy lawyer at Clark Wilson LLP who has advised clients working in the Montney, one of the continent's most prolific and cheapest sources of gas.

Petronas' decision to scrap the Pacific Northwest plant underscores how Canada's natural gas industry has struggled to compete with surging supplies from U.S. shale formations, which are already reaching buyers from Chile to China. As U.S. gas shipments to overseas buyers climb to a record and Canada's export projects remain stalled, Canadian drillers may have little choice but to send their output through Gulf Coast LNG terminals.

"That resource that we own is world class and highly competitive," Progress CEO Mark Fitzgerald said on a conference call Tuesday when asked about the possibility of exporting through the U.S. "We'll look at every option that we can to bring that to market."

Petronas' Progress wouldn't be the first Canadian producer to turn to the U.S. for help in exporting gas. Cheniere Energy Inc., which owns two LNG terminals on the Gulf Coast, signed its first Montney supply deal with Calgary-based Seven Generations Energy Ltd. earlier this year.

Cheniere is "absolutely" looking at other Canadian natural gas suppliers, Corey Grindal, senior vice president of gas supply, said in a June 26 interview in Houston. "We are in conversations with others."

Grindal also said Cheniere is in discussions about whether additional infrastructure needs to be built, potentially with a partner, "to get gas from the Montney down to one or both our terminals." Cheniere operates the Sabine Pass terminal in Louisiana and is building a second near Corpus Christi, Texas.

The Montney, a formation sometimes referred to as the "the Permian of the North" after the massive Texas oil and gas field, straddles the provinces of British Columbia and Alberta. The play holds about 449 trillion cubic feet of marketable natural gas, according to a 2013 estimate from Canada's National Energy Board. That's about half the total reserves of Qatar, the world's biggest exporter of liquefied natural gas.

Seeking Markets

But Canadian oil and gas producers face limited options in finding potential customers for their supply. Regulatory delays and environmental opposition have long stymied pipeline and LNG terminal projects seeking to ship out of Canadian ports to newer, more profitable markets.

Canada "has a tremendous resource, but market outlets are limited," Matthew Phillips, director at Guggenheim Securities LLC in Dallas said.

Petronas spent C$5.2 billion to buy Progress Energy in 2012 to take control of gas fields in the Montney intended to supply the LNG terminal. Progress, with partners China Petrochemical Corp., Japan Petroleum Exploration Co., Indian Oil Corp. and Brunei's state oil company, produce more than 750 million cubic feet equivalent of natural gas per day, according to the company's website.

"There's just a huge amount of it," said Samir Kayande, director at Calgary-based RS Energy Group. "What they need to do is figure out what the market for that gas is."

TransCanada Corp., which was building the North Montney Mainline to supply Montney gas to Petronas' LNG terminal, said earlier this year that the pipeline would be successful even without the facility.

The line "is needed whether or not LNG goes ahead," Shawn Howard, a spokesman for TransCanada, said in an email. "The Montney basin is one of the lowest-cost, most prolific North American shale plays, and production growth in this area requires additional infrastructure to connect supply to existing or new markets."

Canadian producers looking to boost gas exports to the U.S. will face stiff competition from producers in the Marcellus shale basin of Pennsylvania and West Virginia, Phillips said. A U.S. export valve is unlikely to resolve the basic conundrum facing stranded Canadian producers: better prices.

"It means we're beholden to the U.S.," said Andy Mah, chief executive officer of Calgary-based Advantage Oil & Gas Ltd. "Until we can start recognizing that we have something of value and make it happen, we're going to be at their mercy."

Germany Considering Fund to Pay for Reducing Diesel Emissions

Posted July 27, 2017, 12:49 P.M. ET

By Birgit Jennen, Rainer Buergin and Brian Parkin

Chancellor Angela Merkel's government is considering setting up a fund to help pay for programs to cut diesel emissions as cities consider bans and allegations of cheating by German automakers cast doubts on the survival of the technology.

The "three-digit-million" euro fund would contribute to developing new mobility concepts for polluted cities, including Internet-based digital solutions, Transport Minister Alexander Dobrindt said in Berlin on July 27. Handelsblatt reported earlier that the program would likely be funded with 500 million euros ($585 million), split between car companies and the government, to cut diesel pollution and avoid driving bans.

Daimler AG's Mercedes-Benz last week announced plans to voluntarily recall 3 million diesel vehicles in Europe to upgrade their technology, while Volkswagen AG's Audi brand said it will service 850,000 cars. Volkswagen, which two years ago admitted to cheating on emissions in millions of vehicles, is also caught up in an unfolding scandal with Daimler and BMW AG over allegations that they colluded on technology for decades. BMW vehemently denies cheating on diesel technology. Industry executives and government officials set to meet Aug. 2 in Berlin to discuss their options.

"One pillar is the retrofitting of vehicles, in other words optimizing emissions; another pillar is the fund," said Dobrindt, a member of the Bavarian sister party to Merkel's Christian Democratic Union. "I honestly do not think it very effective today to speak about the funeral for the internal combustion engine."

U.K. Ban

While the U.K. on July 26 announced plans to ban sales of diesel and gasoline cars by 2040—echoing a similar initiative in France—Germany has chosen not to follow suit. Diesels still make up about half of all autos sales in Europe and carmakers say they need the fuel, which generates about a fifth less greenhouse gases than gasoline, to meet Europe's tightening emissions standards until the push to electric vehicles gathers more momentum.

"This is not about demonizing the diesel," Ulrike Demmer, a Merkel spokeswoman, told reporters July 26. "A ban on diesel or petrol vehicles is currently not on the agenda of the federal government."

German Environment Minister Barbara Hendricks on July 27 urged the government to go a step further and create a new unit—under her ministry—to more efficiently approve, categorize and scrutinize new vehicles. The relationship between the government and auto industry "has grown too

close," argued Hendricks, a member of the Social Democrats, Merkel's junior coalition partner.

Cem Oezdemir, a co-leader of the opposition Green Party, said at a meeting with VW works council members in Wolfsburg, Germany, that carmakers have pretended to adhere to what are already favorable regulations while the government has looked the other way.

"The diesel scandal, possible cartel arrangements—we have suffered a massive loss of reputation for Made in Germany, but the automobile industry has unfortunately contributed to this," Oezdemir said. "But I also don't want to release the government from their responsibility, because it always takes two for this sort of misconduct."

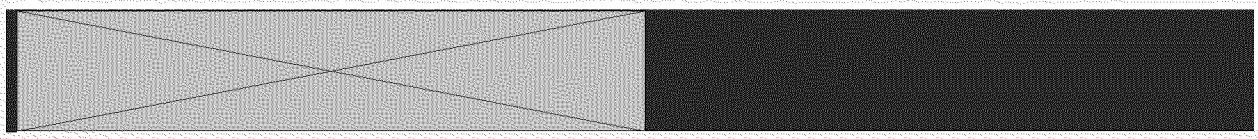
Subject: POLITICO Pro Breaking News: DOE releases oil from Strategic Petroleum Reserve

The Department of Energy is releasing 500,000 barrels of oil from its Strategic Petroleum Reserve to a Louisiana refinery that was affected by Tropical Storm Harvey.



The oil will be delivered via pipeline to the Phillips 66 refinery in Westlake, La., a DOE spokeswoman said. Since last week, Harvey has forced the shutdown of 20 percent of offshore oil production in the Gulf of Mexico and up to 500,000 barrels per day of onshore output in Texas.

"The Department will continue to provide assistance as deemed necessary, and will continue to review incoming requests for SPR crude oil," a DOE spokeswoman said.

GOP House members hit Trump plan to break retirement promise to feds on moral, ethical grounds

By Joe Davidson

Rep. Rob Bishop (R-Utah) speaking last year. He opposes President Trump's plan to cut retirement benefits for current federal employees. (J. Scott Applewhite/AP)

You can't always tell a book by its cover or a politician's position by the party.

Rep. Rob Bishop is a Utah Republican known as a solid right-winger. Like many Republicans, he generally doesn't get good grades on federal workforce issues.

His most recent ratings on congressional voting scorecards were 20 percent from the National Active and Retired Federal Employees Association (NARFE), 15 percent from the American Federation of Government Employees (AFGE) and 10 percent from the National Treasury Employees Union (NTEU).

But wait — while he has voted against positions favored by employee groups on many issues, he recently led a letter from nine Republicans opposing federal retirement cuts proposed by President Trump.

It's a principled position.

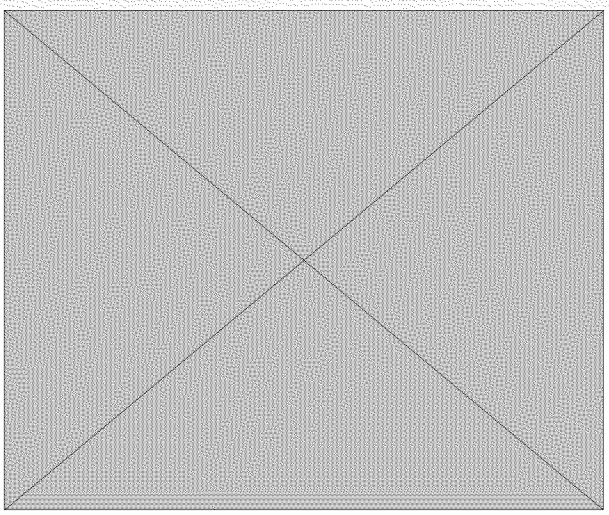
Citing the various ways Trump's budget plan would hit feds, despite his call for a 1.9 percent pay raise, the letter says "our strongest objection is how the proposals break a promise to employees and retirees who have based career planning on longstanding promised benefit calculations. They and their families don't deserve to be treated in this cavalier manner."

In addition to Bishop, it was signed by Reps. Tom Cole (Okla.), Austin Scott

DELIBERATIVE

(Ga.), Barbara Comstock (Va.), Rob Wittman (Va.), Christopher H. Smith (N.J.), Frank A. LoBiondo (N.J.), Walter B. Jones (N.C.) and Brian K. Fitzpatrick (Pa.).

They oppose Trump's plan to:



- Lower retirement benefits by basing them on the average of the high five years of salary instead of the current high three.
- Abolish cost-of-living adjustments (COLA) for current and future Federal Employee Retirement System employees.
- Reduce the COLA for Civil Service Retirement System (CSRS) employees by 0.5 percent from what the formula otherwise allowed.
- End supplemental retirement income for FERS employees who retire beginning in 2018.
- Increase individual out-of-pocket FERS payments by 1 percentage point each year until they equal the government's contribution. This would take up to six years and would amount to increased payments of about 6 percent. Payments from federal law enforcement officers would increase by the same amount but would not equal the greater contributions from law enforcement agencies.

The last point would be "tantamount" to a "permanent 6% pay cut," the letter said.

"I think we have a moral obligation to those currently in the system," Bishop explained during an interview. "That's the basis on which they were hired; that's how they are planning for their future."

The letter to House Speaker Paul D. Ryan (R-Wis.) and House Majority Leader Kevin McCarthy (R-Calif.) points out that these cuts have been pushed before without success: "Recycling discredited proposals targeting federal workers is disruptive to them, and demoralizing to all middle-class civilian worker families." The House leaders have not responded to the letter, and the Trump administration had no comment.

Bishop is not necessarily opposed to imposing less-generous retirement benefits on new staffers. "I can live with that," he said by phone. "I cannot go back retroactively and change those benefits. That's a philological position. … Philosophically, I just think it is wrong."

The proposal that Bishop wants to scrap would have affected Republican administrations. When Barack Obama was president, he proposed increasing retirement contributions made by current employees.

"I was opposed to it then, and I'm still opposed to it," said Bishop, whose district includes 16,000 civilian employees at Hill Air Force Base, an Internal Revenue Service center and other federal offices. "The idea of making retroactive cuts … it's not a conservative or liberal approach … and I've still think it's wrong, regardless of who proposes it."

That's a position that brings his current effort praise from employee organization leaders who generally rate him low.

NTEU President Tony Reardon: "Their letter puts House leadership on notice that any effort to slash federal salaries and pensions will be met with fierce, bipartisan resistance."

John Hatton, NARFE deputy legislative director: "NARFE applauds the letter, and appreciates that these members of Congress are highlighting for their leadership the harmful and unfair consequences that would result from the budget proposals targeting the earned retirement benefits of federal employees and retirees."

AFGE President J. David Cox Sr.: "Through [Bishop's] leadership the military facilities in Utah have thrived, as have the Department of Defense civilians who have found him to be an honest broker and backer of a common-sense approach to defense issues."

More from Federal Insider

The five signatures on the GOP letter lag far behind the 100 on a similar letter from House Democrats. Bishop said he made no attempt to secure a mass letter, preferring to include colleagues who really understand the issues. Apparently, not many Republicans do.

Once "the moral values and the ethical values" against cuts for current workers are explained to his colleagues, Bishop said "I think you'll find there will be much more empathy" toward his position.

The Republicans' letter noted that veterans make up more than 30 percent of the federal workforce, meaning Trump's plan would hit those who have risked their lives for the nation.

The GOP members recalled previous workforce compensation cuts, including a three-year partial pay freeze, furloughs and higher retirement payments by new workers. "In total, these combined shared sacrifices by federal workers have amounted to $182 billion since 2010," the letter said.

"No one needs to remind us of the deficit and debt problem our nation faces, but federal employees are an easy political target," the nine Republicans concluded. "In more ways than one, they have already repeatedly given at the office."

But can they convince their Republican colleagues?

Subject: EPA asks court to pause methane rule enforcement order

By Ben Lefebvre

07/07/2017 05:56 PM EDT

EPA today asked a federal court to delay an earlier decision requiring it to enforce an Obama-era rule to limit methane emissions from oil and gas drilling.

Administrator Scott Pruitt sought to put key aspects of the methane rule on hold last month while the Trump administration considers ways to revise it, but the U.S. Court of Appeals for the D.C. Circuit on Monday ruled that he could not do so without taking public comment. The court ordered EPA to immediately resume enforcing the rule, which requires installing leak detection and repair systems on new oil and gas wells and any that were drilled since it was finalized last August.

In a filing today, EPA argues that the court jumped the gun by requiring the agency to enforce the rule immediately after its ruling instead of allowing what it deems a normal seven-day lead time. That deprived the EPA sufficient time to consider a rehearing, agency lawyers claimed in the latest filing.

"In light of these interests in allowing the United States and the regulated community the standard period to thoughtfully decide whether to seek further review of the significant issues raised by the Court's decision, recall of the mandate is warranted," the agency wrote.

WHAT'S NEXT: It remains to be seen how quickly the court responds to EPA's motion. Pruitt has proposed a longer-term stay of the methane rule that is expected to be in place within the next few months.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

June 16, 2017

Latest News

Pruitt Offers Muted Defense Of EPA Budget Cuts, Opening Door To Increases

EPA Administrator Scott Pruitt offered few specific defenses of the Trump administration's fiscal year 2018 budget request for the agency at a June 15 House appropriations interior subcommittee hearing, opening the door to lawmakers who have rejected the administration's proposed cuts to rewrite the plan.

Citing 'Broad' Reconsideration Discretion, EPA Defends Methane NSPS Stay

EPA is citing its "broad discretion" to reconsider agency rules and briefly pause such provisions as it defends its administrative stay of several key requirements of the Obama-era methane standards for new oil and gas sources against environmentalists' lawsuit asking an appellate court to halt the agency's action.

Environmentalists, EPA Fight Over Legality Of Power Plant CWA Rule Stay

Environmentalists and EPA are fighting over the legality of the agency's indefinite stay for its utility Clean Water Act (CWA) effluent rule, with environmentalists claiming the stay is unlawful and must be dissolved while EPA says litigation over the stay was filed in the wrong court and should be dismissed regardless of its merits.

House Democrats Fail In Bid To Require CASAC Approval For Ozone Delay

House Democrats at a June 15 markup failed with a bid to attach an amendment to a bill overhauling EPA's national ambient air quality standards (NAAQS) program to require the agency's Clean Air Scientific Advisory Committee (CASAC) to affirm any ozone NAAQS delay would not harm public health before it could proceed.

States Caught Between Calls For Reform, EPA Cuts As Hill Weighs Budget

State environmental officials appear caught between competing pressures as debate heats up over EPA's fiscal year 2018 budget, seeing potential opportunities to bolster their say on implementation of environmental policies but warning that full-throated attacks on EPA -- including on the agency's funding to states -- could have dire consequences.

EPA Pulls Draft Coal Ash Permit Guide From OMB, Submits Revised Version

EPA has without explanation withdrawn from White House review its draft guidance for states on crafting coal ash permit programs to comply with the agency's ash Resource Conservation & Recovery Act (RCRA) rule, pulling the guide that had been under review since May 25 and submitting a revised version for review on June 14.

Despite Trump Bar, OMB Mulls 'Rigorous' Method To Estimate GHG Damages

Despite President Donald Trump's bar on the use of the Obama-era social cost of carbon (SCC) metric to estimate climate damages, the administration is “trying to figure out a good, rigorous technical way” of calculating carbon dioxide damages in rules' cost-benefit analysis, a top regulatory review official says.

As Trump Seeks Elimination, NAS Offers Quiet Praise For EPA's STAR Grants

A National Academy of Sciences' (NAS) panel is offering quiet praise for a major EPA research grant program for its public benefits and careful planning -- a program that was cut by the Obama administration and is now slated for elimination by the Trump administration in its fiscal year 2018 budget request.

Pesticide Control
Arkansas PESTICIDES

Proposed rule of the Department of Agriculture, State Plant Board, adopts Regulation No. 7 under Circular 9 regarding pesticide control and registration. The rule allows the board to request additional information from applicants about a pesticide before it is registered and clarifies that the board will give higher consideration to research specific to the state. The rule also directs the board to explain in writing to the registrant if and why any research supplied is found to be insufficient and gives applicants 14 days after receiving a notification of restricted use to notify the board that they wish to dispute the decision. In addition, the rule requires the board to provide written notice to the product registrant before placing further restrictions on a product that has received federal approval and is currently registered and being used in the state. A hearing is scheduled for Dec. 12, 2017, in Little Rock. Comments are due Dec. 3, 2017. Contact: Susie Nichols; State Plant Board, Pesticide Division; 501-225-1598; Susie.Nichols@apsb.ar.gov

Air Quality Standards

Montana AIR

Proposed rule of the Department of Environmental Quality, Board of Environmental Review, amends regulations under ARM 17.8.102 through .1502 (nonconsecutive) to incorporate by reference federal air quality standards, as of July 1, 2016, and the 2015 edition of the U.S. Code. The rule also removes exemptions from federal standards under 40 CFR 63, Subparts JJJJJ and KKKKK, concerning brick and structural clay products manufacturing and clay ceramics manufacturing, respectively. In addition, the rule incorporates the 2017 version of the state Ambient Air Monitoring Program Quality Assurance Project Plan and 2016 revisions to federal standards under 40 CFR 50.14 regarding ambient air quality standards and monitoring. Finally, the rule updates provisions concerning the availability of referenced documents. The rule does not incorporate federal standards under 40 CFR 60, Subparts OOOOa or TTTT, concerning certain crude oil and natural gas facilities and greenhouse gas emissions from electric utility generating units due to ongoing litigation. Comments and hearing requests are due Nov. 24, 2017. Contact: Sandy Scherer; DEQ; 406-444-2630; sscherer@mt.gov

Subject: Interior could cut BLM staff by end of this year

By Ben Lefebvre

06/20/2017 02:12 PM EDT

The Interior Department has told the Bureau of Land Management to prepare for staff cuts of 1,000 positions as soon as the end of this year.

Those cuts would be in line with the White House budget proposal released in May, although lawmakers have already said they did not intend to follow that guidance.

In a memo to agency employees, acting BLM Director Michael Nedd conceded that although the White House budget cuts for the agency have not been approved, staff should prepare for the reductions.

?We remain hopeful that the BLM can handle reducing the size of our workforce through normal attrition, retirements, and smart, selective hiring with an emphasis on trying to fill our critical vacancies from within our current workforce,? Nedd said in the email. ?To accelerate attrition, the Department may also seek authority from the Office of Personnel Management to offer early retirement and voluntary separation incentives later this year.?

Neither BLM nor OPM would comment on the plans.

If implemented, the cut would eliminate 10 percent of BLM's staff. But the agency is already operating below full staffing, according to Public Employees for Environmental Responsibility, a nonprofit group representing state and federal workers.

"BLM is ridiculously thinly staffed," PEER Executive Director Jeff Ruch told POLITICO. "They haven't had 10,000 employees for three years. They've already shrunk 10 percent since 2010.?

Meanwhile, Congress has already said it would allot more money to Interior than the White House requested.

"I don't expect many of [the cuts] to become a reality, especially those that target popular programs," Sen. Lisa Murkowski (R-Alaska) told Interior Secretary Ryan Zinke during a Senate Energy and Natural Resources Committee budget hearing this morning.

Leading the News

Climate Change
U.S. Finds Isolated Climate Change Stance at G-7 Talks
Two days of talks among Group of Seven environment ministers confirmed a crack between the world's other leading industrial nations and the U.S. over climate change issues.

Insurance
Insurers May Face Challenges From a U.S. Climate Deal Exit
The insurance industry could face challenges from climate change in the long term if the U.S. exits the Paris climate accord. But the industry sees the deal's goals as reachable through other methods, the world's largest reinsurer told Bloomberg BNA.

International Climate
EPA Head Blamed Obama for Paris Deal at G-7 Climate Summit
Environmental Protection Agency chief Scott Pruitt blamed former President Barack Obama for forging a bad Paris climate deal, leaving the U.S. with the job of extricating itself, the German environment minister said.

International Climate
U.S. Says It Has Seat at Climate Talks—But Is It at Kids' Table?
The White House is insisting it will still have a seat at the table at the next United Nations climate summit just before Thanksgiving in Bonn—but President Donald Trump's exit from the Paris climate pact may mean the U.S. won't be sitting at the adults' table. Administration officials, including Secretary of State Rex Tillerson and EPA Administrator Scott Pruitt, insisted the U.S. still has a voice in climate negotiations, noting Trump stopped short of pulling out of ...

Air Pollution

EPA Air Pollution Model Gets Inspector General Scrutiny

The EPA's process for approving the air pollution modeling methods it recommends for state regulators is slated for review by the agency's inspector general.

Chemical Security

Pruitt Delays Chemical Plant Regulation Changes to 2019

Chemical companies, oil refiners and other industrial sites will see a reprieve from an Obama administration regulation that would have imposed new safety requirements, the Environmental Protection Agency said.

Chemicals

Easing EPA Chemical Reporting Could Promote Recycling

Companies want to enlist the EPA's help so they can recycle valuable metals and other inorganic chemicals and cut down the amount of time and money they're spending filling out paperwork.

Coal Mining

Arch Coal Could Expand Mining in Colorado Under Draft Plan

Arch Coal Inc. would be able to expand the area it can explore for coal deposits in northwest Colorado under the Forest Service's preferred alternative in a recent environmental analysis, raising the ire of environmentalists.

Contribution

Mining Company Not Liable as Successor in Superfund Suit

A limestone mining company won't face Superfund liability as the successor of another company because there was no overlap in ownership, the U.S. District Court for the Western District of Virginia said (Dixon Lumber Co. v. Austinville Limestone Co., 2017 BL 196075, W.D. Va., Civil Action No. 7:16-cv-00130, 6/9/17).

Emissions Trading

California Budget Bills Fail to Extend Cap-and-Trade

California budget bills on June 12 didn't include legislation Gov. Jerry Brown (D) is seeking to reauthorize the state's greenhouse gas emissions cap-and-trade program.

Energy

Big Oil's Clean Energy Ambitions Face Limits, Consultant Says

The world's biggest oil companies probably won't become renewable energy majors, according to industry consultant Wood Mackenzie Ltd.

Energy

Hydro Bills Pass House as Senate Takes Up Similar Measures

The House signed off on a set of hydropower and minor energy bills June 12, just as a Senate panel prepared to take up its own hydro measures.

Groundwater

India Sets July Deadline for Industries to Get Groundwater Permits

Industries that extract water from underground to mine, manufacture and build products will have until July 13 to obtain "no objection" permits from India's federal groundwater authority, the government announced.

International Climate

Europe's Climate Advice Business Resilient to Trump Paris Exit

Europe's largest architecture and engineering consultancy says President Donald Trump's decision to pull the U.S. out of the Paris climate accord won't disrupt demand for advice on efforts to counter global warming.

Mergers and Acquisitions

Dow-DuPont Deal Clears India, Leaving U.S., Canada to Sign Off

DuPont Co. and the Dow Chemical Co. have cleared a major hurdle to their tie-up with conditional approval from the Competition Commission of India for their $78.5 billion merger. There are only two major countries left to approve the deal — Canada and the U.S.

Natural Resources

Bears Ears Monument Boundaries Probably Extend Too Far: Zinke

Interior Secretary Ryan Zinke is recommending a reduction of the size of the Bears Ears National Monument and a legislative change to allow tribal co-management of the monument, Zinke told reporters in a teleconference June 12.

Renewable Energy

Goldman Is Buying Clean Energy to Help Power Its U.S. Operations

Goldman Sachs Group Inc. isn't just matching renewable-power plants with corporations looking to buy wind or solar power. It'll soon be a buyer of clean energy, too.

Science Policy

EPA Research Office Deputizes House Science Committee Aide

A House Science, Space and Technology committee staff member took over the EPA deputy slot at the Office of Research and Development (ORD) June 12, according to an internal memo obtained by Bloomberg BNA.

Toxic Torts

Flint Water Crisis Class Action Won't Get SCOTUS Eye

A class action alleging an engineering firm didn't protect Flint, Mich., residents from lead contamination will remain in state court after the U.S. Supreme Court denied review June 12 (Lockwood, Andrews & Newnam v. Mason, U.S., No. 16-1092, review denied 6/12/17).

Water Pollution

Landfill Firm, Town Should Clean Up Private Wells, Suit Charges

The owners and operators of a suburban Massachusetts landfill should pay for allegedly contaminating the drinking water wells of close to 100 nearby residents, environmental groups and residents charge in a lawsuit filed in federal court.

Correction

The story, "Lawmakers, Regulators Stress Urgency to Renew Mine Cleanup Fee," published June 8, was updated to reflect new information about the expenditure of Abandoned Mine Land funds, which the agency submitted to Congress after the hearing. The online version has been updated.

Good Thursday morning. GET READY FOR THROWDOWN THURSDAY. James Comey's testimony before the Senate Intel Committee starts at 10 a.m. Today all the networks and all the cables will be live -- with a few of them offering up live streams for free online. And if James Comey's much buzzed about statement is any indication of his savvy and willingness to dish, Trump will be more than tweeting today. He'll be seething. ***Comey's statement*** http://bit.ly/2rMG1bK

FOLLOW POLITICO's two reporters in the hearing room (Hart 216) today: Josh Gerstein (**@joshgerstein)** and Kyle Cheney (**@kyledcheney**).

THE PRESIDENT'S THURSDAY -- Trump speaks at the Faith and Freedom Coalition's Road to the Majority Conference at 12:15 p.m., and then will host governors and mayors at the White House for an infrastructure summit at 3:30.

-- NOTES: The president has nothing before his 12:15 speech. Some of the newsiest bits of the hearing will be at the top. **THE PRESS BRIEFING TODAY** is with Sarah Huckabee Sanders and it will be off camera. Speaker Paul Ryan is holding his weekly press conference at 11:30 a.m. today in the Capitol.

REMEMBER THIS -- Comey isn't constrained by traditional political considerations. Today will shape his legacy. Our reporting tells us that members of Congress don't expect him to accuse the president of a crime, but expect him to be extremely open about what transpired behind closed doors. We are told that he will, at times, go beyond

what he wrote in his statement.

THE BIG PICTURE -- NYT, A18 -- "Comey's Political Shrewdness Is on Display in Tussle With Trump," by Peter Baker and Glenn Thrush: "The morning, at least, seemed to go reasonably well for President Trump. He announced a new F.B.I. director, and two intelligence chiefs told Congress the president had never pressured them to interfere in the investigation into Russian election meddling.

"And then James B. Comey ... dropped the hammer. By authorizing the immediate release of the opening statement he plans to give in his much anticipated appearance before a congressional committee on Thursday, he instantly changed the conversation back to his assertion that the president tried to shut down part of the F.B.I. investigation.

"Mr. Trump may be relatively new to Washington, but Mr. Comey is not. A savvy veteran of the capital who has worked in high positions in multiple administrations, he has usually emerged on top in any internal power struggle. And in the month since his dismissal, Mr. Comey has shown why presidents are normally loath to fire F.B.I. directors." http://nyti.ms/2sGpeXF

THE REPUBLICAN NATIONAL COMMITTEE sent an email at 9:56 p.m. last night to people around town with the subject line: "Talking Points and Digital Packet for Senate Intelligence Committee Hearing." The first item under "top takeaway" is "President Trump feels completely and totally vindicated by Former FBI Director James Comey's opening testimony and is eager to move forward." It includes a "suggested tweets" section. ***The RNC talking points*** http://politi.co/2sGgWPA ... ***WSJ:*** RNC says they've dedicated 60 aides to the pushback effort. http://on.wsj.com/2s6pNx0

THE COUNTER ATTACK -- "West Wing aides fearful of directly attacking Comey: The White House has outsourced its counter-messaging effort during Comey's testimony, as aides try to avoid more personal legal risk," by Matt Nussbaum, Josh Dawsey, Darren Samuelsohn and Tara Palmeri: "'It's fair to say a storm is coming,' one administration source said. 'We're boarding up the windows for the impending hurricane.' ... The [RNC] is taking the lead in the response and has prepared a surrogate operation. ... Two former Trump White House officials - former deputy chief of staff Katie Walsh and former communications director Mike Dubke - are helping coordinate the effort. Press secretary Sean Spicer was at the RNC on Wednesday as preparations took place. ... For official comment, the White House has directed all questions to the office of Trump's outside counsel, Marc Kasowitz.

"Kasowitz's office, in turn, has directed inquiries to Emily Thall, the law firm's director of business development and marketing. On Tuesday, Thall declined to comment in a brief conversation with POLITICO about Comey testimony. By Wednesday, inquiries to Thall were met with an automatic response: She would be out of the office on vacation until next week. By Wednesday night, Kasowitz's firm had retained longtime political communications pro Mark Corallo to handle media inquiries." http://politi.co/2rY3CYY

QUOTE OF THE DAY - From the quadruple-byline story: "White House aides are trying to keep Trump busy Thursday morning with meetings so he won't watch TV and tweet during the hearing. 'But if he wants to watch it, it's not like we can say, 'oh, the TV doesn't work," one official said."

HOW IT'S PLAYING -- HUFFPOST banner, "COMEY BEFORE THE STORM" ... **DRUDGE** as of 6 a.m., "MAY DAY" (about the UK election) ... **N.Y. POST,** "'I EXPECT LOYALTY'" http://nyp.st/2sGrBtM ... **N.Y. DAILY NEWS,** "DON'S PLEA: COVERUP" http://nydn.us/2simZwi ... **EVEN TMZ IS IN ON THE ACTION --** They have videos of Sen. Richard Burr (R-N.C.) (http://bit.ly/2qYQTBX) and Rep. Peter King (R-N.Y.) (http://bit.ly/2s7kyNv).

****** **A message from Samsung:** Samsung has announced more than $10 Billion in US Growth since 2016, including our March 2017 acquisition of HARMAN International, a commitment of $1.2 Billion in U.S.-based IoT Investment and R&D, and a $1B expansion of our Austin, TX Semiconductor Manufacturing Facility. Visit Samsung.com/VisionForTomorrow for more. ******

FUN READ -- "'Must-See TV': Free Drinks and Canceled Meetings for Comey's Testimony," by NYT's Mike Grynbaum and Katie Rogers: "By the time details from Mr. Comey's prepared remarks surfaced on Wednesday ... the hearing had leapt from Beltway curiosity to required viewing, a cliffhanger episode of the nation's real-life reality show. ... At Union Pub in Washington, a sports bar steps from the Hart Senate Office Building, bartenders plan to dole out a free round of Budweisers or bourbon shots every time Mr. Trump blasts out a tweet. For those wondering: No, there will not be a limit. 'We'll give out 20 rounds' if the president tweets 20 times, Ashley Saunders, the bar's general manager, said." http://nyti.ms/2rXKSc3

THIS TOWN -- "White-collar lawyers see opportunity in Trump scandals," by Darren Samuelsohn and Andrew Restuccia: "More than a dozen attorneys and crisis communications specialists have already started working for Trump associates touched by the unfolding Russia scandal, according to a POLITICO tally. People close to the probes say that number is only expected to grow as more than 20 other senior campaign aides and White House officials begin receiving subpoenas, grand jury summons and other requests from special counsel Robert Mueller as well as congressional committees." http://politi.co/2qYR2Wa

ACROSS THE POND -- BRITISH ELECTION TODAY -- "Polls open in UK election after campaign marred by attacks," by AP's Danica Kirka in London: "Polling stations opened across Britain on Thursday for national elections, amid heightened security worries following a series of terror attacks in what one senior police official described as 'unprecedented times.' The public is being asked to be alert and to report concerns to police as voters choose 650 lawmakers for the House of Commons. Deputy Assistant Commissioner Lucy D'Orsi acknowledged concerns about Thursday's general election." http://apne.ws/2qYLB9t

ANNIE KARNI: THE FIRST FAMILY -- "Melania Trump set to make her D.C. move next week: Staffers hope the first lady will be a stabilizing presence in a White House that's been consumed by scandal and infighting": "With the school year over, first lady Melania Trump and the couple's son Barron are expected to finally make their official move to Washington on June 14, according to people familiar with the planning. ... Over the past few weeks, the often stiff-in-her-role first lady has been spending more time in the White House, building out her East Wing staff, preparing the residence for the family and slowly increasing her schedule of public events. ... [T]he June 14 date is seen as a major marker on the White House calendar - when the first lady puts away the full matching set of Louis Vuitton luggage that she travels with and settles in for good." ***With cameos by Sam Nunberg, Chris Ruddy and Anita McBride*** http://politi.co/2simMJL

-- US WEEKLY COVER: "IVANKA TAKES A STAND ... WHY I DISAGREE WITH MY DAD" (h/t Brian Stelter). Online header to the story: "How Ivanka Trump Influences Her Father Donald Trump" ***The cover*** http://bit.ly/2rYjUkz ... ***The story*** http://usm.ag/2rYva0u

CAPITOL HILL WATCH -- "Trump 'all in' on Senate Obamacare repeal," by Burgess Everett and Josh Dawsey: "At a meeting with congressional leaders on Tuesday, Trump urged Senate Majority Leader Mitch McConnell (R-Ky.) to follow through on an aggressive timetable for repealing the law in order to quickly turn to tax reform and help avoid a calamitous autumn full of key fiscal deadlines, according to multiple sources familiar with the meeting." http://politi.co/2rOpxzU

-- IT'S IMPORTANT TO NOTE: Senators don't like being told by Trump, or really any president, about how to run the Senate. While Republican senators have been working their way through how to pass a health care bill, GOPers across the ideological spectrum have been pessimistic about legislation actually passing. But most insiders note: don't count out Mitch McConnell.

THE JUICE ...

-- SPOTTED LAST NIGHT AT TRUMP INTERNATIONAL HOTEL: Treasury Secretary Steven Mnuchin with Tom Barrack, Vincent DeVito, Brandon Clark, Andrew Giuliani, Corey Lewandowski, Nick Owens, Lynne Patton, Jason Osborne, Jerry Pierce and Tim Rupli.

-- FIRST IN PLAYBOOK -- MoveOn will formally call for impeachment proceedings this morning in anticipation of the Comey hearing.

-- SEN. AL FRANKEN's book, "Al Franken, Giant of the Senate," is No. 1 on the upcoming June 18 NYT non-fiction best-sellers list, while William McRaven's "Make Your Bed," is also number one on the on the "Advice, How-to and Miscellaneous" list. http://politi.co/2qYttNa

-- "McConnell groups backing Luther Strange to run $2.4M in ads starting next week," by AL.com's Howard Koplowitz in Birmingham, Alabama: "Two groups connected to Senate Majority Leader Mitch McConnell have bought a combined $2.4 million in ads buys blanketing Alabama television and radio stations with ads supporting Sen. Luther Strange." http://bit.ly/2r8rTHR

-- THE NRCC reported another $545,541 in spending against Jon Ossoff in Georgia's 6th congressional district.

Playbook Reads

CARTOON DU JOUR by Matt Wuerker.

DRAIN THE SWAMP! -- "Trump White House lacks waivers for longtime lobbyists: Critics are questioning whether White House officials with broad portfolios can truly steer clear of conflicts of interest," by Theo Meyer: "At least a half-dozen former lobbyists are working in President Donald Trump's White House even though they haven't received waivers from the administration's ethics rules, raising questions about how much the rules do to prevent conflicts of interest. ...

"The Trump administration has granted exemptions from the rules for a handful of staffers, as President Barack Obama's administration did. But at least six former lobbyists now working in the White House haven't received such waivers, meaning they must recuse themselves internally from any issue where they have conflicts, according to the White House. ... Five of the lobbyists POLITICO identified who haven't received waivers work in Pence's office." http://politi.co/2sicWYj

NEW TIME COVER -- "The Swamp Hotel: How Trump's D.C. outpost became a dealmaker's paradise for diplomats, lobbyists and insiders," by Alex Altman: "[The hotel] is the new town square in Donald Trump's Washington. Tourists perch on the blue velvet sofas in the lobby, snapping cell-phone pictures as power players stream across the dark marble floors and cream carpets: international businessmen, Republican operatives, wealthy donors, foreign diplomats, former Trump campaign aides, the occasional Administration official. That's partly because a President who once promised to 'drain the swamp' of influence peddling now owns the city's newest bog." http://ti.me/2s72K5i ... ***See the cover*** http://bit.ly/2s5AkbA

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years, and we announced more than $10 Billion in US Growth since 2016. This year, we're proud to have added HARMAN International and its 3,500 U.S. employees to the Samsung workforce in America, and just as enthusiastic about our common vision, the similarities in our culture of innovation, and the added value we can

create for customers. Learn more about our partnership at Samsung.com/VisionForTomorrow for more. ******

HISTORY LESSON -- "The Greatest Hearings in American History: James Comey's testimony joins the pantheon of dramatic congressional moments," by Joshua Zeitz in POLITICO Magazine: "This isn't the first - and it won't be the last - time that congressional testimony captured the nation's imagination. From the Army-McCarthy hearings of 1954 to the Iran Contra hearings in 1987, House and Senate committees have held ordinary citizens in rapt attention. ... Comey's testimony is in this sense an absolutely American phenomenon." http://politi.co/2rY5nFI

NICK SCHMIDLE in The New Yorker, "James Comey's Intellectual History": "Comey has told associates that he never tried to lure Trump into improprieties. 'It wasn't like Jim was going to the Mob boss, all wired up, trying to secretly extract a confession,' one associate told me. Yet, in Comey's view, Trump's behavior toward him repeatedly crossed the line, making him 'an obstructor.' Based on Comey's prepared remarks, his Senate testimony will lay the basis for this legal claim, without explicitly making the charge. His testimony is likely to be supremely assured. A senior intelligence official said of Comey, 'He likes the stage. He takes politicians' questions apart. He loves the fact that he's smarter than them.'" http://bit.ly/2sGe9pz

RICH LOWRY, "Comey's fizzle": "The document has considerable entertainment value in its dead-pan account of a profound mismatch, a Washington buddy movie gone bad. It's a tale of a bureaucratically agile and self-serving careerist matched against an institutionally ignorant and self-serving outsider. One is careful, memorializing every conversation and calculating his every more; the other is blundering around in the dark - and eventually blows the whole thing up." http://politi.co/2rNXfFB

BEYOND THE BELTWAY -- "GOP candidate [Ashley Moody] for Florida Attorney general once sued Donald Trump in federal fraud case," by Florida Playbooker Marc Caputo: http://politi.co/2rOO1Jn

THE INNOVATION ISSUE: In a month long Special Report, POLITICO's **The Agenda** takes a deep look at the surprising new politics of innovation, and ideas for how to drive it in a new era. Check out a piece by Nancy Scola on how AOL founder Steve Case became the first call for lawmakers who want to bring innovation to the heartland (http://politi.co/2rOKFFW); a critical look by Arthur Allen at Challenge.gov, the federal government's prize competition designed to spur innovation (http://politi.co/2sWpDom); and Kevin Kosar writes on the surprisingly innovative history of the U.S. Post Office (http://politi.co/2r4Xyij), which was long on the forefront of technology before turning into a lesson in what "not" to do. ***The full issue*** http://politi.co/2s70tqQ

MEDIAWATCH -- Greg "Gianforte to give $50,000 to press freedom group after assaulting reporter," by Hadas Gold: "'I write to express my sincere apology for my conduct on the evening of May 24. My physical response to your legitimate question was unprofessional, unacceptable, and unlawful,' Gianforte (R-Mont.) wrote in a letter

[to Ben Jacobs]. 'As both a candidate for office and a public official, I should be held to a high standard in my interactions with the press and the public. My treatment of you did not meet that standard.'" http://politi.co/2r4iKVs ... ***The letter*** http://politi.co/2shUdMh

Playbookers

SPOTTED -- Rep. Joe Courtney (D-Conn.) at the U.S. Navy Memorial last night, celebrating the launch of a new book by Admiral James Stavridis (USN, ret.), "Sea Power: The History and Geopolitics of the World's Oceans"

REMEMBERING VIC GOLD - WaPo's Matt Schudel: "Vic Gold, a high-powered and sometimes high-strung Republican political strategist who served as the press secretary for Vice President Spiro T. Agnew and who wrote books with a president and the wife of a vice president, died June 5 at a hospital in Alexandria, Va. He was 88. ... Short, intense and often irritable, he was once dubbed 'the Mount Vesuvius of press secretaries' for his outbursts, but he had a redeeming sense of humor and an appreciation of the theatricality of politics." http://wapo.st/2rY5HUM

OUT AND ABOUT - The Competitive Enterprise Institute last night hosted their annual dinner, this time an Alice in Wonderland themed event titled "Through the Looking Glass" at the Marriott Marquis. Speakers included Secretary of Transportation Elaine Chao and the Wall Street Journal's Kimberly Strassel. **SPOTTED:** Grover Norquist, Suhail Khan and Jana Plat, Tom Schatz, Fred Smith, Myron Ebell, Dwayne Carson, Francesca Chambers and Michael Moroney, and Byron Tau.

-- KENT KNUTSON, vice president of government relations for The Home Depot and board member of the Home Depot Foundation, celebrated his 50th birthday at Hotel Monaco's Dirty Habit Wednesday night with friends and family, the Washington retail community and Members of Congress. **SPOTTED:** Sens. Amy Klobuchar (D-Minn.), Roy Blunt (R-Mo.) and Jim Risch (R-Idaho), House Majority Leader Kevin McCarthy (R-Calif.) and Reps. Sean Duffy (R-Wis.), Barbara Comstock (R-Va.), Debbie Dingell (D-Mich.), Jackie Speier (D-Calif.), Richard Hudson (R-N.C.), Adrian Smith (R-Neb.) and Bill Flores (R-Texas).

--CNN's DANA BASH last night kicked off "Badass Women of Washington" at Fig & Olive with a panel with five of the seven women profiled in the series: Sen. Dianne Feinstein (D-Calif.), RNC Chairwoman Ronna Romney McDaniel, Army Surgeon General Nadja West, Sen. Catherine Cortez Masto (D-Nev.), and Rep. Jaime Herrera Beutler (R-Wash.). All five panelists discussed what their views about the series and answered the question, "can a woman have it all?" http://cnn.it/2sFNZmV ... ***Pics*** http://bit.ly/2rPpNhR ... http://bit.ly/2r50ScX ... http://bit.ly/2qZj4AM

SPOTTED: Virginia Moseley, Heather Podesta, Kellyanne Conway, Gloria Borger, Ana Navarro, Hilary Rosen, Bill Press, Nia Malika Henderson, Michael LaRosa, Lauren

Pratapas, Kate Bennett, Nikki Schwab, Alexandra De Luca, Matt Dornic, Zeke Miller, Christina Ruffini, Francesca Chambers, Lauren Culbertson, Ashley Killough, Meredith Balenske, Dannia Hakki, Christine Delargy, Artur Orkisz, Marissa Mitrovich, Meredith Artley, Rachel Smolkin, Hadas Gold, Mitchell Rivard, Johanna Persing, Ryan Mahoney, Richard Hudock, Tara Palmeri, Michelle Jaconi.

-- After 8 years with Sen. Tom Udall (D-Colo.), friends and colleagues yesterday toasted Kevin Cummins' move to the Professional Services Council at Romeo & Juliet Cafe on Capitol Hill. **SPOTTED:** Frannie Wellings, Joe Trahern, Kara Van Stralen, Scarlet Doyle, David Grossman, Michele Ash, Tom Manatos, Melika Carroll, Sunmin Kim, Lee Friedman, Dana Gray, Harry Anastopulos, Cort Bush and Joey Wender.

NEW HAMPSHIRE CELEBRATION in D.C. -- POOL REPORT from Haley Dorgan: "Last night, the Senate got a taste of New Hampshire. Sen. Jeanne Shaheen (D-N.H.) welcomed her colleagues to eat and drink New Hampshire's finest products and get a taste of the Granite State's cultural and tourism opportunities. Sens. Maggie Hassan (D-N.H.), Chris Coons (D-Del.), Sheldon Whitehouse (D-R.I.), and Ed Markey (D-Mass.) and Reps. Annie Kuster (D-N.H.) and Carol Shea-Porter (D-N.H.) were greeted by Kodak the Bear and Max the Moose at the Kennedy Caucus Room. Some of the most popular items? Smuttynose beer, Cider Bellies Doughnuts, Creamy New England Fish Chowdah from the New Hampshire Food Bank, and Granite State Tea Cakes made by culinary students from the New Hampshire Job Corps." Other attendees included Ryan Williams, Byron Tao, Cate Martel, William Shaheen, and Jeff Rose.

SPOTTED yesterday evening at the U.S.-Colombia Business Partnership farewell cocktail party held on the ConocoPhillips rooftop for Ambassador of Colombia to the U.S. Juan Carlos Pinzon: Bill Burlew, Reps. Devin Nunes (R-Calif.), Francis Rooney (R-Fla.), Henry Cuellar (D-Texas), and Matt Gaetz (R-Fla.), Andrew Lundquist, Brian Donahue, Wes Battle and Josh Corless.

ENGAGED -- Brian Parnitzke, director of turnout and targeting at the RNC, proposed this past weekend to **Kate Karnes,** chief of staff in the office of digital strategy at the White House and a former Romney 2012 staffer and RNC alum. The two met in 2013 when they were working on separate campaigns for lieutenant governor of Virginia. Brian popped the question on Folly Beach outside of Charleston, South Carolina, where he first told Kate he loved her. ***Pic*** http://politi.co/2siczgf

TRANSITIONS - OBAMA ALUMNI -- Todd Breasseale, former Army Lt. Col. and spokesman at the DoD who became a DHS assistant secretary for public affairs during Secretary Jeh Johnson's last two years in office, is now helping manage Facebook news feed communications. He reports to McCain '08 alum Tucker Bounds. ... **Christian Marrone** has been promoted to SVP and chief of staff for IT firm CSRA. He joined CSRA in January 2016 after serving as chief of staff at DHS.

... **Mattie Duppler** is joining the National Taxpayers Union as a senior fellow of fiscal policy. He previously served as the coalitions director to the House Republican

Conference and is an alum of Americans for Tax Reform. ... Greenberg Quinlan Rosner has hired **Lindsey Reynolds** as its new COO. She joins GQR this month after 10 years with the DNC, where she served as both COO and director of the office of the secretary.

... Shana Glenzer has started as chief marketing officer at Crowdskout, a data management startup based in D.C. SUNDAY SO FAR - "Fox News Sunday": Panel: Karl Rove, Donna Edwards, Newt Gingrich, Charles Lane

FORMER REP. GABBY GIFFORDS (D-ARIZ.), whose birthday it is today, is headed to Galveston, Texas, where she will help the Navy commission the U.S.S. Gabrielle Giffords. It's the first Navy warship to be named after a living woman since Martha Washington. She learned that the ship would be named in her honor the same day she resigned from Congress in 2012. Hillary Clinton, Joe and Jill Biden, House Minority Leader Nancy Pelosi (D-Calif.), Olivia Munn, Jon Bon Jovi, Katie Couric, Sully Sullenberger and Thad Allen are all expected to attend. https://usat.ly/2r4lguY

BIRTHWEEK (was yesterday): Wendy Sherman, senior counselor at Albright Stonebridge Group

BIRTHDAY OF THE DAY: Russ Schriefer, partner at Strategic Partners & Media
How he's celebrating: "I'm in London with my wife Nina Easton who is chairing the Fortune Most Powerful Women International Summit next week. Our daughter Ellie and I are just tagging along." Read his Playbook Plus Q&A: http://politi.co/2rPcrSJ

BIRTHDAYS: Jonathan Collegio is 41 ... former Rep. Gabby Giffords (D-Ariz.) is 47 (h/ts Hilary Rosen and Katie Peters) ... Paul Winfree, deputy director of the White House Domestic Policy Council and the pride of Williamsburg, Va. ... Jim Cicconi (h/t Hilary) ... Barbara Bush is 92 ... Eric Kuhn, CMO of Layer3 TV and a former DC resident who worked for CNN, is 3-0, celebrating at Lincoln Center in NYC (h/ts Maha Hakki and Susanna Quinn) ... Cory Fritz, a Boehner alum now deputy staff director for comms. at House Foreign Affairs, is 32 ... Rep. Ken Calvert (R-Calif.) is 64 ... Politico's Laura Hayes and Sarah Hashemi ... Patrick Garrigan, Politico alum now events guru for The Atlantic ... "Meet The Press" associate producer Justin Peligri (h/t Olivia Petersen) ... Tim Grieve, VP for news at McClatchy (h/t John Harris) ... Roger Hickey, co-director of Campaign for America's Future ... Kelsey Harkness of the Daily Signal ... Mary Palmer is 31 ... J.J. Simmons V ... Ashley Baia of 270 Strategies ... Karen Robinson (h/t Jon Haber) ... USDA's Allie Ryan ... Matt Whitlock ... Davis White ... The Federalist's Bre Payton ... J.D. Dalfonson, comms director for Rep. Darin LaHood ... John Sandy, COS for Sen. Jim Risch ... Bale Dalton, pride of Orlando and HSC85 U.S. Navy, is 30-

something "and more handsome than ever" (h/t Christian Hertenstein) ... Uber flack Matt Wing ...

... Dasha Zhukova , friend of Ivanka and Jared, art collector and editor, married to Russian oligarch Roman Abramovich, is 36 (h/t Jewish Insider) ... Emily Pomeranz, the special events and major gifts maestro at NARAL (h/t James Owens) ... Hannah Yoest, assistant literary editor at Weekly Standard ... Erin Gorman, cookie baking aficionado currently at the Environmental Defense Fund, formerly "Mother Duckling" of the O'Malley campaign, and a campaign/DGA vet several times over, is 3-0. She will be feted by friends and family all weekend long in Baltimore (h/ts Matt Corridoni and Daniel Ensign) ... Chris Good ... Cathie Ericson ... Denton's Alex McGee, the pride of Atlanta (h/t Ed Cash) ... Lale Mamaux, CoS to Rep. Alcee Hastings ... Jordana Cepelewicz ... Kris Coratti, VP of comms and events at WaPo ... Avery Brooks, senior associate at Global Infrastructure Partners ... Ben Case is 25 ... Obama WH alum Keith Maley, also an ardent Red Sox fan and birdwatcher ... Brian Hardwick ... Michael Shmagin (h/ts Teresa Vilmain) ... Ann Belser ... Nancy Baile, public affairs and comms. manager at Coca-Cola ... Rosie Lineham ... Jane Hampton Cook ... Tom Davidson is 46 ... Barry Lando ... Lila Young White ... actor-comedian Jerry Stiller is 9-0 ... Nancy Sinatra is 77 ... "Dilbert" creator Scott Adams is 6-0 ... Julianna Margulies, a loyal Playbooker, is 5-0 ... Kanye West is 4-0 ... Maria Menounos is 39 ... tennis player Kim Clijsters is 34 (h/ts AP)

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years, and we announced more than $10 Billion in US Growth since 2016. This year, we're proud to have added HARMAN International and its 3,500 U.S. employees to the Samsung workforce in America, and just as enthusiastic about our common vision, the similarities in our culture of innovation, and the added value we can create for customers. Leading the News

Air Pollution
Luminant Coal Plant to Close Despite EPA Easing Haze Rule
A Luminant coal-fired power plant in Texas will retire even though the EPA eased emissions rules for it and seven other coal plants in the state. Luminant, a subsidiary of Vistra Energy, will retire its Monticello plant in January 2018, the company said Oct. 6. The announcement came a week after the Environmental Protection Agency issued its final rules to address haze pollution in Texas. The rules allow the plants to participate in a new intrastate pollution trading program rather than ...

Subject: Today on Climate Beat

July 5, 2017

Today on Climate Beat . . .

. . . we went to court, reporting that California and New Mexico are launching a lawsuit over the Bureau of Land Management's move to "postpone" several requirements in its rule limiting emissions of the potent greenhouse gas methane from oil and gas equipment on federal land.

In personnel news, the Trump administration appears to be getting closer to nominating Kathleen Hartnett White, a prominent climate skeptic and supporter of domestic energy production, to lead the White House Council on Environmental Quality.

And on the regulation front, the Department of Energy has issued a request for information on its test procedure rule for energy efficiency standards for air compressors, a move that signals it is likely to rewrite the Obama-era regulation.

House Clears EPA Funding Bill Full of Poison Pills for Senate

Posted September 14, 2017, 01:40 P.M. ET

By Dean Scott

A funding bill passed today by the House offers a more modest cut to environmental programs than sought by the Trump administration, but is so laden with poison pill amendments that it will be little more than a starting point for negotiations with Senate Democrats.

The House-passed bill (H.R. 3354) would provide roughly $7.5 billion for the EPA in fiscal year 2018, about $1.9 billion above the Trump's administration's request, but still $528 million less than current-year funding. The EPA-Interior bill was combined earlier this month with eight appropriations measures, and that package is what the House passed today, by a vote of 211-198.

That EPA funding level may only be a starting point for Senate Democrats, who have significant leverage in negotiations this fall on what is likely to be a broad funding measure to keep the federal government running after a three-month spending resolution expires in December.

The Senate has no plans to take up the House version of the EPA-Interior spending bill, but House members who attached their amendments to add funding to the bill or change environmental policy now have some leverage of their own in future funding negotiations.

One such amendment, from Rep. Andy Harris (R-Md.), would ban any offshore wind projects within 24 nautical miles (27.6 miles) of the Maryland shoreline. Harris sought the ban at the behest of Ocean City, a popular Maryland beach vacation spot. The language would sideline offshore wind projects by U.S. Wind Inc. and Skipjack Offshore Energy LLC, which were both greenlit by the Maryland Public Service Commission in May.

Other amendments in the bill include two from Rep. Markwayne Mullin (R-Okla.). to block a 2016 EPA regulation on methane emissions from the oil and gas sector and to bar the Obama-era policy of accounting for the impacts of carbon emissions when developing regulations.

The GOP-led House largely rejected efforts to further trim the EPA's budget, adding funding for some programs. One big winner was the EPA's Clean Water State Revolving Fund: an amendment by Rep. John Katko (R-N.Y.) was approved to restore $250 million to the fund, which provides low-cost financing for water infrastructure projects.

Monster Storms Change Coastlines, Not Minds on Climate Change

Posted September 14, 2017, 8:49 A.M. ET

By Jennifer A. Dlouhy

Back-to-back hurricanes fueled by warm Atlantic waters may have altered the coasts of Texas and Florida, but there's no indication they are shifting the politics of climate change.

"We cannot ignore that carbon emissions are causing our ocean temperatures to get warmer, which is fueling more powerful hurricanes," said Sen. Kirsten Gillibrand (D-N.Y.) at a lightly attended hearing on carbon-capture technology.

Yet that is exactly what many are doing on an issue that increasingly breaks down along partisan lines. Republicans in charge of the House and Senate haven't scheduled hearings to examine the phenomenon. President Donald Trump has ignored shouted questions on the topic and administration officials have brushed the whole issue aside as a distraction.

Scott Pruitt, the head of the Environmental Protection Agency, told CNN it is "very, very insensitive" to storm victims to "have any kind of focus on the cause and effect of the storm versus helping people."

Research shows monster storms may only harden people's position, underscoring already entrenched beliefs about the role humans play in warming the planet.

"The climate movement can't depend on the weather to make its political case," said Robert Brulle, a sociologist at Drexel University who studies environmental activism. "We have a window of opportunity to draw attention to the issue—and then three weeks from now we'll be talking about something else."

Environmental disasters, including an oil spill off the California coast, toxic pollution emanating from New York's Love Canal and Ohio's Cuyahoga River bursting into flames, helped catalyze the modern-day ecological movement, shifting public views. But unlike climate change, the causes were clearer; there was no need for scientists to interpret data or model scenarios.

It's much harder to attack the science of an oil spill, Brulle said. "You can't have a tactic of denying the science when you can see it right there with your very eyes."

Some environmental activists say Hurricanes Harvey and Irma should be a wake-up call, vividly illustrating the potential consequences of extreme weather events made worse by climate change. Scientists haven't linked either hurricane directly to climate change—and they may never be able to—though they stress global warming is leading to more intense, more frequent storms.

Decades into the debate over climate change, people's views on the subject are tied up with their political ideology. And it takes more than 185-mile-per-hour winds to change their beliefs.

People in areas that have experienced extreme weather are only marginally more likely to support climate adaption policies such as elevation requirements and restrictions on coastal development, according to research published in the September issue of "Global Environmental Change." Instead, political party identification is a much bigger factor in how people viewed the issue, according to the study that examined public opinion data coupled with geographic information about extreme weather events.

And any changes in thinking after extreme weather are likely to be temporary.

"There was no discernible difference after a month between people who experienced more extreme weather and those who did not," Llewelyn Hughes, a professor at Australian National University, and David Konisky, a professor at Indiana University, said in a Washington Post essay describing their research. "Even though events like Hurricane Irma are tragic, it may very well be that people tend to forget about them quite quickly and get on with the rest of their lives."

Researchers also have found that living through a disaster changes the way people think—effectively making them more skeptical of leaders and less open-minded. A 2011 study of Honduran villages hit by Hurricane Mitch in 1998 found that severe damage reduces people's willingness to work together.

There are also parallels to the gun control debate, which didn't dramatically shift after shootings of schoolchildren in Connecticut and a congressman in Virginia.

In both cases, "there is a very powerful special interest influence group" that has effectively squelched debate, Sen. Sheldon Whitehouse (D-R.I.) said in an interview.

President Barack Obama made fighting climate change a signature policy of his administration. Trump and Republicans in Congress have sought to roll back those efforts.

Some environmental advocates may be wary of being seen as exploiting a natural disaster for long-term policy changes when homeowners are still ripping sodden carpet from their floors and utilities are still working to restore electricity. Whitehouse says there is plenty of time to talk about the issue as lawmakers debate hurricane-spending relief packages and storm-ravaged cities rebuild.

"We should be talking about this issue on a regular basis; I don't think there is a key moment in which we have to say it or we lose the opportunity," Whitehouse said. "Now is a good time to talk about it; later is a good time to talk about it; there will be plenty of opportunities to talk about it."

Congressional Debates

Climate change concerns could spill into congressional debates over how to rebuild cities battered by the storms.

"It's impossible to not discuss the incredible amount of money which the federal government is going to spend to clean up after supercharged hurricanes and to not then discuss what can we put in place now for ten cents on the dollar that will avoid the most catastrophic results," Sen. Ed Markey (D-Mass.)said in an interview.

Extreme weather events could provide an opening to GOP lawmakers—particularly those in affected states—to justify or explain a shift in how they approach the issue, said Joseph Majkut, director of climate science at the Niskanen Center, a libertarian think tank.

Instead of 180-degree pivots on the link between carbon dioxide and climate change, that may come in the form of supporting a resilient infrastructure or backing changes in the national flood insurance program to better incorporate what is known about rising sea levels and storm risks.

"I don't expect any one storm is going to change the debate on climate, which is now sort of sophisticated and entrenched," Majkut said. "I do think it can make a difference at the margins, so one thing to watch for will be individual members, individual districts and how much of a role it might play in 2018."

Federal Energy Regulatory Chairman Changes Tune on Coal

Posted September 14, 2017, 01:45 P.M. ET

By Rebecca Kern

Federal Energy Regulatory Commission Chairman Neil Chatterjee seemed to back away from previous pro-coal comments today in his first public testimony since taking office in August.

Chatterjee, during an August podcast interview, made comments that were in line with the Trump administration's efforts to help prop up coal plants. However, Chatterjee's responses during a Sept. 14 House Energy and Commerce Committee hearing reflected a change in tone to align with views expressed by other FERC nominees that the commission doesn't favor any fuel sources.

"The commission is fuel-neutral, and we will look to ensure that as our grid undergoes this transformation, that we ensure that we evaluate the attributes of fuel sources to see what values they provide," Chatterjee said during a response to a question from Rep. Kevin Cramer (R-N.D.) about what FERC could do make sure coal plants were compensated enough to keep them running.

"We will see if there's a demonstrated need for reliability, whether or not those things can be compensated," he added.

Chatterjee, a former energy staffer for Senate Majority Leader Mitch McConnell (R-Ky.), expressed a different view on coal during an Aug. 14 appearance on a FERC podcast.

"I believe baseload power should be recognized as an essential part of the fuel mix. I believe that generation, including our existing coal and nuclear fleet, need to be properly compensated to recognize the value they provide to the system," Chatterjee said on the podcast.

In his Sept. 14 testimony, Chatterjee echoed comments made by Richard Glick, nominated to be a Democratic commissioner. Chatterjee said that while there are no current reliability threats to the grid with the early retirement of baseload resources, such as coal and nuclear, FERC needs to closely monitor whether retirements could lead to reliability vulnerabilities later.

Glick and Kevin McIntyre, nominated to the Republican chairman of FERC if confirmed by the Senate, both stressed in their confirmation hearing that FERC was fuel-neutral. They are awaiting a Senate committee vote, which was postponed from Sept. 14 to Sept. 19.

Petition, Not Court, is Path to Expand L.A. Ozone Region: Judges

Posted September 14, 2017, 02:08 P.M. ET

By Abby Smith

Los Angeles-area air quality regulators who want to change the way they comply with federal ozone pollution standards may need to convince the California Air Resources Board to petition the EPA on their behalf, federal appeals court judges said Sept. 14.

California's South Coast Air Quality Air Management District sued the Environmental Protection Agency, seeking the right to count reductions of emissions from sources outside the region to help it comply with ozone air quality standards.

However, during oral arguments in the case, judges on the U.S. Court of Appeals for the District of Columbia Circuit seemed to agree with the EPA that the Clean Air Act may not allow the local agency to force this action in court.

Heather Gange, the Justice Department attorney representing the EPA, told the court that the burden is on the local air regulator to ask the state to redraw the the non-attainment area—and the local body should not try to force the action in court.

"The county has options other than torturing the language" of the Clean Air Act, Gange argued.

The Los Angeles air district is challenging a rule implementing 2008 standards that gave states and local air pollution regulators guidance on implementing federal ozone standards.

California Passes Chemical Disclosure Bill With Industry Support

Posted September 14, 2017, 10:17 A.M. ET

By Carolyn Whetzel

SC Johnson, Procter & Gamble, Unilever, and other manufacturers of air fresheners, detergents, and other household items would have to disclose potentially harmful ingredients in their products under a bill passed by California lawmakers.

The Cleaning Product Right to Know Act of 2017 (S.B. 258), if signed by Gov. Jerry Brown (D), would require companies to identify on labels and online information the chemical ingredients found in their products, including in fragrances.

The bill would "create an industry-wide ingredient communication program for manufacturers," Wisconsin-based SC Johnson said in a written statement issued after the state Assembly approved the measure Sept. 12.

"Because of this legislation, consumers will have the opportunity to make more informed choices for their families," Fisk Johnson, the company's chairman and chief executive officer, said.

Broad Support

More than 100 environmental, public health, and worker groups, the Consumer Specialty Products Association, and leading cleaning product makers like SC Johnson, Procter & Gamble, Unilever, RB· Reckitt Benckiser, and Seventh Generation, support the bill.

Industry buy-in, however, came after six months of negotiations that led to amendments to protect proprietary information and make implementation easier, bill author State Sen. Ricardo Lara (D) said.

Consumers and workers want to know what's in the cleaning products they use, Lara said in seeking Senate approval Sept. 13. Some chemicals in the products have been linked to cancer, birth defects, asthma and other adverse health effects, he said.

Passed in the Senate on a final 28-12 vote Sept. 13, the bill would give manufacturers until Jan. 1, 2020, to post ingredients and other product information on their websites. New labels listing intentionally added chemicals would be required a year later. Brown has until Oct. 15 to sign or veto the bill. He hasn't taken a position on the measure.

No federal regulations require the disclosure of most ingredients in cleaning products, although some companies, like SC Johnson, voluntarily provide the information.

Household, Institutional Products

The bill would apply to household and institutional products, and automotive care products, but not industrial products or cosmetics.

Ingredients identified by California, the federal EPA, European Union, or other authoritative bodies as causing cancer or other health and environmental harm would have to be identified on labels and online, according to the measure.

"The cleaning product industry recognized this consumer demand and worked with our coalition to craft a solution in Sen. Lara's bill," Avinash Kar, a senior attorney with the Natural Resources Defense Council, said in a Sept. 13 written statement. "This bill will put California, once again, at the forefront of public health protections that will benefit all Americans."

New York is finalizing industry guidance requiring cleaning product ingredient disclosure, Kar said.

New York City Targets Buildings for Greenhouse Gas Cuts

Posted September 14, 2017, 12:35 P.M. ET

By John Herzfeld

Buildings in New York City face sharp reductions in greenhouse gas emissions under a plan from Mayor Bill de Blasio (D) to target the city's top source of heat trapping emissions.

The proposed legislation, announced today, would require owners of all buildings in the city larger than 25,000 square feet to make improvements to boilers, heat distribution systems, hot water heaters, roofs, and windows. Deeper changes would be required during replacement or refinancing cycles over the next 12 to 17 years.

De Blasio said that the plan would make New York the first city to mandate cuts in emissions from

fossil fuels burned for heat and hot water in buildings, which constitute the top source of greenhouse gases in the city, or 42 percent of the total. He cast it as part of a broader response by cities to inaction on climate issues at the federal level.

The new plan expands on previously announced city goals to cut carbon emissions by 80 percent from 2005 levels by 2050, as well as a long string of city code changes, programs, and voluntary agreements on building energy efficiency. In June, de Blasio issued an executive order backing climate change targets in the wake of President Donald Trump's withdrawal from the Paris climate change agreement.

PPG: Look to China for Chemical Solutions to Pollution Problems

Posted September 14, 2017, 9:33 A.M. ET

By Pat Rizzuto

China's 2015 tax on paints and coatings containing volatile organic compounds immediately opened market opportunities for PPG, Chief Technology Officer David Bem recently told Bloomberg BNA.

In February 2015, the Chinese Ministry of Finance imposed a 4 percent tax on paints and coatings containing 420 grams per liter or more of volatile organic compounds (VOCs). "That immediately changed people's behaviors and the coatings we sold," Bem said.

The tax, designed to reduce airborne concentrations of chemicals that contribute to smog, illustrates how company innovations respond to the power China is wielding to reduce air and water pollution, Bem said.

China's growing commitment to cleaning up its air and water—combined with the country's educational investments, standard-of-living improvements, and infrastructure development—mean it's designing chemical innovations that can help solve problems in other countries as well, said Bem and Chuck Kahle, who was PPG's chief technology officer until he retired in 2016. Kahle discussed chemistry's impact on the global economy during the American Chemical Society's annual meeting in August.

Working with its Chinese partners, PPG has nine research laboratories in China, Bem said. From its facilities there, PPG has both witnessed and responded to China's growing commitment to cutting air and water pollution.

Originally founded in Pennsylvania in 1883 as Pittsburgh Plate Glass, PPG today is a paints, coatings, and specialty materials manufacturer, employing about 47,000 people and operating 156 manufacturing facilities worldwide. It serves aerospace, architectural, automotive, marine, rail car, and consumer product manufacturers.

Functional Coatings, Energy

According to the U.S. Environmental Protection Agency, sufficient levels of exposure to formaldehyde can cause irritation of the skin, eyes, nose, and throat—and cancer at high levels of exposure.

As part of its global mandate, PPG set out to find a solution. Next month it will launch a "next-generation" paint to improve air quality by reducing the formaldehyde emitted from composite wood products, according to company officials. The paint—called Sigma Air Pure—uses an acrylic binder

made with plant-based compounds to reduce up to 70 percent of the formaldehyde present in indoor air, according to the Sigma Coatings website. PPG will debut the paint in the Netherlands and Belgium in October before introducing it to other European markets in early 2018.

Partnering with China seemed like an organic opportunity for PPG. Chinese chemists have been trailblazers in developing functional finishes such as architectural paints and coatings that neutralize free formaldehyde molecules when they contact the painted wall, according to Bem.

China's determination to find environmental solutions, the government's ability to transform markets through public policies, and the sheer size of the Chinese market mean it will be a hotbed of innovation and commercial opportunity, Bem and Kahle said.

"If you can satisfy China's market, you're manufacturing at scale for any market," Bem said.

China is primed to take the lead developing new chemicals for solar energy panels along with chemicals that cut energy use, Kahle said.

A combination of pigments and primers that PPG developed for airplanes illustrates that type of functionality, according to information the company sent Bloomberg BNA. The coating system cuts aircraft exterior temperatures up to 25 degrees Fahrenheit, reducing interior cabin temperatures 5 to 7 degrees, and air conditioning-related energy use, PPG says.

Global Regulations

PPG's experiences in China are just part of its global dealings in which chemical and environmental regulatory changes offer both opportunities and challenges, Bem said. It's challenging for companies to keep track of the pace of chemical regulations around the world, he said.

"Changes to chemical registration regulations have been proposed or implemented in the EU and many other countries, including China, Canada, the United States, and Korea," PPG said in its 2016 10-K filing with the U.S. Securities and Exchange Commission. "Because implementation of many of these programs has not been finalized, the financial impact cannot be estimated at this time. We anticipate that the number of chemical registration regulations will continue to increase globally, and we have implemented programs to track and comply with these regulations."

Chemical regulations in different parts of the world reflect different social and economic philosophies, Bem said. There are regulators that will require some duplicative tests due to their specific requirements, he added. Leveraging chemical toxicity and other data so that information generated for one regulatory body can support regulations in different parts of the world is a good idea, but "you can't also leverage all of it," he said.

TSCA, Fuel Standards

Some regulatory changes—such as the 2016 overhaul of the U.S. Toxic Substances Control Act—will be a boon for chemical makers as a nationwide approach to chemical management is more workable that a patchwork of state rules, he said. "Very rarely is a product designed just for a particular state."

Regulations also create market opportunities, according to Bem. For example, the Corporate Average Fuel Economy, or CAFE, standards require car manufacturers to make lighter components for automobiles. That, in turn, has spurred paint and coating innovations, he said.

Chemical Safety Tests

The amended TSCA requirement that the U.S. EPA develop and implement a plan to promote the regulatory use of in vitro, computer-based, and other new approaches to predicting how chemicals affect people and the environment will promote scientific understanding and regulatory use of new testing technologies, Bem said.

Regulatory bodies are playing catch-up with emerging scientific understandings about ways chemicals could move through, affect, and be transformed by living organisms, he said. Yet markets are responding to new science, Bem said.

To illustrate his point, Bem discussed industries' response to concerns that some scientists have raised about bisphenol A (BPA), a chemical used to soften plastic products and coat metal cans to prevent food spoilage.

Market Drives Change

The question of whether BPA poses reproductive and developmental risks divides the scientific community. The U.S. EPA has described BPA as weakly estrogenic, meaning it can mimic female hormones. Many scientific advisers to regulators have said the chemical's current use levels are safe, yet some of those agencies also have regulated the chemical.

Companies began to switch to alternatives years before regulations were in place, Bem said. The U.S. Food and Drug Administration, for example, declared in 2012 that bisphenol A could no longer be used to make plastic baby bottles or children's "sippy cups" because it agreed with industry petitioners' claims that it was no already no longer used in those applications.

Increasingly, even if the toxicology isn't clear, the market—not regulations—is the driver, Bem said. PPG's toxicologists are working with their supply chain partners to predict chemical toxicity and environmental effects using safety tests that aren't mandated by current regulations, he said.

These teams tend to work with classes of chemicals that are well known "where there's plenty of information, so we don't have to take leaps of faith," he said.

Sustainability Goals

About 80 percent of chemical makers have adopted sustainability codes, meaning they are accountable to their shareholders for meeting specific goals, Kahle said. For PPG, that has meant developing reflective paints and coatings to cut energy use, Bem said.

PPG wants to use more biobased chemicals in its products, but the supply chain that could provide them isn't consistent enough to satisfy global demand, he said.

The growth in customers' sustainability and other value-based requirements also drive PPG's innovations, Bem said.

For example, one European customer focused on ergonomics for painting contractors, he said. The contractors carried large paint containers, similar to a five-gallon pail rather than the traditional one-gallon can familiar to homeowners. The customer and PPG designed a light-weight paint that was easier to carry and reduced fuel delivery costs, Bem said.

In another case, PPG worked with an automaker that wanted paints and coatings with a high recycled content that also could perform well on car parts made with recycled materials, he said. The customer's focus spurred PPG to work in an area that it might not have undertaken on its own due to the cost and complexity involved.

Corporate and customer sustainability expectations mean environmental performance is an important measure of success, he added.

Robots, Driverless Cars

Even somewhat farther afield, PPG works with sensors used in automated manufacturing system robots and self-driving vehicles, he said.

To prevent corrosion and for aesthetic reasons, industrial robots and autonomous vehicles need to be painted or coated, Bem said. Any coverings, however, can't interfere with a sensor's ability to "see," he said. PPG has worked with its aerospace customers on coatings that protect the sensors while improving their "vision" and function under a range of temperatures, humidity, and weather conditions, Bem said.

The chemical innovations that new technologies necessitate, coupled with new Chinese environmental policies, mean the pace of innovation emerging from China will continue to accelerate, Kahle said.

Germany's Energy Transition Creates Costly Problems With Grid

Posted September 14, 2017, 6:15 A.M. ET

By Jabeen Bhatti

Bolstering Germany's renewable output and expanding its electricity grid will be among Chancellor Angela Merkel's priorities if she prevails in upcoming federal elections.

As Germany forges ahead with its green energy transition, grid operators are being forced to dramatically increase operating costs to stabilize a centralized grid that has become unsuited for fragmented renewable production.

"In the next legislative period, we will need a great deal of effort to overhaul our transmission networks," Merkel said at her Christian Democrats' Energy Policy Dialogue event in April.

A "speedier" legislative process will be a priority as will establishing a "community of responsibility" with those of Germany's federal states that have lower transmission costs than others, she added.

Germans head to the polls Sept. 24 to decide whether Merkel, who has led Germany since 2005, will remain in power.

Even if so, to make Merkel's vision a reality, "there's a lot of investments that they have to make and this contributes to increased grid fees," Matthias Lang, a partner at the Bird & Bird law firm in Düsseldorf, told Bloomberg BNA. "But even if tomorrow we have a beautiful idea for the grid, it will still need to be built. And we'll be paying for it for the next 40 or 50 years."

The energy transition, in full swing for more than a decade, has drawn attention across Europe and from other countries also looking to rely more on renewable energy.

Germany already has some of Europe's highest energy costs, so analysts wonder whether more increases will curtail public support: Some 95 percent of Germans support continued investment and expansion of renewables, according to a representative survey by German research agency Kantar Emnid.

Transmission Snafu

Germany decided to cut ties with nuclear power in an ambitious energy transition known as the Energiewende. The move completely upended its energy production and transmission procedures. Since beginning the phaseout of nuclear energy in 2010, renewable energy output has doubled to 33 percent of total production in 2016, while fossil fuel and nuclear energy production significantly decreased, according to the Federal Ministry of Energy and the Economy. As of March, wind made up almost 12 percent of all electricity generation, while solar was almost 6 percent. Despite having succeeded in rapidly overhauling energy production, Germany's electricity grid, originally optimized for a centralized approach to energy consumption and transmission of non-renewables, is still struggling to efficiently accommodate the flood of electricity from renewables, analysts said. Strategically placed power plants used to funnel energy in a harmonized system based on need, price of production, high-consumption areas, and energy availability. As such, grid infrastructure developed along centralized transmission routes. The Energiewende's quick rollout changed that practice. As opposed to strategically erecting power plants in line with transmission networks, renewable energy centers began popping up wherever wind or solar was available. That created a distributed operation using mixed energy sources that has put increased strain on the existing grid, analysts said. "The factor is really commercial where you get the cheapest place to put your wind farms" and solar, said Lang. "It has nothing to do with where the power is consumed. So you have increased the amount of transportation that you need, because there's a total disconnect between where generation and consumption takes place."

New Infrastructure 'Urgent'

The German power grid is sectioned into transmission quadrants overseen by four operators: TenneT, Amprion Inc., 50Hertz Transmission GmbH, and EnBW Transportnetze AG. Hundreds of local and regional energy producers pay these operators to transmit electricity to consumers across Germany. Costs on producers then are passed on to the consumers themselves. Analysts and grid operators said the transmission costs largely stem from efforts to stabilize electricity flow on the grid, known as re-dispatch costs, during periods of particularly high renewable output. This involves turning on or shutting off traditional power plants either to stanch or ramp up output in line with need. As renewables have become more popular, increased output has clogged transmission on a grid that was optimized for fossil fuels. This January and February, instances of re-dispatch on the grid increased by some 63 percent in comparison to the previous year, a spokeswoman from Germany's Federal Association of Energy and Water Management told Bloomberg BNA.

Meanwhile, in 2015, re-dispatch efforts cost operators some 412 million euros ($490 million), three times the cost from the previous year, according to the latest Monitoring Report from Germany's Federal Network Agency. The agency has warned that costs could jump to 1 billion euros ($1.2 billion) by 2020 as renewable output increases. As a result, TenneT, Germany's largest grid operator, whose transmission zone spans the entire middle passage of the country from north to south, was forced to raise operating fees in its zone by 80 percent in 2017, a company spokeswoman told Bloomberg BNA. That translates to a 27 euro ($32) increase a year in energy costs for a three-person household. Grid prices on average accounted for some 25.7 percent of energy costs for German households as of February, according to statistics from the the federal

energy and water management association. “New infrastructure is becoming more and more urgent. Curtailment costs of renewables are increasing and we can’t build the infrastructure so that the networks are faster,” Andreas Jahn, a senior associate with the Regulatory Assistance Project, an energy think tank in Berlin, told Bloomberg BNA.

Infrastructure Needs

Grid operators must now rapidly build infrastructure from the ground up in areas lacking proper access, such as along Germany’s coast with the North Sea, a major center of wind production. “They have an obligation to connect a particular wind farm to the grid,” said Lang. “But if the grid behind the wind farm was never built to take on that type of power, they have to reinforce the grid. And this drives up grid costs.”

This is particularly the case in rural areas in East Germany, where a lack of grid infrastructure has left consumers there footing the bill for updates to newly constructed renewable systems, in addition to transmission costs and stabilization measures. “The costs simply stay with this limited number of customers,” said Jahn. “We need a common agreement on the cost: Urban customers should have to pay a part of the costs in rural areas as well.” While updated transmission routes are supposed to be finished by 2022, when the last of Germany’s nuclear plants are to go offline, the Federal Network Agency confirmed to Bloomberg BNA that new, high-traffic grid connections likely won’t be finished until 2025.

Disputed Solutions

Numerous actions have been suggested to stymie rising costs—from efforts to rapidly increase grid expansion to legislation to equalize costs among consumers across the board, regardless of geographic location. A bill addressing the latter was completed in the Parliament in July and will clear the way for a harmonization of long-distance transmission costs across all regions by 2023. “There’s differing positions from the states simply because many profit enormously from the current system: They have lower grid costs while others’ bills are higher,” Tobias Austrup, an adviser on energy policy with Greenpeace Germany, told Bloomberg BNA. “But it really comes down to a question of fairness,” he added. Another proposal has been to decouple Germany’s transmission network from Austria and Luxembourg to combat electricity bottlenecks at the border that contribute to skyrocketing redispatch costs. But analysts dispute whether decoupling would be financially and politically beneficial. While creating a domestic internal bidding zone for electricity could indeed drive down prices in the short term, it doesn’t match the political objectives of the European Union and could increase congestion at national borders. And that could serve to exacerbate re-dispatch costs. “Electrons don’t know national borders. They know copper,” the Regulatory Assistance Project’s Jahn said. “In the end, it will be more expensive if we have 27 energy transitions instead of a joint project.”

‘Antiquated Power Stations’

Greenpeace’s Austrup views the grid in its current form—with its mix of traditional and renewable power plants—as the root of the problem. With an all-or-nothing approach replacing all traditional power stations with renewables immediately, instead of gradually, Germany could significantly reduce grid fees and energy costs, he said. “It’s a myth that the problem is that there’s too much renewable energy that can’t be transported,” Austrup told Bloomberg BNA. “The problem is these antiquated power stations that no longer belong in this world.” Still, building up renewables to the point of energy independence is a waiting game, said attorney Lang. Technology and legislation have to reach the point where such a feat would be possible. “If we finish the buildup of renewables, then at some stage, the grid will have caught up,” said Lang. “But I’m hesitant to say when exactly this is going to be, because we don’t know what technology we will be able to use going forward.”

That means that high energy costs for consumers in Germany—already higher than most of its European counterparts—won't show any sign of stopping, he added. "It's costing money and costs are going to increase. It will get more expensive," he said. "If we want a higher percentage of renewables, then we have to upgrade the grid to do so. And that will cost what it costs."

Fastenal Canada Fined $218K for Import, Sale of Ozone Depleters

Posted September 14, 2017, 8:26 A.M. ET

By Peter Menyasz

Major industrial supply firm Fastenal Canada Ltd. will pay C$265,000 ($217,000) in fines for importing and selling in Canada aerosol products containing ozone-depleting substances.

The Ontario Court of Justice levied the fine Sept. 7 after the company pleaded guilty to two counts of violating the ozone-depleting substances regulations under the Canadian Environmental Protection Act, Environment and Climate Change Canada said Sept. 13.

Enforcement officers found that Fastenal imported and sold aerosol products containing hydrochlorofluorocarbons (HCFCs), a regulated ozone-depleting substance, between November 2012 and January 2015, the department said in a statement.

The company, based in Winona, Minn., didn't respond to Bloomberg BNA's request for comment.

The fine will go to the Environmental Damages Fund, which is used to support projects that benefit the environment, and the company's name will be added to Canada's Environmental Offenders Registry, the government said.

HCFCs are primarily used in foam blowing agents, refrigeration and air conditioning coolants, solvents, aerosols, and fire extinguishers.

Fastenal has 2,503 retail outlets and 401 on-site locations in the U.S., Canada, Mexico, and Europe, with net sales totaling $4.0 billion in 2016.

Subject: Supreme Court turns down appeal over EPA emissions rules

By Alex Guillén

06/26/2017 10:41 AM EDT

The Supreme Court today declined to take up a power company's appeal that argued EPA regulations wrongly made emissions released during industrial accidents illegal.

In a follow-up to a lawsuit before the D.C. Circuit Court of Appeals that saw most of a suite of Obama-era EPA boiler emissions rules upheld, American Municipal Power, an Ohio-based wholesale power supplier, argued that EPA's rules left emitters "at the mercy of EPA enforcement and citizen suits" following accidents that lead to emissions that exceed regulatory limits.

The Trump administration last month argued that it is reasonable to interpret the Clean Air Act so that EPA is not required to account for equipment malfunctions when setting emissions limits. And, the administration added, the varying types and durations of possible malfunctions makes it impossible to account for them ahead of time.

WATER
San Juan and Dolores River Basins
Colorado WATER

Final rule of the Department of Public Health and Environment, Water Quality Control Commission, amends regulations under 5 CCR 1002-34 to revise the water quality classifications, standards, and designations for multiple segments in the San Juan and Dolores river basins. The rule revises water body segmentation and aquatic life, recreation, water supply, and agricultural use classifications. The rule also revises molybdenum, cadmium, nickel, and lead standards; updates antidegradation designations; and revises temporary modifications. In addition, the rule addresses temperature standards, adds nutrient standards for chlorophyll and total phosphorus, and adds a direct use water supply subclassification. The rule is effective Dec. 31, 2017. Contact: Blake Beyea; DPHE; 303-692-3656; blake.beyea@state.co.us

OIL AND GAS INDUSTRY
Oil and Gas Wells
Indiana OIL AND GAS INDUSTRY

Notice of the Natural Resources Commission announces the recall of a March 29, 2017, proposed rule that would have adopted regulations under 312 IAC 29-1-1 through -34-6 and repealed regulations under 312 IAC 16 regarding oil and gas wells. The rule would have specified permit and operation requirements for oil and gas wells, including Class II wells, coal-bed methane wells, geologic and structure test wells, and noncommercial wells. The rule also would have set

forth criteria for drilling in karst-prone areas, for horizontal well drilling and well spacing, and for identifying commercially mineable coal resources. In addition, the rule would have specified requirements for notification, reporting, waste management, remediation, well abandonment, and management of naturally occurring radioactive materials. Regulatory Update

WATER
Regional Assessments of Water Quality
Texas WATER

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 220.4 and .6 regarding responsibilities of river authorities and designated local governments for regional water quality assessment. The rule would remove the requirements for data collection efforts to be coordinated with the now obsolete five-year basin permitting cycle.

The rule also would direct river authorities to submit summary reports once every third state fiscal biennium, in accordance with the schedule in the state clean rivers program guidance. A concurrent proposed rule would repeal regulations under 30 TAC 305.71 regarding basin permitting. A hearing is scheduled for Dec. 12, 2017, in Austin. Comments are due Dec. 18, 2017. Contact: Jill Csekitz; TCEQ, Water Quality Planning Division; 512-239-3136

—Texas Register (11/17/2017)

Regulatory Update

Utah

AIR
Air Quality/Degreasing Operations
Utah AIR

Final rule of the Department of Environmental Quality, Division of Air Quality, amends regulations under R307-335-1, -2, -3, and -9 and repeals regulations under R307-335-7 and -8 regarding volatile organic compound emission from degreasing operations. The rule removes provisions concerning industrial solvent cleaning, which are proposed to be moved under R307-304 as part of a separate rulemaking. The rule also revises the chapter name, updates recordkeeping requirements, and deletes provisions concerning add-on emission control systems operations. The rule is effective Oct. 29, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Occupational Safety Health/Federal Standards
Utah OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Labor Commission, Division of Occupational Safety and Health, would amend regulations under R614-1-4 to update the incorporation by reference federal occupational safety and health standards for general industry and construction under 29 CFR 1910 and 1926 as of July 1, 2017, with specified exceptions. Comments are due Dec. 15, 2017. Contact: Cameron Ruppe; Labor Commission, Division of Occupational Safety and Health; 801-530-6898; cruppe@utah.gov

—Utah State Bulletin (11/15/2017)

Regulatory Update

WATER
Wastewater Works Operators/Examination
Utah WATER

Proposed rule of the Department of Environmental Quality, Division of Water Quality, would amend regulations under R317-10-10 regarding examinations for certification of wastewater works operators. The rule would remove the option for participants to request an exam review within 10 days after failing the exam and instead recommend that the certification council review question comment forms completed during the testing session and submit them to the test provider. Comments are due Dec. 15, 2017. Contact: Judy Etherington; DEQ, Division of Water Quality; 801-536-4344; jetherington@utah.gov

Subject: Sep 18 PRG Energy Update: UN Climate Week, EPA Noms, ITC Solar Injury Vote

Friends,

Our friend Sean Spicer was the hit of the 69th Emmy awards last night working with host Stephen Colbert to offer a great, light political moment, fresh with a moving podium in an event dripping with political intrigue. The big winners were SNL, Hulu and Julia Louis-Dreyfus, whose win for best actress in a comedy for her "Veep," performance tied Cloris Leachman's record for eight prime-time acting Emmys. See all the winners here.

Also, proud dad moment: this weekend we traveled to Wellesley to watch Hannah's first NEWMAC field hockey game and she didn't disappoint, getting a "Gordie Howe Hat Trick," by scoring the game winning goal, setting up her team's first goal and then getting a yellow card late in the second half.

This week, the UN launches its meetings so climate change events are all around. First, let's address the weekend dust up over the Paris agreement. In case you missed it, the *WSJ reported* that the Administration was considering backing off its pledge to pull out of the Paris Agreement. The Administration pushed back aggressively on that issue. My take: I just don't think there is anything different than we've heard before. For now, it looks and sounds to me like they are still on the same page as back when he made announcement. They only seem to be wiggling on is their strategy to approach discussions at the upcoming UN meeting. Substance seems the same. Happy to discuss in more detail.

Climate Week events started with Gary Cohn this morning hosting a meeting on energy and climate change in New York before the United Nations General Assembly convenes and continues with Columbia Law School hosting an event tonight at 7:00 p.m. on offshore wind in NYC featuring our friends Amy Harder of Axios, Statoil's Megan Kesier and Michael Gerrard of the Columbia Law School. The Concordia Summit also is happening in NYC with speakers like Scott Pruitt (interviewed by Dana Perino), Laura Bush, a bunch of POLITICO moderators and many others. Finally, Yale holds a Climate Conference today and tomorrow hosted by John Kerry featuring Ernie Moniz, Heather Zichal, James Baker, Sens. Graham and McCain, Govs. Brown and Inslee, Hank Paulson, GE's Jeff Immelt and **WAIT FOR IT**… Leo DiCaprio, tomorrow to close the event!!! See the full Climate Week line up here.

So with another hurricane lingering in the Caribbean, it is important to report that as of 4:00 p.m. yesterday, more than 90% of customer outages have been restored. Still, about 850,000 customers are without power in Florida and Georgia as a result of Hurricane Irma. At Irma's peak on September 11, there were more than 7.8 million outages. In Georgia alone, power has been restored to 99% of customers, or 990,000 customers, impacted by Hurricane Irma. For those who are still without power, an army of more than 60,000 continues to work around the clock in support of one mission—to turn the lights back on as safely and as quickly as possible. This includes workers from affected companies, as well as mutual assistance crews, contractors, and other support personnel. See this mutual assistance in action in a social media recap.

Tomorrow, the Senate Energy Committee will vote on White House nominees for two open slots FERC, as well as picks for senior roles at the Interior and Energy Departments. Then Wednesday, the Senate Environment Committee will hear from nominees for several senior positions at the Environmental Protection Agency, including Bill Wehrum to head the agency's the air office. EPA GC Matt Leopold, EPA chemical office head (and TSCA implementer) Mike Dourson, EPA Water office head Dave Ross and NRC's Jan Baran also on the agenda.

Finally, on Friday the US International Trade Commission will vote on whether to move the Suniva 201 solar case forward by determining whether the petitioners were injured. The company is seeking import duties of 40 cents per watt for solar cells that currently sell for 25-33 cents per watt, and a floor price of 78 cents per watt for panels. The U.S. solar industry – as well as outside interests like utilities, contractors, co-ops, retailers, manufacturers and conservative groups have rallied to oppose the bid for protection, arguing it would undercut a thriving sector and harm employment in other areas, particularly installation. Lots of action on the issue including the *Wall Street Journal* Editorial Board hammering the case, conservative groups sending a letter to ITC opposing the case and a new paper from Heritage trade experts on the case.

Today is National Cheeseburger Day!!! Let's celebrate…Call with questions. Best,

Frank Maisano

(202) 828-5864

c. (202) 997-5932

FRANKLY SPOKEN

"Bill is well-respected and well-liked by the career staff at EPA – and by anyone who has ever worked with him. During his almost 6 years at EPA, he worked closely with career staff on a wide range of issues and was known for rolling up his sleeves and getting involved in the details of the Agency's regulations and permitting programs. From his work as an environmental engineer, his time at the Agency, and his many years of counseling clients, he has a comprehensive understanding of EPA's regulatory programs and the many technical issues involved in implementing the Clean Air Act."

Former EPA Air Administrator and Bracewell partner Jeff Holmstead in a letter to Senate Environment Committee Chair John Barrasso and Ranking Member Tom Carper supporting Bill Wehrum to be EPA Air Administrator.

"The reductions in solar costs — I did not foresee them, I also did not foresee the reductions in the cost of natural gas. I did not foresee that we would have the price of oil around $50 a barrel or wherever it is today. I admit that I didn't see the cost of solar and wind decreasing as fast as it has."

Daniel Simmons, Department of Energy staffer who helped draft the DOE Grid Reliability Report in an interview with PV Magazine.

IN THE NEWS

***Wall Street Journal* Ed Board Hits Trade Case** – You might have missed it given the WSJ's other story this weekend, but the editorial board called the Suniva case a "Solar Power Death Wish". The *Journal* says the marketplace is driving the potential harm for the petitioners, noting the "U.S. solar industry has discovered that its comparative advantage lies not in making panels, a basic product, but in adding value to imported cells and modules." They add the potential tariffs would be another "destructive exercise that benefits a handful of Suniva and SolarWorld investors at the expense of everyone else—including the rest of the solar industry. This is protectionism at its worst."

Heritage Paper Details Group's Concern About Solar Tariff – The Heritage Foundation released a paper that challenges the need for the solar trade petition filed by Suniva. They say acquiescing to Suniva and SolarWorld Americas' petition for more tariffs would do deep damage to the rest of the U.S. solar industry.

Conservative Groups Weigh in on Solar Tariff – Several conservative groups sent a letter last week urging members of the US International Trade Commission to reject the relief requested by Suniva and SolarWorld. The groups wrote that the tariffs and minimum price floors requested would double the cost of solar products in the United States, lead to retaliation by our trading partners and face a challenge at the World Trade Organization (WTO). Letter signatories include R Street, the American Legislative Exchange Council, ALEC Action, Citizens for Responsible Energy Solutions Forum, the National Taxpayers Union and the Taxpayers Protection Alliance.

Energy Innovation Discussion Spurs Progress – Clearpath's Rich Powell and former Oak Ridge National Lab Director Thom Mason wrote in a new op-ed in the *Chattanooga Times Free Press* how clean energy innovation has been an essential part of Tennessee's fabric for more than eight decades, including contributing to some of our nation's most significant breakthroughs. But they also issue a word of caution ahead of the busy budget season on Capitol Hill: We must have sustained federal energy innovation investment or risk losing much of the promise being built in the Volunteer State and elsewhere.

Nuclear Plants Withstand Hurricanes – Nuclear plants were among the most resilient of energy infrastructure in the path of Hurricanes Irma and Harvey. Two reactors near Houston operated at full capacity despite wind gusts of 130 mph, which along with flooding, shut down refineries and disrupted wind and solar generation. And while several Florida reactors were preemptively shut down ahead of Irma, they suffered no damage and were powered back up this week. Here is some of the coverage in Florida and additional coverage on Texas.

ALEC: State Nuclear Emerging Trends – Speaking of nuclear, our friend Sarah Hunt at the American Legislative Exchange Council (ALEC) released a new paper on the emerging trends in state nuclear power policy. Research reveals several developments have combined encouraging states to take a fresh look at nuclear energy policy. The survey of the state policy landscape suggests that moving forward, state nuclear policy discussions will focus on policy interventions to preserve existing nuclear power plants instead of policies that promote new construction.

Given the relevance of energy subsidies, mandates and federally regulated wholesale power markets to nuclear power, these policy conversations will hopefully encourage states and the federal government to take a fresh look at unraveling the "Gordian knot" of existing market distorting policies.

SAFE Brings in New Policy Expert – SAFE has brought in a new Senior VP of Policy and he's a heavy hitter. Jonathan Chanis is an expert on oil markets and energy geopolitics and is available for comment on these topics, as well as the upcoming OPEC monitoring committee meeting on Wednesday. Chanis is responsible for planning and directing the research, analysis, and writing of SAFE's policy team. Before joining SAFE, Jonathan taught graduate students at Columbia University about energy security and scenario planning, and he consulted on petroleum and natural gas security, and supply and value chain management. For the 20 years prior to this, Jonathan traded and invested in energy and emerging market equities, and commodities and currencies as a Senior Trader at Caxton Associates, a Vice President at Goldman Sachs's commodities division (J. Aron & Co.), and a Managing Director at Tribeca Global Management (a division of Citigroup). Chanis has been a member of the Council on Foreign Relations since 1988, and an Associate Member of the Columbia University Seminar on the Middle East since 1997.

CAP Report Outlines State Offshore Wind Best Practices – The Center for American Progress has a new report today that examine state policies that helped launch offshore wind projects in Rhode Island, Massachusetts and New York. Among the items they recommend states consider for the policy toolkits: Strong renewable energy requirements, legislation guaranteeing demand for offshore wind power, comprehensive ocean planning, competitive and reasonable long-term power purchase agreements and infrastructure investments in areas like ports.

ON THE SCHEDULE THIS WEEK

TX Renewable Summit Set – The Texas Renewable Energy Summit will be held today and tomorrow in Austin at Omni Southpark. The summit will offer the latest insights into the market and hear from key players about the key trends impacting renewable energy project development, finance and investment in Texas. The falling price of solar panels is driving a surge in interest by public utilities and corporate customers in contracting for solar power, while a huge queue of wind projects is forming. As much as 16 GW of new wind and solar projects could come to fruition in Texas. However, development and financing challenges must be surmounted to assure project success and bankability. Large quantities of solar may drive the dispatch curve and market prices in unpredictable directions.

POLITICO Reporters to Moderate Key Panels at Key Event – The Concordia Annual Summit will be held today and tomorrow prior to the UN meetings launch in New York City. The event is the pre-eminent nonpartisan forum taking place alongside the UN General Assembly, and convenes more than 2,000 influencers and decision-makers through action-oriented programming that aims to build partnerships for social impact. The Summit will feature over 250 speakers, including EPA Administrator Scott Pruitt (interviewed by our friend Dana Perino), Commerce Secretary Wilbur Ross, former British Prime Minister Tony Blair, IMF Managing Director Christine Lagarde, former first lady Laura Bush, former State Department climate negotiator Paula Dobriansky, and United Technologies CEO Greg Hayes, of. As the official media partner of this year's summit, our friends at POLITICO – Anna Palmer, Nick Juliano, Matt Kaminski, Helena Bottemiller Evich and Ben White – will moderate discussions on major issues affecting the U.S. and global community.

Kerry Hosts Yale Climate Conference – Former Secretary of State John Kerry will host a climate conference today and tomorrow at Yale. Speakers will include former Energy Secretary Ernest Moniz, State Dept climate negotiator Jonathan Pershing, Obama Energy Czar Heather Zichal, former Bush Secretary of State James Baker, Sens. Graham and McCain, Govs. Jerry Brown and Jay Inslee, former Bush Treasury Secretary Hank Paulson, GE's Jeff Immelt and Leo DiCaprio, who will close the event tomorrow.

CSIS to Host Trade Discussion With Lighthizer – CSIS will host US Trade Rep. Robert Lighthizer this morning at 10:30 a.m. to discuss US trade policy priorities.

Columbia to Host Offshore Wind Discussion – The Columbia Law School will host an event tonight at 7:00 p.m. in NYC as part of its Climate Week events on offshore wind in New York. The Keynote presenter is Michael Gerrard of the Columbia Law School. Then our friend Amy Harder of Axios will moderate a panel which includes Statoil's Megan Kesier and others.

FERC Nominees to Get Energy Vote – Following last week's delay, the Senate Energy Committee meets tomorrow to vote on Kevin McIntyre to be chairman of the Federal Energy Regulatory Commission and Richard Glick to be a member of the commission. The committee will then lead into a hearing that will look at the vegetation requirements this week for electricity infrastructure on federal land. Witnesses include USDA's Glenn Casamassa, BLM's John Ruhs, Mark Hayden of the Missoula Electric Cooperative, Scott Miller of The Wilderness Society and Arizona Public Service Forestry Manager Andrew Rable.

IEA World Energy Report to be Detailed – The CSIS Energy & National Security Program will host Laszlo Varro, Chief Economist at the International Energy Agency (IEA), tomorrow to discuss the IEA's World Energy Investment 2017. Energy investment in 2016 totaled 1.7 trillion dollars, around 2.2 percent of the global economy. The report covers critical details about energy investment across various energy sectors, sources, and regions. It also includes a special focus on a wide array of topics, including how digitization is impacting investment and employment, global investment in innovation, and the impact of emerging business models. The report assesses the importance of energy policy driving investment into energy efficiency and into facilities that ensure adequate levels of energy security.

WCEE Event to Feature Marriott Leader – The Women's Council on Energy and the Environment's Women in Leadership (WIL) Committee will hold a reception tomorrow at 6:00 p.m. At the Brattle Group featuring Dominica Groom, Senior Director, Global Sustainability and Supplier Diversity at Marriott International, the world's largest global lodging company. Dominica provides global leadership through strategic direction, planning and execution for these important operational platforms. In 2016, she was recognized as one of the top "Leading Women", under the age of 40, in the state of Maryland for her tremendous professional accomplishments, community involvement and commitment to inspiring change. Additionally, she was also recognized as a "Top Influential Leader in Diversity" by the National Association for Minority Companies for her unwavering commitment to diversity & inclusion. Domenica will share her insights on her path to leadership, and some of the "lessons learned" for women in the sustainability and supplier diversity sector.

Senate Environment to Consider Wehrum, Other Noms – The Senate Environment Committee hold a hearing on nominations Wednesday at 10:00 a.m. Nominees under consideration Michael Dourson to be assistant EPA administrator for the chemical office; Matthew Leopold to be General Counsel; David Ross to be assistant EPA administrator for water; William Wehrum to be assistant EPA administrator for air; and Jeffery Baran to be a member of the Nuclear Regulatory Commission.

Forum to Look at Shale, Energy Security – On Wednesday at 4:00 p.m., the Institute of World Politics will host a lecture on the topic of "Energy Security: New Market Realities" with Sara Vakhshouri of SVB Energy International. The rise of North America's shale oil and gas production has changed the market dynamics, energy trade flow, and the elements of energy security. In this talk, Vakhshouri will cover the changes in market fundamentals, energy trade flows, energy prices and policies, and their broader impact upon global and regional energy security. We will also touch upon the current political risks treating the oil and gas supply from countries such as Qatar, Iran and Saudi Arabia.

Napolitano to Discuss NAFTA, US-Mexico Relations – On Thursday at 10:00 a.m. , University of California President Janet Napolitano and Dean of the School of Social Sciences and Government at Tecnológico de Monterrey Alejandro Poiré will speak at a forum that will address the current state and prospective future of U.S.-Mexico trade relations in light of the current policy and political climate. Other speakers will include Sen. Mark Warner, California Senate President Kevin de León, Mexican Ambassador Gerónimo Gutiérrez and former Custom/Border Patrol Commissioner David Aguilar.

WAPA to Feature Ford Product at September Event – The Washington Automotive Press Assn and the staff of Ford's Washington, D.C. offices will hold a networking event that highlights Ford's best-selling vehicle on Thursday at 5:30 p.m.at Ford's offices are located at 801 Pennsylvania Avenue in Suite 400.

ITC Solar Trade Petition Injury Determination – FRIDAY

Statoil to Focus on Climate Roadmap – On Friday at 10:00 a.m., the CSIS Energy and National Security Program will host Bjørn Otto Sverdrup, Senior Vice President for Sustainability at Statoil, to present Statoil's Climate Roadmap. The roadmap explains how Statoil will develop its business in support of the ambitions of the Paris Climate Agreement. Statoil believes the needed energy transition to a low-carbon society represents business opportunities, and Sverdrup will discuss how the company is reducing emissions, growing in renewables, and developing the portfolio and strategy to ensure a competitive advantage in a low-carbon world.

IN THE FUTURE

NATIONAL CLEAN ENERGY WEEK – September 25-29th. Hosted by Citizens for Responsible Energy Solutions, the American Council on Renewable Energy, Advanced Energy Economy, the American Wind Energy Association (AWEA), the Business Council for Sustainable Energy, the Biomass Power Association, Clean Energy Business Network, the Nuclear Energy Institute, the National Hydropower Association, and the Solar Energy Industries Association (SEIA). Sects. Perry and Zinke will launch event on Tuesday, September 26th at the Reserve Officers Association on Capitol Hill in a discussion moderated by former New Hampshire Sen. Kelly Ayotte.

Wharton DC Hosts Innovation Summit – The Wharton DC Innovation Summit will be held on

Monday September 25th at the Marriott Bethesda North Conference Center. The Wharton DC Summit has a rich history of getting at key questions for venture capitalists, a seasoned entrepreneurs, an aspiring entrepreneurs or the intellectually-intrigued by innovation. Interesting panels on transportation, (AVs), drones and many other topics.

AEE Holds Michigan Energy Future Conference – The Advance Energy Economy will hold its 4th Annual Michigan Energy Future Conference on September 25th College for Creative Studies in downtown Detroit. The global market for mobility solutions is growing rapidly, building on innovation, information technology, and new transportation business models. Focusing on this convergence, the event, sponsored by our friends at DTE Energy, will dive deep into the intersection of energy, telecommunications, and transportation. While other conferences have explored these issues independently, the Michigan Energy Future Conference will be the first comprehensive look at the synergies between sectors, exploring opportunities for the U.S. to benefit as the pace of convergence between these sectors accelerates.

Cato Forum to Look at Flood Insurance Program – The Cato Institute holds a forum next Monday at Noon in 122 Cannon looking at the National Flood Insurance Program, Zoning Regulations, and Hurricanes. The event will look at lessons for lawmakers working to reauthorize the expiring National Flood Insurance Program (NFIB). A panel of experts will answer questions on hurricanes, floods, and their aftermath, as well as offer suggestions for what Congress should, and should not, do regarding future disaster mitigation efforts.

WCEE Event to Look at MD Offshore Wind – The Women's Council on Energy and the Environment (WCEE) will hold a lunch forum next Tuesday at Dentons looking at the latest insights into the Maryland PSC's work on offshore wind and energy efficiency, the political challenges faced and the businesses opportunities created. Marissa Gillett, Senior Advisor to the Public Service Commission's Chairman, will be the speaker.

ELI to Look at Ocean Energy – Next Tuesday at Noon, the Environmental Law Institute will hold a forum on ocean energy technologies (wave, tidal, and current hydrokinetic energy) under development. Wave and tidal energy developers claim that federal subsidies and tax cuts are insufficient to promote research and development, and some of the most successful ocean energy companies have moved overseas. A panel of experts will look at key questions to improve development of the hydrokinetic technology sector in the U.S. Among the panelists, Annie Jones, FERC Energy Projects advisor.

Gas Tech CEO to Address Roundtable – The Natural Gas Roundtable will host that David Carroll, president of the International Gas Union at its next luncheon on Tuesday, September 26th. Carroll is the President and CEO of the Gas Technology Institute. He oversees the company's operations and directs its programs for developing technologies, products, and services for customers in the natural gas and related industries. Carroll assumed the additional role of President of IGU for a three-year term in 2015.

Forum to Look at Future of Nuclear – The Global America Business Institute (GABI) is hosting a special workshop on Tuesday September 26th looking at the future of nuclear power globally, focusing on technological, security, and geopolitical considerations. Achieving progress towards decarbonizing and reducing the environmental impact of energy generation is arguably impossible without a significant expansion of nuclear power internationally. However, improving and strengthening the global nuclear governance system and maintaining high international standards in nuclear safety, security, and nonproliferation are essential for nuclear power to become a more integral part of the world's energy portfolio. Speakers will include Partnership for Global Security President Kenneth Luongo and NEI's Everett Redmond.

Coal Event to Hear from Alpha CEO – The 40th annual Coal Marketing Days forum will be held on September 26-27 at the Omni William Penn Hotel in Pittsburgh. The event hosts a variety of coal suppliers and buyers, coal transport companies, and industry-wide analysts who exchange in-depth knowledge on the current state of the global and domestic coal-producing markets and focuses on the current trends and challenges shaping the business. Alpha Natural Resources CEO David Stetson is the keynote.

Ideas Conference Set – *The Atlantic* and the Aspen Institute holds its 9th annual Washington Ideas conference on September 26-28. "Washington Ideas" convenes the nation's leaders in politics, business, health, science, technology, arts, culture and journalism for three days of can't miss conversation and connections. In the heart of the nation's capital, we will tackle the most consequential issues facing the country and the world.

Wilson to Hold Energy Forum – The Mexico and Canada Institutes will host the Wilson Center's 2017 North America Energy Forum on Wednesday September 27th. The Forum is now in its fourth year and will focus on the major challenges and opportunities facing energy producers and consumers in the region, with a strong focus on innovation in the energy sector. Chamber Energy President Karen Harbert and NOIA head Randy Luthi will be among the speakers.

EMA Sets Annual Forum – The Environmental Markets Association holds its 21st Annual

Meeting on September 27-29 at the Renaissance Nashville Hotel. The event focuses on trading, legislation and regulation of environmental markets. The agenda includes panel sessions covering Carbon / RGGI, what's next after the Clean Power Plan, update on current developments and trends in other existing environmental markets such as the SO2 and Nox programs and a general REC Market Overview that provides an update on supply and demand as well as estimates on potential growth as the market faces pricing pressure.

PA Shale Conference Set – SHALE INSIGHT 2017 will be held on September 27th and 28th at the Pittsburgh Convention Center. The event holds the most important discussions on shale development, featuring some of the most prominent industry and government leaders. Influential industry executives and innovative thought leaders will work through two days of technical and public affairs insight sessions, major keynote addresses, and a dynamic exhibit hall featuring all the major shale players.

Smart Mobility Forum Set – The C3 Group hosts the 3rd annual Smart Mobility Forum on Capitol Hill on September 27th at 2:30 p.m. in the Capitol Visitors Center. The Forum will include presentations by experts on the deployment of autonomous vehicle technology and its impact on automotive, transportation, society and policy followed by an interactive Q&A. Featured Speakers include C3 Group President and smart mobility expert Doug Newcomb, Autotrader Senior Analyst Michelle Krebs and Dushyant Wadivkar of Bosch Automated Vehicles.

CSIS, Fortune Smart Women Conference to Feature Ernst – On Friday September 29th at 9:00 a.m., the Smart Women, Smart Power Initiative holds a conversation with Senator Joni Ernst (R-IA). The topics will include North Korea, Syria, Afghanistan, and other global hotspots with Senator Ernst, a member of the Senate Armed Services Committee. She is the first female combat veteran elected to the U.S. Senate. The event is – as always – moderated by Nina Easton of Fortune.

Geothermal Conference Set for Utah – The Geothermal Energy Association (GEA) is holding GEOEXPO+ on October 1-4th at the Salt Palace in Salt Lake City, UT. The meeting will be held in conjunction with the GRC Annual Meeting.

CCS Forum to Look at Norway Success Story – The Global CCS Institute will hold a forum on Tuesday, October 3rd at 9:00 p.m. in National Press Club's Zenger Room on the Innovation and low-carbon policies that are driving the development of clean energy technologies around the world. The discussion will explore how Norway has fostered the development of its carbon capture infrastructure, as well as the emerging business case for carbon capture in the U.S. and

globally. Featured speakers Gassnova CEO Trude Sundset, Rich Powell of ClearPath Foundation, Thina Saltvedt of Nordea Bank Norge and Statoil VP of New Energy Solutions Steinar Eikaas, who operates the world's most successful carbon capture project in the North Sea

SEJ Set for Pittsburgh – Speaking of Pittsburgh, SEJ's 27th annual conference is set for October 4-8 in Steel City.

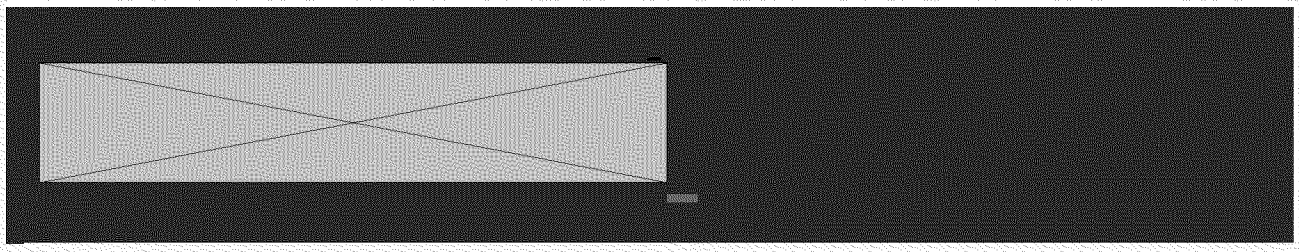
Vets in Energy Forum Set – Veterans In Energy will hold a forum on October 5th through 7th at NRECA in Arlington. VIE provide transition, retention and professional development support to the growing population of military veterans who have chosen energy careers. Speakers will include Chris Hale of GI Jobs and Gen. John Allen, former Dep Commander of US Central Command.

CSIS to Look at Electricfication – The CSIS Energy & National Security Program will host a discussion on Thursday October 5th at 9:30 a.m. looking at the future of electrification with Arshad Mansoor, Senior Vice President of Research and Development at the Electric Power Research Institute (EPRI). Mansoor will provide an overview of the recent EPRI report, *The Integrated Energy Network: Connecting Customers with Reliable, Affordable and Cleaner Energy*, which calls for a more interconnected and integrated energy system through greater electrification. Frank O'Sullivan, Director of Research and Analysis at the MIT Energy Initiative, and Ken Colburn, Principal and U.S. Program Director at the Regulatory Assistance Project, will follow with views on the opportunities and benefits, as well as obstacles and potential drawbacks of a path to a more electrified economy. This event is part of CSIS's ongoing work on Electricity in Transition, which surveys the current landscape of the U.S. and global electricity sector.

ACORE Finance Forum Set – The American Council on Renewable Energy will hold forum on the state of the renewable energy public policy, financial markets and corporate renewables strategy when they hold ACORE Finance West on October 12th at the Bently Reserve in San Francisco. This annual conference convenes senior investors, industry executives, and other top transactional professionals to address market trends in the context of renewable investment opportunities in the Western U.S.

Bloomberg Hosts Sustainability Forum – Bloomberg holds its 3rd annual Sustainable Business Summit on October 12-13th in its New York offices to discuss how companies are yielding positive returns for investors, creating sustainably valuable products and processes, and developing innovative sustainable business models. Uniquely positioned at the intersection of sustainable business and sustainable investing, the summit will explore the challenges and even

greater opportunities emerging across industries.



WAPA to Host Road Rally – The Washington Automotive Press Association holds its 2017 WAPA Rally on October 12th. This year's event will be a drive event on the roads just beyond the Chesapeake Bay Bridge on the scenic Eastern Shore of Maryland. The event provides the opportunity to drive or ride in the latest and greatest cars, trucks and SUVs provided by WAPA's automotive partners.

Renewable Tour Set for October Shenandoah Fall – JMU's Center for Wind Energy joins the nonprofit American Solar Energy Society (ASES) and hundreds of solar-savvy installers and grassroots organizations throughout America to showcase thousands of solar-powered homes, schools and businesses in Virginia and across North America -- for the 22nd Annual National Solar Tour, the world's largest grassroots solar event. The ASES National Solar Tour shows families and businesses real-life examples of how their neighbors are harnessing free energy from the sun to generate electricity, warm and cool their homes, heat water and slash monthly utility bills.

Green Bonds Conference Set for NYC – Environmental Finance will host Green Bonds 2017 at 10 on the Park in New York City on October 23rd. According to the Green Bonds Database, the American green bonds market has continued its rapid growth with over 17$ billion issued in the last twelve months.

At the conference this year we will look at the drivers behind this boom and how to ensure sustainable growth as the market matures.

Subject: Federal Insider: Whistleblowers at U.S. funded research institutions fear retaliation

Whistleblowers at U.S. funded research institutions fear retaliation

By Joe Davidson

The Department of Health and Human Services (HHS) building in Washington. A report by the HHS inspector general's office says "fear of reprisals may prevent potential complainants from reporting suspected" violations of "protections for human subjects" in research projects. (Alex Brandon/Associated Press)

Institutions that conduct human research generally have a reputation for strict fact-finding, going where the research leads while maintaining firm rules to protect the people who are studied.

If those rules are violated, the consequences can be serious. It's worse when workers and others are afraid to report violations.

When a study does not follow procedures, patient safety is jeopardized, public confidence in the research institution and the government agency funding the work suffers, sometimes for decades, with the mistrust passing through generations.

Consider the impact of the Public Health Service's scandalous "Tuskegee Study of Untreated Syphilis in the Negro Male." Patients were denied needed treatment in the name of science. Launched in 1932, it lasted 40 years and is an example of perverted research with lingering negative consequences.

Now comes an investigative report about deterrents in reporting problems with human research. The Department of Health and Human Services (HHS)

ADVERTISEMENT

Office of Inspector General found evidence of a fear of retaliation among whistleblowers in research institutions.

The human studies are funded by the federal government, but generally done by non-federal institutions, such as universities and hospitals.

The Department's Office for Human Research Protections (OHRP) does not provide adequate information on whistleblower protections for research employees and others, according to the report. That's a problem because "fear of reprisals may prevent potential complainants from reporting suspected" violations of "protections for human subjects" in research projects, the report said.

Whistleblowers have been transferred or put in fear of losing benefits.

"Information from whistleblowers is important because it can be insider information," said Joyce Greenleaf, a regional inspector general. "It can bring to light problems with critical research that puts volunteering human subjects at risk. So, to sustain the public's confidence in this research, we need people to be willing to bring these concerns to light."

Pressed for instances, the inspector general's office offered four cases that were not included in the report:

- A nurse who assisted with neurosurgeries at a medical center told investigators a surgeon delayed operations on patients for weeks to obtain equipment needed for a research study, but not needed to treat patients. "Nurse believes this is not in the best interest of the patients. Other nurses have voiced concerns but were reassigned."
- An ophthalmology resident in a large hospital said children and adults were enrolled in research that does not have appropriate approvals. Research involves chemotherapy to treat retinoblastoma, a cancer that begins in the retina, the black part of the eyeball. "There have been adverse events. Many research participants do not speak English, informed consent is inadequate and consent forms are not provided in the participant's native language." The whistleblower was "not comfortable complaining and does not want retaliation."
- A student athlete on a university scholarship "alleges that students do not have a choice but to participate in athletic testing research. The coach is in the room during the informed consent process, and the student alleges

Don Wright, the acting HHS assistant secretary for health, agreed with the recommendations and detailed the inspector general's office additional information on whistleblower protections will be posted on the agency's website.

"We agree that this situation is unacceptable and should be corrected," Wright said. "And we need to know that individuals working in these research institutions will be able to report misconduct without fear of retaliation."

The report had something to say about the adequacy of current whistleblower protections ..." the report said. "Elevating this issue would prompt HHS to consider whether additional whistleblower protections are appropriate. Furthermore, it could help HHS determine whether it should seek a legislative change that enables OHRP and other HHS entities that are not responsible for contract or grant oversight management to receive protected disclosures."

Subject: BREAKING NEWS: McConnell says Senate will vote to take up Obamacare repeal next week

Senate Majority Leader Mitch McConnell announced Tuesday that the Senate will hold a vote to proceed to a measure to repeal Obamacare early next week.

The vote is expected to fail, as three Senate Republicans - Lisa Murkowski of Alaska, Susan Collins of Maine and Shelley Moore Capito of West Virginia - have already said they won't vote to advance the bill. McConnell can only lose two GOP senators on the vote.

Subject: BREAKING NEWS: Senate passes sweeping tax overhaul

The Senate passed a sweeping tax overhaul that would cut taxes for corporations and most individuals.

The legislation passed after Republican leaders made concessions to several holdouts. The Senate and House will have to meld their separate bills before sending legislation to President Donald Trump.

Subject: BREAKING NEWS: House members directed to delay recess departure for Obamacare repeal

House Majority Leader Kevin McCarthy (R-Calif.) has instructed lawmakers to keep their schedules light, in case the Senate passes Obamacare repeal legislation and the House comes under pressure to act.

"While last votes are currently scheduled to take place tomorrow, Members are advised that - pending Senate action on health care - the House schedule is subject to change," McCarthy's announcement to members reads. "All Members should remain flexible in their travel plans over the next few days. Further information regarding potential additional items will be relayed as soon as possible."

OIL AND GAS INDUSTRY
Gas Utilities and Pipeline Operators
Colorado OIL AND GAS INDUSTRY

Proposed rule of the Public Utilities Commission amends regulations under 4 CCR 723-4, Rules 4000 through 4976, concerning gas utilities and pipeline operators. The rule updates provisions concerning the gas purchase plan, gas purchase report, and gas cost adjustment to reflect current utility corporate ownership and changes in organizational structure. The rule also updates references to federal requirements and the procedures for testing revenue meters upon a customer's request. A hearing is scheduled for Oct. 16, 2017, in Denver. Comments are due Sept. 26, 2017. Contact: Becky Quintana; PUC; 303-894-2881; rebecca.quintana@state.co.us

WATER
Municipal and Domestic Wastewater Facility Operators
Mississippi WATER

Final rule of the Department of Environmental Quality amends regulations under Title 11, Part 6, Chapter 3, regarding certification of municipal and domestic wastewater facility operators. The rule requires that professional references be obtained from certified operators at the same classification or higher than the classification being requested and requires that one year of experience be under the supervision of a certified operator. The rule also requires a certified operator's principal residence to be no more than 50 miles from any system they operate and to attend an approved wastewater operator short course for the appropriate classification within 12 months prior to testing for the classification. In addition, the rule addresses state reciprocity. In addition, the rule prohibits individuals from sitting for a Class III or Class IV examination without proof of having taken and passed a Class II examination. The rule is effective Sept. 28, 2017. View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Wednesday afternoon. BREAKING -- NBC 4'S SCOTT MACFARLANE (@MacFarlaneNews): "CAPITOL HILL ARREST: US Capitol Police report arresting person at Cannon Building after finding loaded handgun in suitcase at checkpoint"

SANCTIONS SIGNED -- "Trump signs bipartisan Russia sanctions bill," by Matt Nussbaum: "President Donald Trump on Wednesday signed a bipartisan bill placing new sanctions on Russia, but in a statement he claimed multiple aspects of the legislation violate the Constitution. In one of two statements released almost simultaneously Wednesday morning by the White House, Trump said he supports the law's efforts to crack down on the actions of Iran, North Korea and Russia. But the White House has complained about Congress' efforts to restrict Trump's ability to lift sanctions on Moscow.

"'In its haste to pass this legislation, the Congress included a number of clearly unconstitutional provisions,' Trump said in one statement. 'My Administration particularly expects the Congress to refrain from using this flawed bill to hinder our important work with European allies to resolve the conflict in Ukraine, and from using it to hinder our efforts to address any unintended consequences it may have for American businesses, our friends, or our allies.' The president's second statement included a stepped-up defense of his own administration's foreign policy and input on the legislation. Trump said that 'despite its problems,' he had signed the bill 'for the sake of national unity.' The statement characterized the governments of Iran and North Korea as 'rogue regimes,' a label he did not apply to the Russian government." http://politi.co/2u06Nxk

-- THE LAST TWO LINES OF TRUMP'S SECOND STATEMENT: "I built a truly great company worth many billions of dollars. That is a big part of the reason I was elected. As President, I can make far better deals with foreign countries than Congress." ***The signing statement*** http://bit.ly/2voPSrQ ... ***The second statement*** http://bit.ly/2voZDXl

-- BUT, the U.S. government is comprised of three co-equal branches of government. So Congress has a say.

SENATE CLOSE TO GETTING OUT OF TOWN -- @seungminkim: "The smell of #jetfumes getting stronger in the Senate"

PRESIDENT TRUMP appeared with Sens. Tom Cotton (R-Ark.) and David Perdue (R-Ga.) to announce his support for the RAISE Act, which curbs legal immigration. **TRUMP** , per TPM's Cameron Joseph, today's pooler: "As a candidate I campaigned on creating a merit-based immigration system that protects U.S. workers and taxpayers and that is why we are here today. Merit-based. The RAISE Act, R-A-I-S-E, the RAISE Act, will reduce poverty, increase wages and save taxpayers billions and billions of dollars. It will do this by changing the way the United States issues green cards to nationals from other countries." ***The AP's Ken Thomas and Jill Colvin on the proposal*** http://bit.ly/2vpehO5

-- THIS BILL is exceedingly unlikely to pass the Senate. Our colleague Seung Min Kim understands immigration politics and the Senate better than anyone, and she tweeted: "Very very rough guess but I would think Cotton-Perdue bill gets around 30ish GOP votes on floor, no Dems"

****** **A message from Morgan Stanley** : Millennial investors are bringing increased attention to sustainable, responsible and impact investing-and it may be creating opportunities for investors of all ages. Read more about new sustainable investing portfolios with lower account minimums from Morgan Stanley. ******

CABINET SHUFFLE? -- "Trump Is Considering Perry for Homeland Security Chief," by Bloomberg's Jennifer A. Dlouhy and Jen Jacobs: "The Trump administration is considering Energy Secretary Rick Perry as one possible replacement for John Kelly at the Department of Homeland Security, according to three people familiar with the deliberations. Kelly became White House chief of staff on Monday, and President Donald Trump has not made a decision about who should succeed him as Homeland Security secretary. White House officials are considering others for the position in addition to Perry, the people said. They asked not to be identified discussing a personnel matter." https://bloom.bg/2u06ov6

-- FLASHBACK, JULY 21, 2015: @realDonaldTrump: "Rick Perry did an absolutely horrible job of securing the border. He should be ashamed of himself. Gov. Abbott has since been terrific."

THIS IS SOMETHING ...

-- AP'S DAVID CRARY: " Boy Scouts: Top leaders didn't call Trump to praise speech": The Boy Scouts denied Wednesday that the head of the youth organization called President Donald Trump to praise his recent, politically aggressive speech to its national jamboree. Trump told The Wall Street Journal in an interview published Wednesday, 'I got a call from the head of the Boy Scouts saying it was the greatest speech that was ever made to them, and they were very thankful.' Politico published the transcript of the interview.

"'We are unaware of any such call,' the Boy Scouts responded in a statement. It specified that neither of the organization's two top leaders -- President Randall Stephenson and Chief Scout Executive Mike Surbaugh -- had placed such a call. The White House had no immediate response to the Boy Scouts' denial." http://bit.ly/2ukhBWo

-- CBS NEWS: "Mexican president denies calling Trump to praise border work" : "Mexican President Enrique Pena Nieto is calling into question President Trump's most recent claims that the leader called him to praise his administration's work on the U.S.-Mexico border. As Mr. Trump welcomed his new Chief of Staff John Kelly to the Cabinet table on Monday, Mr. Trump took time to applaud the work Kelly had done during his time leading the Department of Homeland Security.

"'At Homeland, what he has done has been nothing short of miraculous,' Mr. Trump said of Kelly. He went on, saying, 'As you know, the border was a tremendous problem and they're close to 80 percent stoppage. And even the president of Mexico called me -- they said their southern border, very few people are coming because they know they're not going to get through our border, which is the ultimate compliment.'

"But Nieto denies that ever happened. In a statement released by the Mexican Foreign Ministry, Nieto 'has not recently spoken to President Donald Trump over the telephone.'" http://cbsn.ws/2viC02M

BOOK ALERT -- "James Comey has book deal, publication set for next spring," by the AP's Hillel Italie: "Flatiron Books told The Associated Press on Wednesday that Comey will write about everything from allegations of ties between Russia and Donald Trump's presidential campaign to the bureau's investigation into Hillary Clinton's use of a private email server. According to Flatiron, Comey will draw upon his career in government as he writes about 'good, ethical leadership' and how it influences 'sound decisions.' The book is currently untitled and scheduled for publication next spring." http://bit.ly/2tZTm0D

-- ANOTHER BITE: "Comey was represented by Matt Latimer and Keith Urbahn of Javelin. . Financial terms were not disclosed, but several publishers bid for the book and three officials with knowledge of the negotiations said the auction topped $2 million. The officials asked not to be identified because [they] were not authorized to discuss the book."

THE TRUMP EFFECT -- BEN SCHRECKINGER'S latest in POLITICO Mag: **"Dog the Bounty Hunter Hits the Campaign Trail":** "I first encounter Dog the Bounty Hunter on a Sunday morning between services in a back room at the Christ Community Church in Cumming, a town of some 5,000 people about an hour's drive from Atlanta. His wife and fellow reality TV star is sitting in the corner with a sleeveless dress, and Dog-his real name is Duane Chapman-is pacing the room, a white shirt unbuttoned to the solar plexus, exposing his leathery chest. The couple sports matching, slightly-longer-than-

shoulder-length bleach- blond hair. They're here to support Michael Williams, a tall, broad-shouldered and clean-cut state senator who has launched a long-shot campaign to become Georgia's next governor. ...

"Now, he has enlisted the celebrity bounty hunter to campaign as his surrogate for the first half of the last week of July, criss-crossing the endless sprawl of the Atlanta suburbs. In between taking smoke breaks and naps, Dog is delivering sermons, filming ads, making fundraising calls and delivering a memorable stump speech in a hotel ballroom - all under the tutelage of his wife, Beth, the president of the National Bail Bondsman Association." http://politi.co/2ujwU1D

FOGGY BOTTOM WATCH -- "Tillerson spurns $80 million to counter ISIS, Russian propaganda," by Nahal Toosi: "Secretary of State Rex Tillerson is resisting the pleas of State Department officials to spend nearly $80 million allocated by Congress for fighting terrorist propaganda and Russian disinformation. It is highly unusual for a Cabinet secretary to turn down money for his department. But more than five months into his tenure, Tillerson has not issued a simple request for the money earmarked for the State Department's Global Engagement Center, $60 million of which is now parked at the Pentagon. Another $19.8 million sits untouched at the State Department as Tillerson's aides reject calls from career diplomats and members of Congress to put the money to work against America's adversaries. ...

"Current and former U.S. officials call it the latest example of a severe slowdown in department decision-making; of Tillerson's reliance on a coterie of political aides who distrust State's career staffers; and a casualty of President Donald Trump's intention to slash State's budget, which has Tillerson looking for ways to reshape the department and spend less money, not more. Sources cited another sensitive factor at play: Russia. One Tillerson aide, R.C. Hammond, suggested the money is unwelcome because any extra funding for programs to counter Russian media influence would anger Moscow, according to a former senior State Department official." http://politi.co/2u43PME

GAVEL SCRAMBLE -- "Budget chairwoman enters Tennessee governor's race," by The Hill's Niv Elis and Scott Wong: "Rep. Diane Black (R-Tenn.) officially threw her hat into the Tennessee governor's race on Wednesday, setting off a scramble to fill her position as chairman of the House Budget Committee. Under a GOP conference rule known as 'The Paul Ryan rule' that is named for the House Speaker, Black would have to step down from the chairmanship to run. Black could seek a waiver from the 2014 rule, but there is little enthusiasm for it among her Republican colleagues. ...

"Ohio Rep. Bill Johnson is already seeking Black's position. ... Other obvious choices from the committee may not put themselves in the running. Committee Vice Chair Rep. Todd Rokita (R-Ind.) is rumored to be eyeing a Senate run. Moving down the seniority list, Rep. Tom Cole (R-Okla.) and Rep. Mario Diaz-Balart (R-Fla.) have expressed reluctance to give up their powerful positions as appropriations subcommittee chairs, or 'cardinals,' for a shot at the budget gavel." http://bit.ly/2u46pC4

TOP ED -- MICAH ZENKO in Foreign Policy -- **"Donald Trump Is Pushing America's Special Forces Past the Breaking Point":** "There is no reason to doubt that Trump will turn more and more to JSOC, just as his predecessors did, in pursuit of counterterrorism objectives. But this overreliance on lethal force is not just exhausting America's special operators; it is wholly insufficient to comprehensively confront the underlying causes of militancy and terrorism - a mantra Pentagon officials repeat when they all but beg Congress to adequately fund the State Department. But because JSOC is both "awesome" and piles up body counts, it will always remain the leading actor in the global war on terror. The natural question is whether any such war could be managed at some socially acceptable level or, indeed, will ever end." http://atfp.co/2u3WZ9F

TOP TWEETERS -- "This Is Probably The Only Story You Didn't Hear About First From Bradd Jaffy And Kyle Griffin," by BuzzFeed News' Steven Perlberg and Charlie Warzel: "Be it a press conference on Capitol Hill, cabinet meeting pool spray from the White House, Trump golf outing, or fiery segment on Morning Joe - you'll see it first from Jaffy or Griffin. When a reporter in the NBC News operation has an exclusive, [Bradd] Jaffy or [Kyle] Griffin are often first to post the relevant details. Between the two, they somehow manage to tweet virtually every piece of news and opinion of the day - from a fact check of that morning's controversial Trump tweet, to a late-night Washington Post or New York Times bombshell report - and always with plenty of screenshots.

"As news cycles grow faster and more overwhelming, Jaffy and Griffin have become feeds of record for obsessive political journalists and casual tweeters alike. Their relentless output, which, in a different environment, might have felt exhausting, is now a mooring force for a growing number who feel bombarded by breaking news and fear they might miss the next bombshell. The two are hardly the only journalists to tweet breaking news, to be sure. But in a presidency that plays out primarily over Twitter and cable news, Jaffy and Griffin were already in perfect position at Trump's media nexus with all the resources of the internet and a multi-national broadcast organization." http://bzfd.it/2vpbHHL

TRANSITIONS -- Lawrence Kluttz, communications director for Rep. David Price (D-N.C.) has been hired as the speechwriter for new Duke University president Vincent Price (no relation). He starts on August 10.

BONUS BIRTHDAY OF THE DAY: Stacia Deshishku, ABC News D.C. deputy bureau chief. How she's celebrating: "My family tradition, going back to the 70s in Houston, has been eating at Benihana. We celebrate all family birthdays watching culinary knife tossing and stuffing ourselves with fried rice. This year my sons Bennett and Grant will join me for more of the same!" Read her Playbook Plus Q&A: http://politi.co/2u44LAq

****** **A message from Morgan Stanley** : According to Morgan Stanley research, 86% of Millennials-broadly defined as those born between the early 1980s and 2000-say they are interested in sustainable investing. They are also twice as likely to invest in a stock or a fund if sustainability is part of the value-creation thesis. With Millennials on track to become the largest demographic in America-by 2020, one in three U.S. adults will be a

Millennial-the growing interest in sustainable, responsible and impact investing cannot be ignored. However, most sustainable investing opportunities cater to individuals with significant wealth, while the next generation is still in its early earning years. The growing demand for impact investing solutions is driving change, and opportunities created with reduced account minimums for this audience are benefiting investors of all ages. Read more from Morgan Stanley. ******

Driving the Day

Good Friday morning. THE NEW YORK DAILY NEWS: "President Trump chooses inexperienced woman who planned his son Eric's wedding to run N.Y. federal housing programs," by Greg Smith: "She's arranged tournaments at Trump golf courses, served as the liaison to the Trump family during his presidential campaign, and even arranged Eric Trump's wedding. Now President Trump has appointed longtime loyalist Lynne Patton -- who has zero housing experience and claims a law degree the school says she never earned -- to run the office that oversees federal housing programs in New York.

"Patton was appointed Wednesday to head up the U.S. Department of Housing and Urban Development's Region II, which includes New York and New Jersey, where she'll oversee distribution of billions of taxpayer dollars. Patton's tight relationship with the Trump clan dates back to 2009, when she began serving as the family's 'event planner.' ... She also claims on her LinkedIn page to have obtained a juris doctorate degree in 2000 from Quinnipiac University School of Law in Connecticut. Next to the J.D. notation is written (N/A) without explanation. On Thursday school registrar Jim Benson said Patton attended for two semesters but did not graduate. She also listed Yale University but HUD officials couldn't explain why that was there. Patton, who begins her Region II job July 5, did not return calls seeking comment.

"As head of the biggest HUD regional office in the U.S., Patton will oversee distribution of billions in cash to public housing authorities -- including NYCHA -- as well as tens of thousands of rental vouchers and block grants that fund housing inspections and senior citizen programs." http://nydn.us/2sikxU8

-- **N.Y. DAILY NEWS COVER:** "She planned Eric Trump's nups & falsely touts law degree. Now Prez has decided new housing boss in N.Y. is ... THE WEDDING SCAMMER" http://nydn.us/2turnp6

-- LYNNE'S LinkedIn page says she has the following specialties: "Public Engagement, Community Outreach & Revitalization, Strategic Networking, High-Net Worth Fundraising, Client Ambassador, Celebrity Talent Acquisition, Event Planning, Promotions, Social Media Strategy, Philanthropic Auctions & Tournaments, Public & Media Relations." http://bit.ly/2ryfdiE

THE U.S. is sending 4,000 more troops to Afghanistan, per the AP. http://apne.ws/2s88SsE Donald Trump ran for president saying he'd end foreign entanglements. **PRESIDENT TRUMP** is going to Miami today to announce changes to the U.S. policy toward Cuba.

FLASH -- AP at 5:09 a.m.: "**Russia claims it has killed IS leader al-Baghdadi,"** by Bassem Mroue in Beirut and Vladimir Isachenkov in Moscow: "The Russian Defense Ministry said Abu Bakr al-Baghdadi was killed in a Russian strike in late May along with other senior group commanders. There had been previous reports of al-Baghdadi being killed but they did not turn out to be true. The IS leader last released an audio on Nov. 3, urging his followers to keep up the fight for Mosul as they defend the city against a major offensive that began weeks earlier. The spokesman for the U.S.-led anti-IS coalition said in a statement Friday he could not confirm the Russian claim." http://apne.ws/2rCXIJ5

THE CONGRESSIONAL BASEBALL SCORE -- 11-2, DEMOCRATS WIN.

RACHAEL BADE and **KYLE CHENEY** bring us the scene from the Congressional Baseball Game at Nationals Park: "Rodney Davis stood in the shadow of the Nationals Park scoreboard and wiped away a tear. Just a day earlier, the Republican congressman from Illinois - and catcher for the Republican congressional baseball team -- watched his colleague Steve Scalise, the House majority whip, get shot on a practice baseball field in Virginia, while other lawmakers and aides scrambled for cover. ...

"'This is what our country needs after such a tragic act,' said Davis, his arm still scabbed and scraped from diving away from the gunman's bullets on Wednesday....Florida Democrat Charlie Crist was spotted walking around in a suit, a young staffer trailing him carrying his suit jacket." http://politi.co/2ttQWGH

-- COLD WATER ALERT. This is a kumbaya moment -- and we'd emphasize moment. It is, of course, impossible to predict the future. Remember: a gunman shot then-Arizona Rep. Gabby Giffords in the head. Nothing changed. We're skeptical much will change this time. Speaker Paul Ryan told Jake Tapper on CNN that "we can have different ideas without being vitriolic." Yes, they can. But there is no evidence to show they will. We hope we're wrong.

TAPPER had a joint interview with Ryan and Nancy Pelosi, and Anderson Cooper had Mitch McConnell and Chuck Schumer. A good night for CNN.

-- COOPER got this gem of an interaction. Classic line from McConnell when asked about Trump calling the investigation a witch hunt: **COOPER:** "President Trump made a statement last night with Congressman Scalise. It was getting bipartisan praise for his tone. Today tweeting about -- calling this a witch hunt against him, just talking about the people leading it being disturbed, I think was his term, or conflicted. Is that appropriate? **MCCONNELL:** "I typically don't comment on the president's tweeting habits." **COOPER:** "Do you think it is a witch hunt?" **MCCONNELL:** "I don't have any observations about that. We had here an example of a horrendous event that we all condemn, and we're here together tonight to make the point to the American people that there's a whole lot of cooperation in the Congress, even though it may not be covered, on a daily basis."

THE WHITE HOUSE SHOWED UP! -- "At congressional baseball game, newfound unity has its limits," by Yahoo's Hunter Walker: "As she talked to Yahoo News, [Kellyanne] Conway spotted top White House adviser Gary Cohn, who was in a dark suit. She called Cohn over. 'Look how Gary Cohn dresses for a baseball game. He dresses like Gary Cohn! Gary come here!' Conway beckoned. 'He came out of the womb looking like that,' quipped Mulvaney as Cohn strolled over. 'This is New York chic,' said Cohn, a former Goldman Sachs banker. As Cohn posed for photos with Conway, Mulvaney reached over and put an LSU hat on his head. Cohn couldn't see the cap. 'Does it make me a hillbilly?' Cohn asked. 'We couldn't make you a hillbilly if we tried,' Mulvaney said." https://yhoo.it/2ttWtNu

NYT NATIONAL BASEBALL WRITER TYLER KEPNER on the game. Good nugget: "A record 24,959 tickets were sold for the charity exhibition -- a higher attendance than Thursday's major league games in Chicago, Cleveland, Detroit, Minnesota and Oakland." http://nyti.ms/2rmUQAK

CLICKERS -- "Prayers and pitches: Scenes from the congressional baseball game" -- ***33 pix*** http://politi.co/2rCV4Tz ... **27 PHOTOS** by the Washington Post http://wapo.st/2rCXhhC

SPOTTED at the Anheuser-Busch and Buffalo Wild Wings game watch party in the PNC Diamond Club: Sean and Rebecca Spicer, Sarah Huckabee Sanders, Labor Secretary Alexander Acosta, Sen. John Boozman (R-Ark.), Reps. Bill Shuster (R-Pa.), Lacy Clay (D-Mo.), Ted Yoho (R-Fla.), Dave Joyce (R-Ohio), Darrell Issa (R-Calif.), Ann Wagner (R-Mo.), Barbara Comstock (R-Va.), Debbie Wasserman Schultz (D-Fla.), John Delaney (R-Md.), Virginia Foxx (R-N.C.) and Eliot Engel (D-N.Y.), Carl Hulse, Cate Martel, Naomi Jagoda, Allison Brennan, Roland Foster, Kate Pointer.

-- Photo of Tyson's lobbyist Matt Mika's friends and colleagues http://bit.ly/2t9fXI4

THE LATEST ON SCALISE -- RACHAEL BADE: "House Majority Whip Steve Scalise, the Louisiana Republican shot during a congressional baseball practice Wednesday, is

doing better but remains in critical condition and will be hospitalized for an extended period of time, according to a statement from his doctors. MedStar Washington Hospital Center said in a statement Thursday evening that Scalise underwent another surgery 'related to his internal injuries and a broken bone in his leg.' 'He remains in critical condition, but has improved in the last 24 hours,' the statement said. 'The Congressman will require additional operations, and will be in the hospital for some time. At the request of the family, we will continue to provide periodic updates.'" ***Bade on the emotional times on the Hill*** http://politi.co/2swDk15

-- KEY LINE HERE: Scalise will be hospitalized for an "extended period of time." This will be a long recovery.

****** **A message from POET - one of the world's largest ethanol producers:** Led by scientists and engineers, POET operates 30 biofuel facilities & America's first cellulosic biofuel plant. We produce a cleaner fuel for millions of drivers, every day. We're POET and we're driving innovation, from the ground up. Learn more here. ******

THE NEXT FRONTIER -- "Rattled by shooting, lawmakers want more personal protection," by Seung Min Kim and Rachael Bade: "Lawmakers are debating a range of heightened security measures following Wednesday's shooting that critically injured House Majority Whip Steve Scalise, with a growing number of Republicans even seeking to carry their own guns into the Capitol for personal safety. Rattled by the mass shooting by a gunman with an apparent political agenda, lawmakers are struggling with how to balance ensuring security for members of Congress while keeping themselves accessible to voters.

"The gamut of options includes new rules ramping up the law enforcement presence at big group events with lawmakers, equipping Capitol Police with more advanced weapons, and allowing individual members to spend taxpayer or campaign dollars on personal security measures. And several GOP lawmakers want the green light to bring their personal firearms onto Capitol grounds, a move that immediately alarmed Democrats who favor tougher gun restrictions." http://politi.co/2ry7KQy

-- MANY LAWMAKERS have mused about each getting their own Capitol Police officer. But that would be a hugely pricey government expense.

ON THE ALLEGED GUNMAN -- "Scalise Gunman Dodged 2006 Charge That Would Bar Gun Purchases," by Bloomberg's Ari Natter: "James Hodgkinson, 66, was arrested after a 2006 incident in which he was accused of beating his foster daughter, according to court records. The case crumbled after the victim decided not to testify ... Under federal law, someone found guilty of domestic battery of a family member can be barred from legally owning a firearm." https://bloom.bg/2ttKeR1

WAPO'S ASHLEY PARKER , the pride of Montgomery County, scooped that Vice President Mike Pence has hired Richard Cullen, the chairman of McGuireWoods, to represent him. http://wapo.st/2s7VoNE **MATT NUSSBAUM** reminds us that

McGuireWoods also once employed Jim Comey! And the firm also currently represents former Rep. Aaron Schock, who is facing 24 counts of criminal charges related to alleged crimes during his time in office.

SCOOP -- "Trump transition officials ordered to save Russia documents," by Josh Dawsey: "Aides and volunteers on Donald Trump's presidential transition were instructed Thursday to save any records related to 'several pending investigations into potential attempts by Russia interests to influence the 2016 election,' according to a memo provided to POLITICO. In the memo from a transition lawyer, campaign officials were told to preserve all documents related to the Russian Federation, Ukraine and a number of campaign advisers and officials, including former campaign manager Paul Manafort, advisers Carter Page, Rick Gates and Roger Stone, and former national security adviser Gen. Michael Flynn." http://politi.co/2sFQA36

-- GOLDEN BOY ALERT: "Special counsel is investigating Jared Kushner's business dealings," by WaPo's Sari Horowitz, Matt Zapotosky and Adam Entous: "FBI agents and federal prosecutors have also been examining the financial dealings of other Trump associates, including former national security adviser Michael Flynn, former campaign chairman Paul Manafort and Carter Page, who was listed as a foreign-policy adviser for the campaign." http://wapo.st/2shPVCa

THE PUSHBACK -- "Rosenstein prods media for 'anonymous allegations' on Russia probe," by Darren Samuelsohn: "A top Trump Justice Department official issued an unusual, vague statement Thursday night, casting doubt on a series of recent media reports detailing Special Counsel Robert Mueller's growing probe into the Trump campaign for potential collusion with Russia in the 2016 campaign. Deputy Attorney General Rod Rosenstein appeared to be taking issue with recent Washington Post and New York Times stories that President Donald Trump himself is now the subject of an obstruction of justice probe, as well as a separate new report from the Post that Mueller is looking into White House senior adviser and Trump son-in-law Jared Kushner's finances. ...

"'Americans should exercise caution before accepting as true any stories attributed to anonymous 'officials,' particularly when they do not identify the country - let alone the branch or agency of government - with which the alleged sources supposedly are affiliated,' Rosenstein said. 'Americans should be skeptical about anonymous allegations. The Department of Justice has a long-established policy to neither confirm nor deny such allegations.'

"Rosenstein's statement caught many in Washington off guard, in part because it was so generic and didn't actually specify which news reports it was addressing. It's also notable because of who issued it: With Attorney General Jeff Sessions recused from all things related to the Russia probe, Rosenstein as the No. 2 DOJ official has the reins over the Mueller probe. He'll get Mueller's budget and he also has the power to block major investigative steps -- with the caveat he must report to Congress if that happens." http://politi.co/2ttUBEo

--@jbarro: "The Washington Post has updated the Kushner story to reflect the officials cited are indeed U.S. officials."

JOSH DAWSEY, "White House aides fret over Trump's Russia probe obsession": "The greatest threat to Trump and his presidency, say administration officials and outside advisers, comes from his own conduct and obsessive behavior after he took office. While congressional and FBI investigations may prove Trump or his team broke laws before he took office, his advisers say they're more worried that the things he's done since the inauguration may have left him exposed to obstruction of justice or other charges. Trump, for months, has bristled almost daily about the ongoing probes. He has sometimes, without prompting, injected. 'I'm not under investigation' into conversations with associates and allies. He has watched hours of TV coverage every day -- sometimes even storing morning news shows on his TiVo to watch in the evening -- and complained nonstop." http://politi.co/2sFWm4N

THE COUNSEL -- "Mueller, Known for Being Above the Fray, Is Now in the Thick of It," by NYT's Scott Shane and Charlie Savage: "Veterans of past Washington battles on the borders of law and politics said that the president's pushback was to be expected, but that its ferocity and timing were unusual. Just one month into the job, Mr. Mueller has not yet finished hiring staff members or installing a computer network -- deliberately segregated from the main Justice Department -- in the Patrick Henry Building in downtown Washington.

"'It's early in the game to begin to impugn the prosecutors,' said Philip Allen Lacovara, a Watergate prosecutor and a Republican. 'It's a pre-emptive nuclear strike. If you're afraid of what the prosecutors are going to find out, you try to debunk anything they might come up with in advance by attacking them.'" http://nyti.ms/2shLOX2

JUST POSTED -- POLITICO MAGAZINE'S TIM ALBERTA: "Man on a Wire: Mike Pence's Tightrope Act... He might be the most consequential vice president ever. He could well be the next commander in chief. And the one person in America he can't have thinking about that is his boss." http://politi.co/2tunArX

SHOCKING! -- "Senate likely to miss its Obamacare repeal deadline," by Jen Haberkorn: "Senate Republicans are getting dangerously close to missing their deadline to hold a Senate health care vote by month's end, potentially derailing fulfillment of their seven-year-old campaign promise to repeal Obamacare. The Senate left Washington on Thursday with a seemingly insurmountable health care to-do list: When they return on Monday, Republicans will have just two weeks before the Fourth of July recess to overcome the remaining big divides on policy - including what year to roll back Medicaid expansion and how deeply to cut the program that covers health care for low-income people. They also must settle on how to bring down health insurance premiums and when to cut the taxes that paid for Obamacare -- not to mention the vexing issue of whether to defund Planned Parenthood." http://politi.co/2rDiWGu

ALEX ISENSTADT, "GOP sirens blaze over Georgia special election": "The GOP is bracing for the prospect of a loss in Tuesday's Georgia's special election that could have far-reaching implications for President Donald Trump and his party's fortunes in 2018. As grim confidential polling data circulates among GOP strategists, interviews with nearly two dozen Republican operatives and officials reveal that they are preparing for the possibility of an unnerving defeat that could spur lawmakers to distance themselves from Trump and his already-troubled legislative agenda, and potentially encourage a wave of retirements. ...

"While Republicans privately lampoon Ossoff's campaign skills -- deriding him as an inexperienced, talking-point driven candidate -- they acknowledge his cash advantage has made him a lethal opponent. 'We're going to find out if a monkey banging cymbals together spending $25 million can get elected,' the NRCC's executive director John Rogers told a group of Capitol Hill chiefs of staff this week, said one person present for the meeting. His meaning was clear to those in attendance: Ossoff might seem like a mechanical candidate, but he had to be taken seriously." http://politi.co/2rxCDoc

SORRY MEGYN! Alex Jones says he will release a tape of his entire day with Megyn Kelly tonight. http://bit.ly/2swg9mM Her interview is slated to run Sunday.

-- PAGE SIX: "Megyn Kelly interview completely overhauled after backlash" http://pge.sx/2ry1R5Q

Playbook Reads

PHOTO DU JOUR: Capitol Hill special agent David Bailey, who was wounded in Wednesday's shooting, throws out the first pitch of the congressional baseball game at Nationals Park on Thursday. | Win McNamee/Getty Images

FASCINATING LOOK BEHIND THE SCENES -- "At Last, Jeff Bezos Offers a Hint of His Philanthropic Plans," by NYT's Robert Frank: Jeff Bezos, the founder and chief executive of Amazon, is well on his way to becoming the richest person in the world, with a net worth of more than $80 billion. What's less certain is what he plans to do with his fortune, and how he could reinvent philanthropy.

"On Thursday, after questions from The New York Times about the level of his giving, Mr. Bezos posted on Twitter a 'request for ideas' for philanthropy. 'I'm thinking about a philanthropy strategy that is the opposite of how I mostly spend my time -- working on the long term,' he wrote. 'For philanthropy, I find I'm drawn to the other end of the spectrum: the right now.'" http://nyti.ms/2rncunL

TRUMP INC. -- "With shift on Cuba, Trump could undercut his company's hotel-

industry rivals," by WaPo's Drew Harwell and Jonathan O'Connell: "[A]s the owner of a real estate company with a big stake in hotels and resorts, Trump brings an added element to an issue that is unique to his presidency - the ability, through his official actions, to undermine a growth area for his industry rivals who have raced in recent years to establish a foothold in a lucrative new market. Starwood Hotels and Resorts, which merged with Marriott International to form the world's largest hotel chain, last year debuted the first Cuban hotel managed by a U.S. company in nearly 60 years, taking advantage of President Barack Obama's 2014 move to normalize relations with Cuba and lighten regulations enforcing the U.S. embargo on the island." http://wapo.st/2sFYZUg

K-STREET FILES -- "Sudan Ramps Up Washington Lobbying as Sanctions Deadline Looms," by Bloomberg's Jen Jacobs and Nick Wadhams: "Sudan is on the cusp of ending its long status as a pariah in Washington, and the African nation is bolstering its stable of lobbyists to ensure that it happens soon. The government of President Umar al-Bashir -- which is listed by the U.S. as a state sponsor of terrorism -- has hired Washington law firm Squire Patton Boggs LLP at a cost of $40,000 a month to lobby on its behalf as part of its accelerating campaign to ensure that President Donald Trump permanently lifts sanctions against the country ahead of a deadline next month, according to a filing with the Justice Department." https://bloom.bg/2t8WlhP

****** **A message from POET - one of the world's largest ethanol producers:** Led by scientists and engineers, POET is a biofuels company built from innovation. POET operates 30 biofuel facilities across eight states & America's first cellulosic biofuel plant. Across the country, we support 40,000 renewable energy jobs producing a cleaner fuel for millions of drivers, every day. Inside the Beltway, we advocate for pro-biofuel policies to remove barriers to consumer fuel choices with a Reid Vapor Pressure (RVP) fix, support a strong Renewable Fuel Standard, and open new markets for U.S. exports and trade. We are securing a cleaner future for all of us. We are POET and we're driving innovation, from the ground up. Learn more here. ******

BREAKING LATE LAST NIGHT -- "Trump won't alter status of current Dreamers," by Josh Gerstein: "President Donald Trump's administration has issued its most explicit promise to date that so-called Dreamers can keep their permission to work legally in the U.S. 'No work permits will be terminated prior to their current expiration dates,' the Department of Homeland Security said in guidance posted on its website Thursday night. Homeland Security Secretary John Kelly has said recently that the administration is not seeking to deport those who received quasi-legal status under a policy President Barack Obama adopted in 2012. However, the new statement from DHS seems to be a forward-looking promise not to take action against those in the program known as Deferred Action for Childhood Arrivals or DACA, an initiative for undocumented immigrants who entered the country as children." http://politi.co/2shGwLc

LISTEN IN -- The Pollsters -- Kristen Soltis Anderson and Margie Omero -- had Anna on their podcast to talk all things Playbook. The bipartisan duo is **@thepollsters** on Twitter and Facebook. ***Listen and subscribe*** http://apple.co/2jJaEKU

HOW A STREET IN BROOKLYN IS CHANGING THE ENERGY GRID: The shared economy is flourishing, with companies like Airbnb and Lyft capitalizing on the growing popularity of shared services. Can their success be replicated in the energy industry? In the latest installment of **POLITICO Magazine's "What Works"** series, we look at Brooklyn-based LO3 that devised a micro grid system that uses a phone app and smart meters to enable neighbors with solar panels to strike deals amongst themselves on the amount of electricity they buy from each other and at what price. We also look at the revitalization of Tampa, Florida - a broken down deep water port revitalized after 40 years of public and private investment. ***Read more* on Tampa's revitalization** http://politi.co/2tsAvuq ... **about Brooklyn's energy grid** http://politi.co/2rwOymb ... ***Photo gallery*** http://politi.co/2szxlsj

Subject: First Move: Hurricanes on House's Agenda • EPA Avoiding Lab Rats • New York's Carbon-Tax Talk

What you need to know to start your day.

Hurricanes on House's Agenda • EPA Avoiding Lab Rats • New York's Carbon-Tax Talk

By Chuck McCutcheon

The EPA's new point person for Puerto Rico will be among the officials talking to Congress today about what lessons can be gleaned from the response to this season's hurricanes.

Pete Lopez, who recently became administrator for the agency region that includes Puerto Rico, is among the witnesses set to testify at a House committee dealing with infrastructure.

Another panelist at the committee's hearing will be Texas Republican Rep. Michael McCaul, who heads the House's homeland security panel. McCaul's committee was supposed to hold its own hurricane-related hearing this week, but abruptly canceled it amid disputes with Democrats over an appearance by the mayor of San Juan, who has sharply criticized the Trump administration's disaster response. David Schultz is covering.

Military personnel distribute water for residents in Barranquitas, Puerto Rico.
Ricardo Arduengo/AFP/Getty Images

The House Energy and Commerce's energy panel is holding a separate hearing on how to shore up energy infrastructure against hurricanes. That panel will hear from the U.S. Army Corps of Engineers and Energy Department in addition to representatives from Puerto Rico and the Virgin Islands. Rebecca Kern is following.

Congress required EPA last year to move away from chemical safety tests using rats, mice, and other lab subjects. Today the EPA will float its ideas at an all-day workshop on reducing the ways those animals end up in tests while ensuring the tests still provide useful information.

The agency's eventual goal is to move towards tests that can potentially help predict whether a chemical could harm people. Newer kinds of tests can use human cells, and computer models can base their calculations on data about how chemicals move through and out of the body. That data could make the results

more directly applicable to people—but many uncertainties remain. Pat Rizzuto is tracking.

Backers of a carbon tax in New York state have tried—and failed—for years to get a measure into law. But they see some new signs for hope. Gerald Silverman explains in a story being published later this morning.

Other Stories We're Covering

- The House's long-awaited tax bill was supposed to be released yesterday, but lawmakers now promise it will come out today. Alan Kovski is tracking the energy provisions.
- Energy Secretary Rick Perry and Maria Cantwell, the top Democrat on the Senate's energy committee, will discuss their respective energy priorities at a breakfast today. Rebecca Kern is following.
- Cantwell will then join her colleagues on the energy panel to question an array of Interior Department, Alaska, and other officials about the Republican proposal to drill for oil in a portion of Alaska's Arctic National Wildlife Refuge. Alan Kovski is watching.
- Mainstream climate scientists and skeptics don't see eye-to-eye on much, but appear to agree: The EPA should not be the home for a climate "red team, blue team" science debate that Administrator Scott Pruitt has been touting. Abby Smith is monitoring.

Quote of the Day

"We are trying to see if these herbs are relevant for Vietnam."
—Shenbagam Manthiram, Tata Power Co. Ltd.'s chief representative in Vietnam, discussing how grasses and other plants could serve as a cooling environment for solar panels.

Today's Events

- **10 a.m. • Climate** • World Resources Institute unveils free climate-data platform in webinar.
- **10 a.m. • Water** • House Natural Resources' water panel examines three water-related bills.
- **All Day • Ocean Health** • NASA and World Resources Institute hold conference on how satellite data can be used for ocean health and fisheries applications.
- **All Day • Women and Energy** • Environmental Law Institute offers symposium on women in the energy and infrastructure fields.

Around the Web

- To call attention to water pollution, a Canadian angler put up a photo on

Facebook of a fish he caught with plastic wrapped around its middle.

- Coal producer Armstrong Energy, which operates five Kentucky mines, files for bankruptcy protection.
- Both Democratic and Republican House committee leaders want answers on FEMA's role involving the recently canceled electricity contract between Whitefish Energy and Puerto Rico's electric power authority.
- The EPA has reached agreement with a New Jersey company over unregistered and misbranded pesticides.

June 12, 2017

Today on Climate Beat . . .

. . . we went to Italy, where EPA Administrator Scott Pruitt "made clear" to other G7 environment ministers that the United States does not agree with them on climate change policy, according to our news roundup.

Back at home, environmentalists fear recent comments from New Hampshire Gov. Chris Sununu (R) suggest he may be reconsidering the state's participation in the Regional Greenhouse Gas Initiative, though the governor indicated he currently has no plans to pull out of the cap-and-trade program.

And in court, the Justice Department is asking the U.S. Court of Appeals for the 9th Circuit to block a youth-pursued lawsuit alleging the federal government is violating the Constitution by failing to protect them from climate change, after a lower court allowed the case to go to trial.

Subject: Playbook Power Briefing, presented by Starbucks: SIX HOURS until polls close in Georgia -- Senate health care bill could come THURSDAY -- SPICER to hold an ON-CAMERA briefing at 1:30 p.m. -- Senate GOP plans for a JULY vote for the debt ceiling

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Starbucks

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon. A REMINDER: Polls close tonight in Georgia at 7 p.m. and the earliest preliminary results are expected around 7:30 p.m. Our colleague Elena Schneider has seven things to watch in tonight's election, including how high turnout will go and how it will affect the national stage http://politi.co/2sP0gce ... ***Geographic places to watch in Georgia's Sixth, from Scott Bland and our interactive news team*** http://politi.co/2tp9oRV

PRESIDENT TRUMP weighed in this morning on Otto Warmbier's death during a pool spray with Ukrainian President Petro Poroshenko. "It's a disgrace what happened to Otto. It's a total disgrace what happened to Otto. It should never, ever be allowed to happen. And frankly, if he were brought home sooner, I think the results would have been a lot different." Trump ignored shouted questions on any potential tapes on conversations with James Comey or an investigation, per pooler Emily Ngo of Newsday.

IT'S COMING! -- "Sen. Corker expects GOP Obamacare repeal bill will be made public Thursday," by Louis Nelson: "Sen. Bob Corker has not yet seen the healthcare legislation currently being crafted by his Republican colleagues, the Tennessee lawmaker said Tuesday, but he expects to get his hands on it Thursday and looks forward 'to diving into that substance' of the bill. ... Corker told MSNBC's 'Morning Joe' that he expects the legislation to be made public on Thursday and for a vote to take place roughly a week later. The process, which has not included hearings before the relevant Senate committees, is not what Corker would have preferred, he said. But he still intends to judge the legislation based on its merits." http://politi.co/2sOEDZk

-- @pdmcleod: "Just in! Orrin Hatch tells me that Mitch McConnell told him the health bill is coming Thursday. This matches what Sen. Corker said today." ...
@SeungMinKim: "Like we told you yesterday, @SenateDems officially shut down Senate committee business by invoking two hour rule. No hearings rest of day ... One hearing this blocks is a Judiciary hearing on criminal/congressional probes, featuring former Sen Carl Levin (now back in Michigan)"

THEN -- @JohnCornyn on Jan. 7, 2010: "The people have a right to know what is happening behind closed doors with secret HC negotiations" ...

NOW -- @PhilMattingly, today: ".@JohnCornyn: 'There's nothing happening in secret here. In the fullness of time, we'll all see the product we've been working on.'"

MARK YOUR CALENDARS -- "Senate GOP plans July debt ceiling vote," by Burgess Everett: "Senate Republicans are planning for a July vote to raise the debt ceiling, according to senators and aides. Though the Treasury Department has said that Congress can likely wait until September to avoid default, Senate Majority Leader Mitch McConnell and his lieutenants are increasingly disposed to clearing the Senate's plate as much as possible before heading home for August recess. That would also likely mean decoupling the debt ceiling from a potential government shutdown fight in September.

"It's not clear what exactly such a bill would look like, but members of both parties are interested in a broad spending deal that would avoid the blunt budget cuts of sequestration. A clean debt ceiling increase may be a problem for a GOP majority filled with fiscal conservatives. 'I'd like to see that done earlier,' said Senate Majority Whip John Cornyn of Texas when asked about lifting the debt ceiling in September. ... Republican Senate staffers were provided new schedule guidance on Monday laying out that the preferred debt deadline is before the August break." http://politi.co/2tphwBB

In three years, 710 Starbucks partners have graduated, thousands more are enrolled, and our goal is to help 25,000 partners graduate by 2025: http://sbux.co/2sboQ3G ******

STRANGE BEDFELLOWS -- "ExxonMobil Lends Its Support to a Carbon Tax Proposal," by NYT's John Schwartz: "ExxonMobil, other oil companies and a number of other corporate giants [announced] on Tuesday that they are supporting a plan to tax carbon emissions that was put forth this year by a group of Republican elder statesmen. The group, the Climate Leadership Council, unveiled a 'conservative climate solution' in February that would fight global warming by taxing greenhouse gas emissions and returning the money to taxpayers as a 'climate dividend.' ... Exxon Mobil, BP, Royal Dutch Shell and Total S.A. ... publicly back[ed] the plan on Tuesday. ... The plan's Republican authors include James A. Baker III and George P. Shultz, both former secretaries of state, and Henry M. Paulson Jr., a former secretary of the Treasury." http://nyti.ms/2sxgdR8

-- @GroverNorquist: "A Carbon Tax is a Value Added Tax (VAT) on training wheels. A Carbon Tax will morph into a VAT over time--and USA will become France."

BACK ON CAMERA -- After initially saying there would be no briefing today, the White House announced that **SEAN SPICER** will be behind the podium for an on-camera

press briefing at 1:30 p.m.

-- When THE ATLANTIC'S ROSIE GRAY asked Steve Bannon why briefing are now regularly held off-camera, Bannon responded that "Sean got fatter" in a text and did not answer her followups. Rosie's story was published before today's press briefing was announced. http://theatln.tc/2tocoh4

WHAT TECH TOLD TRUMP -- "Tim Cook told Trump tech employees are 'nervous' about immigration," by CNBC's Eamon Javers: "Behind the scenes at the White House tech CEO meeting, Apple CEO Tim Cook told President Donald Trump that technology employees are 'nervous' about the administration's approach to immigration, according to a source familiar with the exchange. The source said the president told the CEOs on Monday that the Senate's health-care bill needs 'more heart.' That would be a second known instance of the president criticizing the GOP bill in private meetings.

"To that, the source said, Cook replied that the immigration approach by the administration also 'needs more heart.' Cook cited the Deferred Action for Childhood Arrivals program, which is under review by the Trump administration. He also said people in tech and their co-workers were nervous about their status, and added that it 'would be great' if the president could 'send them a signal.' According to the source, Trump replied that he wants to see comprehensive immigration reform and urged the CEOs to call their senators and congressmen to push for it." http://cnb.cx/2tp3mRh

DEVELOPING OVERSEAS -- "U.S. shoots down another pro-regime drone in Syria," by CNN's Ryan Browne and Barbara Starr: "A U.S. F-15E fighter jet shot down a pro-Syrian regime drone near At Tanf, Syria, on Monday, two U.S. officials told CNN, the third downing of a pro-regime aircraft this month. The drone was downed just outside the 55 kilometer de-confliction zone, according to the officials. It was an Iranian-made Shahed 129 and was thought to be armed and in firing range of US troops." http://cnn.it/2sONaeM

-- "Russian fighter flies within feet of US recon plane over Baltic Sea," by Stars and Stripes' John Vandiver: "A Russian fighter flew within 'several feet' of a U.S. reconnaissance plane operating Monday over the Baltic Sea, a close military encounter that comes just one day after the U.S. Navy shot down a Syrian warplane. 'Due to the high rate of closure speed and poor control of the (Russian) aircraft during the intercept, this interaction was determined to be unsafe,' said Capt. Joseph Alonso, a U.S. European Command spokesman.

"Russian intercepts of U.S. aircraft around the Baltic Sea have become almost routine in light of increased tensions between Moscow and NATO, which also frequently scrambles fighters to monitor Russian aircraft. In most cases such incidents are deemed business as usual, with planes keeping a safe distance from one another. ... EUCOM said an Air Force RC-135 was flying in international airspace when a Russian Sukhoi Su-27 Flanker flew within 'several feet' of the American jet." http://bit.ly/2tp7CjG

ATTN. JARED -- "Ground broken for first new West Bank settlement in 25 years," by Times of Israel's Sue Surkes and Jacob Magid: "The new settlement, to be known as Amichai, is to accommodate residents of the illegal Amona outpost, which was evacuated in February in line with court orders because it was built on private Palestinian land. 'Today, ground works began, as I promised, for the establishment of the new community for the residents of Amona,' the prime minister tweeted. 'After decades, I have the privilege to be the prime minister who is building a new community in Judea and Samaria.'" http://bit.ly/2tpbkcU

-- THERE IS AN INTERESTING political dynamic at play. President Donald Trump's administration wants to strike a peace deal in Israel and the Palestinian territories, which will inevitably include freezing some settlement constructions. Benjamin Netanyahu has to contend with a right wing, which -- generally speaking -- does not want to stop building in the West Bank.

OBAMA ALUMNI -- FORMER AG ERIC HOLDER to Yahoo News: He said his goal is "to lead the legal resistance to Donald Trump's agenda - and perhaps even run against the president in 2020." https://yhoo.it/2rMihHS

VALLEYWATCH -- "Leaked recording: Inside Apple's global war on leakers," by The Outline's William Turton: "A recording of an internal briefing at Apple earlier this month obtained by The Outline sheds new light on how far the most valuable company in the world will go to prevent leaks about new products. The briefing, titled 'Stopping Leakers - Keeping Confidential at Apple,' was led by Director of Global Security David Rice, Director of Worldwide Investigations Lee Freedman, and Jenny Hubbert, who works on the Global Security communications and training team.

"According to the hour-long presentation, Apple's Global Security team employs an undisclosed number of investigators around the world to prevent information from reaching competitors, counterfeiters, and the press, as well as hunt down the source when leaks do occur. Some of these investigators have previously worked at U.S. intelligence agencies like the National Security Agency, law enforcement agencies like the FBI and the U.S. Secret Service, and in the U.S. military. The briefing, which offers a revealing window into the company's obsession with secrecy, was the first of many Apple is planning to host for employees. In it, Rice and Freedman speak candidly about Apple's efforts to prevent leaks, discuss how previous leakers got caught, and take questions from the approximately 100 attendees." http://bit.ly/2sPbrBx

AFTERNOON READ -- BEN SCHRECKINGER in POLITICO Magazine, **"Jill Stein Isn't Sorry":** "Democrats are still fuming about the role the Green Party nominee may have played in electing Donald Trump-who as president has celebrated the coal industry, promised to pull the United States out of the world's most important climate agreement and refused to even say whether he believes global warming is real. All of that should be anathema to a party whose founding principles include a commitment to 'ecological wisdom.'

"So does Stein, with the benefit of hindsight, have any regrets? 'I don't think so,' she tells me by phone from her home in Lexington, Massachusetts. Decrying 'fake news,' citing the 'sabotage of Bernie Sanders' and talking up the 'tremendous' campaign she could have run with more money, Stein is projecting a Trump-worthy level of defiance. 'I consider it a great honor that the party and our prior campaign for president is suddenly being attacked outside of an election season,' she says." http://politi.co/2sPcAJp

MEDIAWATCH -- Joe DelReal is joining the New York Times as a national correspondent based in Los Angeles later this year. He is currently at WaPo and is a POLITICO alum. ... **Hanna Trudo** is joining National Journal's Hotline as a staff writer. She is currently a senior producer at POLITICO.

-- Bloomberg announces that their European headquarters in the City of London is close to completion and will open in the fall. 4,000 employees will work in the building once completed. https://bloom.bg/2tp8uVu

TRANSITIONS -- Former Rep. **Kendrick Meek** (D-Fla.) has joined King & Spalding as a senior adviser in their government advocacy and public policy group. ... Former VA Secretary **Bob McDonald** has joined the Partnership for Public Service's board of directors ... **Robert Roche** joined the board of directors for the Center for a New American Security. He is the founder and president of Roche Enterprises.

WELCOME TO THE WORLD -- Beth Lester Sidhu, COO of the Stagwell Group and a Politico alum, and **Naveen Sidhu,** VP of development and planning for WTS International, post on Facebook: "And baby makes 4. Eden Kaur Arora Sidhu, born 6-17-17. Big sister Caia is delighted. Everyone else is tired but happy." ***Pic*** http://politi.co/2tpbRMb

-- Kyle Miller, external affairs representative at Dominion Energy and a Senate EPW and Inhofe alum, and **Melanie Miller,** teacher at Sts. Joseph and John School in Strongsville, Ohio, welcomed Everett Dallas Miller on Saturday. ***Pic*** http://bit.ly/2swHFyt

****** **A message from Starbucks:** Student loan debt is almost two times the size of credit card debt - totaling $1.31 trillion. At Starbucks, we created the College Achievement Plan to give baristas the opportunity to earn a tuition-free college degree from Arizona State University. In just three years, 710 Starbucks partners (employees) have graduated, thousands more are enrolled, and our goal is to help 25,000 partners graduate by 2025. Simple traps that American critics of the EU should avoid

Dalibor Rohac et al. | The American Interest

Conservatives are right to be skeptical of "globalism," an intellectual approach that seeks to replace local traditions with a cosmopolitan, universalist outlook. Yet jeopardizing European institutions in favor of returning to some mythical golden age of European nation-states is the wrong solution. At its ideological roots, European integration was a project of conservative restoration, not progressive revolution.

Reuters

London terror attacks followed by same old stale arguments

Jonah Goldberg | National Review Online

The saddest part about the recent terrorist attacks in the United Kingdom — aside from the actual horror for the victims and their families — was that there was so little new to say about it. Of course, that didn't stop anyone: The usual suspects backed into familiar rhetorical corners. It's difficult to see the path forward. Even these attacks will be forgotten, absorbed into the gray maw of "the way things are."

Shutterstock

It's easy to become 'The Man,' after all

Frederick M. Hess | Education Next

A decade ago, most of those who thought of themselves as "reformers" worried that education was awash in paperwork, jargon, and bureaucracy. They argued that streamlining hidebound rules and routines was key to empowering families, communities, and educators. No longer. Race to the Top's sprawling applications were treated as a point of pride, rather than evidence of consultants run amok.

Reuters

The United Kingdom's futile election

Desmond Lachman | AEIdeas

Today, Brits will go to the polls for the third time in two years following Prime Minister Theresa May's decision to call a snap parliamentary election. Tomorrow, by which time the ballots will have been counted, we'll know whether this election served any useful purpose or was simply a cynical exercise in futility — one that risks further undermining the electorate's

confidence in Britain's political class.

Energy

FERC's Powelson Walks Back Comments About Perry's Pricing Rule

Robert Powelson, the newest member of the agency that oversees U.S. power markets, Oct. 6 walked back a day-old threat to quit before supporting U.S. Energy Secretary Rick Perry's proposal to shore up nuclear plants.

Oil Spills

Companies' Burning of Spilled Oil, Composting Sewage Now OK in Brazil

Companies will be allowed to do controlled burns of significant oil slicks far offshore if other methods of cleaning them up have failed under one of two resolutions by Brazil's National Environmental Council (CONAMA) now in effect.

Pipeline Safety

Dakota Access Review Delayed as Court Weighs Pipeline Challenge

A court-mandated government review of the controversial Dakota Access pipeline will take months longer than expected, potentially pushing a decision on whether the conduit can continue to operate into 2018.

Renewable Energy

Solar's Courting Puerto Rico, and the Ravaged Island Is All Ears

The U.S. solar industry is about to airlift rooftop panels and batteries to Puerto Rico, where more than 90 percent of homes and businesses remain without electricity after Hurricane Maria destroyed the grid. The first plane full of supplies is set to leave this week.

Today's Playbook Power Briefing presented by CTIA

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Thursday afternoon from Capitol Hill, where the House just wrapped up a marathon voting session where the chatter was all about immigration and how the president practices politics.

HAPPENING THIS AFTERNOON - Join POLITICO Pro and **TREASURY SECRETARY STEVEN MNUCHIN** today at 4 p.m. at the Omni Shoreham Hotel for a conversation about Tax Reform and The Trump Administration. Admission is free and open to the public. ***Details*** http://politi.co/2xBqLUH ... ***Highlights from the Pro Policy Summit so far*** http://politi.co/2y0NqpF

SOMETHING TO ASK MNUCHIN ABOUT -- "Big Six remain divided over basic elements of tax reform," by Brian Faler: "The 'Big Six' are deeply divided over how to rewrite the tax code, including how to finance long-promised cuts in individual and corporate rates. Though House Republicans are promising to release a plan the week of Sept. 25, the top congressional and administration negotiators remain at loggerheads over a number of items, including plans to reduce a deduction for state and local taxes, as well as one for corporate interest expenses.

'Right now, the Senate and the House are pretty far apart,' said one Republican aide. 'There's serious frustration.'

"Senate Finance Chairman Orrin Hatch (R-Utah), himself a member of the Big Six, fired a warning shot Thursday, saying his panel will not be a 'rubber stamp' for whatever is proposed.

One major issue is whether to adopt a plan that would allow companies to immediately deduct the cost of their investments, sources say." http://politi.co/2x2lm61

HERE'S THE LATEST ON THE DACA DEAL...

-- DON'T EXPECT A QUICK PROCESS. Republicans are positioning **PRESIDENT**

DONALD TRUMP'S negotiation with Nancy Pelosi and Chuck Schumer as a starting point. **SPEAKER PAUL RYAN** said there was "no agreement" and that "the president understands he's going to have to work with the congressional majorities to get any kind of legislative solution." **SENATE MAJORITY LEADER MITCH MCCONNELL** issued a statement saying "we look forward to receiving the Trump administration's legislative proposal as we continue to work on these issues."

-- THE REALITY: Republicans will not be on the sidelines for this negotiation. This won't come to the floor this month, and might not come to the floor in the early part of next month. Republicans -- who have the majority in both chambers -- are in control of what legislation makes it to the floor.

-- DEMOCRATS on Capitol Hill are feeling as optimistic as we've seen this year. One senior Democratic lawmaker came off the floor, predicting that DACA was just the first of many things Trump and Democrats are going to be able to work together on.

PRESIDENT DONALD TRUMP said "we have to have a wall. If the wall is going to be obstructed, when we need the funds at a little bit later date -- we'll be determining how much we need -- then we're not doing anything," when he landed at Fort Myers, Florida to survey the damage from Hurricane Irma. He said Republicans were on board and that "we'll only do it if we get extreme security ... Ultimately we have to have the wall. If we don't have the wall, we're doing nothing. ... If I don't get the wall, then we will become the obstructionists." *Video, where Trump also talks about taxes* http://bit.ly/2xAM0WL

-- He also encouraged Florida Gov. Rick Scott to run for Senate. http://politi.co/2xBnYLt

WHAT'S IN A WORD -- @kaitlancollins: "A White House spokesman says the Trump administration 'will not discuss amnesty.' 'What they will discuss is a responsible path forward.' ... That 'responsible path,' @LWalters45 says, could include 'legal citizenship over a period of time.' ... When asked for her definition of amnesty, she said: 'I'm not going to sit here and litigate what the definition of amnesty is.'"

FROM THE RANK AND FILE -- "Trump diehards divided over DACA deal," by Kyle Cheney and Ted Hesson: "President Donald Trump's apparent deal with Democrats to shield some undocumented immigrants from deportation -- without demanding funding for a border wall -- is dividing some of his most ardent conservative backers. ... But many conservatives on Capitol Hill made clear this week that there is, in fact, a window for the president to win buy-in from the right for a deal that would protect some undocumented immigrants -- those who arrived in the country as minors -- in exchange for stepped-up immigration enforcement measures. ...

"'I think [a deal] is entirely possible if we try to get the political rhetoric out of it and actually look for real solutions,' Rep. Mark Meadows (R-N.C.), chairman of the House Freedom Caucus, told reporters Wednesday. 'We're going to have to deal with it. So we

might as well put forth a conservative effort to deal with the immigration issue broadly.'" http://politi.co/2y8U7Xz

****** **A message from CTIA and America's wireless industry:** The global race to deploy 5G wireless is on-and America needs to win. Government action on spectrum and infrastructure policy will allow U.S. wireless companies to invest $275 billion, create more than 3 million jobs, and add $500 billion to the economy, according to Accenture. Learn more at CTIA.org. ******

BREAKING -- CBS'S MOSHEH OINOUNOU (@mosheh): "Former CIA Deputy Director @MichaelJMorell resigns as Senior Fellow at Harvard Kennedy school over their hiring of Chelsea Manning" http://bit.ly/2wbYkwp

REMEMBER THE IRAN DEAL FIGHT? -- "U.S. Expected to Keep Iran Nuclear Deal in Place for Now," by WSJ's Felicia Schwartz and Laurence Norman: "President Donald Trump on Thursday is expected to extend sanctions relief to Iran, U.S. officials said, retaining for now the U.S. commitment to the landmark 2015 nuclear agreement, whose fate nonetheless remains uncertain. As part of the international deal, the U.S. agreed to waive a wide range of sanctions on Iran and must renew the waiver every 120 days. Thursday is the deadline for renewing that waiver. While Mr. Trump is expected to renew the waiver and extend U.S. sanctions relief, he also is nearing another deadline in October to certify to Congress that Iran is in compliance with the terms of the nuclear deal." http://on.wsj.com/2xBEbA5

WAR REPORT -- "U.S. Military: American ISIS Fighter Reportedly 'Surrenders'," by The Daily Beast's Betsy Woodruff and Spencer Ackerman: "Multiple spokespersons for the U.S. military have told The Daily Beast that they are aware of reports that an American fighting in Syria for the so-called Islamic State has been taken into custody. A source familiar with the situation told The Daily Beast that the American was captured by Kurdish forces. Both of the spokespeople indicated that the fighter 'surrendered.' In either case, the detention of an American fighting for ISIS on an active battlefield would set up a major decision for Donald Trump about the future of wartime captures.

"According to The Daily Beast's source, the U.S. citizen was initially taken into custody by the Syrian Democratic Forces, the mostly Kurdish local proxy that the American military is using to fight ISIS on the ground in Syria. That source said the Kurds then turned the captive over to American forces. It is not clear where the American is currently being held. Neither the U.S. military command overseeing the war against ISIS nor the Justice Department, which plays a substantial role in deciding what to do with U.S. citizen detainees, are disputing this reporting." http://thebea.st/2xBJKOS

FORMER REP. DAVID DREIER (R-CALIF.) has won Mexico's highest honor to foreign nationals, the Aztec Eagle, for his support and work on the U.S.-Mexican relationship.

BEYOND THE BELTWAY - "New York's buildings emit most of its greenhouse gases. The mayor has a plan to change that," by WaPo's Brady Dennis and Kayla

Epstein: "New York City Mayor Bill de Blasio (D) [announced] plans Thursday to force thousands of aging buildings there to become more energy efficient, a first-of-its-kind initiative intended to make the Big Apple a national leader in reducing greenhouse-gas emissions. The initiative would mandate that owners of existing buildings larger than 25,000 square feet invest in more efficient heating and cooling systems, insulation and hot-water heaters in the years ahead. If approved by the City Council, the requirements would apply to about 14,500 private and municipal buildings, which the mayor's office says collectively account for nearly a quarter of New York City's emissions. Most buildings would need to comply with new efficiency targets by 2030, or their owners would face penalties." http://wapo.st/2y7y1od

TRACKING TRUMP'S DONATIONS -- "Houston Humane Society gets letter, donation from Donald Trump," by the Houston Chronicle's Fernando Alfonso III: "The president and Melania Trump sent a letter and $25,000 to the Houston Humane Society to help with ongoing rescue and housing efforts following Hurricane Harvey. 'Animals are truly non-partisan members of society, can use help from both sides of the aisle,' said Sherry Ferguson, executive director for the Houston Humane Society, according to a Facebook post Thursday morning. 'Our shelter is so grateful for the first family's decision to make animals a top priority as Houstonians work to rebuild our city from the devastation left behind by Harvey.'" http://bit.ly/2xACQcP

MORE ON THE SONIC ATTACK ON DIPLOMATS -- "Attacked in bed, safe a few feet away: Cuba mystry deepens," by the AP's Josh Lederman, Michael Weissenstein and Matt Lee: "The blaring, grinding noise jolted the American diplomat from his bed in a Havana hotel. He moved just a few feet, and there was silence. He climbed back into bed. Inexplicably, the agonizing sound hit him again. It was as if he'd walked through some invisible wall cutting straight through his room.

"Soon came the hearing loss, and the speech problems, symptoms both similar and altogether different from others among at least 21 U.S. victims in an astonishing international mystery still unfolding in Cuba. The top U.S. diplomat has called them 'health attacks.' New details learned by The Associated Press indicate at least some of the incidents were confined to specific rooms or even parts of rooms with laser-like specificity, baffling U.S. officials who say the facts and the physics don't add up. ... Suspicion initially focused on a sonic weapon, and on the Cubans. Yet the diagnosis of mild brain injury, considered unlikely to result from sound, has confounded the FBI, the State Department and U.S. intelligence agencies involved in the investigation." http://bit.ly/2xAFaAr

JOHN JUDIS in **THE NEW REPUBLIC -- "Redoing the Electoral Math:** I argued that demographics favored the Democrats. I was wrong": "On one level, there's no arguing with the math. If you take the percentage of Americans that the U.S. census defines as 'minorities' and project their past voting habits into the next decade and beyond, you'll come up with a very sunny version of the Democrats' prospects. There are only two problems with this line of thinking, but they're pretty big ones. For starters, the census prediction of a 'majority-minority' America -- slated to arrive in 2044 -- is deeply flawed.

And so is the notion that ethnic minorities will always and forever continue to back Democrats in Obama-like numbers." http://bit.ly/2xBpr4h

MEDIAWATCH -- EDWARD FELSENTHAL will be the new editor in chief of TIME, the magazine announced today. He was previously the digital director of Time Inc.'s News and Lifestyle groups and the digital editor at TIME. ***Release*** http://ti.me/2xBr2a3

-- CHRIS WALLACE resigned with Fox News until "well past the 2020 election," he said in a news release distributed by Fox News.

--"The David Carr Generation: More than a dozen mentees of the late journalist remember the lessons he imparted," by Mikaela Lefrak in The Atlantic: "Carr had an unusual gift for recognizing young talent, and an equally unusual willingness to pull that talent up the ladder with him. He hired us for internships and jobs, edited our stories, sent out emails on our behalf, invited us to meetings we were really too junior to be a part of, and introduced us to his most successful and famous friends. But most important of all was this: He told us again and again that we had something special. We were smart, he told us. We were worthy. And we believed him, because he was the best guy we knew." ***Featuring Amy Chozick, Ta-Nehisi Coates, Jake Tapper, Brian Stelter, and many more*** http://theatln.tc/2xBe3W8

-- GLAMOUR'S editor in chief Cindi Leive is quitting, the fourth major magazine editor in a week to do so. ***NYT's Katherine Rosman with an interview*** http://nyti.ms/2xBXRE8

BUSINESS BURST -- JPMORGAN CHASE & CO. announced a $40 million investment over three years in Chicago's South and West Sides. They will partner with employers and training institutions to train residents, invest in neighborhood projects, help grow small businesses and help create financially healthy families, according to a press release. *More details* http://bit.ly/2y8muoR

TRANSITIONS -- Carol Danko has been hired by the Overseas Private Investment Corporation to be their managing director of communications, a job she starts Monday. She most recently was VP of public affairs at SIFMA and is a Michael Grimm and Peter King alum. ... **Chris Chafin** has been hired as senior publicity manager for BBC Global News Limited, where he'll oversee media relations in the Americas for the BBC World Service, BBC World News, and BBC.com. He was previously senior communications manager at the Financial Times. ... **Jake Wilkins** has joined Secretary Perdue's communications office at the Department of Agriculture. Wilkins worked in the RNC's press shop and is an alum of multiple Senate offices (h/t Kevin Cirilli)

WELCOME TO THE WORLD - James Kotecki, principal at the Kotecki Group and a Politico alum, and **Emily Kotecki,** manager of interpretation at the North Carolina Museum of Art, recently welcomed Maya Ruth Kotecki. ***Pic with her big brother Max*** - James' caption: "This is the kind of picture that really makes fatherhood worth it." http://politi.co/2wrDkNb

BONUS BIRTHDAY: Errol Cockfield, SVP of MSNBC media relations. (h/t Tyree Rush)

****** **A message from CTIA and America's wireless industry:** Tomorrow's 5G networks will create 3 million jobs, add $500 billion to the economy, and fuel innovation and entrepreneurialism across every sector. If policymakers move quickly to release more spectrum and modernize infrastructure rules, the wireless industry stands ready to invest $275 billion to build these next-gen networks, according to Accenture. This will drive breakthrough advancements in remote health care, connected vehicles, energy, education and beyond-making our lives better and safer. But the race to deploy 5G wireless networks is underway-and we're at a critical moment. The EU, China, Japan, South Korea and others are doing everything they can to win. If policymakers act now, the U.S. can continue our global leadership in wireless. Learn how at CTIA.org. ******

Driving the Day

BREAKING -- "U.S. in Direct Communication With North Korea, Says Tillerson," by NYT's David Sanger in Beijing: "The Trump administration acknowledged on Saturday for the first time that it is in direct communication with the government of North Korea over its missile and nuclear tests. 'We are probing, so stay tuned,' Secretary of State Rex W. Tillerson said, when pressed about how he might begin a conversation with Kim Jong-un, the North Korean leader, that could avert what many government officials fear is a significant chance of open conflict between the two countries.

"'We ask, 'Would you like to talk?' We have lines of communications to Pyongyang - we're not in a dark situation, a blackout. We have a couple, three channels open to Pyongyang,' he added, speaking at the residence of the U.S. ambassador to Beijing after a meeting with China's top leadership. He would not say if the North Koreans had responded, beyond the exchange of threats that, in the past week, have included declarations that the country might conduct an atmospheric nuclear test and that it had the right to shoot down American warplanes in international waters." http://nyti.ms/2wqs1Wn

Good Saturday morning. ONE OF THE PRESIDENT'S MEN -- TOM PRICE IS OUT -- DAN DIAMOND, RACHANA PRADHAN and **ADRIEL BETTELHEIM:** "Price becomes the first Trump administration Cabinet secretary to step down. The White House said Trump asked Deputy Assistant Health Secretary Don Wright to serve as acting secretary of the agency, which has an annual budget of $1.15 trillion and includes the Medicare and Medicaid programs, as well as the FDA, NIH and CDC.

"As late as Thursday, Price said he believed he had the president's support. But the tumult surrounding his travel became another distraction for an administration already

reeling from the defeat of repeated Senate efforts to repeal Obamacare and facing criticism for its hurricane relief efforts in Puerto Rico. In his resignation letter, Price expressed regret that 'recent events' distracted from efforts to overhaul the health care system, reduce regulatory burdens and improve global health. 'In order for you to move forward without further disruption, I am officially tendering my resignation as the Secretary of Health and Human Services effective 11:59 PM on Friday,' Price wrote." http://politi.co/2x4L4Fs ... ***His resignation letter*** http://bit.ly/2x3R460

-- @alexburnsNYT: "So reporting by @politico has led to the HHS secretary resigning and the Labor secretary-designate withdrawing from confirmation process" ... **@hillhulse:** "More than $50 million was spent on a special House election in Georgia to replace a lawmaker who didn't last a year in the Trump Cabinet."

-- CANCELED: Members of Congress and their spouses were invited to a reception Oct. 4 with Price. That has now been canceled, according to sources. ***The invite*** http://bit.ly/2xFWdAK

PETER BAKER, GLENN THRUSH and **MAGGIE HABERMAN** on A1 of the **Saturday NYT:** "Mr. Trump berated Mr. Price in the Oval Office on Friday afternoon for about two hours before heading out to meet with reporters, according to people informed about the meeting. All cabinet travel requests now must be cleared by the White House, they said." http://nyti.ms/2wq8aqD

--"Being called a 'good man' by Trump is sometimes an omen," by AP's Jill Colvin: http://bit.ly/2yA4EKN

BEHIND THE SCENES -- "Trump's breaking point with Price," by Andrew Restuccia, Josh Dawsey, and Dan Diamond: "Tom Price's downfall was his penchant for pricey jets. But his demise was months in the making, as the president continued to lose trust in the Health and Human Services secretary who rarely attended Oval Office strategy meetings, had little sway or influence on Capitol Hill, and was associated in the president's mind with one of the administration's biggest defeats - the failure to repeal Obamacare.

"Of particular notoriety: A picture of Price in March drinking at Bullfeathers, a famed Capitol Hill bar, as his colleagues tried to wrangle votes for the president's signature initiative. Price's lack of goodwill with Trump and other senior administration officials ultimately doomed his chances of survival, even though many administration officials believed the furor would blow over when news first broke that Price spent hundreds of thousands of taxpayer dollars on private jets." http://politi.co/2yyF5d7 ... ***Price at Bullfeathers*** http://bit.ly/2fZ3CBn

-- "'Another Fantastic Week': Tom Price's Celebratory Travelogues," by NYT's Katie Rogers and Eric Lipton: "As he traversed the world on taxpayer-funded flights, Tom Price made it a habit to write home, repeatedly sending celebratory letters back to staff members at the Department of Health and Human Services detailing his time on

the road, and complimenting agency employees who 'ensure the good stewardship of taxpayer dollars.' In May, Mr. Price celebrated his 15th week on the job by detailing his trip to Geneva, snapping a photo of the lush grounds of the United Nations compound, and a mountain range in the distance, as he attended the World Health Assembly. Weeks later, opening with the words 'another fantastic week,' Mr. Price described a June trip to Nashville, Tenn., where he owns a condominium, leaving out the fact that he had flown on a chartered plane and, according to Politico, stopped to have lunch with his son.

"The 'Week in Review' travelogues from Mr. Price, who resigned under fire on Friday, were sent to the department's approximately 80,000 employees. At times they included links to a Flickr account, where agency staff members posted more than 1,800 photographs of Mr. Price's globe-trotting and other agency work, including a recent dinner in Liberia. The dispatches outraged many members of the department staff, given that the travel took place at a time when the agency is facing hundreds of billions of dollars in proposed budget cuts, as well as certain budget-related restrictions on work-related travel for employees." http://nyti.ms/2xKjrmX

MORE QUESTIONABLE SPENDING -- "VA chief took in Wimbledon, river cruise on European work trip; wife's expenses covered by taxpayers," by WaPo's Jack Gillum, Alex Horton, Drew Harwell and Lisa Rein: "Nearly three days into a trip to Europe this past July, Veterans Affairs Secretary David Shulkin had attended a Wimbledon championship tennis match, toured Westminster Abbey and taken a cruise on the Thames. The 10-day trip was not entirely a vacation. Shulkin was in Europe for meetings with Danish and British officials about veterans' health issues, so taxpayers picked up part of the tab.

"Yet he and his wife spent about half their time sightseeing, including shopping and touring historic sites ... The federal government paid for the flights for Shulkin and his wife, Merle Bari, and provided a per-diem reimbursement for their meals and other expenses ... An agency spokesman did not respond to questions about why Bari qualified for the reimbursements and taxpayer-funded airfare, other than to say she was traveling on 'approved invitational orders' and had 'temporary duty' travel expenses." http://wapo.st/2fzY67

ALL IN THE FAMILY -- "Trump kids' ski vacation incurs over $300,000 in security costs," by CBS News' Laura Strickler, Analisa Novak and Julianna Goldman: "The annual Aspen ski vacation taken in March by President Trump's children, Ivanka and Eric Trump, and their families, including son-in-law Jared Kushner, left taxpayers on the hook for security costs of at least $330,000 ... Housing costs were $195,700 at hotels across town. The Secret Service also spent $26,000 on rental vehicles. Equipment costs were close to $22,000 -- to accompany the family on the slopes, the Secret Service had to buy lift tickets and rent skis and boots. They also rented bikes and bought other unidentified items at outfitting supplier REI and Backcountry.com." http://cbsn.ws/2wqgGpw

KELLY TAKES ACTION -- "White House to Cabinet: No private air travel without Kelly's approval," by Matt Nussbaum: "The White House cracked down on Cabinet officials' use of private planes Friday, telling them chief of staff John Kelly must approve almost all travel on 'government-owned, rented, leased, or chartered aircraft,' after Health and Human Services Secretary Tom Price resigned over his own taxpayer-funded flights. Mick Mulvaney, the director of the Office of Management and Budget, sent out the memo soon after Price's resignation was made public.

"'**In light of recent events, the President has asked me** to remind the heads of all executive departments and agencies of Administration policies on travel,' Mulvaney wrote. He reminded the department and agency heads that, by regulation, 'Government-owned, rented, leased, or chartered aircraft should not be used for travel by Government employees except with specific justification.'

"'**However, beyond the law and formal policy,** departments and agencies should recognize that was are public servants,' Mulvaney wrote. 'Every penny we spend comes from the taxpayer. We thus owe it to the taxpayer to work as hard managing that money wisely as the taxpayer must do to earn it in the first place.' Mulvaney added: 'Put another way, just because something is legal doesn't make it right.'" http://politi.co/2kbgfh2

THE LATEST ON PUERTO RICO -- "Trump's upbeat Puerto Rico rhetoric clashes with reality on the ground," by Matt Nussbaum and Marc Caputo: "President Donald Trump says his administration is deftly responding to the devastating hurricane that leveled Puerto Rico, but the jarring gap between his rhetoric and the dramatic reports about dire conditions there is raising fresh questions about the effectiveness of recovery efforts on the island.

"As his administration grapples with the third hurricane to hit the United States in a matter of weeks, and as the relief operation in Puerto Rico kicks into gear, Trump has repeatedly said he's getting positive reviews. Puerto Rico Governor Ricardo Rosselló just stated: 'The Administration and the President, every time we've spoken, they've delivered,' Trump tweeted Friday.

"But nine days after Hurricane Maria knocked out the island's power, communications system and some roadways, Americans there are still struggling to get supplies and phone service. 'There's always a danger whenever you start responding in a way that says, 'Hey we've done a great job,' and there are still people in need,' said Thomas Atkin, a former Coast Guard admiral and principal deputy assistant secretary of defense under President Barack Obama. 'It's kind of like a football coach at halftime saying, 'Hey, we're winning.' You still have half a game to play.'" http://politi.co/2xN4C4A

-- "Puerto Rico's Exodus Begins with a Trickle Into Orlando," by Francisco Alvarado in Orlando for Politico Magazine: http://politi.co/2yPkL8q

****** **A message from Morgan Stanley**: Disruption in Retail: Automation and

digitalization are helping athletic footwear brands chase growth via fast fashion. Read more from Morgan Stanley. ******

PRESIDENT TRUMP LASHES OUT AT SAN JUAN MAYOR -- @realDonaldTrump at 7:19 a.m.: "The Mayor of San Juan, who was very complimentary only a few days ago, has now been told by the Democrats that you must be nasty to Trump." ... **at 7:26 a.m.:** "...Such poor leadership ability by the Mayor of San Juan, and others in Puerto Rico, who are not able to get their workers to help. They...." ... **at 7:29 a.m.:** "..want everything to be done for them when it should be a community effort. 10,000 Federal workers now on Island doing a fantastic job."

... at **7:48 a.m.:** "Fake News CNN and NBC are going out of their way to disparage our great First Responders as a way to 'get Trump.' Not fair to FR or effort!" ... **at 7:55 a.m.:** "I will be going to Puerto Rico on Tuesday with Melania. Will hopefully be able to stop at the U.S. Virgin Islands (people working hard)." ... **at 8:07 a.m.:** "The Fake News Networks are working overtime in Puerto Rico doing their best to take the spirit away from our soldiers and first R's. Shame!"

TICK-TOCK -- "Lost weekend: How Trump's time at his golf club hurt the response to Maria," by WaPo's Abby Phillip, Ed O'Keefe, Nick Miroff and Damian Paletta: "At first, the Trump administration seemed to be doing all the right things to respond to the disaster in Puerto Rico. As Hurricane Maria made landfall on Wednesday, Sept. 20, there was a frenzy of activity publicly and privately. The next day, President Trump called local officials on the island, issued an emergency declaration and pledged that all federal resources would be directed to help.

"But then for four days after that -- as storm-ravaged Puerto Rico struggled for food and water amid the darkness of power outages -- Trump and his top aides effectively went dark themselves.

"Trump jetted to New Jersey that Thursday night to spend a long weekend at his private golf club there, save for a quick trip to Alabama for a political rally. Neither Trump nor any of his senior White House aides said a word publicly about the unfolding crisis. Trump did hold a meeting at his golf club that Friday with half a dozen Cabinet officials -- including acting Homeland Security secretary Elaine Duke, who oversees disaster response -- but the gathering was to discuss his new travel ban, not the hurricane. Duke and Trump spoke briefly about Puerto Rico but did not talk again until Tuesday." http://wapo.st/2xInikh

THE AFTERMATH -- "Rocked by the quake, Mexico's economy could get a boost from the rebuilding," by L.A. Times' Laura Tillman: http://lat.ms/2x4H8UY

WEST WING INTRIGUE -- "Kelly struggling to make sense of Jared and Ivanka's West Wing roles: Trump has also questioned whether having his family members in the West Wing is creating too much noise," by Annie Karni and Josh Dawsey: "As Secretary of Homeland Security, Gen. John Kelly spent months touting a hard line on

immigration, arguing privately and publicly with Congress that if there were objections to the laws, it was up to legislators to change them - not to blame enforcers on the front lines. But after a particularly contentious meeting with Democrats on the Hill regarding DACA this past summer, he was informed by Senate leaders that he appeared to have not been 'read in' to some conversations going on in the White House, according to three sources with direct knowledge of the matter.

"The president's son-in-law, Jared Kushner, Kelly learned, had been quietly back-channeling with Sens. Lindsey Graham (R-S.C.) and Dick Durbin (D-Ill.). Kushner, Democratic Hill aides confirmed, had discussed with the two senators a potential deal to protect Dreamers from deportation. Kelly, according to three sources familiar with the exchange, was livid, not at the content of the discussions - he has said he personally supports DACA - but that they were going on without his knowledge. He called senior White House officials and demanded a meeting with Trump to deliver something of an ultimatum: If Kushner was going to freelance on DHS issues, the president would have to choose between his son-in-law and the four-star general serving in his Cabinet.

"A White House official disputed this account, noting that Kelly was not upset - he simply wanted to be briefed on what the administration's strategy was. ... In a statement to POLITICO, Kelly said, 'Jared is a valued member of the White House staff.' ... It's not just Kelly who is uncertain of how to make the arrangement work. In recent months, according to multiple administration officials, the president has also been casually surveying people close to him about whether having his family members in the government is creating too much noise.

"'Baby, you're getting killed, this is a bad deal,' Trump has told Ivanka Trump, in front of other staffers, after soaking in the criticisms of the role his daughter is playing. ... Privately, Trump has asked some senior staffers their thoughts on how Kushner and Ivanka Trump can withstand the personal attacks, according to White House officials." http://politi.co/2xRH8vS

-- "Officials Expressed Concerns White House Counsel Would Quit Over Donald Trump-Jared Kushner Meetings," by WSJ's Peter Nicholas, Mike Bender and Rebecca Ballhaus: "White House Counsel Don McGahn this summer was so frustrated about the lack of protocols surrounding meetings between President Donald Trump and Jared Kushner, his son-in-law whose activities are under scrutiny in the Russia probe, that West Wing officials expressed concerns the top lawyer would quit, according to people familiar with the conversations.

"Mr. McGahn expressed concern that meetings between Mr. Kushner and Mr. Trump could be construed by investigators as an effort to coordinate their stories ... Two senior White House officials-then-Chief of Staff Reince Priebus and former chief strategist Steve Bannon -urged Mr. McGahn not to resign ... One person characterized Mr. McGahn's frustration as, 'Fine, you're not taking my advice? Why stay?'" http://on.wsj.com/2xEWuUN

JOSH MEYER: "NSA warned White House against using personal email": "The National Security Agency warned senior White House officials in classified briefings that improper use of personal cellphones and email could make them vulnerable to espionage by Russia, China, Iran and other adversaries, according to officials familiar with the briefings. The briefings came soon after President Donald Trump was sworn into office on Jan. 20, and before some top aides, including senior advisor Jared Kushner, used their personal email and phones to conduct official White House business, as disclosed by POLITICO this week.

"The NSA briefers explained that cyberspies could be using sophisticated malware to turn the personal cellphones of White House aides into clandestine listening devices, to take photos and video without the user's knowledge and to transfer vast amounts of data via Wi-Fi networks and Bluetooth, according to one former senior U.S. intelligence official familiar with the briefings." http://politi.co/2x1B9W9

TRUMP is at Bedminster N.J. He is scheduled to speak this afternoon with FEMA director Brock Long, Puerto Rico Gov. Ricardo Rosselló; Puerto Rico Resident Commissioner Jenniffer González-Colón; Luis Fortuño, the former governor of Puerto Rico who is now a federal lobbyist; and U.S. Virgin Islands Gov. Kenneth Mapp by telephone.

PHOTO DU JOUR: Former Vice President Joe Biden, former second lady Jill Biden, former President Barack Obama and Prince Harry of Wales watch on during day 7 of the Invictus Games 2017 on Sep. 29 in Toronto, Canada. | Chris Jackson/Getty Images for the Invictus Games Foundation

FED WATCH -- "Trump interviews four for Fed chair job, to decide in two-three weeks," by Reuters' Steve Holland: "U.S. President Donald Trump is ramping up his search for a new chief for the U.S. central bank, meeting with former Federal Reserve Governor Kevin Warsh and three others and promising a decision next month. 'I've had four meetings for Fed chairman and I'll be making a decision over the next two or three weeks,' Trump told reporters on the White House South Lawn.

"Trump has previously suggested he may reappoint Fed Chair Janet Yellen to the post. Jerome Powell, one of the current governors on the Fed's board, also met with Trump earlier this week about the Fed job, the Wall Street Journal reported on Friday. Trump on Friday did not provide details on his meetings." http://reut.rs/2fzjPwi

TOP-ED - JOHN KERRY in WaPo, **"The Iran deal is working. Here's how we know":**

"[I]t seems irrational to leave an agreement that's working today out of a fixation on potential growth of Iran's nuclear program more than a decade from now, when such growth could happen tomorrow if we unravel the agreement. We'd be back where we were before, only way worse, with the United States isolated, not Iran. We maintain leverage by sticking with the agreement, and European foreign ministers tell me that they would join us in confronting other Iranian misdeeds.

"What leverage do we gain by walking away when we know Iran is complying? We lose our close alignment with our allies. We empower Russia and China. We hand Iranian hard-liners a victory and send a message to any country considering a negotiation with us that, when politics intervene, the United States doesn't keep its word. Moreover, sticking with the deal means we don't jump back in the barrel headed toward military conflict with Iran, and we can focus on North Korea's white-hot nuclear threat today." http://wapo.st/2xF1atJ

VALLEY TALK -- "Silicon Valley all in on tax reform," by Steven Overly: "Silicon Valley is racing to support and shape President Donald Trump's multitrillion-dollar tax proposal, despite months of distancing itself from his policies on everything from immigration to climate change. The Republican proposal to slash corporate tax rates and ease taxation of companies' overseas earnings has vast implications for the tech industry, which counts the wealthiest companies on earth among its ranks. The companies have responded by marshaling an army of lobbyists, some with connections to a Trump administration that many of their customers and liberal employees loathe." http://politi.co/2ydPY7W

****** **A message from Morgan Stanley**: Consumers want new and now, a trend pushing athletic-wear brands to rethink how fast they can design and manufacture footwear. The rise of "fast fashion" is pushing brands to continuously roll out new models. The shift poses both a challenge and an opportunity. Read more from Morgan Stanley. ******

MEDIAWATCH - "ABC Poaches Tara Palmeri, a Politico Rising Star: The white-hot West Wing beat is minting new journalism name-brands," by Vanity Fair's Joe Pompeo: "Tara Palmeri, part of the new gaggle of White House reporters who have been churning out juicy scoops about the As-the-World-Turns Trump West Wing, is leaving Politico for ABC News ... At ABC, Palmeri, a vivid, high-energy presence with a New York tabloid background and an aggressive reporting style ... will be an on-air White House correspondent, giving the network a third presence alongside chief White House correspondent Jonathan Karl and senior White House correspondent Cecilia Vega. Palmeri signed a multi-year deal and will also write for abcnews.com." http://bit.ly/2xQ3PAu

GREAT WEEKEND READS, curated by Daniel Lippman:

--"What Ever Happened to the Russian Revolution?" by Ian Frazier in Smithsonian: "Russia is a glorious country and an ongoing disaster. Just when you decide it is the

one, it turns around and discloses the other. For a hundred years before 1917 it experienced wild disorders and political violence interspersed with periods of unquiet calm, meanwhile producing some of the world's greatest literature and booming in population and helping to feed Europe. Then it leapt into a revolution unlike any the world had ever seen." http://bit.ly/2yzd98Y

--"Diary of a Concussion," by Elizabeth Lopatto in The Verge: "I still felt like myself, but it was kind of like my personality was a set of piano keys and someone had sliced off all the notes you'd ordinarily play with your left hand. I could go on playing with both hands, but only the top half of the keyboard was available. While I was in the ER, it occurred to me: what if I am stuck like this forever? There is no treatment for concussion except for time, but people seem not to believe that." http://bit.ly/2woOwLn

--"Gloria Allred's Crusade," by Jia Tolentino in The New Yorker: "The attorney takes on Bill Cosby, rape law, and Donald Trump." http://bit.ly/2fxhUZf

****** **A message from Morgan Stanley** : It has become commonplace for consumers to see new footwear styles online and shop for them instantly-followed by speedy delivery. For the world's largest athletic brands, the shift toward "new and now" poses both a challenge and an opportunity. Revamping the lengthy design and manufacture process for footwear can be arduous, while streamlining the process to incorporate new technology for creating prototypes and 3D printing can speed production of key materials. These and other innovations could boost revenues, improve margins, reduce operational risk, and finally, win more market share in an already booming category. Since 2007, global sales of athletic wear have increased 61%, and faster supply chains can help sustain that growth for years to come. As brands shift investments toward digital design and automated manufacturing, digitization could have a significant impact on supply chains. Read more from Morgan Stanley. ******

Subject: BREAKING NEWS: Supreme Court to take up Trump's travel ban, let parts of it take effect

The Supreme Court agreed Monday to hear arguments on President Donald Trump's travel ban executive order - and will allow parts of the directive to take effect in the meantime.

The action is a tempered legal victory for the president, who suffered a string of defeats in lower courts that crippled his effort to halt issuance of most visas to citizens of six majority Muslim countries and to stop admission of refugees from across the globe.

The high court's action means parts of the order Trump re-issued in March will likely go into effect until the court decides on the legality of the measure, although the court limited the order's impact on foreigners with clear ties to individuals, businesses or organizations in the United States.

EHS Federal Regulatory Alert

November 20, 2017 - Number 222

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

AIR
Arkansas SIP/Infrastructure Requirements
AIR

Proposed rule of the EPA would approve revisions to the Arkansas SIP regarding infrastructure requirements for the 2006 and 2012 fine particulate matter (PM-2.5), 2008 lead, 2008 ozone, 2010 nitrogen dioxide, and 2010 sulfur dioxide (SO2) NAAQS. Portions of revisions concerning significant contribution to nonattainment or interference with maintenance and interference with visibility protection measures in other states of the 2008 ozone, 2010 SO2, and the 2012 PM-2.5 NAAQS will be addressed in a separate rulemaking. Comments are due Dec. 20, 2017. Contact: Nevine Salem; EPA Region 6; 214-665-7222; salem.nevine@epa.gov. Citations: 40 CFR 52

82 FR 55065 (11/20/2017)

Regulatory Update

AIR
Delaware SIP/Ozone NAAQS Interstate Transport
AIR

Notice of the EPA announces the withdrawal of a Sept. 27, 2017, direct final rule (82 FR 44932) that would have approved a portion of a revision to the Delaware SIP concerning the good neighbor interstate transport requirements for the 2008 ozone NAAQS. The revision addresses the demonstration that sources or emissions activity within the state will not contribute significantly to nonattainment or interference with maintenance of the standards in other states. The withdrawal is in response to adverse comments, which will be addressed in a final rule. The withdrawal is effective Nov. 20, 2017. Contact: Ellen Schmitt; EPA Region 3; 215-814-5787; schmitt.ellen@epa.gov. Citations: 40 CFR 52.420

82 FR 55052 (11/20/2017)

Regulatory Update

AIR

Iowa SIP/PM-2.5 NAAQS Infrastructure Requirements

AIR

Notice of the EPA announces the withdrawal of a Sept. 29, 2017, direct final rule (82 FR 45479) that would have approved portions of revisions to the Iowa SIP regarding infrastructure requirements for the 2012 annual fine particulate matter (PM-2.5) NAAQS. The rule would have approved revisions relating to prevention of significant deterioration (prong 3). The agency did not propose to take action on revisions concerning significant contribution (prong 1), interference with maintenance (prong 2), and visibility protection (prong 4). The withdrawal is in response to an adverse comment. The agency will proceed with a final rule based on the related proposed rule (82 FR 45550; 09/29/2017). The withdrawal is effective Nov. 20, 2017. Contact: Heather Hamilton; EPA Region 7, Air Planning and Development Branch; 913-551-7039; hamilton.heather@epa.gov. Citations: 40 CFR 52.820

82 FR 55053 (11/20/2017)

Regulatory Update

AIR

Virginia SIP/Removal of CAIR Trading Programs

AIR

Notice of the EPA announces the withdrawal of a Sept. 28, 2017, direct final rule (82 FR 45187) that would have approved a revision to the Virginia SIP to remove the annual nitrogen oxide (NOx), seasonal NOx, and sulfur dioxide trading programs under the Clean Air Interstate Rule (CAIR). The CAIR was discontinued in December 2014 upon implementation of the Cross-State Air Pollution Rule. The withdrawal is in response to an adverse comment. The agency will proceed with a final rule based on the related proposed rule (82 FR 45241; 09/28/2017). The withdrawal is effective Nov. 20, 2017. Contact: Sara Calcinore; EPA Region 3; 215-814-2043; calcinore.sara@epa.gov. Citations: 40 CFR 52.2420

GENERAL ENVIRONMENT AND SAFETY
Maine/Seabright Dam Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a hydroelectric application by the town of Camden, Maine, for the Seabright Dam Project on the Megunticook River in Camden. The applicant requests to surrender the project exemption as the generation of power at the project is no longer economical. The applicant requests to remove the three transformers that connect the project to the Central Maine Power Co. grid and to continue to maintain and operate the dam for recreational use of the reservoir. Comments, protests, and motions to intervene are due Dec. 13, 2017. Contact: Marybeth Gay; FERC; 202-502-6125; Marybeth.gay@ferc.gov

82 FR 55097 (11/20/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Michigan/Ludington Pumped Storage Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a fish entrainment settlement agreement by Consumers Energy Co., of Jackson, Mich., and DTE Electric Co. of Detroit, regarding the Ludington Pumped Storage Project on the east shore of Lake Michigan in Mason and Ottawa counties in Michigan. The agreement would resolve among the affected parties issues associated with issuance of a new license for the project regarding fish entrainment. The affected parties request the approval and incorporation of relevant portions of the settlement agreement into any new license that may be issued for the project. The affected parties also request a 50-year license term. Comments are due Dec. 4, 2017, and reply comments are due Dec. 14, 2017. Contact: Aaron Liberty; FERC; 202-502-6862; aaron.liberty@ferc.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
OTC Denture Repair Kits/Premarket Notification Requirements
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the receipt of a petition requesting an exemption from premarket notification requirements for over-the-counter (OTC) denture repair kits. These class II medical devices consist of a material, such as a resin monomer system of powder and liquid glues, that is intended to be applied permanently to mend cracks or breaks. The petition was submitted by Paul Hyman of Hyman, Phelps & McNamara PC, of Washington, D.C. Comments are due Jan. 19, 2018. Contact: Rebecca Nipper; FDA, Center for Devices and Radiological Health, FDA; 301-796-6527. Citations: 21 CFR 807

82 FR 55105 (11/20/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Washington State/North Fork Nooksack Line Lowering Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of the environmental assessment for the North Fork Nooksack Line Lowering Project in Whatcom County, Wash. The project, proposed by Northwest Pipeline LLC, of Salt Lake City, consists of the removal and replacement of pipeline and removal of previously abandoned-in-place pipeline to reduce exposure due to river channel migration. The EA concludes that approval of the proposed project, with appropriate mitigating measures, would not constitute a major federal action significantly affecting the quality of the human environment. Comments are due Dec. 13, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlinesupport@ferc.gov

Subject: FERC, Interior, DOE noms set to clear committee

By POLITICO Staff

09/12/2017 10:40 AM EDT

The Senate Energy and Natural Resources Committee will vote Thursday on several nominees to FERC and the departments of Energy and Interior, committee leaders announced today.

The committee will vote on the following nominees: Richard Glick and Kevin McIntyre to be members of FERC; Joseph Balash to be assistant Interior secretary for land and minerals management; David Jonas to be general counsel of DOE; and Ryan Nelson to be solicitor at Interior.

The nominees are likely to be approved by the committee. It remains to be seen how quickly they will get a vote in the full Senate.

WHAT'S NEXT: The markup is scheduled to begin at 9:30 a.m. Thursday in 366 Dirksen and will be webcast.

Subject: BREAKING NEWS: Anthony Weiner sentenced to 21 months in prison for latest sexting scandal

Former New York Rep. Anthony Weiner was sentenced to 21 months in federal court in Manhattan on Monday after pleading guilty earlier this year to transmitting obscene material to a minor.

The sentencing, delivered by U.S. District Court Judge Denise Cote, marks the lowest point thus far in Weiner's fall from grace - from being a leading voice in the Democratic Party with a shot at becoming mayor of New York, to a registered sex offender.

Energy and Climate Report

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Former Energy Commissioner Honorable Joins Reed Smith Law Firm

Posted July 10, 2017, 12:00 P.M. ET

By Rebecca Kern

Colette Honorable, who left the Federal Energy Regulatory Commission last month, has joined the global law firm Reed Smith to help start up a FERC-focused regulatory team, the firm announced today.

Honorable served as a Democratic FERC commissioner appointed by President Barack Obama from January 2015 until her term expired on June 30. FERC is now down to one lone commissioner—Acting Chairman Cheryl LaFleur— after being without a voting quorum of three commissioners since February. Two Republican FERC nominees Neil Chatterjee and Robert Powelson were favorably reported out of the Senate committee in June and currently await a Senate floor vote.

Honorable will be co-leading Reed Smith's FERC regulatory team with Regina Speed-Bost, a legal adviser to former FERC commissioner William Massey. Speed-Bost most recently was chair of Schiff Hardin's Energy Group in Washington. The firm also hired Debra Ann Palmer, a colleague of Speed-Bost and a former partner Schiff Hardin, who also has FERC and state regulatory experience.

While Reed Smith has employed FERC attorneys in the past, this will be the firm's first FERC-focused regulatory offering, Honorable told Bloomberg BNA in an interview. Reed Smith represents natural gas, renewable, oil and power companies as well utilities with 140 attorneys in its energy practices. The firm has 1,700 attorneys in its 27 global offices.

Wall Street Sours on $9 Billion Mechanism for Green Projects

Posted July 10, 2017, 10:05 A.M. ET

By Brian Eckhouse

Wall Street investors have gone cold on one of the main mechanisms banks invented to fund the green-energy revolution.

The business structure, known as the yieldco, feeds dividends from operating solar and wind farms to investors. Yieldcos first emerged in 2013, when the largest U.S. independent power producer, NRG Energy Inc., launched NRG Yield Inc. The parent formed the yieldco to hold operating wind and solar farms that it had built or acquired. Revenue from those assets funded dividends.

Yieldcos raised $7.9 billion in public equity in 2014 and 2015 but only $1 billion since then, according to Bloomberg New Energy Finance.

The shift is further fallout from the collapse of yieldco promoter SunEdison Inc. and has changed the way clean-energy developers finance themselves. In years past, they started yieldcos to buy projects once they were operating, recycling the capital into new installations. Now, they're turning to a large and deepening pool of buyers—insurance companies and pension funds—to provide funding and sometimes take control of income-producing assets.

"The idea of a you-have-to-have-a-virtuous circle—that idea that you're hooked at the hip between the public markets and growth—is dead," Mike Garland, chief executive officer of the San Francisco-based yieldco Pattern Energy Group Inc., said in an interview. "The market is saying, `Come to us last, not first.' When we started, it was 'Come to us first."'

Pattern Energy and NRG Yield are projected to pay 12-month dividend yields of 6.4 percent and 6.5 percent respectively, according to data compiled by Bloomberg. That's about three times higher than the average 2.1 percent yield of 500 companies on the Standard & Poor's index.

The yieldco structure became a major growth engine for renewables, spawning at least eight yieldcos in North America and similar entities in the U.K. and continental Europe. Investors liked the story: support the growth of clean-energy while also reaping dividends that flow from electricity sales guaranteed by long-term contracts. And because the yieldcos promised to buy more and more projects, the dividends would only grow.

Fading Appeal

But headwinds—most prominently the run-up to SunEdison's bankruptcy in April 2016—stopped at least three other would-be yieldcos from forming and have forced others to eschew public markets for private fundraising. SunEdison had relied on its two yieldcos to finance its dizzying multi-continent buying-binge, thrusting them into turmoil and introducing doubt that the companies would be able to grow fast enough to pay rising dividends. The company's struggles contributed to a broad renewables slump that made it more difficult to raise funds from the public equity markets.

As the business case for yieldcos has lost favor, a new group of buyer has emerged: pension funds and insurance companies hungry for wind and solar farms' steady revenues. And the green bond market has boomed. Issues of bonds linked to environmental projects is set to surpass $100 billion this year more than 10 times the scale of the market in 2012, according to BNEF.

"The yieldco market got very heated," Barry Gold, the New York-based head of Orix Infrastructure & Renewable Energy, said in an interview. "But we all know how things work in the financial markets: if a door closes, someone opens a window somewhere."

Several yieldco owners see the writing on the wall. SunEdison, Abengoa SA and First Solar Inc. are trying to distance themselves from the units they created. Mark Widmar, First Solar's chief executive officer, described the company's 8Point3 Energy Partners LP yieldco as "a dormant vehicle basically."

Pattern, meanwhile, is continuing as an owner of clean-energy projects—the original intent of yieldcos—but is now pushing into development. It recently bought a stake in an affiliated private company that feeds it projects, and it recruited Canada-based Public Sector Pension Investment Board to buy almost 10 percent of its stock.

"We're short renewables in the U.S.—and we want more," Patrick Samson, a Montreal-based managing director at PSP Investments, said in an interview. "My pensions need long-term cash flows."

Institutional investors are indeed emerging as a heavy of renewables mergers and acquisistions:

• Alberta Investment Management Corp. in February agreed to buy one of the largest U.S. private solar companies, sPower, alongside AES Corp.

• John Hancock Life Insurance Co. in March said it will buy a 49-percent stake in a clean-energy portfolio owned by Exelon Corp.

• Activist investor Paul Singermay pressured NRG to sell its yieldco, potentially to capture institutional interest in wind and solar farms.

"Why not just sell to a pension fund?" said Jigar Shah, chief executive officer of clean-energy investor Generate Capital Inc. and a former SunEdison CEO. "There are literally hundreds of them that want these assets."

Wind and solar farms typically have utility contracts that ensure consistent revenue streams, which neatly dovetail with the long-dated liabilities that insurers and pension fund managers accrue. For endowments, solar and wind investments help satisfy their heightened sustainable targets.

"The concept of pooling operational renewable-energy assets and selling to private investors will outlive the yieldco," said Daniel Shurey, a New York-based analyst at BNEF, said by email. "The term 'yieldco' is going extinct."

Shell Plans to Spend $1 Billion a Year on Clean Energy by 2020

Posted July 10, 2017, 9:30 A.M. ET

By Rakteem Katakey

Royal Dutch Shell Plc plans to spend as much as $1 billion a year on its New Energies division as the transition toward renewable power and electric cars accelerates.

"In some parts of the world we are beginning to see battery electric cars starting to gain consumer acceptance" while wind and solar costs are falling fast, Shell CEO Ben Van Beurden said in a speech in Istanbul July 10. "All of this is good news for the world and must accelerate," while still offering opportunities for producers of fossil fuels.

Shell sees opportunities in hydrogen fuel-cells, liquefied natural gas and next-generation biofuels for air travel, shipping and heavy freight—areas of transport for which batteries aren't adequate. The

intermittent nature of wind and solar energy means power plants fired by natural gas will have a long-term role, Van Beurden said.

Van Beurden was addressing the World Petroleum Congress—a gathering of ministers and CEOs from some of the largest oil producers—at a time when the accelerating shift to clean energy is raising questions about their long-term business models. While Russian Energy Minister Alexander Novak and Saudi Arabian Oil Co. boss Amin Nasser said oil and gas will be dominant for decades to come, Van Beurden highlighted the potential for some of the fastest-growing nations to leapfrog straight to a cleaner energy mix.

"When you consider the areas of the world where energy demand is still to expand, like Asia and sub-Saharan Africa, there is a huge opportunity," Van Beurden said. "These are areas that are not, on the whole, locked into a coal-driven system. There is the potential for them to shift more directly onto a less energy-intensive pathway to development."

There is often too much focus on energy-transition policies in Europe and North America instead of the fast-growing developing world, Van Beurden said. "What happens in England is important, but what happens in Ethiopia is at least as important. From Denmark to the DRC, from the U.S. to Uganda, to India, to China, there is a lot of work to do."

These countries will still require fossil fuels to develop industries such as steel, cement and chemicals because they need a heat intensity that cannot come from electricity alone, he said.

France's Utility May Have to Shut 17 Nuclear Reactors

Posted July 10, 2017, 9:27 A.M. ET

By Francois de Beaupuy

Electricite de France SA, the state-controlled operator of 58 nuclear reactors, may have to shut as many as 17 to fulfill government plans to reduce the share of atomic power in France's electricity output to 50 percent by 2025, Ecology Minister Nicolas Hulot said.

The exact number of shutdowns required isn't clear because "we haven't developed everything in our climate plan," Hulot said July 10 on RTL radio. Given the 50 percent target, "everyone can understand that we'll close a number of reactors to achieve that goal, and not just one."

Shutting 17 reactors by 2025 would be a huge challenge for France and EDF, as nuclear power accounted for 72 percent of the country's electricity output in 2016. While the government has pledged to boost renewables, it's not yet evident how they would make up for the shutdown of almost a third of EDF's reactors. France also would face calls from the company to compensate it for potential loss of revenue and the cost of dismantling earlier than planned.

In January, EDF reached a compromise with the government in which the utility would receive 490 million euros ($559 million) and possible subsequent payments if the two reactors of the Fessenheim nuclear plant are taken offline.

Subject: EPA formally proposes WOTUS withdrawal

By Annie Snider

07/26/2017 10:13 AM EDT

EPA and the Army Corps of Engineers will formally propose the withdrawal of the Obama administration's controversial water rule Thursday.

The proposed rule to withdraw the Waters of the U.S. rule, also called the Clean Water Rule, was unveiled in late June, but had yet to be noticed in the Federal Register, the formal step that triggers the beginning of the public comment period. The Trump administration has given the public 30 days to weigh in on the proposed rule, although critics of the effort to repeal the rule have called for more time.

The proposed rule would change little on the ground today since the Obama administration's rule only briefly went into effect before the 6th Circuit Court of Appeals put it on hold nationwide. The repeal is seen as a safety net in case the Supreme Court determines that the 6th Circuit didn't have authority over the case and the hold is dissolved.

The rule would remove the Obama-era rule from the books and cement the regulatory status quo while the Trump administration works on its own rule to define which streams and wetlands are subject to federal protection under the Clean Water Act — an effort it has said it plans to have ready to unveil in December.

WHAT'S NEXT: EPA and the Army Corps will accept public comment on the proposed rule for 30 days. Those public comments will lay the groundwork for expected legal challenges from environmental groups and states that were supportive of the Obama administration's rule.

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

AIR
Georgia SIP/Materials Incoporated by Reference
AIR

Final rule of the EPA updates materials incorporated by reference into the Georgia SIP. The rule affects SIP materials that are available for public inspection. The rule is effective Aug. 31, 2017. Contact: Sean Lakeman; EPA Region 4, Air Planning and Implementation Branch; 404-562-9043; lakeman.sean@epa.gov. Citations: 40 CFR 52.570

82 FR 41337 (08/31/2017)

Regulatory Update

AIR
Greenhouse Gas Reporting Program
AIR

Notice of the EPA announces a correction to a Dec. 9, 2016, final rule (81 FR 89188) that revised requirements of the Greenhouse Gas Reporting Program. The correction removes a reference to liquid petroleum products in Table C-1 to 40 CFR 98, Subpart C, regarding default CO2 emission factors and high heat values for various types of fuel. Citations: 40 CFR 98, Subpart C

82 FR 41343 (08/31/2017)

Regulatory Update

AIR
Illinois SIP/Coal-Fired Electric Generating Units
AIR

Proposed rule of the EPA would approve portions of revisions to the Illinois SIP regarding the

control of emissions from certain coal-fired electric generating units (EGUs). The revisions require the Will County 3 and Joliet 6, 7, and 8 EGUs to permanently cease combusting coal and allow other subject EGUs to cease combusting coal as an alternative means of compliance with mercury emission standards. The revisions also exempt the Will County 4 EGU from sulfur dioxide (SO2) control technology requirements, require all subject EGUs to comply with a group annual nitrogen oxide emission rate, and direct only those subject EGUs that combust coal to comply with a group annual SO2 emission rate. Comments are due Oct. 2, 2017. Contact: Charles Hatten; EPA Region 5, Air Programs Branch; 312-886-6031; hatten.charles@epa.gov. Citations: 40 CFR 52

82 FR 41376 (08/31/2017)

Regulatory Update

AIR
Indiana/PM-2.5 NAAQS Infrastructure Requirements
AIR

Proposed rule of the EPA would approves portions of revisions to the Indiana SIP regarding the infrastructure requirements for the 2012 annual fine particulate matter (PM-2.5) NAAQS. The rule would take no action on revisions regarding the interstate transport provisions and visibility protection requirements (prongs 1, 2, and 4), which will be addressed in a separate action. Comments are due Oct. 2, 2017. Contact: Eric Svingen; EPA Region 5, Air Programs Branch; 312-353-4489, svingen.eric@epa.gov. Citations: 40 CFR 52

82 FR 41379 (08/31/2017)

Regulatory Update

AIR
Kentucky SIP/Louisville Metro Air Pollution Control District
AIR

Final rule of the EPA approves revisions to the Kentucky SIP concerning the Louisville Metro Air Pollution Control District's air quality regulations. The revisions add acronyms and abbreviations for consistency with EPA definitions, update open records procedures to reflect current technology options for delivering submissions, and update public hearing procedures to conform to the Strategic Toxic Air Reduction program. The revisions also update restrictions on open burning and solvent cleaning and modify board member obligations and procedures for board hearings. In addition, the revisions modify the volatile organic compounds emissions reduction strategy and combine two performance standards for solvent metal cleaning equipment. The rule is effective Oct. 2, 2017. Contact: Sean Lakeman; EPA Region 4, Air Planning and Implementation Branch; 404-562-9043; lakeman.sean@epa.gov. Citations: 40 CFR 52.920

82 FR 41335 (08/31/2017)

Regulatory Update

AIR
Nevada SIP/Washoe Oxygenated Fuels Program
AIR

Proposed rule of the EPA would approve a revision to the Nevada SIP. The revision concerns the suspension of Washoe County District Board of Health requirements for carbon monoxide emissions from passenger vehicles. Comments are due Oct. 2, 2017. Contact: Jeffrey Buss; EPA Region 9; 415-947-4152; buss.jeffrey@epa.gov. Citations: 40 CFR 52

82 FR 41386 (08/31/2017)

Regulatory Update

AIR
New Jersey SIP/Materials Incorporated by Reference
AIR

Notice of the EPA announces a correction to a July 3, 2017, final rule (82 FR 30758) to revise the format of materials incorporated by reference into the New Jersey SIP. The revisions reorganize the "identification of plan" section so that information on EPA-approved regulations, source specific requirements, and nonregulatory provisions are listed in tables. The correction, which replaces an incorrect docket number, is effective Aug. 31, 2017. Contact: Kirk Wieber; EPA Region 2, Air Programs Branch; 212-637-3381. Citations: 40 CFR 52.1570, 52.1587, 52.1605

Regulatory Update

FOOD SAFETY
Hazard Analysis and Risk-Based Preventive Controls for Human Food
FOOD SAFETY

Notice of the FDA announces the availability of an additional draft chapter of the guidance for industry regarding compliance with the requirements for hazard analysis and risk-based preventive controls for human food (81 FR 57816; 08/24/2016). The additional chapter addresses the use of heat treatments as a process control. Comments are due Feb. 27, 2018. Contact: Jenny Scott; FDA, Center for Food Safety and Applied Nutrition; 240-402-2166. Citations: 21 CFR 117

82 FR 41364 (08/31/2017)

Regulatory Update

FOOD SAFETY
Meat and Poultry Products Inspection
FOOD SAFETY

Notice announces the intention of the Food Safety and Inspection Service to seek OMB approval for a continuing information collection request regarding the application for inspection, accreditation of laboratories, and exemptions for meat and poultry product establishments and import facilities. The collection addresses recordkeeping requirements that ensure such establishments provide safe, unadulterated products and that nonfederal laboratories act in accordance with FSIS requirements. The collection also addresses recordkeeping requirements to ensure that meat and poultry products that are exempted from agency inspection are not commingled with inspected products and that firms qualifying for a retail store exemption that

have violated the provisions of the exemption are no longer in violation. Comments are due Oct. 30, 2017. Contact: Gina Kouba; FSIS, Office of Policy and Program Development; 202-720-5627. Citations: 9 CFR 303.1, 304.1, 350.5, 351.4, 352.3, 362.3, 381.10, 381.17, 381.175, 439.20, 590.580

82 FR 41391 (08/31/2017)

Regulatory Update

FOOD SAFETY
Public Health Information System
FOOD SAFETY

Notice announces the intention of the Food Safety and Inspection Service to seek OMB approval for a revised information collection request concerning the Public Health Information System. The collection addresses the submission of six forms and two certificates by firms regarding the application for inspection and the export and import of meat, poultry, and egg products. The revision removes FSIS Form 9080-4 regarding product lists because the agency no longer uses the form. Comments are due Oct. 30, 2017. Contact: Gina Kouba; FSIS, Office of Policy and Program Development; 202-720-5627. Citations: 9 CFR 304.1 through 592.96 (nonconsecutive)

The Democrats' leftward march

Ramesh Ponnuru | National Review

Both victory and defeat have been radicalizing experiences for the Democratic Party this century. Democrats moved left after losing to George W. Bush; they moved further left after winning with Barack Obama; and now they seem to be moving further left still with the ascent of Donald Trump. The cumulative effect of this movement was evident in the 2016 campaign of Hillary Clinton, who felt it necessary to disavow many of her husband's old stances — and some of her own.

Getting to 'yes' on overhauling Medicaid

Joseph Antos, James C. Capretta, and Benedic N. Ippolito | Health Affairs

The American Health Care Act includes the most far-reaching changes in Medicaid

financing since the program's birth in 1965. While some advocate for these changes, there's considerable unease over the proposal to yank federal support for an expanded program entirely. These concerns are well-founded: The GOP must recognize there's no realistic alternative to Medicaid for the nation's poorest households.

Reuters

Republicans have an uphill climb in Virginia this November

Michael Barone | Washington Examiner

Virginians voted Tuesday in Democratic and Republican primaries for the state's 2017 governor's race, which will carry significance as one of the country's first major referenda on President Trump. Virginia voted 50 to 44 percent for Hillary Clinton over Trump in 2016. It voted almost exactly in line with the national percentages in 2008 and 2012, but this time it was somewhat more Democratic. That fact, plus early polling, suggest Democrat Ralph Northam is the favorite.

Reuters

Border adjustment phase-in means wider trade deficit for years

Stan Veuger | AEIdeas

The border adjustment, a combination of a tax on imports and a subsidy for exports, is a key source of revenue in the House Republican tax reform plan. House Ways and Means Chairman

Kevin Brady recommended yesterday that it be phased in gradually over a five-year period. Such a phase-in would change most economists' expectations of the policy's effects, with relative price shifts generating larger trade deficits early on and smaller ones starting in 2022 or 2023.

Subject: Morning Energy: Zinke orders review of sage grouse management plans — Democrats boil over at oversight obstruction — Outgoing EEI official looks at power market challenges

By Anthony Adragna | 06/08/2017 05:45 AM EDT

With help from Darius Dixon, Alex Guillén and Annie Snider

EVERYBODY'S HEARD ABOUT THIS BIRD: Interior Secretary Ryan Zinke will release a secretarial order this morning opening a review of sage grouse conservation plans across 11 Western states, Pro's Esther Whieldon reports . Though it may look like a humble bird, it's a huge deal for oil and gas interests. Zinke said governors have complained that the management plans set under the Obama administration hinder their ability to develop resources or use the lands for other activities. The order calls for the government within 60 days to report back on its examination of the 98 existing land use management plans for parts that should be tweaked or rescinded.

But former Interior Secretary Sally Jewell defended the existing management plans on Wednesday, telling POLITICO they were "designed to be very flexible and to allow the states and the federal land management agencies to work together" on both energy development and conservation. The Western Energy Alliance said it wasn't worried reworking the plans could take years. "What risk is there?" Kathleen Sgamma, the group's president, said. "Development is at practically a standstill already in sage grouse habitat." But conservation interests worried the review could do significant damage to existing efforts to protect the sage grouse habitat. "The review appears to be a thinly-veiled and unnecessary attempt to open up important habitat to oil and gas drilling, jeopardizing the important balance and flexibility offered in the existing plans," said Jim Lyons, a senior fellow at the Center for American Progress and former Interior official.

COMEY'S NOT THE ONLY GAME IN TOWN: Zinke faces his former House colleagues this morning at 9:30 a.m. at the House Appropriations Subcommittee on Interior, Environment, and Related Agencies, where he'll have to defend the Trump administration's proposed $1.1 billion, or 10 percent, cut in his agency's budget. Watch the hearing, slated for Rayburn 2007, here. Ahead of his appearance, the Vet Voice Foundation sent a letter to the committee voicing deep opposition to the proposed cuts.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and every single senator has a four-year degree of some sort. For today: There is one former Cabinet secretary serving in the U.S. Senate. Who is it? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

THE INNOVATION ISSUE: How should Washington think about innovation? What's its role in the economy—and what does it take for government to foster new technologies that help the whole nation, not just a favored few? In a month long Special Report, **The Agenda** takes a deep look at the surprising new politics of innovation, and ideas for how to drive it in a new era. In this package, you'll read about how AOL founder Steve Case became the first call for

Congresspeople who want to bring innovation to the heartland; a critical look at Challenge.gov , the federal government's prize competition designed to spur innovation; and the surprisingly innovative history of the U.S. Post Office, which was long on the forefront of technology before turning into a lesson in what *not* to do. Read the entire package here.

DEMOCRATS BASH OVERSIGHT IMPEDIMENTS: Numerous Democratic senators used a hearing considering OMB nominees to bash the Trump administration's formal memo allowing federal agencies to ignore oversight requests from minority-party lawmakers. "I will punch above my weight on this," top Senate Homeland Security and Governmental Affairs Democrat Claire McCaskill said. "The notion that we're going to partisan corners on oversight is disgusting." Yet, Deputy OMB Director nominee Russell Vought declined multiple times to guarantee he would respond to Democratic requests, prompting Heidi Heitkamp to call his answer "absolutely outrageous" and "almost disqualifying." Senate Democrats later Wednesday released a compilation of more than 100 oversight requests the Trump administration has ignored.

Lack of responsiveness to oversight requests has been especially pronounced from EPA to Senate EPW. An unusually fired-up ranking member Tom Carper said if roles were reversed and a Democratic administration ignored GOP requests, "You'd shut the place down. We probably ought to do that as well." He later told ME he would seek a commitment from all EPA officials coming before EPW to respond to all oversight requests (as DHS Secretary John Kelly promised during Tuesday congressional testimony). "Until members of this committee receive adequate responses from [EPA Administrator Scott] Pruitt so that we can all exercise our oversight responsibilities, I feel I have no choice but to oppose the consideration of any additional EPA nominees," Carper said in a statement late Wednesday after meeting with Trump's pick for agency enforcement chief, Susan Bodine.

For her part, law professor and Trump's pick to serve as the country's regulatory gatekeeper Neomi Rao said she is "committed to working with this committee on their requests." Along with the hearing, eight former administrators of the Office of Information and Regulatory Affairs backed Rao's nomination in a letter, including Obama's most recent official, Howard Shelanski.

TAKE A GLANCE! Pro's Darius Dixon sits down with retiring David Owens, a top executive with the Edison Electric Institute, on what's next for the power business and what looming challenges lie on the horizon. "Our members are totally focused on a clean energy pathway, irrespective of the Paris agreement," he said. "Customers are driving it. Customers want it."

GREENS SLAM DOJ DECISION TO END 'THIRD-PARTY' PAYMENTS: Environmental groups are slamming Attorney General Jeff Sessions' Thursday decision to stop requiring violators of laws like the Clean Air Act to pay for projects unrelated to the violation, a practice known as "third party settlements." Restitution funds should go to victims or taxpayers, "not to bankroll third-party special interest groups or the political friends of whoever is in power," Sessions said. Green groups quickly lashed out, saying the move will only reduce spending on environmental clean-ups. "This radical reversal of a decades-old policy could deprive communities of direct assistance for improvements in air and water quality, and is nothing more than an effort by the Trump administration to let companies like Fiat-Chrysler and Mercedes off

the hook," said Pat Gallagher, director of the Sierra Club's Environmental Law Program. Environmental Integrity Project Executive Director Eric Schaeffer, meanwhile, said Session's letter is similar to a House bill backed by conservative groups. "It's disheartening to see the Justice Department reading from their playbook."

For example: One recent prominent example is the last year's record $14.7 billion settlement with Volkswagen over its diesel emissions cheating scandal included $2.7 billion for projects to reduce pollution in areas where the cars had been, as well as $2 billion for electric vehicle infrastructure. However, the payments are typically much smaller than that. Just last week the Cause of Action Institute, a free-market group, urged EPA to re-open an August settlement reached with Harley-Davidson over illegal after-market defeat devices because it included $3 million to the American Lung Association's Northeast chapter to pay for upgrading wood-burning appliances.

GETTING FASTER AT THIS: Just one day after announcing his selection, the White House formally sent Jeffrey Bossert Clark's nomination to run DOJ's Environment and Natural Resources Division to the Senate.

Moving on up! North Dakota District Court Judge Ralph Erickson went out on a limb last year when he issued the first stay of the Obama administration's controversial Waters of the U.S. rule, just hours before it was set to go into effect, even as several other district courts denied stay requests or ruled that they didn't have jurisdiction over the issue. Now, the Fargo-based George W. Bush appointee, known to colleagues as a "Chamber of Commerce Republican," is being nominated by Trump for the 8th Circuit Court of Appeals. Erickson's 13-state hold on the rule helped pave the path for opponents of WOTUS to ultimately win a nationwide injunction from the 6th Circuit Court of Appeals that's still in place today.

FEINSTEIN WARNS OF 'FAILING' NUCLEAR...EVERYTHING: Sen. Dianne Feinstein , the top Democrat on energy appropriations, issued a lengthy broadside against a range of nuclear issues during a budget hearing for the Nuclear Regulatory Commission Wednesday afternoon. She reiterated her longstanding concerns about the delayed and over-budget MOX project in South Carolina — which even Trump's fiscal 2018 budget calls for axing, a decision in line with the Obama administration—before she rattled off a list of the nuclear industry sore spots. Between the waste problem, the economic woes of power reactors in the electricity markets, and a Westinghouse bankruptcy that has undermined nuclear projects in the South, the California Democrat declared: "Is this going to be a failing industry?" There are dozens of sites where nuclear waste is stored with nowhere yet to go, Feinstein noted. "Maybe that's a symptom of what's happening to the industry ... What I see is a big downhill slope for the [nuclear] industry." She supports temporary waste storage facilities, however, Feinstein demurred when reporters later asked whether she would accept having fiscal 2018 funding for reviving the Yucca Mountain project.

Energy spending chairman Sen. Lamar Alexander said the bipartisan quartet of senators who have worked on comprehensive nuclear waste legislation — most, since 2011 — plan to reintroduce the bill again this year. Timing? TBD. The Tennessee Republican also said that he plans to chat with Energy Secretary Rick Perry later this month about what the Energy

Department can do with existing authorities to move ahead with a privately run nuclear waste storage site.

DAM THOSE SEA LIONS: California sea lions might look sweet and innocent to tourists at a San Francisco pier, but to endangered Columbia River salmon, they are conniving killers. In recent years, the mammals have been swimming up the Columbia River in record numbers to feast on endangered salmon, steelhead and other native fish species as they move up the fish ladder at Bonneville Dam. As dam customers and local communities invest heavily in efforts to save the fish species, lawmakers are pushing to allow wildlife managers to kill more of the seafood-loving sea lions, with a measure from Rep. Jamie Herrera-Butler getting a hearing before a House Natural Resources Committee panel this morning.

But some environmentalists and Native American tribes with fishing rights in the basin argue that the measure is trying to fix the wrong problem; the real problem, they say, is four dams upstream on the Snake River that advocates have long eyed for removal. "You can kill all the sea lions you want to - and we have already been killing the most problematic sea lions - but unless we summon the courage to act on the best scientific information and finally address the very significant impacts of the hydroelectric dams on our salmon, they will not come back," Gary Dorr, chairman of the Nez Perce Tribe General Council will testify.

MAPPING DRINKING WATER CONTAMINTS: The Environmental Working Group is out this morning with new research and an interactive map showing the 47 locations across the country where toxic chemicals known as PFCs or PFASs have been detected in drinking water. All told, the group estimates the contaminants — used in Teflon manufacturing and firefighting foam — are in 15 million Americans' drinking water at some level. EPA has told local water officials that levels of PFCs above 70 parts per billion are likely unsafe, but has issued no federal regulation for the contaminants.

INHOFE WARY OF SLOW EPA SELECTIONS: Former EPW Chairman Jim Inhofe told ME Wednesday the White House has been "too slow" in selecting people for various roles at EPA and elsewhere. "We need to get a lot of people [more staff]," the Oklahoma Republican said. "Not just Pruitt." He added he's been very pleased with the administration's efforts to sell the decision to leave the Paris agreement.

McCAIN THINKS PARIS PULLOUT BAD FOR U.S. LEADERSHIP: Count Sen. John McCain among the Republican lawmakers worried about the broader impacts pulling out of the Paris agreement may have on U.S. international efforts. Asked what leaving says about the country's leadership on tough international problems, McCain told reporters: "Not much." He also said the country's international leadership was stronger under former President Barack Obama than Trump.

And there's more concern in private: Sen. Brian Schatz told ME many of his GOP colleagues are privately "terrified" about the message leaving the climate deal sends to the rest of the world. "Everyone is really worried," he said. "This was not a purely climate-related decision. This is a geopolitical miscalculation that diminished our standing."

MAIL CALL! COALITION URGES ENERGY RESEARCH FUNDING: An array of business and energy groups sent a letter to top congressional Appropriators urging strong federal support for energy research and development programs. "Continued support for investments in energy research programs across DOE can accelerate innovation and secure America's competitive advantage at this critical moment for our energy and economic future," the letter, signed by entities including Exelon, Shell, the U.S. Chamber of Commerce, the Nuclear Energy Institute and the Consumer Energy Alliance, says.

SENATORS FIGHT ANOTHER PROPOSED CUT: A bipartisan group of more than 20 senators sent a letter to Perry voicing opposition to a Trump budget provision calling for the auction of transmission assets of Power Marketing Administrations. "There are improvements that can and should be made to the operations of some PMAs, but the dismantling of them is simply not sound governmental policy," the letter, led by Energy and Natural Resources ranking member Maria Cantwell, said. Side note: ME can't remember the last letter signed by both John Barrasso and Martin Heinrich.

FIGHT HEARTLAND'S CLIMATE MATERIALS IN SCHOOLS: Four Senate Democrats — Sheldon Whitehouse, Elizabeth Warren, Brian Schatz and Ed Markey — asked Education Secretary Betsy DeVos in a letter Wednesday whether her agency played any role in the distribution of materials disputing the scientific consensus on climate change to 300,000 public school science teachers across the country. "It is our sincere hope that neither White House staff nor Department of Education officials have turned to the Heartland Institute on the issues of climate change and climate science, or had any role in this mailing to educators," they wrote.

FORUM LOOKS AT BENEFITS OF MONUMENTS: On the 111th anniversary of the Antiquities Act today, top House Natural Resources Democrat Raul Grijalva, Nydia Velázquez and Tim Walz , convene a public forum examining the "recreational, preservation and economic benefits of national monument designations" under that statute. It comes just days before Zinke is expected to offer his perspective to Trump on how the administration should handle the hotly contested Bears Ears and Grand Staircase-Escalante national monuments.

ILLINOIS DEMOCRATS PUSH RAUNER ON PARIS: Eleven Illinois House Democrats, led by Mike Quigley, sent a letter to Republican Gov. Bruce Rauner urging him to formally commit the state to meeting existing emissions reduction goals outlined in the Paris Agreement. "Because it is good for the residents of Illinois and because it is the right thing to do, we feel that the State of Illinois should publicly commit to do its part to meet the existing Paris Agreement goals with or without formal U.S. participation in the Agreement, and to subsequently take actions to do so," they wrote.

CONGRATS: The Standing Rock Sioux, who fought for months against the Dakota Access pipeline, will today at 11:30 a.m. receive the Wallace Global Fund's inaugural Henry A. Wallace Award commending those that stand up to political power. David Archambault II, the tribe's chairman, will speak about how the "significant financial award coupled with investments in renewable energy" will allow them to decrease reliance on fossil fuels. More details here after 11:30 a.m.

Stories from POLITICO Pro

Zinke orders review of sage grouse plans Back

By Esther Whieldon | 06/07/2017 07:17 PM EDT

Interior Secretary Ryan Zinke signed a secretarial order on Wednesday launching an internal review of the agency's sage grouse conservation plans across 11 Western states that aims to foster increased energy development.

The order, which will be released Thursday morning, directs the Bureau of Land Management, U.S. Fish and Wildlife Service and the U.S. Geological Survey to identify parts in BLM's 98 land use management plans that should be tweaked or rescinded because of their effect on development or due to differences with each state's own plans.

The review will focus on principal threats to the sage grouse habitat, such as invasive grasses and wildland fire, and will consider options like captive breeding and setting population targets — something the governors of Wyoming and Colorado warned may not be the right approach. Zinke directed the team to report back within 60 days.

Some governors have complained that the current management plans set under the Obama administration hinder their ability to develop oil and gas resources and create hurdles for timber harvesting and recreation, Zinke said in a press call.

But former Interior Secretary Sally Jewell told POLITICO on Wednesday the existing management plans were "designed to be very flexible and to allow the states and the federal land management agencies to work together" to support both sage grouse conservation and energy development.

However, she acknowledged the agency's 2015 decision not to list the sage grouse as endangered or threatened was not fully hashed out. "When you do something on this scope and scale, you haven't refined all the details yet," Jewell said. What matters is that "everybody understands that they need to protect critical habitat if that decision to not list the bird is going to stick."

The Western Energy Alliance, an oil and gas industry group, has challenged some of the existing plans in court and says the agency ignored the technological advances that reduce the impact of fossil fuel extraction on the sage grouse habitat, which spans all of the major producing basins in Wyoming, Utah, Montana and parts of Colorado.

Alliance President Kathleen Sgamma said Interior should defer more to states since they know where the sage grouse is most active, and she isn't worried that reworking the plans could take years.

"What risk is there?" Sgamma said. "Development is at practically a standstill already in sage grouse habitat."

Conservation groups contend Zinke's move will prioritize energy development over conservation.

"Zinke seems to believe that the highest and best use of America's public lands is for the development of dirty fossil fuels and so it's unsurprising that he's proposing to take a look at gutting protections for an imperiled species to benefit that industry," said Ted Zukoski, an Earthjustice staff attorney who has represented conservation groups in legal battles over sage grouse plans in Wyoming and Utah.

Collin O'Mara, president and CEO of the National Wildlife Federation, said Zinke's idea to set population targets for states could actually increase the likelihood the FWS will later list the bird, since the agency would have to revisit the decision if states fail to meet their targets.

"The very thing that some folks and industry are fearing, which is not being able to do anything, would almost definitely occur if they went on the path they're proposing," O'Mara said.

Nada Culver, senior counsel and director of The Wilderness Society's BLM Action Center, said the existing plans do not need to be scrapped but rather the agency can better clarify how fossil fuel and renewable energy projects can be developed in sage grouse habitat. "There's room in the plan to do that," she said.

Trump seeks 10 percent cut to Interior budget Back

By Ben Lefebvre | 05/23/2017 11:38 AM EDT

President Donald Trump's fiscal 2018 budget requests $11.7 billion for the Interior Department, a $1.1 billion or 10 percent decrease from the 2017 annualized CR level.

BLM would receive $963 million for activities like managing energy development and grazing on federal lands, down 10 percent from this year. The only part of BLM's budget to increase would be for energy and minerals management.

BOEM would see its budget to offer offshore drilling and wind development leases remain flat at $171 million, and the Office of Surface Mining budget would fall 11 percent to $109 million.

The proposal follows up on Trump's promises to slash clean energy and climate change programs launched under the Obama administration and to unwind regulations hampering fossil fuel development such as Interior's coal leasing moratorium.

Congress is unlikely to go along with the deep cuts, however. Any final spending bill would have to secure 60 votes in the Senate to overcome a Democratic filibuster.

Democrats outraged by Trump ban on info requests Back

By John Bresnahan | 06/02/2017 06:58 PM EDT

Hill Democrats are outraged by a new Trump administration policy to ignore information requests from members and senators unless they come from committee or subcommittee chairs.

They argue it's part of a broader pattern by the White House, designed to make the executive branch less responsive to Congress. And they say it effectively locks them out of information necessary for government oversight.

From refusing to release White House visitor logs to scrubbing agency websites of health and safety data and refusing to respond to simple media requests on government operations — or even admitting whether President Donald Trump is playing golf or not — the Trump administration has made it harder for Democrats and the press to find out what is going on inside the White House and federal agencies.

This effort is sometimes being aided by Republicans on Capitol Hill, or undertaken at their behest. For instance, House Financial Services Committee Chairman Jeb Hensarling (R-Texas) has asked federal agencies to refuse to comply with Freedom of Information Act requests designed to find out what data his panel is seeking from those agencies.

Such FOIA inquiries are routinely made by journalists, lobbyists and political operatives. News organizations have strenuously objected to Hensarling's demand.

But the latest initiative by the Trump administration — backed by a May 1, 2017, opinion drafted by the Office of Legal Counsel of the Justice Department — has crossed a once unthinkable line, Democrats argue.

Under this new policy, Democrats — as the minority party — would be limited in their ability to get information from the agencies unless the request was supported by a Republican chairmen. Since the GOP controls both the House and Senate, this would effectively give Republicans a veto over such information requests.

"Every member of Congress represents hundreds of thousands of American citizens who expect their representatives in the House and Senate to fulfill their duty under the Constitution to act as a check on the executive branch in order to promote the proper functioning of federal agencies and departments," said Rep. Elijah Cummings (D-Md.), ranking member on the Oversight and Government Reform Committee.

"We cannot do our jobs if the Trump administration adopts this unprecedented new policy of refusing to provide any information to Congress unless a request is backed by the implicit threat of a subpoena. This has never been the standard for responding to congressional inquiries — and

it should not take the threat of a subpoena to pry information free from this administration."

Cummings added: "This is the latest in a series of abuses by the Trump administration to operate in a shroud of secrecy, hiding their actions from federal ethics officials, the Government Accountability Office, the media, Congress, and the American people."

However, relying on the OLC opinion, White House officials say they do not have to respond to any requests from individual lawmakers, or those that do not come through a committee.

"'Oversight' is a constitutional power which Congress exercises through its established committees and their chairmen," said Lindsay Walters, a White House spokeswoman. "This legal advice provides much needed clarity to the executive branch so that the administration can ensure resources are effectively dedicated to accommodating authorized congressional oversight requests and responding to nonoversight requests, independent of the political party of the requester."

According to the OLC opinion, no minority lawmaker — including the ranking member of a full committee — may request information without the approval of committee or subcommittee chair.

"Individual members of Congress, including ranking minority members, do not have the authority to conduct oversight in the absence of a specific delegation by a full house, committee, or subcommittee," OLC asserted. "Accordingly, the Executive Branch's longstanding policy has been to engage in the established process for accommodating congressional requests for information only when those requests come from a committee, subcommittee, or chairman authorized to conduct oversight."

OLC added: "Members who are not committee or subcommittee chairmen sometimes seek information about executive branch programs or activities, whether for legislation, constituent service, or other legitimate purposes (such as Senators' role in providing advice and consent for presidential appointments) in the absence of delegated oversight authority. In those nonoversight contexts, the Executive Branch has historically exercised its discretion in determining whether and how to respond, following a general policy of providing only documents and information that are already public or would be available to the public through the Freedom of Information Act ... Whether it is appropriate to respond to requests ... from individual members will depend on the circumstances. In general, agencies have provided information only when doing so would not be overly burdensome and would not interfere with their ability to respond in a timely manner to duly authorized oversight requests."

The OLC memo was drafted by Curtis Gannon, the acting assistant attorney general.

Kelly to Senate: We'll respond to all inquiries Back

By Seung Min Kim | 06/06/2017 07:21 PM EDT

At least one top Trump Cabinet official is bucking administration policy when it comes to oversight requests from Congress.

Homeland Security Secretary John Kelly told senators on Tuesday during congressional testimony that his department will respond to any inquiry from members of Congress, no matter who sends the request. A May 1 opinion from the Justice Department argues that only chairmen - all of which are Republicans, since the GOP controls Congress — have the power to conduct oversight of the Trump administration.

"We're leaning forward," Kelly told members of the Senate Homeland Security and Governmental Affairs Committee. "Regardless of who the letter comes from, and it doesn't have to just come from a ranking member or chairman, we'll respond to any congressional inquiry."

Kelly noted during his testimony that under his tenure, DHS has appeared more than 37 times before Congress, sent 57 witnesses and has been involved in 973 "Hill engagements." The Homeland chief also noted that Senate Judiciary Committee Chairman Chuck Grassley (R-Iowa), known for his zealous oversight of the executive branch, "gave me nothing but high marks" on the matter.

"We're going to make that better," Kelly said. "I think in every case thus far, and certainly in the last 90 days, 60 days anyways, we're getting high marks. I will not freeze you out."

Democrats have expressed outrage about stonewalling from the Trump administration on their oversight requests — yet senators gave high marks to Kelly for his pledge to be responsive to Congress, no matter who sends the ask.

"Whether you're on that committee or whether you're a member of Congress, oversight is our big job," Sen. Jon Tester (D-Mont.) told Kelly. "I appreciate you not doing that and I hope that policy continues."

Added Missouri Sen. Claire McCaskill, the committee's top Democrat: "I do appreciate that you all have not frozen us out. Many of my colleagues are being frozen out across the government. You have not frozen us out, and I'm deeply grateful for that."

POLITICO Pro Q&A: Edison Electric Institute executive David Owens Back

By Darius Dixon | 06/08/2017 05:00 AM EDT

Climate change and consumer demands for cleaner power will define the future of the electric grid nearly as much the rivalry between Thomas Edison and Nikola Tesla defined its origin, says David Owens, a top executive with the utility industry's leading trade association in Washington.

Owens is retiring this month after 36 years with the Edison Electric Institute, where he serves as executive vice president for business operations, and he was instrumental in developing a landmark 2013 report that sought to warn utilities about the looming challenges to their business model. Before he heads off to spend more time with his family and learn to play golf, Owens sat down with POLITICO to discuss where the power business goes from here.

This interview has been edited for length and clarity.

What's maybe the biggest challenge or change you've seen in your 30-plus years with EEI?

I think now is the most transformative period that I've ever seen in the industry. And it harkens back to the turn of the last century and the big debate between Tesla and Edison. It was about alternating current versus direct current ... and these were two geniuses who had different views of how the industry evolved.

The subplot of that debate of AC versus DC was centralization versus decentralization — building large plants to serve customers, building larger grids to serve customers — that was evolving at that time. We're in the same place today, but it's even more challenging because we're in a place today where we're saying that the grid has a whole different functionality with a whole new set of new technologies which customers want.

The grid is being redesigned to be a multi-directional grid, and to be a grid that customers can plug into and get a broad array of services. The regulatory climate requires some major reform so all aspects — your relationship with the customers is changing, the infrastructure is changing, and the regulatory process is changing — all at the same time. That's what makes it so exciting and makes it challenging. And then to even build on this, there's cybersecurity that really complicates it. ... So this is the most, in my view, exciting time. It's also the most challenging time for the industry.

A residential customer class is no longer homogeneous. Some residential customers want private solar, some can't afford it. Some residential customers want an electric vehicle. They're all very, very different. Every customer class has unique aspects where they're more individualized.

Your "Disruptive Challenges" report argued that the financial health of the industry was at stake if electricity providers didn't change how they did business. What new issues would you include?

I would have spent more time talking about integrating distributive resources into the grid. I underestimated the challenge there. It's one thing to connect, it's another thing to integrate, and that's a huge challenge. I under-commented on the changes that are necessary to make the grid more dynamic and more transactive. If I had to do any rewriting, I would build on those. [And

that] the states have a bigger role.

Beyond what the government may or may not do on carbon, customers are driving renewables on the grid?

My view is that your vision's got to be customer-focused. That's the only way. If you look at all the great giants — Tesla and Edison were customer-driven.

There's been eight years of an administration very friendly to wind and solar and that had all sorts of programs for renewables. Now the Trump administration is here. How much gets curtailed by not having a federal government offering that kind of support?

Our industry's been firmly committed now. We kind of have three areas that we've been committed to for the last several years. ... First, it's a commitment to clean energy. If you look today, you'll see that one-third of our supply is provided by zero-carbon-emitting technologies.

But lot of new renewables were fueled by tax credits.

It doesn't matter. We buy a lot of that. We're probably the dominant supplier of wind. We're a very significant producer of solar energy. And those are state mandates, and even with those state mandates, those are customer choices.

Forty percent of the Fortune 500 companies have sustainability goals. We work with our customers, they have those goals, we respond to those goals. A number of shareholders are looking at the power supply sources that their retirement funds are in, and they are looking at utilities and they're looking at the overall supply mix of companies.

What is the practical implication for utilities of the White House leaving the Paris climate agreement? The administration had already promised to roll back the Clean Power Plan, for example.

Our members are totally focused on a clean energy pathway, irrespective of the Paris agreement.

They're moving aggressively forward for cleaner energy technologies. I mean, let's just take an example I mentioned under the Clean Power Plan. President Obama had a goal of reducing carbon emissions from our sector 32 percent by 2030. I just demonstrated to you that we've reached 25 percent and it's not 2030, so we are on a clean energy pathway and we will continue to be on a clean energy pathway.

Because customers are driving it?

Customers are driving it. Customers want it.

But in a world where customers have rooftop solar panels, efficient lighting, smart meters and electric vehicles, they are also buying fewer kilowatt-hours. How are utilities adapting to these more advanced communities?

There's a lot of potential for "smart" communities. And you see them evolving.

All communities are looking at aging infrastructure, so you want to take an integrative approach if you're looking at infrastructure. You want to look at transportation, communications, energy and water — all of those sectors working together — and it will provide a whole array of jobs.

There are less kilowatt-hours you're selling, but you're providing a broader array of services now. You move increasingly towards providing a broad array of services to the customer — if you are able to help them build a micro-grid, that's another technology that didn't really exist 10 years ago. ... You'll have some customers that will want to make sure they have better resiliency so they're willing to have their own power supply, to have their own little grid tied into the main grid. We're building those for those customers.

We're all about electrification. The big change is you may have the customer using less energy, but the customer has more plug-in devices than they've ever had before.

Feds reach settlement with Harley-Davidson over defeat devices Back

By Alex Guillén | 08/18/2016 12:32 PM EDT

Harley-Davidson riders may have to do a little less freewheel burning after the motorcycle maker agreed to stop selling defeat devices that had EPA spitting flames.

In a lawsuit and settlement announced today, the Justice Department and EPA allege that Harley-Davidson sold 340,000 "super tuners," after-market defeat devices that can be installed on motorcycles to boost their performance. But they also increase emissions of hydrocarbons and nitrogen oxides, which contribute to smog formation.

The company has agreed to buy back and destroy the devices, which it sold at dealerships across the U.S. since 2008. It also will pay a $12 million civil penalty and spend $3 million on air quality mitigation projects.

"Given Harley-Davidson's prominence in the industry, this is a very significant step toward our goal of stopping the sale of illegal aftermarket defeat devices that cause harmful pollution on our roads and in our communities," said John Cruden, DOJ's top environmental prosecutor.

The violations were discovered following a "routine" inspection, according to the agencies.

Any tuners Harley-Davidson looks to sell in the future will have to be approved by the California Air Resources Board.

DOJ and EPA also say Harley-Davidson sold more than 12,000 bikes from 2006 to 2008 that were not covered by a key EPA certification. The company agreed to have all future motorcycle models certified by EPA.

The deal is open to a 30-day public comment period and judicial approval.

Trump picks lawyer involved in carbon rule challenge for DOJ enviro chief Back

By Alex Guillén | 06/06/2017 06:38 PM EDT

President Donald Trump plans to nominate longtime Washington lawyer Jeffrey Bossert Clark, who is involved in the lawsuits challenging EPA's Clean Power Plan, to run DOJ's Environment and Natural Resources Division, the White House announced today.

Clark has been a partner at Kirkland & Ellis since 1996, except between 2001 to 2005, when he was the deputy assistant attorney for ENRD.

Clark is involved in the litigation over EPA's Clean Power Plan, and likely will have to recuse himself from that lawsuit while running ENRD. He represented Consumers' Research, a self-described "independent educational organization," in filing a "friend of the court" brief along with the state of Nevada that urged the D.C. Circuit Court of Appeals to strike down the carbon rule.

He previously successfully argued on behalf of the Bush EPA before the D.C. Circuit in *Massachusetts v. EPA*, though that ruling was later overturned by the Supreme Court and ultimately established EPA's mandate to regulate greenhouse gases.

Clark has testified before Congress several times recently, including last year, when he supported legislation that would end Chevron deference, the doctrine in which courts are supposed to accept an agency's reasonable interpretation of ambiguous statutes.

Coincidentally, Jeffrey Wood, the Trump appointee currently acting as head of ENRD who has had to recuse himself from the Clean Power Plan lawsuit because he represented Republican lawmakers in a filing, will testify on Thursday at a House Judiciary oversight hearing.

Subject: Today on Climate Beat

November 9, 2017

Today on Climate Beat . . .

. . . we visited Virginia, which is moving ahead with a draft GHG trading rule that is earning the praise of the nine-states in the Regional Greenhouse Gas Initiative (RGGI) power sector cap-and-trade program, which say the Old Dominion's plan shares many common elements with the Northeast trading market.

Speaking of rules, producers of advanced and cellulosic biofuels are mounting a last-ditch push to persuade the Trump administration to mandate higher volumes of low-carbon cellulosic biofuels required under the renewable fuel standard than proposed.

And our daily news roundup looked at how the Trump administration's release of a major climate science report does not appear to have shifted its climate regulatory policies or the views of key political nominees.

Driving the Day

Good Monday morning and welcome to Thanksgiving week. The president is leaving D.C. for Palm Beach tomorrow. Congress is gone. Might we get a quiet week?

HOT QUESTION IN PALM BEACH -- PALM BEACH POST: "Trump in Palm Beach: President's helicopter arrives. Will he use it?" by Christine Stapleton and Mahima Singh: "A huge Air Force transport plane flew over Mar-a-Lago Sunday afternoon before landing at Palm Beach International Airport where it delivered the presidential helicopter.

"But the delivery of the helicopter does not mean that President Donald Trump will use it to fly back and forth to Mar-a-Lago, where a new helipad was built on the back lawn of the estate. The helicopter, along with his black armored vehicle, travels with the president in the U.S. and overseas. ...

"Locals are anxious to learn how the president will make the two-mile trip between the airport and Mar-a-Lago. The trip from the estate to Trump's golf club, which is near the airport, also is about two miles. Earlier this year, the president's motorcade brought traffic to a standstill for hours as an army of local, state and federal law enforcement closed roads near the route along Southern Boulevard." http://pbpo.st/2zTkuEr

FRONT PAGE, **ABOVE THE FOLD** of the **BOSTON GLOBE: "Why evangelicals are again backing a Republican despite allegations of sexual misconduct,"** by Astead Herndon: "None of the nearly 10 pastors reached by phone said the allegations of sexual misconduct changed their views about Moore. Several said the allegations made them more proud to vote for the former judge. ...

"'I don't know how much these women are getting paid, but I can only believe they're getting a healthy sum,' said pastor Earl Wise, a Moore supporter from Millbrook, Ala. Wise said he would support Moore even if the allegations were true and the candidate was proved to have sexually molested teenage girls and women. 'There ought to be a statute of limitations on this stuff,' Wise said. 'How these gals came up with this, I don't know. They must have had some sweet dreams somewhere down the line. 'Plus,' he added, 'there are some 14-year-olds, who, the way they look, could pass for 20.'" http://bit.ly/2zRCkI9

GOOD CATCH -- AP'S KEN THOMAS and **CATHERINE LUCEY: "Bush administration alums rising in Trump's orbit":** "The Bush influence has only grown stronger recently, as Trump nominated Alex Azar to lead the Health and Human Services Department, where he served under the Bush administration, and tapped Jerome 'Jay' Powell to be chairman of the Federal Reserve. Powell served in the Treasury Department under President George H.W. Bush. ...

"The Bush alums in the administration include Transportation Secretary Elaine Chao, who served as Bush's labor secretary, and Dina Powell, a deputy national security adviser who oversaw White House personnel and later served in Bush's State Department under Condoleezza Rice. Even the president's schedule and day-to-day operations are overseen by a former member of Bush's inner circle: Joe Hagin, who served as deputy White House chief of staff." http://bit.ly/2B3yeu6

WAPO'S DAVE WEIGEL in **HOLLIS, NEW HAMPSHIRE: "Democrats see backlash over Republicans' tax bill as a key to winning in the suburbs":** "'Do you think it's right to raise taxes on millions of hard-working Americans?' asked Sen. Maggie Hassan (D-N.H.) at a Friday night Democratic fundraiser. 'Do you want to risk a $25 billion yearly cut to Medicare to give the wealthiest few a tax cut?' The crowd of about 600 Democrats bellowed 'no,' still shocked by the party's recent political gains. Coming off Election Day wins from Seattle to Long Island, Democrats are starting to see the shape of a new majority, built on a potential suburban backlash to changes in the tax code." http://wapo.st/2B4C8mq

JONATHAN MARTIN in **LITTLE ROCK** on **A14** of the **NYT: "Celebrating a 25-Year-Old Clinton Win, but Still Stung by a More Recent Defeat":** "It was billed as a celebration of the 25th anniversary of the Clintons' ascension to the White House, held in some of the same haunts of the Arkansas capital where it all began.

"Yet the election that Bill and Hillary Clinton were most eager to revisit here was not Mr. Clinton's triumph of a quarter-century ago. It was the one that Mrs. Clinton lost last year -- one that the former first couple and many of their supporters have clearly not gotten over. For the first part of a 90-minute conversation with the Clintons on Saturday moderated by James Carville, Mr. and Mrs. Clinton made all manner of references, both direct and indirect, to the man who denied their bid to reclaim the White House, Donald J. Trump.

"However, it was not until Mr. Clinton invoked his wife's losing campaign -- "I'm proud of her for getting caught trying to put people first," he said -- that her admirers rose to their feet in what was an obvious emotional release. ... Explaining how she had tried to cope with what she called a 'very painful' loss, she said she had taken to mystery novels 'because the bad guy always got it in the end.'" http://nyti.ms/2zV06CR

TWEETER IN CHIEF -- "Donald Trump takes the bait, and LaVar Ball's Big Baller Brand wins again," by USA Today's Sam Amick: "LaVar Ball has done it again. ... Never mind the threat of North Korea, the GOP tax reform plan or the accusations of collusion with Russia, the leader of the free world took a moment on Sunday to focus on a man who is nothing short of a marketing genius.

"'Now that the three basketball players are out of China and saved from years in jail, LaVar Ball, the father of LiAngelo, is unaccepting of what I did for his son and that shoplifting is no big deal,' Trump tweeted to his 42-million-plus followers about the incident in which three UCLA basketball players were caught shoplifting and later allowed to return home. 'I should have left them in jail!' Then about six hours later, Trump tweeted again: 'Shoplifting is a very big deal in China, as it should be (5-10 years in jail), but not to father LaVar, Should have gotten his son out during my next trip to China instead. China told them why they were released. Very ungrateful!'" Take a bow, LaVar." https://usat.ly/2zQisVZ

PROBLEMS FOR MERKEL IN GERMANY -- POLITICO EU'S MATTHEW KARNITSCHNIG: "Germany was thrust into political disarray late Sunday as talks to form a new government collapsed, raising the prospect of a new election while clouding Angela Merkel's future as chancellor. Negotiations between Merkel's conservatives, the liberal Free Democrats (FDP) and Greens ended abruptly just before midnight after FDP leader Christian Lindner said he saw no hope the parties could break a stalemate that had dogged the discussions for days. ...

"The failure means Germany is unlikely to have a stable government for months, hobbling Berlin's ability to make pressing strategic decisions on everything from foreign policy to eurozone reform. With Europe facing a host of serious challenges, including disputes over the rule of law in Poland and Hungary and Brexit, the political instability in the EU's largest country could hardly have come at a worse moment." http://politi.co/2iwqM38

****** **A message from the Peter G. Peterson Foundation:** As Washington debates tax reform, there's talk of tax cuts that will give trillions of dollars back to American taxpayers. That sounds great. But if these tax cuts aren't paid for, future generations will be stuck with the bill. Congress, tax reform should grow the economy. Not the debt. www.pgpf.org/tax-reform ******

INSIDE 1600 PENNSYLVANIA AVE -- "'A long winter': White House aides divided over scope, risks of Russia probe," by WaPo's Ashley Parker and Carol D. Leonnig: "Six months into a special counsel's investigation of Russian interference in the 2016

presidential election, White House aides and others in President Trump's close orbit are increasingly divided in their assessments of the expanding probe and how worried administration officials and campaign aides should be about their potential legal peril, according to numerous people familiar with the debate. Some in the West Wing avoid the mere mention of Russia or the investigation whenever possible.

"Others take solace in the reassurances of White House lawyer Ty Cobb that special counsel Robert S. Mueller III will be wrapping up the probe soon and the president and those close to him will be exonerated. ... [S]ometimes, gallows humor creeps into the West Wing. 'When the staff gather in the morning at the White House now, they jokingly say: "Good morning. Are you wired?"' one person close to the administration said." http://wapo.st/2AWg6S5

-- "Special Counsel sends wide-ranging request for documents to Justice Department," by ABC News' Mike Levine: "Special Counsel Robert Mueller's team investigating whether President Donald Trump sought to obstruct a federal inquiry into connections between his presidential campaign and Russian operatives has now directed the Justice Department to turn over a broad array of documents, ABC News has learned. In particular, Mueller's investigators are keen to obtain emails related to the firing of FBI Director James Comey and the earlier decision of Attorney General Jeff Sessions to recuse himself from the entire matter, according to a source who has not seen the specific request but was told about it. Issued within the past month, the directive marks the special counsel's first records request to the Justice Department, and it means Mueller is now demanding documents from the department overseeing his investigation." http://abcn.ws/2hNASPR

JEN HABERKORN and **PAUL DEMKO: "Obamacare mandate repeal may not deliver predicted blow":** "Repealing Obamacare's individual mandate might not be the devastating blow to health insurance markets that supporters of the law fear. Because the tax penalty for not having insurance is far less costly than what many Americans would have to pay for coverage, many have chosen to take the fine. Eliminating it, therefore, might not radically change behavior -- or fulfill the dire predictions of spiking premiums and vast increases in uninsured people that economists, health providers and politicians once predicted." http://politi.co/2zV4eTn

NEW POLICY ALERT -- "Trump Administration Tightens Scrutiny of Skilled Worker Visa Applicants," by WSJ's Laura Meckler: "The Trump administration is adding hurdles and increasing scrutiny in the employment-visa application process, making it harder for businesses to hire foreign workers, and companies and immigration attorneys are bracing for more changes soon. ... The administration is more closely scrutinizing applications for the high-skilled visa program known as H-1B, sending back more than one in four applications between January and August via 'requests for further evidence,' according to data from U.S. Citizenship and Immigration Services, known as USCIS, which administers the program. A year earlier, fewer than one in five were sent back." http://on.wsj.com/2B3aXbH

-- "What EPA chief Scott Pruitt promised - and what he's done," by Alex Guillen and Emily Holden. http://politi.co/2jGrZZ4

LAST NIGHT ON "KASIE DC" -- @KasieDC: "So, what happens when you file a sexual harassment claim on Capitol Hill? Let's walk through it ..." http://bit.ly/2mJSwpB

TRUMP'S MONDAY -- THE PRESIDENT is holding a Cabinet meeting, lunching with VP Mike Pence and HUD Secretary Ben Carson. In the afternoon, Trump will meet with Secretary of State Rex Tillerson and U.N. Ambassador Nikki Haley.

THE JUICE ...

-- FORMER TREASURY SECRETARY JACK LEW is joining the private equity firm Lindsay Goldberg. He will still be a visiting professor at Columbia's School of International and Public Affairs.

FOR YOUR RADAR -- "Zimbabwe's Mugabe passes deadline to resign; now impeachment," by AP's Chris Torchia and Farai Mutsaka in Harare: "Longtime President Robert Mugabe ignored a midday deadline set by the ruling party to step down or face impeachment proceedings, while Zimbabweans stunned by his lack of resignation during a national address vowed more protests to make him leave. "Arrogant Mugabe disregards Zanu PF," one newspaper headline said. Opposition activists and the influential liberation war veterans association announced more demonstrations to pressure the 93-year-old Mugabe, the world's oldest head of state, to step down after 37 year in power. ... Zimbabweans were astonished that Mugabe, flanked by the military in his national address Sunday night, remained defiant." http://bit.ly/2z0zNYk

--"Behind Mugabe's Rapid Fall: A Firing, a Feud and a First Lady," by NYT's Norimitsu Onishi: http://nyti.ms/2zRPTH7

CHARLES MANSON IS DEAD -- AP's John Rogers: "In the summer of 1969, a scruffy ex-convict with a magnetic hold on young women sent some of his disciples into the night to carry out a series of gruesome killings in Los Angeles. In so doing, Charles Manson became the leering face of evil on front pages across America and rewrote the history of an era. Manson, the hippie cult leader who died of natural causes Sunday at age 83 after nearly half a century behind bars, orchestrated the slayings of pregnant actress Sharon Tate and six other people, butchered at two homes on successive August nights by intruders who scrawled 'Pigs' and 'Healter Skelter' (sic) in the victims' blood.

"The slaughter horrified the world. To many, the collateral damage included the era of peace, love and flower power. The Manson Family killings, along with the bloodshed later that year during a Rolling Stones concert at California's Altamont Speedway, seemed to expose the violent and drug-riddled underside of the counterculture and sent a shiver of fear through America." http://bit.ly/2zXGKLI

PHOTO DU JOUR: Former White House communications director Anthony Scaramucci talks during an interview with the Associated Press in Jerusalem on Nov. 20. Scaramucci told the AP that although he has not spoken to Donald Trump in over a month, he talks to the president's inner circle "regularly" and considers himself a media "surrogate" for the administration. | Ariel Schalit/AP Photo

SUSAN GLASSER: "How Trump Is Driving Democrats and Republicans Together" http://politi.co/2hPlZwy ... ***Transcript of her conversation with Sen. Ben Cardin*** http://politi.co/2B4ycSX

MARC CAPUTO and MATT DIXON - "Sex scandals wreak havoc on Florida politics: 'Florida is on fire. And it's not a controlled burn,' said one top Democrat": "The Florida Democratic Party chairman resigned Friday in shame. A Republican state senator faces possible expulsion for sexual harassment. The state Senate's top Democratic leader abruptly stepped down after admitting an extramarital affair with a lobbyist. Even amid the flood of sexual misconduct revelations that have rocked state capitals across the country, the nation's biggest swing state has lived up to its reputation for political drama and excess over the past month, with major implications for next year's contested U.S. Senate and gubernatorial elections - and the next presidential race. ...

"The biggest shock to the system unfolded Friday when the state's Democratic Party chair, Stephen Bittel, quit after POLITICO Florida reported numerous women and men complained he created an uncomfortable work environment for young women ... Bittel's resignation was a major blow to U.S. Sen. Bill Nelson - Florida's only statewide elected Democrat - who spent political capital on his friend and longtime donor to become chair of the state party in a bitterly contested race this year." http://politi.co/2AewiC7 ... ***Subscribe to Florida Playbook*** http://politi.co/2jHSZY1

IN ISRAEL -- JERUSALEM POST: "POLICE QUESTION NETANYAHU FOR THE SIXTH TIME IN CORRUPTION PROBE: Israeli Ambassador Ron Dermer questioned in Netanyahu probe ... Police arrive at Netanyahu's residence to question him in corruption probe," by Udi Shaham: "The questioning focused mainly on Case 1000, the 'gifts affair,' in which it is suspected that the prime minister received expensive gifts from various businessmen." http://bit.ly/2mKHfoX!

****** **A message from the Peter G. Peterson Foundation:** Washington is debating tax reform. There's talk of substantial tax cuts that will give trillions of dollars back to American taxpayers. That sounds great. But if these tax cuts aren't paid for, future generations will be stuck with the bill. Congress is right to pursue tax reform - the code

is outdated, complex and unfair. Tax reform done right should be permanent, because businesses and individuals need certainty to plan and invest. It should be based on realistic, independent projections and assumptions about the effect on our economy and our fiscal outlook. And it should enjoy bipartisan support, so that it's durable over time. Lawmakers should use the valuable opportunity presented by tax reform both to improve our fiscal outlook and strengthen the economy at the same time. Learn more about fiscally responsible tax reform at www.pgpf.org/tax-reform. ******

BEYOND THE BELTWAY -- "As Silicon Valley Gets 'Crazy,' Midwest Beckons Tech Investors," by NYT's Steve Lohr: "The rationale for investing in the Midwest combines cost and opportunity. A top-flight software engineer who is paid $100,000 a year in the Midwest might well command $200,000 or more in the Bay Area. The Midwest, the optimists say, also has ample tech talent, with excellent engineers coming out of major state and private universities in the region. But they also point to technology shifts. As technology transforms nontech industries like health care, agriculture, transportation, finance and manufacturing, the Midwest investors argue that being close to customers will be more important than being close to the wellspring of technology." http://nyti.ms/2B4PTSb

MEDIAWATCH -- DAVID GURA to MSNBC -- per Talking Biz News' Chris Roush: "Gura has joined MSNBC as an anchor and correspondent. Gura had been with Bloomberg TV since March 2015. He has been the anchor of 'Bloomberg Markets: The Trump Economy' on Bloomberg Television and also co-anchor of 'Bloomberg Surveillance' on Bloomberg Radio. ... Previously, he was a senior reporter for, and the principal back-up host of, 'Marketplace.'" http://bit.ly/2ziYyn5

Subject: POLITICO's Morning Energy: Democrats hold fire on climate amid hurricane devastation — Pruitt, Ross to meet with Trump today — Upton pushes Enbridge for immediate repairs

By Anthony Adragna | 09/12/2017 10:00 AM EDT

ALL QUIET ON THE CLIMATE FRONT: Even as the double whammy of Hurricanes Harvey and Irma offers the U.S. an up-front glimpse of the types of devastation the world faces due to a warming climate, Democrats are largely holding their fire on Republicans, Pro's Emily Holden and Elana Schor report . Instead, they appear to be heeding the warnings of several of President Donald Trump's Cabinet officials that discussing climate change with large swaths of land still underwater would be insensitive. "The response to Hurricanes Harvey and Irma thus far has been more muted, likely in part because of a desire to keep the focus on immediate disaster relief," said Trevor Houser, former energy adviser to Hillary Clinton's presidential campaign.

Democrats say there will be opportunities to explore the linkage between extreme weather and manmade climate change moving forward. "We have a lot of time to make that point, and I think we also have a lot of legislative opportunities as we look at reauthorizing flood insurance and funding the disaster relief," Sen. Sheldon Whitehouse , one of staunchest climate hawks, said. Environmental advocates have hit Trump's inaction on climate change online, but have shied away from criticizing Democrats. "The truth is, I'd settle for politicians not talking about climate at all, and instead actually doing something," Bill McKibben, founder of 350.org, said.

Tone shift at the White House? Tom Bossert, Trump's homeland security adviser, told reporters Monday that the cause of both devastating hurricanes is "outside of my ability to analyze" but he acknowledged a need to bolster flood and coastal defenses threatened by rising seas and powerful storms. "We continue to take seriously the climate change, not the cause of it, but the things that we observe," he said. "What President Trump remains committed to is making sure that federal dollars aren't used to build things that will be in harm's way later or that won't be hardened against the future predictable floods that we see." While those words may offer hope to some, ME would note Trump has erased climate considerations from government processes, nixed flood standards for federal projects, withdrawn the U.S. from the Paris climate change agreement, pulled back a regulation to limit carbon dioxide from power plants and halted funding to help poor nations adapt to new weather extremes.

More money needed? Asked if the administration would put more money into agencies like FEMA and EPA, Bossert expressed openness to requesting additional funds - "We'll put money in as money is needed to address the need," he said - but added "right now we have plenty of resources to get through this."

Irma could've been even worse: Even as millions lost power during Hurricane Irma, the head of the state's largest utility said outages could've been even worse if Florida Power & Light Co. had not spent $3 billion to improve the energy grid, POLITICO Florida's Bruce Ritchie reports. "With this kind of storm what I can tell you is, we would be facing a much longer restoration" without the work, FPL President and CEO Eric Silagy said Monday.

Nelson wants Perry's help: The federal government should establish a fuel reserve in Florida to help prevent the fuel shortages that occurred during the response to Irma, Sen. Bill Nelson wrote in a Monday letter to Energy Secretary Rick Perry. "A Florida gasoline supply reserve would ensure that residents and first responders have access to an emergency supply of fuel, and help prevent the shortages that may have kept some from evacuating and may hinder recovery efforts going forward," Florida's senior senator wrote. DOE created the Northeast Gasoline Supply Reserve in 2014 following similar issues during Hurricane Sandy, he noted.

Checking in on Texas: EPA reported late Monday that 35 of the 2,238 drinking water systems affected by Harvey remain shut down, while 35 of the 1,219 wastewater treatment plants in affected countries also remain inoperable. The agency further said it had "directed potential responsible parties or has independently started collecting samples at the 43 Superfund sites to further confirm any impacts from the storm" and said additional assessments continue at two sites - San Jacinto Waste Pits and U.S. Oil Recovery. In addition, Reuters reported federal officials are cleaning up spills of oil and chemicals spilled from a dozen industrial facilities in the aftermath of Harvey.

Yikes: Water testing arranged by The New York Times from two Houston neighborhoods showed alarmingly high levels of bacteria and toxins. Tests from the Briarhills Parkway in the Houston Energy Corridor showed levels of E. coli at levels four times of what's considered safe, while Clayton Homes public housing development downtown showed concentrations of E. Coli more than 135 times healthy levels, as well as elevated levels of lead, arsenic and other heavy metals. The EPA said Monday that 40 of 1,219 waste treatment plants affected by Harvey were not working.

SIREN! Trump meets this morning at 10 a.m. in the Oval Office with EPA Administrator Scott Pruitt and Commerce Secretary Wilbur Ross. EPA and the White House did not respond to further requests about what they'll be chatting about.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and NRDC's Ana Unruh Cohen was the first (of many) to identify Sam Rayburn as the longest-serving House speaker. For today: Which state has had eight lawmakers go on to serve as speaker? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

EPA LAUNCHES PROBE INTO ARKEMA INCIDENT: Officials at EPA have requested information from Arkema to help them ascertain whether the chemical company properly followed Clean Air Act safety regulations before Hurricane Harvey. EPA asked in its letter, obtained by ME Monday, for a response from the company within 10 calendar days of receipt. Among the information sought is what the company did before the storm to prepare for potential flooding and loss of electricity, as well as the quantities of chemicals stored on site. Several chemical containers at the Crosby, Texas, facility caught fire after the hurricane deluged it with water.

MINE PRUITT VISITED FURLOUGHS WORKERS: Consol Energy's Bailey Mine

complex, which EPA Administrator Scott Pruitt visited back in April as one of the first stops on his "Back to Basics" campaign, furloughed more than 300 workers Monday after Pennsylvania's Department of Environmental Protection failed to approve a permit modification in time, the Observer-Reporter reports . A company spokesman said it was the first time in the site's history that state environmental regulators failed to approve a permit in a "timely manner" to maintain operations.

THEY'RE BACCCCCCK: House lawmakers return for a day and a half of work, with a slate of 6:30 p.m. votes expected to include the Interior and EPA section of eight-title, spending package H.R. 3354 (115) under consideration.

SPORTSMEN'S PACKAGE PUSH BEGINS AGAIN: The House Natural Resources Federal Lands subpanel today considers a broad sportsmen's package, H.R. 3668 (115). It contains a controversial provision that would make it easier to obtain gun silencers, bars EPA from ever regulating lead ammunition under the Toxic Substances Control Act, and reauthorizes the North American Wetlands Conservation Act for five years at $50 million per year. The subpanel cancelled the initial hearing on the bill following the June congressional baseball shooting, which the measure's sponsor, Jeff Duncan (R-S.C.), witnessed.

If you go: The session kicks off at 10 a.m. in Longworth 1334. Ranking member Raul Grijalva and Rep. Mike Thompson will discuss the gun silencer provision during a press availability following the hearing.

Other hearings shelved: After Hurricane Irma delayed the House's return, the Energy and Commerce Energy Subcommittee canceled what was to have been a blockbuster hearing on the grid's reliability. Witnesses would have included FERC Chairman Neil Chatterjee (in what would have been his first appearance since confirmation), as well as Gerry Cauley, president of the North American Electric Reliability Corporation, and a DOE official. In addition, the House Science Committee postponed a full committee hearing on the electric grid's resilience that had also been slated for 10 a.m.

SENATE ENERGY LOOKS AT LABS: Senators on the Energy and Natural Resources Energy Subcommittee take a look at the contributions of DOE's national laboratories at a hearing beginning at 3 p.m. Sens. Cory Gardner and Joe Manchin deliver opening remarks, followed by testimony from representatives of West Virginia University, Argonne National Laboratory, Duke Energy and National Renewable Energy Laboratory. More here.

MAIL CALL! UPTON PUSHES ENBRIDGE FOR REPAIRS: Rep. Fred Upton, chairman of the Energy and Commerce Energy Subcommittee, sent a letter Monday urging Enbridge to "conduct repairs immediately" on its Line 5 pipeline after revelations of gaps in the line's protective coating. "The more recent disclosure of a loss of protective coating and the likelihood that human error was a factor raises serious concerns about Enbridge's compliance with federal pipeline safety laws," Upton wrote. "Rest assured I will remain hyper-vigilant and expect prompt response to my request."

MORE VOICES WEIGH IN ON SOLAR TARIFF CASE: Six right-leaning policy groups

will urge the International Trade Commission not to back a bid from solar manufacturers Suniva and SolarWorld USA to impose tariffs on imported solar products in a letter today, Pro Trade's Megan Cassella reports . The groups fear an affirmative ITC decision would double the cost of solar products in the U.S. and leave the country vulnerable to retaliation and challenges at the WTO. "Similar to steel in 2002, solar tariffs today would amount to nothing more than a crony capitalist giveaway to failing companies," they wrote.

GREENS CHALLENGE NEVADA LEASE SALES: The Sierra Club and the Center for Biological Diversity filed a lawsuit Monday challenging BLM's June sale of oil and gas leases in northern Nevada. The lawsuit argues the government failed to consider the possible consequences of drilling in the area, ranging from contamination of desert water sources to increased greenhouse gas emissions. The June 13 sale brought in just $38,560 from three parcels covering approximately 5,760 acres out of more than 95,000 acres offered.

NO MASS EXODUS AMONG THE FEDS: Just more than two percent of federal employees have left their positions since Trump became president, more than during presidents George W. Bush and Barack Obama's opening months but less dramatic than the mass departures feared, BuzzFeed reports. Among the highest departure rates were the departments of Energy (2.7 percent) and Interior (2.5 percent).

REPORT: ROOM FOR IMPROVEMENT FOR SOLAR DIVERSITY: A report out Monday from the Solar Foundation finds women represent just 28 percent of employees in the 260,000 person strong solar industry and people of color are a tiny share of the workforce. African-Americans hold just 7 percent of solar jobs, while Hispanic or Latino employees are 17 percent of the workforce and Asians are 9 percent. The study concludes "women and people of color face significant hurdles to achieving equal pay and positions in the solar industry."

MOVERS, SHAKERS: Adam Kolton has been named executive director of the Alaska Wilderness League, effective Oct. 10. He'll join from the National Wildlife Federation where he's currently vice president of federal advocacy.

SPOTTED: Gina McCarthy, sporting a rolling backpack, at the Dirty Habit bar near the EPA. She was drinking red wine and laughing jovially on Monday evening, per our tipster.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

October 3, 2017

Latest News

Agency Economists Say 2-1 Order 'Doubles' Benefit-Cost Analysis Work

EPA and other government economists are facing significant challenges implementing President Donald Trump's order requiring agencies to repeal two rules for every new one, saying the order doubles the workload of regulatory impact analysis and raises other uncertainties, though some economists call such new directives part of the job.

EPA Says No Update On Ozone Designations As NRDC Threatens Lawsuit

EPA says it has “no further information” about when it will issue designations for which areas of the United States are either attaining or in nonattainment with the 2015 ozone standard after appearing to miss a Clean Air Act deadline of Oct. 1 for the findings, and environmentalists are threatening a suit to force issuance of the designations.

EPA Faces Potential Suit Over Deadline For Comments On Coal Ash Guide

An environmentalist attorney is threatening suit over EPA's sudden closure of the public comment docket for its guidance to states on crafting coal ash permit programs despite the agency verbally vowing to grant 30 more days for input, adding to the legal uncertainty over the implementation of EPA's coal ash disposal regime.

EPA Hedges On GAO Calls To Bolster Enforcement Of Lead & Copper Rule

EPA is generally agreeing with the Government Accountability Office (GAO) that better data on where lead service lines are located would improve the agency's oversight of the Safe Drinking Water Act Lead and Copper Rule (LCR), though the agency stops short of committing to GAO's call to require states to report the data and take other steps to help enforce the rule.

Pesticide Reviews Advance But EPA Attainment Of Court Schedule Uncertain

Trump administration officials are reviewing staff-level draft biological opinions of the first pesticides to undergo a new process for assessing risks to endangered species

but it is unclear whether they will complete their reviews and forward them to EPA in time to meet a year-end court deadline for issuing the final versions.

Judge's Order For New EPA FOIA Search May Boost Herbicide Finding Suit

A federal district court judge is ordering EPA to expand its Freedom of Information Act (FOIA) search in response to environmentalists' request for documents backing the agency's conclusion that a controversial herbicide will not harm listed species, with environmentalists hoping to use the documents in a separate suit challenging the finding.

Daily Feed

EPA formally launches industry 'smart sector' program

“Regulatory policies will be more effective when they are informed by actual conditions in regulated sectors,” one top industry official says of the effort.

Our most read: a new IRIS, EPA's state reviews, what will replace CPP

Also: critics wonder how Pruitt spending issues will impact EPA policy and court rejects indefinite stay of coal-ash rule.

EPA names water permits chief as acting OST director

Deborah Nagle, who has headed EPA's water permits division, became the acting director of the office that crafts risk-based water quality criteria and other standards.

Environmentalists fight EPA ozone 'backsliding' argument

Environmentalists are urging a federal appeals court to reject EPA's defense of measures the agency claims will prevent weakening of ozone air pollution controls.

Goffman to direct Harvard Law's environment program

The former high-ranking EPA official is slated to lead the high-profile program.

Ewire: EPA rejects call to extend coal ash guide comment deadline

At 11th-hour, EPA rescinds pledge to extend coal ash comment deadline, Plus, strict ozone standards take effect.

Environmentalists fault EPA's defense of boiler MACT

Environmentalists continue to attack EPA's rationale behind air toxics regulation of industrial boilers, following appellate court oral argument over the rule.

Subject: Playbook Power Briefing, presented by UC Davis: FIRST IN PLAYBOOK: ALYSSA FARAH to team PENCE as press secy -- THE MATH on the Graham-Cassidy Obamacare bill -- TRUMP makes his U.N. debut -- OBAMA gives speeches to Wall Street -- FLYNN sets up defense fund

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by UC Davis

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Monday afternoon. Anna is live RIGHT NOW at the Concordia Summit in New York, moderating a panel with David Axelrod and Tim Phillips. *Tune in* http://politi.co/2xKFfSe

NEWS -- FIRST IN PLAYBOOK -- ALYSSA FARAH, a top adviser to the House Freedom Caucus, is leaving Capitol Hill to work as press secretary to **VP MIKE PENCE. FARAH** , who has worked for the HFC during the chairmanships of Reps. Jim Jordan (R-Ohio) and Mark Meadows (R-N.C.), helped grow the conservative group from a ragtag group of lawmakers to a force in the House of Representatives. She'll give Pence a critical bridge to the Hill, as the Trump administration girds for several high-profile legislative pushes. Christina Mandreucci is joining Pence's team as director of regional media. ... ***Matt Nussbaum and Jake's write up*** http://politi.co/2yksA5K

TRUMP'S U.N. DEBUT -- AP's DARLENE SUPERVILLE and **JONATHAN LEMIRE** at the U.N.: "President Donald Trump made his debut at the United Nations on Monday, using his first moments at the world body to urge the 193-nation organization to reduce bureaucracy and costs while more clearly defining its mission around the world.

"But while Trump chastised the United Nations -- an organization he sharply criticized as a candidate for president for its spiraling costs -- he said the United States would 'pledge to be partners in your work' in order to make the U.N. 'a more effective force' for peace across the globe." http://bit.ly/2wpGZQA

-- TRUMP opened his speech by talking about Trump World Tower, which is located across the street from the United Nations: "I actually saw great potential right across the street, to be honest with you. And it was only for the reason that the United Nations was here that that turned out to be such a successful project."

-- ANITA KUMAR of McClatchy, today's pooler, says Trump spoke as he exited the U.N.: "I think the main message is 'make the United Nations Great.' Not again, 'make the United Nations great.' Such tremendous potential, and I think we'll be able to do

this."

THE GRAHAM-CASSIDY BILL -- @randpaul: "Graham/Cassidy keeps Obamacare and tells the states to run it. No thanks. ... No [conservative] should vote for a rebranded trillion dollar spending program just because it adds some block grants. ... Keeping 90% of Obamacare is not ok and it's not what we ran on. Conservatives should say no."

-- THE MATH. If Rand is a no, two more no votes kills this bill. Sen. Susan Collins (R-Me.) is believed to be a no, according to our colleagues Burgess Everett and Josh Dawsey. The Congressional Budget Office has not yet scored the bill. **SENATE GOP INSIDERS** tell us that all eyes are on the Graham-Cassidy proposal, as the bipartisan effort -- driven by Sen. Lamar Alexander (R-Tenn.) and Sen. Patty Murray (D-Wash.) -- does not have as much support from the White House and House leaders.

-- @BenjySarlin: "McCain tells @GarrettHaake he wants bipartisan bill with wks of hearings. BUT may 'reluctantly' back Graham-Cassidy if AZ Gov approves" ***Remember: McCain said he voted against the health care bill last time because of the process.***

-- ALERT: Senate Homeland Security and Governmental Affairs hearing next Monday: "Block Grants: How States Can Reduce Health Care Costs" http://bit.ly/2xfVrJP

-- "Dems demand full CBO analysis of Obamacare repeal plan," by Heather Caygle http://politi.co/2xKeI7v

FOR GOOD MEASURE -- SENATE LEADERSHIP FUND, the super PAC backed by Senate Majority Leader Mitch McConnell, just disclosed $144,177 in mailings in support of Sen. Luther Strange in Alabama.

WHEN YOU PUT IT THIS WAY ... -- CNN'S MANU RAJU (@mkraju): "Ty Cobb this month: Rails on reporter in late-night, on-record emails; fooled by prankster; gossips loudly about Russia probe at restaurant".

****** **A message from UC Davis:** As the No. 1 agricultural university in the nation, UC Davis understands how food touches every living thing and what's at stake if we don't answer its challenges. Our research innovations and partnerships with farms, industry and policymakers around the world help ensure healthy, safe food for all. Learn more at 21stcentury.ucdavis.edu. ******

THE LATEST ON RUSSIA -- "Legal defense fund set up for Michael Flynn," by Louis Nelson: "The family of former White House national security adviser Michael Flynn has set up a legal defense fund for him, soliciting donations to ease the "tremendous financial burden" from the ongoing investigations into his actions and the 2016 presidential campaign. 'The enormous expense of attorneys' fees and other related expenses far exceed their ability to pay,' Flynn's brother and sister said in a statement emailed to reporters early Monday. 'To help ensure that he can defend himself, we have

set up a legal defense fund, and we are asking Mike's supporters, veterans, and all people of goodwill to contribute whatever amount they can to this fund.' The fund will not accept donations from foreign governments, nor will it accept money from the Trump campaign or the Trump Organization." http://politi.co/2xKT9np

44'S NEW GIG -- "Obama Goes From White House to Wall Street in Less Than One Year," by Bloomberg's Max Abelson: "Last month ... Barack Obama spoke in New York to clients of Northern Trust Corp. for about $400,000, a person familiar with his appearance said. Last week, he reminisced about the White House for Carlyle Group LP, one of the world's biggest private equity firms, according to two people who were there. Next week, he'll give a keynote speech at investment bank Cantor Fitzgerald LP's health-care conference.

"Obama is coming to Wall Street less than a year after leaving the White House, following a path that's well trod and well paid. While he can't run for president, he continues to be an influential voice in a party torn between celebrating and vilifying corporate power. His new work with banks might suggest which side of the debate he'll be on and disappoint anyone expecting him to avoid a trap that snared Clinton. Or, as some of his executive friends see it, he's just a private citizen giving a few paid speeches to other successful people while writing his next book. ...

"Since leaving office, Obama has delivered public and private speeches that are 'true to his values,' Kevin Lewis, a spokesman for the former president, said in an email. 'His paid speeches in part have allowed President Obama to contribute $2 million to Chicago programs offering job training and employment opportunities to low-income youth.'" https://bloom.bg/2xKMw4D

ON PARIS -- "Top White House aide seeks to clarify U.S. stance on Paris deal," by Andrew Restuccia and Kalina Oroschakoff: "During a breakfast meeting in New York City on the sidelines of the United Nations General Assembly, White House National Economic Council Director Gary Cohn sought to clarify the U.S. stance after a report that the Trump administration planned to remain in the pact sparked global confusion.

"Cohn told about a dozen international energy ministers that the U.S. was prepared to withdraw if it doesn't secure better terms, according to two people present at the meeting who asked for anonymity to discuss the private huddle. The sources added that Cohn offered few details on what precisely the U.S. wants, but stressed that the administration wants to continue engaging with other countries on energy and climate issues broadly." http://politi.co/2xLA1Wx

FOIA WATCH -- "Governments turn tables by suing public records requesters," by the AP's Ryan Foley: "Government bodies are increasingly turning the tables on citizens who seek public records that might be embarrassing or legally sensitive. Instead of granting or denying their requests, a growing number of school districts, municipalities and state agencies have filed lawsuits against people making the requests -- taxpayers, government watchdogs and journalists who must then pursue the records in court at

their own expense.

"The lawsuits generally ask judges to rule that the records being sought do not have to be divulged. They name the requesters as defendants but do not seek damage awards. Still, the recent trend has alarmed freedom-of-information advocates, who say it's becoming a new way for governments to hide information, delay disclosure and intimidate critics." http://bit.ly/2xKqpLw

HOW SPICER TOOK HOLLYWOOD -- CNN's Brian Stelter: "The Emmys surprise came together just a few days before Sunday's telecast. Colbert wondered aloud if Spicer might play along, and one of his 'Late Show' producers then pitched it, according to a source with firsthand knowledge of the skit. Spicer was already in Los Angeles for Kimmel's show last Wednesday. He briefly flew back east, to his home near Washington, then returned to Los Angeles for a secret dress rehearsal before the broadcast. The auditorium was almost entirely emptied before Spicer practiced his lines, the source said, so that his participation wouldn't leak ahead of time. ...

"Both sources who spoke with CNN on Monday morning marveled at the way Spicer was mobbed by Emmys attendees both at the awards show and at the parties afterward. 'He could barely eat at the Governor's Ball, he was so popular,' one of the sources said." http://cnnmon.ie/2xJsYNS

TODAY'S BEYOND THE BELTWAY -- Menendez trial moves slowly -- Illinois A.G. makes surprise announcement that she won't seek reelection

TRUMP'S CABINET: JUST LIKE US -- "U.S. Education Secretary Betsy DeVos' 163-foot yacht docked in Milwaukee": "Boats this big always get attention in Milwaukee, and even more so when they belong to a member of President Donald Trump's cabinet. SeaQuest, a 163-foot, $40 million yacht, belongs to Dick and Betsy DeVos of Michigan. Betsy DeVos is the U.S. secretary of education. A Department of Education spokesperson said DeVos is not in Milwaukee and has no plans to be in the area, and that some other family must be using the boat.

"The department's website shows that last week she was scheduled to visit six Western and Midwestern states as part of her Rethink School tour. There was no activity around the boat, and no clear sign anyone was on board Sunday morning." http://bit.ly/2y9yA0j

BUSINESS BURST -- "Equifax Stock Sales Are the Focus of U.S. Criminal Probe," by Bloomberg's Tom Schoenberg and Anders Melin: "The U.S. Justice Department has opened a criminal investigation into whether top officials at Equifax Inc. violated insider trading laws when they sold stock before the company disclosed that it had been hacked, according to people familiar with the investigation. Prosecutors are looking at the stock sales by Equifax Chief Financial Officer John Gamble; President of U.S. Information Solutions Joseph Loughran; and President of Workforce Solutions Rodolfo

Ploder, said two people, who asked not to be named because the probe is confidential." https://bloom.bg/2woRfc5

VW's Porsche Brand Probed as Diesel Fraud Scandal Spreads

Posted July 10, 2017, 11:14 A.M. ET

By Karin Matussek

Volkswagen AG's Porsche brand faces a formal probe by German prosecutors as the diesel-emissions scandal spreads to VW's iconic sports-car maker.

Prosecutors in Stuttgart said they were escalating an informal investigation started last year into allegations the Porsche brand may have defrauded consumers by selling autos with software that manipulated emissions.

While no individual suspects were named, investigators are looking into the role of employees at the Porsche brand in Germany and the U.S., Jan Holzner, spokesman for Stuttgart prosecutors, said in an emailed statement July 10.

VW admitted in September 2015 that about 11 million diesel cars worldwide were fitted with so-called defeat devices—embedded algorithms used to game emissions tests. The company is now facing three separate diesel-fraud probes in its home country. Braunschweig prosecutors are investigating 37 suspects at Volkswagen, while Munich counterparts are looking into an unidentified number of suspects at the Audi unit, one of whom was arrested a week ago. VW has also faced criminal probes abroad, including the U.S.

The Porsche brand's press office didn't immediately reply to an email seeking comment.

The brand is the sports car-making unit owned by VW. It's separate from Porsche Automobil Holding SE, a listed company whose main asset is a majority share in VW.

Former Energy Commissioner Honorable Joins Reed Smith Law Firm

Posted July 10, 2017, 12:00 P.M. ET

By Rebecca Kern

Colette Honorable, who left the Federal Energy Regulatory Commission last month, has joined the global law firm Reed Smith to help start up a FERC-focused regulatory team, the firm announced today.

Honorable served as a Democratic FERC commissioner appointed by President Barack Obama from January 2015 until her term expired on June 30. FERC is now down to one lone commissioner—Acting Chairman Cheryl LaFleur— after being without a voting quorum of three commissioners since February. Two Republican FERC nominees Neil Chatterjee and Robert Powelson were favorably reported out of the Senate committee in June and currently await a Senate floor vote.

Honorable will be co-leading Reed Smith's FERC regulatory team with Regina Speed-Bost, a legal adviser to former FERC commissioner William Massey. Speed-Bost most recently was chair of Schiff Hardin's Energy Group in Washington. The firm also hired Debra Ann Palmer, a colleague of Speed-Bost and a former partner Schiff Hardin, who also has FERC and state regulatory experience.

While Reed Smith has employed FERC attorneys in the past, this will be the firm's first FERC-focused regulatory offering, Honorable told Bloomberg BNA in an interview. Reed Smith represents natural gas, renewable, oil and power companies as well utilities with 140 attorneys in its energy practices. The firm has 1,700 attorneys in its 27 global offices.

EU to Amend Rules for Import, Export of Hazardous Chemicals

Posted July 10, 2017, 11:13 A.M. ET

By Stephen Gardner

A European Commission initiative published July 7 would amend a European Union regulation that sets out rules for companies importing and exporting hazardous chemicals to include 11 new chemicals that the bloc recently restricted or banned.

The chemicals were added to Part 1 of Annex I in the Prior Informed Consent Regulation (PIC, Regulation (EU) 649/2012), meaning exporters will have to submit a notification for the 11 substances to the European Chemicals Agency. That agency will then forward the information to authorities in the importing country.

The draft amending regulation also would add nine of the 11 chemicals to the PIC Regulation's Annex I Part 2, so that importing countries are required to formally consent to their import.

The 11 substances—three chemicals used in pesticides, three chemicals used in biocides, and five industrial chemicals—were automatically put forward for listing in the amending regulation because of their restricted or banned statuses under EU law, including the bloc's REACH law (Regulation No. 1907/2006 on the registration, evaluation, and authorization of chemicals

In addition, four groups of substances would be added to Annex V of the PIC Regulation, which lists persistent organic pollutants that are subject to an EU export ban. The additions to Annex V would include hexabromocyclododecane, hexachlorobutadiene, polychlorinated naphthalenes and a group

of polybrominated diphenyl ethers, when contained in recycled materials.

These substances have all recently been listed under the United Nations Stockholm Convention on Persistent Organic Pollutants, which specifies highly hazardous chemicals that should be phased out from production and use.

The draft amending regulation said the substances should be listed in the PIC Regulation "in order to implement the Stockholm Convention."

The commission, the EU's executive arm, said any comments on the draft amending regulation could be submitted through Aug. 4.

Wall Street Sours on $9 Billion Mechanism for Green Projects

Posted July 10, 2017, 10:05 A.M. ET

By Brian Eckhouse

Wall Street investors have gone cold on one of the main mechanisms banks invented to fund the green-energy revolution.

The business structure, known as the yieldco, feeds dividends from operating solar and wind farms to investors. Yieldcos first emerged in 2013, when the largest U.S. independent power producer, NRG Energy Inc., launched NRG Yield Inc. The parent formed the yieldco to hold operating wind and solar farms that it had built or acquired. Revenue from those assets funded dividends.

Yieldcos raised $7.9 billion in public equity in 2014 and 2015 but only $1 billion since then, according to Bloomberg New Energy Finance.

The shift is further fallout from the collapse of yieldco promoter SunEdison Inc. and has changed the way clean-energy developers finance themselves. In years past, they started yieldcos to buy projects once they were operating, recycling the capital into new installations. Now, they're turning to a large and deepening pool of buyers—insurance companies and pension funds—to provide funding and sometimes take control of income-producing assets.

"The idea of a you-have-to-have-a-virtuous circle—that idea that you're hooked at the hip between the public markets and growth—is dead," Mike Garland, chief executive officer of the San Francisco-based yieldco Pattern Energy Group Inc., said in an interview. "The market is saying, `Come to us last, not first.' When we started, it was 'Come to us first."'

Pattern Energy and NRG Yield are projected to pay 12-month dividend yields of 6.4 percent and 6.5 percent respectively, according to data compiled by Bloomberg. That's about three times higher than the average 2.1 percent yield of 500 companies on the Standard & Poor's index.

The yieldco structure became a major growth engine for renewables, spawning at least eight yieldcos in North America and similar entities in the U.K. and continental Europe. Investors liked the story: support the growth of clean-energy while also reaping dividends that flow from electricity sales guaranteed by long-term contracts. And because the yieldcos promised to buy more and more projects, the dividends would only grow.

Fading Appeal

But headwinds—most prominently the run-up to SunEdison's bankruptcy in April 2016—stopped at least three other would-be yieldcos from forming and have forced others to eschew public markets for private fundraising. SunEdison had relied on its two yieldcos to finance its dizzying multi-continent buying-binge, thrusting them into turmoil and introducing doubt that the companies would be able to grow fast enough to pay rising dividends. The company's struggles contributed to a broad renewables slump that made it more difficult to raise funds from the public equity markets.

As the business case for yieldcos has lost favor, a new group of buyer has emerged: pension funds and insurance companies hungry for wind and solar farms' steady revenues. And the green bond market has boomed. Issues of bonds linked to environmental projects is set to surpass $100 billion this year more than 10 times the scale of the market in 2012, according to BNEF.

"The yieldco market got very heated," Barry Gold, the New York-based head of Orix Infrastructure & Renewable Energy, said in an interview. "But we all know how things work in the financial markets: if a door closes, someone opens a window somewhere."

Several yieldco owners see the writing on the wall. SunEdison, Abengoa SA and First Solar Inc. are trying to distance themselves from the units they created. Mark Widmar, First Solar's chief executive officer, described the company's 8Point3 Energy Partners LP yieldco as "a dormant vehicle basically."

Pattern, meanwhile, is continuing as an owner of clean-energy projects—the original intent of yieldcos—but is now pushing into development. It recently bought a stake in an affiliated private company that feeds it projects, and it recruited Canada-based Public Sector Pension Investment Board to buy almost 10 percent of its stock.

"We're short renewables in the U.S.—and we want more," Patrick Samson, a Montreal-based managing director at PSP Investments, said in an interview. "My pensions need long-term cash flows."

Institutional investors are indeed emerging as a heavy of renewables mergers and acquisistions:

• Alberta Investment Management Corp. in February agreed to buy one of the largest U.S. private solar companies, sPower, alongside AES Corp.

• John Hancock Life Insurance Co. in March said it will buy a 49-percent stake in a clean-energy portfolio owned by Exelon Corp.

• Activist investor Paul Singermay pressured NRG to sell its yieldco, potentially to capture institutional interest in wind and solar farms.

"Why not just sell to a pension fund?" said Jigar Shah, chief executive officer of clean-energy investor Generate Capital Inc. and a former SunEdison CEO. "There are literally hundreds of them that want these assets."

Wind and solar farms typically have utility contracts that ensure consistent revenue streams, which neatly dovetail with the long-dated liabilities that insurers and pension fund managers accrue. For endowments, solar and wind investments help satisfy their heightened sustainable targets.

"The concept of pooling operational renewable-energy assets and selling to private investors will outlive the yieldco," said Daniel Shurey, a New York-based analyst at BNEF, said by email. "The

term 'yieldco' is going extinct."

Shell Plans to Spend $1 Billion a Year on Clean Energy by 2020

Posted July 10, 2017, 9:30 A.M. ET

By Rakteem Katakey

Royal Dutch Shell Plc plans to spend as much as $1 billion a year on its New Energies division as the transition toward renewable power and electric cars accelerates.

"In some parts of the world we are beginning to see battery electric cars starting to gain consumer acceptance" while wind and solar costs are falling fast, Shell CEO Ben Van Beurden said in a speech in Istanbul July 10. "All of this is good news for the world and must accelerate," while still offering opportunities for producers of fossil fuels.

Shell sees opportunities in hydrogen fuel-cells, liquefied natural gas and next-generation biofuels for air travel, shipping and heavy freight—areas of transport for which batteries aren't adequate. The intermittent nature of wind and solar energy means power plants fired by natural gas will have a long-term role, Van Beurden said.

Van Beurden was addressing the World Petroleum Congress—a gathering of ministers and CEOs from some of the largest oil producers—at a time when the accelerating shift to clean energy is raising questions about their long-term business models. While Russian Energy Minister Alexander Novak and Saudi Arabian Oil Co. boss Amin Nasser said oil and gas will be dominant for decades to come, Van Beurden highlighted the potential for some of the fastest-growing nations to leapfrog straight to a cleaner energy mix.

"When you consider the areas of the world where energy demand is still to expand, like Asia and sub-Saharan Africa, there is a huge opportunity," Van Beurden said. "These are areas that are not, on the whole, locked into a coal-driven system. There is the potential for them to shift more directly onto a less energy-intensive pathway to development."

There is often too much focus on energy-transition policies in Europe and North America instead of the fast-growing developing world, Van Beurden said. "What happens in England is important, but what happens in Ethiopia is at least as important. From Denmark to the DRC, from the U.S. to Uganda, to India, to China, there is a lot of work to do."

These countries will still require fossil fuels to develop industries such as steel, cement and chemicals because they need a heat intensity that cannot come from electricity alone, he said.

France's Utility May Have to Shut 17 Nuclear Reactors

Posted July 10, 2017, 9:27 A.M. ET

By Francois de Beaupuy

Electricite de France SA, the state-controlled operator of 58 nuclear reactors, may have to shut as many as 17 to fulfill government plans to reduce the share of atomic power in France's electricity output to 50 percent by 2025, Ecology Minister Nicolas Hulot said.

The exact number of shutdowns required isn't clear because "we haven't developed everything in our climate plan," Hulot said July 10 on RTL radio. Given the 50 percent target, "everyone can understand that we'll close a number of reactors to achieve that goal, and not just one."

Shutting 17 reactors by 2025 would be a huge challenge for France and EDF, as nuclear power accounted for 72 percent of the country's electricity output in 2016. While the government has pledged to boost renewables, it's not yet evident how they would make up for the shutdown of almost a third of EDF's reactors. France also would face calls from the company to compensate it for potential loss of revenue and the cost of dismantling earlier than planned.

In January, EDF reached a compromise with the government in which the utility would receive 490 million euros ($559 million) and possible subsequent payments if the two reactors of the Fessenheim nuclear plant are taken offline.

—With assistance from Marie Mawad.

Daily Environment Report for EPA

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Energy
Sent: Wed 7/26/2017 2:04:17 PM
Subject: POLITICO's Morning Energy, presented by Chevron: House tees up debate on Energy and Water title — N.Y. nuke subsidy survives first court test — Russian sanctions bill on way to becoming law

By Anthony Adragna | 07/26/2017 10:00 AM EDT

With help from Esther Whieldon and Annie Snider

LET THERE BE MINI-BUS! The House takes up its first spending package today, with nearly four dozen amendments to the Energy and Water title rounding out a list of the first 72 approved by the House Rules Committee. Here are some of the items that caught our eye:

- Democrats will try to strip a rider protecting the Trump administration's withdrawal of the Obama-era Waters of the U.S. rule from legal challenges.

- Another Democratic amendment seeks to restore $921 million to DOE's Energy Efficiency and Renewable Energy account, paid for with cuts to nuclear weapons programs.

- Republican Rep. Paul Gosar's amendment would block work on the social cost of carbon.

- Nevada Democrats are trying to block pro-Yucca Mountain language with an amendment that's sure to fail.

- Ohio Republican Steve Stivers wants to block any funding for Cape Wind, the offshore wind project in Massachusetts' Nantucket Sound that has been stalled for years.

- Florida Republican Ron DeSantis proposed an amendment effectively eliminating the position of director of Civil Works of the Army Corps of Engineers.

- Michigan Republicans Paul Mitchell and Bill Huizenga will get a vote on their amendment aimed at keeping the Corps from slow-walking a controversial study related to keeping Asian carp from reaching the Great Lakes.

- New Jersey Democrat Bonnie Watson Coleman proposed defunding any work in conjunction with President Donald Trump's January executive order aimed at speeding the environmental review of high-priority infrastructure projects, like the Keystone XL pipeline.

- And, of course, the perennial light bulb rider blocking enforcement of DOE efficiency standards returns from Rep. Michael Burgess.

Meanwhile, the League of Conservation Voters urged House lawmakers to reject the mini-spending package, H.R. 3219 (115). The bill "severely cuts federal investment in clean energy, abandoning the research and development that has led to economic growth, job creation, and numerous public health and environmental benefits," the group writes. It also blasts the inclusion of policy riders in the package.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and former Commerce official Randy Mye was first to identify 19th-century Colorado Sen. Henry Teller as the first to win reelection after switching parties. For today: Who won a general election to the House but lost a special election to fill out the remainder of a term on the *same day* back in 2012? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

CUOMO WINS ROUND ONE: A federal judge on Tuesday tossed out a challenge from non-nuclear generators in New York over Gov. Andrew Cuomo's multi-billion dollar nuclear subsidy, POLITICO New York's David Giambusso reports. Judge Valerie Caproni of U.S. District Court for the Southern District of New York said the "zero emission credits" going to four flagging nuclear reactors upstate did not interfere with wholesale energy markets. Instead, she ruled, the program advanced a state policy goal that was within New York's purview and stopped short of treading on FERC's terrain. "Although FERC has substantial authority over interstate wholesale energy sales, the regulation of retail rates for sales of electricity belongs to the States," Caproni wrote in her ruling. "A whole host of measures that States might employ to encourage clean energy development - such as tax incentives or direct subsidies - involve propping up the operation of a generator that might otherwise be unprofitable."

Plaintiffs vow to appeal: Non-nuclear generators argued the subsidy, estimated to cost state utility customers between $2.8 billion and $7.6 billion, interfered with FERC's jurisdiction, and they plan to appeal the ruling, David and Marie J. French report. "The New York Public Service Commission failed ratepayers last year when it instituted a $7.6 billion bailout for uneconomic nuclear plants with almost no public input," New Yorkers for Fair Energy Coalition, one of the plaintiffs in the case, said in a statement. "We will continue to oppose the bailout in the courts and other public forums."

Cuomo praised Caproni's ruling in his own statement: "At a time when the federal government has abdicated its leadership on climate change, New York will continue to do all that we can to ensure that current and future generations have a clean and safe environment in which to live and prosper," the governor said.

9th CIRCUIT PAUSES KIDS CLIMATE SUIT FOR NOW: Three judges on the 9th Circuit Court of Appeals on Tuesday hit the pause button on the kids' climate lawsuit asking for an order forcing the government to take immediate and dramatic action on greenhouse gas emissions. The Trump administration has made an emergency request for the 9th Circuit to stop the proceedings after a federal judge in Oregon said the lawsuit from a group of children and young adults could move to trial. The 9th Circuit's one-page order only says that the pause is temporary and another forthcoming order will address the Trump administration's request more fully. It was issued by Judges Alfred Goodwin, a Richard Nixon appointee, Alex Kozinski (Reagan) and Marsha Berzon (Clinton).

SANCTIONS SAIL THROUGH: House lawmakers voted overwhelmingly Tuesday 419-3 to approve new sanctions on Russia, Iran and North Korea, POLITICO's Elana Schor reports. Arguably the biggest outstanding question is whether Trump will force Congress to override a

veto. "The White House is reviewing the House legislation and awaits a final legislative package for the President's desk," Press Secretary Sarah Huckabee Sanders said Tuesday.

MORE NOMINATIONS SENT OVER: After being nominated last week, the White House sent over to the Senate the nominations of Joseph Balash to be an assistant secretary of Interior and Sam Clovis to be USDA's top scientist on Tuesday. But we're still waiting for the White House to send over the paperwork for Trump's last two nominees for the quorum-less FERC, Democratic Senate staffer Rich Glick and Republican lawyer Kevin McIntyre, whose nominations were announced June 28 and July 13.

** **A message from Chevron**: When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://bit.ly/2vFizh5 **

ANOTHER WEIRD DAY! Energy Secretary Rick Perry's odd Tuesday started when he published an op-ed on Obamacare repeal in an Ohio newspaper (nothing going on in the energy world, Mr. Secretary?), but it took an even more bizarre turn when DOE confirmed Russian pranksters successfully got a 20-minute conversation with him last week, Pro's Darius Dixon reports. The trickery occurred July 19 but got published Tuesday in a story in the Pravda Report, a Russian publication, that linked to the audio. Topics discussed on the call, which Perry thought was with a Ukrainian official on behalf of Prime Minister Volodymyr Groysman, included the 2015 Paris climate agreement, the Nord Stream 2 natural gas pipeline and possibility of a biofuel devised from home-brewed alcohol and manure.

Another day, another rally: Perry and Zinke, along with Trump aide Kellyanne Conway and VA Secretary David Shulkin, traveled with the president to Youngstown, Ohio on Tuesday night for a rally. Picture here.

CARBON TAX PUSHES GOES ON: Two of the Senate's biggest climate hawks - Democrats Sheldon Whitehouse and Brian Schatz - are taking another shot at their carbon tax legislation and will unveil their latest proposal today at the American Enterprise Institute at 3 p.m. Last Congress, the duo proposed legislation they said would curb carbon dioxide emissions by more than 40 percent by 2025 compared to 2005 levels and return revenue collected through the tax to the U.S. public. Details on today's event here.

SUPERFUND RECS ARE OUT: EPA Administrator Scott Pruitt's push to speed the cleanup of Superfund sites got a major boost Tuesday with the release of 42 recommendations from a task force, Pro's Alex Guillén reports. Pruitt also signed a memo with a number of immediate actions, including identifying as many sites as possible for deletion from the National Priorities List and prioritizing sites "where the risk of human exposure is not fully controlled."

WHAT'S IN THAT TAP WATER? Just because your drinking water utility gets a passing grade from federal regulators doesn't mean there aren't dangerous chemicals in your drinking water - that's the message the Environmental Working Group is underscoring with a massive update to its database compiling monitoring records from nearly 50,000 public water systems across the country. EWG found that between 2010-2015, utilities tested for about 500 different

contaminants and found 267 at varying levels in Americans' drinking water, including 93 linked to cancer, 78 associated with brain and nervous system damage and 63 suspected of causing harm to children or fetuses. More than half of the chemicals found are not federally regulated, meaning the federal government has not decided what constitutes an unsafe level of exposure.

BOARDROOM BATTLES ON CLIMATE AT RISK? Business groups, led by the U.S. Chamber, are pushing to make it harder for shareholder activists to push resolutions on issues like climate change onto companies for consideration, Pro Financial Services' Patrick Temple-West reports. The Chamber released seven recommendations Tuesday for SEC consideration that would limit investors' ability to pressure public companies on matters like climate change. Environmental and religious activists hailed a major victory earlier this year when Exxon Mobil investors in May approved a resolution calling for the company to publish annual assessments of the impact of climate change on its business. But the Chamber argued that "no small subset of activists should be able to commandeer longstanding SEC rules for their own parochial purposes."

ALL AROUND THE HILL -

IT'S A MEGA-MARKUP! The House Natural Resources Committee will today vote on 21 bills covering various topics. Among the most interesting: H.R. 825 (115), a bipartisan bill that calls for streamlined permitting for wind, solar, and geothermal energy generation on federal land, and H.R. 2199 (115), which calls for a searchable, online record of federal land ownership and management. A full list of bills being considered is available here.

WILDLIFE BILL SET FOR EPW VOTE: EPW senators consider legislation S. 1514 (115) today that would reauthorize a number of popular conservation programs, including the North American Wetlands Conservation Act and Chesapeake Bay Program, through 2023. While provisions in the package blocking Endangered Species Act protections for gray wolves in Wyoming and the Great Lakes region have drawn some Democratic criticism, it's expected to clear the panel at a business meeting.

PUBLIC LANDS BILLS BEFORE ENR: The Senate Energy and Natural Resources Committee's Subcommittee on Public Lands, Forests and Mining holds a hearing this morning on a slew of public lands bills, including a measure S. 941 (115) from Montana Democrat Jon Tester to make permanent a 20-year mining ban imposed by the Obama administration last year for roughly 30,000 acres of national forest outside Yellowstone National Park, and Barrasso's "Water Rights Protection Act" S. 1230 (115), barring the federal government from requiring that water rights be transferred before an entity can receive a lease, permit or other use agreement.

LAST CALL! Today's the last day for the public to comment to the Commerce Department on 11 National Marine Sanctuaries and Marine National Monuments designated since 2007. The review is separate - but related - to Interior's review of nearly two dozen national monuments designated under the Antiquities Act. Ahead of the deadline, 65 House Democrats sent a letter voicing strong support for the existing designations. Nearly 44,000 comments have already poured in, and you can contribute here . The Center for American Progress has questioned whether Interior will share comments mentioning the marine monument review with Commerce,

though an agency spokeswoman told ME they would.

MAIL CALL! MORE CALL FOR GARRETT WITHDRAWAL: Three senior House Democrats - Steny Hoyer, Gwen Moore and Denny Heck - sent a letter to Trump Tuesday calling on him to withdraw Scott Garrett's nomination to run the Export-Import Bank. They join various business groups imploring the administration to pull the plug on the former New Jersey congressman, one of the biggest critics of the bank. The White House has resisted those calls to date.

CONCERNS RAISED OVER EFFICIENCY PROGRAM: Rep. Ken Calvert, the top EPA and Interior appropriator, raised concerns about the Property Assessed Clean Energy program, which helps private customers implement energy efficiency upgrades on their properties, in a letter obtained by ME. The California Republican asked HUD Secretary Ben Carson and VA Secretary David Shulkin to look into whether the program is being used to "mislead and defraud" citizens into risky loans that might ultimately cause them to default.

TIME TO ACT ON HYDROPOWER: A collection of more than a dozen groups, including the Edison Electric Institute, National Hydropower Association and National Rural Electric Cooperative Association, sent a letter to senior House and Senate energy leaders urging them to push for the passage of bills modernizing the hydropower licensing process. "We believe the hydropower provisions in S. 1460 (115), the Energy and Natural Resources Act of 2017, and H.R. 3043 (115), the Hydropower Policy Modernization Act of 2017, can provide a framework for final legislation to implement this new direction in a way that protects environmental values, public participation, and all existing authorities of federal and state decision???makers in the licensing process," they wrote.

OIA RELEASES STATE OUTDOOR RECREATION SPENDING FIGURES: The Outdoor Industry Association is today releasing data on state-by-state outdoor recreation spending. California boasts $92 billion in annual outdoor recreation consumer spending but most other states bring in more modest amounts. New York sees about $41.8 billion in recreational spending, Colorado sees $28 billion, and Utah and Nevada bring in close to the same levels at $12.3 billion and $12.6 billion, respectively.

CLIMATE SOLUTIONS CAUCUS HITS 50: Reps. Steve Knight (R-Calif.) and Marcy Kaptur (D-Ohio) announced Tuesday they've joined the bipartisan Climate Solutions Caucus, bringing its total membership to 50. "Now 50 members strong, the Climate Solutions Caucus is evidence that there is a growing, diverse, and bipartisan coalition of members of Congress ready to put petty politics aside and find meaningful solutions to the challenges posed by sea level rise and climate change," Carlos Curbelo said in a statement.

Subject: House approves ozone delay bill

By Alex Guillén

07/18/2017 05:49 PM EDT

The House has passed legislation that would delay implementation of the 2015 ozone standard and lengthen the review cycle for EPA to review key air quality standards by a vote of 229-199.

Rep. Pete Olson's Ozone Standards Implementation Act, H.R. 806 (115), would give states until 2026 to tell EPA which areas they believe meet the standard.

More broadly, the bill would also extend the National Ambient Air Quality Standards review cycle from five years to 10 years. Many Republicans and industry groups argue the five-year timeline means companies must contend with frequently updated standards for ozone and other pollutants, but environmentalists and Democrats note that EPA already routinely misses its review deadlines.

The bill would also direct EPA to study how atmospheric ozone forms and describe how foreign sources contribute to U.S. pollution levels.

It is similar to legislation that was voted out of the House last year on a largely party-line vote but did not move forward in the Senate.

EPA Administrator Scott Pruitt has ordered a review of the 2015 rule, which lowered the standard to 70 parts per billion amid major opposition from industry. He has also announced plans to delay by one year the next administrative step in implementing the rule, designating which areas do not meet the limits, which was supposed to happen this fall. That delay is being challenged in court by environmentalists.

WHAT'S NEXT: Senate Republicans have pushed their own version of this bill, but it is unlikely to get the 60 votes needed to overcome a Democratic filibuster in that chamber.

Subject: Energy and Commerce sends bipartisan drinking water bill to the floor

By Annie Snider

07/27/2017 02:25 PM EDT

The House Energy and Commerce Committee added provisions relating to security and emerging contaminants to a bipartisan drinking water measure before sending it to the full House for consideration by voice vote.

The amendment to H.R. 3387 (115), the first major update to the Safe Drinking Water Act in two decades, tackles concerns about new or newly understood contaminants appearing in tap water by requiring utilities to monitor for such "emerging contaminants" so long as funding and laboratory capacity is available.

The amendment also requires water systems to develop emergency response plans addressing their vulnerability to natural disasters and terrorism, and it creates an EPA grant program to help utilities improve their resiliency.

And the committee added provisions requiring water systems to make their reports to consumers more understandable, and encouraging states and EPA to look at whether restructuring or consolidation could help water systems with long-running problems.

The overall measure tackles issues raised in the wake of the lead crisis in Flint, Mich., and represents one of the first bipartisan infrastructure measures to gain traction under the Trump administration.

WHAT'S NEXT: The bill has broad support and should be able to easily pass the House, although it remains to be seen when it would get a vote. Companion legislation has yet to be introduced in the Senate.

Analysis

Air Pollution Control Guide

Federal

Plywood and Composite Wood Products (Applicability). Updated to reflect a direct final rulemaking by the Environmental Protection Agency to clarify requirements allowing certain composite wood products and finished goods to be labeled as compliant with Title VI of the agency's Toxic Substances Control Act (TSCA), which establishes formaldehyde standards for composite wood products. TSCA regulates chemical substances and mixtures that present an unreasonable risk to human health and the environment. The act also develops information needed to identify, prevent, and reduce these risks, which may result from manufacture, processing, distribution in commerce, use, or disposal. The rule took effect Aug. 25.

State

Virginia (Fuel Controls and Mobile Sources). Updated to reflect a final rulemaking by the Virginia Department of Agriculture and Consumer Services establishing standards to regulate the oxygenation of gasoline. The rule also establishes vapor pressure requirements for gasoline ethanol blends. The rule took effect Aug. 24.

Waste Management Guide

State

Nebraska (Solid Waste Management). Updated to reflect a Nebraska final rule revising regulatory requirements for solid waste management, including closure requirements for municipal solid waste disposal areas, notification and recordkeeping requirements for construction and demolition waste disposal areas, and the use of waste tires for agricultural purposes.

New Hampshire (Cleanup Funds). Updated to reflect a New Hampshire final rule revising regulatory requirements governing the allowable uses of the state's Hazardous Waste Cleanup Fund. The rule took effect Aug. 14.

New Hampshire (Generators). Updated to reflect a New Hampshire final rule revising regulatory requirements for hazardous waste generators, including generator classification, storage, and recordkeeping requirements. The rule took effect Aug. 14.

New Hampshire (Treatment, Storage, and Disposal Facilities). Updated to reflect a New Hampshire final rule revising regulatory requirements for hazardous waste treatment, storage, and disposal facilities, including notification requirements and incorporation of federal standards applicable to treatment facilities. The rule took effect Aug. 14.

Vermont (Aboveground Storage Tanks). Updated to reflect a Vermont final rule revising regulatory requirements for aboveground storage tanks, including inspection requirements and "red tagging" noncompliant tanks. The rule took effect Aug. 15.

Vermont (State Superfund Program). Updated to reflect a Vermont final rule revising regulatory requirements for the state superfund program, including procedures for initial investigation, final cleanup, remediation, and closure of contaminated properties. The rule took effect July 27.

Water Pollution Control Guide

State

Indiana (Concentrated Animal Feeding Operations). Updated to reflect rules requiring owners and operators of concentrated animal feeding operations (CAFOs) to obtain an individual National Pollutant Discharge Elimination System (NPDES) permit from the Indiana Department of Environmental Management. The NPDES permit must be accompanied by a $50 application fee and a $250 CAFO permit application fee. The rules took effect Aug. 11.

North Carolina (Monitoring and Reporting). Updated to reflect approval by the Environmental Protection Agency of the request by the North Carolina Department of Environmental Quality (DEQ) to allow electronic reporting for NPDES permits under the federal Cross-Media Electronic Reporting Rule (CROMERR) (40 C.F.R. pt. 3).

North Carolina (State Stormwater Management Program). Updated to reflect requirements for post-construction stormwater management systems to obtain permits from the DEQ. Permitting requirements apply in coastal counties, as well as in noncoastal counties with high-quality or outstanding resource waters, facilities subject to an NPDES municipal separate storm sewer system permit, urbanizing areas, and facilities that are subject to the universal stormwater management program.

North Carolina (Indirect Discharges to Surface Waters: Pretreatment (Background)). Updated to reflect approval by the EPA of the request by the DEQ to allow electronic reporting for NPDES permits under CROMERR (40 C.F.R. pt. 3).

North Carolina (Land Application of Waste (Background)). Updated to reflect requirements for land application of treated sludge to be in compliance with EPA regulations under 40 C.F.R. pt 503.

North Carolina (Nonpoint Discharges to Surface

Subject: Morning Media: Megyn Kelly-Alex Jones drama heats up — NYT's editorial correction — DOJ's vague media prod

By Hadas Gold | 06/16/2017 06:01 AM EDT

With Alex Weprin and Joe Pompeo

THE MEGYN KELLY/ALEX JONES SHOW -- The Megyn Kelly and Alex Jones drama heated up considerably on Thursday night. The show is still set to air on Sunday night and whether or not you agree or disagree that Kelly should have interviewed Jones in the first place, the entire drama surrounding it is turning into a full blown issue for NBC. Not only are there grieving families of innocent young children on one side of Kelly and the network, there's a conniving conspiracy-theorist adept at manipulating the media on the other.

Case in point: Overnight, Jones released some audio of a pre-interview Kelly conducted with him (interspersed with Jones' commentary).

"It's not going to be a contentious, sort of gotcha exchange," she says explaining further that the show is not about such moments, just profiles on interesting people, but that she will be asking him about his more controversial views.

Immediately after playing that clip of Kelly, Jones, sitting in his studio, talks about his conspiracy theories that Sandy Hook was not real but that in "hindsight, it probably did happen." Jones says that once Kelly arrived for the interview, she "attacked me" about his conspiracy theories.

"It really will be about 'who is this guy?' ... I'm not looking to portray you as some boogeyman or just any sort of gotcha moment. I just want to talk about you," Kelly says in further clips. "The craziest thing of all would be if some of the people who just have this insane version of you in their head walk away saying, 'you know what, I see the dad in him."

On the other side are the families. POLITICO has obtained a letter sent by a law firm representing several of the families who lost loved ones in the 2012, suggesting that NBC faces ramifications should the interview air. The letter is addressed to NBC President Andy Lack, Megyn Kelly's executive producer David Corvo and NBC's General Counsel Kimberly Harris. In the letter, the families say that while **"NBC is not responsible for the harassment and abuse Alex Jones has cruelly visited on our clients,"** by choosing to air the interview (on Father's Day no less), NBC has helped legitimize Jones' view. By airing the interview, NBC "implicitly endorses" the notion that Jones' conspiracy theories and lies are "worthy of serious debate."

"We urge you to consider the ethical and legal ramifications of broadcasting this interview to millions of Americans. By now, it should be clear to NBC that airing the interview will cause serious emotional distress to dozens of Sandy Hook families. NBC - and NBC alone - has the

power to prevent that harm."

-- An NBC spokesperson had no comment Thursday night on either the Jones' recordings or the letter from the families.

MEANWHILE, NBC REPORTEDLY 'OVERHAULED' SUNDAY'S SHOW Page Six reported, as Kelly and NBC are now said to be including families of the Sandy Hook children, and are "editing her interview with Jones to be tougher on him." That being said - NBC and many in television news would say pieces are often edited and changed up until the last minute.

HADAS GOLD HERE, minding the store while Joe's on deadline wrapping up a piece (and kicking in a few items on the side). Send me tips and comments: **hgold@politico.com**. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima**, who's on vacation this week. (clima@politico.com / @ludacristiano). **Archives**. **Subscribe.**

TOP DOJ OFFICIAL PRODS MEDIA WITH UNUSUAL STATEMENT: Late Thursday a strange and vague statement landed from Deputy Attorney General Rod Rosenstein. In it, Rosenstein casts doubt on a series of recent reports around Special Counsel Robert Mueller's probe into the Trump campaign.

"Americans should exercise caution before accepting as true any stories attributed to anonymous 'officials,' particularly when they do not identify the country - let alone the branch or agency of government - with which the alleged sources supposedly are affiliated," Rosenstein said. "Americans should be skeptical about anonymous allegations. The Department of Justice has a long-established policy to neither confirm nor deny such allegations."

As our colleague Darren Samuelsohn points out**,** "Rosenstein's statement caught many in Washington off guard, in part because it was so generic and didn't actually specify which news reports it was addressing. It's also notable because of who issued it: With Attorney General Jeff Sessions recused from all things related to the Russia probe, Rosenstein as the No. 2 DOJ official has the reins over the Mueller probe. He'll get Mueller's budget and he also has the power to block major investigative steps - with the caveat he must report to Congress if that happens."

Washington Post subtweets, via Josh Barro**:** "The Washington Post has updated the Kushner story to reflect the officials cited are indeed US officials."

FWIW - A former Wall Street Journal employee emails: "It's not going unnoticed in WSJ circles that Barrett and Entous, recently departed from WSJ to WaPO, are now running circles around their ex-colleagues." Devlin Barrett and Adam Entous were the two lead bylines on Wednesday's Washington Post bombshell: "Special counsel is investigating Trump for possible obstruction of justice, officials say"

AN NYT "MISTAKE" -- The New York Times editorial board issued a correction on an editorial that riled up many on the left and right. The editorial, titled "America's Lethal Politics" about the shooting at a GOP congressional baseball practice, claimed a clear link between Sarah

Palin putting certain Democratic districts in "crosshairs" in a 2010 ad and the 2011 shooting of former Rep. Gabby Giffords. A correction added on Thursday morning (and updated after further errors were pointed out) reads "An editorial on Thursday about the shooting of Representative Steve Scalise incorrectly stated that a link existed between political rhetoric and the 2011 shooting of Representative Gabby Giffords. In fact, no such link was established. The editorial also incorrectly described a map distributed by a political action committee before that shooting. It depicted electoral districts, not individual Democratic lawmakers, beneath stylized cross hairs."

"We're sorry about this and we appreciate that our readers called us on the mistake," the Opinion Page added in a Tweet.

Palin said in a tweet she's now considering her legal options, tweeting that she's "talking to attorneys this AM and exploring options" about a possible libel case.

CNN AND THE TRUMP ADMINISTRATION -- CNN president Jeff Zucker hosted a breakfast with media reporters yesterday at the Time Warner Center in New York, ostensibly to celebrate the four year anniversary of the morning show "New Day." Our own Alex Weprin was there, and of course, as is often the case, the questions quickly drifted toward the Trump Administration and its relationship with the press.

Zucker on the violence and threats against journalists : "Obviously there has been tremendous spate of issues over the past six weeks, but we have been dealing with this at CNN in a heightened way over the past 18 months, where our correspondents were front and center at events where the chants about CNN are front and center. This has been a very serious issue for us for a long time. The amount of rhetoric and threats that our folks are subject to on a daily basis is much more serious than I think many folks realize, and we are incredibly concerned about it. This is what happens when you try and delegitimize an institution that is doing its job. I think it is shameful on the part of the administration and other politicians to cause a frenzy against something that is guaranteed in the constitution of the United States. It does a disservice to this country, and it does a disservice to the world, and allows for a heightened sense of rhetoric against journalists and media organizations, and it is unconscionable and dangerous, and they should know better."

"New Day" anchor Alisyn Camerota also noted that spokespeople for President Trump are not as helpful to journalists as they have been in previous administrations. "I just don't think that the president's spokespeople in this era are that useful. I don't expect them to be able to channel the president. I have changed my expectations. I don't think anybody can channel this president, and he has said as much with his twitter habit."

Zucker On the lawsuit CNN filed against the FBI, asking for James Comey's memos: "We think that the public has a right to see the memos. CNN filed it, but it is on behalf of everyone sitting at this table. We think it is in everybody's interests, and we are happy to take the lead on that, and it is in pursuit of the journalism we do every day. We think think those should be part of the public record."

Zucker, regarding Fox's now-retired "Fair & Balanced" motto: "I don't think anyone who is a serious observer took that [slogan] seriously for a long time." Zucker added that "Very little that Fox does surprises me. I have said it before and I will say it again, it is basically state run TV."

REVOLVING DOOR:

-- Kaitlan Collins is the latest CNN hire, joining the network from The Daily Caller. Collins will stay in her same beat - White House correspondent - and will contribute both on-air and digitally. To make you feel old, Collins, who Ben Schreckinger and I featured in our POLITICO Magazine piece on the media this April, is 25 years old. Our dear friend and old colleague Kelsey Sutton first broke the news over at Mic.

-- With Collins' departure, Alex Pfeiffer has been promoted to White House reporter at Daily Caller, Business Insider's Max Tani reports.

-- Congrats to our former colleague Jeremy Barr on his new gig covering media/politics for The Hollywood Reporter based out of New York. Also at THR, Peter Kiefer has been named real estate and city editor. Announcement.

-- Casey Wooten is National Journal's newest tax policy reporter. Wooten most recently worked as reporter at Bloomberg BNA's Washington bureau.

-- Hildy Kuryk, a former finance director of the DNC, has moved on from her more recent job as director of communications for Vogue and into a consulting role at the magazine, where Kuryk also has been EIC Anna Wintour's personal spokeswoman. Zara Rahim, named one of the "'30 under 30' rising stars in Florida politics" in 2013, has been promoted to the comms director role as of this week.

-- "The Fake News Machine: How Propagandist are Using the Internet and Manipulate the Public." [Trend Micro]

MARK YOUR CALENDARS -- Ann Coulter will be at the Washington Post next Tuesday for an event about the first amendment. Other speakers include big names like Floyd Abrams and

Wajahat Ali, as well as presidents and executive directors of places such as the Knight FIrst Amendment Institute, and the president of Brown and University of Chicago.

CNN AND USA TODAY FILED SEPARATE LAWSUITS SEEKING THE COMEY MEMOS -- The FOIA lawsuits seek to force the FBI to turn over former director James Comey's memos documenting his conversations with President Trump. Arguing that they are not classified and are of high public interest, the lawsuits seek to forced the FBI to expedite their release. Here's CNN's write up of their lawsuit, and lawyer Bradley Moss's tweet announcing he is filing a similar suit on behalf of USA Today and will be adding reporters from The Daily Beast and WIRED.

DID YOU NOTICE TWITTER'S REDESIGN? -- Across both the web and mobile versions, Twitter made some major changes. The first thing I noticed: Retweet and Like counters update in real time. Also changed: Navigation on the Twitter app, the avatar shapes (circles!) and the reply button is now a speech bubble. Not everything has changed - TweetDeck still remains its lovable/hateable self. WIRED covered all the changes here.

SOUND BITES:

-- "Isn't it newsworthy that I'm saying, don't air the interview? None of the media will pick it up. They just want me to be the devil because I'm the alternative media. That's not going to get people to trust the mainstream media. Fake news lives at NBC. They basically made me look like a Halloween character." [Alex Jones]

-- "Alex Jones takes a page from MIA's playbook and releases tapes of Megyn Kelly ordering the truffle fries." [Matt Haber]

-- "Trump supporters appear to be more angry at media and Hollywood for fueling anti-Trump rage culture than Democrat politicians," [Charlie Spiering]

-- "Everybody in this room, including the reporters, God bless you. God bless America." [Donald Trump]

HUFFPOST LAYOFFS MEANS HUFFPOST POLLSTER DOWNSIZES -- Yesterday the Huffington Post announced big layoffs, including some directly affecting the D.C. newsroom. Now as a direct result of the those layoffs, HuffPost's polling home has had to "dramatically reduce the scope" of what they track due to staff reductions, HuffPost polling director Ariel Edwards-Levy tweeted. "For the time being, we'll continue to follow national Trump approval and the 2018 House race: At this time, all other charts will no longer be updated," she wrote. Grace Sparks, a member of the HuffPost Pollster team, was laid off yesterday.

BILL SHINE GETS A NEW LAWYER: A new filing in the District Court for the Southern District of New York on Wednesday shows that the former Fox News co-president has hired a new lawyer to represent him in the case brought by Fox host Andrea Tantaros against the network and several of its executives. Shine has hired Marion Bachrach, a white-collar criminal defense lawyer and former Assistant U.S. Attorney in the Eastern District of New York. He had

previously been represented by the lawyers also representing Fox News.

Subject: State Dept's Shannon to lead U.S. delegation to climate talks

By Andrew Restuccia

10/06/2017 07:18 PM EDT

Thomas Shannon, the State Department's undersecretary for political affairs, will lead the U.S. delegation to a major international climate change summit next month in Bonn, Germany, according to an administration official.

The news comes amid swirling rumors that Environmental Protection Agency Administrator Scott Pruitt was angling to lead the delegation, a move that would have made a skeptic of established climate science the face of the United States at the talks.

In previous years, the State Department's climate envoy led the U.S. delegation to the annual gathering. But the Trump administration has declined to fill that position.

The Bonn negotiations are aimed at implementing the 2015 Paris climate change agreement, from which President Donald Trump has said he intends to withdraw.

Neither the White House nor the State Department responded to requests for comment.

By Joe Pompeo | 06/08/2017 05:43 AM EDT

With Cristiano Lima and Alex Weprin

PASS THE POPCORN - If you're a company with some negative or unflattering news to announce, this morning around 10 a.m. is probably as good a time as ever to drop that press release, because the chances of anyone watching or reading or tweeting or talking about anything other than James Comey's Senate testimony are pretty slim. You can tune in on any of the broadcast or cable-news networks and there will be live-streams galore.

As The New York Times notes: "[M]illions are expected to pause on Thursday to take in a spectacle already being compared to other political-cultural touchstones, like the Army-McCarthy hearings and Anita Hill's testimony about Clarence Thomas. ... By the time details from Mr. Comey's prepared remarks surfaced on Wednesday ... the hearing had leapt from Beltway curiosity to required viewing, a cliffhanger episode of the nation's real-life reality show." More: "'Must-See TV': Free Drinks and Canceled Meetings for Comey's Testimony"

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima** (clima@politico.com / @ludacristiano). **Hadas Gold** contributed to today's column. **Archives**. **Subscribe.**

BETWEEN THE LINES OF THE LATEST NYT EXECUTIVE SHUFFLE - OK there's not too much between the lines, as far as I can tell, but consider this: When the prominent media executive and NPR refugee Kinsey Wilson joined the Times in early 2015, and swiftly accrued a stunning amount of authority for an outsider , he was seen as something of a white knight for the Times' digital future. Two years later, Wilson's position of EVP for product and technology has been eliminated, and Wilson is leaving the company's employ apart from an ongoing advisory role. Several Times sources I spoke with yesterday cautioned that the decision wasn't so much about Wilson, who brought in big digital talent and spearheaded high-profile initiatives like an expanded audio strategy, as it was about his position, which apparently no longer fit into an evolving org chart in which other key players have consolidated influence.

First and foremost, there's Meredith Kopit Levien, whose promotion to chief operating officer was the headline of yesterday's Times Company announcement. Since she left Forbes in 2013 to lead the Times' advertising department, Levien's rise has been strong and steady -- "The appointment clearly puts a potential succession in place" for when CEO Mark Thompson eventually steps down, Ken Doctor writes -- and in her new role, Levien will take ownership of the digital portfolio that had been Wilson's bread and butter. Then there's publisher-in-waiting A.G. Sulzberger, who will bring the perspective of a digital native to a job in which the 36-year-old newspaper scion could potentially succeed his father as early as late 2017. That's to say

nothing of ascendant newsroom figures like Cliff Levy, Alex MacCallum and Sam Dolnick (also a Sulzberger family member) who have carved out bigger digital footprints over the past couple of years. As one insider noted, "the newsroom is very different" than when Wilson came on board, "and the company is also pretty different."

-- "The Kids Are Alt-Right" [BuzzFeed]

-- "Climber Completes the Most Dangerous Rope-Free Ascent Ever" [National Geographic]

45 FUELS GOP MEDIA-BASHING TREND - HuffPost's Michael Calderone : "Trump vilified the press during the 2016 campaign and, as president, has continued dismissing critical coverage as 'fake news,' infamously dubbing the media the 'enemy of the people.' Though Trump can't be blamed for everything a local politician does or says, he has set the tone from the White House by routinely mocking journalists in highly personal ways while disregarding the press as a vital part of a functioning democracy. ... Anti-press rhetoric will likely escalate as Republican strategists plan to make opposition to the news media a key part of their 2018 midterm elections strategy." Lots of examples in the piece, which you can read here.

Related: Newly elected Montana GOP Congressman Greg Gianforte has agreed to donate $50,000 to the Committee to Protect Journalists, as well as issuing a formal apology, as part of a civil settlement with Guardian reporter Ben Jacobs, who Gianforte assaulted. Details.

THE IVANKA SUPERMARKET FACTOR - American Media Inc., which is run by Trump pal David Pecker, was perhaps hoping that this Adweek interview with longtime Us Weekly publisher Vicci Rose would be its P.R. highlight of the day. Instead, everyone was making fun of Us Weekly for giving a sloppy wet kiss to Ivanka Trump on one of the magazine's first covers since AMI closed its deal to acquire the checkout-line staple from Wenner Media. Behold: "Ivanka Takes a Stand: WHY I DISAGREE WITH MY DAD." Maggie Haberman : "Someone pretty familiar with Ivanka Trump's thinking about her WH role is talking to US Weekly."

MIKE PENCE ABRUPTLY CANCELED A 'PBS NEWSHOUR' INTERVIEW - Correspondent Miles O'Brien was all set to sit down with the Vice President on his 58th birthday yesterday, at the Johnson Space Center in Texas. The interview was set up in advance and promoted on Tuesday's edition of "NewsHour." But Sara Just, the program's executive producer, told POLITICO's Hadas Gold that they "received word the interview was cancelled just before it was to take place." She referred us for comment to the VP's office, which said in an email: "Running late. Committed to finding opportunity to reschedule."

SOUND BITES:

-- "Does the spokesman who smeared Ben apologize too as part of deal?" [Maggie Haberman]

-- "More 'anonymous sources'. The Fox leakers are so obvious. Just pathetic knowing who they r. Gutless Saboteurs." [Sean Hannity]

-- "[W]e've done a bad job of explaining to the public that there is a difference between news and opinion and who on their screen is there for which purpose." [Sally Kohn]

-- "I'm not in journalism. I'm just a guy with a lot of flaws." [Marc Maron]

AOL-YAHOO BLOODBATH - Kara Swisher reports over at Recode: "According to sources, layoffs are expected to take place across AOL and Yahoo that could number up to 1,000 jobs. That is less than 20 percent of the combined company, according to sources. This action is not unexpected, given that both companies have a lot of redundancies, including in human resources, finance, marketing and general administration. The merger between the two companies ... is expected to be completed in the next week."

REVOLVING DOOR:

-- **As Morning Media reported in April**, New York magazine's Stella Bugbee recently turned down an offer to become The New York Times' next Styles editor. It appears Bugbee's loyalty has served her well: She's been promoted from editorial director to president and editor in chief of New York's fashion and women's website, The Cut, a role in which she will be responsible for "strategic direction and plans for further growth."

-- **Garrett Graff, a prolific freelancer of late and the former editor of POLITICO Magazine**, has joined the website Longreads as a "contributing writer covering border security and immigration, federal law enforcement, and the mechanics of how government works."

SOUNDTRACK: Jets to Brazil, "Sea Anemone"

EXTRAS:

-- The Center for Public Integrity and ProPublica have joined forces to create a searchable database of financial disclosure forms from members the Trump administration. [CPI]

-- Kurt Bardella: "I used to work at Breitbart. Here's why I think they fired that reporter over a tweet." [Vox]

-- "The One Big Reason Why BuzzFeed Needs to Break Into TV" [Bloomberg Businessweek]

-- Condé Nast is making the tech website Backchannel, which it acquired last year from Ev Williams' Medium platform, a part of Wired's website.

Subject: BREAKING NEWS: High Court holds in favor of Missouri church denied state funds

The Supreme Court ruled today that a Missouri church was wrongly denied a state grant in a closely watched church-state separation case that could have big implications for President Donald Trump's school choice agenda.

The court ruled 7-2 that Missouri was wrong to deny Trinity Lutheran a grant "simply because of what it is - a church." The justices held that Trinity Lutheran Church was illegally excluded from an otherwise neutral public benefit - a state grant to resurface school playgrounds - simply because it was religious.

Subject: Court again freezes Clean Power Plan litigation for 60 days

By Alex Guillén

11/09/2017 04:55 PM EDT

The D.C. Circuit Court of Appeals today once again placed the lawsuits over the Obama administration's Clean Power Plan in abeyance for another 60 days, until Jan. 8.

The court's single-page order did not include any sort of note such as the one included in the court's previous 60-day abeyance order on Aug. 8. In thaLt order, two of the judges attached a stern note saying EPA was skirting its statutory duty to regulate greenhouse gases.

EPA last month released its proposed repeal, and will take public comment through Jan. 16. The agency has yet to release its advance notice of proposed rulemaking seeking suggestions on whether and how to craft a narrower replacement regulation.

WHAT'S NEXT: The court ordered EPA to file status updates on its CPP repeal effort every 30 days.

Subject: POLITICO's Morning Transportation: Chao has her say on self-driving car guidance — Probable cause of Tesla crash TBD today — A tricky truck issue for the Senate

By Brianna Gurciullo | 09/12/2017 10:00 AM EDT

With help from Tanya Snyder and Stephanie Beasley

CHAO HAS HER SAY ON SELF-DRIVING CAR GUIDANCE: Today, Transportation Secretary Elaine Chao will roll out DOT's revisions to the guidance on driverless vehicles that NHTSA released last September. Speaking from Mcity, a testing site for self-driving car tech, Chao will be flanked by representatives from the auto industry and the disability community, both key supporters of self-driving vehicles.

MT preview: The new version of the guidance "is clearer, more streamlined, less burdensome, and contains additional information" for states, according to a DOT release. The reworked guidance also reflects "input received in docket comments, public meeting proceedings and other stakeholder discussions, recent congressional hearings and current state activities," the release said.

Nuts and bolts: The guidelines will remain voluntary. The new document, called "A Vision for Safety," will condense the four sections of the earlier guidance into two. DOT is also stressing that the National Highway Traffic Safety Administration's recall powers aren't affected.

Something seems different ... When former Transportation Secretary Anthony Foxx unveiled the original guidance last year, it was the first official word from the federal government about how self-driving cars should be regulated. Congress hadn't touched the issue yet. Now, the House has voted on a bill and the Senate is tweaking the details of its effort on the subject.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Be sure to send tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"Kiss me on the bus / Kiss me on the bus / Ooh, if you knew how I felt now, you wouldn't act so adult now / Hurry, hurry, here comes my stop." (h/t Jennifer Kalczuk at AlphaVu)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

FOR YOUR RADAR: The House Transportation Committee postponed the Coast Guard and Railroads subcommittee hearings on infrastructure that had been scheduled for today because of Hurricane Irma.

PROBABLE CAUSE OF TESLA CRASH TBD TODAY: When a Tesla car driving with "Autopilot" in use crashed into a tractor-trailer last year, it launched a national conversation

about the rollout of autonomous and semi-autonomous vehicle technologies. This morning, the NTSB will decide the probable cause of the Florida accident that left the Tesla car driver, Joshua Brown, dead. After its own investigation, NHTSA concluded that there was no defect at the time of the incident. The NTSB will state that the "Autopilot" feature should "be declared a contributing factor in the crash," Bloomberg reports.

Family pens statement: Brown's family on Monday said it "is simply not the case" that the 40-year-old's death was the fault of Tesla's vehicle, Reuters reports. "There was a small window of time when neither Joshua nor the Tesla features noticed the truck making the left-hand turn in front of the car," the family said in a statement. "People die every day in car accidents. ... Change always comes with risks, and zero tolerance for deaths would totally stop innovation and improvements."

TRICKY TRUCK ISSUE: As the Senate Commerce Committee prepares for its hearing Wednesday on whether commercial motor vehicles should be included in self-driving car legislation, they're balancing union demands to exempt trucks with the arguments of safety groups that say the bill needs to deal with all vehicles. The discussion draft released Friday includes both options, and lawmakers will be looking for a clear answer to emerge from the hearing. As Tanya reports for Pros, unions are worried that driverless vehicle technology will cost millions of truckers and other drivers their jobs.

No time like the present: But as Commerce Chairman John Thune (R-S.D.) told reporters last week, "at some point we have to address trucks." Many expect the trucking industry to be the first to use driverless technology broadly. And safety advocates say that if trucks aren't included in the legislation, which requires safety evaluation reports, they'll only be covered by NHTSA's voluntary guidance, which doesn't mandate such reports.

Backstory: House members didn't have to deal with the trucking dilemma because the bill came out of the Energy and Commerce Committee, which doesn't have jurisdiction over commercial motor vehicles. And members of the House Transportation Committee, which does, are too wrapped up in the FAA bill to worry much about self-driving trucks right now.

IRMA WATCH: DOT is providing $25 million for roads and highways that need fixing because of Hurricane Irma, Rep. Mario Diaz-Balart (R-Fla.) tweeted Monday afternoon. Diaz-Balart chairs the House Appropriations THUD Subcommittee.

RIDE WIT ME: Lawmakers may attempt to attach a host of unrelated items to the FAA bill because it is one of the only pieces of legislation that must pass before September ends, our friends at Playbook report. The POLITICO trio wouldn't be shocked if lawmakers tried to "throw hurricane relief money onto it, or even language to deal with DACA." However, the "administration has told people on the Hill that they shouldn't even think about trying to bolster Obamacare by attaching cost-sharing reduction payments, according to multiple sources involved in legislative negotiations."

STATES SLAP NHTSA WITH LAWSUIT: California, Maryland, New York, Pennsylvania and Vermont are suing NHTSA "for delaying an Obama-era increase of civil fines for

automakers who violate CAFE fuel economy standards," Pro Energy's Alex Guillén reports . In 2016, NHTSA made final a rule boosting CAFE penalties, after Congress mandated that federal agencies increase civil fines to take inflation into account. In July, NHTSA pushed off the rule's effective date, saying the agency under former President Barack Obama hadn't reviewed "potential economic consequences." The five states contend that "NHTSA's delay violates the Administrative Procedure Act since the agency did not first take public comment, and they contend it violates the 2015 inflation adjustment law by reverting to the previous penalties," Alex writes.

TIME FOR REFLECTION: To commemorate the anniversary of the Sept. 11, 2001, attacks, House Homeland Security Committee Democrats released a report reviewing the Department of Homeland Security's progress in meeting a legislative mandate to enact the 9/11 Commission's recommendations, Steph reports. The Democratic report says DHS should boost Customs and Border Protection staffing at ports of entry before it sets up a biometric entry/exit system. The report also calls for TSA to update its air cargo screening procedures. MT readers may remember that TSA last week mandated enhanced screening procedures for air cargo shipments from Turkey. But, so far, the agency hasn't made changes for other countries.

Come together: Meanwhile, House Homeland Security Chairman Michael McCaul (R-Texas) on Monday called for lawmakers on both sides of the aisle to work together to help prevent future terrorist attacks, which he said are increasingly plotted online. "I think a 9/11-style attack would be very difficult to pull off in today's world, that's the good news," McCaul said on SiriusXM P.O.T.U.S. "The bad news is it's ever pervasive over the internet, and that's their power."

IN TRAVEL BAN NEWS: The Justice Department has gone back to the Supreme Court to request that it "allow authorities to keep up a block on many refugees" included in President Donald Trump's travel ban, POLITICO's Josh Gerstein reports . "Justice Anthony Kennedy issued a temporary stay Monday afternoon that essentially freezes the status quo." Meanwhile, the Trump administration, for the time being, is no longer asserting "that grandparents, aunts, uncles, and cousins of U.S. citizens be covered by the ban despite the Supreme Court ordering an exemption for close family members," Josh writes.

WHERE'S THAT TAX OVERHAUL? Gary Cohn, the director of the National Economic Council, and Treasury Secretary Steven Mnuchin will hit up the Hill today to chat with senators about overhauling the tax code. "Many Republicans view the end of December as an effective drop-dead date for tax reform, with expiration of protections for some young immigrants now set to expire in March," POLITICO's Burgess Everett and Ben White write . (Remember: An infrastructure package is supposed to come after a tax bill.) But Trump's agreement last week with Democratic leaders on the debt ceiling, which angered conservatives, could hurt the administration's tax plans.

LET'S SEE HOW THIS GOES ... On Monday, Maryland's governor said his state would provide $500 million more in funding to Metro over the course of four years - as long as D.C., Virginia and the federal government copy the Old Line State. As The Washington Post's Robert McCartney and Faiz Siddiqui report, it's a tough ask, particularly for Virginia and the Trump

administration.

FLY-IN: The Association of Equipment Manufacturers has a fly-in this week. "The 50 executives flying in will be pushing members of Congress for action on infrastructure spending, tax reform and free-trade agreements," our friends at POLITICO Influence report. Rep. Sam Graves (R-Mo.) is slated to speak to the group.

REPORT ALERT: The Economic Policy Institute is out with an analysis this week arguing for "a stronger federal role in infrastructure investment." EPI's Hunter Blair writes that the federal government is able to help states invest in infrastructure when the economy declines, has a better view of how infrastructure fits into a national network and can focus on issues like access.

THE AUTOBAHN:

- "Miami and Fort Lauderdale airports are reopening Tuesday - but with limited service." The Miami Herald.

- "What Florida roads look like after Hurricane Irma." The Washington Post.

- "Irma's next air travel target: The world's busiest airport." USA Today.

- "Seaports prepare to reopen after Irma." The Wall Street Journal.

- "General Motors is starting to build cars that can eventually drive without a human." Recode.

- "Google plots to conquer self-driving cars - by making peace with Detroit." The Wall Street Journal.

- "Volkswagen spends billions more on electric cars in search for mass market." Reuters.

- "An expensive grill and a Brazilian actress: Day 3 of the Menendez trial." POLITICO New Jersey.

- "Five of the best transport ideas - and five of the worst." POLITICO Europe.

THE COUNTDOWN: DOT appropriations run out in 88 days. The FAA reauthorization expires in 19 days. Highway and transit policy is up for renewal in 1,115 days.

Driving the Day

Good Tuesday morning. 59 dead. **527** injured. **42** guns in the shooter's hotel room and house.

WAPO LEADALL -- "At least 59 killed in Las Vegas shooting rampage, more than 500 others injured," by Lynh Bui in Las Vegas, Matt Zapotosky, Devlin Barrett and Mark Berman in Washington: "Police said he stayed in a large hotel suite for several days and aroused no suspicion, bringing with him an arsenal of 23 guns -- their calibers ranging from .223 to .308, some with scopes -- authorities said. One of the weapons he apparently used in the attack was an AK-47 type rifle, with a stand used to steady it for firing, people familiar with the case said. He fired, without warning, from an elevated position on an open-air venue, leaving his victims few options to avoid harm. ...

"Among the questions [investigators] have: How a former accountant with a penchant for high-stakes gambling obtained a weapon that sounded to those on the ground like it could fire as an automatic, and how he was able to bring it and many other weapons into a Vegas hotel suite undetected. ... Lombardo said hotel staff had been in and out of the two-room suite, which Paddock had stayed in since Sept. 28, and spotted nothing 'nefarious,' though he had more than 10 suitcases." http://wapo.st/2xUYZkS

-- CONTRIBUTING TO THE POST'S STORY: Tim Craig, Felicia Mello and Heather Long in Las Vegas; Barbara Liston in Orlando; Justin Glawe in Mesquite, Tex.; and Derek Hawkins, Travis M. Andrews, Brian Murphy, Wesley Lowery and Julie Tate in Washington.

WHAT YOU NEED TO KNOW ...

-- AP ... HOW HE GOT OFF SO MANY SHOTS: "The gunman who unleashed hundreds of rounds of gunfire on a crowd of concertgoers in Las Vegas had two 'bump-stocks' that could have converted semi-automatic firearms into fully automatic ones, officials said. ... California Sen. Dianne Feinstein has long railed against them. Several years ago, she told The Associated Press she was concerned about the emergence of new technologies that could retrofit firearms to make them fully automatic. 'This replacement shoulder stock turns a semi-automatic rifle into a weapon that can fire at a rate of 400 to 800 rounds per minute,' she said." http://bit.ly/2xXwFz4

-- NYT ... THE PREPARATION, by C.J. Chivers, Thomas Gibbons-Neff and Adam Goldman: "[M]r. Paddock established firing positions by smashing a pair of windows in his hotel room. He was armed with at least 23 firearms, the authorities said, including rifles designed to be fired at such distances. He was also perched from a vantage point that increased the likelihood that even errant shots were more likely to strike someone than had he fired them from ground level. Among his weapons, a law enforcement official said, were AR-15-style rifles, a civilian variant of a standard service rifle used by the American military for more than a half-century.

"The possibility that Mr. Paddock used tripods, which two law enforcement officials said were in the room, indicates that he understood how to overcome some of the difficulties of his plan. Special mounts designed to fit the underside of a rifle and sit atop camera tripods allow the gunman to fire more accurately while standing. Military snipers use tripods in urban spaces, often setting themselves back from a window so neither they nor their weapons can be seen from the streets below." http://nyti.ms/2ylmYuX

-- WAPO ... THE PEOPLE WHO DIED: -- "The lives lost in Las Vegas": "Dozens of people were killed and hundreds were injured Sunday when a gunman opened fire at a country music festival in Las Vegas. Here are stories of those who died." http://wapo.st/2xWYilj

-- THE SHOOTER ... NYT 's Jose DelReal and Jonah Engel Bromwich: "He was a high-stakes gambler recognized in the casinos of Nevada. He dabbled in real estate investments in Texas. His last known full-time employment was 30 years ago. He was twice divorced. He had a pilot's license and had owned two single-engine planes. ... Mr. Paddock bought three guns -- a handgun and two rifles -- at a shop in Mesquite, Guns & Guitars, within the last year, said Christopher Sullivan, the general manager. All the purchases were legal and cleared routine federal screening, Mr. Sullivan said. 'The man does not have a criminal history,' Mr. Sullivan said." http://nyti.ms/2yTNBEC

-- THE COMMERCIAL APPEAL (The Memphis newspaper) **... THE COMPANION: "Who is Stephen Paddock's roommate, Marilou Danley?"** http://memne.ws/2yEUDfw

CHOOSE YOUR NEWS: Las Vegas Review-Journal: **"In the face of tragedy, the Strip falls silent"** http://bit.ly/2g773G7 ... Las Vegas Sun: **"A day after horrific event, a semblance of normalcy along Strip"** http://bit.ly/2yETtR1

NYT EDITORIAL: "477 Days. 521 Mass Shootings. Zero Action From Congress." http://nyti.ms/2xOeax4 ... **WSJ EDITORIAL: "'An Act of Pure Evil':** Amid the Las Vegas horror, don't forget Steve Scalise's recovery." http://on.wsj.com/2g7ICIo

TWO THINGS TO LOOK OUT FOR ...

-- HOW DO REPUBLICANS HANDLE GUN BILLS? Republicans in the House were readying to pass the SHARE Act, a bill which would, among other things, eases regulations on gun silencers and strips the ATF's ability to classify some ammunition as "armor piercing." This bill is a priority of the NRA. It doesn't stand a chance of becoming law, but the optics of pursuing it would be politically tricky, to say the least. Rep. Jeff Duncan (R-S.C.) -- the bill's sponsor -- told us off the House floor Monday night that he didn't think Las Vegas had changed anything in relation to his bill, and he expected a vote in the coming weeks. A Republican leadership aide said there were some unspecified issues with the legislation. ***John Bresnahan, Heather Caygle and Burgess Everett on the state of play*** http://politi.co/2yEq0qv

-- COULD THIS BE THE END OF HIGH-CAPACITY MAGAZINES? A big gun-control bill isn't going to happen. But there seems to be a lingering fear in some pockets of the right that the mass shooting will force Congress to limit the ability to purchase high-capacity magazines, which allow shooters to spray bullets without reloading. Any tightening of gun restrictions in an all-Republican Washington is **VERY HARD TO IMAGINE,** and top aides and lawmakers we spoke to yesterday were skeptical. But this is one area gun-rights advocates are watching closely. One veteran operative for the gun lobby said the latest shooting could bring the debate "roaring back." **LINGERING QUESTION:** Where does Trump -- who has branded himself as close to the NRA -- land on this issue?

THE FIRST LIVE LEADERSHIP REACTION -- SPEAKER PAUL RYAN and House Republican leaders at 10 a.m.

JIMMY KIMMEL's very emotional, tearful monologue from last night. http://bit.ly/2yT6EyR

ANNIE KARNI: "Las Vegas shooting presents new kind of leadership test for Trump": "President Donald Trump's reaction to the country's deadliest mass shooting -- a somber statement from the Diplomatic Room, a moment of silence on the South Lawn, and a dormant-for-a-day Twitter feed -- didn't make a tragic situation worse. The president's words and actions, Democrats and Republicans said, were in line with what any other National Rifle Association-backed president would do. Trump's call for unity in the face of 'an act of pure evil' was accompanied by a day declared by his team to be a no-go zone for political or policy discussions about the nation's gun laws.

"For the first nine months of his presidency, most of the crises Trump has faced have been of his own making. But the shooting, which killed at least 59 and injured

more than 500 Las Vegas concert-goers Sunday night, presents a new kind of leadership test. In the coming days, as the window of a condolences-only response to a domestic tragedy closes, Trump will be forced to navigate a thorny political situation as he reacts to the first mass shooting to unfold on his watch.

"Mass shootings in America have become moments of national reckoning on immigration, terrorism and bullying. In this case, where the shooter had no clear motive, the discussion quickly turned to the one subject Trump and his advisers steered clear of in their first 24-hours of response: gun safety measures. Already, some moderate Republicans have expressed hope that the shooting will push him to come out against a bill pending in the House that would loosen restrictions on purchasing silencers." http://politi.co/2fGkvjK_

****** **A message from Koch Industries:** Facing challenges can be intimidating. But at Koch, it's how we work. From creating renewable fuels to designing innovations that make vehicles more aerodynamic and energy-efficient, we challenge the status quo. Our more than 70,000 U.S. employees help reduce waste, and make everyday products better. See for yourself at ChallengeAccepted.com. ******

THE NRA PLAYBOOK -- "NRA goes dark after Vegas massacre," by Josh Meyer: "Democrats lashed out at the National Rifle Association after the worst mass shooting in American history Monday, but instead of fighting back the gun rights group retreated to a familiar posture: silence. The NRA's website, Twitter feed and Facebook page-all of which are typically updated frequently throughout the day-went dark on Monday, posting no new content, and the group did not respond to several calls and emails seeking comment.

"But that doesn't mean the powerful Washington lobbying organization isn't extremely busy behind the scenes. After a mass casualty shooting like the one that killed 58 in Las Vegas Sunday night, the NRA invariably turns to a playbook it has perfected over several decades, critics and supporters alike told POLITICO. The approach calls for aggressive fact-finding and long strategy sessions before any public statements. The Fairfax, Va.-based organization has waited weeks before responding to past deadly incidents that NRA critics call the indirect result of its resistance to tighter gun control." http://politi.co/2xdsxXy

SCOOP - "Trump administration weighing executive order on welfare," by Andrew Restuccia: "Trump administration officials are mulling an executive order that would instruct federal agencies to review low-income assistance programs, part of a coming effort to make sweeping changes to the country's welfare system. The White House began circulating a draft order to federal agencies for comment last week, according to two administration officials ... One of the officials said the draft order calls on agencies to review existing regulations and propose new rules that conform to a set of broad welfare principles, including tighter work requirements that encourage recipients to shift back into the labor force." http://politi.co/2khbiDk

RETIREMENT WATCH -- "Collins agonizes over decision to ditch the Senate," by Burgess Everett: "Sen. Heidi Heitkamp was watching TV recently when she saw a report that Susan Collins was considering a run for Maine governor and soliciting advice on the decision. The North Dakota Democrat quickly shot a text message to her Republican colleague: 'Don't do it.'

"A move by Collins to seek the governorship would rock the Senate and the broader political landscape. In a chamber controlled by just 52 Republicans, Collins and a handful of other centrist senators can decide the fate of President Donald Trump's agenda. And a run by Collins for governor could eventually cost the GOP one of its last congressional footholds in New England. ...

"In an interview, Collins said the buzz about her prolonged indecision is 'accurate.' She initially planned to make up her mind by the end of September, but pushed back her deadline to mid-October as she wrestled with the GOP's recent Obamacare repeal effort. 'Given the contentious environment in Washington right now, my voice and vote matter a great deal,' Collins said. 'On the other hand, if I were fortunate enough to be elected governor, I could work more directly on job creation.'" http://politi.co/2xcvOq7

COMING ATTRACTIONS -- "Republicans might block Trump from killing Iran nuke deal," by Seung Min Kim and Elana Schor: "President Donald Trump might soon toss the Iran nuclear deal back to Congress to decide its fate -- but it's no sure thing that lawmakers would kill it for good. Critics of the Obama-era agreement, led by the president himself, appear to be on a mission to tank the accord. Naysayers in Congress are vowing to take advantage of a fast-track mechanism that would allow lawmakers to reinstate sanctions against Tehran with a simple majority vote. ...

"Democratic senators, even those who opposed the nuclear agreement two years ago, want the deal to remain in place. As it stands now, enough Republicans are undecided that GOP leaders would struggle to corral the votes needed to reimpose sanctions. The choice could land on Capitol Hill later this month, if Trump declines to certify by an Oct. 15 deadline that Iran is complying with the nuclear deal." http://politi.co/2kigvuB

MORE EMAIL DRAMA -- "Hundreds of White House emails sent to third Kushner family account," by Josh Dawsey and Andrea Peterson: "White House officials have begun examining emails associated with a third and previously unreported email account on Jared Kushner and Ivanka Trump's private domain, according to three people familiar with the matter. Hundreds of emails have been sent since January from White House addresses to accounts on the Kushner family domain, these people said. Many of those emails went not to Kushner's or Ivanka Trump's personal addresses but to an account they both had access to and shared with their personal household staff for family scheduling.

"The emails - which include nonpublic travel documents, internal schedules and some official White House materials -were in many cases sent from Ivanka Trump, her

assistant Bridges Lamar and others who work with the couple in the White House. The emails to the third account were largely sent from White House accounts but occasionally came from other private accounts, one of these people said." http://politi.co/2xNfaBL

TRUMP'S TUESDAY -- Trump and the First Lady will leave this morning for San Juan, Puerto Rico. They will be briefed on Hurricane Maria relief efforts and meet with residents impacted by the hurricane. U.S. Virgin Islands Gov. Kenneth Mapp and Puerto Rico Gov. Ricardo Rosselló will meet with the Trumps. They will then greet the Navy and Marine Corps before returning back to D.C.

PLAYBOOK METRO SECTION -- "Laurene Powell Jobs is buying a big stake in Wizards, Capitals sports empire," by WaPo's Thomas Heath: "Powell Jobs's investment, estimated to be hundreds of millions of dollars, will give her the second-largest stake - about 20 percent - in Monumental, the 19-member, Ted Leonsis-led holding company that is one of Washington's highest-profile enterprises, the people said, speaking on condition of anonymity because the deal has not been approved by the NBA and NHL ...

"The investment by Powell Jobs increases her presence in the Washington community after her business and philanthropic arm, Emerson Collective, bought a majority interest in The Atlantic magazine from its owner David Bradley in July." http://wapo.st/2hK30mE

THE JUICE ...

-- FIRST IN PLAYBOOK: **SPEAKER PAUL RYAN TO SPEAK AT RTCA DINNER:** The Wisconsin Republican is the headliner at the 73rd annual Radio and Television Congressional Correspondents Association dinner Oct. 25 at the National Building Museum. Roy Wood Jr. from the "Daily Show" is the headline entertainer, and iHeart Media's Bobby Bones is the guest emcee. John Parkinson of ABC News is the dinner's chairman.

-- FIRST IN PLAYBOOK: **AAN EXECUTIVE DIRECTOR CORRY BLISS** continued his drumbeat on tax reform Monday, hosting more than 40 people, including aides from the White House, Treasury, Senate and House GOP leadership, and House Ways and Means Committee, along with more than two dozen conservative, business and tax groups. Topics discussed included: Hill engagement and the timeline for moving forward.

SPOTTED: White House's Marc Short, Treasury's Shannon McGahn, Antonia Ferrier and Brendan Dunn of Mitch McConnell's office, Brendan Buck, George Callas, Derrick Dockery, Josh Althouse and Jake Kastan from the Speaker's operation and Rick Limardo from Ways and Means. Outside groups represented included: Americans for Tax Reform, Americans for Prosperity, AR Squared, National Taxpayers Union, Americans for Limited Government, American Petroleum Institute, Freedom Partners

and the BRT, among others.

-- **PLAYBOOK SCOOP:** Amy McGrath, the Democrat running against Rep. Andy Barr (R-Ky.), raised $768,000 in the two months last quarter she was in the race. She has $550,000 on hand.

REMEMBERING TOM PETTY -- "Tom Petty, Heartbreakers frontman who sang 'Breakdown,' 'Free Fallin" and other hits, dies at 66," by L.A. Times' Randy Lewis: http://lat.ms/2wtTJBJ

K ST. FILES -- "Congressman Duped Into Holding Sham Hearing for Ukrainian TV," by The Daily Beast's Betsy Woodruff and Andrew Desiderio: "A former U.S. lawmaker appears to have duped a freshman congressman's office into organizing a sham 'hearing' that aired on Ukrainian television on behalf of a shadowy lobbying client implicated in the Panama Papers leak, The Daily Beast has learned. Former Rep. Connie Mack (R-FL) reached out to the office of Rep. Ron Estes (R-KS) -- a freshman lawmaker who won the special election to replace CIA Director Mike Pompeo -- to reserve a room in the basement of the Capitol for an event on the Ukrainian banking sector.

"As The Weekly Standard documents, the fake 'hearing' was broadcast in full on Ukraine's NewsOne and described to viewers as the 'U.S. Congressional Committee on Financial Issues.' But not a single member of Congress attended. ... Panelists at the event included Sergiy Taruta, a former politician in Ukraine, Oleksandr Zavadetskyi, a former NBU employee, and James Woolsey, the former CIA director under President Bill Clinton who also served as an adviser to President Trump's campaign. ... An Estes spokesman added that the office policy for booking rooms has been updated to ensure that this doesn't happen again. ...

"Mack is a registered lobbyist on behalf of a firm called Interconnection Commerce, which according to Mack's lobbying disclosure is headquartered in the British Virgin Islands and is focused on 'shining a light on corruption in Ukraine.' ... During the event, Mack implied he is still a member of Congress." http://thebea.st/2xb9WjT ... ***The Weekly Standard piece*** http://tws.io/2xcWjLO

TRUMP'S CABINET -- "Federal watchdog opens probe into travel by Interior Secretary Ryan Zinke," by WaPo's Lisa Rein: "The inspector general for the Interior

Department has opened an investigation into Secretary Ryan Zinke's travel during seven months in office, from his use of taxpayer-funded charter and military planes to his mixing of official trips with political appearances. Nancy K. DiPaolo, a spokesperson for Deputy Inspector General Mary Kendall, described a broad investigation into Zinke's 'travel in general,' including 'modes of travel, costs and schedules.' 'It's not just one trip,' she said. 'It's seven months of travel.'

"She said the probe was prompted by numerous complaints from employees and the public and recent newspaper articles. Reps. Raúl M. Grijalva (Ariz.) and A. Donald McEachin (Va.), the top Democrats, respectively, on the House Committee on Natural Resources and the panel's subcommittee on oversight and investigations, also requested an investigation." http://wapo.st/2fGCu9K

-- "E.P.A. Chief's Calendar: A Stream of Industry Meetings and Trips Home," by NYT's Eric Lipton and Lisa Friedman: "For lunch on April 26, Scott Pruitt, the new administrator of the Environmental Protection Agency, dined with top executives from Southern Company, one of the nation's largest coal-burning electric utilities, at Equinox, a white-tablecloth favorite of Washington power brokers. That evening, it was on to BLT Prime, a steakhouse inside the Trump International Hotel in Washington, for a meal with the board of directors of Alliance Resource Partners, a coal-mining giant whose chief executive donated nearly $2 million to help elect President Trump. Before those two agenda items, Mr. Pruitt met privately with top executives and lobbyists from General Motors to talk about their request to block an Obama administration move to curb emissions that contribute to climate change.

"It was just a typical day for Mr. Pruitt, the former Oklahoma attorney general. Since taking office in February, Mr. Trump's E.P.A. chief has held back-to-back meetings, briefing sessions and speaking engagements almost daily with top corporate executives and lobbyists from all the major economic sectors that he regulates - and almost no meetings with environmental groups or consumer or public health advocates, according to a 320-page accounting of his daily schedule from February through May, the most detailed look yet at what Mr. Pruitt has been up to since he took over the agency." http://nyti.ms/2kgBwWJ

-- "DeVos' security detail could cost up to $6.54M over the next year," by Caitlin Emma: "That projected cost is seen as a 'high water mark' that the agency doesn't plan to exceed, said spokeswoman Liz Hill. An agreement governing DeVos' protective detail - which is provided around the clock by the U.S. Marshals Service - was just renewed for fiscal 2018, which began on Saturday. ... It's extremely unusual for the Education secretary to be protected by marshals - the past four Education secretaries have been protected by the Education Department's own small security force." http://politi.co/2ylVVjt

****** **A message from Koch Industries:** Flint Hills Resources, a Koch company, is the fifth largest ethanol producer in the United States - with seven ethanol plants, and 850 million gallons of annual capacity. Each year, farmers from America's heartland sell 288

million bushels of their corn to our facilities where we extract the necessary ingredients for both ethanol and high-quality biodiesel. We convert the remaining portions of the kernels into distillers grains, a livestock feed that helps nourish hogs, cattle and poultry. Farmers work hard to grow their crops, and we strive to help create the most value from their harvest. We also focus on reducing waste and leaving more natural resources available for future needs. It's part of Koch's commitment to operate responsibly in the communities across America that are home to our more than 70,000 U.S. employees. Learn more about our renewable fuels at ChallengeAccepted.com. ******

MUELLER WATCH -- "Mueller Tasks Adviser With Getting Ahead of Pre-Emptive Pardons," by Bloomberg's Greg Farrell: "U.S. Special Counsel Robert Mueller has a distinctly modern problem. The president, judging by his tweets, could try to pardon people in his circle even before prosecutors charge anyone with a crime. Mueller's all-star team of prosecutors, with expertise in money laundering and foreign bribery, has an answer to that. He's Michael Dreeben, a bookish career government lawyer with more than 100 Supreme Court appearances under his belt.

"Acting as Mueller's top legal counsel, Dreeben has been researching past pardons and determining what, if any, limits exist, according to a person familiar with the matter. Dreeben's broader brief is to make sure the special counsel's prosecutorial moves are legally airtight. That could include anything from strategizing on novel interpretations of criminal law to making sure the recent search warrant on ex-campaign adviser Paul Manafort's home would stand up to an appeal." https://bloom.bg/2ymmyop

-- "White House legal defense fund close to launching," by Darren Samuelsohn: "Some White House aides who face legal bills as a result of the congressional and special counsel investigations into Russian meddling in the 2016 election could get financial support as soon as this week, a senior White House aide said on Monday. The finishing touches are being put on a legal defense fund to help mid-level staffers pay for their attorneys, said Ty Cobb, a lawyer in President Donald Trump's White House." http://politi.co/2xOw8zl

RUSSIA WATCH -- "Trump's company had more contact with Russia during campaign, according to documents turned over to investigators," by WaPo's Tom Hamburger, Ros Helderman and Adam Entous: "Associates of President Trump and his company have turned over documents to federal investigators that reveal two previously unreported contacts from Russia during the 2016 campaign, according to people familiar with the matter. In one case, Trump's personal attorney and a business associate exchanged emails weeks before the Republican National Convention about the lawyer possibly traveling to an economic conference in Russia that would be attended by top Russian financial and government leaders, including President Vladimir Putin ... In the other case, the same Trump attorney, Michael Cohen, received a proposal in late 2015 for a Moscow residential project from a company founded by a billionaire who once served in the upper house of the Russian parliament." http://wapo.st/2xcTaff

-- "Russians took a page from corporate America by using Facebook tool to ID and influence voters," by WaPo's Elizabeth Dwoskin, Craig Timberg and Adam Entous: "Russian operatives set up an array of misleading Web sites and social media pages to identify American voters susceptible to propaganda, then used a powerful Facebook tool to repeatedly send them messages designed to influence their political behavior, say people familiar with the investigation into foreign meddling in the U.S. election. The tactic resembles what American businesses and political campaigns have been doing in recent years to deliver messages to potentially interested people online.

"The Russians exploited this system by creating English-language sites and Facebook pages that closely mimicked those created by U.S. political activists. The Web sites and Facebook pages displayed ads or other messages focused on such hot-button issues as illegal immigration, African American political activism and the rising prominence of Muslims in the United States. The Russian operatives then used a Facebook 'retargeting' tool, called Custom Audiences, to send specific ads and messages to voters who had visited those sites." http://wapo.st/2xPDSz3

FOR YOUR RADAR -- "U.S. to expel two-thirds of Cuban diplomats amid sonic attack probe," by McClatchy's Franco Ordoñez: "The Trump administration will kick nearly two-thirds of Cuba's embassy personnel out of the United States after months of mysterious attacks targeting American diplomats drove the White House to pull its own staff from Havana, according to multiple sources familiar with the plan. According to three of the U.S. sources briefed on the plan, the State Department will announce the expulsion of Cuban diplomatic personnel as soon as Tuesday. A fourth described the expulsion as 'reciprocity' for the American withdrawal from Havana." http://bit.ly/2xUxFU1

VALLEY TALK - "Facebook is hiring another 1,000 people to review and remove ads," by Recode's Kurt Wagner: "Facebook will hire 1,000 additional people to the internal team that reviews and removes Facebook ads, according to details shared via email with Recode by a Facebook spokesperson. The company also said it will invest more in machine learning to 'better understand when to flag and take down ads,' and expand its advertising content policies to stop ads that use even 'subtle expressions of violence.' ... The company will also start to 'require more thorough documentation' from advertisers who want to buy political ads on Facebook." http://bit.ly/2wvii1c

MEDIAWATCH -- HAMBY'S NEXT EPISODE: SNEAK PEEK -- The second episode of Snapchat's weekly series "Good Luck America" starts airing today. Per Snapchat: "Host Peter Hamby visits South Carolina and offers an inside look at President Trump's Republican base, the base he refers to in poll numbers, why they are so loyal and as a result, why Republicans in Congress are hesitant to cross Trump. Hamby speaks with average citizens as well as South Carolina Gov. Henry McMaster, South Carolina Republican Chairman Drew McKissick, Iowa Sen. Joni Ernst and Greenville County Republican Chairman Nate Leupp."

Subject: POLITICO's Morning Score: What happened last night on Obamacare — Messer finance chair promises 'exciting news' Wednesday — Democrats prod Heller, Flake amidst health care votes

By Elena Schneider | 07/26/2017 10:00 AM EDT

With Zach Montellaro, Kevin Robillard and Daniel Strauss

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

VOTE-A-RAMA - "How the GOP brought Obamacare repeal back from the dead," by POLITICO's Burgess Everett, Seung Min Kim and Jennifer Haberkorn: "As Mitch McConnell strode to the Senate floor on Tuesday, with no votes to spare to keep the GOP's Obamacare repeal campaign alive, he knew where everyone in his conference stood. Everyone, that is, except for Ron Johnson. The ornery Wisconsinite had been needling the Senate majority leader for weeks, accusing McConnell of a 'breach of trust' in selling a health care plan to his caucus. So when Johnson sprinted to the Capitol basement after a party lunch for a meeting with FBI director nominee Christopher Wray, just as a critical procedural vote got underway, Republicans had no idea where he would land, said a person who knows the senator well. ...But Tuesday's dramatic roll call - capped by Sen. John McCain's return to Washington less than a week after a cancer diagnosis and a tie-breaking vote by Vice President Mike Pence - allows President Donald Trump and his fractured party to continue their long-shot campaign to scuttle the Democratic health care law they've spent seven years railing against." **Full story.**

ICYMI - DSCC launches Nevada, Arizona Pandora ads ahead of health votes: The DSCC has launched digital radio ads against GOP Nevada Sen. Dean Heller and Arizona Sen. Jeff Flake ahead of today's vote on debating Obamacare repeal. The ads, made by Ralston Lapp, are running on Pandora radio and are targeting "key elements of the midterm electorate - including persuadable voters, seniors and women," the DSCC said. Heller and Flake are considered to be the two most vulnerable Senate Republicans in 2018, and the ads aim to remind voters of their history of voting to repeal Obamacare no matter which way they vote today. **Full story.**

- POLLING DATA - Titus internal poll shows tight Nevada Senate race: Democratic Rep. Dina Titus released an internal poll that found her in a dead heat against GOP Sen. Dean Heller in Nevada, signaling that she's still considering the race and not quietly stepping aside for former Sen. Harry Reid's preferred Democratic candidate, Rep. Jacky Rosen. In a general election head-to-head, Heller has 47 percent to Titus's 45 percent, per the poll. It also showed Titus with strength in Washoe County, a bellwether county where Titus trails by one point. The memo didn't share data on the primary race, but Titus told The Nevada Independent that she felt "confident" she'd win a primary against Rosen. Anzalone Liszt Grove Research conducted the 600-person telephone poll with a margin of error of plus or minus 4 points. **Read the full memo here**.

COMING ATTRACTIONS - Messer finance chair promises 'exciting news' Wednesday: "Indiana Rep. Luke Messer, who has flirted with a Senate bid for months, will have "exciting news" on Wednesday, the chairman of Messer's finance committee told top fundraisers in an email." **Full story.**

Days until the 2017 election: 103.

Days until the 2018 election: 467.

Thanks for joining us. You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

IN THE STATES - The DNC is pouring $1.5 million and top staffers into the Virginia gubernatorial race to bolster Ralph Northam, NBC News reports. "In addition to doubling the number of paid field organizers in the state, the money will be used to beef up the party's operations in the state, including training, digital and tech. [DNC Chairman Tom] Perez is also sending three of his top political aides, including Chief of Staff Sam Cornale, DNC Political and Organizing Director Amanda Brown Lierman, and DNC political adviser Ramsey Reid, who ran get-out-the-vote operations for the Virginia Democratic Coordinated Campaign in 2016." Yesterday in Score, we reported that the RGA donated $2 million to Ed Gillespie's campaign, on top of the $1 million they had already donated.

- "DeSantis-aligned super PAC gets familiar new head as gubernatorial rumors swirl," by POLITICO Florida's Matt Dixon: "In another sign that Rep. Ron DeSantis is considering a run for governor in 2018, the state and federal fundraising committees tied to the two-term Republican congressman are now both headed by the same person. Erika Alba, an attorney in Foley & Lardner's Jacksonville office, is in charge of Fighting for Florida's Future, a super PAC that raised $1.2 million in support of DeSantis' 2016 run for Senate, according to a recent filing with the FEC. The super PAC was led by Nelson Warfield, a longtime GOP consultant no longer involved with the committee." **Full story.**

- "Kennedy quietly reversed Illinois tax break request," by POLITICO Illinois' Natasha Korecki: "Democrat Chris Kennedy has made Illinois property taxes - among the highest in the nation - a focus of his campaign for governor. He's railed against an appeal system that he has likened to 'extortion' for kicking lucrative tax breaks to politically connected insiders with high-powered lawyers. But even as Kennedy took to social media and forums to complain about a 'rigged system,' he was actively pursuing a second property tax appeal of his own - asking for a 20 percent reduction for his personal home in the Chicago suburb of Kenilworth. Kennedy then quietly withdrew his appeal request, according to a letter obtained by POLITICO, seven days after a story surfaced that was critical of property tax reductions won by his chief primary opponent, billionaire J.B. Pritzker." **Full story.**

THE END OF THE CASE, OR THE BEGINNING? - "Woman pleads guilty in scheme to pay off Brady challenger," by POLITICO's Josh Gerstein: "A Pennsylvania pastor pled guilty to a federal felony Tuesday for participating in a scheme that led a challenger to Rep. Robert Brady (D-Pa.) to bow out of a 2012 primary contest. Appearing in U.S. District Court in Philadelphia, Rev. Carolyn Cavaness pled guilty to a single charge of making a false statement in a federal proceeding, court records show. Cavaness was a campaign staffer for Jimmie Moore, a Philadelphia judge who entered the Democratic primary against Brady. ... No charges have been announced against Moore or Brady. However, one court filing made public Tuesday indicates prosecutors believe Brady attempted to influence the testimony of at least one witness in the investigation." **Full story.**

- Via the Philadelphia Inquirer's Jeremy Roebuck and Chris Brennan: "Reached for comment after the filings were unsealed late Tuesday, Brady referred a reporter to Ken Smukler, his longtime political consultant. 'You have to talk to Kenny,' Brady said. 'They did all that. That's five years ago. I don't remember none of that.' Asked if his campaign sent Moore's campaign $90,000 to pay debts, Brady said: 'Whatever they did, I don't know.'" **Full story.**

TIMELINES - "Hovde says no decision, despite move to end committee," by the Associated Press: "Hovde said Monday that paperwork filing with the Federal Elections Commission earlier this month indicating he plan to close the 'Hovde for Senate' campaign committee was just clean up work from the 2012 campaign. Hovde says he's still considering whether to get into the race next year and won't make a decision until after his youngest daughter leaves for college later in August." **Full story.**

READING LIST - "Senator Jeff Flake, Facing Twin Threats, Is Said to Take On G.O.P. Rift in New Book," by The New York Times' Alexander Burns: "Senator Jeff Flake , Republican of Arizona, faces political challenges from both sides in seeking re-election next year: On the left, emboldened Democrats are aggressively recruiting candidates to run against him. On the right, allies of President Trump are devising ways to punish Mr. Flake for his outspoken rejection of Mr. Trump last year. Yet Mr. Flake, seemingly undaunted, has secretly planned an unconventional campaign kickoff that risks intensifying both threats: Working privately, and largely without the knowledge of political advisers, he has written a book that amounts to an ideological manifesto for his own version of conservatism, according to three people briefed on the manuscript who discussed it on the condition of anonymity." **Full story.**

AIR WAR - Gillespie launches television ads in Virginia: "Virginia Republican Ed Gillespie has launched the first three television ads of the general election in the state's governor's race. All are positive ads focusing either on his biography or his plans to improve the state's economy." Watch the ads here, here and here. **Full story.**

- Ohio Senate candidate Gibbons releases first TV ad: "Ohio Republican Mike Gibbons' Senate campaign released its first statewide TV ad today, attacking "career politicians" for failing to repeal Obamacare and cut taxes." Watch the ad here. **Full story.**

PERSONNEL CHANGES - IMGE, IJR split, adds staff: Phil Musser, IMGE's CEO who co-

founded the Independent Journalism Review, announced to staff in an email that he bought IMGE from MGA Holdings, splitting off from the conservative website. "This was long in the works, and will allow us to pursue our dreams, and IJR to pursue theirs without the worry of conflicts of interest," Musser wrote. IMGE also brought on new personnel, including former NRCC executive director Liesl Hickey as a strategic partner and Phil Cox, who runs the bipartisan public affairs firm 50 State, as a senior adviser.

CODA - QUOTE OF THE DAY: "Trust me. Do you know why he challenged you to a duel? 'Cause you could beat the s- out of him." - Rhode Island Sen. Jack Reed to Maine Sen. Susan Collins, referring to GOP Rep. Blake Farenthold's comments that he would challenge Collins to a duel, if she were a man, The Washington Post reported.

Subject: Today on Climate Beat

July 18, 2017

Today on Climate Beat . . .

. . . we did some trading, offering early details of the California Legislature's super-majority votes to extend the state's landmark greenhouse gas cap-and-trade program, given the program long-term certainty and protecting against potential future legal challenges.

On the personnel front, Miles Keogh, a former research director at the National Association of Regulatory Utility Commissioners, has been tapped to run the National Association of Clean Air Agencies, the state air directors' agency announced.

And in court, a major commercial appliance industry group has asked to intervene in litigation challenging the Department of Energy's delay of several Obama-era appliance energy efficiency standards, suggesting it seeks to protect the department's broad authority to correct errors in the standards before finalization.

Subject: Morning Energy: Judge hands tribes major Dakota Access victory — Pruitt returns to Hill today — Uphill challenge seen for E15 bill

By Anthony Adragna | 06/15/2017 05:41 AM EDT

With help from Esther Whieldon, Darius Dixon, Eric Wolff and Alex Guillén

THIRD TIME'S THE CHARM! Opponents of the Dakota Access pipeline received a major legal victory late Wednesday as a federal judge ruled the government's environmental review of the project was inadequate and that the U.S. Army Corps of Engineers must redo its analysis under the National Environmental Policy Act. In his 91-page ruling, U.S. District Court Judge James Boasberg said the government "did not adequately consider the impacts of an oil spill on fishing rights, hunting rights, or environmental justice, or the degree to which the pipeline's effects are likely to be highly controversial."

But he stopped short of immediately ceasing the pipeline's operation, calling that a "separate question" subject to additional briefing to be discussed at a status conference next week. Tribal opponents of the pipeline, which began operating this month, had failed twice before in legal challenges seeking to block its completion. But they hailed Wednesday's decision: "We applaud the courts for protecting our laws and regulations from undue political influence, and will ask the Court to shut down pipeline operations immediately," Standing Rock Sioux Chairman Dave Archambault II said in a statement.

In a statement, the Grow America's Infrastructure Now coalition said the outstanding claims in the case "do nothing to impact the ongoing operation of the pipeline" and expressed confidence the Corps would allay the judge's concerns. "While we have little doubt that the Corps will ultimately be successful in satisfying the Court's concerns, tonight's decision continues the public saga of the project and jeopardizes ongoing infrastructure investment," Craig Stevens, a spokesman for the group, said.

PRUITT RETURNS TO THE HILL: Capitol Hill is still reeling after Wednesday's shocking shooting of House Majority Whip Steve Scalise and four others at a congressional baseball practice, but House appropriators plan to move forward as scheduled and hear testimony from EPA Administrator Scott Pruitt on President Donald Trump's fiscal 2018 budget request for the agency. That request sought a 31 percent cut for the agency, from $8.2 billion to $5.6 billion, though even fellow GOP lawmakers have bristled at such steep proposals. Look for lawmakers from both parties to press Pruitt — offering his first congressional testimony since being confirmed — on cuts to their pet programs but for Democrats to also press him on ongoing efforts to roll back a number of Obama-era regulations.

One key issue to watch: Whether Pruitt gives a full-throated defense of the budget that not only slashes climate change spending but does not spare his favored programs — including Superfund and brownfields. If he does, he's chaining himself to Trump's proposal and signaling even his own priorities are at risk. If not, he may double-cross the boss. On the other hand, Pruitt is

talented at sidestepping thorny issues and returning to his comfort zone, a high-wire act he could pull off once more.

Ahead of his appearance, Pruitt's critics will hold a "resistance rally" outside the Independence Avenue entrance to Rayburn at 10 a.m. Participating groups include Hip Hop Caucus, Green for All, Sierra Club, Environment America, Moms Clean Air Force, WE ACT for Environmental Justice, Sojourners, Green Latinos, Climate Action Campaign, the Union of Concerned Scientists and Franciscan Action Network, among others.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and NRDC's Edwin Chen was first to name President Gerald Ford as the last sitting chief executive to testify before Congress. For today (and in honor of the awesome Congressional Baseball Game): What congressman hit the first known grand slam during the game back in 1957? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

ARIZONA REGULATOR JOINS EPA: Henry Darwin, Arizona's former environmental chief, has been named EPA's assistant deputy administrator, where he will help manage day-to-day operations. He's been the state's chief operating officer since 2015 but before that served five years as director of the Arizona Department of Environmental Quality, Pro's Alex Guillén reports . Darwin "will deploy the same Lean Management System that he successfully deployed" in Arizona, EPA spokesperson Liz Bowman said. "He will focus the Agency on providing value to taxpayers by helping us measure performance, improve our processes and solve the issues that matter to Americans."

In 2014, Darwin testified before Congress that he did not believe EPA had the legal authority to regulate carbon emissions as it did with the Clean Power Plan. Darwin's position at EPA does not require Senate confirmation.

NUCLEAR ENERGY CREDIT BILL GETS A VOTE: The House Ways and Means Committee is set to vote today on legislation extending the nuclear energy production tax credit program that Southern Co. and SCANA need to keep their nuclear projects on sound financial footing. The credits — worth billions of dollars to the companies — currently require new reactors be in service by the end of 2020 to qualify, a timeline made just about impossible given the bankruptcy of contractor Westinghouse. The bill would open the credits to projects that power up after 2020. The markup is scheduled for 10 a.m. in Longworth 1100.

YUCCA, OZONE, BROWNFIELDS BILLS ON THE MOVE: House Energy and Commerce Environment Subcommittee members are expected today to advance their first three major environmental measures of this Congress. Chairman John Shimkus gets a vote on his draft bill rewriting the nation's nuclear waste policy. The measure contains language on interim storage sites, but seeks to advance Shimkus' long-held priority of completing Yucca's licensing process. Also on the docket is the Ozone Standards Implementation Act (H.R. 806), which would delay implementation of the 2015 ozone standard through 2025 and stretch the regular air quality standard review period from five years to 10. And the panel will consider a draft bill reauthorizing and tweaking the brownfields program to raise the cap on federal grant amounts

for individual sites. Similar versions of all three bills have been considered in prior Congresses, though none have come close to passage. The markup kicks off at 10 a.m. in Rayburn 2123.

NRC CHAIRWOMAN GETS PANEL VOTE: Moving quickly just two days after her confirmation hearing, NRC Chairwoman Kristine Svinicki gets a vote this morning at 10 a.m. at Senate EPW. Time is of the essence because her term expires June 30, and Svinicki would have to step down, at least temporarily, if the Senate fails to confirm her by then. Her biggest hurdle may be securing time on the Senate's floor schedule, with ranking member Tom Carper telling reporters after the hearing Tuesday that she'd have little trouble clearing the Senate.

LONG WAY TO GO FOR E15: Sen. Deb Fischer got her promised hearing Wednesday on a bill to promote sales of 15 percent ethanol gasoline, but she's going to need a lot of help to get the legislation out of the Senate Environment and Public Works Committee. Five cosponsors of the bill, S. 517, sit on the panel, but no other EPW members have declared their support, leaving it six votes short of a committee majority.

As Pro's Eric Wolff reports, Chairman John Barrasso, top Democrat Tom Carper, and Republican former chairman Jim Inhofe all opposed the bill or would require significant changes to win their support. GOP Sens. John Boozman and Richard Shelby told ME they oppose the E15 bill, and Republicans Roger Wicker and Shelley Moore Capito have sponsored anti-ethanol legislation in the past. The last Republican on the committee, Alaska Sen. Dan Sullivan, appears to have no public position on the RFS. Among EPW Democrats, Illinois Sen. Tammy Duckworth is the bill's only cosponsor. ME caught up with Sen. Ed Markey, who said he hadn't made up his mind, and Sen. Cory Booker told Eric he has "negotiations underway."

Markup? Two ethanol sources who have had conversations with Senate staff said they expect a committee vote on Fischer's bill in July, but everyone agreed that the timing was in flux.

X MARKS THE MOX: Top lawmakers on the Senate energy appropriations panel seem more prepared than ever to defund the controversial MOX nuclear project after years of holding back their frustrations. The Obama administration spent years urging Congress to put the project, which was designed to dilute weapons-grade plutonium into reactor fuel, into cold standby before it eventually called for killing MOX outright in favor of a "dilute and dispose" program last year. Interestingly, Trump's budget last month agreed. "I think the fact that successive administrations have come to the same conclusion is very important," Sen. Lamar Alexander, the energy spending chief, said of MOX at a hearing Wednesday afternoon, after noting that a special "red team" said the dilution effort would be faster and cheaper. "I think we have a formula," said Sen. Dianne Feinstein, the top Democrat on the energy spending panel. Last year, Alexander, faced with opposition from South Carolina Sen. Lindsey Graham, extended MOX's life so other committees could discuss it.

WAITING FOR REG REFORM: Sen. Rob Portman told ME the regulatory overhaul he and Sen. Heidi Heitkamp sponsored will get to the floor, "Soon now, I hope!" The bill advanced out of committee last month, but Heitkamp was the only Democratic backer. Sen. Claire McCaskill, a centrist Democrat whose support Portman and Heitkamp probably need, promised her own bill that day with the hopes she'd have it out by Memorial Day. Wednesday she told ME she said

reviewed a draft last week, but that it still needed work. She hopes she'll release it before the July 4 break.

Appreciate the scene: Portman gave his answer while to ME while sitting on a Senate subway after a gaggle of reporters bombarded him with questions on the upper chamber's secretive healthcare bill. He called out his response on reg reform, a topic he would much rather discuss, as the train pulled away from the platform, almost as if the moment had been shot for a movie. ME would like to be played by Chris Pratt, thanks for asking.

ANOTHER KEYSTONE MEETING SCHEDULED: The Nebraska Public Service Commission has added a third public meeting on TransCanada's application for the controversial Keystone XL pipeline route through the state on June 28, Pro's Ben Lefebvre reports. Comments during the meeting at the Divots Conference Center in Norfolk will be on a first-come, first-served basis. The commission expects to make a final decision before the end of the year.

PAST EPA CHIEFS PAN TRUMP: Former EPA administrators Carol Browner and Gina McCarthy got off a few jabs at President Trump during appearances at Wednesday night's League of Conservation Voters dinner. McCarthy said Trump's solar wall idea makes him "the definition of 'desperado,'" adding: "It's an interesting tactic, trying to pass a terrible idea by linking it with a good one. What's next? A wind-powered oil derrick?" Browner, meanwhile, joked that Trump's "covfefe" tweet "sounds like something EPA would regulate."

MAINE MONUMENT STILL IN SPOTLIGHT: Interior Secretary Ryan Zinke swings through Maine for a second day and again will focus on the controversial Katahdin Woods and Waters National Monument. Zinke today meets with tribal leaders, Gov. Paul LePage and other local elected and business representatives of varying opinions about the monument, according to the agency.

GRIJALVA QUESTIONS METHANE PULLBACK: House Natural Resources Ranking Member Raul Grijalva sent a letter to Zinke Wednesday questioning whether Interior violated the Administrative Procedures Act by suspending key parts of the methane waste rule. "Extending those compliance dates without another notice-and-comment period, and with only a cursory rationalization that is in large part based on written requests from oil and gas industry groups, is arbitrary and capricious," he wrote.

RECORDS SOUGHT OVER DOE GRID STUDY: The Center for Biological Diversity filed a FOIA request Wednesday seeking records of DOE communications with energy companies and other outside entities related to its ongoing electric grid reliability study. "We hope our request will shed light on the administration's communications with the dirty companies that would benefit most from hampering wind and solar," Howard Crystal, a senior attorney with the group, said in a statement.

PRO-WIND GROUP LAUNCHES CAMPAIGN IN D.C.: American Wind Action launched a multimillion-dollar digital, TV and radio advertising issue advocacy campaign Wednesday in Washington that features workers at an Iowa wind turbine manufacturing facility who say the industry "powers American jobs."

REPORT: CLEAN ENERGY MOMENTUM CONTINUES: A report released Wednesday by Deloitte finds renewable energy sources are competitive with conventional energy and 63 percent of residential consumers said they're very concerned about climate change and their carbon footprints. "Green energy no longer solely means environmental concerns, 'green energy' also means the dollars that can be saved by investing in wind, solar and other clean energy sources," Deloitte's Marlene Motyka said in a statement.

CLIMATE CAUCUS GROWS AGAIN: There are now 42 members of the bipartisan Climate Solutions Caucus with the addition of four more lawmakers: Reps. Jimmy Panetta (D-Calif.), Scott Taylor (R-Va.) and Barbara Comstock (R-Va.), as well as Del. Stacey Plaskett (D-V.I.).

MOVER, SHAKER: James Schindler, a member of the Trump administration's Interior beachhead team and prior legislative aide to former Sen. David Vitter, took an official job as special assistant in the Bureau of Ocean Energy Management effective May 28, according to a Public Financial Disclosure Report obtained by ME.

YOU'RE HIRED: Akin Gump has signed four new clients, including Gulfport Energy Corporation and Otis Eastern Service (h/t POLITICO Influence).

Stories from POLITICO Pro

Trump budget request maintains steep EPA cuts Back

By Alex Guillén | 05/23/2017 11:19 AM EDT

The Trump administration's proposed budget calls for slashing EPA's funding for fiscal 2018 by 31 percent, the most severe cut of any major federal agency.

The budget would see EPA's funding drop to just over $5.6 billion, down from the $8.2 billion EPA ultimately got for fiscal 2017, in line with the figures the administration issued in its previous "skinny" budget.

Only a few areas would see modest budget increases, such as the State Revolving Funds that make low-interest loans for water infrastructure projects and a chemical review program that is expanding to keep pace with last year's overhaul of the Toxic Substances Control Act.

But almost every other EPA office would face significant cuts that have already been criticized by lawmakers from both parties. Those cuts target climate change-related programs, hundreds of millions of dollars' worth of state grants, regional water cleanup efforts in places like the Chesapeake Bay and the Great Lakes and the agency's enforcement efforts.

Appropriators on the Hill have expressed skepticism that Congress will cut EPA's budget as deeply as the White House is requesting.

Former Arizona environmental chief tapped for EPA operations job Back

By Alex Guillén | 06/14/2017 06:58 PM EDT

Arizona's former environmental chief has been tapped to be EPA's "chief of operations," according to a release from Gov. Doug Ducey's office.

Henry Darwin has been the state's chief operating officer since 2015, and is also acting director of the state's Department of Economic Security. Before that he spent five years as director of the Arizona Department of Environmental Quality. Darwin will remain in his Arizona post until June 30.

It is not clear what the job of chief of operations entails, or how it is different from deputy administrator, who traditionally runs day-to-day operations at EPA. Agency spokespeople today did not immediately answer questions about the position.

In 2014, Darwin testified before Congress that he did not believe EPA had the authority to regulate greenhouse gases as EPA did under its Clean Power Plan. He has a degree in engineering from the University of Arizona and a law degree from Lewis & Clark College.

Nuke utilities warn failure to extend tax credit could upend new reactors Back

By Darius Dixon | 05/03/2017 06:31 PM EDT

Utilities building new nuclear reactors in Georgia and South Carolina say they will have to rethink those projects if Congress does not extend tax credits they had been counting on.

The nuclear projects, already suffering delays, were on track to be finished just before those tax credits would expire, and now they are expected to fall further behind because of the bankruptcy of contractor Westinghouse, which designed the new reactors being installed. The tax credit does not expire until the end of the decade, and South Carolina lawmakers failed to get it included in an omnibus spending bill expected to pass this week. But nuclear proponents say quick action would go a long way to help the new reactors come online.

"The most obvious thing the U.S. government can do is to lend support to extend the timeframe on the production tax credit," Southern Company CEO Tom Fanning told investors on a quarterly earnings call Wednesday.

Southern subsidiary Georgia Power and its partners are evaluating whether to change course on its two-reactor Vogtle nuclear expansion project in the wake of Westinghouse's bankruptcy, and Fanning said reworking the tax credit would be "central" to how it proceeds.

A similar evaluation is underway at South Carolina-based SCANA Corp., which is building two Westinghouse-designed AP1000 reactors at its V.C. Summer Nuclear Station. SCANA Executive Vice President and CFO Jimmy Addison told investors last week that the future of the nuclear tax credit was one of three "critically important" variables that will determine the future of the project.

Both Southern and SCANA had recently expected to bring a Vogtle and Summer reactor online in 2019 and 2020. Those projects have already faced numerous delays, and any additional slippage in the schedule may mean they won't come online in time to claim the tax credits investors had assumed would be there.

At issue is a nuclear production tax credit that the industry estimates would be worth as much as $6 billion over eight years. The credit is only available for reactors that come online by 2020.

Over the past week, a bipartisan group of lawmakers had been trying to move a package of tax extenders that would have included removing the in-service deadline for new nuclear reactors, but they have struggled to gain traction.

South Carolina Sen. Lindsey Graham briefly threatened to hold up the omnibus spending package Congress is set to pass this week in an effort to get the nuclear incentive included in the bill, but he and other nuclear advocates are now looking for other avenues.

"I'm not going to sit on the sidelines and watch the nuclear industry be destroyed," Graham said Wednesday. "For three years, we've been trying to get these tax credits extended. ... The [four] reactors that are being built are very much at risk."

Graham's Palmetto State colleague Sen. Tim Scott, who introduced legislation seeking to make changes to the credits, is already eyeing the next ride.

"We are hopeful that as we look forward to a tax package or another vehicle that seems to have the possibility of passing, that we will have this conversation in earnest again," he told POLITICO.

At the moment, Southern has an interim agreement with Westinghouse that has kept the project moving and thousands of workers on site, Fanning said.

That agreement runs through May 12, and Fanning said that Georgia Power and its Vogtle project partners are negotiating a broader "transition" plan with Westinghouse that will move the project to a new contractor, including Southern taking over as general construction contractor. He also emphasized that Westinghouse parent company Toshiba is still on the hook to spend at least $3.7 billion for Vogtle and maintain commitments regarding intellectual property.

Fanning said the partners will send an assessment to state regulators outlining their options "within the next month or two." That could include three possible paths: full steam ahead on both reactors, continue with just one unit or walk away from the whole thing.

"If it looks likely that the best thing for customers is to not complete these plants, I think at that point you might take a completely different posture on site," he said. "So long as it is viable for us to complete the plant, it is absolutely important for us to not only maintain, but improve productivity on the site. ... [If we] were to start sending people home, the chances of us getting those people back on site would be awfully difficult."

SCANA's Addison said the future of its reactors would depend on confirming the project's existing cost estimates, recouping what it is owed by Westinghouse and extending the tax credits.

"And all three of those are in the billions of dollars. So they're all critically important," he told investors last week. "And we have impressed upon everyone that has a vested interest in South Carolina and in nuclear in America that'll listen to us, that the timeliness of this is very, very important to this evaluation."

Ethanol politics bog down E15 bill Back

By Eric Wolff | 06/14/2017 02:18 PM EDT

A bill to expand sales of gasoline with 15 percent ethanol appears to be stuck on long-running disputes over biofuel policy that may limit its support outside of corn states.

Sen. Tom Carper (Del.), the top Democrat on the Environment and Public Works Committee, said after a hearing today that he will oppose the E15 bill without an amendment addressing "transparency in the RIN market," a reference to the credits refiners must purchase to comply with the Renewable Fuels Standard. Merchant refiners in the Philadelphia area, along with Trump associate Carl Icahn and refining giant Valero, blame high RIN prices for threatening their profits.

Carper also raised concerns about increasing ozone emissions that already plague his state if more E15 were sold, a concern shared by several influential environmental groups. Sen. Tammy Duckworth (Ill.) is the bill's only Democratic co-sponsor on the committee.

Sen. Cory Booker (D-N.J.) did not ask any questions at today's hearing, but afterward he told POLITICO he is in "negotiations" over the bill, declining to offer details. Sen. Deb Fischer (R-Neb.), the lead sponsor of the bill, said she plans to speak to Booker but has not done so yet.

Republicans in the hearing seemed to have staked out their positions, with corn-state senators like Mike Rounds (S.D.), Jerry Moran (Kan.), and Joni Ernst (Iowa) promoting the bill and long-time RFS opponents like Sen. Jim Inhofe (Okla.) and Chairman John Barrasso (Wyo.) criticizing it.

WHAT'S NEXT: Barrasso has said the committee will vote on the E15 bill, but no date has been set.

Senate Armed Services panel to hold a hearing on MOX project Back

By Darius Dixon | 04/13/2016 04:04 PM EDT

The Senate Armed Services Committee plans to hold a hearing on the controversial MOX nuclear project, lawmakers said today — and Sen. Lindsey Graham says it'll be a show.

"If you're looking for a good time, come listen to that hearing," Graham said at an energy and water appropriations markup.

The South Carolina Republican was pleased that Senate appropriators included $270 million for the project in its fiscal 2017 energy and water spending bill, which was approved in subcommittee today. But he's been increasingly frustrated with the Obama administration's effort to shut down MOX, a project at the center of an agreement with Russia to divert 34 metric tons of U.S. weapons-grade plutonium.

"I'm going to weigh into these guys like Sherman going through Georgia," Graham added.

The hearing hasn't been scheduled yet, according to Graham's office.

The House approved a spending bill earlier this afternoon that also rebuffs the administration's official effort to spike MOX.

Sen. Dianne Feinstein, the top Democrat on the energy and water panel who described MOX's ballooning costs as "exorbitant," said that Energy Secretary Ernest Moniz gave several lawmakers a presentation about the project this morning, including herself, Alexander, Graham and members of the Senate Armed Services Committee.

Sen. Lamar Alexander, who chairs the energy and water subpanel, said that decisions about the fate of MOX rest with authorizers on the Armed Services panel.

Nebraska regulators schedule new public meeting for Keystone XL Back

By Ben Lefebvre | 06/14/2017 03:44 PM EDT

Nebraska regulators have added a third public meeting on TransCanada's application for the controversial Keystone XL pipeline to traverse the state.

The Nebraska Public Service Commission meeting will be held on June 28 at the Divots Conference Center in Norfolk. Public comment will be on a first-come, first-served basis, according to the NPSC notice.

Hundreds of people showed up at the previous session to give their views on whether Nebraska should allow the pipeline to follow the path that developer TransCanada has proposed. Environmentalists have criticized the 830,000-barrel-a-day pipeline for facilitating development of Canada's oil sands. Supporters have said the pipeline will provide jobs and reduce dependence on oil imported from unfriendly countries.

The NPSC expects to make a final decision on the Keystone route by the end of the year.

WHAT'S NEXT: After the new June 28 meeting, a public meeting will be held in August.

BLM delays key parts of methane waste rule Back

By Alex Guillén | 06/14/2017 10:08 AM EDT

The Bureau of Land Management will suspend key parts of the methane waste rule while litigation and an internal agency review plays out, the agency says in a Federal Register notice to be published on Thursday.

Oil and gas producers "should not be required to expend substantial time and resources to comply with regulatory requirements that may prove short-lived as a result of pending litigation or the administrative review that is already under way," BLM says in its notice.

Several provisions were scheduled to take effect on Jan. 17, 2018, but have been pushed back indefinitely, BLM said.

The postponed requirements include a mandate to capture a certain amount of waste gas

produced during production, along with storage tank vapors; measure flared gas; upgrade or replace some equipment; and have in place leak detection and repair programs. Those requirements would have required operators to buy and install significant new equipment at "substantial cost," BLM said.

Some other provisions have already taken effect and are not postponed, including a requirement that new permits to drill include waste minimization plans, certain maintenance mandates and limits on venting and flaring while in production.

The rule survived a nullification attempt via a Congressional Review Act resolution last month after several Republicans sided with Democrats to keep the rule alive.

WHAT'S NEXT: Opening briefs in the lawsuit in the U.S. District Court for Wyoming are due July 3, with briefing continuing through August. The requirements stayed by BLM will remain paused until litigation and an internal review are complete, a process that could take years.

Subject: Morning Energy: Unpacking Pruitt's early days as administrator — DOE defends closing climate office — Carper pushing for quick Svinicki vote

By Anthony Adragna | 06/16/2017 05:42 AM EDT

With help from Anca Gurzu and Alex Guillén

PRUITT'S EARLY SCHEDULES RELEASED: After months of requesting them, EPA released Administrator Scott Pruitt's schedules for his first five weeks in office to E&E News late Thursday. They show a host of previously-known meetings with governors and industry figures, but also detail undisclosed private meetings with senior energy industry VIPs — and virtually no interactions with environmentalists.

Wading into the White House: Before he helped convince President Donald Trump to ditch the Paris climate deal, Pruitt lunched separately with members of the dueling ideological camps inside the White House. On March 13, Pruitt sat down with the president's daughter Ivanka Trump, who ultimately failed to convince her father to stick with the accord. A few days later, he discussed climate change with Stephen Miller, one of the president's more populist conservative advisers.

Congress calls: Sen. Todd Young (R-Ind.) scored an early win when a when a March 8 call to raise the USS Lead Superfund site in East Chicago led to a personal visit by Pruitt on April 19. Indiana's other senator, Democrat Joe Donnelly, also scored a phone call with Pruitt. And Pruitt met once with Sen. Luther Strange (R-Ala.), a longtime collaborator on environmental lawsuits when both were AGs. The topic, according to Pruitt's schedule, was the "Alabama sweep," which ME is guessing is a sports thing.

Industry invites: Pruitt spoke at a dinner gathering of the American Petroleum Institute's executive committee and board of directors — held at the Trump Hotel, across the street from EPA headquarters. Pruitt also discussed regulatory reform and "Chevron's perspective on global oil and gas developments" with Chevron chief John Watson. Steve Pastor, a petroleum executive with BHP Billiton, asked for a meeting to "thank [Pruitt] for leadership."

More industry meetings with: Coal CEO Bob Murray; Andrew Liveris, Dow Chemical; Lynn Good, Duke Energy; Sean Trauschke, Paul Renfrow and George Baker of OGE Energy; National Rural Electric Cooperative Association CEO Jim Matheson; BMW Global Chairman CEO Harald Krüger; A.J. Ferate, vice president of regulatory affairs at Oklahoma Independent Petroleum Association.

Odds and ends: Pruitt on several occasions blocked out time for CIA Director Mike Pompeo, but no other details were included. At Pruitt's request, former Virginia attorney general Ken Cuccinelli stopped by to talk about an undisclosed topic. Cuccinelli is now general counsel for FreedomWorks, the Koch-connected group. Pruitt met in his office on March 22 with Kevin Hern, a Tulsa businessman planning to run for the seat of Rep. Jim Bridenstine, who said he

would limit himself to three terms. Pruitt also met with: German Environment State Secretary Jochen Flasbarth; Environmental Council of the States executive director Alexandra Dunn; Jason Grumet of the Bipartisan Policy Council; James T. Conway and others from Securing America's Future Energy; San Joaquin Valley Air Pollution Control District executive director Seyed Sadredin.

An ear for ethanol: Pruitt's calendar is light on details in terms of what was discussed, with a few exceptions. On several occasions Pruitt discussed the federal biofuels mandate, including a wonky dispute over which companies are responsible for complying with the law. Pruitt has the final call on a petition the Obama administration proposed rejecting that would move the so-called point of obligation from oil refiners to fuel blenders. The point of obligation was a topic of discussion when Pruitt met with Greg Love of Love's Travel Stops, which belongs to a trade association representing truck stop owners that has come out against shifting the obligation. Pruitt also discussed the topic with George Damiris, the CEO of HollyFrontier, an independent refiner that supports the shift. And he discussed the Renewable Fuel Standard with BP America CEO John Minge, whose company is part of a coalition pushing to keep the point of obligation where it is. Pruitt also met separately with National Corn Growers Association CEO Chris Novak and Corn Refiners Association CEO John Bode alongside other agriculture industry representatives, although his calendar did not list the topics they discussed.

Did we miss anyone?: No meetings with environmentalists were listed on Pruitt's calendar, which covered Feb. 21 to March 31. Pruitt's first public meeting with greens was a few weeks later, when he met with members of the Nature Conservancy and Audubon Society.

Meanwhile, more Oklahoma emails: More than 4,000 of newly-released emails from Pruitt's time as Oklahoma attorney general provide further evidence of how closely he coordinated with fossil fuel companies, The Associated Press reports. The records, which contain schedules and lists of speaking engagements, detail dozens of meetings between Pruitt, members of his staff, and executives and lobbyists from the coal, oil and gas industries.

TGIF EVERYONE! I'm your host Anthony Adragna, and Covington & Burling's Bud Earley was first to identify future President Gerald Ford as the first to hit a grand slam in the Congressional Baseball Game. For today: In what city did the First Continental Congress meet back in 1774? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

HOW A STREET IN BROOKLYN IS CHANGING THE ENERGY GRID: The shared economy is flourishing, with companies like Airbnb and Lyft capitalizing on the growing popularity of shared services. Can their success be replicated in the energy industry? In the latest installment of **POLITICO Magazine's "What Works"** series, we look at Brooklyn-based LO3 that devised a micro grid system that uses a phone app and smart meters to enable neighbors with solar panels to strike deals amongst themselves on the amount of electricity they buy from each other and at what price. We also look at the revitalization of Tampa, Florida — a broken down deep water port revitalized after 40 years of public and private investment. Read more: Tampa Revitalization | Brooklyn's Energy Grid | Photo Gallery

CAN I CONSOLIDATE? The Energy Department confirmed that it is shuttering the Office of International Climate and Technology — calling it "one example of many" efforts to "consolidate the many duplicative programs that currently exist" within the agency in light of anticipated budget cuts. The shift is part of a larger realignment toward basic scientific research as opposed to technology deployment and follows a budget request that would eliminate programs like ARPA-E while slashing spending on fossil, nuclear and renewable energy offices.

But DOE disputed the idea that getting rid of the climate office would impede the type of work that it did. "The premise of the New York Times article claiming that the Administration is retreating on its efforts to promote clean energy is entirely false," DOE spokesman Shaylyn Hynes said in a statement, referring to the initial report that the office's 11 employees had been told their positions were being eliminated. Secretary Rick Perry "has a proven record of managing under tight budgets and looks forward to working with whatever resources Congress appropriates." Perry just returned from a trip to China for the annual Clean Energy Ministerial, which was organized with help from the international climate office. DOE said it would continue to do some preparation for future such meetings but would disperse the work among regional offices.

REJECTION OF REVOCATION: The Trump administration appears unlikely to try to rescind a series of national monument designations under the Antiquities Act made by former President Barack Obama and his predecessors. Interior Secretary Ryan Zinke offered good news to supporters of Maine's Katahdin Woods and Waters National Monument during a two-day tour by car, foot and canoe of the area when he said federal ownership of the area is "settled" and that he was unlikely to recommend shrinking it, according to multiple reports.

Zinke suggested he might actually go further and ask Congress to designate the area as a national park. And he appeared to reject an idea from Maine Gov. Paul LePage to transfer control of the monument back to the state: "We can look at management schemes, but I'm not a fan of sale or transfer of public lands," he told Maine Public Radio. Zinke's New England comments come after he recommended earlier this week trimming back — but not revoking — the controversial 1.4 million-acre Bears Ears National Monument in Utah, which many in the state's congressional delegation were pushing. It's worth noting Zinke could still change his mind before issuing final recommendations to Trump and that any attempt to alter existing monuments is sure to face legal challenges.

The man and the sea: Zinke's New England swing takes him to Boston today where he'll gather input the Northeast Canyons and Seamounts National Marine Monument off the coast of New York and New England. He hosts a listening session with local fisherman at 11 a.m., some of whom have filed a lawsuit challenging the designation.

CARPER PUSHING FOR SVINICKI VOTE: Top Senate EPW Democrat Tom Carper told ME "I'll do everything I can to make sure we" vote on NRC Chairwoman Kristine Svinicki's renomination before her current term expires at the end of the month. EPW cleared her renomination by voice vote earlier Thursday, though a spokesman for Majority Leader Mitch McConnell declined to comment on vote timing. Svinicki would have to step down, at least temporarily, if the Senate fails to confirm her by June 30.

Wait and see on oversight needs: Carper said he "appreciated" assurances from Chairman John Barrasso that EPA should respond to oversight requests from members of both parties, but said "we need the heartfelt assurances" of the agency. The Delaware Democrat has been frustrated by what he says are inadequate responses to his letters seeking information on agency actions.

THE LEGEND OF CHICAGO: Lawmakers from both parties warned Pruitt on Thursday he'd have to swallow more funding for his agency than requested, but Pruitt also pushed back on the suggestion he planned to close any EPA regional offices. "There is no consideration presently with respect to any regional offices about moving them to one location or another," he told a House Appropriations subcommittee. "I'm not sure where that came from." Asked specifically about Chicago-based EPA Region 5, Pruitt said reports of its impending closure were "pure legend" and "not something that is under discussion presently."

AGENCIES SEES PAPERWORK SLASHED: OMB Director Mick Mulvaney issued a memorandum Thursday eliminating a host of things federal agencies previously had to report to his office. Among those mandates on the chopping block: Reporting governmental costs related to the 2010 Deepwater Horizon oil spill in the Gulf of Mexico. "Too often, burdensome tasks have piled up without consideration of whether the requirements collectively make sense," the document notes.

EPA FIGHTS TO KEEP METHANE STAY: EPA asked a federal appeals court to reject environmentalists' request to reinstate key parts of the agency's rule limiting methane emissions from new oil and gas wells. As Pro's Alex Guillén notes, the agency further increased tension this week by proposing a two-year delay of those requirements. "There is no emergency," and the environmental groups cannot meet the requirements to obtain court action, EPA argued in a Thursday court filing. Those green groups must respond by June 20 and look for court action to follow shortly afterwards.

BROOKLYN'S HOTTEST CRAZE: Debra Bruno looks at the rise of microgrids in Brooklyn as part of POLITICO Magazine's What Works series. A novel system uses a phone app and smart meters to enable neighbors to strike deals for how much electricity they want to buy from one another and at what price. And it's powered by the same secure information exchange that makes bitcoin trading possible.

MAIL CALL! SENATORS: BUT, SERIOUSLY, PRUITT: Not holding back, six Senate EPW Democrats wrote Pruitt Thursday raising "serious questions" about whether he can "be trusted to inform Congress" about his activities as EPA administrator after revelations he used a third, previously undisclosed, email account while serving as Oklahoma attorney general. They asked Pruitt to immediately correct the record on his email habits and requested information about his use of secondary email accounts at EPA. The letter, spearheaded by Sheldon Whitehouse, goes on to ask if Pruitt has used "any other email addresses or other forms of electronic communication" for any purpose with entities with business pending before the agency.

NO METHOD TO THE MADNESS? The Manhattan Institute's Mark Mills is supporting a

revival of the U.S. manufacturing industry — a view he says is unpopular in parts of the gig-economy-obsessed tech world — and the biggest drag on the sector is the proliferation of regulations. His recent paper says myriad regulations cost manufacturers an average of $20,000 per employee, but that burden is even higher on the small companies, where the cost reaches $35,000 per employee. The No. 1 offender, Mills told ME, is the EPA. "Environmental regulations have been dominant. They've increased the most, and they cost the most." Much of the problem companies is trying to navigate the web of rules, many of which are in conflict with each other, he said. The argument, Mills says, is not to have no regulations, but to "de-conflict" them, like Germany and Canada do, which would ease the cost of compliance and help the sector.

GREEN GROUP SLAMS DEMOCRATIC AD: Friends of the Earth Action is decidedly not pleased with an ad released earlier this week boosting moderate Democratic Sen. Joe Manchin from a PAC allied with Minority Leader Chuck Schumer . The spot from Majority Forward praises Manchin for his efforts to roll back Obama-era coal regulations, but the Friends of the Earth said it undercuts resistance to Trump's environmental agenda. "As the Trump administration continues its devastating war against public health and the environment, it is troubling to see Democratic leaders normalizing Trump and his extreme agenda," Erich Pica, president of Friends of the Earth Action, said in a statement.

REPORT: TARGETING ENERGY EFFICIENCY MAKES NO SENSE: Public Citizen is out with a report Thursday arguing Trump's efforts to impede energy efficiency efforts make no sense even if he considers climate change a hoax, because the programs save consumers trillions over the course of their lifespans. "The savings from these programs literally approach the scale of Trump's most lavish promises for infrastructure spending," David Arkush, managing director of Public Citizen's climate program, said in a statement.

MOVER, SHAKER: Chris Adamo joins the National Wildlife Federation as senior fellow for conservation innovation; he served as chief of staff for the White House Council on Environmental Quality during the Obama administration between 2015 and 2017. Prior to that, he worked on conservation issues in the Senate for more than a decade and served as staff director for the Senate Agriculture Committee.

IT'S BEEN A TRIP! An 18-stop, 4,825-mile, coast-to-coast road trip sponsored by the American Gas Association ends today in Washington. The event has showcased a variety of vehicles running on compressed natural gas, liquefied natural gas and renewable natural gas. More information here.

Stories from POLITICO Pro

How Tampa Turned a Dead Zone Into a Downtown Back

By Richard Danielson | 06/15/2017 06:59 PM EDT

Tampa Mayor Bob Buckhorn likes to say that when he moved here in 1980, only 600 people lived downtown—300 of them at the old Morgan Street jail.

No wonder. Downtown Tampa in 1980 had been in decline for decades. A century before, early leaders had charted its future as a deep-water port for moving cargo: phosphate mined in Central Florida, citrus grown along the Gulf Coast and cigars rolled in brick factories crowded with Cuban and Italian immigrants. To step onto the docks before World War II was to enter a realm of railyards, warehouses and oil tanks. The prettiest building in town was (and arguably still is) a minaret-topped grand hotel that a 19th-century rail baron built on the far bank of the Hillsborough River. But until the early 1960s, that gem looked back across the river at a meat-packing plant teeming with big, brazen rats.

By the time Buckhorn arrived in his 1966 Dodge Dart, Tampa's waterfront was an industrial dead zone, some warehouses empty, others demolished and replaced by vacant lots. The city's streetcars, which once carried 24 million passengers a year, were long gone, muscled aside by a car-centric culture that helped make the Tampa Bay area the second deadliest metro in the country in which to walk or ride a bike. Downtown retailers had closed or decamped for the suburbs. There was no way to walk along the river, literally no path from the office buildings to the waterfront, and little open space. One of the only city parks near the river was fenced and padlocked to stop vagrants from bathing in its fresh-water spring.

"We had this river running right through the heart of the city, and everybody had turned their back on it," says Sandy Freedman, Tampa's mayor from 1986 to 1995, when things started to change in a big way. "We blocked the views. We blocked the access. We did everything in reverse of what you want to do when you have a river or any amenity."

Today Tampa has reinvented its downtown step by gritty step, but it hasn't been cheap. Over the past 30 years, City Hall and the government of Hillsborough County have invested more than half a billion dollars in projects to activate the waterfront. This was Tampa's Hail Mary pass—a multi-front push to transform a purely industrial zone into a tourist-friendly amenity and, eventually, a place to live. It required nothing less than a reversal of decades of centrifugal development pressure that had pushed people and tourist attractions miles from the city center. First came the performing arts center. Then the convention center. Then the aquarium. Then the hockey arena. Then the public subsidies for a convention hotel. Then the trolley. Then the history center. Then the new art museum. Plus a series of new parks, one where the meat-packing plant once stood, another at the fresh-water spring.

Finally, a 2.5-mile Riverwalk strung them all together. It took six mayors and 40 years, but it has opened up public access to the waterfront, connected the big public projects, and led to something new in downtown Tampa—a lot of people walking around, riding bikes and enjoying the river they had long ignored.

Together, these public investments did two things. Over the past 15 years, they put out the welcome mat for millennials and empty nesters looking to move back to the city. Tampa once competed for call centers; now it seeks to leverage assets like MacDill Air Force Base and the University of South Florida to pursue firms in defense, tech, life sciences, health care and banking services. Last year, the nonprofit Tampa Downtown Partnership said downtown's population had doubled in eight years to more than 8,100 people in 5,700 units, with two-thirds of downtown residents making $100,000 or more a year.

And there's more in the pipeline. Thanks to two new players that have, for Tampa, unprecedented reach, the city is about to get a turbocharged boost of growth. Former mutual fund impresario Jeff Vinik has partnered with billionaire Microsoft founder Bill Gates' private capital fund, Cascade Investment, on what could be Tampa's biggest transformation yet. With the arrival of Vinik and Cascade, decades of incremental, government-led change has set the stage for two big-thinking, fast-moving, business titans who relish the chance to play with the kind of blank urban canvas that doesn't present itself very often. If this public-private partnership succeeds, Tampa could finally make good on its longstanding ambition to be a star of the New South—not by reviving its downtown, but by reinventing it.

***

Today, Vinik, 58, is Tampa's most popular pro sports team owner, most prominent philanthropist and most ambitious developer, but he never meant to come to Tampa and remake a city. Ten years ago, he says, "I could not have imagined it."

Vinik's first career was in Boston, where at 33 he was hired to run Fidelity's Magellan Fund, then the nation's biggest mutual fund. In 1996, he left Fidelity and started his own hedge fund, which posted annualized 17-percent returns before he shut it down and returned billions of dollars to investors in 2013. By then, however, Vinik had already begun to re-invent himself. In 2010, he bought the Tampa Bay Lightning for an estimated price of $110 million. It was a purchase that

reflected an investor's eye for an undervalued asset. Less than two years before, it had sold for $200 million.

A lifelong hockey fan who grew up in New Jersey and New York, Vinik remembers falling asleep at age 5 to a Rangers game on a small television in his bedroom. When he bought the team, Vinik told reporters he had been thinking about it for two years, ever since a conversation with a close friend about what was next for him during a Christmas pop music concert in Boston. He wanted something fun and loved hockey's excitement. He sat down and Googled, "How to buy a sports team." Then, more systematically, he started to read books on sports management. He got to know the people who ran the teams as well as National Hockey League Commissioner Gary Bettman.

Vinik ended up looking seriously at 10 to 15 teams. He believed it's "critical to become part of the fabric of the community if you were going to own a sports team," so he began thinking about places where he would want to live, and Florida's warm weather was appealing. He looked at the Florida Panthers, but found the location of their arena, next to a toll road near the Everglades, to be isolated. In Tampa, he liked that the Lightning played in the southern end of downtown, on the other side of an elevated highway from the central business district, but near the bay. True, the arena was largely surrounded by acres of surface parking lots, but Vinik says "long-term that was a very good thing. Having said that, I had no aspirations of buying those properties or developing those properties." Still, buying the Lightning gave Vinik control of a publicly owned arena that hosted major concerts as well as hockey games, plus the ownership of two parking lots totaling about 5½ acres on either side of the arena. Vinik says the vacant land that came with the team did not play a big role in his decision to buy the Lightning. A year or two later, another parcel right across the street came on the market for a price that Vinik found "not cheap, but reasonable."

"It just seemed like good common sense to buy a piece of property across the street from the arena," he says. Then a couple of more parcels became available, and he bought them, again with no bigger plan in mind. He bought more. More came on the market. Eventually Vinik spent nearly $60 million to compile about 40 mostly contiguous acres near the arena. About three-quarters of the way in, he says, "the light bulb gradually went on and we said, 'Hmm, there are development opportunities here.'"

To pursue those opportunities, Vinik teamed up with Cascade. Vinik says he made the connection with Cascade through Tod Leiweke, the former Seattle Seahawks CEO whom Vinik hired to run the Lightning. Leiweke came to Tampa with an impressive portfolio of expertise, interests and relationships. He knew sports management. He was a natural civic leader. In both Seattle and Tampa, he helped drive efforts to address homelessness. (That wasn't his only community issue. I once bumped into him at the launch of a police gun buyback in one of Tampa's toughest neighborhoods.) Leiweke's older brother Tim was president of the company that developed the L.A. Live entertainment district next to the Staples Center in Los Angeles. And in Seattle, Tod Leiweke got to know key Microsoft executives, including Cascade manager Michael Larson, who is credited with building Gates' net worth from $5 billion two decades ago to what *Forbes* says is $89 billion now.

"Tod knew Michael Larson," Vinik says. "He introduced us. We had a couple of conversations, and they were interested in increasing their real estate exposure. They got it. Michael got it in terms of the potential we see here in downtown Tampa. It was a partnership (that was) meant to be."

Together, Vinik and Cascade Investment formed Strategic Property Partners, which is developing the 40 acres around the arena, plus a couple of other key acquisitions. One is the 719-room Tampa Marriott Waterside Hotel & Marina. It sits on the waterfront between the hockey arena and the Tampa Convention Center. SPP bought it for $150 million and plans a major renovation.

On the other side of the arena is another Vinik-Cascade asset: Channelside Bay Plaza, a 230,000-square-foot waterfront shopping mall. Less than 20 years old, it's a striking example of the kind of building that former Mayor Freedman talks about: one that turns its back on the water. Meant to be a festival marketplace, Channelside Bay Plaza looks inward, with few views of the shipping channel behind the building. On one of my few visits, for a night-time political rally in 2011, I spent an hour in its courtyard without realizing I could have seen the water from where I stood. Vinik plans to tear it down and start over.

But that's just one piece of a development plan that's mind-bogglingly ambitious. Over the next 10 years, Strategic Property Partners plans $3 billion in construction, aided by $100 million in local tax-increment financing revenues, including:

- 3,500 apartments or condominiums totaling 3 million square feet of construction.
- 2.4 million square feet of offices. That's more than a third as big as downtown Tampa's existing office inventory of 6.1 million square feet. • More than 1 million square feet of retail. This would be a huge increase. A downtown partnership survey last year found that downtown residents increasingly spend more on dining out and entertainment downtown, but still leave the urban core for groceries, gas, casual clothing, shoes, gifts, haircuts and items from the pharmacy.
- Two new hotels with a total of 650 rooms, or nearly a quarter of the 2,500 rooms downtown Tampa now has outside the SPP-owned Marriott Waterside.

So far, there's little to see. SPP plans to break ground on its first phase, encompassing 4 million square feet of residential and commercial development, next spring, with its first buildings opening in 2020. To get ready, the company has 15 teams of architects and designers working on plans for 16 different city blocks. Many of the roads around the arena are torn up so larger water, sewer and storm drainage pipes can be installed. The project also will realign part of the street grid to slow down traffic and create a place that not only gives pedestrians sanctuary from Tampa's older and statistically more deadly streets, but is also where it's easy and fun to walk around.

Early on, Vinik and Cascade brought in new urbanist planning experts Jeff Speck and David Dixon to help shape the vision. Later, after Leiweke left Tampa for a job as the chief operating officer of the National Football League, James Nozar, 38, was hired from The JBG Companies near Washington, D.C., as CEO of SPP. Nozar came in with a range of experience in urban

redevelopment—such as the Atlantic Plumbing and West Half Street mixed-use projects in Washington, D.C.—but in Tampa, where most of SPP's holdings have until now been used for arena parking, his team has a clean slate.

"Most people would see that as an advantage, which we do, but it also makes it very challenging," he says. Strategic Property Partners is building in an area that lacks architectural and place-making context, and it aims to create something that from the start feels like a neighborhood, not a shopping mall. It helps that the mix of residential, retail, cultural, office and entertainment will be evenly balanced, Nozar says. That should make it possible for many residents to get up, walk to the gym, grab coffee, duck back home to change, walk to work, get a meal or two during the day, and go to a hockey game or concert—all without ever needing a car.

For context, Nozar and SPP director of development Bryan Moll, another JBG alum, have looked at Tampa's older neighborhoods, including Ybor City, the city's historic Latin quarter and the home of its cigar-making industry about three-quarters of a mile from downtown. To enhance the pedestrian experience, they've focused on the ground floors of their buildings—their scale, how they interact with the public space as well as the pedestrian's need for a variety of experience and—crucial in Florida—shade. The new project will include new parks, and one main street will have a double row of mature trees along one side, a single row along the other. SPP is building a centralized air-conditioning plant for the entire district, which is expected to help drive energy efficiency, something that's rare in commercial developments, though more common in large campus projects like universities and healthcare facilities. For SPP, it makes sense because of the project's single ownership and long-term focus. It also frees rooftops for dog parks, swimming pools, restaurants and green space. One 300-foot-tall office building will have planted terraces or ledges on every floor, plus a green roof. An apartment building will be topped with 10 feet of soil on its roof so mature trees can grow there.

Along with a name, one thing that Vinik and Cascade have not announced is a tenant list. But Vinik says the company has a long list of prospective tenants. Because they are self-financing, Vinik and Cascade do not have to worry as much about an economic downturn, about repaying construction loans or about building quickly, leasing up and selling out.

"There is no intention of flipping here," Vinik says. "We're looking very long term. We believe the real value creation in the district occurs over five to 10 years as it becomes one of the best places to live, work and play in, hopefully, the Southeast."

***

In 1985, business boosters took to calling Tampa "America's Next Great City," but the facts on the ground often seemed to lag behind the brand. As "New South" cities like Charlotte and Atlanta soared, it was hard to see whether any of Tampa's big bets would pay off. The performing arts center, convention center and aquarium all struggled in their early years, and there was a ton of second-guessing.

In her nearly nine years as mayor, Sandy Freedman did a lot of building, but she wanted a good city with affordable housing and healthy neighborhoods as much as a "great" one with an

impressive skyline and upbeat marketing. (Her signature accomplishment, getting local banks to put up $67 million to build or rehab thousands of affordable homes, got her into the conversation when President-elect Bill Clinton was considering candidates for secretary of housing and urban development.) So she tended to have a more skeptical outlook than the Chamber of Commerce. Once, when I asked her about that "America's Next Great City" slogan, she rolled her eyes.

And early on, Freedman didn't even want to build the convention center. Sitting on the City Council she had voted against every single contract to buy land for the site. It was too hemmed in by an expressway on one side, she thought, and the river on the other. Supporters talked about how the city could expand it in the future by driving pilings into the riverbed, but she didn't believe that for a moment (and, in fact, it hasn't happened). But after the city spent $27 million on land, she couldn't think of a way to kill it, so she went ahead with the project.

The Florida Aquarium was next, and it took a push that would have impressed Robert Moses. The aquarium was long planned for Harbour Island, a mixed-used development created across a shipping channel from downtown, but the developer told Freedman the project's parking wouldn't fit there after all. So Freedman says she called the port director and, although she wasn't on the port authority board and therefore was not his direct boss, told him to come to her office in an hour, because she was holding a news conference to announce that the aquarium was headed to a waterfront site the port owned.

"He said, 'What?' He was apoplectic. He really was. He was apoplectic for a year or two after that," Freedman says. But "they had all that land that was on the water, and I had just come from seeing Baltimore," which had transformed its Inner Harbor using an aquarium as centerpiece. "There's a lot of Baltimore in all of this. It wasn't rocket science. It had been done before, and you learn from the best. That was probably one of the best decisions I ever made even though it was so tough at the beginning."

Then came a deal for a downtown hockey arena. That brought in the county government, a first at that time. County Commissioner Ed Turanchik was a vocal proponent of a downtown site. What also made it possible, Freedman says, was private sector support. The developer of Harbour Island agreed to put up nearly $9 million to acquire the rights to a key piece of property on the understanding he would get the money back when the city and county put the deal together.

Freedman also tore down a bare-bones auditorium that had been built in the 1960s where the old rat-infested meat-packing plant once stood. Finally, she tried to put together a deal for a big hotel to help the convention center, which was built without all the meeting space it needed. But the plan was complicated and controversial, and it fell apart toward the end of her second term. Her successor, Dick Greco, would provide the public subsidies that closed the deal for the Marriott.

Still, of all the projects, the Riverwalk appears to have had the most far-reaching impact—no surprise, given the track record of river walks from San Antonio to Milwaukee for creating recreational space and economic development. "This relatively small amount of money that we've spent, I think, will pay dividends 10-fold over time, more so than, like, the [performing arts center] or the aquarium," Buckhorn says. "They're important, they add to the mix, and

they're key anchors, but they're not game-changers. I think the Riverwalk is a game-changer."

Pam Iorio, Tampa's mayor from 2003 to 2011, remembers how not having something like the Riverwalk undercut even the joy of the Tampa Bay Lightning winning the Stanley Cup in 2004. That night, she says, "we all spilled out of the arena. It was one of those big, group hug kind of times where everybody was hugging each other and jumping up and down. I realized, right there, right then, that this crowd had no place to go and celebrate."

The next morning, Iorio told her senior staff that the next time Tampa won a championship, it needed a public space where people could take the party. By the time she left office in 2011, Iorio had finished a massive upgrade and expansion of the riverfront park, known as Curtis Hixon Waterfront Park, that Freedman had created, arranged a waterfront site for the Tampa Bay History Center and completed a big chunk of the Riverwalk. Curtis Hixon now serves as the front yard for residents from two 30-story apartment towers built across the street during Iorio's administration and hosts art shows and concerts.

Buckhorn opened the last key segment of the Riverwalk in 2015, and the impact was immediate and dramatic. Just three years before, the city had hosted the Republican National Convention, which did a poor job of showcasing the city. Curtis Hixon Park was commandeered for private parties inside a massive tent, and the Secret Service security footprint was so vast and heavy that much of the Riverwalk was cut off from public use. In contrast, when the College Football Playoff brought its national championship to Tampa in January, the Riverwalk played a key role in the city's bid. The game was played at Raymond James Stadium, about five miles northwest of downtown Tampa, but the Riverwalk allowed most game-related activities to be held along the downtown waterfront. There were free concerts with Usher and Eric Paslay at Curtis Hixon Waterfront Park and, a little more than half a mile away, a fan experience expo at the convention center. The Riverwalk connected the two, allowing fans to walk from one event to the other. Local organizers lined the route with pop-up food and drink vendors and smaller stages playing live music, plus docks where high-rollers could tie up their yachts and fans could walk by and gawk at them.

The Riverwalk started with a modest effort to sell individual planks to residents, but over the course of four decades it required quite a bit more: $33 million, mostly in public spending, including a $10.9 million transportation grant from the Obama administration. In its bid for the grant, the city said the Riverwalk would help stimulate economic development.

It has. At the north end of the Riverwalk, Buckhorn decided to recycle the fenced-up park next to the city's old waterworks. At the same time, he put out a request for proposals to renovate the 100-year-old pump house. The winning bid came from Tampa restaurateur Richard Gonzmart, whose family founded what is Florida's oldest restaurant, the Columbia, in Ybor City in 1905. Gonzmart was born four blocks from the pump house, and his grandparents lived five blocks from it, but the building was so obscure and forgotten that he never noticed it. Still, he had seen renovated warehouses and waterfronts in Montreal and Vancouver, and he wanted to try to do something similar in Tampa. In 2009, he opened a cafe version of his family's flagship restaurant inside the new Tampa Bay History Center at the southern end of the Riverwalk. "My father always told me when there was an opportunity along the waterfront not to even hesitate,"

Gonzmart says.

Gonzmart originally planned to spend $1.4 million to open a seafood grille and craft brewery inside the old pump house. He ended up spending more like $6 million, but he opened Ulele as Tampa's hottest restaurant. Next door, Buckhorn spent $7.4 million more turning a dead space into a busy park with a splash play area, dog park and outdoor stage. Together, Gonzmart says, the two attract 1,500 to 2,000 people a day. Ulele stays booked well in advance, and although Gonzmart declines to discuss its revenues, he says they exceed his projections, and that they rose 14 percent the second year and are up 28 percent above that this year.

Gonzmart's is the biggest investment so far along the river, but not the only one. A Tampa dinner-cruise operator has launched a regular water taxi service, and concessionaires at the convention center rent out water bikes and small boats. The city also has issued a request for proposals to put a restaurant at Curtis Hixon Waterfront Park. *This week, Gonzmart submitted a bid, but so did six others.*

Recycling fallow property has been a signature achievement during Buckhorn's two terms as mayor. Along with pairing the city's renovation at Water Works Park with Ulele, he has struck deals to sell one city-owned block next to City Hall and another near the performing arts center for high-rise development. And he attracted a company that specializes in renovating historic properties for a $26 million transformation of Tampa's vacant federal courthouse, a Beaux-Arts jewel built in 1905, into a Le Méridien boutique hotel.

When Vinik starting buying parking lots around the hockey arena, there was a lot of speculation that he might be assembling a land for another big project: a new baseball stadium for the Tampa Bay Rays. The Rays play across Tampa Bay in St. Petersburg, but their fan base there lacks the corporate support typical of Major League Baseball. The team has long wanted to explore the stadium market in Tampa, and is doing so now, but it is not looking at the land Vinik and his partners assembled.

That's because Vinik lined up a different anchor for his project, one that Buckhorn likes to say is "bigger than baseball."

***

In August or September, the University of South Florida plans to break ground on a $164.7 million medical school and cardiovascular research institute on an acre of land Vinik and Cascade donated to the university at their waterfront project.

Neither Vinik nor USF President Judy Genshaft recall who first suggested moving the medical school downtown. USF is about 10 miles north of downtown, putting its medical school more than 25 minutes from its teaching hospital, which is on the edge of downtown. (It's the only top-100 medical school in the country to be so far away from its hospital.) For years, USF had struggled with this distance, at one point even exploring the possibility of building a hospital on campus.

What Vinik and Genshaft recall is that they talked a lot soon after he bought the Lightning. Initially, she says, the conversations touched on whether USF doctors might assist the hockey team, or whether the Lightning had opportunities for USF students majoring in sports management. But Genshaft believes universities need to be economic engines for their regions, so she is active in virtually every economic development initiative in the Tampa Bay area. Soon enough, the conversation turned to the idea of moving the medical school to the Vinik-Cascade project, and a deal was quickly made.

However it came about, the 13-story Morsani College of Medicine and Heart Health Institute, scheduled to open in late 2019, is expected to help both parties. Already, USF administrators say, the move is helping them recruit both faculty and students. Applications for USF's medical school are up 50 percent in three years. This year, nearly 6,400 applicants are vying for 170 spots in next fall's first-year class. USF says its medical school applicants also have the highest average MCAT scores of any Florida university, a sign that it's not only attracting more applicants period, but more of the best applicants available.

For Vinik and Cascade, having the USF med school as an anchor in his company's project will help seed the place with an estimated 2,275 faculty, researchers, staff and students—in short, a tower full of highly skilled and highly prized young professionals, and will help attract companies in health, science and technology. This is the kind of partnership that has helped remake cities such as Roanoke and Winton-Salem, both of which drew substantial investments from nearby universities and research institutions. And it's the kind of city-university partnership that Buckhorn has seen elsewhere, especially Pittsburgh, and has always wanted to bring to Tampa. USF's project, which is being built with about $112 million in state funds (USF is raising the rest privately), will represent the latest public investment in Tampa's waterfront. Vinik says long-range commitments like that make a project like his possible.

"I've been called a visionary," he says. "The real visionaries were the people who 20 years ago put the arena in the south part of downtown, the convention center, the aquarium, the history center. Those were the visionaries. It just happened to take 10 to 20 years for somebody and an organization to come along to actually start realizing that vision."

Brooklyn's Latest Craze: Making Your Own Electric Grid Back

By Debra Bruno | 06/15/2017 06:58 PM EDT

When Michael Guerra, a blunt-talking Brooklyn real estate broker, installed 24 solar panels on his Park Slope rooftop in 2012 during a home renovation, all he knew was that he liked the idea of being able to supply his own green electricity—and to run his air conditioning in the summer without paying exorbitant charges. So he got as many panels as his utility and the state would allow.

"I'm the guy who wanted solar panels on his roof since Jimmy Carter was president," says the 54-year-old.

Then one day in 2016, he got a knock on his door. Sasha Santiago had been on a nearby rooftop and spied Guerra's solar panels; he used Google Earth to home in on the right building.

"A strange man rang my bell and—I'm not kidding—said, 'Hi, I'm Sasha. Can I talk to you about a microgrid?'" Guerra says. "I said, 'What's that?'"

Santiago explained that the company he worked for, Brooklyn-based LO3 Energy, was running a pilot program that would permit renewable energy users like Guerra to sell power directly to their neighbors. In effect, the neighbors would become their own small power grid in the middle of the most populous city in the country.

"Oh, this is shared economy. This is Airbnb, this is Uber, this is 21st century," Guerra remembers thinking. He agreed to be part of the project on President Street. Residents with solar panels on one side of the street sold environmental credits to residents on the other side of the street who had no solar of their own.

New York state allows electricity consumers to use their own solar panels to supply their electricity, but any power produced that the customer doesn't use feeds back into the larger grid, with consumers being paid for those kilowatt hours. The microgrid system that LO3 had devised would essentially cut out the middleman, using a phone app and smart meters to enable neighbors to strike deals for how much electricity they want to buy from one another and at what price. The technology that makes this possible, Santiago explained to Guerra, is blockchain, the same secure information exchange that makes bitcoin trading possible.

"The idea with blockchain is that everything is done peer to peer," says Duke University economist Campbell R. Harvey. "With a microgrid, people that have solar panels can actually trade amongst themselves. They don't have to have a centralized person in the middle that is taking a piece of the action." In a time when the national electricity grid could be vulnerable to terrorism and climatic events, a new technology "could potentially resolve some of these problems," he says.

Brooklyn, he says, is "a glimpse of the future."

***

Blockchain has been looked at for everything from medical records and voting to international money transfers and even online poker. Its value is the way it maintains the integrity of a transaction by breaking it into small blocks of data that are not controlled by one person and therefore can't be tampered with.

LO3, which began as an energy think tank in 2012, saw that blockchain would be perfect for creating energy markets, says Scott Kessler, LO3's director of business development. The sale

and purchase of electricity depends on the fast and secure processing of enormous amounts of continually changing data—the availability of a particular type of energy, its value at that instant and any ceiling the consumer might have placed on a contract price.

Blockchain enables the meters to communicate reliably with one another, but it's the phone app that really puts the control in the hands of the microgrid consumers. The app "acts as your bidder" in the energy marketplace, Kessler says, enabling consumers to determine "what is their willingness to pay for energy."

Buyers interested in simply getting the best price could opt out of any sort of green energy, relying on whatever energy source is available from ConEd, Kessler notes. Or, "they could play with the percentage and see how cheap can I go to get local green energy."

"The idea is that it isn't just rich people with solar panels selling energy to each other, but really, it's the entire community ...So if you're low-income and you need the cheapest power you can get, we'll still provide that to you. We don't want to be dictating.

Picking Brooklyn as the location of the experiment made sense for several reasons, says Kessler.

The community is "environmentally conscious"—not only are there a number of solar panels already set up on rooftops, but many Brooklynites already buy green power and receive a renewable energy credit from ConEd, the New York electric utility.

Brooklyn has a vested interest in "energy resiliency." When Hurricane Sandy hit Brooklyn, the Gowanus Canal flooded for blocks and power was knocked out to many of the high-rise public housing buildings. "You had folks in wheelchairs with no access to elevators for a week or two, without power, so it was a really bad situation," Kessler says. With enough battery storage, a microgrid could potentially survive a power outage that affected much larger portions of the city.

The borough's economic and architectural diversity, from industrial warehouses to historic brownstones, made it a good test subject, Kessler says. That mixture could offer LO3 great feedback about the kinds of energy that might be needed in the future.

***

The pilot program was successful enough that the microgrid will go live later this year. The next phase of the project will involve 300 households or small businesses that have signed letters of interest, along with 50 generation sites—all solar except for one small wind turbine. In total, those producers generate about 1.5 megawatts of electricity, still just a small portion of the needs of Brooklyn's nearly 3 million residents. But the point is not to replace the whole grid, but to show that small grids can serve local communities.

It's hard to get any more local than Roger and Barbara Ditman. Roger, 75, and Barbara, 73, bought their four-story brownstone on 10th Street in 1973 for $63,000. (Today it's worth $3.5 million.) About five years ago, the retired couple paid $40,000 to install 16 solar panels on their

roof—panels that now supply about 95 percent of the home's electricity. With the solar production and various state credits for the solar panels, the investment is almost paid off, Roger Ditman says.

Signing up for the Brooklyn Microgrid means that their excess electricity could be bought in the community. "To me, it's the next step," says Roger Ditman. "It's taking advantage of something that is totally free. It helps the atmosphere, it helps the country, and it helps the community. What we're not using gets made available to our neighbors and to the larger community, as opposed to using energy that comes from Arizona."

Michael Guerra compares the microgrid to the changes in telephone service. "There used to be a central switching station. Now if you look at voice-over IP, you've got routers that are distributed around that are talking to one another," he says. "Microgrid controllers can do the same kind of thing with electricity. They can isolate problem spots," and create a kind of "island" that would be producing electricity when the rest of the city might be dark.

"After I learned about it," Guerra says, "I thought, 'This is definitely happening. This can't *not* happen.'"

Svinicki clears EPW, heads to full Senate Back

By Darius Dixon | 06/15/2017 10:23 AM EDT

Nuclear Regulatory Commission Chairwoman Kristine Svinicki sailed through the Senate Environment and Public Works Committee this morning on her way to a third term.

Lawmakers on the panel approved her renomination on a voice vote.

Svinicki has been on the NRC's leadership board since 2008 and was elevated to the chairmanship by President Donald Trump in January, but her current term expires June 30. And unlike many other federal boards and commissions, NRC leadership members have to step down, even temporarily, if the Senate fails to confirm the nominee.

Trump has nominated two new NRC commissioners, Annie Caputo and David Wright, but EPW plans to vote on them later this month. Sen. Tom Carper, Environment and Public Works' top Democrat, has said that he supports Svinicki's renomination and that EPW Chairman John Barrasso "seemed to be comfortable" with packaging them with a renomination of NRC Commissioner Jeff Baran, a Democrat whose term runs out next summer.

WHAT'S NEXT: Svinicki's nomination is now in the hands of Senate leadership and it's unclear when she will get a vote on the floor. Carper suggested earlier this week that Democrats are

unlikely to demand a procedural vote on Svinicki's confirmation.

GOP tells Pruitt he will get bigger budget than requested Back

By Alex Guillén | 06/15/2017 02:42 PM EDT

Republican lawmakers made it clear today that EPA is not going to get the budget it asked for — it's going to get a whole lot more.

Multiple GOP members of the Appropriations committee overseeing EPA said they will not come close to enacting the administration's proposed 31 percent cut.

"I can assure you you're going to be the first EPA administrator that's come before this committee in eight years that actually gets more money than they asked for," Rep. Tom Cole (R-Okla.) told EPA Administrator Scott Pruitt. "That doesn't mean you'll get as much as you've had, but you'll do better than you asked for."

Rep. Mark Amodei (R-Nev.) noted that Congress has already cut EPA's budget by more than $2 billion since 2010. "No one's standing on the rooftops begging for dirty air and dirty water," he said in calling for no more than moderate spending reductions.

Other Republicans on the panel made sure to defend specific programs they favor.

House Appropriations Chairman Rodney Frelinghuysen (R-N.J) told Pruitt that his state is home to more than 100 of the nation's 1,300 Superfund sites. "I think it's good to move with precaution before you take too many dramatic steps," he warned about EPA's 31 percent cut to that program.

Subcommittee chairman Ken Calvert (R-Calif.) criticized steep cuts to a popular diesel engine refit program and lamented the complete deletion of targeted air shed grants.

And Rep. Dave Joyce (R-Ohio) criticized the budget for killing the $300 million Great Lakes Restoration Initiative.

WHAT'S NEXT: Appropriators will write EPA's spending bill for next year, expected to be released later this summer.

EPA urges court not to lift stay of methane rule for new oil, gas wells Back

By Alex Guillén | 06/15/2017 03:55 PM EDT

EPA today urged the D.C. Circuit Court of Appeals not to reverse its decision to pause leak detection and repair requirements and other key parts of the agency's rule limiting methane emissions from new oil and gas wells.

Environmental groups sued last week and filed an emergency motion seeking the court's reversal of EPA's stay. The agency this week proposed a two-year delay of those requirements, increasing this lawsuit's tension.

"There is no emergency," and the environmental groups cannot meet the requirements to obtain court action, EPA argued in its brief today.

The leak detection requirements would prevent just 0.046 percent of annual oil and gas industry methane emissions, according to EPA. And pausing other requirements dealing with equipment and certification requirements does not present any imminent harm, the agency said.

EPA called the green groups' request "a sideways effort to attack EPA's decision to convene reconsideration proceedings" on the methane rule.

The public interest goes beyond environmental concerns to include economic growth and "productive capacity," the agency argued.

"EPA's short-term stay strikes a balance among these interests by allowing the Agency to consider whether to refine aspects of the 2016 Rule to better account for issues that the Agency did not consider and concerns among the regulated community that EPA did not foresee," the agency wrote.

WHAT'S NEXT: The green groups' response is due June 20, with a court decision likely sometime after that.

EPA proposes two-year delay of oil, gas methane rule Back

By Alex Guillén | 06/13/2017 06:27 PM EDT

EPA today proposed a two-year pause on key methane leak detection and repair requirements for new oil and gas wells, saying it needs the time to reconsider the Obama-era rule.

The Trump administration last month issued a 90-day stay, but EPA has to go through a rulemaking process to finalize the two-year delay. The agency will take public comment for 30 days once the proposal is published in the Federal Register.

The delay also pushes back a provision on pneumatic pumps, as well as a requirement that professional engineers certify closed vent systems. EPA said last month that it also intends to review the rule more broadly than just those requirements.

Environmental groups last week sued over the initial 90-day stay and asked a court to lift it immediately. EPA's response to that request is due June 15.

WHAT'S NEXT: EPA will take public comment on its proposed two-year delay before issuing a final decision that is likely to be challenged in court.

Brooklyn's Latest Craze: Making Your Own Electric Grid Back

By Debra Bruno | 06/15/2017 06:58 PM EDT

When Michael Guerra, a blunt-talking Brooklyn real estate broker, installed 24 solar panels on his Park Slope rooftop in 2012 during a home renovation, all he knew was that he liked the idea of being able to supply his own green electricity—and to run his air conditioning in the summer without paying exorbitant charges. So he got as many panels as his utility and the state would allow.

"I'm the guy who wanted solar panels on his roof since Jimmy Carter was president," says the 54-year-old.

Then one day in 2016, he got a knock on his door. Sasha Santiago had been on a nearby rooftop and spied Guerra's solar panels; he used Google Earth to home in on the right building.

"A strange man rang my bell and—I'm not kidding—said, 'Hi, I'm Sasha. Can I talk to you about a microgrid?'" Guerra says. "I said, 'What's that?'"

Santiago explained that the company he worked for, Brooklyn-based LO3 Energy, was running a pilot program that would permit renewable energy users like Guerra to sell power directly to their neighbors. In effect, the neighbors would become their own small power grid in the middle of the most populous city in the country.

"Oh, this is shared economy. This is Airbnb, this is Uber, this is 21st century," Guerra remembers thinking. He agreed to be part of the project on President Street. Residents with solar panels on one side of the street sold environmental credits to residents on the other side of the street who had no solar of their own.

New York state allows electricity consumers to use their own solar panels to supply their electricity, but any power produced that the customer doesn't use feeds back into the larger grid, with consumers being paid for those kilowatt hours. The microgrid system that LO3 had devised would essentially cut out the middleman, using a phone app and smart meters to enable neighbors to strike deals for how much electricity they want to buy from one another and at what price. The technology that makes this possible, Santiago explained to Guerra, is blockchain, the same secure information exchange that makes bitcoin trading possible.

"The idea with blockchain is that everything is done peer to peer," says Duke University economist Campbell R. Harvey. "With a microgrid, people that have solar panels can actually trade amongst themselves. They don't have to have a centralized person in the middle that is taking a piece of the action." In a time when the national electricity grid could be vulnerable to terrorism and climatic events, a new technology "could potentially resolve some of these problems," he says.

Brooklyn, he says, is "a glimpse of the future."

***

Blockchain has been looked at for everything from medical records and voting to international money transfers and even online poker. Its value is the way it maintains the integrity of a transaction by breaking it into small blocks of data that are not controlled by one person and therefore can't be tampered with.

LO3, which began as an energy think tank in 2012, saw that blockchain would be perfect for creating energy markets, says Scott Kessler, LO3's director of business development. The sale and purchase of electricity depends on the fast and secure processing of enormous amounts of continually changing data—the availability of a particular type of energy, its value at that instant and any ceiling the consumer might have placed on a contract price.

Blockchain enables the meters to communicate reliably with one another, but it's the phone app that really puts the control in the hands of the microgrid consumers. The app "acts as your bidder" in the energy marketplace, Kessler says, enabling consumers to determine "what is their willingness to pay for energy."

Buyers interested in simply getting the best price could opt out of any sort of green energy, relying on whatever energy source is available from ConEd, Kessler notes. Or, "they could play with the percentage and see how cheap can I go to get local green energy."

"The idea is that it isn't just rich people with solar panels selling energy to each other, but really, it's the entire community ...So if you're low-income and you need the cheapest power you can get, we'll still provide that to you. We don't want to be dictating.

Picking Brooklyn as the location of the experiment made sense for several reasons, says Kessler.

The community is "environmentally conscious"—not only are there a number of solar panels already set up on rooftops, but many Brooklynites already buy green power and receive a renewable energy credit from ConEd, the New York electric utility.

Brooklyn has a vested interest in "energy resiliency." When Hurricane Sandy hit Brooklyn, the Gowanus Canal flooded for blocks and power was knocked out to many of the high-rise public housing buildings. "You had folks in wheelchairs with no access to elevators for a week or two, without power, so it was a really bad situation," Kessler says. With enough battery storage, a microgrid could potentially survive a power outage that affected much larger portions of the city.

The borough's economic and architectural diversity, from industrial warehouses to historic brownstones, made it a good test subject, Kessler says. That mixture could offer LO3 great feedback about the kinds of energy that might be needed in the future.

***

The pilot program was successful enough that the microgrid will go live later this year. The next phase of the project will involve 300 households or small businesses that have signed letters

of interest, along with 50 generation sites—all solar except for one small wind turbine. In total, those producers generate about 1.5 megawatts of electricity, still just a small portion of the needs of Brooklyn's nearly 3 million residents. But the point is not to replace the whole grid, but to show that small grids can serve local communities.

It's hard to get any more local than Roger and Barbara Ditman. Roger, 75, and Barbara, 73, bought their four-story brownstone on 10th Street in 1973 for $63,000. (Today it's worth $3.5 million.) About five years ago, the retired couple paid $40,000 to install 16 solar panels on their roof—panels that now supply about 95 percent of the home's electricity. With the solar production and various state credits for the solar panels, the investment is almost paid off, Roger Ditman says.

Signing up for the Brooklyn Microgrid means that their excess electricity could be bought in the community. "To me, it's the next step," says Roger Ditman. "It's taking advantage of something that is totally free. It helps the atmosphere, it helps the country, and it helps the community. What we're not using gets made available to our neighbors and to the larger community, as opposed to using energy that comes from Arizona."

Michael Guerra compares the microgrid to the changes in telephone service. "There used to be a central switching station. Now if you look at voice-over IP, you've got routers that are distributed around that are talking to one another," he says. "Microgrid controllers can do the same kind of thing with electricity. They can isolate problem spots," and create a kind of "island" that would be producing electricity when the rest of the city might be dark.

"After I learned about it," Guerra says, "I thought, 'This is definitely happening. This can't *not* happen.'"

U.S. Is Said to Favor 15 Billion-Gallon Biofuels Requirement

Posted July 05, 2017, 12:13 P.M. ET

By Jennifer A. Dlouhy, Mario Parker and Ari Natter

The Trump administration will propose requiring refiners to use 15 billion gallons of conventional renewable fuels in 2018, a modest win for Midwest corn farmers and U.S. ethanol producers.

The proposed biofuel target was described by people familiar with the decision who asked not to be identified before it was formally announced. That mandate would reflect a 15 billion-gallon ceiling in federal law for conventional renewable fuel and would mirror the current 2017 requirement for that category, mostly fulfilled by corn-starch-based ethanol.

Donald Trump promised to support ethanol while campaigning for president and he reiterated that position in a speech in Iowa last month. The ethanol industry is "under siege," but the Trump administration is saving it, the president told a crowd in Cedar Rapids.

The decision sets up a clash with oil refiners, which had argued the ethanol requirement exceeds a 10 percent "blend wall," or the amount that can be easily blended into the fuel supply.

According to a May forecast from the U.S. Energy Information Administration, motor fuel demand is set to climb to about 143.5 billion gallons in 2018 from about 143 billion in 2017. Given that forecast, if the conventional renewable fuel quota were fulfilled entirely by ethanol, the fuel would represent 10.5 percent of total projected gasoline consumption. Most gasoline sold in the U.S. is E10, or 10 percent ethanol. Refiners can turn to other fuels, including renewable biodiesel, to help meet the target.

The American Petroleum Institute, which represents oil producers and refiners, had asked the EPA to set lower quotas that would reflect about 9.7 percent of projected gasoline demand; some refiners had pushed a lower 9.5 percent.

The ethanol industry counters that the government explicitly allowed vehicles built after 2001 to use 15 percent ethanol, and many vehicles can run on an 85 percent blend. Gasoline containing 15 percent ethanol is available in about 800 filling stations nationwide, according to Growth Energy, a coalition of biofuel producers.

Top EPA officials have been mulling changes to an earlier, internal proposal out of concerns that refiners will import ethanol from Brazil and biodiesel from Argentina to fulfill the quotas.

Volvo Vaults to Volts, Planning to Pull Plug on Gasoline Engines

Posted July 05, 2017, 10:51 A.M. ET

By Elisabeth Behrmann, Niclas Rolander and Christoph Rauwald

As it turns out, news of the death of the internal combustion engine may not be very exaggerated after all.

Volvo Car Group said July 5 it expects to soon start phasing out vehicles powered solely by fossil fuels, joining a parade of manufacturers in shifting toward electrics more quickly than most in the industry expected a few years back.

The automaker says it plans to offer only hybrid or full-electric motors on every new model launched in 2019 or later, including five electrics it expects in its lineup by 2021. Though the company will continue to produce full-combustion versions as it makes the small upgrades automakers introduce with each new model year, when a major revamp occurs (typically every seven years) it will no longer offer that option. That means that by about 2025 Volvo will make its last full-gasoline or diesel car—the first major manufacturer to make such a pledge.

“This announcement marks the end of the solely combustion engine-powered car,” said Volvo Chief Executive Officer Hakan Samuelsson. “Volvo’s brand will be strengthened by electrification.”

Though electric cars have been around since the 1800s and have gotten a lot of attention in the past half-decade or so, they’re still just a fraction of the overall market as drivers balk at high prices and limited driving ranges. Battery-powered autos made up about 1 percent of sales in the U.S., Europe and China last year.

Sales Driven by Government Prodding

And even those tepid sales figures are largely driven by government prodding. China, in an aggressive push to fight smog, plans to impose quotas for battery-powered cars that will effectively force manufacturers to sell electrics. In Europe, where regulators have relied on diesel to reduce pollution, stricter rules that take effect in 2020 will cut limits on carbon dioxide emissions by a third—a threshold that’s almost impossible to meet without fully or partly electric engines.

In the U.S., though President Donald Trump has promised to scrap rules that would require automakers to almost double gas mileage, California is leading a push for even stricter standards. Its regulations will require about 15 percent of cars and trucks sold in 2025 to be zero-emission—meaning they’ll almost certainly run on electricity. At least nine other states have embraced California’s lead.

Consumer resistance is starting to ease as tighter regulation forces carmakers to lower costs, improve batteries, and come up with better designs. Goldman Sachs Group Inc. estimates about a quarter of cars sold globally by 2025 will be hybrid or electric.

Of course, Tesla Inc. aims to have a big piece of that. The California company started making its latest model this week—at about $35,000 its most affordable ride yet—as part of a plan to produce 500,000 cars in 2018 and 1 million annually by 2020.

Tesla is scaring traditional automakers into action. BMW says the electric iNext will replace the 7-Series as its flagship in 2021 and expects battery-powered cars to account for some 25 percent of its sales by 2025. Volkswagen, in an effort to overcome revelations that it cheated on emissions tests for millions of diesels, is accelerating its rollout of electrics. The Audi luxury brand will introduce its first all-electric model, an SUV, in 2018, followed by another two battery-powered vehicles by 2020. In 2019, VW's Porsche unit will introduce the all-electric Mission E. Then in 2020 the VW car brand will roll out the first of four electric cars it's planning.

Automakers understand that they must cut prices and improve driving range for consumers to really embrace the technology, and they're starting to deliver. GM late last year introduced the all-electric Chevrolet Bolt, with a range of 238 miles and a price tag of $38,000. And Volvo CEO Samuelsson said vehicles must have a range of at least 350 kilometers before they'll gain broad acceptance, a target he says his cars will meet.

A big hurdle will be the cost of developing electric technology. Daimler AG has budgeted 10 billion euros to develop 10 new electric models by 2022. BMW's profit margins are at their lowest since 2010 due to increased spending on electrics.

The shift to greener cars will squeeze profits across the industry for years to come as manufacturers develop both electric and traditional combustion engines before battery-powered vehicles become economically viable. That turning point to profitability is likely to come around 2020, according to VW brand chief Herbert Diess.

"For us and for many of our competitors," Diess says, "this time will be an enormous challenge."

Volvo, owned by Chinese billionaire Li Shufu, understands those cost considerations but Samuelsson says he has the financing to make the shift. While the uncertain forecast for prices of batteries makes it difficult to predict the cost of the endeavor, he says he's confident the move will benefit the brand.

"We'll get more attractive cars," Samuelsson said. "This improves our competitive situation. It also goes back to Volvo's brand values of protecting what's important."

Like its recently deceased Swedish cousin Saab, Volvo has built a loyal following with its boxy, no-nonsense design, a reputation for reliability, and cutting-edge safety features (Volvo invented the three-point seat belt in the 1950s.) Volvo has enjoyed a revival in recent years with a focus on SUVs like the XC60—since 2009, its bestselling model.

Volvo in April said its first electric vehicle will be a Chinese-made compact expected to hit the market in 2019. The model, to be sold globally, will be based on the basic design of the company's XC40 compact SUV.

"We want to be a leading brand in terms of responsibility, safety and sustainability," Samuelsson said. "So we think this suits us perfectly."

G-20 Ire On Paris Withdrawal Unlikely to Affect Trump Plans

Posted July 05, 2017, 11:07 A.M. ET

By Bryce Baschuk

Leaders of Group of 20 nations, outspoken in their opposition to President Donald Trump's withdrawal from the Paris climate accord, won't be able to do much about it at this week's summit in Hamburg, Germany, business representatives and an academic told Bloomberg BNA.

German Chancellor Angela Merkel promised that she would use her position as the host of the July 7-8 summit to defend the Paris climate agreement as a necessary tool to fend off the growing threats to the environment. G-20 nations make up about two-thirds of the world population.

Other world leaders—such as French President Emmanuel Macron, Japanese Prime Minister Shinzo Abe, and Chinese President Xi Jinping—are expected to back Merkel's call to support the accord.

But in the absence of new negotiations, the high-level statements should amount to little more than hot air, officials told Bloomberg BNA in recent phone interviews.

Agree to Disagree

"I don't believe that anyone wants to isolate the U.S. or gang up on the U.S.," said Gary Litman, the vice president for global initiatives at the U.S. Chamber of Commerce. "That won't help anyone."

Matthew Goodman, a senior advisor at the Washington, D.C. based Center for Strategic and International Studies, generally agreed.

"When this group last met in May for the G-7 summit they agreed to disagree," he said. "Then Trump withdrew from the Paris agreement."

"Maybe this issue doesn't become a debate at all," he said.

Rob Mulligan, a senior vice president at the Washington, D.C.-based United States Council for International Business, said the time may not be ripe for discussion on the issue.

"G-20 leaders have already had some exchanges on the issue of climate change," he said. "They are not at a point where any change can be discussed."

Fair Playing Field

When Trump announced America's withdrawal from the Paris agreement last month, he said it would hurt U.S. businesses and make it more difficult to compete with international rivals such as China and India.

Though both Xi and Indian Prime Minister Narendra Modi have reaffirmed their support for the deal, their countries were granted lengthy implementation timelines, financial aid, and other flexibilities in order to join the accord.

Gary Cohn, the director of Trump's National Economic Council, told reporters last week that the

president wants to ensure that the climate accord offers a "level playing field" to all participants.

"We cannot be in a position where the United States is cutting and cutting emissions while other countries continue to grow until 2030," Cohn said during a June 29 press conference in Washington. "We're looking for fairness across the board in the agreement."

Environmental advocates pointed out that Trump's decision to withdraw from the Paris accord cannot technically go into effect until November 2020, at which point the issue is expected to be a key focus of the next American presidential election.

Irreversible, Non-Negotiable

Last week, Merkel said the Paris accord was not open to renegotiation and told members of the German parliament that Europe is "more determined than ever" to make the agreement a "success" following Trump's decision to withdraw.

"We will not wait until the last people in the world are finally convinced by the crushing weight of the scientific evidence of climate change," Merkel said in a June 29 speech to the German parliament. "In other words, the climate agreement is not reversible and it is non-negotiable."

Jacob Kirkegaard, a senior fellow with the Peterson Institute for International Economics, said the impasse could prevent any significant environmental outcomes at this year's G-20 summit—but that's not necessary a disaster.

"The G-20 is a latent organization—it is there in a big crisis to have all the players in the room," Kirkegaard told Bloomberg BNA. "But in the absence of an acute crisis, don't expect them to agree on everything."

Germany's Russian Gas Fix Raises Alarm in Merkel's Backyard

Posted July 05, 2017, 8:52 A.M. ET

By Weixin Zha and Anna Shiryaevskaya

Hidden by pine forests near the deserted site of what was once East Germany's biggest nuclear reactor, two shiny pipelines emerge from the Baltic Sea to mark the spot where Chancellor Angela Merkel is trying to secure the country's energy future.

Not far from the Hanseatic town of Greifswald—an area Merkel represents in parliament—the chancellor wants a $10 billion pipeline expansion built to increase the amount of Russian natural gas imported from Siberia, more than 3,000 kilometers (1,864 miles) away.

The project, led by Russia's state-run Gazprom PJSC, is intended to bolster German confidence that it has enough gas to underpin an unprecedented transition from the coal and nuclear plants, which are being closed, to a future dominated by renewable energy.

But the plan has opponents, both close to home and further afield.

People living in the sparsely populated area have filed almost 160 objections. Local approval is still pending and the site also requires removal of two shipwrecks sunk by the Swedish navy in the 18th century. European allies have also objected—worried that the project will deepen Europe's reliance

on supplies from an increasingly antagonistic Russia—and U.S. lawmakers have proposed stiffer sanctions on energy companies that do business with Russia.

"There are not many other places apart from Russia where Germany can get a lot of gas quickly," said Jonathan Stern, chairman and senior research fellow at the Natural Gas Research Programme of the Oxford Institute for Energy Studies.

Already Europe's biggest gas user, Germany gets about 40 percent of what it consumes from Russia, the world's largest exporter, according to industry consultant Wood Mackenzie Ltd. in London. That dependence is only going to increase by 2025 to more than 50 percent, especially with output from the Netherlands, Germany's western neighbor, set to drop in coming years.

The Gazprom project, known as Nord Stream 2, also will allow for deliveries elsewhere in Europe, making Germany an even more important hub for distributions across the continent. Russia already supplies more than 20 countries with gas used to run power plants, heat homes and make chemicals.

Doubling Shipments

The existing link was commissioned in 2011 and runs for 1,224 kilometers under the Baltic Sea from Vyborg, Russia, to Lubmin in Germany. It is able to carry 55 billion cubic meters of gas, or two-thirds of German gas demand, and the expansion will double that.

"Nord Stream 2 isn't only about meeting additional demand, it's also about adjusting gas supplies towards the most cost-efficient routes," Gergely Molnar, an analyst at Wood Mackenzie in London, said by phone.

Transporting gas through Nord Stream to Germany is about 40 percent cheaper than through land-based pipes via Ukraine, according to Molnar. Russian gas at the German border cost $5.07 a million British thermal units in May, up 28 percent from a 12-year low in September but 45 percent below its 10-year average, according to International Monetary Fund data.

Germany, the U.K., France, Belgium and the Netherlands will likely benefit from lower prices, according to Brussels-based think tank Bruegel. Gazprom would also avoid transit fees paid to use pipelines in Ukraine and Poland, Bruegel said. The company plans to reduce flows via Ukraine after 2019.

Germany's approval procedures mean that infrastructure projects can be delayed by local opposition. A hearing is scheduled to start July 17 in Stralsund, Germany, according to the Ministry of Energy and Infrastructure in the state of Mecklenburg-Vorpommern.

Meanwhile, time is running out for Merkel to help Germany meet its 2020 climate goals. Despite the transition known as the Energiewende, the country is at risk of missing its target to reduce carbon emissions by 40 percent from 1990 levels.

After federal elections in September, the new government may have to present proposals for closing down power plants that run on coal, which still provides about 40 percent of the nation's electricity generation. Merkel's ruling Christian Democratic Union foresees a "mid- to long-term" exit from lignite and coal, according to their 76-page manifesto published July 3.

Nuclear Exit

Gas may provide a fifth of Germany's power in five years, almost double current levels, according to HSBC Holdings Ltd.

Germany's journey toward a renewable energy system began almost two decades ago. The policy shift intensified after Japan's Fukushima nuclear disaster in 2011, which led to Merkel's decision to exit atomic energy by 2022.

"In the long term, Europe needs new volumes of imported gas from reliable suppliers, and the Nord Stream project will become that lifebuoy," Gazprom Deputy Chief Executive Officer Alexander Medvedev said in Berlin on June 15.

'Additional Option'

Nord Stream 2 would "definitely be an additional option" to increase imports, according to Stefan Rolle, head of gas and oil markets and crisis prevention at the German Economy Ministry. "Gas is only a transition technology" to meet the nation's climate goals, he said.

Gas demand for power production may peak in 2025 before being replaced with wind and solar, according to Wood Mackenzie. The country aims to produce as much as 80 percent of its electricity from renewable sources by 2050.

Germany's gas network is already well connected, with pipelines linking it to Norway and to liquefied natural gas terminals in Belgium and the Netherlands.

"Current capacities are sufficient even if gas-fired power plants will run more," said Claudia Kemfert, head of the energy unit at the DIW economic institute, a Berlin-based research group. "Nord Stream 2 won't be needed."

Undeterred, Gazprom is forging ahead. About 37,000 12-meter-long pipes are stored at an industrial site bigger than 20 soccer pitches on the island of Ruegen, waiting to be coated with concrete long before being laid on the seabed at an average depth of 50 meters.

While Merkel last month condemned a bill on expanded Russian sanctions approved in the U.S. Senate, she's also one of the harshest critics of Russia. The chancellor, who helped negotiate the Minsk peace agreement aimed at ending violence in Ukraine, has pushed for sanctions to be maintained, arguing that measures can only be dropped once Moscow adheres to the terms of the deal.

"We need gas supplies when coal isn't used anymore," said Klaus-Peter Trapp, a 57 year-old cabinet maker from Greifswald. "This can have consequences if Russia and Germany don't get along well anymore."

—With assistance from Kelly Gilblom, Elena Mazneva and Brian Parkin.

World's Costliest Gas Clouding China's Quest for Bluer Skies

Posted July 05, 2017, 8:46 A.M. ET

By Bloomberg News

China has promised to make its skies blue again, but having some of the world's most-expensive natural gas isn't helping.

The biggest energy consumer on earth wants to use more of the cleaner-burning fuel in place of the coal that's choking its skies and causing pollution far exceeding the World Health Organization's daily recommended limit. China has the ability to increase imports and is seeking to raise domestic production, but high prices risk suppressing demand growth and jeopardizing the country's ambitious targets.

The challenge is that producers, importers and distributors in China need the government-controlled prices to be high enough to make money. By cutting them too much, the state risks hurting their margins, threatening investment in future production, and the country's energy security. But be too generous to the industry, and the nation's health is at stake.

"It's a balancing act for the government that requires on one side stimulating gas demand to increase the percentage of clean fuels," said Miaoru Huang, a Beijing-based energy analyst for Wood Mackenzie Ltd. "On the other hand, it needs to ensure reasonable returns for upstream players and transmission and distribution companies that are needed to ensure sustained investment so China can maintain its growth in domestic gas production."

The Chinese government has set a goal of getting as much as 10 percent of its energy from gas by 2020 and 15 percent by 2030, up from 6 percent in 2015. To achieve this, demand will have to grow by about 15 percent a year through the rest of the decade, according to UBS Group AG.

After consumption growth slowed to well below that pace for the past few years, it is once again booming, increasing at a rate of 13.2 percent so far this year. These graphics tell the story of how that's happening and what the future may hold.

The world's sixth-biggest producer of gas, China gets about 64 percent of what it needs domestically, according to Bloomberg calculations based on government data. It imports the rest by pipelines from Central Asia and Myanmar, as well as on seaborne tankers as liquefied natural gas.

The Ordos Basin in Shaanxi Province is the largest gas-producing area in the country, according to Sino Gas & Energy Holdings Ltd. It's where China drilled its first oil well more than 100 years ago. The nation's experience with petroleum dates back 900 years, when the scientist Shen Kuo found near the Yan River oil seeping out of the rocks, which he noted could be used for lighting, according to China National Petroleum Corp.

In the modern era, the National Development and Reform Commission, the country's top economic planner, traditionally set gas prices at the well, making sure they were high enough to cover drilling costs and a small profit for the companies.

Even as production exploded over the last decade, China couldn't keep up with booming demand, so the nation's big three energy companies—CNPC, China Petrochemical Corp., known as Sinopec, and China National Offshore Oil Corp.—became gas importers. CNPC built a pipeline connecting gas fields in Turkmenistan, Kazakhstan and Uzbekistan to western China, while a link from Myanmar started in 2013. CNPC will start receiving gas from Russia on a Siberian pipeline in 2019. The country also has more than a dozen terminals on its eastern and southern coasts to receive LNG cargoes.

But buying the gas overseas proved costly. The companies inked supply deals at prices linked to the cost of oil, so when crude rose into the $100-a-barrel range, the cost of importing ballooned to levels higher than the energy giants were allowed to sell domestically. PetroChina, the country's largest listed energy firm, has lost money on gas imports every year going back to at least 2013, according to company filings.

The NDRC responded in 2013 and 2014 by raising prices to a level that was high enough to encourage production and help cover the cost of imports. But that increase had an immediate impact on demand, snapping the run of double-digit percentage growth every year from 2003 to 2013.

In 2015, the government cut wholesale prices. By December 2016, gas was cheaper on a wholesale basis than other fuel sources such as fuel oil or propane, a liquefied petroleum gas typically used for heating and cooking, according to UBS analysts including Ken Liu. However, the final cost to industrial users was still higher because of large margins for distribution companies.

So now the government is taking a knife to the middlemen companies that transport the gas from the state-run giants and sell it to individual users, firms like ENN Energy Holdings Ltd., China Gas Holdings Ltd. and China Resources Gas Group Ltd. The NDRC last month capped investment returns for natural gas distributors at 7 percent.

In January, China's latest five-year plan called for using gas instead of coal in industrial boilers throughout four major urban areas: the greater Beijing region, northeast China, the Yangtze River Delta around Shanghai and the Pearl River Delta in Guangdong province. Local governments are supporting the efforts with measures including subsidized gas connections and boiler replacements, as well as price caps, according to Morgan Stanley.

The NDRC issued guidelines July 4 aimed at increasing use of the fuel, including encouraging the participation by private companies in overseas gas investments, expanding LNG import terminals and expanding underground gas storage capacity. Shares of gas companies seen benefiting from rising demand—ENN, China Gas and China Resources Gas—all gained in Hong Kong on July 5.

Provincial governments don't have the budget to keep subsidies going forever, though, so to be able to sustain rapid consumption growth the government will have to find a way to bring gas prices down more, said Michal Meidan, an analyst with Energy Aspects Ltd. in London. Wholesale prices for the fuel in China were the most-expensive among major users in the world last year, according to the International Gas Union.

While lowering prices further may spur more demand, China runs the risk of suppressing production and imports, Meidan said.

Output goals are already going to be difficult to meet because of high costs and difficult geology, according to Bloomberg Intelligence. The government expects most gas production growth to come from unconventional resources, such as shale and coal-bed methane, with production targeted to reach as much as 100 billion cubic meters a year by 2030.

At stake in all of this is the health of the world's most populous nation. Poor air quality has been a source of social unrest and China had more pollution-related deaths than any other country in 2012, according to World Health Organization data.

Coal still accounts for about two thirds of China's total energy consumption. Natural gas produces about half the carbon dioxide and just a fraction of the sulfur dioxides and particulates of coal when

it's burned, according to the U.S. Energy Information Administration.

Premier Li Keqiang in March pledged to make China's skies blue again, three years after the country declared a "war on pollution."

Progress has been steady but slow. Last year in Beijing, average concentrations of PM2.5 -- small particles that pose the greatest risk to human health -- fell almost 10 percent, the biggest annual decrease in the past four years.

That trend is reversing this year as power generation and steel output grow, according to a research note from a Greenpeace analyst in late May, making air quality goals for this year seem increasingly unattainable.

Subject: Supreme Court turns down New Mexico lawsuit over Gold King spill

By Alex Guillén

06/26/2017 10:10 AM EDT

The Supreme Court today in a 7-2 vote declined to take up a lawsuit brought by New Mexico against Colorado over the 2015 Gold King mine spill.

New Mexico's complaint, which as a lawsuit between states went straight to the Supreme Court rather than a lower court, argued that decades of poor environmental oversight by Colorado contributed to the spill, which was inadvertently caused by EPA engineers working to clean up the site.

Justices Clarence Thomas and Samuel Alito voted to allow the lawsuit to proceed, according to the Supreme Court. The duo referred back to an unrelated 2016 case in which they argued in a dissent that the Supreme Court does not have the authority to turn down cases that fall within the court's "original jurisdiction," which includes lawsuits between two states.

Various other lawsuits regarding the spill, including against EPA, are playing out in lower courts. New Mexico may be able to bring its suit against Colorado elsewhere, as the Trump administration suggested in a "friend of the court" brief earlier this month.

Subject: NERC chief: A grid run mostly on renewables is 'technically feasible'

By Darius Dixon

09/14/2017 11:42 AM EDT

The technology already exists to run the electric grid largely on renewable energy, though implementing it wouldn't be easy, Gerry Cauley, the CEO of the North American Electric Reliability Corp., told lawmakers this morning.

Cauley was being probed by Texas Rep. Joe Barton, who asked whether it was "possible to meet the same reliability standards if you go to a generation system that is predominantly renewables."

"From what we're seeing, it's technically feasible. There are a lot of new challenges," the NERC chief told a House Energy and Commerce subcommittee.

"Wind and solar do not inherently come with the controls to provide frequency response, voltage response," he said, while noting a logistical problem when California wildfire last year triggered 1,200 megawatts of solar capacity to disconnect from the grid.

"We've been working with the vendors to show them some of those weaknesses," Cauley said. "I think the technology is there today. It just requires a lot of coordination."

FERC Chairman Neil Chatterjee later told reporters that he believed there was some "disagreement" between Cauley and Barton about the reliability impacts of high renewable penetration on the grid. "I'd want more details on that before I speculate," he said.

In a separate line of questioning about global warming impacts on the grid, Cauley said that climate change was outside NERC's expertise but that in his eight years as its CEO he had seen "an increase in the magnitude and severity of events — flooding and so on."

Subject: Senators ask GAO to review Pruitt's advisory board grant ban

By Alex Guillén

11/09/2017 04:48 PM EDT

Nine Senate Democrats and independent Bernie Sanders today asked the GAO to expand a previous inquiry into EPA's advisory boards to include Administrator Scott Pruitt's new directive barring grant-holders from serving on those committees.

GAO is already considering the independence of EPA's various advisory committees following complaints from the lawmakers about whether Pruitt was protecting their independence and neutrality.

The lawmakers pointed to a 2004 court ruling in which the 5th Circuit said the presence of federal grant recipients on a National Institute for Occupational Safety and Health advisory board was not a valid reason to reject the scientists' recommendations.

"The double-standard is striking: an academic scientist that receives an EPA grant for any purpose cannot provide independent advice on a completely different subject matter on any of EPA's science advisory boards, while industry scientists are presumed to have no inherent conflict even if their research is entirely funded by a company with a financial stake in an advisory board's conclusions," the lawmakers wrote.

The letter was signed by Sheldon Whitehouse of Rhode Island, Tom Carper of Delaware, Ed Markey of Massachusetts, Brian Schatz of Hawaii, Sanders of Vermont, Jeanne Shaheen of New Hampshire, Mazie Hirono of Hawaii, Gary Peters of Michigan, Sherrod Brown of Ohio and Al Franken of Minnesota.

Subject: Today on Climate Beat

June 28, 2017

Today on Climate Beat . . .

. . . we went to Congress, where House Democrats criticized sharp funding cuts for clean energy programs at the Energy Department (DOE) in a fiscal year 2018 funding bill drafted by majority Republicans, arguing the cuts would set the country back in efforts to address climate change.

Our news roundup offered an early look at the proposed House cuts to DOE, which are far less in many cases than what the White House had requested.

We brought some personnel news, with a new internal EPA staff memo from Ryan Jackson, chief of staff to Administrator Scott Pruitt, that shows a host of new political aides at the agency that do not require Senate confirmation, including a new senior deputy general counsel who comes from the American Petroleum Institute.

Speaking of personnel, the top Democrat on the Senate environment committee, Sen. Tom Carper (D-DE), is poised to vote against the confirmation of EPA enforcement chief nominee Susan Bodine, citing Pruitt's failure to provide baseline data the senator has been seeking.

In the courts, EPA is asking a federal appellate court to further hold litigation challenging the agency's greenhouse gas endangerment finding for the aircraft sector in abeyance, citing ongoing "discussions" with the agricultural groups that brought the suit.

And in other litigation news, the Natural Resources Defense Council is asking a federal district court to force EPA to respond to its Freedom of Information Act request seeking the agency's website retention policies, after EPA began removing climate-related information from its site soon after the Trump administration took office.

Subject: POLITICO's Morning Score: Senate Democrats hold on to majority hopes — Trott latest GOP retirement — End Citizens United builds case for campaign finance reform

By Kevin Robillard | 09/12/2017 10:00 AM EDT

With Zach Montellaro, Elena Schneider and Daniel Strauss

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

DEMS DREAM OF MAJORITIES - "Senate Democrats hold on to majority hopes," by Kevin Robillard and Gabriel Debenedetti: "Reelecting red-state Democratic incumbents is still the top priority for Senate Minority Leader Chuck Schumer and Democratic Senatorial Campaign Committee Chairman Chris Van Hollen. But they have also begun investigating opportunities to play offense on GOP turf, polling and investigating potential candidates in states like Texas, Tennessee and Alabama with the Republican Party facing a tough national environment. The Democratic effort began well before a recent burst of bad news for Senate Republicans. ... 'Our priority is to make sure that we win all our incumbent races,' Van Hollen said in an interview. Then, 'we have great pickup opportunities in Nevada and Arizona,' he continued. 'And we have good candidates in other states, and we're going to have more. We're going to work to maximize our opportunities.' Much of the insistence is for donors' benefit, said a handful of top party operatives: Closing the door on flipping a chamber will make it much harder to raise cash in 2018, especially with House Democrats smelling opportunity to win back the majority there. ... Winning back the Senate would essentially require Democrats to draw a straight flush, followed by four-of-a-kind." **Full story.**

- "GOP senators push back against Bannon's effort to dislodge incumbents," by Seung Min Kim: "Concerned about retaining their fragile majority, GOP senators said in interviews Monday that Bannon's nascent effort would further damage the prospects of keeping control of the Senate. Republicans are already in the middle of a cycle in which some senators have been trying to fend off primary challengers, even before Bannon's meddling. 'I wish he'd focus on Democrats. Circular firing squads don't work very well,' Sen. John Cornyn of Texas, the majority whip and two-time chairman of the party's Senate campaign arm, said in an interview Monday. ... The threats emanating from Bannon are especially potent because conservative primary challengers to Republican incumbents are essentially the only way that Democrats, who now control 48 seats, could create a path to a Senate majority. ... 'I always make it a point not to get into the middle of Republican civil wars,' Sen. Chris Van Hollen of Maryland, chairman of the DSCC, said Monday. 'So I'll leave it to them.'" **Full story.**

- "Republican Sen. Bob Corker weighs whether to retire in 2018," by CNN's Manu Raju: "Tennessee Sen. Bob Corker, the influential chairman of the Senate Foreign Relations Committee who was once considered for a spot in President Donald Trump's Cabinet, is

weighing whether to call it quits next year. Corker told CNN last week that he has not made a decision about his future, and appeared to confirm Trump's tweet that he asked the president for political advice about whether to run for reelection. 'As far as what am I going to do in the future, I'm still contemplating the future,' Corker said in an interview. 'It's a tremendous privilege to do what I do, and to weigh in on the big issues. ... But I have not decided what I'm going to do in the future.'" **Full story.**

HOT TO TROTT OUT OF CONGRESS - "Michigan Rep. Dave Trott won't run for reelection," by Campaign Pro's Elena Schneider: "Michigan Rep. Dave Trott said Monday that he would not seek reelection, making him the third Republican incumbent in the past week to vacate a potential battleground district ahead of the 2018 midterm elections. ... Trump carried Trott's seat in suburban Detroit by just under 5 points in 2016. Before Trott's announcement, Democrats were already eyeing his seat. Democrat Haley Stevens, a digital manufacturing executive who served as chief of staff to then-President Barack Obama's Auto Task Force, decided to challenge Trott in April. ... Republicans in the state said they expect a bloody primary to replace Trott. 'It would be very difficult for someone to clear the field because of the various factions here,' said Dennis Lennox, a Republican consultant in Michigan. 'But if there is an A-list candidate in the race, we should know by next week.' Republicans floated several potential candidates, including state Rep. Klint Kesto, state Rep. Laura Cox and Mike Bouchard, who ran for Senate in 2006." **Full story.**

- More names: Republican also mentioned state Sen. Marty Knollenberg and state Sen. Mike Kowall. Meanwhile, Democrats already have their own primary, including Stevens and another Obama administration alum, Fayrouz Saad. Daniel Haberman, a local businessman, is also "considering" and is "likely to run," per a source familiar with the candidate's thinking.

FRONTIERS OF CAMPAIGN ISSUES - "End Citizens United builds a case - and trove of data - for reform campaigns," by Campaign Pro's Maggie Severns: "End Citizens United has a message for Democrats seeking a 2018 message: Don't forget about campaign finance reform. And the progressive PAC is touting polling that shows it could be a big help with independent voters in the midterm elections. The trove of information collected through polls and focus groups, shared exclusively with POLITICO, makes the case that well-crafted messages on money in politics tie into so-called kitchen table issues, like jobs and health care, that are most critical to the voters who have been slipping out of Democrats' fold. Critically, independent voters indicated they care deeply about curbing the influence of special interests, End Citizens United has found. In a new poll of 50 top House battleground districts in early September, for example, independent voters ranked reducing the role of special interests behind only one other issue - national security - in terms of importance. That finding was consistent with other national and state polling End Citizens United conducted in the past year and a half. 'Can we actually win races on this? Obviously, what our polling shows is, yes we can,' End Citizens United President Tiffany Muller said in an interview. 'We need to win races by winning independent voters and unaffiliated voters and non-college voters back on our side. And this issue moves them.'" **Full story.**

Days until the 2017 election: 56.

2020 WATCH - "Liberals dominate Democrats' 2020 jockeying," by Gabriel Debenedetti: "[T]he lion's share of activity among potential 2020 hopefuls so far is on the progressive end of the Democratic spectrum - an indication of a broader ideological swing in a party struggling to be seen as more populist. ... 'Of the names being talked about - [California Sen. Kamala] Harris, [Los Angeles Mayor Eric] Garcetti, [Connecticut Sen. Chris] Murphy, [New York Sen. Kirsten] Gillibrand, and a long list of others - almost all have staked out positions on Medicare for all, immigration and the economy, which are more progressive than any Democratic nominee since 1972,' said Howard Dean, a former Vermont governor and Democratic National Committee chairman who ran for president as a liberal insurgent in 2004. 'It's about damn time,' added retired Iowa Sen. Tom Harkin, the liberal stalwart who ran for president in 1992." **Full story.**

- Brown won't co-sponsor Sanders' single-payer bill: Ohio Sen. Sherrod Brown said Monday he wouldn't sign on as a co-sponsor to Vermont Sen. Bernie Sanders' single-payer bill. Most other potential 2020 contenders, including Massachusetts Sen. Elizabeth Warren, New Jersey Sen. Cory Booker and California Sen. Kamala Harris, have signed on. Brown said he'll instead focus on building support for a bill to allow Medicare buy-in at age 55. He adds: "I have always been supportive of Medicare for all."

2018 WATCH - "Rick Scott: In the eye of the storm," by Matt Dixon, Marc Caputo and Bruce Ritchie: "While millions of Floridians are now dealing with flooding and power outages, Scott's preparation and response to the storm - a logistical nightmare that affected nearly every inch of the nation's third largest state - have so far won praise. ... He's had a nearly ubiquitous television presence, providing constant storm updates while overseeing one of the largest regional evacuations in U.S. history - and he's leaned heavily on his close relationship with President Donald Trump, whom he vocally supported in 2016. The two spoke daily as the storm approached. ... Scott's role in the Hurricane Irma drama comes as he considers whether to heed Trump's pleas and challenge Sen. Bill Nelson, a Democrat up for reelection next year - and a successful Irma response could bolster a potential Scott 2018 campaign. ... In 2004 and 2005, then-Gov. Jeb Bush saw his approval ratings skyrocket in Florida after eight hurricanes swiped the state. ... 'They won't admit it publicly, but I can tell you Scott's team is thrilled by the free media exposure. You can't pay for that type of coverage, even if you're as rich as Rick,' said one Republican consultant who has ties to the governor's advisers." **Full story.**

- "Calley plans town halls as Schuette preps barbecue," by the Detroit News' Jonathan Oosting: "Lt. Gov. Brian Calley will host town hall meetings across Michigan in October and November before making a final decision on whether he'll run for governor. Plans for the town hall tour are taking shape amid speculation that Republican Attorney General Bill Schuette is

preparing to announce his campaign for governor, potentially as early as Tuesday night at his annual mid-Michigan barbecue in Midland. ... While Republican insiders believe he could use the venue to announce his campaign for governor, Schuette's political team has not divulged any details beyond a generic media advisory inviting reporters to the event." **Full story.**

YOUR DAILY MENENDEZ - "An expensive grill and a Brazilian actress: Day 3 of the Menendez trial," by Matt Friedman: "When one of Florida eye doctor Salomon Melgen's girlfriends handed her interviewer at the U.S. consulate in the Dominican Republic a letter from U.S. Sen. Robert Menendez in support of her 2008 visa application, the interviewer wasn't impressed. ... Menendez said in a 2010 email that he would reimburse his friend, Florida eye doctor Salomon Melgen, for the nearly 650,000 American Express points Melgen used to purchase a three-night stay at a hotel in Paris for the senator - as soon as Menendez accumulated enough points himself. But it would have taken Menendez about 30 years to accumulate those points at the rate he was spending then, an American Express executive testified at Menendez's corruption trial. And three years later, when Menendez for the first time redeemed his own American Express points - more than 135,000 of them - he used them instead to purchase a high-end grill that was shipped to New Jersey, according to the witness." **Full story.**

PRIMARY CONCERNS - Fitzgerald won't run for Wisconsin Senate, backs Vukmir: Wisconsin Senate Majority Leader Scott Fitzgerald said Monday he wouldn't enter the GOP primary to challenge Democratic Sen. Tammy Baldwin, and endorsed fellow state Sen. Leah Vukmir with a not-so-subtle shot at her primary rival, Kevin Nicholson. "I would like to express my complete support for Sen. Leah Vukmir, an actual conservative," Fitzgerald said. "She is an exceptional leader, one of the best Wisconsin has to offer, so I am choosing not to run for the U.S. Senate knowing we are in great hands."

ON THE AIRWAVES - AAN puts additional $2.5M into boosting tax reform: American Action Network, a nonprofit with ties to House GOP leadership, is spending an additional $2.5 million in 23 congressional districts to boost tax reform. The ad features a couple from Wisconsin discussing how the tax code is too complicated and how a tax cut would help them. Here's a list of the districts. Watch the ad here.

QUOTE OF THE DAY: "People think Citizens United is an insurance company. That's what they talk about in focus groups." - End Citizens United President Tiffany Muller

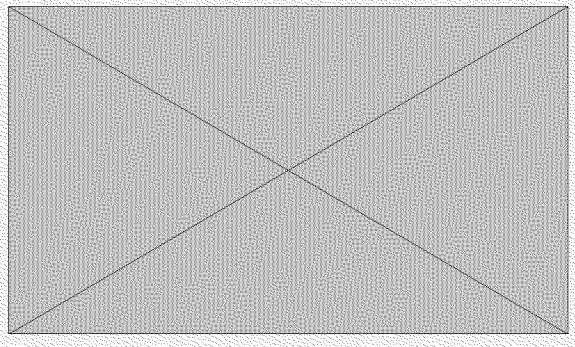
Subject: AEI Today: Betsy DeVos versus the mindless mob at Harvard

Shouts. Interruptions. Orchestrated chanting. The predictable convulsions of the contemporary university when a conservative comes to town.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



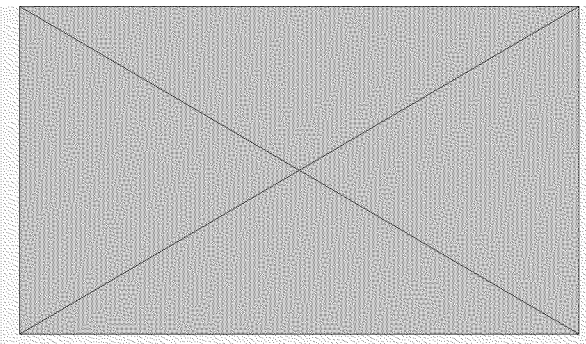
Reuters

Betsy DeVos versus the mindless mob at Harvard

Frederick M. Hess and Grant Addison | National Review Online

Shouts. Interruptions. Orchestrated chanting. The predictable convulsions of a university when any conservative comes to town. Against this threadbare backdrop, Secretary of Education Betsy DeVos delivered what is probably her best speech to date. If universities are merely places where mobs heckle unpopular speakers

while serious remarks are drowned out by chanted slogans, it’s not clear what is gained. We already have Twitter.



Reuters

Maria must be a wake-up call to Puerto Rico's economic woe

Desmond Lachman | The Hill

The last thing the Puerto Rican economy needed was a hurricane on the scale of Maria. Even before the hurricane hit, the island's economy was in a major downward spiral, mired for more than 10 years in recession. Now that a once-in-a-hundred-year hurricane has hit the island, it's up to Congress and the Puerto Rican government to come up with a realistic economic plan. If they don't, brace for a humanitarian crisis — and a large, permanent wave of migration from the island to the mainland.

Lynchpin of teachers' union power returns to the Supreme Court

Nat Malkus | AEIdeas

What will happen to public schools after the most powerful force in the politics of education has its wings clipped? It looks like we are about to find out. Last week, the US Supreme Court announced that it would hear Janus v. American Federation of State, County, and Municipal Employees. The case deals with mandatory union agency fees, which plaintiff Mark Janus argues violate his First Amendment rights to free speech and free association.

Twenty20

Addiction shouldn't be an excuse for criminal behavior

Sally Satel | The Wall Street Journal

Julie Eldred admitted stealing jewelry last year to support her opioid habit. A condition of her probation was that she refrain from using drugs. When she tested positive for fentanyl 11 days later, the judge ordered her to prison until an inpatient treatment bed was available. Eldred now claims the order to remain drug-free was unconstitutional cruel and unusual punishment because her drug use was a symptom of her addiction. In other words, she couldn't help herself.

Sent: Wed 7/26/2017 2:03:58 PM
Subject: POLITICO's Morning Transportation, presented by American Public Transportation Association: FAA whiplash — PFC intrigue at Senate THUD — Cuomo visits Chao, Dems in D.C.

By Stephanie Beasley and Lauren Gardner | 07/26/2017 10:00 AM EDT

With help from Heather Caygle, Sarah Ferris, Brianna Gurciullo and Tanya Snyder

FAA WHIPLASH: House Transportation Chairman Bill Shuster told our Tanya Snyder on Tuesday that he's still trying to whip enough votes to get his FAA bill H.R. 2997 (115) on the chamber floor this week before lawmakers skedaddle for August recess - not 24 hours after he told Fox News that a vote to keep the agency running would have to wait until September. The Pennsylvania Republican is mining for "a couple more" votes. "I don't just want to win, I want to win significantly," he said.

Real talk: The House has the balance of the week to wrap up a four-bill spending package before members skip town Friday. Barring some kind of massive appropriations meltdown this week, we're betting the FAA bill is going to become a September item on the calendar (provided Shuster gets his votes). Then we're in extension territory, when the question becomes: How long will the chambers give themselves for this boxing match?

The Bill Shuster FAA extension bill: Rep. Rick Larsen (D-Wash.), ranking member of the Aviation Subcommittee, is dubious. "I just don't see that the votes are there," he told Tanya. But he's got an idea: "If they want to do extensions, we'll start naming extensions after members of Congress."

We also cover the Senate: Senate Commerce Chairman John Thune said Tuesday that the upper chamber's bill, S. 1405 (115), may have to wait until September for floor consideration. "It could be before the August break or it could be September," Thune said , pointing out that the Senate is tackling health care this week and potentially defense next week. An extension is "always a possibility," he said, though it isn't his "preference." Meanwhile, Thune said talks are still in progress about his provision to alter the 1,500-hour rule for first officers in training, which the committee adopted during markup.

"I woke up in New York City / From my sleep behind the wheel / Caught a train to Poughkeepsie / And time stood still"

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

SENATE THUD SPENDING BILL OFF TO FULL COMMITTEE: The Senate subcommittee responsible for DOT appropriations on Tuesday approved a fiscal 2018 spending bill that would supply the agency with about $19.5 billion in discretionary funding - $1.67 billion more than the House's legislation. The draft bill would bump up TIGER funding to $550 million, while the House bill would end the grant program altogether as President Donald Trump requested. The Senate panel also ignored Trump's requests to draw the Capital Investment Grant program to a close and sever funding for Essential Air Service and long-distance Amtrak service. The full committee will hold a markup Thursday.

About those PFCs ... Airlines for America was out with a statement Tuesday objecting to any language in the Senate bill that would raise the federal limit on Passenger Facility Charges. "While the committee has not made the bill language public, airport sources indicate that the subcommittee voted [Tuesday] to increase and nearly double the PFC tax from $4.50 to $8.50, which would result in a massive $3.2 billion tax hike on every air traveler who takes to the skies," A4A said. Airports Council International-North America and the American Association of Airport Executives are lauding the bill. The Senate Appropriations Committee only said in a release Tuesday that the legislation "provides greater flexibilities for airports to make much-needed capacity improvements."

Hot mic drop: Sen. Susan Collins isn't one to shy away from bashing the White House, but even she's not usually this blunt. Collins was caught with the tape rolling after a Senate appropriations panel Tuesday as she slammed OMB - and Trump - to a Democratic appropriator, Sen. Jack Reed . "I swear, OMB just went through and whenever there was 'grant,' they just X it out," Collins said. "With no measurement, no thinking about it, no metrics, no nothing. It's just incredibly irresponsible." Reed responded, berating Trump as "crazy." Collins added, "I'm worried." Then, she took aim at Trump. "I don't think he knows there is a BCA or anything," Collins said, referring to the Budget Control Act of 2011 that sets strict spending limits on Congress. (Of course, the juicy stuff is what Collins had to say about being challenged to a duel by Rep. Blake Farenthold. "He's huge," Collins said about the Texas Republican. "He's so unattractive, it's unbelievable.")

OPENING UP THE GATEWAY? New York Gov. Andrew Cuomo will be in Washington today to meet with Transportation Secretary Elaine Chao and Democratic members of the state's delegation, The New York Times scooped. His meeting with Chao comes as Congress continues to work on a spending bill that many would like to see send some money toward the Gateway project - and as the New York metro area slogs through a "summer of hell" with Amtrak and its commuter rail lines. Rep. Louise Slaughter , the New York delegation's dean, will host the meeting on the Hill "to discuss state and national priorities, including protecting the [Affordable Care Act], federal transportation investments, and initiatives to making voting easier," according to an aide.

** **A message from American Public Transportation Association:** Public transportation is a vital part of an integrated transportation network that drives our economy forward, creating 50,000 jobs for every $1 billion invested. Without public transit, America simply can't move forward. And in order to improve our public transportation systems, states and localities need continued federal investment. Learn more at APTA.com/InvestNow. **

DON'T FORGET ABOUT US: Rep. John Katko (R-N.Y.) said he's considering introducing legislation this year that could reinstate TSA's defunct air cargo security policy division, given the litany of complaints that he heard during a House Homeland Security subpanel hearing Tuesday. Stephen Alterman, president of the Cargo Airline Association, told lawmakers that aside from providing TSA with additional resources to oversee cargo security, Congress should push the agency to consolidate all of its air cargo officials under one division and not leave them scattered across the agency. "I think there should be concentration of recognizing the unique place that air cargo plays in the world," he said. Brandon Fried, executive director of the Airforwarders Association, added that inconsistent policy interpretations during TSA inspections was one of the most frustrating things air transport companies are dealing with today.

¿DÓNDE ESTÁ EL AEROPUERTO? Katko also chatted with MT about a bill H.R. 3328 (115), he recently introduced that would tighten TSA oversight of commercial flights between the U.S. and Cuba. He said language in the legislation - which is slated to be marked up by the full House Homeland Security Committee today - calling for TSA to inspect the airport equipment and security procedures at Cuban airports is necessary to ensure American travelers are safe. "Let's have a good look at the security protocols there and make sure they're up to snuff," he said. "Because TSA has very limited access to them, and they basically have to rely on what the Cuban government is telling them." The bill would also require TSA to standardize its process for signing agreements to allow U.S. air marshals on scheduled, commercial flights. That portion is not specific to Cuba, Katko said.

Reminder: Katko was among a group of Homeland Security Committee members that were denied visas to enter Cuba last year. And he has been generally supportive of Trump's plan to impose new restrictions on travel between the U.S. and Cuba, and to roll back some of the Obama administration policies that sought to normalize relations.

LAPTOP BAN UPDATE: Cuban and other point-of-departure airports with flights to the United States are still on the hook to implement new security measures introduced last month by Homeland Security Secretary John Kelly. A DHS spokesman said TSA officials were now working with 280 international airports and 180 airlines on the next phase of the process. This phase will include additional technological updates and increased use of bomb-sniffing dogs at each airport, he said. Airlines and airports have a total of 120 days to complete implementation or face penalties that could include a complete ban on passengers carrying large electronics and the suspension of flights to the U.S.

YOU MAY ENTER: The Coast Guard has decided that it doesn't need to completely block public access to the portion of the Potomac River that runs adjacent to President Trump's Virginia golf course when he's there. Instead of blocking off the two-mile stretch of river for Trump and other golf-loving administration officials, the Coast Guard will work with Secret Service to escort members of the public through that area, Adm. Paul Zukunft told a House Transportation subpanel Tuesday. The Coast Guard has issued an interim rule that would lay out the parameters of the process. The public comment period closes on Aug. 9. "One of the things they're looking at, through this public comment period, is can they create an unescorted portion of the river that will allow people, again, free access through there," a DHS spokesman said.

NTSB: NO ONE TO BLAME BUT THE VICTIM: At a board meeting Tuesday, NTSB determined that all safety mechanisms were in place and functioning properly at the time of a deadly 2015 train crash outside of Valhalla, N.Y. When the railroad gate closed on top of her SUV, Ellen Schaeffer Brody got out to assess the damage, seemingly unaware that a train was coming - and then got back in her vehicle and proceeded forward onto the tracks. Despite the sounding of the train horn, the flashing of the lights, and the reflective paint on the pavement indicating the presence of a railroad crossing, NTSB Chairman Robert Sumwalt said, "I don't believe that she thought she was on a railroad track or close to a railroad track." He chalked it up to a "loss of situational awareness."

Next steps: NTSB recommended that jurisdictions with third rail systems at or near highway-railroad grade crossings conduct risk assessments and take steps to mitigate any safety issues that may arise, but the discussion of probable cause focused on the driver's actions.

Grieving husband slams the process: "What you saw was a bunch of engineers talk about how they need to protect the status quo," said Alan Brody, the widower of the SUV driver who died in the crash, after the meeting. "Nothing will be fixed from today." Brody said the rail crossing signs are invisible at night and that "even the town knows that [the crossing] is inherently unsafe." Indeed, the town wants to close down the crossing, which remains open for now.

SHIFTING GEARS: Andrea Wohleber has left the Transportation Trades Department to be policy and legislative director for the Transport Workers Union.

THE AUTOBAHN:

- "VW executive charged in U.S. emissions probe to plead guilty." Reuters.

- "D.C. Director of Transportation Leif Dormsjo announces resignation." The Washington Post.

- "Lawsuit challenges the secrecy of White House advisers on infrastructure." The New York Times.

- "New York City's transit agency reveals $836M subway plan." The Associated Press.

- "Company whose trailer was used in human smuggling case has history of complaints, legal problems." The Washington Post.

- "DOT moves forward with next phase of CAFE standards." POLITICO Pro.

THE COUNTDOWN: DOT appropriations run out in 66 days. The FAA reauthorization expires in 66 days. Highway and transit policy is up for renewal in 1,162 days.

**** A message from American Public Transportation Association:** Our nation's public transit systems do more than carry Americans to work-they're a critical part of an integrated transportation network that drives our economy forward. That's why states and localities have

partnered with the federal government for more than 35 years to repair and expand services. But President Trump's budget would eliminate funding for vital public transportation projects-and put 800,000 jobs at risk, including more than 500,000 construction-related jobs. Communities can't improve public transportation alone. To protect our future, we need continued federal investment in public transportation. Congress: Fully fund the FAST Act, and include public transportation in any infrastructure bill. Visit APTA.com/InvestNow to learn more. **

Subject: BREAKING NEWS: White House, congressional leaders lay out broad tax reform principles, drop import tax

In a joint statement today, the Trump administration and congressional leaders said "the time has arrived" for tax-writing committees to draft legislation that will cut tax rates "as much as possible" for corporations and individuals.

However, they abandoned a controversial tax on imports. They plan for the legislation to move through the committees this fall.

California

HAZARDOUS MATERIALS TRANSPORTATION
Hazardous Materials/Explosives Routes and Stopping Places
California HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the California Highway Patrol amends regulations under 13 CCR 1153 concerning commercial vehicle routes and stopping places for transportation of explosives. The rule updates the list of safe stops to be used by carriers transporting explosives along the designated explosives routes to reflect business closures and ownership changes. Hearing requests are due Aug. 4, 2017. Comments are due Aug. 21, 2017. Contact: Tian-Ting Shih; CHP, Commercial Vehicle Section; 916-843-3400; cvsregs@chp.ca.gov

HAZARDOUS WASTE CLEANUP
Prospective Purchaser Agreement/Former Naval Information Research Foundation Site

California HAZARDOUS WASTE CLEANUP

Notice of the Department of Toxic Substances Control announces an amended proposed prospective purchaser agreement with Pasadena Gateway LLC and the Los Angeles Regional Water Quality Control Board concerning the Space Bank Mini Storage Facility, formerly the Naval Information Research Foundation site, in Pasadena. The agreement addresses the purchase of the site, demolition of existing improvements, and development of the site into a mixed-use, multifamily, and retail project with a total of two acres of open space. Various metals; volatile organic compounds, including tetrachloroethylene; and petroleum hydrocarbons have been detected on the site, and no groundwater investigation has been conducted to date. The amended agreement is issued in response to comments and includes a covenant not to sue. Comments are due Aug. 14, 2017. Contact: Angela Garcia; DTSC; 714-484-5310; angela.garcia@dtsc.ca.gov

TOXIC SUBSTANCES
Safe Drinking Water and Toxic Enforcement Act
California TOXIC SUBSTANCES

Notice of the Office of Environmental Health Hazard Assessment announces the availability of the revised list of chemicals known to the state to cause cancer or reproductive toxicity, as required by the Safe Drinking Water and Toxic Enforcement Act (Proposition 65). The list specifies chemicals by name, the Chemical Abstracts Service registry number and the date of initial appearance. The revised list reflects the addition of glyphosate (CAS No. 1071-83-6) and pentabromodiphenyl ether mixture (DE-71, technical grade) to the list of chemicals known to the state to cause cancer. The list is effective July 7, 2017. Contact: OEHHA; 916-324-7572; P65.Questions@oehha.ca.gov

WATER
Procedures for Issuing Loans from the Public Water Supply Loan Program
Illinois WATER

Final rule of the Illinois EPA adopts regulations under 35 IAC 662.105 through .670 (nonconsecutive) to update and reorganize procedures for issuing loans from the Public Water Supply Loan Program. The rule sets forth provisions for reducing fixed loan rates for small and hardship communities; projects meeting environmental impact criteria, including those that involve the removal or replacement of lead in water mains or in service lines; and the restructuring of existing loan obligations. The rule also authorizes 30-year loan terms for disadvantaged communities. A concurrent final rule repeals existing provisions under 35 IAC 662. The rule is effective July 1, 2017. WATER
Water Pollution Control Loan Program
Illinois WATER

Final rule of the Illinois EPA adopts regulations under 35 IAC 365.105 through .670 to update the water pollution control loan program to provide for the financing of stormwater treatment system projects. The rule also addresses reduced fixed-rate loans for small communities with service populations of less than 25,000, hardship communities with service populations of less than 10,000, and projects that meet specified environmental impact criteria. In addition, the rule authorizes 30-year loan terms for small community and hardship community applicants. Finally, the rule provides for the restructuring of existing loan obligations and updates the agency's affordability criteria for principal forgiveness to public loan recipients. A concurrent final rule repeals existing regulations under 35 IAC 365. The rule is effective July 1, 2017. WATER
Water Controls/Water Quality Standards
Nevada WATER

Notice of the State Environmental Commission announces changes to a June 23, 2016, proposed rule to amend regulations under NAC 445A.11724 through .2214 regarding water quality

standards to conform with EPA numeric criteria for Escherichia coli bacteria for protection of water contact recreation beneficial use. The rule changes the existing reference period from annual geometric mean (AGM) to geometric mean (GM) for all waters that have an existing AGM; replaces the unit of measurement from most probable number (MPN) per 100 milliliter (mL) with colony-forming-units (CFU) per 100 mL; and removes existing single value (SV) criteria of 235 MPN, 298 MPN and 576 MPN and replaces with a SV of 410 CFU. The rule also explains frequency and duration limits of the GM and SV criteria and adds a definition of "colony-forming-units." The changes clarify the use of the term "geometric mean." Regulatory Update

AIR
Air Quality/Flat Wood Panel Coating Operations
Utah AIR

Proposed rule of the Department of Environmental Quality, Division of Air Quality, amends regulations under R307-349-2 through -6 and adopts regulations under R307-349-7 regarding volatile organic compound (VOC) emissions from flat wood panel coating operations. The rule changes the applicability threshold from the potential to emit 2.7 tons or more per year of VOC to an application-based threshold of a combined 20 gallons or more of coating products and associated solvents per year. The rule also adds recordkeeping requirements and definitions. The rule will be submitted to the EPA as part of the serious area fine particulate matter (PM-2.5) state implementation plan. A hearing is scheduled for July 27, 2017, in Salt Lake City. Comments are due Aug. 15, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

—Utah State Bulletin (07/01/2017)

Regulatory Update

AIR
Air Quality/General Requirements
Utah AIR

Final rule of the Department of Environmental Quality, Division of Air Quality, amends regulations under R307-101-3 to incorporate by reference the updated version of the Code of Federal Regulations. The rule addresses standards for recordkeeping and inventory requirements relating to tertiary butyl acetate. The rule is effective June 8, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

—Utah State Bulletin (07/01/2017)

Regulatory Update

AIR
Air Quality/Graphic Arts Printing Operations
Utah AIR

Proposed rule of the Department of Environmental Quality, Division of Air Quality, repeals and readopts regulations under R307-351-1 through -8 (nonconsecutive) regarding volatile organic compound (VOC) emissions from graphic arts printing operations. The rule changes the applicability threshold from the potential to emit 25 tons or more per year of VOC emissions to an application-based threshold of a combined 450 gallons or more of all VOC-containing materials per year. The rule also reduces the exemption for solvent cleaners that do not meet VOC vapor pressure or density requirements from 110 gallons to 55 gallons per year and clarifies definitions. The rule will be submitted to the EPA as part of the serious area fine particulate matter (PM-2.5)

state implementation plan. A hearing is scheduled for July 27, 2017, in Salt Lake City. Comments are due Aug. 15, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

—Utah State Bulletin (07/01/2017)

Regulatory Update

AIR
Air Quality/Large Appliance Surface Coatings
Utah AIR

Proposed rule of the Department of Environmental Quality, Division of Air Quality, amends regulations under R307-347-2, -4, -5, -6, and -7 and adopts regulations under R307-347-8 regarding volatile organic compound (VOC) emissions from large appliance surface coating operations. The rule changes the applicability threshold from the potential to emit 2.7 tons or more per year of VOC to an application-based threshold of a combined 20 gallons or more of coating products and associated solvents per year. The rule also adds recordkeeping requirements and definitions. The rule will be submitted to the EPA as part of the serious area fine particulate matter (PM-2.5) state implementation plan. A hearing is scheduled for July 27, 2017, in Salt Lake City. Comments are due Aug. 15, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

—Utah State Bulletin (07/01/2017)

Regulatory Update

AIR
Air Quality/Magnet Wire Coatings
Utah AIR

Proposed rule of the Department of Environmental Quality, Division of Air Quality, amends regulations under R307-348-1 through -6 and adopts regulations under R307-348-7 regarding volatile organic compound (VOC) emissions from magnet wire coating operations. The rule reduces the applicability threshold to 2 tons or more per year of VOC. The rule will be submitted to the EPA as part of the serious area fine particulate matter (PM-2.5) state implementation plan. A hearing is scheduled for July 27, 2017, in Salt Lake City. Comments are due Aug. 15, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

Regulatory Update

AIR
Air Quality/Section 110(l) Demonstrations
Utah AIR

Notice of the Department of Environmental Quality, Division of Air Quality, announces the availability of Clean Air Act Section 110(l) demonstrations that three concurrent proposed rules to amend regulations under R307-335 and -343 and adopt regulations under R307-304 would not unduly relax the state implementation plan. The rules address volatile organic compound (VOC) emissions from wood furniture manufacturing, degreasing, and solvent cleaning operations. The demonstrations find that the proposed rules will not interfere with attainment, reasonable further progress, or other applicable requirements. Comments are due July 31, 2017. Contact: Joel Karmazyn; DEQ, Division of Air Quality; 801-536-4423; jkarmazyn@utah.gov

—Utah State Bulletin (07/01/2017)

Regulatory Update

AIR
Air Quality/Solvent Cleaning Operations
Utah AIR

Proposed rule of the Department of Environmental Quality, Division of Air Quality, adopts regulations under R307-304-1 through -8 to establish requirements for volatile organic compound (VOC) emissions from solvent cleaning operations. The rule also provides for vapor pressure limits for regulated entities as an alternative to VOC limits and specifies recordkeeping requirements. The rule replaces industrial solvent cleaning standards that are proposed for repeal concurrently under R307-335. A hearing is scheduled for July 27, 2017, in Salt Lake City. Comments are due Aug. 15, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

—Utah State Bulletin (07/01/2017)

Regulatory Update

AIR
Air Quality/Stationary Sources
Utah AIR

Final rule of the Department of Environmental Quality, Division of Air Quality, amends regulations under R307-210-1 to incorporate by reference the updated version of the Code of Federal Regulations concerning standards of performance for new stationary sources. The rule addresses new standards for carbon dioxide emissions from fossil fuel-fired electric generating units. The rule also addresses new standards for phosphoric acid manufacturing, including numeric emission limits for previously unregulated fluoride emissions from calciners. In addition, the rule addresses work practice standards for hydrogen fluoride emissions; the removal of startup, shutdown, and malfunction exemptions; and revised recordkeeping requirements. The rule is effective June 8, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

—Utah State Bulletin (07/01/2017)

Regulatory Update

AIR
Air Quality/Wood Furniture Manufacturing Operations
Utah AIR

Proposed rule of the Department of Environmental Quality, Division of Air Quality, amends regulations under R307-343-1 through -7 and adopts regulations under R307-343-8 regarding volatile organic compound (VOC) emissions from wood furniture manufacturing operations. The rule changes the applicability threshold from 2.7 tons per year potential to emit to an application-based threshold of a combined 20 gallons or more of coating products and solvents combined. The rule also updates coating categories and increases the VOC limits for the two component polyurethanes to 1 pound VOC/lb solids. In addition, the rule exempts canned aerosol coating products from coating limits that are less than 22 fluid ounces used for touch-up or repair. The rule will be submitted to the EPA as part of the serious area fine particulate matter (PM-2.5) state implementation plan. A hearing is scheduled for July 27, 2017, in Salt Lake City. Comments are due Aug. 15, 2017. Contact: Ryan Stephens; DEQ, Division of Air Quality; 801-536-4419; rstephens@utah.gov

Energy and Climate Report

July 06, 2017 - Number 129

News

Climate Change
China Poised to Blow Past Solar Goals Amid Push to Clear Skies
China is poised to blow past its solar targets several years ahead of schedule as the government presses ahead with efforts to fight pollution, solidifying the nation's role as the world's biggest solar market.

Climate Change
G-20 Energy Efficiency, Greenhouse Gases Both Rise, Report Says
The world's industrial powers are becoming more energy efficient, but greenhouse gas emissions continue to rise in those countries because of growing economies, according to an assessment of the Group of 20 nations by a climate advocacy group.

Climate Change
G-20 Seeks to Contain Trump by Avoiding Climate Mention
German Chancellor Angela Merkel is seeking to unite the Group of 20 nations on key environmental goals by steering clear of references to climate change wherever possible, according to a draft being circulated ahead of a summit of world leaders.

Coal-Fired Power Plants
Southern's Clean Coal Tryout Officially Dead Upon State Order
A seven-year, $7.5 billion effort to build a first-of-its-kind "clean coal" power plant in Mississippi is officially over.

Energy
More EPA Biofuel Authority May Loom Amid Blending Cut Proposal
More EPA authority in identifying biofuel blending mandates may be coming down the pike.

Energy
Renewables Top Nukes in U.S. Power Mix for First Time Since 1984
For the first time in more than 30 years, America's nuclear plants have fallen behind wind farms, solar panels and other renewable energy suppliers as a source of electricity.

Energy
Simplifying Energy Tax Code System Proving Not So Simple
Proposals to simplify energy tax credits are garnering interest from Senate Democrats and House Republicans as congressional leaders contemplate comprehensive tax reform.

Hydraulic Fracturing

South African Farmers Wary of Fracking as Licensing Looms

Farmers in South Africa say they need more assurances that shale-gas drilling is safe for their industry as exploration licenses for companies including Royal Dutch Shell Plc are expected in months.

International Climate

France Seeks Carbon Price More Than 19 Times Market Level

French Environment Minister Nicolas Hulot said he wants to increase the government's target price for carbon emissions to more than 100 euros ($114) a ton by 2030 to meet the nation's climate-change goals.

Motor Vehicles

Tesla Seen Pulling Away from GM for Clear U.S. Electric Car Lead

More than a dozen automakers are jostling to lead the U.S. electric-car race, but Bloomberg New Energy Finance sees a clear winner separating from the pack: Tesla Inc.

Oil & Gas

Interior's Zinke Wants Oil and Gas Permitting Streamlined

Oil and gas companies could get more leasing opportunities and faster permitting for work on federal onshore lands under an order announced July 6 by Interior Secretary Ryan Zinke.

CHANGING THE MATH ON CLIMATE CHANGE: In a move that will set the tone for the Trump administration's legal and political battles over climate regulation, EPA plans to consider fundamentally altering the benefits it associates with the Clean Power Plan in an upcoming proposal to rescind the Obama-era emissions reduction rule, Pro's Emily Holden reports , citing multiple sources familiar with recent drafts. Taken together, the changes will eliminate tens of billions of dollars in the Clean Power Plan's benefits that could be used to bolster EPA Administrator Scott Pruitt's legal argument for pulling back the regulation.

Among the changes, President Donald Trump's EPA will dramatically alter its use of the social cost of carbon by no longer considering any social or economic benefits the rule creates outside the United States and counting far fewer of the health benefits that might have come from reducing air pollutants. Obama's regulators accounted for the fact that levels of sulfur dioxide, nitrogen dioxide and particulate matter would decline along with the greenhouse gases, but the Trump proposal won't count any of those additional reductions if pollutant levels were already at levels deemed safe by the agency in other regulations.

Proponents of the Obama regulation argue Pruitt's EPA is relying on fuzzy math and ignoring the fact utilities are transitioning to cleaner energy sources faster than anticipated. Janet McCabe, who led EPA's air office under Obama, said Trump's team seems to be ignoring the fact that many states are already on track to hit the rule's targets ahead of schedule. "Every other story is about how costs are coming down, about how emissions are reducing, about how power companies are making choices to close their coal plants or run them less because they're so expensive," she said. And David Doniger, climate director for the Natural Resources Defense Council, said "the courts are going to look very, very hard at this kind of cooking of the books."

EPA spokeswoman Liz Bowman's response: "While it appears you are writing a piece based on rumors about CPP, the facts are that the Obama administration's estimates and analysis of costs and benefits was, in multiple areas, highly uncertain and/or controversial."

TGIF ONE AND ALL! I'm your host Anthony Adragna, and Craig Meyers was first up to identify Reps. Debbie Dingell and Doris Matsui as the two current lawmakers who replaced their spouses in their congressional seats. For today: Who is the first participant in the U.S. Senate Youth Program to be elected to the body? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and

@POLITICOPro.

GET YOUR POPCORN READY! Energy Secretary Rick Perry should expect a bevy of tough questions in his first appearance before the House Energy and Commerce Subcommittee on Energy next Thursday. Chief among them will be his effort to quickly push through new FERC rules benefitting coal and nuclear plants that has united the oil, gas, wind and solar industries — along with consumer groups — against him. Look for Democrats to push Perry on his use of non-commercial aircraft as secretary, in light of reports he chartered a private plane one day before HHS Secretary Tom Price resigned. More information on the Oct. 12 hearing here.

He may not enjoy a home field advantage: Fellow Texans are usually quite chummy with their former governor but the FERC grid proposal might have them peppering Perry with non-softballs. Rep. Pete Olson said Perry had grabbed "the tiger by the tail" and predicted it would be a "big" area of discussion from both parties. "I'm concerned because it appears to be picking winners and losers," he told reporters. "Every time we do that, it hurts the consumer."

But first: Perry is scheduled to speak this morning at a Veterans in Energy forum in Arlington, Va. this morning.

DOE, PHMSA PICKS CONFIRMED: Before heading out on a 10-day recess, the Senate confirmed by voice vote Howard "Skip" Elliott to run the Pipeline and Hazardous Materials Safety Administration and Bruce Walker to lead DOE's electricity delivery and energy reliability office. Lawmakers also cleared Timothy Gallaudet's nomination as No. 2 at NOAA by voice vote and passed a resolution declaring Thursday "Energy Efficiency Day."

Not in the cards: Confirmation of FERC chairman nominee Kevin McIntyre and Democratic commissioner pick Rich Glick. Senate Energy and Natural Resources Chairman Lisa Murkowski asked unanimous consent to approve the selections, but an unidentified senator objected. Murkowski, who has been pushing to get FERC to full complement this week, said on the floor she was "disappointed" after the objection.

HELP THAT MESS IN TEXAS: Gov. Greg Abbott, Sens. John Cornyn and Ted Cruz and all but three of Texas' House members requested $18.7 billion in disaster funding be included in the next Appropriations package as the state continues its recovery from Hurricane Harvey. "We all recognize that the funding already appropriated is a small fraction of the federal resources needed to help rebuild Texas," they wrote.

Not so fast? House Majority Leader Kevin McCarthy indicated Thursday his chamber would take up the White House's $29 billion disaster aid request next week but Republican Study Chairman Mark Walker said his influential bloc might oppose the package without corresponding spending cuts, Pro's Budget & Appropriations Brief's Sarah Ferris reports.

Seems unnecessary: The Trump administration removed information about the status of drinking water and electricity access on Puerto Rico from FEMA's site, The Washington Post reports. Government figures show 9.2 percent of the island now has electricity and 54.2 percent of people have potable drinking water. Meanwhile, Flint Mayor Karen Weaver released a letter

of support Thursday to San Juan Mayor Carmen Yulin Cruz sent earlier in the week.

Over in Florida, lawmakers are looking at potential ways to alleviate fuel shortages in the aftermath of hurricanes, but POLITICO Florida's Bruce Ritchie reports solutions may be elusive. That isn't stopping Democratic Sen. Bill Nelson, who filed legislation Thursday requiring DOE to create a gas supply reserve that would hold at least 1 million barrels of oil in two separate locations, Bruce and Sergio Bustos report.

Veep alert! Vice President Mike Pence is visiting the U.S. Virgin Islands and Puerto Rico today for an update on Hurricane Maria recovery efforts.

BETTER LATE THAN NEVER? As POLITICO reported was likely way back in March, the White House formally selected Faegre Baker Daniels attorney Andrew Wheeler to serve as No. 2 at EPA, Pro's Alex Guillén reports. Wheeler, a former staffer to Sen. Jim Inhofe and the EPW Committee, was formerly a registered lobbyist for coal producer Murray Energy but deregistered in an Aug. 11 filing . Hopefully, he'll keep participating in ME's trivia!

REPORT: ENERGY-RELATED CO2 EMISSIONS DOWN: Energy-related emissions of carbon dioxide fell 1.7 percent in 2016 — that's 89 million metric tons, according to an Energy Information Administration report out Thursday. Emissions have declined in six of the past 10 years and energy-related ones are down 14 percent from 2005 levels. Transportation-related carbon emissions rose in 2016, though emissions from the industrial, commercial and sectors were all down. Natural gas emissions surpassed those from coal in 2016, though the report notes "natural gas produces more energy for the same amount of emissions as coal."

** **A message from Chevron**: We're piloting a program that uses drones to keep an eye on Chevron wells, tanks, and pipelines—all to keep DOERS and what they're doin' safer. Watch the video: http://politi.co/2xO60oe **

LAWSUIT THREATENED OVER MISSED OZONE DEADLINE: A group of 14 state attorneys general threatened to sue EPA for missing an Oct. 1 deadline to decide which parts of the U.S. do or do not meet the 2015 ozone standard. They join a coalition of environmental groups, which vowed to sue Pruitt earlier this week.

TAX OVERHAUL: BIOFUELS PRODUCERS LIKE THE PASSTHROUGH TAX BREAKS: Like everyone, ethanol producers await the details of Republican tax overhaul plans, but they see at least one feature they like: the tax cut on passthrough businesses. The principles in the "Big Six" tax overhaul call for a reduction in the tax rate from 36.9 percent to 25 percent on taxes paid by businesses run by sole proprietors, partnerships, and "S Corps", commonly called "passthrough" businesses. "That's how our plants are mostly organized, we see this as potential positive for our members," said John Fuhrer, senior director for government affairs for Growth Energy, an ethanol producers group.

FERC EYES NEW ENFORCEMENT CHIEF: Two sources with knowledge of the plans tell Pro's Darius Dixon and Esther Whieldon that Skadden attorney John Shepherd Jr. is expected to become FERC's next enforcement chief. According to Shepherd's bio, his practice focuses on

market design, market power and market manipulation issues in the energy and natural gas markets. The timing of the announcement is not certain.

GRIFFITH STEPPING INTO MURPHY'S E&C SLOT: With embattled Rep. Tim Murphy opting Thursday to resign from Congress later this month, an Energy and Commerce aide tells ME Virginia Rep. Morgan Griffith is expected to become chairman of the panel's Oversight and Investigations Subcommittee.

ASSUME E15 BILL DEAD (FOR NOW): Both Senate EPW Chairman John Barrasso and bill sponsor Deb Fischer now say a measure S. 517 (115) that would allow year-round sales of higher blends of ethanol won't even get a committee vote this year, Pro's Eric Wolff reports. Even with five committee members as co-sponsors, there wasn't sufficient support among panel members and a flurry of amendments threatened to go after bedrock environmental laws. "I think what happened [was] it looked like we were really going to do this. So we loaded the box up with every Clean Air Act amendment we could think of," a refining industry source who opposed the bill told Eric.

MAIL CALL! GOP URGES DOI LEAK PROBE! House Natural Resources Chairman Rob Bishop and Oversight Subcommittee Chairman Bruce Westerman sent a letter Thursday requesting a briefing and copies of written policies concerning unauthorized leaks at Interior. They point to four leaks over the past several months with documents not yet finalized. "Improper disclosure of internal agency information, however, both classified and nonclassified, is an unacceptable practice," they wrote. "It is vital that those responsible for unauthorized releases are held accountable."

TWO THUMBS UP! Sen. Bill Cassidy, Barrasso and Murkowski wrote a letter Thursday to Perry to voice support for a proposed rule that would speed approvals of small-scale liquefied natural gas exports. DOE formally proposed the regulation on Sept. 1 and the comment period ends Oct. 16.

ANOTHER PRUITT PROBE PURSUED: Three senior House Energy and Commerce Democrats — Frank Pallone, Paul Tonko and Diana DeGette — asked EPA's inspector general in a Thursday letter to investigate Pruitt's installation of a $25,000 "privacy cube" in his office. "[Americans] have a right to know if Administrator Pruitt is wasting taxpayer money on duplicative and unnecessary purchases for his office," they wrote.

HEARING ON FEDERAL STAFFING SOUGHT: All House Oversight Democrats asked for a hearing to be scheduled on Trump administration efforts to downsize the federal workforce. Read it here.

KELLOGG VP SEEKING UPTON'S SEAT: Democrat George Franklin, a vice president at Kellogg announced Thursday he'll seek Energy and Commerce Energy Subcommittee Chairman Fred Upton's congressional seat, WWMT reports. It remains unclear, of course, whether the incumbent Upton will seek reelection to the House, run for Senate or retire.

RECORDS SOUGHT FOR PERRY'S TRUMP HOTEL SPEECH: Citizens for

Responsibility and Ethics in Washington filed a FOIA request seeking all records and requests for reimbursement stemming from Perry's speech to the National Mining Association at the Trump Hotel earlier this week. Copy here.

MUSK'S BIG IDEA: Elon Musk is open to helping rebuild Puerto Rico's electric grid. "The Tesla team has done this for many smaller islands around the world, but there is no scalability limit, so it can be done for Puerto Rico too. Such a decision would be in the hands of the PR govt, PUC, any commercial stakeholders and, most importantly, the people of PR," he tweeted Thursday. Gov. Ricardo Rossello responded on Twitter "let's talk" and said Puerto Rico could be Musk's "flagship project"

ANTI-PIPELINE AD LAUNCHED IN VIRGINIA: The Southern Environmental Law Center launched a $200,000, three-week television ad campaign in Virginia opposing the Atlantic Coast Pipeline being pushed by Dominion Energy.

HUNDREDS SEEK WILDFIRE FIX: More than 200 groups asked congressional leadership to enact "a comprehensive solution to the wildfire suppression funding issue that addresses the borrowing issue and the erosion of budgets due to increasing wildfire suppression costs." They voiced support for bipartisan House H.R. 2862 (115) and Senate S. 1842 (115) bills.

Stories from POLITICO Pro

EPA's climate rule withdrawal will include big changes to cost calculations Back

By Emily Holden | 10/05/2017 08:47 PM EDT

The Trump administration will consider fundamentally limiting the way the federal government counts benefits from curbing climate change and air pollution in an upcoming proposal to rescind former President Barack Obama's signature climate regulation, according to multiple sources familiar with recent drafts.

In nixing the Clean Power Plan, EPA will suggest changing the benefits it counts, which would bolster its arguments that the rule's economic burdens would outweigh its gains from cleaner air, reduced illnesses and greater energy efficiency.

President Donald Trump has long vowed to erase Obama's restrictions on coal plants, and then announced he was pulling out of the Paris climate accord, so it's no surprise he plans to eliminate the rule. But the fine print will have big implications for the inevitable yearslong legal fights to come. It could anger environmental advocates while satisfying some industries and conservative states.

"It may seem like inside baseball, but this is going to set the tone," said John Larsen, a director at the analysis firm Rhodium Group. "We haven't seen the details of any sort of regulatory plan from this administration yet on climate."

EPA could release its withdrawal proposal in the coming days, while leaving the door open to eventually replace the rule with one that would pose minimal costs but provide few climate benefits, as POLITICO reported last month.

Among other changes, Trump's EPA will drastically alter how it uses the social cost of carbon, a metric for assigning a monetary value to curbing emissions. The agency will decline to consider any social or economic benefits the rule creates outside the United States — unlike the Obama administration, which included worldwide impacts in its calculations.

And it will count far fewer of the health benefits that might have come from reducing air pollutants that cause premature deaths, heart attacks and asthma hospitalizations.

Taken together, the sources say, the recalculations eliminate tens of billions of dollars of the rule's benefits, which Obama's EPA had contended would outweigh the costs of enforcing a faster shift away from coal-fired power. The new numbers could be meant to aid EPA Administrator Scott Pruitt's legal case for scrapping the rule.

The rule's supporters are already accusing Trump and Pruitt of promoting fake math. They say the administration is ignoring the reality that power companies are making the transition to green energy even faster than Obama anticipated.

"Like so many things, they seem to be completely ignoring what's happening in the real world," Janet McCabe, who led EPA's air office under Obama, said of Trump's team. "Every other story is about how costs are coming down, about how emissions are reducing, about how power companies are making choices to close their coal plants or run them less because they're so expensive."

David Doniger, climate director for the Natural Resources Defense Council, said that "the courts are going to look very, very hard at this kind of cooking of the books."

"There are two kinds of ways to get the law wrong, to play fast and loose with science and facts or with the economics, and you can lose for either or both reasons," he said.

But EPA spokeswoman Liz Bowman said that if anyone's numbers were questionable, it was Obama's.

"While it appears you are writing a piece based on rumors about CPP, the facts are that the Obama administration's estimates and analysis of costs and benefits was, in multiple areas, highly uncertain and/or controversial," she said in an email Thursday night.

The businesses and states that opposed Obama's regulation say it's about time EPA reconsidered the costs. For example, it's reasonable to count only the rule's U.S. benefits since Americans would be paying the costs, said Jeff Holmstead, an industry lawyer who was EPA's air administrator under former President George W. Bush.

The math surrounding the rule has long been a political lightning rod.

The Obama-era EPA said the rule would be a net gain for society because shifting to cleaner energy sources would slow climate change and reduce pollution-related illnesses, among other benefits. In contrast, studies financed by conservative groups estimated that the regulation would cost the economy hundreds of billions of dollars during the same time frame.

The rule sought to cut the U.S. power industry's carbon pollution 32 percent by 2030, compared with 2005 levels — and as of two years ago, the country was more than halfway there. The regulation was the centerpiece of Obama's pledge that the U.S. would fulfill its part of the 2015 Paris climate agreement.

Trump has since announced he's pulling the United States out of Paris, unless he can "negotiate"

a more favorable deal, and he's ordered EPA to undo a host of Obama-era regulations, chief among them the Clean Power Plan.

He has also directed his agencies to recalculate Obama's math on the social and economic impacts of climate change.

In a March executive order, Trump disbanded an interagency team that had been working on revising the social cost of carbon.

He also told his agencies to revert to White House guidance from 2003, which directed regulators performing cost-benefit analyses to "focus on benefits and costs that accrue to citizens and residents of the United States." Any look at international implications should go into a separate report, the George W. Bush-era guidance said.

That "America First" approach to regulation is a big departure from Obama's methods, which considered the worldwide effects of reducing U.S. carbon pollution, but it will help Trump's EPA justify repealing the rule.

In the Clean Power Plan, the Obama administration had estimated that each metric ton of carbon dioxide imposes about $40 of costs on society. That means the plan would yield about $30 billion in global climate benefits by 2030 — but only $2 billion to $7 billion in domestic gains, less than the rule's estimated cost, according to the think tank Brookings.

Experts who support the international strategy say going back is misguided. Michael Greenstone, the chief economist for Obama's Council of Economic Advisers in 2009 and 2010, told lawmakers in March that using a social cost of carbon that incorporates only U.S. benefits is "essentially asking the rest of the world to ramp up their emissions."

Noah Kaufman, an economist for World Resources Institute's climate program, said that "because climate change is a global problem, it requires a global solution."

"If countries try to solve it only for themselves, not taking into account how U.S. emissions affect the global community, and the global community doesn't consider how it affects us ... you're just never going to solve the problem," Kaufman said.

EPA will also refuse to count many of the health benefits that the Obama administration estimated would arise as side effects of reducing carbon emissions, the sources said. Specifically, Obama's regulators accounted for the fact that levels of sulfur dioxide, nitrogen dioxide and particulate matter — pollutants already regulated by other EPA rules — would decline along with the greenhouse gases.

In contrast, Trump's EPA won't count those ancillary reductions if the pollutants were already below levels that the agency has deemed safe in other standards.

Environmental advocates say that logic is wrong, because further curbing those pollutants means people will be even healthier. But Holmstead said that while it's legitimate for EPA to look at the

other pollutant reductions the rule might achieve, the agency shouldn't count them to offset costs.

The changes to the cost-benefit analysis will come in a regulatory impact analysis that aims to highlight a wide range of cost estimates for the rule. The analysis will accompany EPA's proposed rule for rescinding the Clean Power Plan and its advanced notice of proposed rulemaking on options to replace the regulation.

Obama's critics estimate the rule would force consumers to pay $200 billion more by 2030 and saddle electricity customers with double-digit price hikes in many states, according to a study contracted by the conservative American Energy Alliance's Institute for Energy Research.

The Obama-era EPA and many academic institutions and think tanks have argued that the rule would cost far less, between $5 billion and $8 billion in 2030 by the agency's previous calculations. Plus, they have said, the social benefits of reducing carbon levels, slowing climate change and ratcheting down illness-causing air pollution would far offset the costs, achieving $26 billion to $45 billion in net benefits by 2030.

Advocates say costs are already proving to be even lower than expected as power companies move away from coal on their own.

The Institute for Policy Integrity at New York University School of Law this week released a paper compiling multiple studies that have found that Clean Power Plan compliance costs have fallen dramatically since the rule came out in 2015. That included an analysis from the American Petroleum Institute that estimated lower costs than EPA's original expectations.

"The takeaway from this should be, if we're going to do anything with the Clean Power Plan right now, given these trends we should be strengthening the goals," said Jack Lienke, an author of that paper and regulatory policy director for the institute. "Emissions can be reduced much more cheaply. That's a reason to set more aggressive targets, not to weaken targets or repeal them altogether."

White House seeks nearly $30B in disaster aid package Back

By Sarah Ferris | 10/04/2017 06:13 PM EDT

The White House this afternoon formally requested nearly $30 billion in emergency funding for its ongoing recovery efforts in hurricane-battered regions like Puerto Rico, Florida and Texas.

In a letter to congressional leaders, the Trump administration asked for $12.8 billion for FEMA's disaster relief fund, $16 billion for the National Flood Insurance Program and $576.5 million for the forest service's firefighting fund.

"We need the help of Congress to stabilize the affected communities and replenish dwindling and depleted funds," Office of Management and Budget chief Mick Mulvaney wrote. He said the money should be classified as "emergency spending," meaning it would not require spending offsets.

House and Senate appropriators immediately released statements in support of the White House's request and pledged to act quickly. House Appropriations Chairman Rodney Frelinghuysen (R-N.J.) said he would "put legislation forward as soon as possible."

Rep. Nita Lowey, his Democratic counterpart on the panel, said she supported Trump's request for FEMA, but added it needed to go further.

"Congress should add to this request by appropriating funding for flexible Community Development Block Grants; rebuilding coastlines, roads, transit systems, airports, ports, and other infrastructure; small business loans; and repairs to military installations and other federal facilities damaged in the storms," said Lowey, of New York.

The White House's request had previously been reported by POLITICO.

RSC chief stakes opposition to hurricane relief without offsets Back

By Sarah Ferris | 10/04/2017 10:50 PM EDT

The Republican Study Committee's chairman is threatening to oppose the next round of hurricane relief funding if Congress doesn't cut spending to cover the costs.

"We're going to come out strong for those to be offset," Rep. Mark Walker (R-N.C.) told POLITICO late Wednesday. "Just because Republicans are in charge doesn't mean deficits and debts no longer matter."

Walker said he has for weeks told fellow lawmakers, including those in leadership, to demand offsets. Now he is going public with his position as Congress considers the White House's new $29 billion disaster aid request.

Lawmakers are expected to vote mid-month on the fresh aid plan, which includes $13 billion in Federal Emergency Management Agency funding that would not count toward Congress' annual spending limits.

GOP leaders have signaled there are likely to be more requests to come, and the price tag for hurricane recovery could total hundreds of billions of dollars.

So far, Congress has allocated $15 billion in emergency funding since the three devastating storms began ravaging the U.S. and its territories with Hurricane Harvey's initial blow in late August.

Walker's demands are likely to incite a years-old fiscal fight within the GOP over whether emergency spending should add to the nation's deficit.

Prominent conservatives, including Vice President Mike Pence and House Speaker Paul Ryan (R-Wis.), have for years argued that disaster relief should be offset.

"Congress must ensure that a catastrophe of nature does not become a catastrophe of debt," then-congressman Pence said in a 2005 floor speech that has resurfaced in recent weeks.

In 2011, a similar demand by House conservatives brought the government to the brink of shutdown.

Walker proposes Congress consider reshuffling money from accounts like the Energy Department's loan program for manufacturing fuel-efficient cars.

This year, a majority of House Republicans already agreed to bend the pay-as-you-go requirement for the $15 billion hurricane relief package (H.R. 601 (115)) enacted last month. Ninety Republicans, including Walker, opposed the legislation, which also funded the government through Dec. 8 and temporarily suspended the debt ceiling.

On future packages, Walker said he believes "the bulk" of the House's Republicans will join in opposition if there are no offsets.

The first emergency package was different, he argues, because it was an immediate response when "there were people's lives in the balance" and it "wasn't an overwhelming amount."

Walker stressed that he isn't planning to hold a disaster package "hostage" but wants to remind fellow Republicans that they, too, have campaigned against runaway spending.

"We just want to say, 'Hey, we're waving a flag out here,'" Walker said. "If we don't have the money, then is it not due diligence to go find out where money is being spent frivolously?"

Sources: Trump expected to tap Wheeler as EPA deputy Back

By Andrew Restuccia, Alex Guillén and Anthony Adragna | 03/16/2017 08:00 PM EDT

President Donald Trump is expected to tap Andrew Wheeler, a coal lobbyist and former aide to Sen. Jim Inhofe, to be deputy administrator of the Environmental Protection Agency, sources familiar with the hiring process told POLITICO.

Sources cautioned that the decision has not yet been finalized, but they said Wheeler is expected to get the job. It's unclear when Trump will make the announcement, but one source said it could be weeks before Wheeler is officially tapped.

Wheeler worked as an EPA staffer earlier in his career. He later joined Inhofe's Senate office and then spent more than a decade as a Republican staffer on the Senate Environment and Public Works Committee, where he worked on several major pieces of legislation, including the 2005 and 2007 energy bills.

He has worked at the law firm Faegre Baker Daniels since 2009. He now co-leads the firm's energy and natural resources practice.

Wheeler is a registered lobbyist for Murray Energy, the nation's largest privately owned coal company, which regularly filed lawsuits against the Obama administration over its environmental regulations.

As a lobbyist, Wheeler may need to obtain a waiver to serve at the EPA.

Trump signed an executive order in January that bars registered lobbyists from participating in "any particular matter" on which they lobbied in the past two years. Those lobbying restrictions last for two years from the time the person joins the administration.

But the executive order says the administration can grant "any person a waiver of any restrictions" in its ethics and lobbyist requirements. Unlike an order signed by former President Barack Obama in 2009, Trump's executive order doesn't require public disclosure of the waivers.

Aside from Murray, Wheeler also lobbies on unspecified energy and energy efficiency issues for Underwriters Laboratories, an Illinois-based lab company, and on agricultural issues for cheese maker Sargento. His former clients include Xcel Energy and Bear Head LNG, as well as a cooking oil-recycling company, an auto auctioner and a medical isotope coalition.

Wheeler won't be the only energy lobbyist to join the Trump administration. Mike Catanzaro, a lobbyist at the firm CGCN Group whose clients included several fossil fuel companies, took a job at the White House last month as an energy and environmental adviser at the National Economic Council. Catanzaro is a former EPW staffer to Inhofe.

Meanwhile, EPA Administrator Scott Pruitt, a fellow Oklahoman, has also brought former Inhofe aide Ryan Jackson on as chief of staff. Byron Brown, a former Inhofe aide, is EPA's deputy chief of staff and Mandy Gunasekara, a former EPW counsel, is now a senior policy adviser to Pruitt.

More aides with ties to Inhofe are expected to join the EPA in the coming weeks. Susan Bodine

and Brittany Bolen, two EPA staffers, are widely expected to be offered jobs at EPA.

Wheeler, a White House spokeswoman and an EPA spokesman did not immediately respond to a request for comment.

White House announces Wheeler pick for EPA deputy Back

By Alex Guillén | 10/05/2017 03:52 PM EDT

The White House today nominated Andrew Wheeler to be deputy EPA administrator.

POLITICO reported in March that Wheeler was the leading contender for the job, which will help run day-to-day operations at EPA while the agency works to undo many Obama-era regulations.

Wheeler previously worked for Sen. Jim Inhofe and the Senate Environment and Public Works Committee. Since 2009, he has been an attorney at the law firm Faegre Baker Daniels, where he was a registered lobbyist for coal producer Murray Energy. Wheeler de-registered himself as a Murray lobbyist in an Aug. 11 filing.

Wheeler will be at least the seventh political staffer with ties to Inhofe to land at EPA. Others include chief of staff Ryan Jackson, deputy chief of staff Byron Brown, adviser Mandy Gunasekara and Susan Bodine, the enforcement nominee who started working as an enforcement adviser to Administrator Scott Pruitt last month ahead of her Senate confirmation.

WHAT'S NEXT: The Senate Environment and Public Works Committee will likely schedule a confirmation hearing for Wheeler in the coming weeks.

Sources: FERC enforcement critic in line to become enforcement chief Back

By Darius Dixon and Esther Whieldon | 10/05/2017 04:29 PM EDT

Skadden attorney John Shepherd Jr. is expected to be named FERC's next head of enforcement, according to two sources with knowledge of the plans.

Shepherd co-authored a paper for the Energy Law Journal in 2010 calling for new due process

rules within the FERC enforcement office, which polices energy markets for manipulation, and has made headlines for levying multi-million dollar fines against firms like JPMorgan Chase and Barclays. Shepherd co-authored the paper with William Scherman, a former FERC general counsel who has been critical of the agency's enforcement work.

According to his biography on the Skadden, Arps, Slate, Meagher & Flom website, Shepherd's practice focuses on market design, market power and market manipulation issues in the energy and natural gas markets. His biography also highlights his success securing the "dismissal of a non-public investigation against a Midwest natural gas company for alleged capacity 'flipping' violations."

The sources said the timing of the appointment was not certain.

Reached by phone today, Shepherd said he had not been contacted about the position.

Last month, fellow Skadden attorney James Danly became FERC's general counsel.

Tim Murphy resigns from Congress Back

By Rachael Bade and Jake Sherman | 10/05/2017 04:06 PM EDT

Rep. Tim Murphy (R-Pa.), the embattled anti-abortion lawmaker who allegedly encouraged his lover to terminate a pregnancy, on Thursday announced his plan to resign from office later this month — just a day after announcing his plan to retire following the 2018 election.

The Pennsylvania Republican's about-face came after House GOP leaders and senior Republicans upped the pressure on Murphy to step down. Republican sources familiar with Murphy's thinking said the married father of one child initially believed he could weather a story in the Pittsburgh Post Gazette, revealing he had sent a series of text messages to his girlfriend — a psychologist half his age — encouraging her to have an abortion. Murphy has been a strongly anti-abortion lawmaker during his 15 years in Congress.

"This afternoon, I received a letter of resignation from Congressman Tim Murphy, effective October 21," Speaker Paul Ryan said in a statement. "It was Dr. Murphy's decision to move on to the next chapter of his life, and I support it."

But many senior Republicans did not believe Murphy could — or should — survive until the end of his term. Several top Republicans said Ryan, who met with Murphy Wednesday evening to discuss his future, also wanted him to step down.

GOP insiders also were worried that additional damaging stories could surface involving

Murphy and his office. The Post-Gazette revealed that his staff was in turmoil for years, with the congressman yelling at aides and throwing folders.

"As I said last night, the circumstances surrounding this situation are extremely disappointing to me," National Republican Congressional Committee Chairman Steve Stivers said in a statement.

But Stivers predicted that Republicans would easily hold Murphy's district, despite the scandal that destroyed the GOP lawmaker's career.

"The NRCC is undefeated in special elections this year and I'm supremely confident that will continue," the Ohio lawmaker said. "In the meantime, we look forward to seeing how national Democrats can spin yet another special election loss into a so-called moral victory."

The sudden furor surrounding Murphy brought a wave of detractors eager to tell of their mistreatment at his hands during his time in Congress.

Five former Murphy employees contacted POLITICO to share stories of inappropriate behavior by both Murphy and his chief of staff Susan Mosychuk. Those included tales of staff being berated as "worthless" and "stupid." Others told of being forced by Mosychuk to take the stairs instead of the elevators as punishments for underperforming.

Republicans believed the matter could become an ethics issue that would trigger an investigation and distract from GOP messaging. With Murphy set to resign in two weeks, any ethics probe would end as soon as he left office.

Throughout Wednesday, Murphy held a series of private meetings with other GOP lawmakers as he sought to save his career. Pennsylvania GOP Reps. Charlie Dent and Bill Shuster huddled with Murphy in his office on Wednesday afternoon, but would not discuss what was said following the private session.

By Thursday morning, Murphy began to understand those complications and had drafted a resignation letter.

Murphy's departure from Congress is expected to set off a scramble to replace him in what is a safe GOP seat. Democrats signaled that they have very low expectations of making a competitive run there.

"Pennsylvania's 18th Congressional District is a reliable Republican stronghold, but the grass-roots energy behind Democrats has proven powerful this year, and we will be closely tracking this district and special election," said Meredith Kelly, communications director for the Democratic Congressional Campaign Committee.

In Pennsylvania special elections, the state central committees for both parties select primary nominees, rather than through a primary vote.

Pennsylvania Gov. Tom Wolf, a Democrat, will set the special general election date, which some

political operatives believe will occur on the same day as the regular primary date next May.

"I'd assume the governor would put it on primary election day of next year," said Mark Harris, a Republican consultant in the state. "If that's the case, there would be two ballots — a special election ballot and a primary ballot. In theory, a candidate could win the special election and another candidate could win the primary."

Two Republican candidates announced their bids on Thursday — state Sen. Guy Reschenthaler, a former judge and Iraq War veteran, and state Sen. Kim Ward. Local operatives also named state Rep. Rick Saccone, who's currently running for the U.S. Senate, as another potential candidate.

Three Democrats were already vying to take on Murphy before he resigned, including Pam Iovino, a veteran who picked up an endorsement from VoteVets on Wednesday. But Democratic operatives said they expect more candidates to jump in, naming Matt Smith, president of the Greater Pittsburgh Chamber of Commerce, state Rep. Dan Miller and Westmoreland County Commissioner Ted Kopas.

John Bresnahan and Elena Schneider contributed to this report.

Bill to expand E15 ethanol dead for the year Back

By Eric Wolff | 10/05/2017 03:36 PM EDT

A bill to allow year-round sales of higher blends of ethanol won't get a vote in the Senate Environment and Public Works Committee this year after it attracted amendments that targeted major environmental laws, Republican senators told POLITICO.

Both EPW Chairman John Barrasso (R-Wyo.) and Sen. Deb Fischer (R-Neb.), author of S. 517 (115), said it lacked the votes to get out of committee despite having five members as co-sponsors. A majority of the remaining Republicans opposed the measure, and Fischer failed to win the backing of at least six Democrats to get it through the committee. Fischer had previously decided against bringing the bill to markup in July.

Republicans like Sen. Jim Inhofe (R-Okla.), who opposed the bill, saw it as a chance to weaken the Clean Air Act, and industry sources said Democrats had a string of their own plans to try to address concerns about higher food prices and increased air pollution. The combined weight of the amendments under discussion ultimately sunk the bill.

"The original sponsor said the votes aren't there; I don't expect to see it this year," Barrasso said. Fischer agreed that the bill would not come up for a vote this year.

Ethanol producers have long argued that allowing year-round sale of gasoline with 15 percent ethanol would help increase the number of credits that refiners must use to comply with the Renewable Fuel Standard — and ultimately drive down prices. But the oil industry sees the RFS as "broken," and major producers have no interest in small tweaks, especially one that would cut into the sale of their product.

Fischer won committee time in May for her bill, which would waive a Clean Air Act provision that prevents summer sales of E15 in some states after a last-minute scramble for votes on a resolution to kill an Obama-era rule limiting methane leaks by gas producers. Barrasso agreed to give her bill a hearing and a markup vote in exchange for votes from Fischer, Sen. Chuck Grassley (R-Iowa) and other corn-state Republicans. The methane resolution ultimately failed.

Ethanol producers had hoped to sway Democrats by touting the fuel's lower greenhouse gas profile than gasoline, and the hope that allowing E15 to be sold all year would create higher demand for advanced biofuels with even lower emissions, a top concern for longtime RFS supporter Sen. Ed Markey (D-Mass.).

The committee also has five senators among its members thought to be considering running for the Democratic nomination for president in 2020: Sens. Bernie Sanders (I-Vt.), Cory Booker (N.J.), Kirsten Gillibrand (N.Y.), Kamala Harris (Calif.) and Jeff Merkley (Ore.). Ethanol remains a key issue in Iowa, and a "yes" vote could have been a boost to a primary bid.

But industry sources say that Democrats, along with the Sierra Club, which opposed the bill, had concerns about the potential for higher food prices and air pollution. A biofuels and a refining industry source said Democrats wanted an amendment to cap ethanol volumes if food prices ran too high, and some Democrats worried that the air waiver, which has to do with fuel evaporation provisions, would create air pollution problems.

Though Fischer had sought a rifle shot that would address only the Clean Air Act waiver, the legislation ultimately "ricochets all over the place," said a refining industry source who opposed the bill.

"I think what happened [was] it looked like we were really going to do this. So we loaded the box up with every Clean Air Act amendment we could think of," he said.

Inhofe had his sights on the Clean Air Act, and he had planned a host of amendments, including killing the Clean Power Plan and the Waters of the United States rule, and sunsetting the conventional biofuel requirement that is typically filled by ethanol. The amendments would be hard for Republicans to oppose but would have been virtually impossible for Democrats to support, if any got attached to the bill.

"We think it is very unfortunate that this bill has been caught up by unrelated issues," John Fuher, senior director for government affairs for Growth Energy, an ethanol group, said in a statement. "We continue to believe that this legislation is necessary, as it would lift an outdated, unnecessary restriction on retailers who want to offer their customers the choice of a cleaner,

more affordable fuel option year-round."

Oil groups who opposed the legislation were more upbeat.

"We are pleased that E15 waiver is not moving," said Frank Macchiarola, downstream director for the American Petroleum Institute. "We think it reflects a broad bipartisan consensus that, first, E15 is not ready for the market place, and second, the RFS needs to be addressed holistically with significant reforms based on free market fundamentals that protect the American consumer."

U.S. Is Said to Favor 15 Billion-Gallon Biofuels Requirement

Posted July 05, 2017, 12:13 P.M. ET

By Jennifer A. Dlouhy, Mario Parker and Ari Natter

The Trump administration will propose requiring refiners to use 15 billion gallons of conventional renewable fuels in 2018, a modest win for Midwest corn farmers and U.S. ethanol producers.

The proposed biofuel target was described by people familiar with the decision who asked not to be identified before it was formally announced. That mandate would reflect a 15 billion-gallon ceiling in federal law for conventional renewable fuel and would mirror the current 2017 requirement for that category, mostly fulfilled by corn-starch-based ethanol.

Donald Trump promised to support ethanol while campaigning for president and he reiterated that position in a speech in Iowa last month. The ethanol industry is "under siege," but the Trump administration is saving it, the president told a crowd in Cedar Rapids.

The decision sets up a clash with oil refiners, which had argued the ethanol requirement exceeds a 10 percent "blend wall," or the amount that can be easily blended into the fuel supply.

According to a May forecast from the U.S. Energy Information Administration, motor fuel demand is set to climb to about 143.5 billion gallons in 2018 from about 143 billion in 2017. Given that forecast, if the conventional renewable fuel quota were fulfilled entirely by ethanol, the fuel would represent 10.5 percent of total projected gasoline consumption. Most gasoline sold in the U.S. is E10, or 10 percent ethanol. Refiners can turn to other fuels, including renewable biodiesel, to help meet the target.

The American Petroleum Institute, which represents oil producers and refiners, had asked the EPA to set lower quotas that would reflect about 9.7 percent of projected gasoline demand; some refiners had pushed a lower 9.5 percent.

The ethanol industry counters that the government explicitly allowed vehicles built after 2001 to use

15 percent ethanol, and many vehicles can run on an 85 percent blend. Gasoline containing 15 percent ethanol is available in about 800 filling stations nationwide, according to Growth Energy, a coalition of biofuel producers.

Top EPA officials have been mulling changes to an earlier, internal proposal out of concerns that refiners will import ethanol from Brazil and biodiesel from Argentina to fulfill the quotas.

G-20 Ire On Paris Withdrawal Unlikely to Affect Trump Plans

Posted July 05, 2017, 11:07 A.M. ET

By Bryce Baschuk

Leaders of Group of 20 nations, outspoken in their opposition to President Donald Trump's withdrawal from the Paris climate accord, won't be able to do much about it at this week's summit in Hamburg, Germany, business representatives and an academic told Bloomberg BNA.

German Chancellor Angela Merkel promised that she would use her position as the host of the July 7-8 summit to defend the Paris climate agreement as a necessary tool to fend off the growing threats to the environment. G-20 nations make up about two-thirds of the world population.

Other world leaders—such as French President Emmanuel Macron, Japanese Prime Minister Shinzo Abe, and Chinese President Xi Jinping—are expected to back Merkel's call to support the accord.

But in the absence of new negotiations, the high-level statements should amount to little more than hot air, officials told Bloomberg BNA in recent phone interviews.

Agree to Disagree

"I don't believe that anyone wants to isolate the U.S. or gang up on the U.S.," said Gary Litman, the vice president for global initiatives at the U.S. Chamber of Commerce. "That won't help anyone."

Matthew Goodman, a senior advisor at the Washington, D.C. based Center for Strategic and International Studies, generally agreed.

"When this group last met in May for the G-7 summit they agreed to disagree," he said. "Then Trump withdrew from the Paris agreement."

"Maybe this issue doesn't become a debate at all," he said.

Rob Mulligan, a senior vice president at the Washington, D.C.-based United States Council for International Business, said the time may not be ripe for discussion on the issue.

"G-20 leaders have already had some exchanges on the issue of climate change," he said. "They are not at a point where any change can be discussed."

Fair Playing Field

When Trump announced America's withdrawal from the Paris agreement last month, he said it would hurt U.S. businesses and make it more difficult to compete with international rivals such as China and India.

Though both Xi and Indian Prime Minister Narendra Modi have reaffirmed their support for the deal, their countries were granted lengthy implementation timelines, financial aid, and other flexibilities in order to join the accord.

Gary Cohn, the director of Trump's National Economic Council, told reporters last week that the president wants to ensure that the climate accord offers a "level playing field" to all participants.

"We cannot be in a position where the United States is cutting and cutting emissions while other countries continue to grow until 2030," Cohn said during a June 29 press conference in Washington. "We're looking for fairness across the board in the agreement."

Environmental advocates pointed out that Trump's decision to withdraw from the Paris accord cannot technically go into effect until November 2020, at which point the issue is expected to be a key focus of the next American presidential election.

Irreversible, Non-Negotiable

Last week, Merkel said the Paris accord was not open to renegotiation and told members of the German parliament that Europe is "more determined than ever" to make the agreement a "success" following Trump's decision to withdraw.

"We will not wait until the last people in the world are finally convinced by the crushing weight of the scientific evidence of climate change," Merkel said in a June 29 speech to the German parliament. "In other words, the climate agreement is not reversible and it is non-negotiable."

Jacob Kirkegaard, a senior fellow with the Peterson Institute for International Economics, said the impasse could prevent any significant environmental outcomes at this year's G-20 summit—but that's not necessary a disaster.

"The G-20 is a latent organization—it is there in a big crisis to have all the players in the room," Kirkegaard told Bloomberg BNA. "But in the absence of an acute crisis, don't expect them to agree on everything."

EU Food Agency Re-Opens Risk Review of Bisphenol A

Posted July 05, 2017, 03:31 P.M. ET

By Stephen Gardner

European food regulators are taking the unusual step of calling for input ahead of a 2018 toxicity evaluation of the widely used chemical bisphenol A, which may lead to restrictions on food packaging such as can linings.

The European Food Safety Authority's (EFSA) senior toxicologist Anna Castoldi said in a statement June 30 the authority was staging a public consultation on the structure of the evaluation because bisphenol A had been "an issue of public interest for a very long time." It is the first time EFSA has carried out such a pre-evaluation consultation seeking comments on the parameters for its review.

Bisphenol A is produced in high volumes and used in applications including the manufacture of polycarbonate plastics and tin can linings. However, there has been a long-running dispute about its hazards, in particular whether or not it has hormone- or endocrine-disrupting properties.

Jasmin Bird, communications manager of the Polycarbonate/BPA Group within industry federation PlasticsEurope, told Bloomberg BNA July 4 that industry experts were "in the process of reading and digesting" the consultation's technical documentation, and declined to comment.

Evaluated in 2015

In an evaluation of bisphenol A finalized in 2015, EFSA found that uses of the substance—including in food packaging—posed no risk to consumers. However, EFSA still reduced the safe daily exposure level to bisphenol A from 50 micrograms per kilogram (mg/kg) of body weight to 4 mg/kg, and said it would carry out a new evaluation when new information on the risks of bisphenol A became available.

Castoldi said the 2018 evaluation could lead to a revised safe daily exposure level for bisphenol A. A lower daily exposure level could ultimately lead to restrictions of the use of bisphenol A in, for example, food contact materials. The EU has already limited bisphenol A in thermal paper used in cash register receipts.

In the EU bisphenol A is permitted in the manufacture of food contact materials, such as food storage containers, though it is prohibited in polycarbonate infant feeding bottles. The substance is manufactured in or imported into the EU in annual volumes of up to 10 million metric tons, according to European Chemicals Agency data.

Since the 2015 EFSA evaluation, bisphenol A has been classified as a "substance of very high concern" under the European Union's REACH chemicals law (Regulation No. 1907/2006 on the registration, evaluation and authorization of chemicals), on the basis of its reprotoxic and endocrine disrupting effects. Its classification as an endocrine disruptor means that it is assumed there is no safe level of exposure to the substance.

EFSA said its previous evaluation only considered studies of bisphenol A that were published up to December 2012. Among the new evidence that EFSA was waiting for before re-evaluating bisphenol A is a study being carried out by the U.S. National Toxicology Program, which should be finalized in late 2017.

EFSA said responses to the pre-evaluation consultation should cover the scope of the evaluation, the methodology to be used, and the information sources to be included.

Volvo Vaults to Volts, Planning to Pull Plug on Gasoline Engines

Posted July 05, 2017, 10:51 A.M. ET

By Elisabeth Behrmann, Niclas Rolander and Christoph Rauwald

As it turns out, news of the death of the internal combustion engine may not be very exaggerated after all.

Volvo Car Group said July 5 it expects to soon start phasing out vehicles powered solely by fossil

fuels, joining a parade of manufacturers in shifting toward electrics more quickly than most in the industry expected a few years back.

The automaker says it plans to offer only hybrid or full-electric motors on every new model launched in 2019 or later, including five electrics it expects in its lineup by 2021. Though the company will continue to produce full-combustion versions as it makes the small upgrades automakers introduce with each new model year, when a major revamp occurs (typically every seven years) it will no longer offer that option. That means that by about 2025 Volvo will make its last full-gasoline or diesel car—the first major manufacturer to make such a pledge.

"This announcement marks the end of the solely combustion engine-powered car," said Volvo Chief Executive Officer Hakan Samuelsson. "Volvo's brand will be strengthened by electrification."

Though electric cars have been around since the 1800s and have gotten a lot of attention in the past half-decade or so, they're still just a fraction of the overall market as drivers balk at high prices and limited driving ranges. Battery-powered autos made up about 1 percent of sales in the U.S., Europe and China last year.

Sales Driven by Government Prodding

And even those tepid sales figures are largely driven by government prodding. China, in an aggressive push to fight smog, plans to impose quotas for battery-powered cars that will effectively force manufacturers to sell electrics. In Europe, where regulators have relied on diesel to reduce pollution, stricter rules that take effect in 2020 will cut limits on carbon dioxide emissions by a third—a threshold that's almost impossible to meet without fully or partly electric engines.

In the U.S., though President Donald Trump has promised to scrap rules that would require automakers to almost double gas mileage, California is leading a push for even stricter standards. Its regulations will require about 15 percent of cars and trucks sold in 2025 to be zero-emission—meaning they'll almost certainly run on electricity. At least nine other states have embraced California's lead.

Consumer resistance is starting to ease as tighter regulation forces carmakers to lower costs, improve batteries, and come up with better designs. Goldman Sachs Group Inc. estimates about a quarter of cars sold globally by 2025 will be hybrid or electric.

Of course, Tesla Inc. aims to have a big piece of that. The California company started making its latest model this week—at about $35,000 its most affordable ride yet—as part of a plan to produce 500,000 cars in 2018 and 1 million annually by 2020.

Tesla is scaring traditional automakers into action. BMW says the electric iNext will replace the 7-Series as its flagship in 2021 and expects battery-powered cars to account for some 25 percent of its sales by 2025. Volkswagen, in an effort to overcome revelations that it cheated on emissions tests for millions of diesels, is accelerating its rollout of electrics. The Audi luxury brand will introduce its first all-electric model, an SUV, in 2018, followed by another two battery-powered vehicles by 2020. In 2019, VW's Porsche unit will introduce the all-electric Mission E. Then in 2020 the VW car brand will roll out the first of four electric cars it's planning.

Automakers understand that they must cut prices and improve driving range for consumers to really embrace the technology, and they're starting to deliver. GM late last year introduced the all-electric Chevrolet Bolt, with a range of 238 miles and a price tag of $38,000. And Volvo CEO Samuelsson said vehicles must have a range of at least 350 kilometers before they'll gain broad acceptance, a

target he says his cars will meet.

A big hurdle will be the cost of developing electric technology. Daimler AG has budgeted 10 billion euros to develop 10 new electric models by 2022. BMW's profit margins are at their lowest since 2010 due to increased spending on electrics.

The shift to greener cars will squeeze profits across the industry for years to come as manufacturers develop both electric and traditional combustion engines before battery-powered vehicles become economically viable. That turning point to profitability is likely to come around 2020, according to VW brand chief Herbert Diess.

"For us and for many of our competitors," Diess says, "this time will be an enormous challenge."

Volvo, owned by Chinese billionaire Li Shufu, understands those cost considerations but Samuelsson says he has the financing to make the shift. While the uncertain forecast for prices of batteries makes it difficult to predict the cost of the endeavor, he says he's confident the move will benefit the brand.

"We'll get more attractive cars," Samuelsson said. "This improves our competitive situation. It also goes back to Volvo's brand values of protecting what's important."

Like its recently deceased Swedish cousin Saab, Volvo has built a loyal following with its boxy, no-nonsense design, a reputation for reliability, and cutting-edge safety features (Volvo invented the three-point seat belt in the 1950s.) Volvo has enjoyed a revival in recent years with a focus on SUVs like the XC60—since 2009, its bestselling model.

Volvo in April said its first electric vehicle will be a Chinese-made compact expected to hit the market in 2019. The model, to be sold globally, will be based on the basic design of the company's XC40 compact SUV.

"We want to be a leading brand in terms of responsibility, safety and sustainability," Samuelsson said. "So we think this suits us perfectly."

New Zealand Exempts Road Fees for Heavy Electric Vehicles

Posted July 05, 2017, 12:53 P.M. ET

By Murray Griffin

New Zealand is exempting heavy electric vehicles from road use charges, a move that could save some truck drivers thousands of dollars a year.

A measure passed by Parliament June 27, which became law the next day, added large electric delivery trucks, buses and vans to the incentives already enjoyed by the country's few drivers of electric passenger cars. It also grants all electric vehicles free access to high-occupancy lanes and bus lanes.

The Ministry of Transport estimates annual savings at NZ$2,480 ($1,806) for a medium-sized two-axle delivery truck, NZ$5,560 ($4,049) for a two-axle waste truck and NZ$6,140 ($4,472) for a

trolley bus.

The value of the existing road user charge exemption for electric passenger cars is about NZ$558 ($406) a year.

'Standing-Still Legislation'

Heavy electric vehicles, defined as any vehicle with a maximum gross weight of more than 3.5 metric tons, will be exempt from road charges until they comprise 2 percent of the heavy vehicle fleet. This would match arrangements already in place for light electric vehicles (up to 3.5 metric tons), which exempt them from road user charges until they make up 2 percent of the light vehicle fleet.

While New Zealand has about 4 million cars and trucks on its roads, fewer than 4,000 are electric vehicles, according to government figures. The country has set a goal of reaching 64,000 electric vehicles by 2021. In 2016, it had only 60 registered heavy electric vehicles, 57 of them electric trolley buses that operate in Wellington, the capital.

The ruling National Party introduced the measure, "an important part of the government's work to improve the efficiency of our energy use and to meet our climate change commitments," minister for energy and resources Judith Collins told Parliament.

But some lawmakers said the changes don't do enough to encourage electric vehicle use.

"This is standing-still legislation," said Labor member of Parliament Megan Woods. "It is not putting in place the kind of transformational change that will see the uptake of EVs happen faster," Woods told Parliament.

G20's Financing of Fossil Fuels Outweighs Renewables, Study Says

Posted July 05, 2017, 9:19 A.M. ET

By Chisaki Watanabe

Fossil fuels received four times more than clean energy in public financing from Group of 20 member countries, according to a report by environmental groups that urged more financing be directed to renewables to address climate change.

Financing for oil, gas and coal projects from G20 public finance institutions and multilateral development banks averaged $71.8 billion per year between 2013 and 2015, according to a report released by Oil Change International, Friends of the Earth U.S., the Sierra Club and WWF European Policy Office. That compares with $18.7 billion annually provided to support clean energy.

The report came after U.S. President Donald Trump vowed to usher in an era of "energy dominance" with plans such as lifting barriers to finance overseas coal energy plants and pulling the U.S. out of the Paris climate change accord. Germany will host world leaders at a G-20 conference in Hamburg the week of July 3-7.

"Our research shows that the G20 still hasn't put its money where its mouth is when it comes to the clean-energy transition," Alex Doukas, senior campaigner at Oil Change International and one of the report's authors, said in a statement. "If other G20 governments are serious about standing up to

Trump's climate denial and meeting their commitments under the Paris Agreement, they need to stop propping up the outdated fossil fuel industry with public money."

Of the $71.8 billion in public finance, $13.5 billion went to exploration for new reserves of oil, gas and coal, according to the report. Japan provided the most exploration finance at $3.4 billion a year, followed by South Korea's $1.6 billion. The U.S. and China provided $1.4 billion each.

The groups analyzed public support for energy projects from G20 public finance institutions such as overseas development aid agencies and export credit agencies, as well as multilateral development banks such as the World Bank.

"If G20 leaders are serious about meeting climate goals, they must undertake rapid and ambitious efforts to shift public finance from 'brown' to 'green' activities," authors of the report said. "This is a significant step they can take even without the cooperation of Donald Trump."

Other findings by the groups included:

• Japan, China, and South Korea were the top providers of public financing among G20 for fossil fuels followed by the U.S. and Germany.

• Top five recipients of public finance for coal included Vietnam, Russia and Australia.

• Brazil, the U.S. and Saudi Arabia were top recipients of public finance for oil and gas.

Germany's Russian Gas Fix Raises Alarm in Merkel's Backyard

Posted July 05, 2017, 8:52 A.M. ET

By Weixin Zha and Anna Shiryaevskaya

Hidden by pine forests near the deserted site of what was once East Germany's biggest nuclear reactor, two shiny pipelines emerge from the Baltic Sea to mark the spot where Chancellor Angela Merkel is trying to secure the country's energy future.

Not far from the Hanseatic town of Greifswald—an area Merkel represents in parliament—the chancellor wants a $10 billion pipeline expansion built to increase the amount of Russian natural gas imported from Siberia, more than 3,000 kilometers (1,864 miles) away.

The project, led by Russia's state-run Gazprom PJSC, is intended to bolster German confidence that it has enough gas to underpin an unprecedented transition from the coal and nuclear plants, which are being closed, to a future dominated by renewable energy.

But the plan has opponents, both close to home and further afield.

People living in the sparsely populated area have filed almost 160 objections. Local approval is still pending and the site also requires removal of two shipwrecks sunk by the Swedish navy in the 18th century. European allies have also objected—worried that the project will deepen Europe's reliance on supplies from an increasingly antagonistic Russia—and U.S. lawmakers have proposed stiffer sanctions on energy companies that do business with Russia.

"There are not many other places apart from Russia where Germany can get a lot of gas quickly," said Jonathan Stern, chairman and senior research fellow at the Natural Gas Research Programme of the Oxford Institute for Energy Studies.

Already Europe's biggest gas user, Germany gets about 40 percent of what it consumes from Russia, the world's largest exporter, according to industry consultant Wood Mackenzie Ltd. in London. That dependence is only going to increase by 2025 to more than 50 percent, especially with output from the Netherlands, Germany's western neighbor, set to drop in coming years.

The Gazprom project, known as Nord Stream 2, also will allow for deliveries elsewhere in Europe, making Germany an even more important hub for distributions across the continent. Russia already supplies more than 20 countries with gas used to run power plants, heat homes and make chemicals.

Doubling Shipments

The existing link was commissioned in 2011 and runs for 1,224 kilometers under the Baltic Sea from Vyborg, Russia, to Lubmin in Germany. It is able to carry 55 billion cubic meters of gas, or two-thirds of German gas demand, and the expansion will double that.

"Nord Stream 2 isn't only about meeting additional demand, it's also about adjusting gas supplies towards the most cost-efficient routes," Gergely Molnar, an analyst at Wood Mackenzie in London, said by phone.

Transporting gas through Nord Stream to Germany is about 40 percent cheaper than through land-based pipes via Ukraine, according to Molnar. Russian gas at the German border cost $5.07 a million British thermal units in May, up 28 percent from a 12-year low in September but 45 percent below its 10-year average, according to International Monetary Fund data.

Germany, the U.K., France, Belgium and the Netherlands will likely benefit from lower prices, according to Brussels-based think tank Bruegel. Gazprom would also avoid transit fees paid to use pipelines in Ukraine and Poland, Bruegel said. The company plans to reduce flows via Ukraine after 2019.

Germany's approval procedures mean that infrastructure projects can be delayed by local opposition. A hearing is scheduled to start July 17 in Stralsund, Germany, according to the Ministry of Energy and Infrastructure in the state of Mecklenburg-Vorpommern.

Meanwhile, time is running out for Merkel to help Germany meet its 2020 climate goals. Despite the transition known as the Energiewende, the country is at risk of missing its target to reduce carbon emissions by 40 percent from 1990 levels.

After federal elections in September, the new government may have to present proposals for closing down power plants that run on coal, which still provides about 40 percent of the nation's electricity generation. Merkel's ruling Christian Democratic Union foresees a "mid- to long-term" exit from lignite and coal, according to their 76-page manifesto published July 3.

Nuclear Exit

Gas may provide a fifth of Germany's power in five years, almost double current levels, according to HSBC Holdings Ltd.

Germany's journey toward a renewable energy system began almost two decades ago. The policy shift intensified after Japan's Fukushima nuclear disaster in 2011, which led to Merkel's decision to exit atomic energy by 2022.

"In the long term, Europe needs new volumes of imported gas from reliable suppliers, and the Nord Stream project will become that lifebuoy," Gazprom Deputy Chief Executive Officer Alexander Medvedev said in Berlin on June 15.

'Additional Option'

Nord Stream 2 would "definitely be an additional option" to increase imports, according to Stefan Rolle, head of gas and oil markets and crisis prevention at the German Economy Ministry. "Gas is only a transition technology" to meet the nation's climate goals, he said.

Gas demand for power production may peak in 2025 before being replaced with wind and solar, according to Wood Mackenzie. The country aims to produce as much as 80 percent of its electricity from renewable sources by 2050.

Germany's gas network is already well connected, with pipelines linking it to Norway and to liquefied natural gas terminals in Belgium and the Netherlands.

"Current capacities are sufficient even if gas-fired power plants will run more," said Claudia Kemfert, head of the energy unit at the DIW economic institute, a Berlin-based research group. "Nord Stream 2 won't be needed."

Undeterred, Gazprom is forging ahead. About 37,000 12-meter-long pipes are stored at an industrial site bigger than 20 soccer pitches on the island of Ruegen, waiting to be coated with concrete long before being laid on the seabed at an average depth of 50 meters.

While Merkel last month condemned a bill on expanded Russian sanctions approved in the U.S. Senate, she's also one of the harshest critics of Russia. The chancellor, who helped negotiate the Minsk peace agreement aimed at ending violence in Ukraine, has pushed for sanctions to be maintained, arguing that measures can only be dropped once Moscow adheres to the terms of the deal.

"We need gas supplies when coal isn't used anymore," said Klaus-Peter Trapp, a 57 year-old cabinet maker from Greifswald. "This can have consequences if Russia and Germany don't get along well anymore."

World's Costliest Gas Clouding China's Quest for Bluer Skies

Posted July 05, 2017, 8:46 A.M. ET

By Bloomberg News

China has promised to make its skies blue again, but having some of the world's most-expensive

natural gas isn't helping.

The biggest energy consumer on earth wants to use more of the cleaner-burning fuel in place of the coal that's choking its skies and causing pollution far exceeding the World Health Organization's daily recommended limit. China has the ability to increase imports and is seeking to raise domestic production, but high prices risk suppressing demand growth and jeopardizing the country's ambitious targets.

The challenge is that producers, importers and distributors in China need the government-controlled prices to be high enough to make money. By cutting them too much, the state risks hurting their margins, threatening investment in future production, and the country's energy security. But be too generous to the industry, and the nation's health is at stake.

"It's a balancing act for the government that requires on one side stimulating gas demand to increase the percentage of clean fuels," said Miaoru Huang, a Beijing-based energy analyst for Wood Mackenzie Ltd. "On the other hand, it needs to ensure reasonable returns for upstream players and transmission and distribution companies that are needed to ensure sustained investment so China can maintain its growth in domestic gas production."

The Chinese government has set a goal of getting as much as 10 percent of its energy from gas by 2020 and 15 percent by 2030, up from 6 percent in 2015. To achieve this, demand will have to grow by about 15 percent a year through the rest of the decade, according to UBS Group AG.

After consumption growth slowed to well below that pace for the past few years, it is once again booming, increasing at a rate of 13.2 percent so far this year. These graphics tell the story of how that's happening and what the future may hold.

The world's sixth-biggest producer of gas, China gets about 64 percent of what it needs domestically, according to Bloomberg calculations based on government data. It imports the rest by pipelines from Central Asia and Myanmar, as well as on seaborne tankers as liquefied natural gas.

The Ordos Basin in Shaanxi Province is the largest gas-producing area in the country, according to Sino Gas & Energy Holdings Ltd. It's where China drilled its first oil well more than 100 years ago. The nation's experience with petroleum dates back 900 years, when the scientist Shen Kuo found near the Yan River oil seeping out of the rocks, which he noted could be used for lighting, according to China National Petroleum Corp.

In the modern era, the National Development and Reform Commission, the country's top economic planner, traditionally set gas prices at the well, making sure they were high enough to cover drilling costs and a small profit for the companies.

Even as production exploded over the last decade, China couldn't keep up with booming demand, so the nation's big three energy companies—CNPC, China Petrochemical Corp., known as Sinopec, and China National Offshore Oil Corp.—became gas importers. CNPC built a pipeline connecting gas fields in Turkmenistan, Kazakhstan and Uzbekistan to western China, while a link from Myanmar started in 2013. CNPC will start receiving gas from Russia on a Siberian pipeline in 2019. The country also has more than a dozen terminals on its eastern and southern coasts to receive LNG cargoes.

But buying the gas overseas proved costly. The companies inked supply deals at prices linked to the cost of oil, so when crude rose into the $100-a-barrel range, the cost of importing ballooned to levels higher than the energy giants were allowed to sell domestically. PetroChina, the country's

largest listed energy firm, has lost money on gas imports every year going back to at least 2013, according to company filings.

The NDRC responded in 2013 and 2014 by raising prices to a level that was high enough to encourage production and help cover the cost of imports. But that increase had an immediate impact on demand, snapping the run of double-digit percentage growth every year from 2003 to 2013.

In 2015, the government cut wholesale prices. By December 2016, gas was cheaper on a wholesale basis than other fuel sources such as fuel oil or propane, a liquefied petroleum gas typically used for heating and cooking, according to UBS analysts including Ken Liu. However, the final cost to industrial users was still higher because of large margins for distribution companies.

So now the government is taking a knife to the middlemen companies that transport the gas from the state-run giants and sell it to individual users, firms like ENN Energy Holdings Ltd., China Gas Holdings Ltd. and China Resources Gas Group Ltd. The NDRC last month capped investment returns for natural gas distributors at 7 percent.

In January, China's latest five-year plan called for using gas instead of coal in industrial boilers throughout four major urban areas: the greater Beijing region, northeast China, the Yangtze River Delta around Shanghai and the Pearl River Delta in Guangdong province. Local governments are supporting the efforts with measures including subsidized gas connections and boiler replacements, as well as price caps, according to Morgan Stanley.

The NDRC issued guidelines July 4 aimed at increasing use of the fuel, including encouraging the participation by private companies in overseas gas investments, expanding LNG import terminals and expanding underground gas storage capacity. Shares of gas companies seen benefiting from rising demand—ENN, China Gas and China Resources Gas—all gained in Hong Kong on July 5.

Provincial governments don't have the budget to keep subsidies going forever, though, so to be able to sustain rapid consumption growth the government will have to find a way to bring gas prices down more, said Michal Meidan, an analyst with Energy Aspects Ltd. in London. Wholesale prices for the fuel in China were the most-expensive among major users in the world last year, according to the International Gas Union.

While lowering prices further may spur more demand, China runs the risk of suppressing production and imports, Meidan said.

Output goals are already going to be difficult to meet because of high costs and difficult geology, according to Bloomberg Intelligence. The government expects most gas production growth to come from unconventional resources, such as shale and coal-bed methane, with production targeted to reach as much as 100 billion cubic meters a year by 2030.

At stake in all of this is the health of the world's most populous nation. Poor air quality has been a source of social unrest and China had more pollution-related deaths than any other country in 2012, according to World Health Organization data.

Coal still accounts for about two thirds of China's total energy consumption. Natural gas produces about half the carbon dioxide and just a fraction of the sulfur dioxides and particulates of coal when it's burned, according to the U.S. Energy Information Administration.

Premier Li Keqiang in March pledged to make China's skies blue again, three years after the

country declared a "war on pollution."

Progress has been steady but slow. Last year in Beijing, average concentrations of PM2.5 -- small particles that pose the greatest risk to human health -- fell almost 10 percent, the biggest annual decrease in the past four years.

That trend is reversing this year as power generation and steel output grow, according to a research note from a Greenpeace analyst in late May, making air quality goals for this year seem increasingly unattainable.

China Seen Scaling Back Carbon Market After Trump's Paris Move

Posted July 05, 2017, 7:57 A.M. ET

By Mathew Carr and Aibing Guo

China may remove industries including steel from the national carbon market it plans to start this year because President Donald Trump wants to pull the U.S. out of the Paris climate deal.

The carbon market, which was to have been the world's largest, may cover power generation, cement, aluminum and possibly aviation, according to Junjie Zhang, the director of the environmental research program at Duke Kunshan University in Jiangsu, China. Iron and steel, petrochemicals, chemicals and paper making may not initially be included in the program, Zhang said by phone.

"China's step back in carbon markets is related to the U.S. determination" to pull out of the 2015 Paris agreement covering the period after 2020, said Zhang.

"The diplomatic value now is negative between the U.S. and China in terms of climate collaboration—negative means the Trump administration does not believe in climate change," so there's no reason for China to continue collaboration.

Global emissions trends indicate the world is headed for a temperature rise of about 4 degrees Celsius (7.2 Fahrenheit) and will miss the target of holding the increase to "well below" 2 degrees established in the Paris deal, according to a report published July 3 by Climate Transparency, an international research group. China's policies are rated highly by experts in the report because the country is decommissioning coal-power plants and aims to increase its renewable energy capacity by 38 percent above 2015 levels by 2020.

China's National Development and Reform Commission, which is in charge of carbon market planning, didn't immediately respond to faxed questions seeking comment. The 21st Century Business Herald reported in May that the steel and chemical industries sectors would be excluded at the launch of China's carbon market.

Even if it scales back its carbon market, China will continue to enact policies seeking to protect the climate, Zhang said. Setting up the carbon market is very complicated, he said.

"China's carbon market is based on not just the diplomatic value of U.S.-China collaboration, but also because of an internal incentive for low-carbon development," he said. "No sector wants to be covered by the carbon market" because of the extra regulation that entails.

China's market was to cover more than 5 percent of global emissions and would have been larger than the European Union program, currently the globe's biggest, the World Bank estimated in a May report.

June 07, 2017 - Number 109

News

Climate Change

How Australia Survived a Climate Policy Reversal

Australian businesses and organizations say they know firsthand the damage that can be done if a national government retreats from climate commitments—and they have some suggestions for U.S. companies on how to respond.

Climate Change

If Trump Gets His Way, World May Not Know If U.S. Emissions Rise

President Donald Trump's critics argue that pulling the U.S. out of the Paris climate accord will lead to an increase in greenhouse gas emissions.

Coal Mining

Lawmakers, Regulators Stress Urgency to Renew Mine Cleanup Fee

Congress is already behind schedule in renewing a fee on coal companies that's essential for cleaning up the $10.5 billion worth of abandoned mines across the country, lawmakers and state regulators said June 7.

Coal-Fired Power Plants

Utilities Seek Ohio Subsidies Even as Coal Falls From Power Mix

American Electric Power and other electricity companies want Ohio ratepayers to prop up two of their aging coal-fired power plants until 2040 despite AEP's predictions that coal will drop in its mix for electricity generation.

Congress

House Panel Approves Energy Bills as Pallone Urges Climate Action

A House panel unanimously approved a slew of energy bills June 7, including a measure to increase workforce education and training for energy and manufacturing-related fields.

EPA

PODCAST: What Happens When Empty Desks Run the Government

President Donald Trump blamed Democrats June 5 for "taking forever" to approve his administration's appointees in a tweet, saying that "They are nothing but OBSTRUCTIONISTS!" But, Trump hasn't moved the quickest of the last few presidents on vetting and getting appointees through the confirmation process—in fact, he is the slowest of the last four presidents, according to data collected by the Partnership for Public Service. Of the 559 key positions ...

Endangered Species

Interior to Review Sage Grouse Policy, Consider Changes

The federal government will review conservation plans for the greater sage grouse to determine how it can work more closely with states and use more flexibility and innovation to protect the bird in 11 Western states, Interior Secretary Ryan Zinke said June 7.

Energy

Dark Clouds Hang Over Nuclear Town Torpedoed by Green Energy

In an eerily quiet nuclear reactor hall in southern Sweden, new copper and steel machinery stretching 50 meters and weighing hundreds of tons is just sitting idle.

Energy

Key Shale-Boom Booster Threatened by Trump's Spending-Cut Plans

An agency instrumental to America's surge in energy production would lose half its funding in President Donald Trump's proposed federal budget.

Energy

Top German Court Blocks Nuclear Fuel Tax

Germany's Constitutional Court said June 7 the federal government overstepped its powers when introducing the national nuclear-fuel tax in 2011.

Enforcement

Advocate for Clients Such as BP to Lead Environment at Justice

President Donald Trump's choice to lead the environment section at the Justice Department is a Washington litigator known for his advocacy on behalf of clients such as BP PLC in the Deepwater Horizon oil spill and the U.S. Chamber of Commerce in opposing EPA climate regulations.

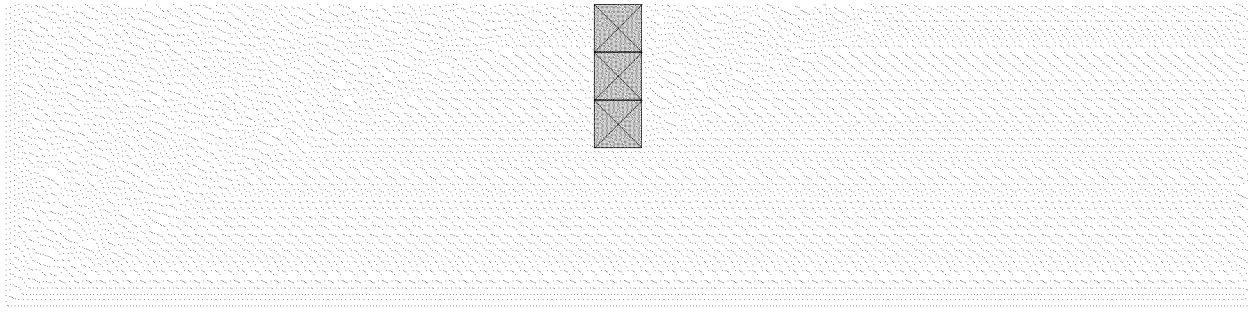
Radioactive Waste

Private Storage is Fastest Nuclear Waste Option: Sen. Alexander

The quickest—and possibly least expensive—solution for storing the country's used nuclear fuel would be at privately run interim storage facilities, the Republican heading the Senate panel on the Energy Department's budget says.

Vehicle Fuels

Electric Car Market Goes Zero to 2 Million in Five Years



The number of electric vehicles on the road rocketed to 2 million in 2016 after being virtually non-existent just five years ago, according to the International Energy Agency.

Subject: POLITICO's Morning Energy, presented by Exelon: Put your hands in the air for Energy Week! — Pruitt's got a posse — The trade dispute that could ruin solar

By Eric Wolff | 06/26/2017 10:00 AM EDT

With help from Esther Whieldon, Andrew Restuccia, and Ben Lefebvre

WELCOME TO ENERGY WEEK! WHATEVER THAT MEANS! President Donald Trump aims to make this week Energy Week. You may recall theme weeks from such prior weeks as Tech Week, Workforce Development Week, and Infrastructure Week. The fact that these weeks seem not to have drawn much attention has more to do with the steady drumbeat of news on the Senate health care bill and the ever-widening, ever-deepening Russia scandal, as POLITICO's Andrew Restuccia and Josh Dawsey report in a story going live this morning.

Of course, part of the problem is Trump himself, who can't seem to stay focused. The White House tried to fill his schedule with wonky policy events to create a counter-narrative, but they haven't succeeded in keeping the president on topic. Asked about other theme weeks that may be coming in the future, a senior Trump aide told Andrew and Josh, "Whatever he tweets."

Here's the Energy Week itinerary:

Today Trump will discuss energy with Indian Prime Minister Narendra Modi. India is the third largest coal consumer, and it's appetite is growing, so Trump could take the opportunity to press the case for the U.S. coal industry to get into the market there. But then, Modi has said he is still committed to the Paris climate accord, and his ambitious plans to develop solar power there could alter the course in the power-starved country.

On Wednesday Trump will host Wisconsin Gov. Scott Walker, Maine Governor Paul LePage, and Nebraska Gov. Pete Ricketts along with other local and tribal leaders for a discussion regarding local and state energy.

On Thursday Trump, will give a speech on "Energy Dominance" after meeting with EPA Administrator Scott Pruitt, Interior Secretary Ryan Zinke, and Energy Secretary Rick Perry, who will host the American Energy Dominance Panel at DOE with labor and industry groups.

Not happening: A long-hoped for visit by Trump to an LNG export terminal in Louisiana this week has been scratched. The reasons? Sources tell ME that last week's Tropical Storm Cindy (complete with floating squads of fire ants), the need to be in D.C. to twist arms for the Senate health care bill, and the lack of advance planning made organizing the trip too difficult.

JUST ANOTHER MANIC MONDAY! I'm your fill-in host Eric Wolff, and I want you to know that every week is Energy Week at ME, as we provide you with the latest news with a spring in our step and a song in our hearts. It's been fun pitching in for a couple of days of ME glory, but Ben Lefebvre will take over tomorrow, so while you can send me your comments at

ewolff@politico.com, you should send your ME tips to blefebvre@politico.com. Anthony will be back Wednesday, along with trivia answers, so you can find him at aadragna@politico.com, or follow us on Twitter @ericwolff, @aadragna, @bjlefebvre, @Morning_Energy, and @POLITICOPro.

PRUITT'S POSSE: EPA's Pruitt is relying on a skeleton crew of loyalists with little experience in environmental regulations, augmented by former industry lobbyists, as he pursues an ambitious agenda of seeking to undo the agency's Obama-era rules, your morning host reports. Trump's molasses-slow pace in announcing nominations has left Pruitt running an agency out of the Office of the Administrator, with senior advisers keeping tabs on key policy making offices from the Office of Policy. In filling these jobs he has drawn from his time as Oklahoma Attorney General, bringing in former campaign staff, the former head of both the Republican Attorneys General Association and the Rule of Law Defense Fund, and a gaggle of Sen. Jim Inhofe's ex-aides. Both supporters and opponents question whether the team he's assembled is up to the task.

A tight inner circle: Pruitt hasn't made his life easier by his unwillingness - which he has transmitted to his hand-picked subordinates - to trust career staff. "If you are Pruitt, you have a handful of folks around you that you trust and have confidence in," said Stephen Brown, top lobbyist for oil refiner Tesoro. "You head an agency of 15,000, many of whom can be described as 'the resistance.' What would anyone do except hunker down and deal only with those you trust?"

Golden padlock: Investigative Reports and Editors, a journalists' association, gave Pruitt its "golden padlock" award on Friday for requiring a two-year lawsuit to get him to turnover key emails form his time as Oklahoma Attorney general.

GTM: TRADE DISPUTE COULD CRUSH U.S. SOLAR INDUSTRY: A report out today by GTM Research finds that if Trump implements the solar import trade tariffs solar panel makers Suniva and SolarWorld Americas are seeking, it could wipe out nearly two-thirds of the solar projects set to be built in the U.S. cumulatively from 2018 through 2022. Between 36.1 gigawatts and 47.5 gigawatts might fall to the wayside if Trump sets tariffs and minimum prices for imported solar panels and cells, the report says. It "could send shockwaves through the U.S. solar industry," GTM said in the report.

The largest solar plants, which are in the utility-scale sector, will be hit the hardest because the majority are moving forward under power purchase agreements that may need to be canceled or renegotiated, the report said. Developers are scrambling to pre-order cheap imported modules in case Trump enacts the changes next year. But Cory Honeyman of GTM tells ME that only about 1.3 gigawatts-worth of projects are on track to get modules in time. The U.S. International Trade Commission is slated to rule on the trade complaint by Sept. 22 and send its findings to Trump in mid-November.

ZINKE GOIN' TO THE COUNTRY (PEACH EATING UNCERTAIN): Interior's Zinke will head to the resort town of Lake Tahoe, Nev. to make an announcement on the Trump administration's "commitment to rural communities." Zinke will be addressing the Rule of Law Defense Fund (which, of course, ME mentioned above in connection to Pruitt).

Then on Tuesday Zinke heads to Whitefish, Mont. (the most delicious town to spread on a bagel) to address the Western Governors Association. For Zinke, the event is a chance to head back to the town where he grew up and starred on the high school football team (Go Bulldogs!).

** **A message from Exelon:** Innovation always begins with the spirit of discovery-the search for new ideas and answers to our biggest questions. As America's largest clean energy provider, what happens when 34,000 Exelon engineers, analysts, and innovators put their heads together to tackle the energy industry's biggest challenges? Find out here: http://bit.ly/2szvZN4 **

CITY MAYORS CLIMATE POWERS, ACTIVATE! Former New York Mayor Michael Bloomberg will today announce a $200 million philanthropic effort to help cities fight climate change and to increase their voices at the national level, the New York Times reports. Bloomberg is set to make the announcement as part of a speech at the U.S. Conference of Mayors' annual meeting in Miami Beach, Fla. As part of the effort, cities will be able to apply for six- and seven-figure grants to support policy experimentation.

Form of: Climate resolutions! The mayors will also vote today on resolutions to establish a 100 percent renewables by 2035 target, accelerating the electrification of transportation, and "Supporting a Cities-Driven Plan to Reverse Climate Change." Climate warriors look toward cities and states to carry on the carbon reduction work as the federal government under President Trump pulls the federal government out of the carbon reduction business.

Shape of: G20 demands! The mayors of 46 "megacities", have put out a statement asking the G20 leaders to aggressively push for carbon reductions when they meet in Bonn, Germany in July. "You have the privilege of leadership at a unique moment in history to help realize the potential of the Paris Agreement," the statement says. "The cities of the world and their citizens have a shared vision for a just and sustainable future... Together with business leaders we have already decided on a climate-safe future of opportunity, optimism and innovation -- there is no alternative."

APPROPRIATION JUNCTION, WHAT'S YOUR FUNCTION? Congressional appropriators a cramming in hearings and markups like it's the week before finals, which seems about right for late June (Hey, your host is from New York. The school year **lasts** forever). EPA Administrator Scott Pruitt will meet with Sen. Lisa Murkowski and her band of Interior-Environment appropriators on Tuesday, and the heads of the Bureau of Reclamation and the U.S. Army Corps of Engineers will spend their Wednesday morning with Sen. Lamar Alexander and his subcommittee. Even NASA's budget is getting a hearing on Thursday.

On the House side, the Energy and Water Development appropriation will get a subcommittee markup on the House side on Wednesday.

MARK 'EM UP, DANNO! The House Natural Resources Committee will have a markup today on a slew of mostly minor bills, but there are a couple of noteworthy votes. The committee will take up Rep. Hal Rogers RECLAIM Act that would pump $200 million a year for five years into coal-mine clean up (a program that the Trump budget disappeared), and a bill from Rep. Don

Young to advance the construction of King Cove road, the project long-sought by the Alaska delegation that was stymied by the Obama administration.

QATAR LOVES EXXON: Qatari Emir Sheikh Tamim bin Hamad al-Thani and Exxon Mobil CEO Darren Woods met over the weekend to talk 'continued cooperation' amid increasing tensions in the region, Reuters reports . Exxon has been instrumental in opening up Qatar's natural gas fields, and the tiny country is now the top LNG supplier in the world. Secretary of State Rex Tillerson, Woods' predecessor at Exxon, issued a statement Sunday saying that Qatar has begun a review of the demands from its neighbors Saudi Arabia, the United Arab Emirates, Bahrain and Egypt, which cut ties with Qatar, accusing the country of supporting extremism. "While some of the elements will be very difficult for Qatar to meet, there are significant areas which provide a basis for ongoing dialogue leading to resolution," Tillerson said.

CAP'S LIST: The Center for American Progress is out today with a website listing the fossil fuel affiliations of political appointees working in the Trump administration. "Across the administration, political staff have close ties to the Koch brothers, Exxon, and coal trade associations, among others -- and many of the people tasked with regulating the industry were getting their paycheck from it just months ago," Erin Auel, a research associate for CAP, said in a statement.

NUCLEAR WASTE MERGER DECAYS TO STABLE FORM: Valhi, the parent company of Waste Control Specialists, will not appeal a federal court decision to block a merger with Energy Solutions, a low-level nuclear waste management company. The Nuclear Regulatory Commission on Thursday suspended an application by WCS to build a high-level nuclear waste facility in Texas.

DRY LAKE: BAD FOR FISHING, GOOD FOR SOLAR: BLM hopes to sell solar leases in Dry Lake Nevada, the first leases under a new rule, Pro's Esther Whieldon reports. the agency is conducting environmental reviews in advance of the sale in the hopes of streamlining permitting and construction.

MOVERS, SHAKERS: Jamie Simler, director of FERC's Office of Energy Market Regulation, has retired. Anna Cochrane, deputy director of the office, has been promoted to director. Jette Gebhart has been named acting deputy director.

Stephen Kittredge will be leaving the Electric Power Supply Association to run government affairs for Owens Corning.

Subject: EIA: Renewable energy growth to 'squeeze out' coal through 2040

By Ben Lefebvre

09/14/2017 11:39 AM EDT

Renewable energy will make up nearly a third of the world's electricity generation output by 2040, putting it on equal footing with coal power, the EIA said in its latest long-term outlook.

Solar, wind and other renewable energy sources will grow at the fastest pace of all fuel sources in the next 22 years until they account for 31 percent of all power generation, the EIA report says.

Meanwhile, coal's use as a generation fuel will drop to 31 percent of total power generation, down from 40 percent in 2015.

In all, renewable energy power generation will nearly double to about 11 trillion kilowatt hours by 2040. Combined with steady growth in nuclear power output, coal will see its importance continue to fall, Ian Mead, assistant administrator of the EIA's Office of Energy Analysis, said during a presentation at the Center for Strategic and International Studies.

"Coal gets squeezed out by those other two shares of generation," Mead said.

A big chunk of the growth will come from China, which is forecast to replace some of its coal power plants with renewable sources, nuclear energy and natural gas.

Overall world energy consumption will climb 28 percent from 2015, reaching 736 quadrillion Btu by 2040, the EIA report said.

The increased use of renewables, even as total energy demand increases, will keep world coal-related CO2 emissions growth at 0.1 percent annually to 2040, compared with the growth rate of 2.3 percent a year from 1990 to 2015.

WHAT'S NEXT: EIA will detail in coming months how Paris Climate agreement impacts energy output.

Highlights

Leading the News

No Link Between Roundup and Cancer, Study Finds
By *Tiffany Stecker*
A long-term survey of tens of thousands of U.S. farmers found no significant link between cancer and exposure to glyphosate, best known as the main ingredient in Monsanto Co.'s Roundup herbicide.

Monsanto, DowDuPont Left Hanging as EU Deadlocks on Glyphosate
By Stephen Gardner
Monsanto, DowDuPontWait and other companies that use glyphosate in their pesticide formulations were left frustrated Nov. 9 as the European Union once again failed to make a decision on reauthorizing the chemical.

Senate Sends EPA an Air Chief in Largely Party Line Vote
By *Abby Smith*
The Senate is sending the EPA an air chief—adding to the agency's team its second confirmed political appointee.

EPA Parks Portions of Greenhouse Gas Rule for

Trucks

By *Andrew Childers*

The EPA would exempt some large trucks from its greenhouse gas emissions requirements under a long-expected proposal unveiled today.

U.S. Energy Regulator Lays Out Plan to Keep At-Risk Coal Online

By *Catherine Traywick* (Bloomberg)and *Rebecca Kern* (Bloomberg BNA)

FirstEnergy Corp.'s efforts to save its ailing coal plants are gaining traction with the top U.S. energy regulator.

Today's News

D.C. Claims Right to Prevent Sewer Backups from Mislabeled Wipes

By *Amena H. Saiyid*

Washington, D.C., has the right to try preventing sewer backups caused by disposable wipes mislabeled as flushable, the District said in a court filing defending its labeling rules and disputing claims by manufacturer Kimberly-Clark Corp.

Legislation to Allow Drilling in Arctic Refuge Unveiled in Senate

By *Alan Kovski*

Legislation to allow oil exploration in Alaska's Arctic National Wildlife Refuge was released late Nov. 8 and scheduled for markup Nov. 15 in the Senate Energy and Natural Resources Committee.

Judges Skeptical of EPA's Need For More Time on Kiln Emissions

By *Jennifer Lu*

The EPA's need for two extra years to review its toxic pollution standards for brick kilns met with skepticism from federal judges today.

Los Angeles Emissions Trading Plan Changes Snuffed Out by Court

By *Carolyn Whetzel*

Southern California air quality officials will have to revisit changes to a regional pollution credit trading program approved in 2015, a state court said.

Williams Cleared to Resume Work on $3 Billion Gas

Pipeline

By Lynn Doan and Tim Loh

Williams Partners LP was cleared by a federal court to resume construction on a $3 billion pipeline that will help shuttle shale gas across the eastern U.S.

As Rooftop-Solar Growth Ebbs, Installers Chase Profitability

By Brian Eckhouse

There's long been a Catch-22 about residential solar: Despite staggering market demand, it's been hard to make money doing it. Until now.

Wind Energy Feels the Force of World Markets

By *Anna Hirtenstein*

The prevailing wind has dramatically changed for the world's biggest maker of the swooshing blades that dot landscapes from Argentina to Mongolia.

West Virginia Gets China Energy Deal That Dwarfs State's GDP

By Jim Polson

West Virginia was the biggest recipient of the $250 billion of investments signed during President Donald Trump's visit to China.

EU Reaches Deal to Overhaul World's Largest Carbon Market

By Ewa Krukowska

European Union negotiators agreed to overhaul the region's cap-and-trade program, approving a plan to bolster carbon prices and adjust the emissions market to more ambitious climate goals in the next decade.

Deutsche Bank's Tool Maps Climate-Change Investment Risks

By Emily Chasan

Deutsche Bank AG's asset-management unit is using a detailed map to determine where natural disasters spawned by climate change may pose the greatest risks to its investment portfolios.

U.S. Sets Duties on Argentine Biodiesel as Final Decision Looms

By Jennifer A. Dlouhy and Mario Parker

The U.S. set final import duties on biodiesel from Indonesia and Argentina of as much as 72.28 percent, after concluding that government subsidies are giving an unfair advantage to producers in those countries.

Top Canada Court to Hear Appeal on Abandoned Oil Well Decision

By Allison McNeely

The Supreme Court of Canada has agreed to hear an appeal of a lower court decision that allows bankrupt oil and gas companies to hand off the cost of cleanup to government authorities in order to maximize money for creditors.

China's Appetite for U.S. Energy Falls Short of Binding Deals

By *Dan Murtaugh*, *Aibing Guo* and *Ryan Collins*

China showed its appetite for big ticket investments in U.S. energy production and exports during President Donald Trump's visit, but left the event with almost no binding deals.

Ford Cleared of Asbestos Claims From 1970s Brake Repair

By *Peter Hayes*

Ford Motor Co. won dismissal of lung cancer claims by the widow of a man allegedly exposed to asbestos while working on car brakes.

Leading the News

Enforcement
Justice Department Environment Pick Downplays BP Defense Work
Past work defending BP PLC after the Deepwater Horizon oil spill and personal opposition to the EPA's climate change efforts would have no bearing on running the Justice Department's environmental office, President Donald Trump's nominee said.

Oil & Gas
Discoveries Boost Hopes for Alaska Oil Output
Oil discoveries on the North Slope of Alaska during the past few years have increased hopes for the economy of the region and the state.

Radioactive Waste
House Strikes Compromise on Yucca, Interim Nuclear Storage
A bipartisan measure to pressure a long-awaited decision on permanent nuclear waste storage, while also paving the way for private interim facilities, will move to the House floor following the Energy and Commerce Committee's approval June 28.

News

Agriculture
China to Treat More Animal Waste to Help Clear Rural Pollution
China, the world's top pork producer, plans to treat more waste from livestock breeding to improve its rural environment and reduce agriculture pollution.

Agriculture
Democratic Appropriators Criticize Cuts to Farm Programs

Democrats on the House agriculture appropriations subcommittee are raising concerns about cuts to programs in the fiscal year 2018 agriculture spending bill that was approved by voice vote June 28.

Asbestos

Take-Home Asbestos Suit Against Pasadena Ruled Untimely

The daughter of a mechanic who worked for the city of Pasadena waited too long to file claims that she developed mesothelioma from exposure to asbestos on her father's work clothes, a California appeals court ruled (City of Pasadena v. Superior Court of Los Angeles Cty., 2017 BL 219050, Cal. Ct. App., 2d Dist., B280805, 6/26/17).

Brownfields

$200 Million Brownfields Bill Easily Clears House Panel

The House Energy and Commerce Committee approved a popular brownfields bill working its way to the House floor.

Chemicals

EU Chemicals Agency Hopes to Increase Imports' Scrutiny

Updated guidance on the notification obligations of companies that import goods containing hazardous chemicals into the European Union could lead to more compliance checks on imports, the European Chemicals Agency told Bloomberg BNA.

Coal Mining

Looking for a Coal Job? Better Work on Those Playstation Skills

While on the campaign trail in West Virginia last year, Donald Trump donned a hardhat and pantomimed digging coal with a shovel. The coal miners in the audience would soon be back to work, he promised: "Get ready, because you are going to be working your asses off."

Coal-Fired Power Plants

Southern Stops Work on the Coal Part of 'Clean Coal' Power Plant

U.S. utility owner Southern Co. has dropped the coal part of what was planned to be a first-of-its-kind "clean coal" plant.

Delaware Law

Spectra Energy Can't Shake Investor Suit Over Pipeline Deals

A Spectra Energy Partners LP investor can move forward with a lawsuit challenging a pipeline transaction between the master limited partnership and its parent, the Delaware Chancery Court ruled June 27 (Morris v. Spectra Energy Partners (DE) GP LP, 2017 BL 221004, Del. Ch., No. 12110-VCG, 6/27/17).

Drinking Water

Michigan Sues to Keep Flint on Detroit Water System

Michigan's Department of Environmental Quality sued the Flint City Council over the local government's decision against a long-term deal to purchase water from a Detroit-area water authority.

Emissions Trading

California Supreme Court Declines Review of Carbon Auction Case

California business groups lost their last chance to convince a court that the state's carbon cap-and-trade allowance auction is an illegal tax.

Energy

China Is About to Bury Elon Musk in Batteries

As Elon Musk races to finish building the world's biggest battery factory in the Nevada desert, China is poised to leave him in the dust.

Energy
House Panel's Spending Bill Cuts Energy Research Program
Rep. Mike Simpson (R-Idaho) said that while he likes the Energy Department's ARPA-E program, which provides early stage investment in innovative energy technologies, his Energy and Water Subcommittee's fiscal 2018 appropriations bill would cut it "because of limited resources."

Energy
Trump Said to Announce Nuclear Review, Coal Exports to Ukraine
President Donald Trump will announce a broad review of U.S. nuclear regulations and the start of coal exports to Ukraine in a speech June 29.

Environmental Reviews
PennEast Gas Line Hits Snag as New Jersey Closes Application
The PennEast pipeline, a $1 billion project that would link America's biggest shale gas basin to major eastern markets, suffered a setback in New Jersey when the state halted a key environmental review.

Forests
Satellite Used to See Atlantic Forest for the Trees in Brazil
The Rio de Janeiro State Environment Secretariat is using satellite images to detect illegal deforestation in the Atlantic Forest, Brazil's most degraded and endangered biome before sending out field teams to verify findings and arrest or fine violators.

Oil & Gas
Pipeline Pinch Adds to Oil-Sands Woes as Keystone Wait Drags
Call it the pipeline pinch, or maybe the Keystone quagmire.

Pesticides
Pesticide Registration Bill May Cover Three Years, Not Six
Lawmakers are seeking to shorten a pesticide registration bill lifespan by half.

Pipeline Safety
Industry, Safety Advocates Building Pipeline Data System
The Pipeline and Hazardous Materials Safety Administration is drawing on industry and state expertise to build a shared information system that will help prevent pipeline accidents.

Regulatory Policy
Senate Takes Up Nomination of Rao, Trump's Regulatory Chief
The Senate formally began considering the nomination of Neomi Rao to be President Donald Trump's chief regulatory officer but delayed a final vote until June 29.

Renewable Energy
China State Grid Chairman Says Clean Energy Will Create Jobs
Thousands of renewable energy plants will create jobs as the world switches to clean power from coal, according to the chairman of the State Grid Corp. of China.

Renewable Energy
Connecticut's Renewable Efforts Get Court Approval
A Connecticut effort to contract for renewable energy does not violate federal law, a federal

judge ruled Wednesday.

Renewable Energy
Green Energy Investing Meets Crowd Funding in African Venture
Gullspang Invest led a group of investors providing 6 million euros ($6.8 million) to Trine Finance Ltd., a company that spurs off-grid solar power in emerging markets including Africa by tapping crowd funding in the U.K. and other advanced economies.

Shareholder Activism
Activist Corvex Ups Pressure on Energen to Explore Oil Deals
Activist investor Corvex Management increased its stake in oil explorer Energen Corp. and said it may push for a "meaningful path" to give shareholders more say, after the company elected to stick to its current business plan rather than pursue a sale.

Toxic Chemicals
Worker Gets Second Shot at Industrial Asthma Case
A California worker's claims of industrial asthma from exposures to a hospital disinfectant shouldn't have been summarily dismissed, a California court of appeals ruled June 27 (Maldonado v. Medivators, Inc., 2017 BL 221442, Cal. Ct. App., 4th Dist., No. G052489, unpublished 6/27/17).

Toxic Substances
North Carolina Slashes Blood Lead-Level Thresholds
North Carolina lowered its thresholds for blood lead levels in children to match federal recommendations and extended those protections to pregnant women in its newly enacted budget.

Transportation
Delay of Transportation Emissions Data Rule Stirs Democrats' Ire
Two top transportation Democrats in the House and Senate criticized the Transportation Department's move to indefinitely delay a requirement that states track greenhouse gas emissions from the nation's highways.

Unfair Practices
Japan to Take 'Strict Action' Against LNG Antitrust Violations
Japan's Fair Trade Commission said existing liquefied natural gas contracts that include resale restrictions may violate antitrust laws and sellers shouldn't include the clauses in new deals.

Vehicle Fuels
California Weighs Making Electric Cars Cheaper Right Off the Lot
The federal tax credit for electric car purchases has an end in sight, but California doesn't want demand for the zero-emissions vehicles to meet the same fate.

Vehicle Fuels
Germany Counters Diesel's Dirty Image with National Task Force
Germany is seeking to counter concerns over the harmful emissions from diesel vehicles by bringing together government and auto-industry experts to devise ways to clean up the technology, which supports thousands of jobs in the country.

Water Infrastructure
Water Infrastructure Cuts Could Hit Commerce, Senators Fear
Proposed cuts to water infrastructure spending could hamper imports, exports, and inland

commerce, Senate appropriators from both parties said June 28.

Water Pollution

Groups Sue Hawaiian Dairy to Halt Illegal Manure Discharges

Groups in Hawaii want a federal court to order a large dairy in Hilo to stop discharging waste into streams and ocean waters.

Practitioner Insights

Chemicals

Practitioner Insights: New Chemical Bias Worse Than Ever

Since the early 1990s until Congress finally amended the Toxic Substances Control Act (TSCA) in June 2016, the statute's most frequent criticism was that it gave EPA inadequate authority to ban dangerous substances that were already in commerce and "grandfathered" when TSCA was passed in 1976 (so called "existing chemicals").

Sent: Tue 10/3/2017 9:44:15 AM
Subject: Morning Energy, presented by Chevron: FERC sets quick timeframe to consider Perry's request — Trump heads to Puerto Rico today — Heavyweights weigh in on solar tariffs today

By Anthony Adragna | 10/03/2017 05:41 AM EDT

With help from Eric Wolff, Lauren Gardner and Alex Guillén

FERC AIMS FOR QUICK WORK: FERC is asking for initial comments on DOE's proposed rule that would benefit nuclear and coal-fired power plants to be submitted in just three weeks — a timeline that suggests the independent commission is eager to move quickly on the Trump administration's proposal that is already generating push-back from a diverse group of major industry players. In a notice out late Monday, FERC set an Oct. 23 comment deadline and said reply comments would be due by Nov. 7.

Energy super-group says slow down: Representatives of oil, natural gas, wind, solar and other sectors urged FERC in a Monday letter to pump the brakes on Energy Secretary Rick Perry's request for a quick turnaround on the new rules, Pro's Darius Dixon reports . "This is one of the most significant proposed rules in decades related to the energy industry and, if finalized, would unquestionably have significant ramifications for wholesale markets under the Commission's jurisdiction," wrote the 11 groups, including the American Petroleum Institute, Solar Energy Industries Association and Electric Power Supply Association. They called Secretary Rick Perry's proposed timeline "unreasonable on its face."

Murkowski seems lukewarm: Senate Energy Chairman Lisa Murkowski also seemed lukewarm to Perry's push, saying in a statement she respects "Secretary Perry for taking an action that he believes is necessary" and "will be following the proceedings closely" at FERC.

DOE's proposal should be a hot topic on the Hill today. The House Science Committee takes a look at grid resilience at a hearing at 10 a.m. in Rayburn 2318. Then this afternoon a House Energy and Commerce subcommittee will hear a wide variety perspectives on reliability in a changing electric sector, including representatives of the coal and nuclear industries as well as several of the groups who signed that letter, at 2 p.m. in Rayburn 2123.

TRUMP HEADS TO PUERTO RICO TODAY: President Donald Trump heads to the devastated island of Puerto Rico today even as information released Monday by the federal government hints at the lengthy recovery road ahead. Puerto Rican Gov. Ricardo Rosselló said at a news conference that just one in 10 of the island's nearly 3.5 million people are likely to have power within two weeks, and only a quarter of the island should have the lights on by next month. It's a similarly dire situation for drinking water: 47 percent of residents have potable drinking water right now, though Rosselló said that number should climb to around 60 percent by the end of the week.

The president summed up his view of the situation Monday. "It's been amazing what's been done in a very short period of time on Puerto Rico. There's never been a piece of land that we've

known that was so devastated," Trump said in Oval Office remarks. "The bridges are down, the telecommunications was nonexistent, and it's in very, very bad shape. The electrical grid, as you know, was totally destroyed. But we've gotten tremendous amounts of food and water, and lots of other things — supplies — generally speaking, on the island." The White House said San Juan Mayor Carmen Yulín Cruz, who drew Trump's wrath over the weekend, has been invited to events with him today.

Disaster relief request coming: Meanwhile, the Trump administration is expected to by the end of this week request between $10 billion to $15 billion to respond to the disaster, Playbook reports.

The Center for American Progress today is out with a policy roadmap for lawmakers as they consider the next round of assistance for Puerto Rico and other areas impacted by hurricanes. They urge Congress to enact policies to improve resiliency, update flood risk information and prioritize underserved communities, among other ideas, rather than just throwing money at the problem.

PERMANENT JONES ACT REPRIVE? Senate Majority Leader Mitch McConnell on Monday fast-tracked potential consideration of legislation S. 1894 (115) that would permanently exempt Puerto Rico from the Jones Act, which bans foreign-flagged ships from traveling between U.S. ports. After sustained pressure, Trump granted a 10-day Jones Act waiver for Puerto Rico last week.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and the American Chemistry Council's Jon Corley was first to ID former Rep. Cynthia McKinney as the 2008 Green Party nominee. For today: What "Love Boat" actor went on to serve four terms in Congress for Iowa? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro .

ITC TO GET AN EARFUL ON REMEDY FOR THAT SOLAR BURN: The U.S. International Trade Commission will hear arguments this morning about how to best level the playing field for U.S. solar manufacturers, and it looks like it's going to be quite a show, with hours' worth of speakers lined up. The commission found last week that U.S. solar manufacturing had been harmed by cheap solar imports, over the objections of the rest of the solar industry.

In this corner, for the installers: The Solar Energy Industries Association, along with solar producer SunPower, told the ITC in its brief that a tariff will result in the loss of 62,800 jobs in 2018 and 80,000 jobs in later years. Sen. Martin Heinrich will bat for the no-tariffs team, along with a laundry list of SEIA witnesses. They will also be backed by representatives from the embassies of China, Korea, Brazil, and Mexico.

And in this corner, for the petitioners: In their public briefs, Suniva and SolarWorld Americas offered the commission two choices: A tariff plus a price floor for solar cells, or a tariff plus a quota. Sen. Ron Wyden and Rep. Suzanne Bonamici , both of Oregon, will speak in support of their home-state SolarWorld, which wants tariffs and a price floor. "I urge the Commission to

recommend a remedy robust enough to repair the serious injury already experienced by the U.S. solar manufacturing sector and to ensure its long-term growth and competitiveness," Wyden will say according to an excerpt of his statement obtained by ME. "In practical terms, that means identifying a remedy that helps to revive a domestic manufacturing sector central to our leadership in energy innovation yet long under siege."

And First Solar shall be first: SEIA also locates a winner if tariffs are imposed, Arizona-based thin film manufacturer First Solar, which does much of its manufacturing in Malaysia. "Thin-film solar directly competes with CSPV solar in the marketplace. Consequently, global trade restrictions on [crystalline silicon photovoltaic] would raise rivals' costs and drive customers toward First Solar's products, strengthening First Solar's already strong hand."

MORE CONCERNS RAISED OVER RFS POTENTIAL CHANGES: Nearly all major biofuel trades and the corn growers are out with a letter this morning to Trump urging him to abandon "drastic, unprecedented changes" to change the Renewable Fuel Standard that they said would benefit a select few petroleum refiners. "The proposed changes are inconsistent with the law and threaten the growth and prosperity of the U.S. biofuels industry," wrote signatories of the letter, including National Corn Growers Association, Renewable Fuels Association and Growth Energy. "EPA's changes are also inconsistent with Administrator Pruitt's assurances to uphold the law and your long-standing support of ethanol and the RFS." EPA released a notice last week suggesting it might reduce the already set 2018 biomass-based biodiesel requirement and shrink the mandate in 2019.

Grassley confirms Trump conversation: Iowa Sen. Chuck Grassley told reporters he discussed his concern over potential changes to the RFS during a Friday phone conversation with Trump. "They're trying to respond to big oil and not take into consideration the needs of alternative energy, biofuels," he said. "Cutting back on the mandate isn't a way you're going to encourage capital and capital is what we need now to get pumps to pump E15 instead of E10."

Seems relevant: The White House previously granted EPA deputy general counsel Erik Baptist, a senior counsel to the American Petroleum Institute for more than six years, an ethics waiver to work on RFS issues given his "expertise in this program and its policy and implementation." Copy of that waiver here.

NO OZONE DESIGNATIONS AS DEADLINE PASSES: EPA appears to have missed the Oct. 1 deadline to say which parts of the U.S. meet the 2015 ozone standard and which don't, a key step toward implementing the regulation. The agency is remaining mum; a spokesperson told ME Monday that there is "no further information" on when the designations will be released. The matter has been controversial for months, ever since Administrator Scott Pruitt said he would delay the designations by a year — a delay he later reversed following lawsuits from Democratic attorneys general and environmental groups. (The 2015 standard itself is also under review, with no specific timeline attached.) It may be a while before green groups can take Pruitt to court. The Clean Air Act requires them to provide EPA with 60 days' notice before filing a lawsuit over a missed deadline, meaning any suit couldn't be filed until December at the earliest.

Also adding uncertainty to the process is a pending proposed rule at OMB that appears to set

new thresholds for how EPA classifies ozone areas. That rule arrived at OMB on Sept. 21. EPA had previously proposed classification details last November that the agency characterized as only minor changes to the implementation rules for the 2008 ozone standard. An EPA spokesperson declined to comment on a rule under review at OMB.

** **A message from Chevron**: When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://politi.co/2fVfOTm **

WHAT ABOUT LOLA? Two House Democrats want Interior's inspector general to expand its newly announced investigation into Secretary Ryan Zinke's non-commercial travel to also include his wife, Lola, in light of her involvement with a GOP Senate campaign in Montana, Pro's Esther Whieldon reports. "Because the secretary's spouse is leading a Senate campaign in Montana, tax-payer funded travel for Mrs. Zinke, especially to or from Montana, deserves heightened scrutiny," Raul Grijalva and Donald McEachin wrote in a letter Monday.

HEARING ROUNDUP! SEEMS LIKE A PATTERN HERE: The Senate Energy and Natural Resources Committee axed a vote slated for this morning on the nominations of Steven Winberg to be assistant Energy secretary for fossil energy and Bruce Walker to be assistant Energy secretary for electricity, delivery and energy reliability. No reason was given.

RALLY AGAINST DOURSON: Ahead of Wednesday's hearing on four EPA nominations, Sens. Tom Udall and Richard Blumenthal are holding a press conference with advocates today at 2:30 p.m. to protest Michael Dourson's nomination to run the agency's chemicals office. Udall, you'll remember, was a key architect of the revamped national chemicals law last year.

LIFELINE FOR NAVAJO GENERATING? Peabody Energy said Monday it had found "a number of highly qualified potential investors" interested in taking an ownership stake in the Navajo Generating Station that would allow it to continue operating beyond 2019. It did not provide further details. The plant's current owners said back in February they planned to close the facility after 2019, several decades before expected. But Zinke said in late June that "one of Interior's top priorities" has been finding a way to keep it operating.

MAINE ATTRACTION: Democrat Lucas St. Clair, who led a successful push to create the Katahdin Woods and Waters National Monument, announced Monday he'll challenge incumbent Rep. Bruce Poliquin, the Bangor Daily News reports. St. Clair is the 39-year-old son of Burt's Bees entrepreneur Roxanne Quimby and resigned his post as president of the Friends of Katahdin Woods and Waters to run for office.

NOT IN SLO'S BACKYARD: Energy company Phillips 66 will drop its lawsuit challenging a California county's denial of a proposal that would have let the refiner bring millions of gallons of oil per week by train to its facility in Santa Maria, environmentalists who opposed it said Monday. The county's decision to reject the project came after the Surface Transportation Board last year declined to prevent another California city from denying Valero Energy's bid to expand crude-by-rail operations. The San Luis Obispo Tribune reports that the parties reached a settlement, which must be approved by a court.

PAUSE BUTTON HIT: Amid the worst mass shooting in modern U.S. history, a broad sportsmen's package with controversial gun silencer provisions is no longer expected to get a House vote in the near future, POLITICO's John Bresnahan and Heather Caygle report. Democrats said the Las Vegas massacre was just one more reason to shelve the bill. "There's a lot we need to do in the wake of this mass shooting. We don't need to make it easier to get hold of items that could make mass casualty events even more deadly," Grijalva said in a statement.

TAKE A GLANCE! STUDY: U.S. PAYS BIG FOSSIL FUEL SUBSIDIES: Oil Change International is out with a report today finding the U.S. provides more than $20 billion toward oil, gas and coal production annually. Those include $14.7 billion in annual federal subsidies and $5.8 billion in yearly state-level incentives.

REPORT: GETTING EASIER TO HIT CLEAN POWER PLAN GOALS: The Institute for Policy Integrity at NYU's School of Law is out with a report today arguing the emissions reduction targets of the Obama administration's Clean Power Plan are more achievable due to changes in the electric sector. If the agency were to redo its regulatory impact analysis with recent developments, the report argues compliance costs would be even lower than originally thought.

MOVER, SHAKER: Peter Tomasi has joined Foley & Lardner LLP's environmental practice as of counsel in its Milwaukee office. He was previously a partner at Quarles & Brady LLP.

Stories from POLITICO Pro

DOE's Perry pushes FERC to support coal power plants Back

By Darius Dixon | 09/29/2017 02:48 PM EDT

The Trump administration on Friday called on FERC to create new rules to protect coal-fired and nuclear power plants that are being squeezed by cheaper natural gas and renewable sources, saying they were "indispensable for economic and national security."

Energy Secretary Rick Perry, who told miners in Pennsylvania on Thursday that "it's time for coal in this country to be revived," pressed electricity regulators to alter power markets and protect the resilience of the power grid with payments to generators that keep fuel supplies on site, a clear reference to the coal-fired and nuclear power plants.

The proposal, which DOE said gave FERC 60 days to create a final or interim rule, comes just a month after Perry's agency issued a report saying FERC should "expedite" its work with grid operators to ensure the stability of the nation's power network.

"In terms of process, this is a pretty bold move," said Tony Clark, a Republican former FERC commissioner. DOE often conducts studies on issues it believes need attention, he said, but "actually forwarding to the commission something specific for action is a pretty bold way of moving the issue right up the batting order at FERC."

The new proposal, directed at FERC under a rarely used Section 403 authority of the Department of Energy Organization Act, stops short of specifically seeking market incentives for coal. But it calls for full-cost recovery for power generating units that provide essential power and "ancillary" services — and have a 90-day fuel supply on site in case of natural or man-made disruptions. That would exclude most natural gas power plants, which do not typically keep large fuel inventories on hand and instead receive supplies via pipeline.

Perry's request represents a departure from the two decades of U.S. policy that has trended toward more market-based tools, which has helped natural gas to nearly double its power market share. Renewable energy sources like wind and solar, though still modest when compared to fossil fuels or nuclear power, have also grown quickly as federal incentives helped drive down their costs.

But the growth of renewables and natural gas — combined with tighter pollution controls and weak new demand for electricity — has forced hundreds of old coal-fired power plants into retirement. Nuclear power plants in some parts of the country are also under financial pressure, hurt by negative wholesale power market prices that sometimes require the plant owners to pay to deliver their power supplies.

"If this gets the debate started, then my hat's off," said former FERC Chairman Pat Wood, a friend of Perry and a strong advocate for market-based power systems. "But it's a pretty arresting [thing] to wake up and read. That would never have played in Texas. ... If there is a service to be valued, then a market can value that."

In the grid study ordered by Perry and released in August, DOE experts pointed to low power prices and cheap natural gas as the single biggest reason for coal ceding its position as the nation's biggest source of electricity. And that report also called for "reforms" to power markets that would help bolster the electricity network's resilience by easing the financial pressures on many power providers.

In its Friday proposal, DOE cited a spike in demand during the 2014 "polar vortex" that hit much of the U.S., which prompted utilities to run many coal plants that were slated for retirement. Without those plants, as many as 65 million people in the PJM market would have seen their power resources threatened, DOE said.

But the new regulatory pitch from the agency also fueled the growing feud between the gas and coal industries.

Paul Bailey, president and CEO American Coalition for Clean Coal Electricity, commended Perry for "initiating a rulemaking by FERC that will finally value the on-site fuel security

provided by the coal fleet."

But the American Petroleum Institute, which also represents natural gas producers, said DOE drew the wrong conclusions from the 2014 event, and that forcing new mandates on the power market wasn't the solution.

"[A]s we review the proposal we are concerned the agency has mischaracterized the lessons learned from past weather-related events and appears to suggest that additional regulation is the answer where markets have already proven the ability to greatly benefit consumers and give our electric system the flexibility needed to meet constantly, and often rapidly, changing electricity demands," said API Executive Vice President and Chief Strategy Officer Marty Durbin in a statement.

FERC, which has struggled to integrate states' energy policies that aim to boost renewables or support aging nuclear power plants, has long maintained a fuel-neutral stance in the regional markets that it oversees. If it were to follow Perry's directive to create incentives for grid resilience to plants that maintain their own fuel inventories on site, it would be an implicit move at the national level to alter the electricity markets to support the fuels that both Perry and Trump have touted.

Montana regulator Travis Kavulla suggested on Twitter that rather than deal with the pressing issues facing the grid, "Instead, this reform is sort of the @ENERGY equivalent of the Oprah "you get a car, and you get a car. And you? A car!" approach."

However, FERC, whose members are appointed by the president and operate as an independent body, isn't obligated to implement the specific policy pushed by Perry. The commission will so be back to operating with a full five members in the coming weeks, with a Republican majority.

"FERC's going to follow its own procedures," said Marc Spitzer, a Republican former FERC commissioner. "It would be a mistake for people to assume that this is going to be some partisan Republican rubber stamp given the way FERC works."

FERC can spend months or years digging into complex issues that underpin the power markets, and its commissioners tend to seek common ground with each other to ensure that its rules are clear and ensure long-lasting regulations that give utilities stability to plan their operations.

"Is someone really going to invest [billions of dollars] when it's a 3-2 vote that partisans and the parties can flip next year? Is that a good forum for investment as opposed to a 5-0 order?" Spitzer said.

FERC declined to say when the agency last received a rulemaking from DOE using Section 403.

Gas, oil, renewables, utility groups ask FERC to lengthen debate on DOE pricing rule Back

By Darius Dixon | 10/02/2017 05:43 PM EDT

Nearly a dozen energy-related trade associations are pleading with FERC today to pump the breaks on an Energy Department request for rules that would benefit nuclear and coal-fired power plants, calling the Trump administration's proposed timeline "unreasonable on its face."

DOE last week asked FERC to quickly implement a proposal mandating payments to power plants for their on-site fuel stocks. Today, representatives of oil, natural gas, wind, solar and other sectors were unified in their opposition to that time frame.

"This is one of the most significant proposed rules in decades related to the energy industry and, if finalized, would unquestionably have significant ramifications for wholesale markets under the Commission's jurisdiction," wrote the 11 groups, including the American Petroleum Institute, Solar Energy Industries Association and Electric Power Supply Association. DOE's time frame is "wholly unreasonable and insufficient to allow for an informed consideration of the significant issues proposed therein."

DOE directed FERC to take "final action" on the proposal within 60 days of its publication in the Federal Register, and make it take effect within 30 days after that. Alternately, DOE said regulators should institute it as an interim final rule with the potential for later changes.

The groups, which have asked for FERC to convene a technical conference and offer a 90-day comment period, said the commission "is justified in setting its own schedule for seeking comments on the NOPR, should it choose to notice it or a similar proposed rule for comment at all."

WHAT'S NEXT: The timeline on DOE's proposed rule will start once it's published in the Federal Register, but it is unclear when that might be.

White House: Trump to allow foreign ships to supply Puerto Rico Back

By Colin Wilhelm | 09/28/2017 08:59 AM EDT

President Donald Trump will grant a 10-day waiver to the Jones Act to allow non-U.S.-flagged ships to transport supplies to Puerto Rico in a bid to speed the commonwealth's recovery from Hurricane Maria's devastation.

White House press secretary Sarah Huckabee Sanders announced the waiver Thursday morning

via Twitter and said "it will go into effect immediately."

Puerto Rico had petitioned the Department of Homeland Security for a waiver as it struggles with shortages of water and fuel. The administration denied that request two days ago, and the president told reporters Wednesday that, "we have a lot of shippers and a lot of people and a lot of people who work in the shipping industry that don't want the Jones Act lifted."

Puerto Rico Gov. Ricardo Rosselló had continued to press the U.S. government for a waiver, including on morning cable news television on Thursday. Senate Republicans John McCain of Arizona and Marco Rubio of Florida also called for the relief, as did most congressional Democrats.

Later Thursday morning House Democrats pushed Trump for more.

"The waiving of the Jones Act was a good idea, but we want to stretch it out to be longer than ... 10 days," Rep. Jose Serrano (D-N.Y.) said. "Much longer than that."

McCain and Sen. Mike Lee (R-Utah) introduced legislation today to permanently exempt Puerto Rico from the Jones Act.

Lawmakers argued that more help was needed from the military as well, needling Trump over reports from Puerto Rico that there's not enough support from the federal government to distribute supplies sitting in the capital of San Juan.

The military response continues to gradually ramp up after the repeated calls from Congress and the commonwealth government.

The deputy commander for the regional Department of Defense command coordinating relief efforts, Brig. Gen. Rich Kim, is scheduled to arrive in Puerto Rico on Thursday. The USS Comfort, a naval hospital ship, will depart Norfolk, Va., on Friday for Puerto Rico.

But that didn't satisfy lawmakers calling for more.

In a letter sent Thursday afternoon, Rubio pushed for Trump to use his constitutional authority as commander in chief to increase the military's involvement in coordinating disaster relief efforts.

"There is no clear command, control, and communication between local officials on the ground and federal agencies, and many roads and bridges remained unpassable, making it even more difficult for repair crews to restore power and communications to areas of the island outside of San Juan," Rubio wrote. That has resulted in "lifesaving supplies sitting in containers rather than being distributed upon arrival," he wrote.

"This unique situation requires a well-coordinated response led by the Department of Defense (DOD), which is the only entity capable of executing a recovery effort of this scale and complexity," he said. "I urge you, as commander-in-chief, to make DOD the lead agency in the ground phase of recovery efforts."

"We have the resources," said Congressional Hispanic Caucus Chair Michelle Lujan Grisham (D-N.M.), referring to the U.S.

The number of Americans affected by Hurricane Maria in the Caribbean is equivalent to "the combined populations of the states of Wyoming, Vermont and Alaska," she added. "I have no doubt that the responses to those states in this situation would be far different than the situation we're having today."

Several states have offered to help deploy their own personnel to help Puerto Rico, and the Congressional Hispanic Caucus chair said House Democrats were looking for ways to expedite that.

In an interview with CBS, Rene Plasencia, a Republican in the Florida state house who accompanied emergency responders to Puerto Rico, said those responders could not get transportation from officials on the ground to provide help.

"We've been trying to get [rescue] planes in [from Florida] since last Friday," Plasencia said.

Democrats also criticized Trump's remarks earlier this week that delivering emergency supplies to Puerto Rico is difficult because it's an island.

"Well, you built a golf course there so you certainly knew where it was," Rep. Luis Gutierrez (D-Ill.) said. He was referring to a Trump brand golf course that went bankrupt a few years after the president began his involvement with the project, leaving the commonwealth government on the hook for millions in debt.

"Mr. President, talk to your national security team," Serrano said. "They certainly had plans for 50 years to invade an island in the Caribbean," he said, referring to Cuba. "So they know how to get troops and the military into an island."

Talk has already begun in Congress around an aid package. Some on the left want a suspension of the law that Congress passed last year to allow the commonwealth to restructure its $70 billion in bond debt that also instituted an unpopular federal oversight board. But Republicans, who have promised ample disaster relief funding when a request comes from the Trump administration, would likely reject that.

Rep. Nydia Velazquez (D-N.Y.) estimated that $50-$70 billion would be needed to rebuild Puerto Rico, and Gutierrez pushed for the federal government to pick up the total bill for the cash-strapped island, likening it to a sick patient in the hospital.

"It's bankrupt," Gutierrez said. "There is no money in Puerto Rico to make copayments."

"This is Katrina 2017," he said.

White House praises solar manufacturers in statement on trade decision Back

By Eric Wolff | 09/22/2017 01:15 PM EDT

The White House praised the role of U.S. solar manufacturing in providing "energy security and economic prosperity" in its response to a federal trade panel's finding today that will give President Donald Trump the final word on setting tariffs and quotas on solar imports.

In a unanimous vote, the U.S. International Trade Commission said domestic panel and cell makers had been harmed by cheap imports, agreeing with the petition filed by Suniva and SolarWorld USA.

"The President will examine the facts and make a determination that reflects the best interests of the United States," said Natalie Strom, a White House spokeswoman. "The U.S. solar manufacturing sector contributes to our energy security and economic prosperity."

Solar manufacturing made up 13 percent of the 260,000 jobs in the solar industry was the slowest growing segment between 2010 and 2016, according to the 2016 National Solar Job Census from the nonprofit Solar Foundation.

WHAT'S NEXT: The commission will send recommendations for tariffs to the president by Nov. 13.

Suniva, SolarWorld modify remedy proposal in trade case Back

By Eric Wolff | 09/28/2017 07:20 PM EDT

Suniva and SolarWorld USA are pressing a U.S. trade panel to recommend that President Donald Trump institute either a floor price for imported solar equipment or tariffs plus a quota that caps the amount of solar panels and cells that can enter the country.

The two solar panel manufacturers filed a joint brief to the U.S. International Trade Commission, and each recommended different remedies, though they said that either option could be selected.

Suniva recommends a price floor for all solar modules that starts at 74 cents per watt and

declines over the four years of the tariff, as well as tariffs for both modules and the solar cells. SolarWorld said it was seeking a a quota of 220 MW on imported cells and 5,700 MW on imported modules.

"Both co-petitioners agree that an effective remedy must include either the co-petitioners' requested tariff plus Suniva's requested module floor price or the co-petitioners' requested tariff plus SolarWorld's requested quota," the companies said in a joint statement.

Briefs were due on Wednesday to the ITC, and the companies publicly released their proposals to today, excluding proprietary company information.

The ITC voted unanimously last week that low-cost imports had harmed the domestic solar manufacturing industry. Under the "safeguard" provisions of the Trade Act, Trump will have the final say in what tariffs to impose.

WHAT'S NEXT: The commission will have a hearing on remedies on Oct. 3.

Biofuel producers unite against potential EPA biodiesel cuts Back

By Eric Wolff | 09/27/2017 06:57 PM EDT

Biofuels producers and their farm-state backers in Congress are keeping the pressure on EPA, accusing the agency of betraying President Donald Trump's promises to back the Renewable Fuel Standard after the agency signaled it would cut its biodiesel volume mandates.

EPA's Tuesday notice seeking input on whether to reduce the already set 2018 biomass-based biodiesel requirement and shrink the mandate in 2019 is drawing opposition from both biodiesel and ethanol producers, who say EPA's move marks its second attempt to undermine the program this year.

The new EPA notice has already driven down prices for biofuel credits, which are used by refiners to meet the obligations under the RFS. That's a boon to refiners like CVR Energy, the company owned by former Trump adviser Carl Icahn who had joined with other fuel processors like Valero Energy earlier this year in an unsuccessful effort to shift the compliance burden of the RFS away from their companies.

Trump has repeatedly offered public support for ethanol producers and the RFS, and just last month, he told Sen. Chuck Grassley (R-Iowa) to assure Iowans he had their backs on the RFS — a position Trump staked out early in his presidential campaign and which helped him carry Iowa and other Midwestern states.

On Wednesday, Sen. Joni Ernst (R-Iowa) blasted the new EPA move, saying in a letter to Trump that the biodiesel cut would be "bad for American farmers, American manufacturing and American rural communities," adding that she hoped "that your EPA has not forgotten about the pledges that were made to my constituents and to farmers across the country."

That letter came a day after Grassely said the proposal "seems like a bait-and-switch from the EPA's prior proposal and from assurances from President Trump himself and Cabinet secretaries in my office. ... This all gives me a strong suspicion that Big Oil and oil refineries are prevailing, despite assurances to the contrary."

And biodiesel makers are drawing strong support from the ethanol industry, who see the EPA's move as a step toward undercutting the RFS.

"This would undermine renewable fuel production in the U.S. and cause severe harm to our friends in the biodiesel industry," Robert Walther, vice president of federal advocacy for ethanol producer POET, told POLITICO. "That harm would radiate throughout the entire biofuel value chain from starch biofuel plants, to cellulosic facilities now scaling up, to the corn and soybean farmers who voted overwhelmingly for Trump."

In its Tuesday notice, EPA relied on letters from Valero, the American Petroleum Institute, and the American Fuel and Petrochemical Manufacturers to argue the agency expects biodiesel prices to climb because of the expiration of a tax credit last year — as well as the new tariffs the administration is putting on biodiesel imports from Argentina and Indonesia.

As a result, the agency asked for comment on revising down the amount of biodiesel to be used in 2018 by 15 percent, and on setting 2019 biodiesel requirements possibly as low as the 1 billion gallon floor laid out in the law, less than half the original 2018 level of 2.1 billion gallons.

Biodiesel credits are linked to the ethanol credits — called Renewable Identification Numbers — since U.S. ethanol producers typically fall short of supplying the volumes required under the RFS program. Oil refiners then must buy biodiesel RINs to meet requirements, according to research by University of Illinois economist Scott Irwin.

While corn ethanol credit prices are cheaper than biodiesel RINs, the two tend to move in tandem, so the effect of EPA's notice on RIN prices for ethanol, advanced biofuel and biodiesel was immediate: a 20 percent decline in prices for credits of biodiesel and ethanol after EPA's notice, according to the fuel price tracking service OPIS.

The proposal to cut the biomass-based fuel shocked the biodiesel makers such as Gene Gebolys, CEO of World Energy, who said the industry "froze" as soon as the notice came out.

"The more baffling part is Trump has been consistently supportive of the RFS, over and over and over and over again, he has been supportive of the RFS," he said. "This has been a frontal assault on the RFS. You have to ask yourself, is EPA taking direction from the White House or the oil industry?"

EPA also did not respond to a request for comment. Nor did API or Valero, both of whom EPA cited in its notice, although the AFPM trade association was pleased by the action.

"EPA is on the right track in adjusting renewable fuel requirements," AFPM CEO Chet Thompson said in a statement. "This proposal more appropriately advances Congress's stated purpose of bolstering America's energy independence. American drivers shouldn't have to shoulder more costs to help foreign biofuel producers."

But ethanol producers think EPA may be putting key states in play if it follows through and makes cuts to biodiesel.

"If I am a Democrat thinking of taking Trump on in Iowa and Wisconsin in 2020, I am licking my chops," Walther from POET said.

Grijalva asks Interior IG to include Zinke's wife in travel probe Back

By Esther Whieldon | 10/02/2017 04:10 PM EDT

Two House Democrats are calling on the Interior Department's inspector general to investigate how often Interior Secretary Ryan Zinke's wife joined him on taxpayer-funded charter or military flights in light of her involvement in a Republican Senate campaign.

Lolita Zinke is chairing the campaign of Troy Downing, a businessman who is vying to unseat Sen. Jon Tester next year.

"Because the secretary's spouse is leading a senate campaign in Montana, tax-payer funded travel for Mrs. Zinke, especially to or from Montana, deserves heightened scrutiny," wrote Raúl M. Grijalva and Donald McEachin in a letter today to Deputy Inspector General Mary Kendall, the top watchdog within Interior. Grijalva is the top Democrat on the House Natural Resources Committee, and McEachin is ranking member of its oversight subcommittee.

POLITICO reported earlier today that the IG's office has opened an investigation into Zinke's travels.

The inspector general's office has not decided on the scope of its investigation but it is "focused on the secretary's travel at this point," said Nancy DiPaolo, IG spokeswoman. The investigation, which was launched Friday, "is at its earliest phases," she said. "We'll likely be looking into travel, modes of travel, costs and schedules, etc."

STB clears way for California city to block oil train facility Back

By Lauren Gardner | 09/21/2016 06:41 PM EDT

The Surface Transportation Board declined this week to block a California city from rejecting a plan to build a facility that would enable more oil trains to pass through the area, but only because the project's owner was an energy company, not a railroad.

Oil refiner Valero Energy had petitioned the STB to step in and prevent Benicia, Calif., from denying the company permits to build the facility in the city, which is also home to one of the company's refineries.

Environmentalists cheered the Tuesday rejection as a victory in their effort to encourage local governments — which fear catastrophes like the oil train explosion in Lac Megantic, Quebec, that killed 47 people in 2013 — to reject projects that could bring vast quantities of crude oil through their communities.

The regulator is likely to find itself at the center of future high-profile cases like this since trains remain one of the most viable methods of transporting oil, much like the Federal Energy Regulatory Commission has became a hotbed of controversy as green groups have sought to block permits for pipelines that ship fossil fuels.

But STB made it clear that its members rebuffed Valero in this instance only because it was not a rail carrier, nor was it handling transportation services for one, and therefore does not fall under the board's jurisdiction.

STB's decision that interstate commerce law doesn't allow it to preempt the Benicia government from denying the permits to Valero came hours ahead of a unanimous city council vote scuttling the project.

It's not yet clear whether Valero will take its fight to court. A company spokeswoman said executives are "considering our options moving forward."

"After nearly four years of review and analysis by independent experts and the city, we are disappointed that the city council members have chosen to reject the crude by rail project," Valero spokeswoman Lillian Riojas said.

STB's decision included guidance that even if Benicia had approved the permits, the bayside city near San Francisco wouldn't have carte blanche to impose conditions on Valero, since they could "unreasonably" bleed into operations by Union Pacific, the freight railroad the refiner planned to have service the offloading facility.

"As an initial matter, any attempt to regulate UP's rail operations on its lines would be

categorically preempted," STB wrote. "Otherwise, state and local regulation is permissible where it does not unreasonably interfere with rail transportation."

If circumstances changed and the railroad were to build or own the offloading facility project, "then it would clearly be preempted by the federal law," Karen Torrent, federal legislative director at the Environmental Law and Policy Center, said of Benicia's permit denial.

The Association of American Railroads declined to comment on Tuesday's decision, but it had voiced its support for Valero's petition in July, expressing concern that a "patchwork" of rules among states and localities could stymie freight operations.

"This case now presents the Board with the situation where state and local permitting requirements are being applied to rail-served customer facilities with the purpose of controlling — and often preventing — rail transportation," AAR attorney Timothy J. Strafford wrote.

Jackie Prange, a Natural Resources Defense Council staff attorney, said the ruling has broader implications because local governments in California and the Pacific Northwest grappling with similar projects have monitored the Benicia case.

The San Luis Obispo County Planning Commission is scheduled to hold its final hearing Thursday on a proposal by refiner Phillips 66 to bring millions of gallons of crude per week into its Santa Maria refinery by train. The company asked the county last month to delay the hearing, anticipating that STB would not have issued its decision in the Benicia case by now, according to a local report.

Staff at the county commission have recommended that officials reject the project.

Subject: Jul 10 PRG Energy Update: Back in Town

Friends,

With the July 4th holiday passing, it means we had some great fireworks (especially in DC) and that the *Tour de France* is rolling in France. With 9 of 21 stages complete, the riders have reached the first rest day today with 4-time champ Chris Froome racing up the *Mont du Chat* yesterday to expand his lead in the yellow jersey. Lots of time and many mountains to still climb. You can watch all the action on NBCSN every day. It was also Super Saturday at Wimbledon with Federer, Murray, Nadal and Djokovic all looking strong on the men's side while Kerber, Halep, Wozniacki and Venus Williams (who has already advance today to the QF with a straight set win) have all advanced to the 4th round. The All-Star break for major League baseball also start today and not too soon for the World Champion Cubs who gave up 10 runs in the first inning in their game yesterday against the Pirates.

Interesting action at the G-20 with some limited focus on climate. On Saturday, G-20 nations reached a compromise on climate change that declared the Paris climate change agreement is "irreversible" and must be implemented "swiftly." The U.S., on the other hand, declared its intention to pull out and forced additional language in supporting fossil fuels alongside support for renewables. And as for the soon-expected grid study from DOE, we hear it won't likely be this week, but we are still keeping our eyes open for paper. And speaking of energy dominance, Platts Capitol Crude addresses the subject on this week's podcast with ClearView's Kevin Book, looking at whether it's hollow rhetoric and what it could mean for policy and markets going forward.

Congress returns this week to more action on healthcare. No expected action on the just re-introduced Senate Energy legislation but Sens Murkowski and Cantwell are hopeful that they will have something passed by August recess. There will be votes on nominations for NRC and EPA on Wednesday, as well as a House Resources hearing on oil and gas development. Also Wednesday, the full House Approps Committee marks up its Ag and Energy/Water budgets. Finally, tomorrow, the annual Congressional Renewable Energy and Energy Efficiency expo will be held in the Rayburn Foyer.

Off the hill, our friend Coral Davenport discusses the Paris Agreement at a forum at the Embassy of Croatia tomorrow evening and Wednesday the Women's Energy Network is hosting CFTC

Commissioner Sharon Bowen for a lunch and learn" event. And today, the EPA is holding a public hearing on methane regulation delays which should bring out the usual suspects on both sides if the debate.

Finally, Bracewell has brought on some new energy expertise in the civil Litigation arena by hiring David A. Super to lead our civil litigation practice in Washington, D.C. Super joins Bracewell from Baker Botts where he practiced for 27 years. Super as new head of civil litigation in DC is a first chair trial lawyer with fantastic experience acting for companies in the energy industry, including disputes with federal regulators on many energy and environmental issues.

I'm out for most of the week in Lancaster, PA, the home of USA Field Hockey, umpiring their National Championships. We are taking a quick break to road trip to Detroit for Metallica on Wednesday. Anyway, I will be fully connected, so feel free to call with questions.

Best,

Frank Maisano

FRANKLY SPOKEN

"AHRI encourages ratification of the Kigali Amendment, while also instituting the regulatory and tax reforms necessary to ensure predictability for manufacturers, distributors, and installers while providing incentives for consumers and businesses to replace their older, less efficient equipment with updated models. Taken together, these steps can bring about significant energy reduction and environmental benefits."

AHRI's Francis Dietz following a new report by the Institute for Governance & Sustainable

Development (IGSD) that reviews HCFC/HFC regulatory frameworks, energy efficiency standards, and labeling programs in 19 countries that account for roughly 65% of global AC demand.

-

IN THE NEWS

New Study Highlights Quest for Improved AC Globally – The Institute for Governance & Sustainable Development (IGSD) in Washington, DC and Paris along with researchers at the U.S. Department of Energy's Lawrence Berkeley National Laboratory released a report that addresses the hydrochlorofluorocarbons (HCFC) and hydrofluorocarbons regulatory frameworks, energy efficiency standards, and labeling programs in 19 countries that account for roughly 65% of global AC demand. The report, "*Opportunities for Simultaneous Efficiency Improvement and Refrigerant Transition in Air Conditioning,*" ranks the HFC transition as the single biggest climate mitigation opportunity available today.

AHRI Sees the Issue As Hugely Important – This is a hugely important transition that the HVAC industry has played a significant role in crafting with other stakeholders. As manufacturers of more than 90% of U.S. – and more than 70% of global – residential and commercial air conditioning and commercial refrigeration units, AHRI member companies are committed to producing more energy efficient products to help reduce global demand for energy, lower costs for consumers, and decrease greenhouse gas emissions. As the LBNL report indicates, there are many global opportunities to accomplish make significant progress on all those goals, beginning with ratification and implementation of the Kigali Amendment to the Montreal Protocol and continuing with efforts to simultaneously reduce the energy impact of AC and commercial refrigeration equipment while increasing its availability and affordability for consumers around the world. Also important are national and regional minimum energy performance standards backed by performance certification programs, such as the AHRI Certification Program, that help assure governments, businesses, and consumers of the accuracy of stated equipment efficiency.

What About Efficiency on Units though? – AHRI's Francis Dietz adds current AC units are already super-efficient and in fact are nearing the technological limits of efficiency. The issue really is getting efficient units in the hands of consumers at prices they can afford. We can accomplish that gradually through MEPS, which is already being done all over the world, but to make bigger leaps through stronger tax incentives and rebate programs to induce people to change out their old equipment for newer, more efficient models.

DOE Releases Walk-In Freezer Rule – The Department of Energy is issuing the final rule for walk-in coolers and freezers, which was held up at DOE for months. It's set to publish in the *Federal Register* today. The rule, issued in December of 2016 by the outgoing Obama Administration was delayed with several others as part of a review by the new Trump Administration. AHRI said it understood why the new administration wanted to review the walk-in coolers and freezers rule before issuing it, but are pleased it is now being issued in the form that was agreed to in the ASRAC negotiations of which AHRI and Other key efficiency and environmental stakeholders played important roles. AHRI's Francis Dietz: "This is one less regulatory ball in the air for our industry and our members can now move forward in preparing for the rule's implementation."

Refiners Send Letter to Trump on Venezuela Crude, Potential Sanctions – Given the troubling political developments in Venezuela, the American Fuel & Petrochem Assn (AFPM) is sending a letter to President Trump and other key foreign policy advisors to highlight one critical consideration: a full or partial prohibition of Venezuelan crude imports. The refiners group says it could have a significant negative effect on U.S. refiners, consumers, and our nation's economy. AFPM Prez Chet Thompson: "Sanctions limiting U.S. imports of Venezuelan crude would disadvantage many U.S. refineries, particularly those in the Gulf Coast and East Coast regions, that have optimized to utilize sour crudes produced in Venezuela. Restricting the supply of crude could also impact the price that U.S. consumers and businesses pay for their fuel." I can forward letter if want to review.

ACI Releases Sustainability Report – The American Cleaning Institute's (ACI) released its 4th Sustainability Report, "Foundations for Transformation," showcases the steps the cleaning product supply chain is taking to address the industry's core material issues. The 2017 Report highlights the progress made by companies throughout the cleaning product supply chain to decrease the industry's environmental footprint over the last two years. Since its inception, ACI's Sustainability Metrics Program has been tracking industry performance in categories including energy, water, waste and climate change/greenhouse gases, to showcase where member companies are doing well, and to highlight the areas in need of attention. The 2017 Report highlights include a 23% reduction during cleaning product formulation since 2011, an increase in renewable energy use by 46% since 2011 and a 64% of the waste from product formulation being reused or recycled in 2015.

Unions Weigh In on E15 Expansion Legislation – Following a hearing recently on legislation to allow year-round sale of E15 percent, the United Steelworkers union sent a letter Thursday to all 100 senators arguing that the RFS needs a complete overhaul rather than the modification in Sen. Deb Fischer's bill. A mark-up is planned for later this month. Happy to forward letter if you need it.

Interior Pushes to Expand Drilling, Speed Permit Approvals – Interior Secretary Ryan Zinke on Thursday issued an order that instructs BLM to hold lease sales every quarter and establishes a 30-day approval time for oil and natural gas drilling permits. The approval time for a permit under the Obama administration was 257 days on average. Christopher Guith at the Chamber's Global Energy Institute said this is a much-needed change in U.S. policy, embracing America's energy abundance and diversity instead of policies that pushed us to depend more on imported energy and exported jobs. Guith: "The law has been pretty clear for a century--the Secretary of Interior is responsible for conducting quarterly lease sales on available BLM land and concluding the review process on an application for a permit to drill within 30 days. The previous administration decided to ignore these legal requirements to the detriment of U.S. energy security and western jobs. Secretary Zinke's re-commitment to following the law is a tremendous step towards harnessing America's status as a growing energy super-power."

ON THE SCHEDULE THIS WEEK

Wilson to Host Discussion on Religion, Climate in Small Island Nations – Today at 2:00 p.m., American University and the Wilson Center will host a forum exploring climate change as a basis for outreach and collaboration in the Caribbean and the Pacific and the added value religious voices might bring to this work. In the small island developing states (SIDS) of the Caribbean and the Pacific, faith-based leaders, community stakeholders, and national policymakers work together to address pressing concerns associated with climate change, such as ensuring livelihoods and sustainability in the face of sea-level rise and other threats. Ambassador to the United States and the Organization of American States for Barbados Selwin Hart will be among the speakers.

Congressional Renewable Expo Set – The 20th annual Congressional Renewable Energy and Energy Efficiency EXPO and Policy Forum will be held tomorrow from at 9:30 a.m. to 4:30 p.m. in Rayburn. Among the speakers will be Sen. Edward Markey and Rep. Paul Tonko.

***NYT's* Davenport to Discuss Paris at WFPG Forum** – The Women's Foreign Policy Group will host a forum tomorrow at 6:00 p.m. at the Embassy of Croatia featuring our friend Coral Davenport of the *New York Times* to discuss President Trump's decision to withdraw from the Paris Climate Agreement. Coral *NYT* colleague Elisabeth Bumiller will moderate.

House Resources to Focus on Oil, Gas on OCS – The House Natural Resources Subcommittee on Energy and Mineral Resources will hold an oversight hearing on Wednesday focused on evaluating federal offshore oil and gas development on the outer continental shelf.

Senate Committee to Vote on Nominees – The Senate Environment Committee will hold votes at 9:45 a.m. Wednesday on nominees to the Nuclear Regulatory Commission, as well as EPA's top enforcement officials. EPW had originally slated the markup for the Wednesday before July 4th recess. NRC nominees Annie Caputo and David Wright, and EPA nominee Susan Parker Bodine are awaiting committee approvals.

Group to Release Smarter Grid Report – Former Trump transition team member and Alliance for

Innovation and Infrastructure Chairman Brigham McCown will hold a press call Wednesday at 10:00 p.m. to discuss the release of Alliance for Innovation and Infrastructure's latest policy analysis, "Building a smarter electric grid: How investing in smarter electricity will energize America."

House Appropos to Mark up Ag, Energy Budgets – The full House Appropriations Committee will meet at 10:30 a.m. to markup the FY2018 Agriculture Appropriations Bill and FY2018 Energy and Water Development Appropriations Bill. Later at 3:00 p.m., the House interior Funding panel will mark up the 2018 Interior budget.

Forum to Feature CFTC Commissioner – The Washington DC Chapter of the Women's Energy Network is hosting a forum at BP featuring U.S. Commodity Future Trading Commission Commissioner Sharon Y. Bowen. The "Lunch and Learn" even will feature Bowen discussing the day's most critical energy issues before the CFTC, as well as sharing her experiences as a trailblazing lawyer, business woman and public servant.

Wilson to Host China Coal Transition Forum – The Wilson Center will hold a forum on Wednesday at 2:00 p.m.to discuss China and its uncertain transition away from coal. Speakers at this China Environmental Forum (CEF) event will discuss the massive reforms that are lessening the pollution and carbon emissions from China's coal-fired power sector and the social and economic challenges. Melanie Hart (Center for America Progress) will speak on how China is transforming its coal sector to improve efficiency, reduce emissions, and reduce the nation's

dependence on coal. Hongxia Duan and Lucy Kitson of the International Institute for Sustainable Development (IISD) will discuss the opportunities and pitfalls of such a large-scale transformation in Shanxi and the lessons China can draw from countries that have undergone the economic and social transition away from coal. Lisa Abbott (Kentuckians for the Commonwealth) will close out the discussion bringing in a comparative discussion on how her group promotes energy diversification in the Appalachians that keeps communities strong.

Forum to Look at Ukraine Energy – The Atlantic Council will hold a forum on Wednesday at 2:30 p.m. on important energy reforms in Ukraine. The Atlantic Council's Dinu Patriciu Eurasia Center and Global Energy Center will bring together top energy experts and policymakers to discuss the status of the Ukrainian energy sector in a series of thematic panels. The discussion will begin with a talk on the state of the hydrocarbon industry and will segue to an exchange on the development, challenges, and way forward for the electricity, coal and nuclear sectors in Ukraine. Among the speakers will be DOE's David Mohler.

Clean Energy Webinar Will Discuss Grid Report – On Thursday at 10:00 a.m., the Analysis Group's Susan Tierney and Paul Hibbard will present findings from their report on market forces driving our changing electric power system, commissioned by Advanced Energy Economy (AEE) and AWEA. The report was submitted to DOE to inform the Department's upcoming review of grid issues.

IN THE FUTURE

-

RFF to host Webinar On Cali Cap/Trade – Resources for the Future and other experts will hold an interactive online panel discussion on Tuesday July 18th looking at the proposed changes to California's cap-and-trade program, potential implications for the state's carbon market, and the potential effects on linkage with the programs in Quebec, Ontario, and other jurisdictions that might consider linkage in the future. Speakers include RFF's Dallas Burtraw, James Bushnell of UCal-Davis, Stewart Elgie of the uOttawa Institute of the Environment, Jan Mazurek of the ClimateWorks Foundation Duke Nicholas Institute expert Brian Murray and Dave Sawyer of EnviroEconomics.

WCEE to Host Sustainable City Event – Next Tuesday at Noon, the Women's Council on Energy and the Environment (WCEE) will host a forum with National Geographic's Senior

Manager of Sustainability, Susan Kolodziejczyk. Kolodziejczyk will present an interactive exploration of the intersection of urbanization and sustainability, what that means in terms of society's choices and priorities, and examples of successful, innovative city solutions around the world

Webinar to Focus on NJ Solar Issues – Utility Dive is hosting a webinar on Tuesday July 18th at 2:00 p.m. focused on the PSE&G approach to proactively studying and accommodating the impacts of DER on the PSE&G system. NJ is experiencing some of the strongest solar PV growth in the U.S. NJ-based Public Service Electric and Gas (PSE&G) takes an active role in understanding feeder and substation capacity to accommodate solar PV, and to avoid negative impacts to grid reliability, voltages, thermal capacity, flicker and more. The webinar will cover PSE&G's method to study and accommodate the impacts of DER, in collaboration with Siemens PTI. An overview of the study and its methodologies and the distribution system at PSE&G, available DERs, challenges, the need for the study and the results. Speakers include PSE&G's Ahmed Mousa and Siemens PTI's Hugo Bashualdo.

AGA to Discuss NatGas Supply – The American Gas Association (AGA) and the Potential Gas Committee (PGC) will hold a press conference on Wednesday, July 19 at 9:30 AM EDT, to release the major findings of the PGC's year-end 2016 biennial report: *Potential Supply of Natural Gas in the United*. The report is expected to reveal that domestic estimates of undiscovered natural gas resources continue to grow, due largely to the existence of technologies that continue to unlock energy resources from shale and other producing formations. Alexei V. Milkov, director of the Potential Gas Agency, Colorado School of Mines and AGA's Chris McGill will speak.

Forum to Look at RFS – CSIS will host an update on the U.S. Renewable Fuel Standard on Wednesday July 19th at 10:00 a.m. The event will feature Harvard's James Stock and our friend Kevin Book of ClearView, a Senior Associate of the CSIS Energy & National Security Program.

Cramer to Headline Forum on Innovation – Microsoft and the Center for Climate and Energy Solutions (C2ES) will hold a conversation on Wednesday July 19th looking at clean innovation and why it makes business sense. The discussion will bring together stakeholders from industry, government and civil society to discuss the business drivers for innovation in clean energy and low-carbon technologies across a broad range of industries. Keynoter will be Rep Kevin Cramer, while a panel lead by Bob Perciasepe, will explore the business drivers and challenges associated with clean innovation across multiple sectors and geographies. These issues include growing customer demand, competitiveness concerns, cost pressures, efficiency gains and enhanced performance.

Forum to Feature BP's Finley on Energy Report – The US Association for Energy Economics, National Capital Area Chapter (NCAC-USAEE) will host BP's Mark Finley for its July luncheon on Friday July 21st at the Chinatown Garden. Finley will present the just-released 2017 BP Statistical Review of World Energy.

-

Grid Evolution Summit Set – The Grid Evolution Summit is set for July 25th through 27th at the Washington Hilton. The event, sponsored by the Smart Electric Power Alliance, will be a conversation of industry stakeholders that will determine how the electric sector evolves, modernizes the grid and better integrates distributed energy resources. Speakers will include Rep Paul Tonko, House Energy Committee Counsels Rick Kessler and Tom Hassenboehler, PSE&G Renewable VP Courtney McCormick, Xcel's Doug Benvento DOE's Eric Lightner, Maryland PSC Chair Kevin Hughes, Kit Carson Electric Co-op CEO Luis Reyes and Utility Dive Editor Gavin Bade.

-

CSIS to Look at NAFTA Energy Issues – On Wednesday July 26th at 10:00 a.m., CSIS will hold a forum on renegotiating NAFTA, looking at energy challenges and opportunities. The event will feature CSIS experts Dave Pumphrey and Scott Miller.

Community Solar Forum Set for Denver – The Coalition for Community Solar Access will host the first annual National Community Solar Summit in Denver on July 26 – 28. A few highlights for Denver include energy company CEOs including Tom Matzzie of CleanChoice Energy, Jesse Grossman of Soltage, Zaid Ashai of Nexamp, Rick Hunter of Microgrid Energy and Steph Spiers of Solstice. Other speakers include energy company leaders Hannah Masterjohn of Clean Energy Collective, Dan Hendrick of NRG Energy, Adam Altenhofen of US Bank, Adam Capage of 3 Degrees and Lori Singleton of Salt River Project.

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Liquefied Natural Gas Export Plans Face Years of Oversupply

Posted July 18, 2017, 7:01 A.M. ET

By Alan Kovski

Plans for exports of U.S. liquefied natural gas have multiplied as a global supply glut has developed, raising the prospect that some exporters may lose money for several years.

Analysts say the LNG surplus also increases the likelihood that some contracts could be renegotiated, some projects may be delayed long enough to get past the oversupply period, and some plans may never come to fruition at all.

Fast growth in worldwide LNG demand should eliminate the surplus in five or six years, so there can be good reason to delay projects and become part of a "second wave," analysts told Bloomberg BNA. But until then, markets—rather than lawmakers, regulators or activists—will pose obstacles to profitable exports.

"There are certainly going to be regrets," said Kenneth Grant, executive vice president of Compass Lexecon, a subsidiary of FTI Consulting Inc. "Margins are going to be squeezed for years."

Companies in the competition for LNG exports range from Exxon Mobil Corp. and Royal Dutch Shell Plc to relatively small outfits founded over the last decade with private equity backing.

About 70 percent of global LNG is consumed in Asia, where contract prices typically are indexed to spot crude oil prices. Currently that indexing produces Asian spot LNG prices of about $5.50 per million British thermal units (MMBtu). LNG from the U.S. for sale in Asia costs an estimated $8 to $9 per MMBtu, taking into account the costs of the gas, liquefaction, and transportation.

"Buying LNG at these prices is a guarantee of losing money," Fereidun Fesharaki, chairman of consulting company FGE, said while speaking recently at the Center for Strategic and International Studies, a think tank in Washington.

Market Pressures Felt

U.S. LNG is being exported only from the Sabine Pass facility of Cheniere Energy Inc. in Louisiana. The buyers and sellers using the plant are struggling with global prices well below their estimated

costs. GAIL (India) Ltd., one of the buyers, reportedly has been seeking to renegotiate its contract, although neither GAIL nor Cheniere has confirmed the reports.

GAIL, whose majority owner is the government of India, is not a small fish, but so far, Cheniere has indicated it has no intention of renegotiating anything.

The pressure for renegotiations may grow substantially, however, as top LNG traders like Shell see the growing risk of losses within their contract portfolios.

Fesharaki suggested some buyers, especially the national oil companies of some LNG-consuming countries, may walk away from contracts and trigger legal wrangling if they cannot renegotiate terms.

Cheniere, which started exporting in 2016, may be able to pass off most of its market risks to customers, but it has had its own financial strains, losing money in 2016. It turned a profit of $172 million in the first quarter of 2017, but its long-term debt amounted to $24 billion, a high level for such a specialized company with such a short track record in LNG.

Cheniere's contractual customers include GAIL, Shell, Korea Gas Corp., Total S.A., Spanish company Gas Natural Fenosa, and British utility Centrica Plc. Typically the companies will buy the gas and market the LNG themselves, although Cheniere also is willing to sell LNG overseas through its own marketing affiliate, giving it at least some of the market risk that its six big contractual customers take.

Challenge to Find Customers

Most companies planning to build U.S. LNG export plants need customers to sign 20-year contracts to give banks enough assurance of revenues to justify the loans for the projects. Projects currently under construction are proceeding because of 20-year contracts typically signed when LNG prices were much higher than they are now, before the slump in gas and oil prices that started in 2014.

The U.S. projects under construction are "tolling" arrangements, where the owner of the liquefaction plant provides the service but does not try to take an ownership stake in the LNG. Customers take the market risk.

Now, the challenge is to find customers willing to sign such contracts when everyone can see spot prices are not fully covering U.S. LNG costs. Big customers in Japan, South Korea, China and India have been the special prizes.

President Donald Trump has been talking of LNG sales as a way to improve the U.S. trade balances with China and South Korea and a way to provide Europeans with less reliance on Russian-pipelined natural gas. His remarks do not square with the market conditions, however.

Chinese companies are over-contracted, and Asian demand is so oversubscribed that the surplus has been going to Europe, Fesharaki said. LNG spot prices in Europe are lower than Asian prices, again raising the prospect of sales at a loss for the near term.

The glut shifts negotiating leverage to buyers, Grant at Compass Lexecon said. Buyers might ask for such things as shorter contract terms, fixed prices, and unlimited flexibility on shipping destinations, he said.

Looking farther ahead, Grant said LNG trading likely will shift as it matures to more flexibility in contracts and fewer tolling arrangements. "You can see where it's going," he said.

Much More Supply Soon

Six U.S. LNG export projects are under construction, with in-service target dates spread over 2017-2019, according to Energy Information Administration (EIA) data. The great majority of their capacity already is committed to 20-year contracts, typically take-or-pay contracts where the LNG buyer either takes the amount in the contract or pays an alternative fee to the owner of the liquefaction plant.

Global LNG trade has been running at 34.6 billion cubic feet a day (Bcfd) and growing at about 6 percent a year. The six U.S. projects under construction will add about 9.6 Bcfd of export capacity, said Victoria Zaretskaya, an EIA analyst.

That is a very large capacity addition during a period when Australia also will be expanding its exports, the projects helping to assure an expansion of the global market surplus, Zaretskaya said.

Fesharaki, looking at the global growth, said, "Between 2017 and 2020 we are increasing the global supply by 40 percent. [There is] no way we can increase the demand by 40 percent in three years."

Qatar, the world's largest LNG exporter, sent a tremor through the LNG market July 4 when it said it would increase its LNG exports by 30 percent in five to seven years through an expansion of its North Field natural gas production. Qatar Petroleum, with majority stakes in the nation's LNG export operations, has some big partners in those operations, including Exxon Mobil Corp., Royal Dutch Shell, and Total S.A.

The cost of producing natural gas at Qatar's North Field and liquefying it is $2 to $2.50 per MMBtu under current market conditions, Zaretskaya said. Such low-price competition means lower utilization rates should be expected for U.S. export facilities once the extra capacity comes online, she said.

"It's very hard to compete with Qatar."

Looking at the indexing of Asian LNG prices to crude oil, EIA estimates oil prices would have to climb to the $65-$70 range per barrel for U.S. LNG to be competitive in Asian spot markets, Zaretskaya said. Current prices are below $50 for the benchmark crudes West Texas Intermediate and Brent, though it is commonly expected that they will rise over time.

Prospects for Second Wave

Five U.S. LNG export projects have been approved by the Energy Department and the Federal Energy Regulatory Commission but are not yet at the construction stage, in part because they do not all have customers locked up. Other projects have been proposed but not yet approved.

The projects that have yet to see construction and win permits would form the second wave for U.S. LNG export facilities.

Magnolia LNG LLC, planned for the Lake Charles, La., area, is one of the projects approved but awaiting customer contracts and construction. It is a subsidiary of Liquefied Natural Gas Ltd.

The target for Magnolia LNG is to complete customer contract negotiations and reach a final investment decision by the end of 2018, Greg Vesey, CEO of the parent company and the subsidiary, told Bloomberg BNA.

Vesey's timing might allow most of the glut to pass before his LNG export plant goes into operation. It can take four years to build an LNG export plant, he said. If the construction were to start late in 2018, the plant might be completed around the end of 2022. Analysts have been suggesting the glut will fade by about 2023-2024, although their forecasts preceded the Qatar expansion announcement.

Still, there are quite a few developers aiming for a similar window of opportunity.

"I accept that it is tough competition," Vesey said.

Private Equity Prominent

Magnolia LNG, like many of the projects, has private equity as part of its financial backing. Private equity managers have been diving into energy infrastructure projects throughout the U.S. oil and gas sector.

Stonepeak Infrastructure Partners, a private equity firm, is a partner of Magnolia LNG. Such investment managers look to energy infrastructure investments for their relative long-term stability, Vesey said.

Long-term stability is especially valued by pension funds. IFM Investors Pty Ltd., an Australian investment group owned by pension funds, has invested in one of the projects under construction, Freeport LNG, in Texas. Global Infrastructure Partners, a private equity firm, also owns a piece of Freeport LNG.

Cheniere Energy's institutional investors include BlackRock Inc., The Vanguard Group Inc., The Goldman Sachs Group Inc., Carl Icahn, and hedge fund Baupost Group, among others. And Blackstone Group took a big ownership stake in Cheniere's Sabine Pass project through a Cheniere affiliate.

The developers with projects not yet approved will have trouble catching up because they will find that the Federal Energy Regulatory Commission does not hand out approvals easily even when the five-member commission has a quorum for making such decisions, which it does not now, Vesey said. It took almost three years to get Magnolia LNG through FERC.

West Coast Export Plan

Most of the U.S. export plans are for Gulf Coast sites, and two are for the East Coast. One prominent plan, still at an early stage of permitting at FERC, is for the West Coast—the Jordan Cove project that would ship to Asia from Coos Bay, Ore.

Jordan Cove Energy Project L.P., a subsidiary of Canadian energy infrastructure company Veresen Inc., would build the liquefaction plant and a 235-mile pipeline across Oregon from a gas pipeline hub. A basic selling point would be lower shipping costs and less time than sailing from the Gulf Coast through the Panama Canal to Asia.

FERC rejected the Jordan Cove plan in 2016 because the commission did not see customers solidly

lined up to justify pipeline approval. Now the "pre-filing" stage of the permitting process at FERC has been restarted for the project because 50 percent the liquefaction plant capacity and 66 percent of the pipeline capacity have been contracted.

The biggest buyers for Jordan Cove are JERA Co. Inc. and the Japanese trading giant Itochu Corp. JERA represents two Japanese utilities and is the world's largest buyer of LNG. Australian financial company Macquarie Group Ltd. also has contracted for part of the pipeline capacity through its Macquarie Energy LLC energy trading unit.

Much farther north is a Pacific Coast LNG export plant sitting idle and up for sale. The Kenai LNG plant at Nikiski, Alaska, was idled in 2015 by owner ConocoPhillips Co. and has not shipped anything since, though it is available to do so. ConocoPhillips halted its operations because of "market conditions," it said in 2016, after competing sources of LNG from Australia, Indonesia and elsewhere had surged into the Asian market.

Lining Things Up for FERC

Jordan Cove is talking with other potential buyers and intends to have 100 percent of its capacity under contract within a time frame that should make the project acceptable to FERC, company spokesman Michael Hinrichs said.

"We prefer not to have any more curve balls thrown at us," Hinrichs said, alluding to the company executives' surprise when FERC rejected their plan in 2016.

Fesharaki, though skeptical about projects that are not in construction, said the Jordan Cove project "maybe is still doable."

He was more definite about the Golden Pass project in Texas, with partners Exxon Mobil and Qatar Petroleum, a Qatari government-owned company. Golden Pass appears sure to go ahead because its partners have the money and appear determined to make it happen, Fesharaki said.

Grant at Compass Lexicon implied something similar, though he did not single out Golden Pass. He said the best bets would be the proposals that are well-capitalized and can make use of existing infrastructure. That would describe the Exxon Mobil and Qatar venture.

Canadian Projects in the Wings

There also has been a spate of proposals for LNG exports from Canada, but they have stalled in the face of the same problem of global oversupply.

LNG projects are not in construction in Canada now, although environmental cleanup as a first step in site preparation has begun at a British Columbia coastal site.

That is the location of the planned Woodfibre LNG project. It is owned by Pacific Oil & Gas Ltd., part of a Singapore-based group of companies. It is fully permitted, as are several other Canadian plans.

Woodfibre apparently would be the first Canadian LNG export project out of the gate, maybe with a startup as early as 2020, said Mark Pinney, manager of natural gas markets and transportation at the Canadian Association of Petroleum Producers. It would be an integrated operation, the gas bought and sold by Woodfibre-affiliated companies, not a tolling arrangement.

The biggest question is how robust LNG demand will be, Pinney said. The underlying demand growth has been tremendous, but there can be slowdowns, as happened in 2016 in Japan and South Korea, he said.

Like other analysts, Pinney agreed the glut should be over by 2024 or 2025. "Demand is going to catch up," he said.

James Henderson, director of the Natural Gas Program at the Oxford Institute for Energy Studies, put it tartly in an analysis issued in 2016. "The somewhat simplistic assumption that Asian markets would always obligingly provide consistently high LNG demand growth has become questionable," he said.

California Extends Carbon Trading Program Through 2030

Posted July 18, 2017, 8:48 A.M. ET

By Carolyn Whetzel

Legislation extending California's carbon trading program through 2030, squeaked by both state houses late July 17, secured in part by concessions to industry such as banning local agencies from regulating carbon emissions in certain business sectors.

The thin, super-majority votes to pass A.B. 398—28-12 in the Senate and 55-21 in the Assembly—also required passage of a separate bill, A.B. 617, to tackle localized emissions of harmful pollutants. In the end, eight Republicans and several moderate, business-friendly Democrats supported A.B. 398.

In addition to prohibiting local air agencies from regulating the carbon emissions of oil refineries, power plants, cement producers, and other entities in the program, the bill also provides allowance price caps and an exemption of sales and use taxes for electricity producers on certain new equipment and some construction related expenses. A.B. 398 also suspends a fire prevention fee on rural property owners long opposed by Republicans.

State law enacted last year requires California to reduce greenhouse gas emissions 40 percent below 1990 levels by 2030.

Hard-Fought Victory

Passage of A.B. 398 was a hard fought and important victory for Gov. Jerry Brown (D) who pressed lawmakers to preserve the five-year-old program set to expire in 2020.

"Tonight, California stood tall and once again, boldly confronted the existential threat of our time," Brown said in emailed statement. "Republicans and Democrats set aside their differences, came together and took courageous action. That's what good government looks like."

Brown, industry and business groups, and others believe the trading program is a critical, cost-effective tool in achieving the state's ambitious climate goals and maintaining California's role as a global climate leader.

The governor sought the two-thirds votes on A.B. 398 to help insulate the program from future legal challenges.

A.B. 398 continues the basic framework of the existing program, which sets a statewide annual limit on greenhouse gas emissions and requires the largest stationary sources of carbon emissions to the meet declining annual limits. To comply, covered entities must either install emissions controls to reduce emissions or purchase allowances, or permits.

However, the bill means covered entities must make do with fewer carbon offsets—credits for planting trees and reducing methane emissions. The number of available free allowances under the program will shrink overtime.

The companion air quality bill, A.B. 617, required only a simple majority for passage. Clearing the Senate on a 27-13 vote and Assembly 50-24, A.B. 617, boosts maximum penalties for air quality violations, requires state regulators to update the air toxics program, implementation of community plans to reduce emissions of ozone forming emissions and particulate pollution, and best available retrofit control technology at industrial facilities.

The California Business Roundtable, California Chamber of Commerce, California Manufacturers and Technology Association and dozens of other business and industry groups and labor organizations supported A.B. 398 and A.B. 617.

Large environmental groups including the Environmental Defense Fund and Natural Resources Defense Council supported the bills, but environmental justice and community groups lobbied against the bills, saying the concessions, like allowing the continued use of carbon offsets and free allowances, were unacceptable.

Fewer Nuclear Licenses to Force Layoffs at Nuclear Regulator

Posted July 18, 2017, 9:03 A.M. ET

By Rebecca Kern

Up to 20 administrative support workers at the Nuclear Regulatory Commission may lose their jobs as the agency seeks to cut its workforce to help make up for a funding shortfall resulting from fewer licensing applications, an NRC spokesman told Bloomberg BNA July 18.

The agency, which oversees the safety of U.S. nuclear reactors, has provided 120-day notices of a reduction-in-force to select employees in the Office of Administration, the Office of the Chief Human Capital Officer and the Office of Small Business and Civil Rights, according to a staff-wide email sent by NRC Executive Director of Operations Victor McCree July 12.

The agency is trying to reduce the number of employees that would be laid off to less than 20 by Nov. 6 through other measures such as attrition, the spokesman told Bloomberg BNA.

Funded in part by licensing fees, the agency has received fewer applications from companies to build nuclear reactors, which can cost more than $11 billion. They are struggling to compete in the wholesale energy markets against facilities fueled by low-cost natural gas.

The NRC also has limited its external hiring, offered three rounds of buy-outs to employees and has reassigned employees with potentially affected positions to higher priority work, McCree said in the email.

"Despite these actions, the estimated rate of voluntary attrition through the remainder of FY 2017 will not enable us to meet our FY 2018 workload needs," McCree wrote.

The agency worked with the National Treasury Employees Union ahead of the notifications to avoid the involuntary measures, McCree said in the email.

The NRC is also requesting further staff reductions in its fiscal 2018 budget proposal, which would cut 311 full-time-equivalent employees.

For the past several years, Congress has directed the NRC to reduce its budget and workforce due to fewer nuclear operators planning to build new reactors. NRC's budget has been under scrutiny since it increased staff in 2010 due to an expected influx of new reactor applications, which the agency didn't receive because applicants withdrew them for market reasons.

Clean Energy Is Trouncing Oil, Gas and Coal in Trump Era

Posted July 18, 2017, 9:22 A.M. ET

By Joe Ryan, Christopher Martin and Brian Eckhouse

President Donald Trump took office vowing to revive the coal industry's fortunes. So far, the smart money has been on clean energy.

An index of 40 publicly-traded solar companies, wind-turbine component makers and others that benefit from reduced fossil fuel consumption is up 20 percent this year. That's more than double the S&P 500's 9.8 percent gain. And better than the 8.3 percent rise by an index of leading coal companies.

The eco-friendly stock rally—which comes as oil and natural gas-focused shares have dipped—stems from a constellation of factors, including a Nevada law to boost rooftop solar, China's mass-transit policy and optimism that Elon Musk's Tesla Inc. might deliver its Model 3 sedan on time. In short, Trump's pro-fossil fuel agenda hasn't damaged investor support for clean energy.

"Nothing dreadful has happened, and these companies continue to execute," said Jenny Chase, Bloomberg New Energy Finance's lead solar analyst.

As clean-energy stocks climb, investors have pumped more money into wind and solar. U.S. investments totaled $14.7 billion during April, May and June, up 51 percent from the previous quarter to mark the highest level since 2015, according to Bloomberg New Energy Finance. European investments rose 10 percent, to $8.8 billion.

"We are seeing catalysts for these markets driven by the fact that people increasingly realize clean energy is more profitable than conventional energy," said David Richardson, an executive director at Impax Asset Management, which focuses on sustainability and has about $8.7 billion under management, up 32 percent this year.

Solar stocks are performing especially well under Trump. Sunrun Inc., the largest independent U.S. rooftop panel installer, is up 32 percent, closing July 17 at $7.01. That rally has been fueled in part by a Nevada law passed in June to make solar more affordable for the state's homeowners. Nevada gets more sunshine than almost anywhere in the nation, but it's been a dead-zone for solar since

regulators slashed rooftop panel subsidies in 2015. The new legislation largely restored those credits.

Solar manufacturers are rallying, too. First Solar Inc., the largest American panel maker, has gained 33 percent, to $42.72. Average panel prices, which plunged 35 percent last year, have begun to stabilize, falling just 8 percent since December, to 33 cents per watt. The market shift stems from solar developers aggressively stocking up on panels, fearing that a pending federal trade case could lead to tariffs on imported equipment.

"It created some tailwind for the manufacturers," said Sophie Karp, an analyst at Guggenheim Securities.

Some of the biggest clean-energy gainers include fuel cell manufacturers, which use liquid hydrogen to generate electricity through a chemical process that emits only water. While hydrogen-powered engines have been slow to catch on in cars—largely because of a lack of fueling stations—China has been pushing to use the technology in buses.

As Beijing has beefed up investments this year, fuel cell maker Hydrogenics Corp. has nearly doubled, to $8.70. Ballard Power Systems Inc. is up 73 percent, to $2.86.

Electric car maker Tesla is up 50 percent this year as the company has begun limited production of its Model 3 sedan, its cheapest vehicle yet. Musk says he expects production to reach 20,000 cars a month by December.

In the end, some of the clean-energy gains may be fleeting. The trade case that's driving up solar panel prices may ultimately lead to tariffs that analysts warn could slow overall demand. Fuel cell companies have a long history of ephemeral rallies. And Tesla's stock has been slipping since its June 23 peak after a troubling quarterly sales report and ongoing concern about its ability to mass produce. It closed down 2.5 percent July 17, at $319.57.

German Diesel Makers Get Reprieve as Home States Reject Bans

Posted July 18, 2017, 10:13 A.M. ET

By Elisabeth Behrmann and Birgit Jennen

Diesel engines received a reprieve in Germany after the home states of BMW AG, Daimler AG and Audi signaled they'd allow upgrades of older motors instead of supporting driving bans that some cities are pushing to cut air pollution.

The state government of Bavaria—where BMW and Audi are based—said July 18 that it agreed to a voluntary recall with carmakers in an effort to avoid bans of diesel-powered vehicles in its cities, of which Munich is the biggest. Baden-Wuerttemberg, home to Mercedes-Benz parent Daimler, indicated it would be open to a similar solution.

Auto manufacturers have been lobbying against the prohibitions and offered to pay for the fixes, which could affect as many as 13 million vehicles. Weighing in with their own views are state and federal authorities, as well as German courts.

Germany is wrestling over the future of diesel autos, with possible driving bans in some localities clashing with an industry that employs tens of thousands to produce vehicles that use the technology. While states appear willing to strike deals that allow carmakers to upgrade older models, city governments and courts are likely to continue pushing back and seek bans.

Efforts by Munich, where BMW is based, and Daimler's hometown of Stuttgart come as some urban areas fail European Union air-quality standards and local governments worry about the impact of cancer-causing nitrogen oxide—of which diesel cars are a major source—on the health of their residents. The technology has been under fire especially since Volkswagen AG's emissions cheating became public almost two years ago, a scandal that's also enmeshed its Audi luxury-auto brand.

Of several municipalities that have deliberated on introducing restrictions, the northern German city of Hamburg is the only one that has succeeded in prohibiting older diesel cars from certain streets.

In France, the government has gone a step farther, outlining plans two weeks ago to end the sale of gasoline- and diesel-powered vehicles by 2040 in a bid to become a carbon-neutral nation.

Diesel bans threaten to upend an industry already challenged by the costs of developing electric vehicles. BMW Chief Executive Officer Harald Krueger contends the shift to cleaner cars isn't possible without keeping the fuel, which burns more efficiently than gasoline, as part of an interim step before combustion motors are eliminated.

In particular, diesel technology plays a major role in Germany, where the models accounted for about 46 percent of sales last year. It also supports thousands of jobs. At Robert Bosch GmbH, the world's biggest car-parts supplier, about 50,000 positions are linked to diesel, with many more employed at Volkswagen and other auto producers.

With a federal election just over two months away, German Transport Minister Alexander Dobrindt has come out against vehicle bans, saying they're an ineffective tool for reducing pollution. Dobrindt has organized a gathering of government and industry executives on Aug. 2 to consider options for updating older diesels.

Political Solutions

"Driving bans can only be a means of last resort because they limit the mobility of people," Hubertus Heil—general secretary of the Social Democrats, Chancellor Angela Merkel's junior coalition partner—said July 17 in Berlin. "The solution must be to organize mobility in Germany in another way. So it is good that all parties involved sit down together and develop a concept for the future."

Even as politicians get behind car fixes, there's the risk of judicially-ordered restrictions. On Wednesday, Stuttgart's administrative court will hold a public hearing on a complaint seeking to ban all diesel cars from driving into the city, which is Baden-Wuerttemberg's capital. Stuttgart, built in a valley, has for many years failed air pollution tests. In Munich, a court compelled the city in March to prepare diesel bans to bring down levels of nitrogen oxide.

Last year, the federal Transport Ministry prodded manufacturers including VW, Audi and Mercedes-Benz to recall 630,000 cars that pushed the limits of emissions regulations. Industry leaders contend that the 13 million-car estimate for new fixes is too high.

How that would work and who will pay for it will be discussed at the task force meeting on Aug. 2. BMW and Audi said last month more than 50 percent of their diesel cars that meet Euro-5 emissions

standards could be upgraded, and on Tuesday, Bavaria said the carmakers had agreed to bear the cost of the recalls.

"We see good prospects to find a federal solution to upgrade Euro-5 diesel cars," said Michael Rebstock, a BMW spokesman.

Subject: Murkowski pledges to work with Trump on healthcare, sidesteps details of Zinke call

By Ben Lefebvre

07/27/2017 02:12 PM EDT

Sen. Lisa Murkowski (R-Alaska) said she will continue to work with President Donald Trump on health care reform but did not address reports that Interior Secretary Ryan Zinke threatened projects in her home state in a public statement today.

"While I have disagreed with the Senate process so far, the President and I agree that the status quo with health care in our country is not acceptable and that reforms must be made," Murkowski said in a prepared statement. "I continue working to find the best path for what I believe will achieve that — a committee process where we can work issues in the open and ensure Alaskans have the health care choices they want, the affordability they need, and the quality of care they deserve."

Murkowski confirmed to reporters in the Capitol today that Zinke called her Wednesday, but she did not elaborate on their conversation. She also told E&E News earlier today that Trump had called her Tuesday after she voted against proceeding to legislation to repeal Obamacare.

Murkowski and fellow Alaska Republican Senator Dan Sullivan received calls Wednesday warning them that the administration's support for public lands or energy projects may dwindle after Murkowski's vote Tuesday against taking up a bill to repeal Obamacare. Interior has wide sway over Alaskan energy project because nearly two-thirds of the state consists of federal property. The Alaska Dispatch News first reported the calls.

House Democrats are calling for an investigation into the call Zinke made to the Alaskan senators.

John Bresnahan contributed to this report.

Summaries

FOOD SAFETY
New Animal Drug Applications/Withdrawal of Approval
FOOD SAFETY

Notice of the FDA announces the withdrawal of approval of two new animal drug applications for bulk dihydrostreptomycin sulfate (NADA 065-291) and bulk streptomycin sulfate (NADA 065-324). The actions are taken at the request of the sponsor, Zoetis Inc., of Kalamazoo, Mich., because the products are no longer manufactured or marketed. The withdrawals are effective July 24, 2017. Contact: Sujaya Dessai; FDA, Center for Veterinary Medicine; 240-402-5761; sujaya.dessai@fda.hhs.gov. Citations: 21 CFR 514.116

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Controlled Substances/Removal of Naldemedine
GENERAL ENVIRONMENT AND SAFETY

Proposed rule of the Drug Enforcement Administration would remove the opium alkaloid derivative naldemedine and its salts from Schedule II of the Controlled Substances Act. The rule is issued in response to a request by new drug application sponsor, Shionogi Inc., of Florham Park, N.J. The FDA has approved naldemedine for marketing under the trade name Symproic® (0.2 mg tablets) for the treatment of opioid-induced constipation in adults with chronic noncancer pain and has determined that it is unlikely the substance possesses abuse-related indications. Comments and hearing requests are due Aug. 11, 2017. Contact: Michael Lewis; DEA, Diversion Control Division; 202-598-6812. Citations: 21 CFR 1308.12

GENERAL ENVIRONMENT AND SAFETY

Vermont/Highgate Transmission Interconnection

GENERAL ENVIRONMENT AND SAFETY

Notice of the Energy Department announces the receipt of an application from Vermont Electric Power Co., of Rutland, Vt., to amend a presidential permit (PP-82) regarding ownership of the Highgate Transmission Interconnection Facility. The amendment specifies that Vermont Transco LLC will acquire 87.03 percent of the ownership interest in the facility, and Stowe Electric Department will acquire 5.27 percent of the ownership. In addition, Burlington Electric Department will remain a joint owner with 7.7 percent interest. Comments or motions to intervene are due Aug. 11, 2017. RADIATION

Advisory Committee on the Medical Uses of Isotopes Meeting

RADIATION

Notice of the NRC announces a meeting of the Advisory Committee on the Medical Uses of Isotopes. The agenda includes updates on medical-related events, licensing guidance for yttrium-90 microsphere brachytherapy, category 3 source security and accountability evaluation initiatives, and the patient release project. The committee also will discuss medical event reporting and its impact on safety culture; training and experience requirements for authorized individuals; nursing mother guidelines for exposure to diagnostic and therapeutic radiopharmaceuticals; and the physical presence requirements for the Leksell Gamma Knife® Icon™. The meeting is scheduled for Sept. 11-12, 2017, in Rockville, Md., and via webcast. Comments are due Sept. 6, 2017. Contact: Sophie Holiday; NRC; 301-415-7865; sophie.holiday@nrc.gov. Addressing Cyber Risks at Maritime Transportation Security Act Regulated Facilities

WATER

Notice of the U.S. Coast Guard announces the availability of the draft Navigation and Inspection Circular (05-17) guidance for addressing cyber risks at Maritime Transportation Security Act regulated facilities. The document clarifies existing requirements under the MTSA to incorporate analysis of computer and cyber risks and provides guidance for addressing those risks. The document also addresses incorporation of cybersecurity risks into an effective facility security assessment and policies and procedures that may reduce cyber risk to operators of maritime facilities. The document may be used as a benchmark to develop and implement measures and activities for effective self-governance of cyber risks. Comments are due Sept. 11, 2017. Subject: BREAKING NEWS: Hospital: Scalise improving but still in critical condition

House Majority Whip Steve Scalise, the Louisiana Republican shot during a congressional baseball practice Wednesday, is doing better but remains in critical condition and will be hospitalized for an extended period of time, according to a statement from his doctors.

MedStar Washington Hospital Center said in a statement Thursday evening that Scalise underwent another surgery "related to his internal injuries and a broken bone in his leg."

"He remains in critical condition, but has improved in the last 24 hours," the statement said. "The Congressman will require additional operations, and will be in the hospital for some time. At the request of the family, we will continue to provide periodic updates."

Subject: Morning Energy: First skirmish of latest ANWR kicks off — FERC's Powelson talks grid resiliency proposal — EPW schedules Wheeler, White confirmation hearing

By Anthony Adragna | 11/02/2017 05:40 AM EDT

With help from Tim Starks

KICKSTARTING ANWR OF WORDS: Senate Energy Chairman Lisa Murkowski launches the latest push to open the Arctic National Wildlife Refuge to oil and gas drilling today with a mega three-panel hearing on the topic. Tasked with raising $1 billion over the next decade through budgetary instructions, Murkowski's panel is expected to move forward quickly with legislation that would remove restrictions on drilling in ANWR or other currently off-limits areas.

Who's testifying? The first panel includes Alaskans Sen. Dan Sullivan, Gov. Bill Walker and Rep. Don Young . After that, lawmakers will hear from Lt. Gov. Byron Mallott; Greg Sheehan, acting director of the Fish & Wildlife Service and two other Alaskan officials. And the third panel includes various other interested groups, ranging from representatives of the Wilderness Society to the Arctic Slope Regional Corporation. "I want to make sure that the debate finally catches up with the technology and the high standards that exist in Alaska," Sullivan said, adding critics of ANWR drilling have been using the same "stale, old talking points" for 40 years.

What will opponents say? Led by ranking member Maria Cantwell , critics of ANWR drilling are likely to argue the low price of oil makes raising $1 billion from opening the area unlikely and that the industry has been lukewarm about Arctic exploration. "They're in a hurry for something that the industry hasn't been excited about," she told reporters. "In 50 years, she and I — even though we've worked together as good colleagues — are going to be dead and the only thing that's going to matter is whether we've preserved a place as unique as this." Sullivan, for his part, scoffs at the idea there isn't interest in drilling: "There's plenty of interest. I know that." Cantwell asked Interior Secretary Ryan Zinke in a letter Wednesday to clarify his position on ANWR drilling. She said a markup of legislation is expected next week.

What about the House? The House Natural Resources Committee, which faces the same $1 billion revenue instructions as its Senate counterpart, is also likely to look at ANWR, Chairman Rob Bishop told ME. "ANWR by itself could give us the revenue numbers that we need," he said. "Whether we do anything more than that, I don't know." As a side note, ME saw Bishop and Ways and Means Chairman Kevin Brady energetically chatting at length on the floor during votes Wednesday.

WE'RE LEAPING INTO THURSDAY! I'm your host Anthony Adragna, and Strategies 360's Matt Gall identified Sens. Debbie Stabenow and James Lankford, as well as Rep. Joe Kennedy, as Congress' red heads. For today (a stretch question): There are eight current senators who served as attorneys general in their states. Name them. Send your tips, energy gossip and comments to aadragna@politico.com , or follow us on Twitter @AnthonyAdragna,

@Morning_Energy, and @POLITICOPro.

HE'S GOT THE... POWELSON: Rob Powelson, who joined FERC this summer, said the country's at an "inflection point" for the future of the electricity markets, and called for patience as his agency works through Energy Secretary Rick Perry's controversial grid proposal on top of other tough discussions about state energy policies. "There are a lot of moving parts to this conversation. I don't mind that there's a little bit of impatience," he tells Pro's Darius Dixon in an interview. "This is an issue that has been elevated in the conversation of energy policy. I've been very direct in my position in support for markets."

States' rights guy? Powelson said it's not his job to stand in the way of states seeking to address carbon through mechanisms like the Regional Greenhouse Gas Initiative and California's cap and trade model. "If states want to want to value carbon, they should be able to do it," he said. "States have said, 'Look, in lieu of a hard price on carbon on the national level, there are mechanisms for valuing it.' And it's not my job to tell those states you can't do that."

Blame for 'polar vortex': He chaired the Pennsylvania utility commission during Hurricane Sandy in 2012 and the 2014 "polar vortex," but Powelson isn't buying DOE's line questioning the reliability of natural gas during that cold snap. "There were enough sins in there that everybody had some responsibility," he said.

Oh, and hey Congress: Powelson called for people to be patient as he and Chairman Neil Chatterjee learn the ins and outs of their new roles, but he subtly jabbed Congress for its inaction on two other FERC nominations. "If I could stress one thing, I need everybody in this town to remain calm, understand that the FERC is working hard around these issues," he told Darius. "[But] it'd be nice to have two other colleagues to be part of this conversation."

TWO MORE GET EPW HEARING: The Senate Environment and Public Works Committee plans to hold a hearing Nov. 8 on the nominations of Kathleen Hartnett White to run the White House Council on Environmental Quality and Andrew Wheeler's bid to be EPA deputy administrator, your ME host reports. That comes as Pro's Alex Guillén got his hands on White's financial disclosure form which shows she owns four oil leases but appears to give away most of the income from them.

TWO HURRICANE HEARINGS ON TAP TODAY: The House Transportation Committee gets top billing for hurricane-related hearings today as it convenes top officials from FEMA, the Coast Guard, the Army Corp of Engineers and EPA to discuss "initial lessons learned from the 2017 hurricanes, and identify key challenges and obstacles that may remain in the way of recovery." Lawmakers from affected communities in Florida, Texas, the U.S. Virgin Islands and Puerto Rico will also appear.

Meanwhile, the House Energy and Commerce Energy Subcommittee meets at the same time with Army Corps, Energy, GAO, state and industry officials to discuss energy infrastructure response and recovery efforts. Look for questions about the $300 million Whitefish Energy contract, the slow Puerto Rico recovery and ongoing disaster relief funding requests to dominate the discussion. ME would also look for lawmakers from both parties to discuss the need for

increased consideration of infrastructure resiliency when building (without mention of climate change among Republicans).

More questions for FEMA: Bipartisan House Energy and Commerce leaders sent a letter to FEMA Director Brock Long seeking information about what role his agency has played in repairing the Puerto Rican grid to date. "It would appear that the Agency, until now, was not involved in one of the most significant decisions in the effort to rebuild Puerto Rico's electrical grid," they write. "Efforts by the governor of Puerto Rico and PREPA to cancel the contract with Whitefish underscored the need for federal leadership and strategic coordination of the effort to restore Puerto Rico's electric system."

Today: Senior House Democrats, including Minority Leader Nancy Pelosi and Minority Whip Steny Hoyer, hold an event "in solidarity with the people of Puerto Rico and the U.S. Virgin Islands" on the House East Front Steps at 10 a.m.

Key meetings: Gov. Ricardo Rosselló's rather eclectic set of meetings in Washington on Wednesday included Rep. Sean Patrick Maloney, Sens. Roger Wicker, Orrin Hatch and Tom Carper, Bishop and acting Homeland Security Chief Elaine Duke.

PICTURE THIS SCENE: While riding in a bus up a mountainside over the weekend in Puerto Rico, Bishop took a "very positive" call from Trump about national monuments. Though he said Trump provided few specific details, Bishop said the president vowed to announce his final decision on whether to shrink a host of national monuments "very soon" and spoke positively about Interior Secretary Ryan Zinke's recommendations. And, Bishop said, Trump "basically agreed with us that [the Antiquities Act] has been abused and needs modification."

Oregonians fault report: Sens. Ron Wyden and Jeff Merkley sent White House Chief of Staff John Kelly a letter expressing concern about "numerous factual errors" in Zinke's report that they worry contributed to recommended diminished protections for the Cascade-Siskiyou National Monument.

Won't prejudge Whitefish cancellation: It's too soon to know whether Puerto Rico's decision to pull the plug on Whitefish Energy's $300 million contract to rebuild the island's grid was the right call or not, Bishop told ME. "There's still strange things about it, but there has to be some reasons they did it in the first place," he said. "Procedure is obviously pretty bad because there were so many questions and transparency was not there. But whether ultimately, I don't have enough information [yet]." Natural Resources intends to continue looking into the matter.

ME TOO! Sen. Jeff Flake has also placed a hold on Bill Northey's nomination for a USDA undersecretary post in an effort to land a White House meeting over the Renewable Fuel Standard, his office says.

FOREST MANAGEMENT EFFORT PASSES: House lawmakers cleared legislation on Wednesday that backers say will address fire-borrowing, streamline environmental review processes and minimize litigation related to the U.S. Forest Service and Bureau of Land Management. The vote was 232 to 188. Critics say the measure, H.R. 2936 (115), would

undermine endangered species protections and impede the ability of agencies to respond to wildfires.

Meanwhile, ten Senate Democrats asked Trump and Senate leaders to include funding for wildfire disaster response in the next disaster aid package.

CRAMER: TRUMP URGED SENATE RUN: North Dakota Rep. Kevin Cramer told a radio host Wednesday that Trump called him during dinner on Halloween and "strongly, strongly encouraged" him to run against Sen. Heidi Heitkamp next year. Cramer said he'd make a decision "after we get tax reform done." Clip, flagged by American Bridge, here.

MAIL CALL! HOUSE LAWMAKERS HIT BACK ON RFS: Sixty-four House lawmakers, led by Republican Bob Goodlatte and Democrat Peter Welch, slammed the RFS in a letter to Pruitt as "a well-intentioned but deeply flawed policy that has negatively impacted families and businesses" around the country. They urged EPA to factor in its "significant pitfalls and costs" in future regulatory actions.

UPTON: ENBRIDGE'S RESPONSE 'ABSOLUTELY UNACCEPTABLE': Rep. Fred Upton sent a letter to Enbridge Wednesday seeking documents and a meeting with a top official concerning when the company knew of damage to Line 5 pipeline under the Straits of Mackinac. "Although Enbridge has stated that the safety of the pipeline was not compromised by the loss in coating, it is absolutely unacceptable that the people of Michigan were kept in the dark about this issue for three years," he wrote.

WHATCHA GONNA DO? Nine Senate Democrats wrote Commerce Secretary Wilbur Ross on Wednesday asking for information on what the administration plans to do with two major climate change reports — the Climate Science Special Report and the final National Climate Assessment — expected to be released in the coming days.

TAKE A GLANCE! LET'S GET RESILIENT: Joint Economic Committee Democrats released a report Wednesday arguing the federal government must adapt how it rebuilds following natural disasters to be more resilient and that every dollar spent on disaster preparedness provides almost $4 in future benefits. Take a glance here.

NOT RIGHT AROUND THE CORNER: Southern Co. CEO Tom Fanning said Wednesday increased federal loan guarantees for the Vogtle nuclear power project in Georgia won't be finalized before next spring, Pro's Darius Dixon reports. "Final issuance of the additional loan guarantee is subject to the satisfaction of a number of conditions and is not expected to occur prior to the end of the first quarter of 2018," Fanning said on the company's quarterly earnings call.

FORMER EPA OFFICIAL: PRUITT POSES 'DIRE AND FUNDAMENTAL' THREAT: Former EPA Deputy Administrator Bob Sussman argues in the latest issue of Environmental Law Reporter that Pruitt poses an existential threat to the agency. "EPA's ability to maintain core protections and respond to new threats—the bread and butter of EPA's mission—is rapidly eroding and may suffer irretrievable damage if Pruitt's policies continue," he wrote.

FERC HIT BY CYBERSECURITY ATTACK: The inspector general of FERC said that a "recent security incident involving [FERC's] unclassified cybersecurity program" pointed to the need to better implement certain cyber defenses, without providing specifics about the incident. "We are concerned that certain controls may not have been in place that could have potentially prevented the incident," the IG's office said. Read the report here.

NOT PLEASED: Billionaire environmentalist Tom Steyer's $10 million campaign to impeach Trump isn't sitting well with House Minority Leader Nancy Pelosi who reached out to tell him the effort is a distraction, POLITICO's Heather Caygle reports. Other Democrats agree with her view that the party should focus on showing it can govern. "I certainly don't think that that's a helpful effort," Rep. Ro Khanna said of Steyer's campaign.

TAKE A GLANCE: The U.S. Chamber's Global Energy Institute released a series of videos showcasing the energy industry's response to the recent string of hurricanes.

Stories from POLITICO Pro

POLITICO Pro Q&A: FERC Commissioner Rob Powelson Back

By Darius Dixon | 11/02/2017 05:00 AM EDT

Rob Powelson, who joined FERC this summer, has found himself serving as something of an ambassador from the states during one of the agency's most turbulent periods.

A Republican with a more than eight-year tenure as a Pennsylvania energy regulator, Powelson made headlines recently for saying that he didn't join FERC "to go blow up the markets" after Energy Secretary Rick Perry unveiled a controversial grid proposal aimed at propping up coal-fired and nuclear generation.

His five years as chairman of the state commission included Hurricane Sandy in 2012, and the 2014 "polar vortex" — an event Perry often cites to justify his proposed rule. But where the Energy Department's plan chides the reliability of natural gas during that cold snap, Powelson said "there were enough sins in there that everybody had some responsibility" and that grid operators are adapting to the "new normals of weather."

We're at an "inflection point" for the future of the electricity markets, Powelson told POLITICO in a recent interview. He said he wouldn't stand in the way of states that want to do more to address climate change — "If states want to want to value carbon, they should be able to do it" — but he urged patience from everyone waiting for FERC action on pricing reform and state policies.

This interview has been edited for length and clarity.

Your home state is a big chunk of the PJM market. But last week Pennsylvania's state

legislature approved a resolution supporting the DOE proposal while the utility regulator called the plan "unwieldy, untimely and impractical."

As I often said in my prior life: God forbid the legislature has to make a decision that the PUCs have to make — raise rates, fine companies, revoke licenses. That's why you have independent agencies like FERC and state public utilities commissions that have to do economic regulation and safety regulation.

I think there are forces at play that wanted to put that marker out. When you peel it back, I think now back in Pennsylvania, as of Friday, there's 500 trillion cubic feet of natural gas under the ground. If you're the Marcellus Shale Coalition, you're like "What happened to us in this discussion?"

The legislature put a marker down ... but at the end of the day, the resolution is not binding. It's not an act of law.

Pennsylvania is among the states that may consider out-of-market policies to help nuclear. So, what keeps you up at night more — addressing state subsidies or the pricing issues?

I'm a states' rights advocate, but there are two things that drive what we do here. There's the Federal Power Act, and there's the Natural Gas Act. FERC Order 888 created this wholesale construct in the market. In the mid-2000s, probably 26 or so states ... did [renewable portfolio standards]. Republican states, Democratic states — those RPSs have driven strong investments in renewables. ... Pennsylvania, and other states, are [asking], "Do we embed in the RPS a nuclear standard?" Some are doing that after the fact.

And then there are some who have said these RPSs have caused a distortion in the market as we get to grid parity and we get more scale of renewables and the impact that that's having. ... These state policies obviously drove an outcome. Today, an unintended consequence is that some people say these states have not valued nuclear.

There are a lot of moving parts. To FERC's credit, we look at the markets and how they're functioning and how we value things like resiliency, and how we keep markets functioning. That's what I'm looking at. This is an inflection point. No doubt about it.

For you, is anything other plant retirements driving market policy changes?

If there is a deep concern about grid resiliency, and we can use events like the polar vortex, the recent hurricanes, and we can use derechos — these new weather events, the new normals of weather. The RTOs are saying, "Look, the velocity of these storms and the impact they have on the generation fleet, we think, yeah, we should do a deeper dive and value resilient resources." On the flip side to that is you've had states that have looked at things like microgrids, and they're doing grid resiliency.

The polar vortex was alarming in the sense you had a 24 percent forced outage rate. There were enough sins in there that everybody had some responsibility. But then you go to the next year,

February of 2015, on another very bad cold snap there wasn't a 24 percent forced outage rate and the system performed. Right after 2014, PJM put forth the construct of capacity performance. And, by the way, we're not 100 percent into the capacity performance [process]. We have another auction of capacity performance results and then we're fully into a fully integrated CP. I personally want to see where we stand there. That's a longer term view. I want to see how capacity performance is working and ... how it deals with reliability.

Why isn't there an agreed upon set of facts around the polar vortex?

Capacity performance was a direct outcry of the polar vortex. ... I was told, as chairman, that capacity performance would provide the needed uplift compensation metrics to deal with these types of events going forward — meaning that these baseload resources will be adequately compensated by this.

In your mind, has that turned out to be true?

I'm still waiting. When we get to 100 percent, I think we'll have a story to tell.

You've crossed paths with Perry a couple of times since the proposal came out. Have you made your views clear to him?

To his credit, he's looking at this issue in terms of — as the head of DOE — reliability, resiliency. He's looking at the sustainability of these markets.

There are a lot of moving parts to this conversation. I don't mind that there's a little bit of impatience. Chairman [Neil] Chatterjee and I are the new FERC guys. I get it. This is an issue that has been elevated in the conversation of energy policy. I've been very direct in my position in support for markets.

Commissioner Cheryl LaFleur has often talked about the "doors" to how that conflicts with states gets resolved: planned re-regulation, unplanned re-regulation, litigation and/or some kind of harmonization.

The state policy changes are ongoing with us. ... Personally, I'd like to see us get our hands around that conversation. If states want to want to value carbon, they should be able to do it. They've done it with things like the [Regional Greenhouse Gas Initiative]. California has a cap and trade model. States have said, "Look, in lieu of a hard price on carbon on the national level, there are mechanisms for valuing it." And it's not my job to tell those states you can't do that.

Is it FERC's job to tell them they should do that?

I don't think so. What we're saying is that if you're going to design constructs, you better make sure they adhere to certain market principles. Trying to answer your question, yes, post-technical conference, there's a genuine commitment to handle the state piece. There are a couple of options, but I'll be straight up with you, I can't get into where they would go.

FERC's authority over the RTOs is fairly absolute. Can you see any scenario where FERC overrides the RTOs and the states to impose something akin to what Perry has proposed?

I think we'd be hard-pressed to not engage stakeholders like our states and our RTOs, independent market monitors.

Is there a chance FERC expands the footprint of the DOE proposal to include areas outside of PJM, New York and New England?

I've thought about it. I don't have any preconceived outcome. Most people would say that this is more of a PJM, New England, NYISO issue. But there's not a lot of coal left in New England.

I'm trying to be patient here and seeing where we go internally with staff recommendations.

How do you view your role with FERC after eight-plus years at the state-level?

My biggest takeaway is that I respect the independence of FERC. I worked for three governors.

What's very important to me is maintaining the independence of this agency because the people that work here look for that kind of guidance. In my view, not that there's been issues in my short tenure here, but it's important that you maintain that. The same could've said under the Obama administration. Our engagement with the states is now, more than ever, so critical.

Some have argued that it's been the imperialistic FERC, at times — that we've been very top-down.

The DOE NOPR hasn't necessarily helped improve the image of FERC's independence.

The NOPR, based on my cursory review of the state comments — and we're doing forecasting — have been 98 percent against. Obviously, this is a big issue. It's an inflection point for the FERC.

You've said this is an inflection point a few times.

We've come through the conversations post-Order 888 in the 1990s, to the future of the markets to ... today, the $64,000 question: What's working and what's not working in markets, and how to do we keep those markets sustainable, long-term.

If there's a deficiency, how do you fix it fast enough to make a difference?

To Secretary Perry's credit, he has certainly stimulated a conversation or — as some would say — a call to action. That's healthy. I'm an impatient regulator, by nature. But some of this stuff has to be thought through. We have to develop a record and we have internal capacity to look at what's working and not working in markets.

If I could stress one thing, I need everybody in this town to remain calm, understand that the FERC is working hard around these issues.

I'm actually kinda giddy to be here at this point in time. It's a good challenge for us to have. The big question is, where do we go?

Is the DOE proposal at all distracting?

No, it's nothing personal. I think they were trying to say is that we've had all these things and when you lose the quorum, the train stops. ... You can't take up a notational vote on an issue of this magnitude.

Neil and I have only been on the job less than [three] months. I'm asking people to be patient with us too. We're the new people here. And it'd be nice to have two other colleagues to be part of this conversation.

POLITICO Pro Q&A: FERC Commissioner Rob Powelson Back

By Darius Dixon | 11/02/2017 05:00 AM EDT

Rob Powelson, who joined FERC this summer, has found himself serving as something of an ambassador from the states during one of the agency's most turbulent periods.

A Republican with a more than eight-year tenure as a Pennsylvania energy regulator, Powelson made headlines recently for saying that he didn't join FERC "to go blow up the markets" after Energy Secretary Rick Perry unveiled a controversial grid proposal aimed at propping up coal-fired and nuclear generation.

His five years as chairman of the state commission included Hurricane Sandy in 2012, and the 2014 "polar vortex" — an event Perry often cites to justify his proposed rule. But where the Energy Department's plan chides the reliability of natural gas during that cold snap, Powelson said "there were enough sins in there that everybody had some responsibility" and that grid operators are adapting to the "new normals of weather."

We're at an "inflection point" for the future of the electricity markets, Powelson told POLITICO in a recent interview. He said he wouldn't stand in the way of states that want to do more to address climate change — "If states want to want to value carbon, they should be able to do it" — but he urged patience from everyone waiting for FERC action on pricing reform and state policies.

This interview has been edited for length and clarity.

Your home state is a big chunk of the PJM market. But last week Pennsylvania's state

legislature approved a resolution supporting the DOE proposal while the utility regulator called the plan "unwieldy, untimely and impractical."

As I often said in my prior life: God forbid the legislature has to make a decision that the PUCs have to make — raise rates, fine companies, revoke licenses. That's why you have independent agencies like FERC and state public utilities commissions that have to do economic regulation and safety regulation.

I think there are forces at play that wanted to put that marker out. When you peel it back, I think now back in Pennsylvania, as of Friday, there's 500 trillion cubic feet of natural gas under the ground. If you're the Marcellus Shale Coalition, you're like "What happened to us in this discussion?"

The legislature put a marker down ... but at the end of the day, the resolution is not binding. It's not an act of law.

Pennsylvania is among the states that may consider out-of-market policies to help nuclear. So, what keeps you up at night more — addressing state subsidies or the pricing issues?

I'm a states' rights advocate, but there are two things that drive what we do here. There's the Federal Power Act, and there's the Natural Gas Act. FERC Order 888 created this wholesale construct in the market. In the mid-2000s, probably 26 or so states ... did [renewable portfolio standards]. Republican states, Democratic states — those RPSs have driven strong investments in renewables. ... Pennsylvania, and other states, are [asking], "Do we embed in the RPS a nuclear standard?" Some are doing that after the fact.

And then there are some who have said these RPSs have caused a distortion in the market as we get to grid parity and we get more scale of renewables and the impact that that's having. ... These state policies obviously drove an outcome. Today, an unintended consequence is that some people say these states have not valued nuclear.

There are a lot of moving parts. To FERC's credit, we look at the markets and how they're functioning and how we value things like resiliency, and how we keep markets functioning. That's what I'm looking at. This is an inflection point. No doubt about it.

Senate EPW to take up White, Wheeler nominations next week Back

By Anthony Adragna | 11/01/2017 05:48 PM EDT

The Senate Environment and Public Works Committee plans to hold a confirmation hearing on Nov. 8 regarding Kathleen Hartnett White's nomination to run the White House Council on Environmental Quality.

In addition, the panel plans to consider Andrew Wheeler's selection to serve as EPA deputy administrator on the same day.

CEQ nominee owns four oil leases Back

By Alex Guillén | 11/01/2017 05:35 PM EDT

Kathleen Hartnett White, the Texas Public Policy Foundation fellow nominated to run the White House Council on Environmental Quality, owns four oil leases, though she appears to give away most of the income.

One of those properties, in Sugarland, Texas, is leased to CVR, the refiner owned by billionaire investor and President Donald Trump backer Carl Icahn, according to White's financial disclosure. It generated between $201 and $1,000 for White since the beginning of 2016,

according to the form. The other leases provided income between $201 and $5,000 over that period, according to the form, which requires her to report only a range.

However, it is not clear how much of that money White kept. The form indicates that she gifted the interest generated by all four leases to a nephew, but that the leases "generated a small amount of income" over the reporting period.

White's husband reported significant ranch and cattle holdings in Texas via stakes in two different family trusts. In addition to her work at TPPF, White sat on the Texas Emissions Reduction Plan Advisory Board, which was disbanded on Sept. 1. She also reported part ownership of a Jack Russell Terrier breeding business in Texas.

Although White was announced White's nomination on Oct. 13, she appears to have been waiting in the wings for some time before that. White's signature on the financial disclosure is dated Aug. 2.

WHAT'S NEXT: The Senate Environment and Public Works Committee has not yet announced a hearing on White.

Southern CEO: DOE loan guarantees won't be final till next spring Back

By Darius Dixon | 11/01/2017 04:39 PM EDT

The Energy Department's decision to increase federal loan guarantees for the Vogtle nuclear power project in Georgia isn't expected to be finalized before next spring, Southern Co. CEO Tom Fanning said today.

DOE announced in late September that it had conditionally approved a $3.7 billion loan guarantee increase for the project on top of the $8.33 billion previously authorized by the Obama administration. But DOE's action to cement that decision is still at least four months away.

"Final issuance of the additional loan guarantee is subject to the satisfaction of a number of conditions and is not expected to occur prior to the end of the first quarter of 2018," Fanning said on the company's quarterly earnings call.

Obama's Energy Department originally approved Vogtle project loan guarantees totaling $3.4 billion to Southern Co.'s Georgia Power, $3.1 billion to Oglethorpe Power and $1.8 billion to the Municipal Electric Authority of Georgia. Energy Secretary Rick Perry is primed to offer an additional $1.67 billion to Georgia Power, $1.6 billion to Oglethorpe and $415 million to MEAG.

WHAT'S NEXT: The Georgia Public Service Commission is scheduled to begin hearings on Nov. 6 to discuss the Vogtle project.

Pelosi moves to muzzle Trump impeachment talk Back

By Heather Caygle | 11/01/2017 01:02 PM EDT

House Minority Leader Nancy Pelosi offered a forced smile recently when asked on MSNBC about a Tom Steyer-sponsored ad that calls for President Donald Trump's impeachment.

"That's a great ad," Pelosi said twice, before rushing to plug the Democrats' Better Deal economic agenda as the TV hit wrapped up.

Pelosi played it off, but privately she was peeved. She told lawmakers at a Democratic leadership meeting soon after that she had reached out to the Democratic megadonor to tell him that his $10 million ad campaign is a distraction. (A source close to Steyer said he hasn't spoken with Pelosi since the ad launched.)

Pelosi is eager to show her party can govern — in contrast to the chaos surrounding Trump — and she believes that a reputation as the "no drama" Democrats is key to taking back the House in 2018 and whisking her backing into the speaker's chair.

While not an official slogan, Pelosi has discussed the strategy broadly in recent leadership and caucus meetings, urging members to avoid talk of impeachment and resist taking Trump's bait on whatever topic is dominating his Twitter feed that day.

"There's nothing any of us can say in Congress that is going to change people's view of Donald Trump," said freshman Rep. Ro Khanna, a Silicon Valley progressive who agrees with Pelosi's strategy. "What they need is us to help them form their view of whether the Democratic Party is ready to lead."

Pelosi and House Minority Whip Steny Hoyer of Maryland both issued cautious statements Monday after former Trump campaign aides were indicted in special counsel Robert Mueller's Russia probe. The House Democratic leaders reiterated their calls for an independent commission while carefully avoiding any speculation about Trump's potential collusion with Moscow in the 2016 campaign.

Privately, Pelosi has suggested that the Russia probe could lead to the unraveling of Trump's presidency, going so far as to say "the proof is in the Putin" at a Democratic leadership meeting earlier this year.

But in public, the California Democrat is encouraging her rank and file to take a measured approach to all things Trump, banking on the strategy that, by next November, the president and congressional Republicans will bomb with voters on their own.

Pelosi has warned lawmakers about wading too deeply into Trump-created distractions, most recently at a leadership meeting last week, where she cited the controversy surrounding NFL players kneeling during the national anthem and the president's attacks on Rep. Frederica Wilson (D-Fla.) over his phone call to a soldier's widow.

Instead, she has urged Democrats to stay focused on policy battles, telling members at their caucus meeting last week they "will be in the majority" if Republicans head into the midterms without a single major legislative accomplishment.

That doesn't mean House Democrats will ignore Trump or his tweets. But Democratic leaders think responding to every culture war salvo from the president will only muddy their message heading into the midterms.

Pelosi has encouraged lawmakers to talk up what a Democratic majority can deliver for voters, plugging their economic message on repeat in hopes that it eventually will break through with voters.

"In my opinion it cannot happen fast enough," said Rep. Cheri Bustos, a moderate Democrat whose northwestern Illinois district was carried by Trump last year. "If we get asked about Frederica Wilson or the NFL or Russia, we can answer that. But then let's get back to what's on people's minds."

The party's Trump-focused message fell flat last year, as Democrats picked up only six seats in the House after boasting about the potential for double-digit gains and lost big in working-class districts that dot the Rust Belt.

This time around, Democratic leaders purposefully avoided including divisive social issues in their agenda rollout this summer. Their "no drama" approach to Trump's controversies is an extension of that strategy.

Keeping Democrats united won't be easy for Pelosi. The caucus ranges from progressive rabble-rousers like Khanna — who ousted a Democratic incumbent last year and called for a primary challenge to Sen. Dianne Feinstein of California — to a dozen Democrats sitting in Trump-won districts like Bustos.

"It is difficult because [Trump's] actions are so outrageous," said Rep. Ruben Gallego (D-Ariz.). "And it's ongoing work, by all of us, not just leadership" to stay focused.

The approach risks angering progressive groups and liberal donors, some of whom have declared all-out war on Trump and have threatened to primary Democratic lawmakers who don't do enough to take on the president.

But some lawmakers say their hands are tied — that the best way to defeat Trump's agenda is by regaining the majority, and the best way to be back in the majority is to avoid focusing too much on Trump.

In terms of the Indivisible Movement to resist Trump's agenda, Rep. John Larson (D-Conn.) said, "There's a role and a place for that. But the vast majority of people are scared to death about their own futures,"

"When you haven't been in the majority since 2010, you want to make sure that given the opportunity we have in front of us to take back the House, that you remain focused," Larson added. "And that's the only way any progressive agenda is going to have the opportunity to see the light of day."

Indivisible, the grass-roots progressive group formed after Trump's election, declined to comment.

Meanwhile, even as the Russia probe heats up, Democratic leaders have been working behind the scenes to quell any chatter about impeachment. For them, the topic is a distraction from defeating Republicans' tax push in the short term and could turn off independent voters down the road.

Democratic leaders pressured Rep. Al Green to relent on forcing a vote on impeaching Trump after the Texas Democrat reignited the issue on the House floor recently. Hoyer was seen having a long, intense chat with Green just off the House floor during the debate.

And then there's Steyer's ad, and many House Democrats agree with Pelosi on that.

"I certainly don't think that that's a helpful effort," Khanna said of the ad.

Steyer said in a statement, "This isn't about me, or Rep. Pelosi. This is about giving a voice to the American people who are demanding the political establishment stand up to Trump."

There is at least one pol who is happy to comment on Steyer's impeachment push.

"Wacky & totally unhinged Tom Steyer, who has been fighting me and my Make America Great Again agenda from beginning, never wins elections!" Trump tweeted.

Subject: Morning Media: Investigating news orgs? -- Milo's white nationalist ties -- Thrush vs. Abramson -- NYT's Weinstein bombshell -- St. Louis arrests mount

By Michael Calderone | 10/06/2017 05:36 AM EDT

FOR A MOMENT, it looked like the White House was going to knock down President Trump's dangerous suggestion on Twitter that the Senate Intelligence Committee start looking into news networks he dismisses as "fake."

-- "Should Congress investigate news outlets?" CNN correspondent Jim Acosta asked Press Secretary Sarah Sanders, just as she pivoted to another reporter in the briefing room and could be heard saying "No." However, Sanders told me she was calling on Los Angeles Times reporter Noah Bierman rather than answering Acosta. Sanders responded to another question about Trump's tweet by reiterating the White House's view that the news media should be held "to a higher standard."

-- Trump has accused journalists of spreading "fake news" so frequently that it's no longer news. Even his most incendiary comments -- like calling the media the "enemy of the people" and anti-American -- get eclipsed by more shocking statements. Though Richard Burr, chairman of the Senate Intelligence Committee, told POLITICO that Congress is "not going to investigate news organizations," the notion that an idea so antithetical to the First Amendment is being entertained in the White House and given oxygen on social media remains alarming.

-- "If Congress were to start investigating news outlets...we are then something less than the United States of America," Acosta said after the briefing on CNN. "It is just an appalling suggestion to come from the president of the United States."

MILO YIANNOPOULOS TELLS BUZZFEED HE'S "NOT A RACIST" and condemns racism, even as reporter Joseph Bernstein revealed through a cache of documents how the former Breitbart technology editor and provocateur has courted white nationalists and helped promote their repellent views through the populist news site. "These new emails and documents, however, clearly show that Breitbart does more than tolerate the most hate-filled, racist voices of the alt-right," Bernstein writes. "It thrives on them, fueling and being fueled by some of the most toxic beliefs on the political spectrum -- and clearing the way for them to enter the American mainstream."

-- There's so much in this 8,000-word blockbuster, as Bernstein relies on the documents and additional reporting to shed light on Yiannopoulos's relationships to Breitbart News chief and former White House strategist Steve Bannon, tech billionaire Peter Thiel, leading white

nationalists, mainstream journalists, and Trump and Breitbart backers Robert and Rebekah Mercer. Bernstein also has a video of Yiannopoulos singing "America the Beautiful" as attendees, including white nationalist Richard Spencer, sieg heil in Nazi fashion.

JOURNALIST ARRESTS MOUNT IN ST. LOUIS: Ten journalists have recently been arrested in St. Louis, according to the latest tally from the U.S. Press Freedom Tracker. The arrests have come during coverage of demonstrations in response to the acquittal of white former police officer Jason Stockley in the 2011 shooting death of Anthony Lamar Smith, who is black.

-- Jordan Chariton, a political reporter for progressive outlet The Young Turks who was arrested Tuesday night, suggested that the lack of wider media outrage over the press crackdown stems from the demonstrations receiving little national attention -- and those arrested largely being from the independent or local media rather than, say, CNN or the New York Times. "I think police can operate with impunity knowing that there's no name-brand press," he said.

-- Police arrested legal observers and journalists, by Chariton's account, as a way to go after the "eyes and ears" on the street before turning to protesters who had blocked a highway. Chariton said he and his cameraman, Ty Bayliss, were fingerprinted, had mugshots taken, and spent 16 hours in jail. They have yet to be charged with a crime.

-- "Corporate media, independent, right, left, all of us need to protect each other because at the end of the day you can't normalize the obstruction of the First Amendment," he said.

GLENN THRUSH ALREADY QUIT TWITTER, but his past tweets about President Trump drew criticism from former New York Times executive editor Jill Abramson. She praised her former employer in the Columbia Journalism Review for its big Trump-related scoops but suggested that the behavior of Times staffers, like Thrush, on Twitter "can be construed by critics as gloating or overkill." In particular, she questioned Thrush tweeting about Trump spreading "demonstrably false information" or having "degraded discourse." Such observations, "while true," she wrote, "are opinions."

-- "Explain that one to me. Isn't a 'true' observation by definition a fact?" Thrush responded on Facebook. "This is boss-speak: It's the aesthetics she doesn't like. It doesn't sound 'right' to say Trump has degraded discourse more than any other president in recent history. But it is undeniably true. Whether it is useful for an institution to have its reporter saying it so bluntly is a matter of editorial discretion and style. It is entirely appropriate for them to constrain my expression should they so choose. But true is true, and observation isn't opinion. That is an alternative fact, Jill."

SPEAKING OF THE PAPER'S WHITE HOUSE COVERAGE: "Is Trump-Whisperer Maggie Haberman Changing The New York Times? -- by Vanity Fair's Joe Pompeo: "With her tabloid pedigree, her Lois Lane mien, her 158,000 thousand tweets to more than 640,000 followers, and her lightning rise to front-page dominance, Haberman is a sui generis creature at the Times, even if she has formidable predecessors."

AND SOME WELCOME NEWS FOR THE NEWS MEDIA: POLITICO's Jason Schwartz

writes that polls indicate the media is increasingly more trusted than Trump. "'Confidence in the media has gone up this year while confidence in the executive branch has gone down,' said Chris Kahn, Reuters' U.S. political polling editor. Kahn added that when the president weighs in on a subject, he usually heavily influences how people feel."

SOUND BITE: "The whole fake news thing doesn't really carry much weight on Capitol Hill, where lawmakers coexist with reporters who work hard to do a job." [Jake Sherman]

MUST-READ: The New York Times' Jodi Kantor and Megan Twohey reveal decades of allegations of sexual harassment and inappropriate conduct against film mogul Harvey Weinstein -- behavior that many around him were aware of and didn't speak out on. "Dozens of Mr. Weinstein's former and current employees, from assistants to top executives, said they knew of inappropriate conduct while they worked for him," they report. "Only a handful said they ever confronted him."

BEFORE THE TIMES' BOMBSHELL DROPPED, Weinstein spoke to a who's who of high-powered lawyers and public relations executives, including former Obama communications director Anita Dunn, according to BuzzFeed. He also consulted Lanny Davis, David Boies, Lisa Bloom, and Charles Harder, who successfully represented Hulk Hogan against Gawker and Melania Trump against The Daily Mail. Harder is now threatening a lawsuit against The Times (though, importantly, he still hasn't filed).

-- "This is a vendetta," Weinstein told Page Six, "and the next time I see [Times executive editor] Dean Baquet it will be across a courtroom."

FACEBOOK VS. "FAKE NEWS" -- per CNBC: "Facebook will start testing fake news warnings, adding context to the traditional news feed and constant sharing on its platform...The new feature will allow Facebook users to tap a button for additional information about the news article and source, including details from the publisher's Wikipedia entry, trending and related content, and information about how the article is being shared."

THE WATERGATE EFFECT: Margaret Sullivan revisits Woodward and Bernstein's influence on a generation of journalists amid today's renewed sense of mission in newsrooms. "Trump coverage may not recruit a new generation of reporters, but it does seem to inspire those who are already in the journalism pipeline," she writes in CJR. "Many of them are fired up by what they see every day."

REVOLVING DOOR:

Washington Post national security reporter **Adam Entous** is joining The New Yorker as a staff writer. I reported yesterday on the expected move, but the news became official following memos from each publication. New Yorker editor David Remnick called Entous "one of the finest and most rigorous investigative journalists in the country," while Post editors touted Entous's "very impressive run" since joining a year earlier from the Wall Street Journal. They also noted Entous will remain at the Post while "he finishes a number of stories."

Maegan Vazquez, most recently a White House reporter for IJR, is joining CNN's politics team as a breaking news reporter. She previously interned at CNN.

Caitlin Huston is the new editor in chief of Broadway News. She was previously a reporter at MarketWatch.

EXTRAS:

-- -- Though Sinclair's controversial merger with Tribune isn't complete, company president Chris Ripley welcomed future colleagues to "the nation's largest broadcast group" in a memo obtained by FTV Live.

-- Megyn Kelly is getting paid $69 million over three years, according to The Daily Mail.

-- ProPublica launches network to support local news.

-- Nicely done NBC Left Field video on a "fake news firestorm in Twin Falls, Idaho."

Subject: Pruitt signals new effort to start biofuel rule reset

By Eric Wolff

07/05/2017 04:28 PM EDT

EPA Administrator Scott Pruitt's announcement laying out the proposed 2018 biofuel volumes today appears to foreshadow a forthcoming shakeup of the Renewable Fuel Standard.

In his statement, Pruitt said that EPA will conduct a technical analysis to "inform a future rule" for a reset. The RFS allows EPA to reset volumes when targets set in statute are missed by 20 percent or more two years in a row, or by 50 percent in one year. While conventional biofuels — mostly corn-based ethanol — have kept pace with EPA demand, advanced biofuels, such as cellulosic ethanol, have not.

"The Clean Air Act requires EPA to reset volume targets when certain conditions are met. We expect those conditions to be met in the near future, so we are conducting technical analysis now, to inform future reset rules," Pruitt said.

The announcement also said the agency will be "assessing higher levels of ethanol free gasoline," although the announcement did not make clear what that entailed. Opponents of the RFS have argued that gasoline blended with ethanol poses a danger to small engines like lawnmowers, snow mobiles and small boat motors.

EPA is also taking comment to "address concerns" that some RFS obligations are met with imported fuel from Brazil, Argentina and Indonesia. The National Biodiesel Board, a trade association for biodiesel producers, has lodged a trade complaint against Argentina and Indonesia.

The agency will also seek to "bolster" cooperation between EPA and the Commodities Futures Trading Commission to help manage transactions in RFS credits. RFS opponents, notably including Trump adviser Carl Icahn, have complained about fraud in the credits market.

Subject: POLITICO's Morning Transportation: House, Senate move forward on FAA, driverless cars — Fact file about DOT's general counsel nominee — FAA wish lists

By Tanya Snyder | 06/26/2017 10:00 AM EDT

With help from Lauren Gardner

ALL ON THE SAME TEAM: After months of disorganization, the House and Senate are now marching forward in lockstep toward two distinct goals: reauthorizing the FAA and setting forth a legislative framework for the integration of autonomous vehicles.

Step one: FAA: The House and Senate are both marking up their FAA reauthorization bills this week - the House on Tuesday, the Senate on Thursday. Why the fast-walking? Because the FAA's current authorization to collect and spend the excise taxes that fuel the aviation system will expire Sept. 30, and lawmakers are trying to get a full reauthorization bill before they have to start breathing the E word. Even last year, House Transportation Committee Chairman Bill Shuster (R-Pa.) managed to get his bill out of committee, and that's likely to happen again this year. The real question mark hovers over floor consideration, which he's pushing for sometime next month.

Step two: driverless cars: The Energy and Commerce Committee will also begin discussing 13 bills they hope to roll into one big legislative package on driverless cars. Here, the House is slightly ahead of the Senate, where Commerce Committee leaders have put forth a set of "principles" regarding driverless car legislation and held a hearing on the issue but don't have any actual bills in front of them yet.

HAPPY MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. As always, send us tips, feedback and lyrics: tsnyder@politico.com or @TSnyderDC and lgardner@politico.com or @Gardner_LM.

"I remember searching for the perfect words / I was hoping you might change your mind / I remember a soldier sleeping next to me / Riding on the Metro." h/t Jennifer Mitchell, Virginia Department of Rail and Public Transportation

Want to keep up with MT's song picks? Our Spotify playlist has over 100 followers - you can get listening, too!

Programming note: Morning Transportation won't publish Monday, July 3, or Tuesday, July 4, in observance of the July 4 holiday.

THE WEEK AHEAD:

Tuesday - The House Transportation Committee marks up the FAA reauthorization bill. The House Energy and Commerce Committee holds a hearing on self-driving vehicle legislation.

ITIF hosts a Hill briefing on technological disruption in the labor market.

Wednesday - The Senate Commerce Committee holds a confirmation hearing for Steven Bradbury to be general counsel at the Department of Transportation.

Thursday - The Senate Commerce Committee marks up its FAA reauthorization bill.

ON THE FLOOR: The House this week will consider a bill (H.R. 1726) by Rep. Duncan Hunter (R-Calif.) that would, essentially, clean up the Coast Guard's statutory codes, reorganizing it to be more cohesive.

BRADBURY'S FACT FILE: DOT general counsel nominee Steven Bradbury was a donor and adviser to the campaigns of Jeb Bush and Sen. Marco Rubio (R-Fla.) in 2016. He did not contribute to Trump's campaign, according to Bradbury's Senate questionnaire. And, as Eugene Mulero of Transport Topics pointed out , the two stains on Bradbury's otherwise pristine criminal record involve a $37 fine and one-point violation for failing to yield on a left turn in Montgomery County in 2002, and a $10 fine in 1981 for not paying his subway fare in New York City.

GIVE US A BREAK: The Teamsters are hoping the FAA bill won't get bogged down with non-germane provisions - specifically, one that would preempt state laws requiring rest and meal breaks for truckers. Lawmakers have tried to insert such provisions into the FAST Act, the THUD appropriations bill and the last FAA bill, and failed each time, Teamster President Jimmy Hoffa noted in a letter sent to House Transportation Committee leaders on Friday. Hoffa accuses the trucking industry of trying to "muscle legislation through Congress that would rob their own workers of pay and safety protections."

GIT 'ER DONE: The National Association of Manufacturers wrote to House Transportation Committee leaders urging them to pass an FAA reauthorization by the September 30 deadline to prevent a shutdown, and to make sure a few key provisions are included. The organization is asking Congress to uncap the passenger facility charge so airports can modernize. They also want Congress to help speed up the aircraft certification process; maintain Open Skies agreements; stick to ICAO regulations on the shipping of lithium ion batteries - and pre-empt state laws on trucker rest and meal breaks. The group was silent on the air traffic control proposal, on which they have no public position, and which is the single biggest obstacle to enacting a long-term FAA bill before the deadline.

FLYING THE CYBER SKIES - The Senate FAA bill says that before the FAA should grants authorization for planes to fly, it should consider 1) whether the cybersecurity of plane electronics systems are up to snuff, and 2) whether planes prevent passengers from gaining access to flight guidance or aircraft control via in-flight entertainment systems. The latter provision appears to be a reaction to both controversial research and a disputed incident that raised questions about whether hackers can gain control of a plane via an entertainment system. Our friends over at Pro Cybersecurity have more.

WAY AHEAD OF YOU: Amtrak has already started making "significant progress" on

correcting the problems identified in the inspector general's report we mentioned in MT last week, according to a spokeswoman. Before the IG report was finalized, they reorganized key programs, addressed a vendor performance issue "at the highest levels," and "only projects that delivered value to Amtrak were continued and unused funds were returned to the company." They expect more progress by the time their fiscal year ends September 30.

BUH-BYE B.A.T.: Despite the fervent support of Speaker Paul Ryan, House Republicans are ready to call it quits on his proposal to include a border adjustment tax in their tax overhaul plans, report Ben White and Colin Wilhelm. White House opposition spooked GOP leaders away from supporting the tax, which was estimated to net about $1 trillion in key offsets. Without it, it's unclear how Republicans will be able to push corporate tax rates from 35 percent to 15 percent as promised without adding to the deficit. The border adjustment tax was also public enemy number one for the auto industry, which warned that a BAT would increase the cost of a new car by an average of $2,000 per vehicle.

A DELAY A DAY: NHTSA has pushed back the effective date of a final rule adjusting civil penalties for fuel economy violations to inflation. The rule, issued in December, now won't take effect until July 10, according to a notice set to be scheduled in the Federal Register on Tuesday. The rule only affects vehicles for model year 2019 and beyond.

SHIFTING GEARS: Samantha Greene starts today as communications director for Rep. Julia Brownley (D-Calif.), a T&I member. Greene previously did comms for the Information Technology and Innovation Foundation.

GONE TO THE DOGS: Check out this video of "take your dog to work day," including the inspiration for "Pets on Trains" - Lilly, the dog who owns Rep. Jeff Denham (R-Calif.).

THE AUTOBAHN:

- Bills on high-speed rail, autonomous and electric vehicles teed up in the UK this year. GazetteLive.

- Potholes ahead for states looking to get into the self-driving car game. USA Today.

- "Autonomous high-speed trains expected to operate in France by 2023." Normangee Star.

- Oregon's pay-per-mile program refunds more than it earns in revenue. The Argus Observer.

- "Amazon's beehive idea for drone delivery in thickly populated urban centers." 1redDrop.

- "De Blasio: I'm 'much less hopeful' about working with Trump." POLITICO.

- "Japanese airbag maker Takata files for bankruptcy, gets U.S. sponsor." Reuters.

- "Delays at Reagan National Airport as crews repair patch of main runway." The Washington Post.

THE COUNTDOWN: DOT appropriations run out in 97 days. The FAA reauthorization expires in 97 days. Highway and transit policy is up for renewal in 1,193 days.

-- FASCINATING, via today's Palm Beach Post's front page: "Days before President Trump flies into town for Thanksgiving, one of the world's most expensive yachts, owned by Russian oligarch Roman Abramovich, sailed into the Port of Palm Beach Friday afternoon.

"The 533-foot Eclipse, valued at $400 million to $500 million, comes equipped with a pool, helipad, submarine and room for a crew of 92, according to marine websites. It made its way past The Bahamas and docked at 1:15 p.m, taking the slip normally reserved for the Grand Celebration, a cruise ship currently on hurricane-relief duty in St. Thomas, Virgin Islands. Originally booked to stay through Dec. 5, the Eclipse may have to leave Dec. 1, as it is being followed by the 644-foot World, billed as 'the largest private residential ship on the planet,' which is scheduled to arrive that day.

"Where will the Eclipse go? According to the MarineTraffic app, she plans to head south on the Intracoastal Waterway, toward downtown West Palm Beach. Note to Transportation Security Administration: That would put a Russian submarine within a mile or so of the winter White House." http://bit.ly/2AbRhp1

TALKER -- TOM RICKS in **FOREIGN POLICY: "Babylon Revisited: Melancholy Thoughts After a Short Trip to Washington, D.C.:** As a young reporter in political Washington in the late 1980s, I noticed that there was a type of person who thrived in the driven, transactional environment of the capital." http://atfp.co/2yXIlKh

HARDSHIP ASSIGNMENT -- JONATHAN MARTIN and **ALEX BURNS** in Austin: **"Republican Governors' 2018 Dilemma: What to Do About Trump?"** http://nyti.ms/2zNR8HS

Good Saturday morning. REALITY FINALLY SETS IN -- "Aides give up on trying to control Trump's tweets," by Annie Karni: "When candidate Donald Trump waged a Twitter war against Khizr Khan, the Gold Star father who rebuked him from the stage of the Democratic National Convention, former House Speaker Newt Gingrich and New Jersey Gov. Chris Christie were sent in for a 'tough love talk' about the efficacy of the tweets, two former campaign officials recalled. Controlling potentially damaging tweets was a job left mostly to the legal team in the early days of the administration. Former attorneys Marc Kasowitz and Jay Sekulow gave Trump one simple rule to guide his tweeting habit: don't comment online about the Russia investigation.

"'The message was, tweet about policy, tweet about politics, but don't attack the special counsel,' recalled another former aide. None of the advice seemed to have any lasting effect on a president who views his own impulses as a virtue. And these days, the staff has basically stopped trying: there is no character inhabiting the West Wing who is dispatched to counsel the president when he aims the powerful weapon of his Twitter feed at himself." http://politi.co/2AYJPdQ

NYT'S PETER BAKER -- "In Mocking Franken Over Claims of Sexual Misconduct, Trump Joins a Debate He Started": "[T]he notion that Mr. Trump himself would weigh in given his own history of crude talk about women and the multiple allegations against him surprised many in Washington who thought he could not surprise them anymore. A typical politician with Mr. Trump's history would stay far away from discussing someone else's behavior lest it dredge his own back into the spotlight. But as Mr. Trump has shown repeatedly during his 10-month presidency, he is rarely deterred by conventional political wisdom even as he leaves it to his staff to fend off the cries of hypocrisy.

"'Like everything else Trump touches, he hijacks it with his chronic dishonesty and childishness,' said Mark Salter, a longtime adviser to Senator John McCain, Republican of Arizona. 'The intense, angry and largely ignorant tribalism afflicting our politics predates Trump's arrival on the scene. But he has infused it with a psychopath's inability to accept that social norms apply to him.'" http://nyti.ms/2hJ8PkX

CLINTON WEIGHS IN ON FRANKEN, MOORE -- "Clinton blasts Trump and Moore over sexual misconduct allegations," by Cristiano Lima: "Hillary Clinton slammed President Donald Trump and Alabama Senate candidate Roy Moore on Friday over their alleged sexual misconduct, criticizing them for not 'accepting responsibility' and 'apologizing' for their reported transgressions as Sen. Al Franken did. Clinton said that Franken, who was accused this week of groping a female broadcaster in 2006, acted responsibly by owning up to his actions and publicly apologizing for them - a far cry from the response given by Trump and Moore, she said.

"The former secretary of state and Democratic presidential nominee said that Franken's request to have the Senate ethics panel investigate his sexual misconduct 'is the kind of accountability I'm talking about.' 'I don't hear that from Roy Moore or Donald Trump,' she added during an interview with New York's WABC radio. 'Look at the contrast between Al Franken, accepting responsibility, apologizing, and Roy Moore and Donald Trump, who have done neither.'" http://politi.co/2hzuE2m

-- CLINTON ON TRUMP'S PRESIDENCY: "Trump 'has disgraced the office' ... Asked whether there was anything she admired about the Trump's tenure in office thus far, Clinton replied: 'No. The answer is absolutely no.' 'I didn't think he'd be as bad as he turned out to be,' she added."

TRUMP RESPONDS -- @realDonaldTrump at 8:31 a.m.: "Crooked Hillary Clinton is the worst (and biggest) loser of all time. She just can't stop, which is so good for the Republican Party. Hillary, get on with your life and give it another try in three years!"

ABOUT THOSE GILLIBRAND-CLINTON COMMENTS -- "Gillibrand remark on Clinton resignation shocks Democrats," by Gabe Debenedetti in New York: "Kirsten Gillibrand is having a moment, whether she meant to or not. Going where no other prominent Democrat had before on Thursday evening by declaring that Bill Clinton should have resigned the presidency during the Monica Lewinsky scandal, the New York senator and potential 2020 presidential contender yet again found herself the face of a national conversation with the potential to dominate headlines and divide her party. ...

"The longtime Clinton ally's answer to the New York Times question neatly encapsulated how Gillibrand has placed herself front-and-center on the dominant issue of the day, even if it forces a debate her own party is uncomfortable confronting. And it highlighted the political dexterity that her critics and rivals often deride as opportunism: A former conservative Blue Dog House member, Gillibrand has reinvented herself as a leading progressive and face of the Trump resistance ahead of a potential presidential run." http://politi.co/2hzVmlj

****** **A message from Chevron:** We're piloting a program that uses drones to keep an eye on Chevron wells, tanks, and pipelines-all to keep DOERS and what they're doin' safer. Watch the video: http://politi.co/2zOnTVE ******

SHOW ME THE MONEY -- "Roy Moore scandal ignites fundraising explosion for Democratic challenger Doug Jones," by NBC News' Alex Seitz-Wald: "The Roy Moore scandal has unleashed a torrent of online donations to Democrat Doug Jones, who was collecting around $250,000 per day in its immediate aftermath ... Democrats may end up in the unlikely situation of dramatically outspending the GOP in the Senate contest in deep red Alabama now that national Republicans have abandoned Moore." http://nbcnews.to/2zSy4FM

PRESIDENT TRUMP WEIGHS IN ON BIG GAME CONTROVERSY -- @realDonaldTrump at 7:47 p.m.: "Put big game trophy decision on hold until such time as I review all conservation facts. Under study for years. Will update soon with Secretary Zinke. Thank you!" ***Trump also retweeted Greta Van Susteren and Piers Morgan this morning supporting his decision on trophy hunting.***

-- STATEMENT FROM INTERIOR SECRETARY RYAN ZINKE: "President Trump and I have talked and both believe that conservation and healthy herds are critical. As a result, in a manner compliant with all applicable laws, rules, and regulations, the issuing of permits is being put on hold as the decision is being reversed."

IT'S ALL ABOUT THAT BASE -- "Trump adds five conservatives to list of possible Supreme Court picks," by Reuters' Jim Oliphant and Andrew Chung: "In a move certain to please conservatives, President Donald Trump on Friday added five names to his list of candidates for a prospective U.S. Supreme Court vacancy as he presses ahead with a campaign to move the federal judiciary to the right. Two of them are appellate judges who were nominated by Trump earlier this year and confirmed by the Senate: Amy Coney Barrett and Kevin Newsom. Another, Brett Kavanaugh, sits on the U.S. Court of Appeals in Washington, long viewed as a stepping-stone to the high court. The others were Britt Grant, a Georgia Supreme Court justice, and Patrick Wyrick, a Oklahoma Supreme Court justice." http://reut.rs/2yVce3h

SOME THINGS NEVER CHANGE -- "Trump still loves polls," by Josh Dawsey and Steven Shepard: "As a TV host, Donald Trump loved ratings. As president, he loves polls-as long as they show him on the upswing. He crowed on Twitter hours after landing back in Washington from his 12-day Asia tour about his Rasmussen number-46 percent-noting it was 'one of the most accurate' in 2016, and decried 'fake news' polls showing his approval in the 30s while also suggesting, with no evidence, that 'some people' think his numbers could be in the 50s. (The Rasmussen poll sank to 42 percent on Friday.)

"Aides in the White House often show Trump polls designed to make him feel good, according to aides and advisers. Usually they're the ones that focus just on voters who cast ballots for him in 2016 or are potential Trump supporters -Trump's base-but occasionally include public polls like Rasmussen, depending on what the numbers say. 'You know, I thought that he'd be a little less in campaign mode than he's been. I think he's never really kind of gotten out of campaign mode and I thought he might,' said New Jersey Gov. Chris Christie, a Trump adviser. 'I guess it's his judgment that that's what

he has to do but that's surprised me a little bit.'" http://politi.co/2jAobZp

A PROBLEM FOR REPUBLICANS -- "In towns and cities nationwide, fears of trickle-down effects of federal tax legislation," by WaPo's Renae Merle and Peter Jamison: "[I]n small towns and thriving cities, in Republican- and Democratic-leaning states, local leaders are warning that the $1.5 trillion tax legislation moving through Congress threatens to undermine their ability to raise money for government services, including police and schools. The Republican measures would eliminate or severely curtail taxpayers' ability to lower their federal tax bill by deducting the cost of their state and local taxes. Without that offset, local leaders say, taxpayers will begin to seek relief closer to home, potentially making it more difficult to provide basic services." http://wapo.st/2j6vAeX

FOR YOUR RADAR -- AP at 9:01 a.m.: "PARIS (AP) - Lebanon's Hariri says he is returning to his country, confirms he is resigning amid political tensions."

ANOTHER TWIST IN THE RUSSIA INVESTIGATION -- "Congressional aides may have answers on pro-Russia GOP platform change," by Kyle Cheney: "As U.S. investigators probe whether President Donald Trump's campaign orchestrated a Russia-friendly change to the Republican Party platform last summer, three senior Capitol Hill aides - including Speaker Paul Ryan's chief of staff - may have answers about how the episode unfolded. The three staffers, who have not been accused of any wrongdoing, advised the GOP convention's platform committee on foreign policy matters and had front-row seats when a low-profile group of delegates, acting in conjunction with Trump campaign officials, spiked a proposal urging a tougher U.S. policy against Russian aggression in Ukraine.

"That change has drawn scrutiny from the House and Senate intelligence committees as they investigate whether any Trump campaign officials cooperated with Russian meddling in the 2016 election. Some witnesses say they expect it to become a topic of interest in special counsel Robert Mueller's parallel criminal probe. Spokespeople for the offices of two of the staffers told POLITICO they have not been in contact with Mueller or his team. But Ryan's top aide, Jonathan Burks, would neither confirm nor deny whether he had heard from the special counsel: 'I'm not going to have any comment,' he said." http://politi.co/2A7atUM

-- "Moscow meeting in June 2017 under scrutiny in Trump probe," by AP's Desmond Butler, Mary Clare Jalonick and Eric Tucker: "Earlier this year, a Russian-American lobbyist and another businessman discussed over coffee in Moscow an extraordinary meeting they had attended 12 months earlier: a gathering at Trump Tower with President Donald Trump's son, his son-in-law and his then-campaign chairman. The Moscow meeting in June, which has not been previously disclosed, is now under scrutiny by investigators who want to know why the two men met in the first place and whether there was some effort to get their stories straight about the Trump Tower meeting just weeks before it would become public ... Congressional investigators have questioned both men - lobbyist Rinat Akhmetshin and Ike Kaveladze, a business

associate of a Moscow-based developer and former Trump business partner - and obtained their text message communications." http://bit.ly/2hKpTqC

KEEPING HIS SENSE OF HUMOR -- @charlie_savage: "At Mayflower Hotel, Sessions jokes: 'Is Ambassador Kislyak in the room before I get started? Any Russians? Anybody been to Russia? Got a cousin in Russia?' #FedSoc2017". ***30-second video*** http://bit.ly/2A9Cvz7

HMM -- "U.S. Flagged Russian Firm Kaspersky as Potential Threat as Early as 2004," by WSJ's Paul Sonne: "A Russian cybersecurity firm whose products current and former U.S. officials suspect Moscow has used as a tool for spying was flagged by U.S. military intelligence as a potential security threat as early as 2004, according to new information the Defense Department provided to Congress. ... The DIA 'began producing threat reporting referencing Kaspersky Lab as a threat actor as early as 2004,' according to the email, reviewed by The Wall Street Journal, raising questions about why other federal agencies continued to use the firm's products." http://on.wsj.com/2mCiHyl

JARED WATCH -- "Kushner failed to disclose outreach from Putin ally to Trump campaign," by NBC News' Ken Dilanian and Carol E. Lee: "President Trump's son-in-law and senior adviser, Jared Kushner, failed to disclose what lawmakers called a 'Russian backdoor overture and dinner invite' involving a banker who has been accused of links to Russian organized crime, three sources familiar with the matter told NBC News. An email chain described Aleksander Torshin, a former senator and deputy head of Russia's central bank who is close to Russian President Vladimir Putin, as wanting Trump to attend an event on the sidelines of a National Rifle Association convention in Louisville, Kentucky, in May 2016 ... The email also suggests Torshin was seeking to meet with a high-level Trump campaign official during the convention, and that he may have had a message for Trump from Putin ...

"Kushner rebuffed the request after receiving a lengthy email exchange about it between a West Virginia man and Trump campaign aide Rick Dearborn ... Kushner responded to the email by telling Dearborn and the handful of other Trump campaign officials on the email that they should not accept requests from people who pretend to have contacts with foreign officials to aggrandize themselves ... 'Pass on this,' Kushner responded ... 'A lot of people come claiming to carry messages. Very few we are able to verify. For now I think we decline such meetings.'" http://nbcnews.to/2AamRDs

-- "Kushner attorney fires back at Senate Judiciary Committee," by CNN's Jeremy Herb and Evan Perez: "In a letter Friday to Senate Judiciary Chairman Chuck Grassley of Iowa and ranking Democrat Dianne Feinstein of California, attorney Abbe Lowell wrote that there were no 'missing documents' as the committee has alleged, while criticizing the panel's leaders for going to the media on Thursday with their accusations 'I would have assumed that, if there were any questions about our productions or exchanges, that would have been communicated to me directly before you made this a media event,' Lowell wrote." http://cnn.it/2isWU7A

PUTTING THE SQUEEZE ON MIDDLE EAST PEACE -- "U.S. puts Palestinians on notice: D.C. office may be shuttered," by AP's Josh Lederman and Matt Lee: "The Trump administration put the Palestinians on notice Friday that it will shutter their office in Washington unless they've entered serious peace talks with Israel, U.S. officials said, potentially giving President Donald Trump more leverage as he seeks an elusive Mideast peace deal. Secretary of State Rex Tillerson has determined that the Palestinians ran afoul of an obscure provision in a U.S. law that says the Palestine Liberation Organization's mission must close if the Palestinians try to get the International Criminal Court to prosecute Israelis for crimes against Palestinians. A State Department official said that in September, Palestinian President Mahmoud Abbas crossed that line by calling on the ICC to investigate and prosecute Israelis.

"But the law leaves the president a way out, so Tillerson's declaration doesn't necessarily mean the office will close. Trump now has 90 days to consider whether the Palestinians are in 'direct and meaningful negotiations with Israel.' If Trump determines they are, the Palestinians can keep the office. The official said it was unclear whether the U.S. might close the office before the 90-day period expires, but said the mission remains open at least for now." http://bit.ly/2yTYzcS

-- "The Mooch is headed to Israel just weeks after 'tone-deaf' Holocaust poll," by Page Six's Kevin Dugan: "A month after Anthony Scaramucci's 'media venture' posted a tasteless poll on the Holocaust, the short-lived White House communications director is taking a four-day trip to Israel, The Post has learned. 'I'll meet everybody,' he told The Post on Friday, hours before he was to take off. 'I'm having dinner with Dave Friedman, the ambassador, who's a great friend of mine.' The one-time hedgie is also heading to Yad Vashem, the Holocaust memorial site in Jerusalem, he said." http://pge.sx/2j6XJCy

THE GRINCH -- "CIA nixes holiday party invites for media," by Ali Watkins: "CIA Director Mike Pompeo has opted not to invite reporters to the CIA's annual holiday party this year, ending a years-long streak of inviting the intelligence press corps to the upscale event. The event has historically provided a rare opportunity for reporters to mingle with agency officials who typically shun or avoid them - but that the idea has

been nixed by Pompeo, who has been openly critical of the news media, was hardly surprising. ... The party, held in the agency's iconic headquarters lobby, is also a famously bizarre Washington exercise. Reporters, closely minded by the CIA's press staff, are able to mingle in the hors d'oeuvres line with station chiefs, foreign partners and occupants of the CIA's executive offices." http://politi.co/2zPqD48

BRETT TALLEY PROFILE - "Law clerk by day, ghost hunter by night, now Trump's judiciary nominee," by WaPo's Robert O'Harrow Jr.: "Few in memory have been nominated with credentials quite like those of [Brett] Talley, 36, an Alabama native, a political speechwriter, an author of horror books and a fledgling lawyer who has never tried a case. In 2009 and 2010, he was a member of the Tuscaloosa Paranormal Research Group, a volunteer operation that since the early 2000s has held all-night vigils and used infrared cameras, handheld sensors and other devices to search for spectral entities in plantation mansions, abandoned hospitals and other buildings. ... In 2014, when he was a speechwriter on Capitol Hill, Talley took a Post reporter ghost hunting in a District cemetery." http://wapo.st/2ze5jGK

NOT THE ONION - "Candidate for Ohio governor reveals sexual past on Facebook," by AP's Julie Carr Smyth in Columbus: "A state Supreme Court justice running for governor volunteered candid details of his sexual past on Facebook on Friday, saying he was taking a swipe at the 'media frenzy' over sexual misconduct. Democrat William O'Neill's post was immediately attacked as inappropriate and led to calls for his ouster. In it, he wrote that he has been 'sexually intimate with approximately 50 very attractive females," including 'a gorgeous blonde' with whom he 'made passionate love' in a hay loft and a 'drop dead gorgeous red head' from Cleveland." http://bit.ly/2zPfuAH

WES GOODMAN UPDATE -- "How a conservative group dealt with a fondling charge against a rising GOP star," by WaPo's Kimberly Kindy and Elise Viebeck: "On a fall evening two years ago, donors gathered during a conference at a Ritz-Carlton hotel near Washington to raise funds for a 31-year-old candidate for the Ohio legislature who was a rising star in evangelical politics. Hours later, upstairs in a hotel guest room, an 18-year-old college student who had come to the event with his parents said the candidate unzipped his pants and fondled him in the middle of the night.

"The frightened teenager fled the room and told his mother and stepfather, who demanded action from the head of the organization hosting the conference ... Tony Perkins, president of the Council for National Policy [and head of the Family Research Council] ... Goodman, 33, abruptly resigned this week after state legislative leaders learned of what the House speaker called 'inappropriate behavior related to his state office.' Local media outlets have reported the behavior involved a consensual sexual encounter with a male visitor in his legislative office." http://wapo.st/2AYMkgf

DRIP, DRIP, DRIP -- "Rep. Gianforte's account to police on assault of reporter appears to contradict his later apology," by WaPo's Ellie Silverman: "Documents released by law enforcement officials in Montana on Friday show that Greg Gianforte,

then the Republican candidate in the state's special congressional election, told police in May that a reporter from the Guardian had grabbed his wrist during a physical altercation at his campaign headquarters, blaming the 'liberal media' for 'trying to make a story.' His statement appears to contradict the apology he later issued to Ben Jacobs, saying the reporter 'did not initiate any physical contact with me,' raising questions about whether the congressman was truthful with authorities. Travis Hall, a spokesperson for Gianforte, referred The Washington Post to a statement given to the Associated Press, in which he said the information in the documents was 'nothing new.'" http://wapo.st/2jylgPE

REMEMBERING BOBBY BAKER - WaPo's Jon Thurber: "Bobby Baker, a protege of future president Lyndon B. Johnson whose career of wealth and privilege came crashing down in an influence-peddling scandal, died Nov. 12 -- his 89th birthday -- in St. Augustine, Fla. Mr. Baker [was] once the most influential staffer in the U.S. Senate ... 'Mr. Baker, I understand you know where the bodies are buried in the Senate. I'd appreciate it if you'd come to my office and talk with me,' the newly elected Sen. Johnson (D-Tex.) said in his first telephone conversation with Mr. Baker in late 1948. Mr. Baker was just 20 at the time and a staffer for the Senate leadership ... His vast knowledge of the operations of the Senate and his facility in the art of accommodation - moving pet legislative projects ahead for some senators or helping fulfill the proclivities of others for drink, sex or cash - would make him an invaluable asset to Johnson." http://wapo.st/2zNz94k

Environment & Safety Resource Center Update

September 11, 2017 - Number 37

Analysis : Safety Guide | Waste Management Guide | Water Pollution Control Guide
Federal Statutes, Regulations and Agency Documents : Federal Chemical Controls Updates | Federal Hazardous Materials Transport Updates | Federal Register Final Rules | Federal Register Notices | Federal Register Proposed Rules | Military Documents
States—Environment : Arizona | California | New Jersey | Oklahoma | Utah | Washington

Analysis

Safety Guide

Federal

State

Minnesota (Boilers and Pressure Vessels). Updated to include a new rule clarifying attendance requirements at high-pressure and unoccupied high-pressure boiler plants and revising attendance horsepower levels to align with the licensing statute. The rule also adds clarifying language, provides for an additional unoccupied plant option, and specifies requirements for boiler attendants to update logbooks. The new rule became effective Sept. 5.

Waste Management Guide

State

Florida (Release Reporting). Updated to reflect Florida's Public Notice of Contamination Act, which requires owners and operators of facilities to report discharges of a reportable pollution release to the Department of Environmental Protection (DEP) within 24 hours. The law also requires owners and operators to report the migration of pollutants off-site to the DEP within 24 hours. The department subsequently must post a notice of the release on a designated public website. The statute took effect July 17.

Water Pollution Control Guide

State

Wisconsin (Effluent Guidelines). Updated to reflect the requirement in Department of Natural

Resources (DNR) regulations for discharge permits to include effluent limitations. The DNR may impose an effluent limit on an internal waste stream if it is impractical or infeasible to do so at the point of discharge.

Wisconsin (Water Quality Management Plans). Updated with the requirement in state law directing the DNR to establish a continuing water quality management planning process.

Wisconsin (Permit Fees). Updated with annual fee requirements for discharge permits for stormwater from municipal systems, industrial sites, and construction sites. In areas with authorized local programs, the municipality pays a $75 annual fee for each construction site approved during the previous year instead of the permit holder paying the fee.

Wisconsin (Monitoring and Reporting). Updated to reflect the requirement for the DNR to determine monitoring frequency for each effluent limitation in a Wisconsin Pollutant Discharge Elimination System (WPDES) permit on a case-by-case basis.

Wisconsin (Stormwater Permits for Industrial Activities). Updated with a statutory requirement for owners or operators to obtain a permit for discharges from stormwater conveyances associated with industrial activity as defined by the DNR.

Wisconsin (Pretreatment Program). Updated to reflect requirements for industrial users discharging to publicly owned treatment works (POTWs) to comply with monitoring and reporting requirements. A POTW subject to pretreatment requirements must develop and implement procedures to ensure compliance by industrial users. POTW pretreatment programs also are subject to reporting requirements.

Subject: Morrisey announces West Virginia Senate run

By Kevin Robillard

07/10/2017 01:43 PM EDT

West Virginia Attorney General Patrick Morrisey announced a challenge to Democratic Sen. Joe Manchin today, setting up a GOP primary showdown with Rep. Evan Jenkins.

Morrisey, who filed lawsuits against President Barack Obama's administration over environmental regulations, plans on running to Jenkins' right. In an announcement video labeling Morrisey a "conservative workhorse," the attorney general takes clear shots at the congressman and incumbent senator.

"Unlike my opponents, I've never supported Hillary or Obama or Obamacare or higher taxes, or cap and trade," Morrisey says to the camera in the video. "You'll never have to worry about me wavering in my conservative values."

The 2:30-long video also features Morrisey promoting gun rights, his work on the opioid epidemic and fights against the EPA.

"I'm proud to be a conservative workhorse, and I want to be your U.S. senator," Morrisey concludes the ad.

Harm From Low Doses of Chemicals Could Be Overlooked: Academies

Posted July 18, 2017, 02:00 P.M. ET

By Pat Rizzuto

Potential health problems associated with low doses of hormonally-active chemicals could be missed unless the EPA specifically looks for them, according to a National Academies report released July 18.

Determining whether human and animal studies both find evidence that low doses of a chemical cause harm also would be easier if experimental animal studies routinely measured internal concentrations of the chemicals in the test animals, David Dorman, the chairman of the academies committee that prepared the report told Bloomberg BNA. Dorman teaches toxicology at North Carolina State University.

The Dow Chemical Co. already uses a toxicity testing protocol recommended in the report: it measures internal doses of chemicals given to animals during toxicity tests. The National Toxicology Program also routinely measures internal concentrations of chemicals in experimental animal studies. The Environmental Protection Agency takes similar measurements when conducting some of its own research.

The academies report on low-dose toxicity from hormonally-active, or "endocrine-active," chemicals recommends the EPA use a three-pronged strategy to detect health problems that could result from the low doses to which people are exposed. The report defines low doses as meaning chemical concentrations found or estimated to be in people.

It appears the EPA should incorporate the report's recommendations into its Endocrine Disruptor Screening Program, which examines whether pesticides and chemicals in drinking water affect the female or male reproductive hormones, estrogen and androgen, or the thyroid hormone, Nichelle Harriott, science and regulatory director for Beyond Pesticides told Bloomberg BNA based on BNA's summary of the report's key findings. The EPA's current chemical testing protocols could miss health problems that occur at very low doses and during vulnerable stages of development, Harriott said.

Three-pronged Strategy

The academies recommended the EPA first survey scientific studies, work with scientific organizations, and, perhaps, track social media to identify possible health effects that may occur when people are exposed to low doses of chemicals that mimic, block or alter hormone function.

The EPA should also examine experimental animal and human data systematically to investigate whether low-doses of endocrine active chemicals are causing potential effects, the report said.

To help it understand whether such effects are actually occurring at exposure levels in the general public or certain subpopulations, the agency should consider updating chemical toxicity test designs, requiring new data, securing new toxicity or exposure prediction models, and other actions to make sure it is identifying health effects occurring at exposures the public endures, it said.

Plasticizers, Flame Retardants

The committee followed its own recommendations as it analyzed phthalates, a group of which are called plasticizers, because they make plastic soft, and polybrominated diphenyl ethers (PBDEs), a group of flame retardants.

Among its findings, the committee concluded fetal exposure to a plastic softener, diethylhexyl phthalate (DEHP), could cause a reproductive abnormality and decrease testosterone levels in males. Exposure to at least one of the PBDEs could decrease IQ, it said.

The report does not make any statement about the potential, or risks, of these harms occurring for two reasons.

First, it's difficult to compare the results of animal studies to epidemiological studies of people, because most animal studies report only the dose given to the animal whereas human studies use internal measurements of chemicals in serum or other body fluids or tissues, the report said.

Second, conclusions about whether harm was occurring would have necessitated a full risk assessment that examined exposures, which the committee did not undertake, it said.

Dow Measures Internal Doses

Dow began to routinely take internal measurements of new agricultural chemicals used in laboratory animal experiments at least five years ago, James Bus, who has retired from directing toxicology and environmental research at the company, told Bloomberg BNA. Bus is now a toxicological consultant with Exponent, Inc., an environmental and engineering consulting firm. Dow has continued that practice, a company spokesman confirmed July 18.

As a consultant Bus said he now recommends other companies take such internal measurements, because they can help determine whether the problem that's occurring in an animal occurs because the very high dose typically given an animal overwhelmed its ability to break down or eliminate the chemical, he said.

The internal experimental animal measurements also add valuable perspective showing how much lower—often 1,000s or 10,000s times lower—human exposures are, Bus said. He elaborates on these points and discusses their relevance to automated toxicity, or high throughput tests, in a newly

published perspectives article in Current Opinion in Toxicology.

Court Hands EPA Win in Fight Over Dow Pesticide

Posted July 18, 2017, 01:26 P.M. ET

By Tiffany Stecker

A federal appeals court July 18 backed the EPA's decision not to ban a widely used insecticide, saying the agency followed court orders when it denied a request from environmental groups to restrict chlorpyrifos.

The U.S. Court of Appeals for the Ninth Circuit's opinion is a victory for the Trump administration, whose decision not to revoke agricultural uses of chlorpyrifos marked a detour from the path the Obama administration took (Pesticide Action Network N. Am. v. EPA, 9th Cir., No. 14-72794, 7/18/17).

The Natural Resources Defense Council and Pesticide Action Network North America demanded in a 2007 petition that the EPA prohibit spraying of chlorpyrifos on crops because the chemical, manufactured by Dow AgroSciences, has been linked to neurodevelopmental delays in population studies. Chlorpyrifos is used to control pests on corn, soybeans, broccoli, and other crops, as well as on golf courses and turf, according to the Environmental Protection Agency's website.

The groups sued the EPA in 2014 to force the agency's hand on the issue. The EPA repeatedly sought to delay a decision on that petition, but was ultimately given a March 31 deadline by the court.

The EPA in 2015 proposed to revoke tolerances of the pesticide on food crops, which would have ended all agricultural uses of the pesticide, but didn't make a final decision before the end of the Obama administration. EPA Administrator Scott Pruitt denied the environmental advocates' request on March 29.

The NRDC and PANNA swiftly challenged that decision April 5, arguing that the denial was inadequate because it contained no new safety findings and made no final determination on whether the legal tolerances for chlorpyrifos on food crops must be revoked. At the time, the EPA said it would make a final decision on the re-registration of chlorpyrifos by Oct. 1, 2022.

Environmentalists Fight Decision

The three-judge panel disagreed with those arguments. The EPA complied with the court's orders when it issued a "final response" to the petition, they wrote.

"Although EPA dragged its heels for nearly a decade, it has now done what we ordered it to do," judges Diarmuid O'Scannlain, Wallace Tashima, and Margaret McKeown wrote in the opinion.

The environmentalists said the EPA failed to act on the "substance" of the petition. The question before the court, however, was the timing of the decision, not the substance of the agency's regulation, the judges said.

Patti Goldman, an attorney for Earthjustice who represented NRDC and PANNA, said the organizations will shift their attention to fighting the merits of Pruitt's decision.

"We're disappointed in the ruling because what they did is so blatantly illegal," Goldman told Bloomberg BNA.

Goldman is representing the groups on the issue in a separate case being heard before the Ninth Circuit, as well as in administrative objections sent to the EPA. Five states and the District of Columbia have intervened on behalf of the environmentalists in the lawsuit challenging the decision.

According to EPA spokeswoman Amy Graham, "This victory affords EPA the necessary time to conduct a proper evaluation under the law of the science and the studies on chlorpyrifos and provide clarity about the pesticide's safety to the American people."

Dow AgroSciences was not immediately available to respond to the court ruling.

EPA Must Revisit Toxic Air Pollution Standards, Court Says

Posted July 18, 2017, 11:19 A.M. ET

By Andrew Childers

The EPA must provide further evidence that it has adequately regulated air emissions of three toxic pollutants, a federal appellate court ruled today in a victory for environmental advocates.

The U.S. Court of Appeals for the District of Columbia Circuit said that the Environmental Protection Agency must justify how emissions limits for other pollutants also control the three substances in question.

Under Section 112(c)(6) of the Clean Air Act, the EPA must identify sources that account for at least 90 percent of the emissions of seven different hazardous air pollutants and issue emissions standards that control those sources. The agency in 2015 issued a finding that it had met that obligation.

That finding is disputed by environmental advocacy organizations, who say the EPA retroactively claimed it had sufficiently regulated three toxic pollutants—polycyclic organic matter, hexachlorobenzene, and polychlorinated biphenyls—because they were controlled by emissions limits set for other substances. The D.C. Circuit didn't rule on whether the EPA's claims were valid, but found that the agency failed to explain its reliance on those other "surrogate" pollutants.

The advocacy organizations that filed the lawsuit include the American Lung Association and the Sierra Club. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

Liquefied Natural Gas Export Plans Face Years of Oversupply

Posted July 18, 2017, 7:01 A.M. ET

By Alan Kovski

Plans for exports of U.S. liquefied natural gas have multiplied as a global supply glut has developed, raising the prospect that some exporters may lose money for several years.

Analysts say the LNG surplus also increases the likelihood that some contracts could be renegotiated, some projects may be delayed long enough to get past the oversupply period, and some plans may never come to fruition at all.

Fast growth in worldwide LNG demand should eliminate the surplus in five or six years, so there can be good reason to delay projects and become part of a "second wave," analysts told Bloomberg BNA. But until then, markets—rather than lawmakers, regulators or activists—will pose obstacles to profitable exports.

"There are certainly going to be regrets," said Kenneth Grant, executive vice president of Compass Lexecon, a subsidiary of FTI Consulting Inc. "Margins are going to be squeezed for years."

Companies in the competition for LNG exports range from Exxon Mobil Corp. and Royal Dutch Shell Plc to relatively small outfits founded over the last decade with private equity backing.

About 70 percent of global LNG is consumed in Asia, where contract prices typically are indexed to spot crude oil prices. Currently that indexing produces Asian spot LNG prices of about $5.50 per million British thermal units (MMBtu). LNG from the U.S. for sale in Asia costs an estimated $8 to $9 per MMBtu, taking into account the costs of the gas, liquefaction, and transportation.

"Buying LNG at these prices is a guarantee of losing money," Fereidun Fesharaki, chairman of consulting company FGE, said while speaking recently at the Center for Strategic and International Studies, a think tank in Washington.

Market Pressures Felt

U.S. LNG is being exported only from the Sabine Pass facility of Cheniere Energy Inc. in Louisiana. The buyers and sellers using the plant are struggling with global prices well below their estimated costs. GAIL (India) Ltd., one of the buyers, reportedly has been seeking to renegotiate its contract, although neither GAIL nor Cheniere has confirmed the reports.

GAIL, whose majority owner is the government of India, is not a small fish, but so far, Cheniere has indicated it has no intention of renegotiating anything.

The pressure for renegotiations may grow substantially, however, as top LNG traders like Shell see the growing risk of losses within their contract portfolios.

Fesharaki suggested some buyers, especially the national oil companies of some LNG-consuming countries, may walk away from contracts and trigger legal wrangling if they cannot renegotiate terms.

Cheniere, which started exporting in 2016, may be able to pass off most of its market risks to customers, but it has had its own financial strains, losing money in 2016. It turned a profit of $172 million in the first quarter of 2017, but its long-term debt amounted to $24 billion, a high level for such a specialized company with such a short track record in LNG.

Cheniere's contractual customers include GAIL, Shell, Korea Gas Corp., Total S.A., Spanish company Gas Natural Fenosa, and British utility Centrica Plc. Typically the companies will buy the gas and market the LNG themselves, although Cheniere also is willing to sell LNG overseas through its own marketing affiliate, giving it at least some of the market risk that its six big contractual

customers take.

Challenge to Find Customers

Most companies planning to build U.S. LNG export plants need customers to sign 20-year contracts to give banks enough assurance of revenues to justify the loans for the projects. Projects currently under construction are proceeding because of 20-year contracts typically signed when LNG prices were much higher than they are now, before the slump in gas and oil prices that started in 2014.

The U.S. projects under construction are "tolling" arrangements, where the owner of the liquefaction plant provides the service but does not try to take an ownership stake in the LNG. Customers take the market risk.

Now, the challenge is to find customers willing to sign such contracts when everyone can see spot prices are not fully covering U.S. LNG costs. Big customers in Japan, South Korea, China and India have been the special prizes.

President Donald Trump has been talking of LNG sales as a way to improve the U.S. trade balances with China and South Korea and a way to provide Europeans with less reliance on Russian-pipelined natural gas. His remarks do not square with the market conditions, however.

Chinese companies are over-contracted, and Asian demand is so oversubscribed that the surplus has been going to Europe, Fesharaki said. LNG spot prices in Europe are lower than Asian prices, again raising the prospect of sales at a loss for the near term.

The glut shifts negotiating leverage to buyers, Grant at Compass Lexecon said. Buyers might ask for such things as shorter contract terms, fixed prices, and unlimited flexibility on shipping destinations, he said.

Looking farther ahead, Grant said LNG trading likely will shift as it matures to more flexibility in contracts and fewer tolling arrangements. "You can see where it's going," he said.

Much More Supply Soon

Six U.S. LNG export projects are under construction, with in-service target dates spread over 2017-2019, according to Energy Information Administration (EIA) data. The great majority of their capacity already is committed to 20-year contracts, typically take-or-pay contracts where the LNG buyer either takes the amount in the contract or pays an alternative fee to the owner of the liquefaction plant.

Global LNG trade has been running at 34.6 billion cubic feet a day (Bcfd) and growing at about 6 percent a year. The six U.S. projects under construction will add about 9.6 Bcfd of export capacity, said Victoria Zaretskaya, an EIA analyst.

That is a very large capacity addition during a period when Australia also will be expanding its exports, the projects helping to assure an expansion of the global market surplus, Zaretskaya said.

Fesharaki, looking at the global growth, said, "Between 2017 and 2020 we are increasing the global supply by 40 percent. [There is] no way we can increase the demand by 40 percent in three years."

Qatar, the world's largest LNG exporter, sent a tremor through the LNG market July 4 when it said it

would increase its LNG exports by 30 percent in five to seven years through an expansion of its North Field natural gas production. Qatar Petroleum, with majority stakes in the nation's LNG export operations, has some big partners in those operations, including Exxon Mobil Corp., Royal Dutch Shell, and Total S.A.

The cost of producing natural gas at Qatar's North Field and liquefying it is $2 to $2.50 per MMBtu under current market conditions, Zaretskaya said. Such low-price competition means lower utilization rates should be expected for U.S. export facilities once the extra capacity comes online, she said.

"It's very hard to compete with Qatar."

Looking at the indexing of Asian LNG prices to crude oil, EIA estimates oil prices would have to climb to the $65-$70 range per barrel for U.S. LNG to be competitive in Asian spot markets, Zaretskaya said. Current prices are below $50 for the benchmark crudes West Texas Intermediate and Brent, though it is commonly expected that they will rise over time.

Prospects for Second Wave

Five U.S. LNG export projects have been approved by the Energy Department and the Federal Energy Regulatory Commission but are not yet at the construction stage, in part because they do not all have customers locked up. Other projects have been proposed but not yet approved.

The projects that have yet to see construction and win permits would form the second wave for U.S. LNG export facilities.

Magnolia LNG LLC, planned for the Lake Charles, La., area, is one of the projects approved but awaiting customer contracts and construction. It is a subsidiary of Liquefied Natural Gas Ltd.

The target for Magnolia LNG is to complete customer contract negotiations and reach a final investment decision by the end of 2018, Greg Vesey, CEO of the parent company and the subsidiary, told Bloomberg BNA.

Vesey's timing might allow most of the glut to pass before his LNG export plant goes into operation. It can take four years to build an LNG export plant, he said. If the construction were to start late in 2018, the plant might be completed around the end of 2022. Analysts have been suggesting the glut will fade by about 2023-2024, although their forecasts preceded the Qatar expansion announcement.

Still, there are quite a few developers aiming for a similar window of opportunity.

"I accept that it is tough competition," Vesey said.

Private Equity Prominent

Magnolia LNG, like many of the projects, has private equity as part of its financial backing. Private equity managers have been diving into energy infrastructure projects throughout the U.S. oil and gas sector.

Stonepeak Infrastructure Partners, a private equity firm, is a partner of Magnolia LNG. Such investment managers look to energy infrastructure investments for their relative long-term stability,

Vesey said.

Long-term stability is especially valued by pension funds. IFM Investors Pty Ltd., an Australian investment group owned by pension funds, has invested in one of the projects under construction, Freeport LNG, in Texas. Global Infrastructure Partners, a private equity firm, also owns a piece of Freeport LNG.

Cheniere Energy's institutional investors include BlackRock Inc., The Vanguard Group Inc., The Goldman Sachs Group Inc., Carl Icahn, and hedge fund Baupost Group, among others. And Blackstone Group took a big ownership stake in Cheniere's Sabine Pass project through a Cheniere affiliate.

The developers with projects not yet approved will have trouble catching up because they will find that the Federal Energy Regulatory Commission does not hand out approvals easily even when the five-member commission has a quorum for making such decisions, which it does not now, Vesey said. It took almost three years to get Magnolia LNG through FERC.

West Coast Export Plan

Most of the U.S. export plans are for Gulf Coast sites, and two are for the East Coast. One prominent plan, still at an early stage of permitting at FERC, is for the West Coast—the Jordan Cove project that would ship to Asia from Coos Bay, Ore.

Jordan Cove Energy Project L.P., a subsidiary of Canadian energy infrastructure company Veresen Inc., would build the liquefaction plant and a 235-mile pipeline across Oregon from a gas pipeline hub. A basic selling point would be lower shipping costs and less time than sailing from the Gulf Coast through the Panama Canal to Asia.

FERC rejected the Jordan Cove plan in 2016 because the commission did not see customers solidly lined up to justify pipeline approval. Now the "pre-filing" stage of the permitting process at FERC has been restarted for the project because 50 percent the liquefaction plant capacity and 66 percent of the pipeline capacity have been contracted.

The biggest buyers for Jordan Cove are JERA Co. Inc. and the Japanese trading giant Itochu Corp. JERA represents two Japanese utilities and is the world's largest buyer of LNG. Australian financial company Macquarie Group Ltd. also has contracted for part of the pipeline capacity through its Macquarie Energy LLC energy trading unit.

Much farther north is a Pacific Coast LNG export plant sitting idle and up for sale. The Kenai LNG plant at Nikiski, Alaska, was idled in 2015 by owner ConocoPhillips Co. and has not shipped anything since, though it is available to do so. ConocoPhillips halted its operations because of "market conditions," it said in 2016, after competing sources of LNG from Australia, Indonesia and elsewhere had surged into the Asian market.

Lining Things Up for FERC

Jordan Cove is talking with other potential buyers and intends to have 100 percent of its capacity under contract within a time frame that should make the project acceptable to FERC, company spokesman Michael Hinrichs said.

"We prefer not to have any more curve balls thrown at us," Hinrichs said, alluding to the company executives' surprise when FERC rejected their plan in 2016.

Fesharaki, though skeptical about projects that are not in construction, said the Jordan Cove project "maybe is still doable."

He was more definite about the Golden Pass project in Texas, with partners Exxon Mobil and Qatar Petroleum, a Qatari government-owned company. Golden Pass appears sure to go ahead because its partners have the money and appear determined to make it happen, Fesharaki said.

Grant at Compass Lexicon implied something similar, though he did not single out Golden Pass. He said the best bets would be the proposals that are well-capitalized and can make use of existing infrastructure. That would describe the Exxon Mobil and Qatar venture.

Canadian Projects in the Wings

There also has been a spate of proposals for LNG exports from Canada, but they have stalled in the face of the same problem of global oversupply.

LNG projects are not in construction in Canada now, although environmental cleanup as a first step in site preparation has begun at a British Columbia coastal site.

That is the location of the planned Woodfibre LNG project. It is owned by Pacific Oil & Gas Ltd., part of a Singapore-based group of companies. It is fully permitted, as are several other Canadian plans.

Woodfibre apparently would be the first Canadian LNG export project out of the gate, maybe with a startup as early as 2020, said Mark Pinney, manager of natural gas markets and transportation at the Canadian Association of Petroleum Producers. It would be an integrated operation, the gas bought and sold by Woodfibre-affiliated companies, not a tolling arrangement.

The biggest question is how robust LNG demand will be, Pinney said. The underlying demand growth has been tremendous, but there can be slowdowns, as happened in 2016 in Japan and South Korea, he said.

Like other analysts, Pinney agreed the glut should be over by 2024 or 2025. "Demand is going to catch up," he said.

James Henderson, director of the Natural Gas Program at the Oxford Institute for Energy Studies, put it tartly in an analysis issued in 2016. "The somewhat simplistic assumption that Asian markets would always obligingly provide consistently high LNG demand growth has become questionable," he said.

D.C.'s Wipes Law: Flush it or Flaunt It?

Posted July 18, 2017, 7:31 A.M. ET

By Amena H. Saiyid

A battle in the District of Columbia over what kinds of disposable wipes can be flushed down the toilet has pitted the city government and municipal wastewater utilities against manufacturers, such as Kimberly-Clark Corp. and Procter & Gamble.

And at least one member of Congress has injected himself into the debate: Rep. Andy Harris (R-

Md.) recently charged that a new District of Columbia law amounted to a ban on flushable wipes, echoing a claim made by manufacturers. Kimberly-Clark, which markets flushable wipes under its Cottonelle, Scott Naturals, and Pull-Ups Big Kid brand names, told Bloomberg BNA in a statement that the "poorly conceived" law could actually worsen the district's sewer problems by limiting consumer choice and increasing reliance on non-flushable products.

However, backers of the city ordinance, which include the region's water and wastewater authority, DC Water, say the the law doesn't impose any ban.

Rather, it directs the D.C. Department of Energy and Environment to write standards for "flushable" wipes, making sure they degrade in sewers in what the law calls a "low period of time" and aren't made of plastic. These standards would take effect Jan. 1, 2018.

"This legislation has nothing to do with banning. It's a piece of legislation that requires companies to be truthful in advertising, and to not say products are flushable when they are not," D.C. Councilwoman Mary Cheh (D-Ward 3) told Bloomberg BNA in a telephone interview.

D.C.'s success in enacting its bill may pave the way for other jurisdictions to do so as well, Cynthia Finley, regulatory affairs director for the National Association of Clean Water Agencies, told Bloomberg BNA.

Gum Up Sewers

Consumers are largely unaware that most varieties of disposable wipes, such as those used to remove makeup and clean babies' bottoms, aren't meant for flushing because they can gum up sewers, leading to blockages that can cost DC Water as much as $50,000 each year to unclog.

Many consumers may not even notice the tiny "do not flush" logo printed at the bottom of most such packages that display a figure dropping a piece of paper in toilet with a slash across it. And they may even be unaware of the existence of wipes that can be flushed, or so some manufacturers claim.

DC Water spokesman Vincent Morris told Bloomberg BNA that the D.C. law merely requires clear, consistent, and prominent labeling for consumers.

"If you examine a packet of wipes, the consumer guidance isn't clear," Morris said. "We want it prominently displayed that either it is safe to flush or not to flush."

To that end, the D.C. law also requires manufacturers to clearly label the non-flushable varieties, including wipes for babies, feminine hygiene, and skincare, which are major culprits in clogging sewer systems.

First of Its Kind

The Nonwoven Disposal Products Act of 2016, the formal name of the D.C. wipes ordinance, is the first of its kind in the nation. Proponents say the law has garnered national attention because it could encourage other cities and states to adopt similar restrictions, creating a patchwork of regulations, which could prove costly for industry.

Other states—California, Maine, Minnesota, and New Jersey—have tried to pass flushable-wipes laws but were unsuccessful, according to the National Association of Clean Water Agencies, which

represents municipal wastewater utilities and backs the D.C. law.

NACWA's goal in backing mandatory standards is to "level the playing field" for all companies, ensuring all wipes labeled "flushable" were actually safe for sewer systems, and those labeled non-flushable wipes are done consistently. "It doesn't make sense for Kimberly-Clark to oppose mandatory labeling if they are following voluntary guidelines, but wipes imported from China and other countries are not," Finley said, adding "legislation will not only protect sewer systems, but it will level the playing field for all wipe brands."

Meanwhile, D.C. is working on draft regulations that it hopes to release for comment as early as this fall and have them in place by the time the law takes effect, Morris said.

Public Education Versus Legislation

Opponents say the law is the wrong approach.

"Public awareness and education, not legislation, is the most effective best way to address these issues," Tonia Elrod, spokeswoman for the Association of the Nonwoven Fabrics Industry (INDA), which includes members such as Kimberly-Clark and Procter & Gamble.

The association, which is part of a coalition called the Responsible Flushing Alliance, advocates voluntary measures that focus on educating the public about the dangers of non-flushable wipes over the mandatory guidelines that municipal wastewater utilities seek to impose.

A month ago, INDA updated its code of labeling practices to ensure manufacturers make clear which products are not flushable, she said.

Harris, during a July 13 markup of a fiscal year 2018 appropriations bill, warned his colleagues on a House Appropriations panel that "everybody's going to flush nonflushable wipes" unless the city council works with the committee to find a workable definition for "flushable." Harris introduced, then withdrew, an amendment to block the D.C. wipes law during that meeting.

Elrod raised the same argument. Companies "may not continue to sell flushable wipes if the definition of flushables is not achievable, or if it is not a viable business for our members," Elrod said.

Consumers then would have no choice but to use non-flushable wipes that they would continue to discard down the toilet, exacerbating the clogging problem, she added.

Opposition to D.C. Law

Procter & Gamble told Bloomberg BNA July 12 that it would defer to INDA, which has consistently advocated for changing public behavior through education and voluntary industry compliance.

Kimberly-Clark Corp. made no bones about its position on the D.C. wipes law in a statement to Bloomberg BNA.

"Kimberly-Clark agrees with INDA and other manufacturers of flushable moist wipes that the DC legislation is poorly conceived since it will not address the District's sewer system problems and will only serve to worsen the situation and harm consumers in the District, since it may leave them no choice but to turn to using, and flushing, more non-flushable items," the company said.

Elrod and Kimberly-Clark cited studies characterizing wastewater samples, saying flushable wipes comprised between 2 percent and 8 percent of the total waste found in New York and Maine sewers, respectively.

The bulk of the products found in the sewer drains were paper towels, baby wipes, skincare wipes, facial tissues, feminine hygiene products, Elrod said, adding "none of these products are meant to be flushed."

The industry won't get any argument on that front from DC Water, which also is engaged with area wastewater utilities in a Metropolitan Washington Council of Governments' "protect your pipes" campaign to educate the public about the dangers of flushing medications, wipes, fats and oil grease down the drains.

"All wipes are a problem if they aren't disposed properly," Morris said.

Cheh said the industry is presenting a "false dichotomy" by making consumers choose between education and legislation. "This is not a zero-sum game. We can do both," she said, noting that the district is already involved in a campaign to educate its consumers about what not to flush.

The association rued the city's "inappropriate" emphasis on flushable wipes.

'Workable' Definition

Harris said the city still has time to come up with a workable definition.

Elrod acknowledged that the language in the D.C. law is compatible with efforts the industry is already taking, which include clear labeling of non-flushable items and a guarantee that flushable items be made from 100 percent plant-based cellulose that biodegrades.

"The real solution is to help us all understand what we can flush and what we should not flush," INDA spokeswoman Elrod told Bloomberg BNA a day before the July 13 debate.

Kimberly-Clark pointed to its Cottonelle wipes, saying their products meet widely accepted industry standards for flushability.

"Our products are engineered to lose strength as they move through properly maintained plumbing, sewage or septic systems," the company said, defending its advertising claims.

However, Kimberly-Clark and Procter Gamble are facing class action lawsuits in federal district courts from New York residents who alleged the flushable wipes didn't degrade, but instead caused basement backups and septic system failures.

Cheh said it is up to the companies to make a product that degrades and doesn't clog up pipes.

"Otherwise, they are making products that are clogging up the system and mislabeling them, and our taxpayers are having to pay to clean up the mess that they have created," Cheh said.

Trump to Nominate Toxicologist to Head EPA Chemicals Office

Posted July 18, 2017, 10:37 A.M. ET

By Tiffany Stecker

President Donald Trump intends to nominate a longtime EPA official and risk assessor with ties to the chemical and tobacco industries to head the agency's chemical safety and pesticides office, the White House said.

Michael Dourson, a professor of environmental health at the University of Cincinnati and founder of the Risk Science Center, spent 15 years at the Environmental Protection Agency's offices in Cincinnati, Washington, D.C., and Region 5 headquarters in Chicago, under Presidents Ronald Reagan, George H.W. Bush, and Bill Clinton.

After leaving the agency in 1995, he founded Toxicology Excellence for Risk Assessment (TERA), a regulatory analysis firm that became the Risk Science Center when it joined with the University of Cincinnati in 2015.

Dourson was considered in 2014 to lead the EPA's Integrated Risk Information System, which identifies and characterizes chemicals' health hazards. The job went instead to Vincent Cogliano, then acting director of IRIS and currently an employee at the EPA.

In 2014, the Center for Public Integrity and InsideClimate News published an investigation of TERA, suggesting it worked closely with the chemical and tobacco industries to fast-track chemical risk assessments. Dourson said in response that the criticism didn't bother him: "We get criticized by everyone. But that doesn't change the fact that TERA is neutral."

The American Chemistry Council praised the decision to nominate Dourson.

"His knowledge, experience and leadership will strengthen EPA's processes for evaluating and incorporating high quality science into regulatory decision making," spokesman Jon Corley said. "The Senate should act on Dr. Dourson's nomination without delay as it comes during a crucial point in the implementation of the Lautenberg Chemical Safety Act."

The Environmental Defense Fund opposed the move.

"We are deeply concerned over the nomination of Michael Dourson to head the toxics office at EPA," Richard Denison, senior scientist with the organization, said in a blog post. "Unfortunately, this nomination fits the clear pattern of the Trump administration in appointing individuals to positions for which they have significant conflicts of interest."

Clean Energy Is Trouncing Oil, Gas and Coal in Trump Era

Posted July 18, 2017, 9:22 A.M. ET

By Joe Ryan, Christopher Martin and Brian Eckhouse

President Donald Trump took office vowing to revive the coal industry's fortunes. So far, the smart money has been on clean energy.

An index of 40 publicly-traded solar companies, wind-turbine component makers and others that benefit from reduced fossil fuel consumption is up 20 percent this year. That's more than double the S&P 500's 9.8 percent gain. And better than the 8.3 percent rise by an index of leading coal

companies.

The eco-friendly stock rally—which comes as oil and natural gas-focused shares have dipped—stems from a constellation of factors, including a Nevada law to boost rooftop solar, China's mass-transit policy and optimism that Elon Musk's Tesla Inc. might deliver its Model 3 sedan on time. In short, Trump's pro-fossil fuel agenda hasn't damaged investor support for clean energy.

"Nothing dreadful has happened, and these companies continue to execute," said Jenny Chase, Bloomberg New Energy Finance's lead solar analyst.

As clean-energy stocks climb, investors have pumped more money into wind and solar. U.S. investments totaled $14.7 billion during April, May and June, up 51 percent from the previous quarter to mark the highest level since 2015, according to Bloomberg New Energy Finance. European investments rose 10 percent, to $8.8 billion.

"We are seeing catalysts for these markets driven by the fact that people increasingly realize clean energy is more profitable than conventional energy," said David Richardson, an executive director at Impax Asset Management, which focuses on sustainability and has about $8.7 billion under management, up 32 percent this year.

Solar stocks are performing especially well under Trump. Sunrun Inc., the largest independent U.S. rooftop panel installer, is up 32 percent, closing July 17 at $7.01. That rally has been fueled in part by a Nevada law passed in June to make solar more affordable for the state's homeowners. Nevada gets more sunshine than almost anywhere in the nation, but it's been a dead-zone for solar since regulators slashed rooftop panel subsidies in 2015. The new legislation largely restored those credits.

Solar manufacturers are rallying, too. First Solar Inc., the largest American panel maker, has gained 33 percent, to $42.72. Average panel prices, which plunged 35 percent last year, have begun to stabilize, falling just 8 percent since December, to 33 cents per watt. The market shift stems from solar developers aggressively stocking up on panels, fearing that a pending federal trade case could lead to tariffs on imported equipment.

"It created some tailwind for the manufacturers," said Sophie Karp, an analyst at Guggenheim Securities.

Some of the biggest clean-energy gainers include fuel cell manufacturers, which use liquid hydrogen to generate electricity through a chemical process that emits only water. While hydrogen-powered engines have been slow to catch on in cars—largely because of a lack of fueling stations—China has been pushing to use the technology in buses.

As Beijing has beefed up investments this year, fuel cell maker Hydrogenics Corp. has nearly doubled, to $8.70. Ballard Power Systems Inc. is up 73 percent, to $2.86.

Electric car maker Tesla is up 50 percent this year as the company has begun limited production of its Model 3 sedan, its cheapest vehicle yet. Musk says he expects production to reach 20,000 cars a month by December.

In the end, some of the clean-energy gains may be fleeting. The trade case that's driving up solar panel prices may ultimately lead to tariffs that analysts warn could slow overall demand. Fuel cell companies have a long history of ephemeral rallies. And Tesla's stock has been slipping since its

June 23 peak after a troubling quarterly sales report and ongoing concern about its ability to mass produce. It closed down 2.5 percent July 17, at $319.57.

Fewer Nuclear Licenses to Force Layoffs at Nuclear Regulator

Posted July 18, 2017, 9:03 A.M. ET

By Rebecca Kern

Up to 20 administrative support workers at the Nuclear Regulatory Commission may lose their jobs as the agency seeks to cut its workforce to help make up for a funding shortfall resulting from fewer licensing applications, an NRC spokesman told Bloomberg BNA July 18.

The agency, which oversees the safety of U.S. nuclear reactors, has provided 120-day notices of a reduction-in-force to select employees in the Office of Administration, the Office of the Chief Human Capital Officer and the Office of Small Business and Civil Rights, according to a staff-wide email sent by NRC Executive Director of Operations Victor McCree July 12.

The agency is trying to reduce the number of employees that would be laid off to less than 20 by Nov. 6 through other measures such as attrition, the spokesman told Bloomberg BNA.

Funded in part by licensing fees, the agency has received fewer applications from companies to build nuclear reactors, which can cost more than $11 billion. They are struggling to compete in the wholesale energy markets against facilities fueled by low-cost natural gas.

The NRC also has limited its external hiring, offered three rounds of buy-outs to employees and has reassigned employees with potentially affected positions to higher priority work, McCree said in the email.

“Despite these actions, the estimated rate of voluntary attrition through the remainder of FY 2017 will not enable us to meet our FY 2018 workload needs,” McCree wrote.

The agency worked with the National Treasury Employees Union ahead of the notifications to avoid the involuntary measures, McCree said in the email.

The NRC is also requesting further staff reductions in its fiscal 2018 budget proposal, which would cut 311 full-time-equivalent employees.

For the past several years, Congress has directed the NRC to reduce its budget and workforce due to fewer nuclear operators planning to build new reactors. NRC’s budget has been under scrutiny since it increased staff in 2010 due to an expected influx of new reactor applications, which the agency didn’t receive because applicants withdrew them for market reasons.

California Extends Carbon Trading Program Through 2030

Posted July 18, 2017, 8:48 A.M. ET

By Carolyn Whetzel

Legislation extending California's carbon trading program through 2030, squeaked by both state houses late July 17, secured in part by concessions to industry such as banning local agencies from regulating carbon emissions in certain business sectors.

The thin, super-majority votes to pass A.B. 398—28-12 in the Senate and 55-21 in the Assembly—also required passage of a separate bill, A.B. 617, to tackle localized emissions of harmful pollutants. In the end, eight Republicans and several moderate, business-friendly Democrats supported A.B. 398.

In addition to prohibiting local air agencies from regulating the carbon emissions of oil refineries, power plants, cement producers, and other entities in the program, the bill also provides allowance price caps and an exemption of sales and use taxes for electricity producers on certain new equipment and some construction related expenses. A.B. 398 also suspends a fire prevention fee on rural property owners long opposed by Republicans.

State law enacted last year requires California to reduce greenhouse gas emissions 40 percent below 1990 levels by 2030.

Hard-Fought Victory

Passage of A.B. 398 was a hard fought and important victory for Gov. Jerry Brown (D) who pressed lawmakers to preserve the five-year-old program set to expire in 2020.

"Tonight, California stood tall and once again, boldly confronted the existential threat of our time," Brown said in emailed statement. "Republicans and Democrats set aside their differences, came together and took courageous action. That's what good government looks like."

Brown, industry and business groups, and others believe the trading program is a critical, cost-effective tool in achieving the state's ambitious climate goals and maintaining California's role as a global climate leader.

The governor sought the two-thirds votes on A.B. 398 to help insulate the program from future legal challenges.

A.B. 398 continues the basic framework of the existing program, which sets a statewide annual limit on greenhouse gas emissions and requires the largest stationary sources of carbon emissions to the meet declining annual limits. To comply, covered entities must either install emissions controls to reduce emissions or purchase allowances, or permits.

However, the bill means covered entities must make do with fewer carbon offsets—credits for planting trees and reducing methane emissions. The number of available free allowances under the program will shrink overtime.

The companion air quality bill, A.B. 617, required only a simple majority for passage. Clearing the Senate on a 27-13 vote and Assembly 50-24, A.B. 617, boosts maximum penalties for air quality violations, requires state regulators to update the air toxics program, implementation of community plans to reduce emissions of ozone forming emissions and particulate pollution, and best available retrofit control technology at industrial facilities.

The California Business Roundtable, California Chamber of Commerce, California Manufacturers and Technology Association and dozens of other business and industry groups and labor organizations supported A.B. 398 and A.B. 617.

Large environmental groups including the Environmental Defense Fund and Natural Resources Defense Council supported the bills, but environmental justice and community groups lobbied against the bills, saying the concessions, like allowing the continued use of carbon offsets and free allowances, were unacceptable.

Listing Triggers Northwest Territories Protection Plan for Bison

Posted July 18, 2017, 8:47 A.M. ET

By Jeremy Hainsworth

Canada's Northwest Territories is ratcheting up a recovery strategy for wood bison after the species was moved to the territory's List of Species at Risk as a threatened animal.

While the listing adds no protections for North America's largest land mammal or its habitat, it does trigger a requirement to implement a recovery strategy within two years, territorial Ministry of Environment and Natural Resources spokeswoman Dawn Curtis told Bloomberg BNA July 17.

An estimated 2,500 wood bison roam the Northwest Territories. They are vulnerable to threats such as naturally occurring anthrax and introduced bovine tuberculosis and brucellosis.

The listing was made under direction of the NWT Conference of Management Authorities (CMA) and the Species at Risk Committee under the Species at Risk Act.

The committee determined the population could be endangered if nothing is done to reverse declining population trends. "It could disappear from the NWT in our children's lifetimes," the CMA said in its report.

The territorial government, the Tlicho aboriginal government, and the Wek'ezhi Renewable Resources Board share wood bison management authority.

Brazil President Pushes Amazon Deforestation Bill

Posted July 18, 2017, 8:35 A.M. ET

By Simone Iglesias

Brazil's President Michel Temer is ignoring pleas from both supermodel Gisele Bundchen and the Norwegian Prime Minister by submitting a bill to Congress that would reduce protections of a large national forest in the Amazon, just weeks after vetoing similar legislation.

The new bill would downgrade the legal protections governing around 27 percent, or close to 350,000 hectares, of the Jamanxim national forest in the northern state of Para. The original proposal, vetoed last month on the eve of the president's trip to Norway, would have reduced the area under preservation by nearly 600,000 hectares, according to World Wildlife Fund. During Temer's visit, Norway announced plans to cut its funding of Amazonian conservation projects due to Brazil's failure to prevent a rise in illegal deforestation.

Changes to the status of the region will permit land there to be sold, cleared of forest, used for agriculture and livestock as well as for mining activities, according to the state news agency Agencia

Brasil. Legislators from the country's agriculture caucus, a key part of Temer's base, lobbied for the downgrade. The president had vetoed the original bill not because disagreed with the spirit of the proposal but because lawmakers inflated the area to be downgraded, according to two aides who were not authorized to speak on record. Temer needs all the support he can muster at present as he battles to secure enough votes to avoid trial at the Supreme Court.

Environmental organizations, including the WWF, argued that the earlier bill would put biodiversity and water resources at risk. The rate of deforestation in the Amazon rose 29 percent in July 2016, compared with August 2015, according to the National Institute for Space Research, or INPE. Para was the Brazilian state with the highest rate of deforestation.

In June, Temer confirmed his decision to veto the original proposal in a tweet to Bundchen, who is also an environmental campaigner. It was not enough, however, to mitigate the concerns of the Norwegians, who announced their decision to cut their Amazon Fund contribution on June 23.

Subject: Morning Media: WSJ editorial fallout -- NPR's Oreskes resigns -- O'Reilly meeting with Newsmax -- Tapper rips Fox -- NYT's digital gains

By Michael Calderone | 11/02/2017 05:39 AM EDT

THE WALL STREET JOURNAL EDITORIAL BOARD SWIPED at POLITICO Tuesday after a report on how The Journal's opinion section has lately echoed pro-Trump voices at fellow Rupert Murdoch-owned entities Fox News and the New York Post. The Journal editorial page recently called for special counsel Robert Mueller to resign, while running an op-ed urging Trump to issue a "blanket pardon" in response to the Russia probe. Editorial page editor Paul Gigot declined to comment to POLITICO on Monday, but his board responded with an unsigned editorial on Tuesday: "The Press Loves Fusion GPS."

- The editorial focused on POLITICO's including a tweet from former Journal editor Neil King - who said he didn't "know a single WSJ alum who's not agog at where that edit page is heading" - without mentioning that King this year joined Fusion GPS, an investigative firm started by ex-Journal reporters that last year commissioned the infamous Trump-Russia dossier. "Politico quotes an employee of Fusion to attack The Wall Street Journal for criticizing Fusion," the editorial read. Actually, the Journal piece King responded to on Twitter doesn't mention Fusion. Still, in the interest of disclosure, POLITICO updated the original story to note that King works at the firm.

- Now that that's settled. It's striking the Journal editorial board didn't mention another tweet included in the POLITICO story: Columbia journalism professor and former senior Journal editor Bill Grueskin suggested that the "WSJ edit page has gone full bats- t" for "hosting an op-ed suggesting Trump pardon everyone, including himself." And the Journal editorial also didn't respond to a third critical tweet in the POLITICO piece: New York Times Magazine writer Nikole Hannah-Jones calling the Mueller editorial "embarrassing for every good reporter at that paper."

- Criticism of The Journal's editorial line has recently come from commentators across the political spectrum, including Wednesday from a prominent conservative columnist and reporters inside the paper. Vanity Fair's Joe Pompeo asked whether a "civil war" was breaking out between the news and editorial divisions at The Journal after speaking to staffers there. One Journal reporter said it was "frustrating" to see the editorial page undermine its reporting. Another said some of the Journal opinion writers' claims could be disproved "if they just read our own reporting."

- "One need not conclude that 'Fox is taking over' The Journal or that Murdoch and sons personally are editing opinion columns to recognize that the Journal has changed in the Trump era," Washington Post "Right Turn" columnist Jennifer Rubin wrote Wednesday. "The perceived shift in the Journal's editorial board, not unlike the further decline into journalistic insanity at Fox, is symptomatic of the intellectual rot that has eaten away at the right, and at the Republican Party specifically. On the right, years of bashing liberal media turned from criticism to paranoia

and a sense of victimhood."

Good morning and welcome to Morning Media. Congratulations to the World Champion Houston Astros (and to Sports Illustrated for this incredibly prescient cover). Please send tips to mcalderone@politico.com and @mlcalderone. Jason Schwartz (@JasonSchwartz) and Daniel Lippman (@dlippman) contributed to the newsletter. Archives. Subscribe.

TOP NPR EDITOR MICHAEL ORESKES RESIGNED Wednesday after two women leveled sexual harassment allegations, including unwanted kissing, during his tenure two decades ago at the New York Times. "The worst part of my whole encounter with Oreskes wasn't the weird offers of room service lunch or the tongue kiss but the fact that he utterly destroyed my ambition," one woman told The Washington Post. An NPR employee, Rebecca Hersh, had filed a former complaint in October 2015 after Oreskes turned "a career counseling session into a three-hour-long dinner that delved into deeply personal territory," as NPR's David Folkenflik reported.

- "I am deeply sorry to the people I hurt," Oreskes said in a statement. "My behavior was wrong and inexcusable, and I accept full responsibility. To my colleagues, I am grateful for every minute I've had to work with each of you. Thank you. NPR has an important job to do. Public radio matters so much and I will always be your supporter."

- NPR CEO Jarl Mohn told staff Wednesday that he asked "Oreskes for his resignation because of inappropriate behavior" and received it. "Some have asked me if it took published news reports for us to take action," he wrote in a memo. "The answer is that it did not. We have been acting. Some of the steps we took were visible and others weren't. We have a process in place and we followed that process."

- Yet some NPR staffers are questioning that process, as CNN's Brian Stelter reports: "In interviews with CNN, nine staffers said they believe Mohn did not take the Oreskes harassment accusations seriously enough. 'There were repeated complaints to management going back more than a year, and nothing ever happened,' one of the sources said on condition of anonymity."

SOUND BITE

"The way media organizations shift sexual predators around often without warning the next employer reminds me a bit of the Catholic Church. Halperin and Oreskes had long careers, bounding from one outlet to the next, each time leaving a sea of victims in their wake." [Hilary Sargent]

BILL O'REILLY TO NEWSMAX? The former Fox News star, who lost his cable news perch following revelations of settlements to women alleging sexual harassment, is meeting next week with executives at Newsmax, an upstart conservative TV rival, POLITICO's Darren Samuelsohn and Jason Schwartz report.

- "We don't think Bill O'Reilly's career is over," Newsmax CEO Chris Ruddy told POLITICO. "He does have a market. We're very interested and exploring looking at that," Ruddy
